An expanded foreign trade is essential if the American people are to maintain their present high standards of living and to retain even approximately their present position in international finance. Our annual surplus of grain, meats, cotton and manufactures must be sold in foreign markets in increasing quantities and it is evident that this cannot be done without ships—ships owned and controlled by Americans, displaying our flag, as in the past, in every port of the world.

What did we get out of the war in the way of ships? Let me deal in figures for a moment. The Emergency Fleet Corporation, which had charge of ship construction, launched in 1917, one hundred and six vessels with a deadweight tonnage of 708,970, and delivered complete to the Shipping Board 49 ships, totaling 303,115 deadweight tons. The following year 812 vessels of 4,244,126 deadweight tonnage were launched and 532, representing a tonnage of 3,026,006 deadweight, were completed and delivered. Last year 1,055 ships were launched and 1,181, with a tonnage of 6,385,123 actually delivered. Of the war construction program there remains 534 vessels of 3,661,767 tons, all of which will be delivered by August this year.

In addition we purchased or contracted with Japan for the building of 45 ships of 372,023 deadweight tons, and have received and put into service 18 of these, totaling 148,323 tons.

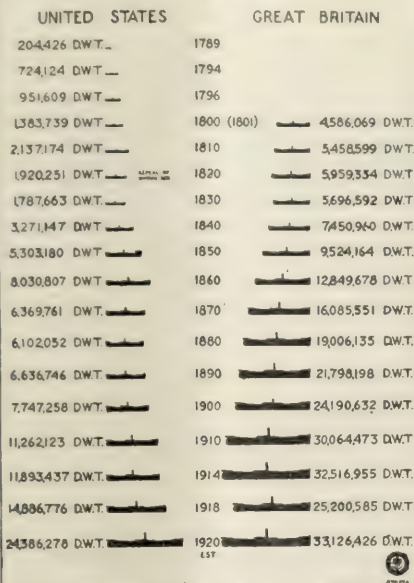

These activities and the taking over of German and Austrian cargo ships have given the United States 8,700,917 deadweight tons of steel ships, 1,799,123 tons of wooden ships, 63,000 tons of composite and 10,000 tons of concrete ships, giving a total deadweight tonnage, excepting the ships to be completed this year, of 10,573,040.

Some of these ships have been reconveyed to their former owners and some sold. The ships sold thus far number 188, of a value of \$93,545,947, including eighteen former German cargo ships, but sales have not kept pace with the launchings.

Recently there has been some controversy over the proposed sale of thirty ex-German passenger liners, including the "Leviathan." These ships were repaired by the Navy Department after they had been damaged by their crews when war was declared. They were reconverted as transports and given to the War Department, which has just turned them back to the Shipping Board.

Expert estimates on the cost of reconditioning these ships for passenger service amount to \$75,000,000 and the work would take from six to twelve months. Since there is at present a world market for ships and high prices can at present be secured, the Shipping Board has felt that it would not be justified in undertaking the work of reconditioning, without express direction from Congress. It is the conviction of the Board that there never will come a time when more money may be obtained for these ships than now. We believe that

COMPARATIVE PROGRESS MERCHANT MARINE TONNAGE UNITED STATES & GREAT BRITAIN EXPRESSED IN D.W.T.

if we expend the \$75,000,000 for re-converting them as passenger liners, we may never hereafter be able to sell them for the cost of reconditioning plus the price we can now secure.

It is undoubtedly true that higher prices could be got for these vessels from foreign buyers than from Americans, but to sell them for operation under any other than the American flag would violate the whole purpose of the Board.

It is now up to Congress to decide whether these ships shall be sold on the conditions laid down by the Shipping Board, namely:

(a) That they may be purchased only by American firms, corporations or individuals for use under the American flag;

(b) That they be operated on routes and services established by the Shipping Board,

Or shall be refitted for passenger service by the Board and owned hereafter by the Government. My own judgment, based upon the action already taken by the House with reference to a permanent merchant marine policy, is that these and all

other ships now owned by the Government will ultimately be sold to American interests in accordance with the present policy of the Shipping Board.

The question of whether the ships shall be owned by the Government or by private interests is, however, of secondary importance. The thing of real importance is that they be owned by Americans—and not by foreigners. It should be understood in this connection that whether owned by the Government or by private capital, the ships must in either case be operated by American shipping companies. The Government has no adequate organization for directing the operation of ships.

If Government ownership is [Continued on page 418]

The United States has 8,700,917 deadweight tons of steel ships, many of which were built at the Hog Island Shipyard near Philadelphia. This air view of the shipyard, taking in a radius of over three miles, was made on a nose dive at a height of 3000 feet

The Straits of Panama

The Necessary Successor of the Panama Lock Canal

A Message from the Republic of France to the Republic of the United States

By Lieutenant Colonel Philippe Bunau-Varilla

It is to Lieutenant Colonel Philippe Bunau-Varilla that the United States owes its present control of the Panama Canal, for he was the first Minister Plenipotentiary of the new Republic of Panama at Washington in 1903 and negotiated the Hay-Bunau-Varilla treaty of November, 1903, by which the perpetual Canal rights were granted to the United States by Panama. When he was Chief Engineer of the French Panama Canal Company, 1884-1886, he was planning not merely for a temporary lock canal, but for the future excavation of a sea-level waterway which would be comparable to the Straits of Gibraltar or the Dardanelles and he has never ceased to advocate that solution of the Panama problem. During the late war he served as Lieutenant Colonel of Engineers in the French Army and was made Commander of the Legion of Honor. He was wounded at Verdun.

SOME time ago press reports attributed to Secretary Baker, after his visit to Panama, the opinion that the construction of the Nicaragua Canal ought to be undertaken in view of the increasing traffic of the Panama Canal and of its eventual congestion in the near future.

The enormous volume of the traffic bound to pass across the Central American Isthmus is something which will escape only those afflicted with an incurable mental shortsightedness.

Is the remedy to consist in reproducing a second time, at Nicaragua, a waterway bearing the burden of the defects with which the first waterway was endowed at Panama, or is the remedy to consist in removing from the first waterway the defects which not only limit its capacity for traffic, but also expose it to complete or temporary paralysis in the eventualities of war or of seismic disturbances?

My opinion is for the second system. There has been no doubt in my mind since 1886 that the Panama Canal must be first constructed as a lock canal and later on transformed, without interrupting for five minutes the passage of ships, into a free, deep, broad strait uniting the two oceans. Until this final form of the great waterway is reached there ought not to be a moment of inaction for those in charge of the preparedness of the United States for war.

A lock canal is a highly vulnerable canal: in time

of war thru the acts of the enemy, and in all times thru the acts of nature, or the accidents of fate.

A ship built as an aeroplane carrier can launch from the high sea any number of bombing planes within fifty or a hundred miles of the Isthmus, and these aeroplanes can drop on the delicate structures of the locks a sufficient quantity of aerial torpedoes to put them soon out of commission. A ship loaded with explosives may be exploded by treachery during the passage of a lock and destroy it entirely. A long range bombardment by warships, guided by aeroplanes and protected from view by artificial clouds of smoke, generated by submarines, may cause deadly injuries to the locks, while the forts defending the canal will be incapable of striking back at the offender. One must not forget that all the locks on the Atlantic side are but a few miles from the seashore. Nature, in time of peace as in time of war, may disable the canal for months, if not for years, by sending an earthquake and opening, in the earth dam of Gatun, fissures similar to those recorded to have taken place at the very same location during the earthquake of 1879.

To establish a second canal at Nicaragua must not be regarded as the good solution because this canal, a lock canal for eternity, is burdened by the same war dangers and infinitely more exposed to ruin by earthquakes than the lock canal at Panama.

The wise solution consists in removing from the

At Pedro Miguel (above) the valley of the Rio Grande is enclosed by dams, making Lake Miraflores, which acts as a reservoir and supplies water for the locks at Miraflores and Pedro Miguel

Panama Canal all the structures which not only limit its output per day, but expose the precious waterway to a complete or partial annihilation at a time when the very life of the United States may be at stake.

The wise solution consists in the complete elimination of any artificial structure between the two oceans, in the removal of any locks or of any dam, the destruction of which may impair the waterway. The consequent creation of a wide, deep, free junction between the two oceans will render not only the capacity of transit unlimited but it will make the canal invulnerable.

The great earthquake, which wiped out Messina, left untouched the Straits of Messina. That same earthquake would have crippled for years the locks and dams of the Panama Canal: it would have been harmless to the Straits of Panama as I describe them.

"But," will say a first group of conscientious objectors, "what will you do with the difference of level of the two oceans, they cannot be put into free communication without generating a waterfall from the higher ocean into the lower one."

"May your easily worried mind be set at rest, my dear friend," I shall answer, "there is no difference between the mean level of the Atlantic ocean at Colon and that of the Pacific ocean at Panama. What has caused the confusion is that the Pacific at Panama has tides which make the sea rise to a maximum of approximately ten feet above and fall ten below mean level, while the Atlantic ocean at Colon has only tides of one foot above and one foot below mean level, and is therefore practically tideless.

"These variations of levels will generate currents in the waterway just as the rise and fall of the sea level at the mouth of the Thames causes currents in that river between the sea and London. These currents have never prevented the navigation between this city and the North Sea as far as I can find out.

"I may add that I have discovered the laws governing the movement of the water in a case such as that of the Straits of Panama. If, as I proposed in 1906, the Straits of Panama shall after the transformation from the lock form have a bottom width of 500 feet, an average surface width of 600 feet, and 50 feet depth at the lowest stages of the tide, the maximum velocity will be at the Panama entrance about half an hour after high or low tide, and will scarcely exceed three knots an hour. This disposes of the objection raised about a supposed difference of level of the two oceans."

"But," will exclaim another group of conscientious

Courtesy of the Encyclopaedia Britannica.

Pedro Miguel and Miraflores Locks are at the Pacific end of the Canal, Gatun Locks at the Atlantic. Owing to the presence of these locks, an air raid, in case of war, or an earthquake, might paralyze the entire waterway. The Canal is 500 feet wide at both the Pacific and Atlantic entrances, 1000 feet wide at the Gatun Locks, but only 300 feet wide from the famous Culebra Cut to Pedro Miguel, its narrowest section

objectors, "there have already been so many slides! You will by deeper excavations create new and still more dangerous ones."

This is my answer. "I am so well aware of the danger of slides that I did all in my power to have the lock canal constructed with more locks, so as to pass the Culebra summit at a higher elevation, and to avoid the slides which the too low cut thru the divide has entailed.

"But if I expected slides during the excavation, and if I thought that the plans adopted ought to have been to a certain degree modified by that expectation, I am also certain that, for whatever depth considered, they can be easily dealt with and that there is no insuperable difficulty connected with them. It is nothing but a question of slopes and of removal of earth and rock."

This problem has been before me ever since 1884 when I took in hand the excavation of the Culebra cut. At that time there had been but an insignificant scratch made on the soil and one might say that the altitude of the summit was still 300 feet above the sea, as when Balboa crossed the Isthmus and discovered the Pacific in the second decade of the sixteenth century.

When the canal was in the first days of May, 1904, transferred by the Second French Company to the American Government, the altitude of the summit had been reduced by the French from 300 feet to 160 above the sea; the difference being a deepening of 140 feet.

When the first great ocean steamer, the "Cristobal," passed thru the canal from the Caribbean sea to the Pacific ocean on August 3, 1914, the Culebra summit had been further lowered from 160 feet to 40 feet above the sea, the difference being a deepening of 120 feet.

What reasonable being will suppose that when you have deepened a cut 260 feet it is impracticable to lower its bottom 95 feet more, especially when the sliding ground is confined to a very short part of the length of the Culebra cut, say one mile in length.

When the decision will be taken, and it must be taken, to transform the present lock canal into a strait of 500 feet minimum width at the bottom and of 600 feet minimum width at the water level, this width will most probably have to be brought to 1200 feet in the parts where a slide can take place. If such a thing should happen, the margin reserved to protect against any such incident would guarantee the complete immunity of the navigable channel against any such interference.

On the Outside Looking In

Some Timely Information on the League of Nations

By Hayne Davis

WHETHER the United States Senate ratifies the Covenant of the League of Nations or not, the League has become an actual fact in the political world, and the United States will have the League to deal with, whether this country is inside or outside of it.

The League became an actuality when the first session of its executive council convened at Paris, January 16th, 1920, the required number of nations having approved the Covenant as drafted at Versailles prior to that date. The Council organized itself by the election of the eminent French statesman, Leon Bourgeois, as President of the Council. The Secretary General (Sir Eric Drummond of England) had already been designated in the treaty of Versailles. The United States was the only absentee among the nine nations named in this treaty as permanent members of the Executive Council. The four other permanent members of the Council—Great Britain, France, Italy and Japan—and all four of the specially designated temporary members—Belgium, Brazil, Greece and Spain—were represented at this first meeting. The second session of the Council is now sitting at London, and in the absence of a representative from the United States has ventured to choose an American whom the Council desires to collaborate with others appointed by the Council to formulate plans for an international Court of Justice. The name of Elihu Root was published as the appointee of the Council apparently without any inquiry by the Council as to whether the Government of the United States would approve of his appointment or would prefer that this country be represented in this work of the Council by some other of the many Americans who are qualified for taking part in this most important international action. Mr. Root may be the one *best* qualified, but the selection was by the Council, not by the Government of the United States, and not even upon consultation with the Government of the United States. And it so happens that he is not of the same party as the present President, and has in fact antagonized the President

in the campaign for his election, and also in the campaign for carrying the people and Senate of the United States in favor of the League of Nations and its Covenant as drafted at Paris.

The League has already begun, therefore, to take action in matters which concern the United States, and in this instance has shown less regard for the wishes of the Government of the United States than is customary on the part of any government in the appointment of a person to represent it at our capitol.

The League as now constituted contains the following countries, located in each of the four continental areas:

Africa: Liberia.

America (Central and Island): Cuba, Guatemala.

America (South): Argentine, Bolivia, Brazil, Colombia, Ecuador, Panama, Paraguay, Peru, Uruguay.

Asia: China, Japan.

Europe: Belgium, British Empire, Czechoslovakia, France, Italy, Spain, Switzerland.

Sovereign nations not in the League today:

America (Central and Island): Costa Rica, Hayti, Honduras, Nicaragua, Salvador, San Domingo.

America (North): Mexico, United States.

Asia: Hedjaz, Persia, Siam.

Europe: Albania, Austria, Bulgaria, Denmark, Germany, Holland, Hungary, Norway, Portugal, Roumania, Russia, Serb-Croate, Sweden, Turkey.

Thus the total number of nations now in the League is 22, the number outside (counting Russia exclusive of Poland as one) 25.

The area of nations in the League is 24,747,000 square miles, the area of nations not in the League is 15,255,000 square miles.

The population of the member nations is one billion twenty-one and a half million, and of the non-member nations is about half a billion.

The League as launched has, therefore, within its youthful body a respectable portion of the world's area and population. Will it grow in wisdom and stature, and in favor with God and man? [Continued on page 410]

Wide World

The Council of the League of Nations began its first business session at St. James Palace, London, early in February. The representatives were Baron Matsui, Japan; Mr. A. J. Balfour (speaking), England; M. Leon Bourgeois, France; Sir Eric Drummond, Secretary-General of the Council; Signor Ferraris, Italy; M. Paul Hymans, Belgium, and Count Quinones de Leon, Spain

Editorially Speaking

Wet planks are slippery material for platforms.

* * *

Secret diplomacy is another name for leaky diplomacy.

* * *

We can't quite determine the attitude of the Senate toward the League of Nations. Does it want to stay out with all the privileges of membership, or go in with all the privileges of the outsider? Does it want to eat its cake and have it or only have it after eating it?

* * *

The decision to keep the Turk in Constantinople is disappointing to many Americans. We have no right, however, to complain of a decision which grows directly out of the refusal of the United States to undertake responsibilities in the Near East. It is an open and notorious diplomatic "secret" that we could have had a mandate not only for Armenia but for parts of the Turkish Empire much farther west had Congress not shown itself so hostile to the whole idea of an American mandate. Or if we did not desire to undertake the exclusive control of Constantinople we might at least have joined with other Powers in giving military and financial support to an International Commission which would administer Constantinople in the interests of civilization. But by refusing responsibility we have cancelled our influence.

* * *

On your honor, now, can you tell us who represents you in the State Legislature? Or whom you chose for your city Board of Aldermen? Or whether the State Engineer has made good? Or the exact duties of the Lieutenant-Governor? Or even how many state, county and municipal officers you must vote for next November? Or why there must always be two Houses to every Legislature? Or the merits and qualifications of the elected members of the State judiciary? Or why the Sheriff is elected and the Chief of Police appointed?

If not, it is right to raise the question whether it is essential to democracy that so many offices be filled by election. We do not vote for the President's cabinet; why should we be compelled to vote for the Governor's executive associates, or the Mayor's? We do not vote for the Supreme Court of the nation; why should we vote for the State Court of Appeals? For just how many public officials on your ballot do you really feel responsible?

* * *

Any year in which there is no outstanding Presidential candidate is sure to bring out a crop of booms for "favorite sons" and "dark horses." It would be well if a preliminary civil service examination for candidates could be arranged to weed out lesser competitors. We may suggest the following questions, with a required average of seventy per cent:

1. Have you been mentioned by at least five persons in addition to yourself?
2. Does at least one person among your supporters live outside your native state?
3. Can you hold your state delegation on the third ballot?
4. Are you really a dark horse or only a "stalking horse" for somebody?
5. Why are you too good for the Vice-Presidency?
6. Are you just "a" governor or "a" senator, or have you done something really unusual?
7. Would you run on the party platform no matter

of what planks it is composed or have you some other issues besides a pleasant personality and a record of party fealty?

8. Have you been asleep since 1913 or are you aware of certain changes in the world and in the position of the United States which have taken place since that time?

9. Would you appoint a cabinet of men as big as you are, or would you be afraid to have independent and vigorous personalities in your official family?

10. Have you a genuine interest in making the public business as efficient as any private business in the world?

* * *

The victory of the monarchist party in Hungary is the most serious blow to republicanism in seventy years, because under Hapsburg rule republican sentiment was stronger there than in any other part of eastern or central Europe. In 1849 Kossuth proclaimed Hungary an independent republic, and the combination of Austrian and Russian armies which overthrew his government did not destroy the idea on which it was based.

But today something worse has happened than a conquest by monarchs; there has been a conversion to the principles of monarchy. No foreign tyrant could have created such a popular reaction. Only Bolshevism was adequate to the task. The dictatorship of Bela Kun has left behind it such intolerable memories that the peasantry turn against every form of revolutionary doctrine from the dictatorship of the proletariat to the constitutional republic.

Plant Bolshevism and you reap reaction.

* * *

Some of us have been looking forward with hope to a time when men of science would take a more active share in the management of the nation's affairs. It would seem that they, because of their more objective attitude and their professional habits of thoroughness and accuracy, would form a needful corrective to the present régime of lawyers and politicians who are always partizan and sometimes ignorant. In other countries indeed scientific men are assuming the burden of directing governmental policies, but American scientists have officially refused to help the people to decide the burning questions of the day. The American Association for the Advancement of Science at its recent St. Louis meeting resolved:

That sectional officers avoid placing on their programs papers relating to acute political questions on which public opinion is divided.

This means that this Association, which comprizes in its sections and affiliated societies practically all the scientists and technical experts in the country, cannot even consider such acute political questions as preservation of forests, utilization of water power, nationalization of mines, promotion of foreign commerce, restriction of immigration, settlement of race conflicts, policies of the League of Nations, race suicide and methods of education. It will be the duty of the Chief Censors, hitherto known as sectional secretaries, to see that the discussions are confined to such safe subjects as "The Internal Ear of the Canadian Mole" and "The Anatomy of the South Sea Sea-Urchin." But even these may come to be political questions so our cautious scientists will have to follow Einstein into the fourth dimension to keep out of trouble.

If these scientists were soldiers instead of citizens they would be called slackers. They are more than pacifists for they shrink even from a war of words.

Playing Politics

THE uncertainty that persisted until the final roll call when the treaty of peace was last before the Senate is absent as the second test approaches. This time every one knows what is going to happen to the treaty. It is going to be defeated unless there is a miracle—such a miracle as a surrender by the President.

The treaty is going to be defeated because the dominant leader of one political party has chosen to make it the principal issue of the presidential campaign, and because the leader of the other has accepted his challenge. There is muttering in the ranks from those who would prefer that their parties make a stand on issues in which they believe the people are more interested, but so far no adequate revolt.

Lodge will not give ground in the Senate. He arranged a new "ultimatum" from the Irreconcilables to demonstrate that he could not. Hitchcock will not surrender—and he still controls enough votes to prevent the treaty's being sent to the President. And so the Senate is frozen in a new deadlock—for politics' sake.

The treaty is being fairly rushed to defeat. The Irreconcilables, pleased with the prospect, have taken their filibuster out of the way so that the expected may come to pass before there can be any change in the situation.

After the Senate has again failed to give its consent to ratification, there will be an effort by Senator Lodge to return the treaty to the President, formally advising him that the Senate cannot ratify. This move will be opposed by Senator Hitchcock. Whether it succeeds or not there will follow an effort to declare the existence of a state of peace with Germany, if some way can be

found to do it constitutionally without the approval of the President.

In due course will come the "solemn referendum" desired by President Wilson, but, whatever the decision of the electorate and however clear cut, it is doubtful if the treaty as signed at Versailles can ever be revived so far as the United States is concerned.

One year will have passed before the new Senate meets. The death this week of Senator Bankhead leaves nineteen seats now held by Democrats to be filled in the new Senate. The terms of fifteen Republicans expire March 3, 1921. If the Democrats capture all thirty-four of these seats they will have only sixty-two votes in the new Senate—two fewer than the number required to ratify—and the Republicans will still hold thirty-four—two more than enough to prevent ratification on any but the terms they dictate.

Taking the treaty into the campaign may be of advantage to the Democratic party. It may re-elect President Wilson, if he is a third-term candidate. Many Republicans believe his position will have a strong appeal to the women voters, reacting to the "he kept us out of war" psychology. But the figures show it cannot greatly improve the treaty's chances of success in the Senate.

So soon as the treaty is out of the way for the session, the Senate will turn its energies to domestic legislation, which, except for the railroad bill, has been all but forgotten for more than a year. The first measure to come up will be the dyestuff bill, designed to prevent the dumping of German dyes in this country when full commercial relations are resumed.

Before the war there were in the United States only seven dye producing establishments, with a total annual output valued at \$3,596,795. Today as a result of the stoppage of German imports there are seventy-seven companies making finished dyes with an annual value of \$62,026,390. The House at the last session passed a bill for the protection of this industry under a system of licensing dye imports from abroad.

The Senate Finance Committee substituted a scheme for a three-year embargo to be administered by the Tariff Commission against the importation of dyes similar to those being manufactured in this country. Under the supposition that the bill could be passed quickly, the treaty debate was interrupted and one day last week given over to consideration of the dye bill.

Unexpected opposition developed. Middle-western senators thought the legislation would foster monopoly. The strongest opposition came, however, from senators who had introduced bills for the protection under high tariffs of the magnesite, tungsten and other industries developed during the war. These bills had been described by Senator Penrose, chairman of the Finance Committee, as "pop-gun tariff legislation" before he went south for the winter. The committee planned to hold them for inclusion in a general revision of the tariff to be undertaken at the next session.

However, Senator Poindexter took the leadership of the group whose bills had been neglected and threatened a filibuster against the dye bill unless the others were immediately reported. Action on the bill was blocked

*Knott in Dallas News.*

Teacher, it can't be done!

and it is probable that the Finance Committee will recognize the necessity of at least reporting the others before it is again taken up.

The House came during the week to a reluctant decision to give consideration to various of the sixty-two bills that have been introduced for the payment of an additional bonus to former service men. The American Legion, thru its Washington offices, is pressing energetically for "adjusted compensation" for its members and the House, uncertain to just what extent the Legion can control the "soldier vote," may go some way toward meeting its wishes, if it can find some method of doing so without bankrupting the Government or depreciating the value of outstanding Government bonds.

The Legion also is pressing with renewed vigor for the immediate establishment of a system of universal military training. The House Military Affairs Committee, after dropping the provisions for such a system from the army appropriation bill, decided to report a separate measure for this purpose.

Favorable action on universal military training cannot well be secured before the election, but its supporters predict and its opponents fear that it will go thru with a rush soon thereafter. The enemies of universal military training are planning, therefore, to get behind a substitute scheme proposed by Senator Capper. His bill would establish a system of universal physical education in the public schools, half the expense being borne by the Federal Government and half by the States. Such a system, its advocates contend, would give all the benefits of universal military training—to girls as well as to boys—at very much less expense and without encouraging the growth of a militaristic spirit in the United States.

RICHARD BOECKEL, *Washington.*

The Railways Unscramble

ON Monday, March 1, the United States Government ceased to operate the railroads of the nation, and private management, subject to the provisions of the Railroad act, was resumed. President Wilson signed the bill in spite of considerable pressure from the American Federation of Labor, the Railway Brotherhoods and the Farmers' National Council, urging him to veto it. In a note address to the representatives of the brotherhoods, the President tried to remove some of their apprehensions as to the possible effect of the new law on the adjustment of wages:

I cannot share the apprehension of yourselves and your constituents as to the provisions of the law concerning the Labor Board. I believe those provisions are not only appropriate in the interest of the public, which, after all, is principally composed of workers and their families, but will be found to be particularly in the interest of railroad employees as a class.

The argument that the public representatives on the Labor Board will be prejudiced against labor because drawn from classes of society antagonistic to labor can and ought to be overcome by selecting such public representatives as cannot be charged with any such prejudices. Nor do I anticipate that the public representatives will be against wage increases because they involve rate increases.

The owners and managers of the railroads are far better satisfied with the new law than the representatives of organized labor. The chief railroad companies have issued statements of a reassuring character as to the prospect of an early return to normal conditions of efficient operation. Most of them regard the experience of Government control during the war as an object lesson of the advantages of private ownership and claim that service and equipment depreciated greatly under public management, altho they concede that war conditions were necessarily abnormal and called for excep-

Ireland in the Columbus Dispatch.

Whence all but him had fled

tional measures. Chairman Cuyler, of the Association of Railway Executives, after reciting the present inferior condition of railroad equipment, said:

Under either private or Government ownership these deficiencies would have to be made up and paid for. What will distinguish private from Government ownership will be in the use made of the facilities existing at any given moment. There will be a tremendous pressure behind service to secure traffic. Greater effort will be made to satisfy shippers and passengers.

The return of the railroads might, if we may coin a word, be described as the greatest experiment ever made in "desocialization." Property worth some \$20,000,000,000 has passed from public to private management with the approval of a substantial majority in both branches of Congress. The network of railways covering the country, operated by the Government as a single system, now reverts to 230 corporations. A certain measure of public control is, however, retained. The Interstate Commerce Commission is enlarged by two additional members and its power over rates is increased. The right of the railroad corporations to issue bonds is made subject to the regulation of the commission. All labor disputes, which cannot be otherwise settled, come under the jurisdiction of a public Labor Board. The Interstate Commerce Commission is directed to fix rates during the next two years sufficient to allow 5½ per cent returns to the railroads on the value of their property devoted to the public use.

Director General Walker D. Hines defends the management of the railroads by the Government and declares that the period of transition after the resumption of private management will present few difficulties. He points out that with the close of the winter season operation will be much easier than it has been for several months. He admits a deficit, for the period of Government operation, of \$715,500,000, but ventures the opinion that under war conditions the cost to private operators would have been much more.

Mr. Hines explains the increase in the number of employees by the introduction of the eight-hour day. Thus while the number of men on the payroll had increased, the number of "labor hours" paid for had not. The average increase in pay per labor hour was about 100 per cent above the rates prevailing in 1913 and 1914, but other industries showed similar and even greater increases during the same period; that of the iron and steel industry averaging about 120 per cent. Moreover, the increase of pay per hour to railwaymen is partly

Thomas in Detroit News

Two opinions—both wrong

offset by the shortening of the working day to the eight-hour standard, so that if wages are measured by the week or year they have increased but little over 80 per cent since war conditions began to affect the cost of living. The Brotherhoods feel, therefore, that further increases are justified and must be granted in the near future. Mr. Hines declares that the only strikes under Federal control were unauthorized by responsible unions and that "the railroad employees as a whole are entitled to be highly commended for the steadiness and loyalty with which they have stuck to their work in the face of all sorts of misrepresentations and appeals to strike."

The total net cost to the Government of railroad operation is placed by Mr. Hines at \$1,886,322,885, of which Congress has still to appropriate \$436,322,885. Not all of this sum should be regarded as net deficit, however, as most of it is offset by improvements to permanent railroad equipment or recoverable assets and investments. In addition to the net deficit of \$715,500,000 for the operation of railroads, certain minor costs bring the deficit to about \$854,000,000. This amount is a direct charge on the public, but according to Mr. Hines it does not represent the cost of Government inefficiency but simply the price which had to be paid for keeping rates from increasing as rapidly as did operating expenses owing to the world-wide rise in the costs of material and services.

In conclusion the report of the director general thus summarizes what Federal operation did for the railway system of the nation:

It made practicable a war transportation service that could not have been otherwise obtained; its unification practices have increased the utilization of the inadequate supply of equipment so that an exceptionally large transportation service has been performed in the busy periods of 1919, with a minimum of congestion; it met the emergency of the unprecedented coal strike in a way which private control could not have done and absorbed a heavy financial loss on that account which would have proved highly disturbing to private control; it provided more additions and betterments and equipment than private control could have provided during the difficult financial period of 1918 and 1919; it dealt fairly with labor and gave

it the benefit of improved and stabilized working conditions which were clearly right; it not only did not cost more than private control would have cost during the same period but cost considerably less on account of the economies growing out of unification, and the total burden put upon the public (thru rates and taxes) on account of railroad costs was substantially less than would have been necessary if the railroads had remained in private control and rates had been raised enough to preserve their credit; it protected the investments in railroad properties, whereas without Federal control those investments would have been endangered, and it turns the railroads back to private control functioning effectively, with a record of exceptional performance in an exceptionally difficult winter, despite the disruption caused by the coal strike, and in condition to function still more effectively with the normal improvement to be expected in the weather and other conditions.

Steel Does Not Dissolve

THE Supreme Court of the United States has decided that the United States Steel Corporation does not, by the mere fact of its existence, extent and organization, violate the Sherman Anti-Trust law. The opinion was that of Justices McKenna, White, Holmes and Van Devanter. Justices Day, Clarke and Pitney give a dissenting opinion, and Justices McReynolds and Brandeis did not judge in the case, because prior to becoming members of the Supreme Court they had taken part in prosecutions against the Steel Corporation.

The majority opinion was that "the law does not make mere size an offense or the existence of unexerted power an offense." It was ruled that positive evidence of oppressive action to crush competitors and thus assure a monopoly must be brought in evidence. A distinction was drawn between the case of the United States Steel Corporation and those of the Standard Oil Company and the American Tobacco Company, in which the Supreme Court had previously affirmed the illegality of a monopoly and ordered dissolution. The Standard Oil Company and the Tobacco Trust were guilty, according to the Supreme Court, of illegal and coercive methods to stifle competition, whereas no such methods, at least of recent date, had been employed by the Steel Corporation.

The dissenting opinion agreed that the Sherman Anti-Trust law placed no ban on "size and the power that legitimately goes with it," but contended that the Steel Corporation had entered into combinations and agreements in restraint of trade. By means of "pools, associations, trade meetings and as a result of discussion and agreements at the so-called 'Gary dinners,' where the assembled trade opponents secured coöperation and joint action," the Steel Corporation "had within its control the domination of the trade and the ability to fix prices and restrain the free flow of commerce upon a scale heretofore unapproached in the history of corporate organization in this country."

A number of other cases under the Sherman act are pending before the Federal courts, but it is not certain that the decision in the case of the Steel Corporation will have any appreciable effect as a precedent. The majority of the Supreme Court did not deny the constitutionality of the Sherman act or claim to offer a new interpretation of it, but contended simply that on the facts as presented sufficient evidence of illegal practices had not been proved in the particular case before the court. Moreover, if Justices McReynolds and Brandeis had felt free to give a verdict it is very possible that a majority of the court would have been obtained for dissolution.

On the same day as the Steel Trust decision, the Su-

preme Court handed down a verdict on the income tax laws of Oklahoma and New York. These two states taxed the incomes of non-residents deriving income from business within the state assessing the tax. The constitutionality of the tax on non-residents was affirmed in both cases. On the other hand, the provision of the New York law granting exemptions to resident taxpayers which were denied to non-residents was declared unconstitutional as an unjust discrimination against citizens of other states. In consequence of this decision the New York legislature will amend the law.

Issues in the Empire State

NEW YORK has formally opened the campaign of 1920 with "unofficial" state conventions of both the Republican and Democratic parties. Neither party pledged the state delegation to any candidate, but each convention selected four delegates-at-large to the national convention, adopted a platform and made the sort of "keynote" speeches appropriate to the early days of a campaign.

Ex-Senator Root was the leading orator at the New York Republican convention. Mr. Root said that the chief task of the Republican party was "to bring our country back to normal." He urged a national budget, the curtailment of expenditure by executive departments and tax revision downwards. He favored the ratification of the Treaty with Germany with the reservations favored by the Senate majority. Dr. Butler, chairman of the platform committee, concentrated his attack on the excess profits tax and urged its abolition.

© Keystone View

Much discussion was aroused by President Wilson's recent nomination of Bainbridge Colby to succeed Mr. Lansing as Secretary of State. Mr. Colby is noted, says one characterization, "for his swiftly variable political faith, his sharp tongue, and his interesting personality." He has been successively a Republican, a Progressive, an Independent, and an ardent follower of President Wilson. During the war he was appointed by President Wilson as a member of the United States Shipping Board

The American Issue

"US ADOPT THAT LITTLE RUFFIAN? NEVER!"

Senator Wadsworth, of New York, who is up for reelection to the United States Senate, has consistently opposed woman suffrage, prohibition, and the League of Nations

The platform denounced "the inordinate extravagance of the present Administration" and urged "the prompt passage of legislation to authorize a national budget." The general tenor for the platform was most conservative. It asked for the repeal of war-time legislation, the return of the railroads to private ownership, a "merchant marine owned by private capital and operated by private energy," stricter immigration laws, a return to the protective tariff, a military system based on "a trained citizen reserve," and the ratification of the Peace Treaty with the Senate reservations. The denunciation of Socialism was extended even to "the so-called Plumb plan" and to the labor clauses of the Treaty, which were lyrically referred to as "the net spread by international Socialism."

The Democratic convention, instead of meeting the Republicans squarely on the issue of political and economic "stand-patism" in an attempt to capture the liberal and radical vote, decided that the liquor vote was after all the most important. After a general endorsement of the administration of President Wilson and of Governor Smith, the platform dwelt on one concrete issue, the eighteenth amendment, declaring:

We are unalterably opposed to prohibition by Federal amendment. We believe it to be an unreasonable interference with the rights of the states as guaranteed by the Constitution. We feel that the recent enactment was the imposition of the ideas of an active minority against the wishes of the great majority of the American people. We therefore declare for its speedy repeal and to the end that the personal liberty of the people of our State may be thoroly safeguarded until such time as this repeal may be brought about we declare the right of our State in the exercise of its sovereign power to so construe the concurrent clause of the eighteenth amendment as to be in accord with the liberal and reasonable views of our people.

Mayor Lunn of Schenectady, former Socialist, opposed this plank and suggested instead one favoring amendment of the constitution by popular referendum, declaring that it was impossible to repeal the eighteenth amendment under existing constitutional provisions. His motion to substitute was lost, but his proposal was adopted as an additional plank in the platform.

The two parties have raised issues but have not joined issue. Both platforms endorsed woman suffrage, denounced Bolshevism, favored rigid economy and pointed with pride to the party war record. Both favored ratification of the Treaty, the Republicans insisting on the Senate reservations and the Democrats opposing "destructive reservations." The issues of budget reform and of private versus public ownership

Why We Pay Taxes

Make a chain of hundred dollar bills to the amount of the money spent for the Great War and it will go between eight and nine-tenths of the way around the world, approximately 21,250 miles

Ten Times the Cost of Previous Wars Combined

The big chart shows the direct cost of the Great War to seven of the countries involved, with a comparison of the money spent by each of these nations on other wars for two centuries previous. This cost shows only money expenditure, of course. Such indirect costs as loss of revenues, destruction of trade, depreciation of earning of currency and increased prices, pensions, computed. The figures illustrated on these prepared by a statistician from official reports of the governments of the Allies and Germany various financial studies of the war. For the dollar was taken as the unit of value and other currencies were converted by valuing the English pound at \$5.00, the franc at \$.20, the mark at \$.25, the ruble at \$.50, and the krone at \$.25

Distribute the money cost of the war among the people of the largest city in the world, and every man, woman and child in New York would get \$32,000. Scatter it over the entire United States and each inhabitant would receive \$1826. The city of New York could be run for 751 years on the money that the Great War cost

Major Dalrymple (left), prohibition commissioner, took the heart out of the whisky rebellion at Iron River, Michigan, by ordering the prompt destruction of the liquor discovered there

of industry raised by the Republican convention were practically ignored by the Democratic convention; and, conversely, the prohibition issue, on which the Republicans had nothing to say, was the heart and center of the Democratic platform.

Our Neighbor Up North

THE Dominion of Canada is just now much excited over the possibility that the United States may insist on a reservation to the League of Nations Covenant which will bar the British Dominions from separate membership in the League. A remark of the Governor General at the opening of the Dominion Parliament is considered significant; "the status of Canada as a member of the League of Nations has been definitely fixed." Canada is determined to maintain this position, and there have been many suggestions that any attempt to recede from it will compel Canada to reconsider her action in joining the League. On no conditions will the Dominion forego its separate nationhood. Professor Wrong of the University of Toronto expresses the Canadian point of view with exceptional clearness:

It was at the request of the Prime Minister of Canada that a declaration was signed on May 6, 1919, by the President of the United States, the Prime Minister of France, and the Prime Minister of Great Britain, to the effect that no limitation would be placed upon the right of Canada as a nation to be a full member of the League of Nations, quite independently of Great Britain. At Washington it is now urged that this gives an unfair advantage to the British States. To this Canada's answer is that her part in the war brought the completion of her national life, that this was recognized at Paris not less by Great Britain than by the other nations of the world, that she signed the treaty of peace on this understanding, and that to draw back on this point would be for her to become again a colony of Great Britain. . . .

Great Britain is a European State governed from London; Canada is an American State governed from Ottawa. The self-governing States of the British Empire are governed by their Prime Ministers, kept in power by a majority of the elected representatives of their people. The King has no direct political authority of any kind; he can

act only thru his Ministers; he does this in Canada thru Canadian Ministers. The tie of Canada with Great Britain is the tie of common traditions and loyalties; it is very strong, but it is so light that, with no sacrifice of national status, the United States might be included in the League of Nations which is the British Empire. The world will have to learn in respect to the British Commonwealth that each of its selfgoverning States is a nation with rights as such.

The Nation of Canada, since such is its political status, is beginning to follow the example of Australia and New Zealand in adopting a selective policy toward immigration. During 1919 twenty thousand persons were refused admission to Canada. Sir Andrew Macphail of Montreal declared that promiscuous immigration was not to be encouraged. "The only immigration to save us is the emigration from the cities to the country." Canada fears that the settlement of large blocks of foreign population in the towns may destroy the distinctive nationhood of the Dominion. As a partial offset to the cityward movement the Government has actively forwarded plans to settle returned soldiers on the land. More than 15,000 service men have already been provided with homesteads in rural Canada according to the Report of the Soldier Settlement Board.

One manifestation of the increasing national consciousness of Canada is the attempt to develop a merchant marine and a national railway system. The new budget, it is predicted, will include \$20,000,000 for shipping. The plans of the Government call for sixty ships with a total of nearly 360,000 tons. Increased exportation of lumber and foodstuffs from Canada to Great Britain and continental Europe is expected and, unless the commercial men of the Dominion are in error, the new shipping will be fully occupied in handling Canadian freight. According to the Report of the Shipping Federation \$700,000,000 worth of goods was exported last season thru Montreal, making it the second port in North America. The Canadian Government is negotiating with the Grand Trunk Railway Company for the purchase of the entire system, which will be united with other lines already acquired by the Dominion.

Turks Massacre Armenians

JUST at the time when the Allies, acting independently of America, have decided to allow the Turks to retain possession of Constantinople, comes the news of horrible atrocities committed by the Turks on the Christian population. It is estimated that 5000 Armenians have been murdered in the villages of Cilicia. At Marash the American college was fired upon and the outlying buildings burned. The American rescue home for Armenian girls at Marash was sacked and the eighty-five inmates killed. Women and children have been mutilated or put to death by torture. Marash was garrisoned by French troops, but the attack of the Turks was so fierce that they were compelled to withdraw to Adana. Some 3000 Armenians tried to escape slaughter by following on foot, but many of the women and children perished from snowstorms on the way to the coast. Arab troops from the army which the British provided for the Kingdom of the Hedjaz took the side of the Turks in this fighting, but later Prince Feisal ordered his men to withdraw.

In the midst of the war, when the outlook was darkest, France and Great Britain came to an agreement as to the partition of Turkey which is known as the Sykes-Picot treaty of 1916. According to this the British were to annex Egypt and Cyprus and to extend their control over Mesopotamia, northern Arabia and Palestine, while the French were to assume control over northern and

coastal Syria, Cilicia and the region round about Alexandretta as far north as Sivas.

But the French claims in Cilicia were resented not only by the Turks but also by the Armenians, who hoped to have an independent republic extending from the Black Sea to the Mediterranean. Another secret document discovered in the Russian archives has been brought to America by Isaac Don Levine. This is a communication from the British Secretary for Foreign Affairs Balfour notifying the French Government that Italy had adhered to the Sykes-Picot treaty on condition of getting the Smyrna region as her share of the spoils. The document is dated August 18, 1917, that is, after the United States entered the war, yet it seems that it was not made known to the American Government. Italy secured a secret promise before she entered the war that she would get Turkish territory as well as France and Great Britain, but it later became necessary to win over the Greeks, so Smyrna was given to Greece instead of to Italy. When the Greeks took possession after the Armistice they came into conflict with the Italians as well as with the Turks.

Premier Lloyd George, in defending before the House of Commons his decision to keep the Sultan in Constantinople, said that the agreement to give Constantinople to Russia lapsed with the Russian revolution of 1917, and in January, 1918, the British gave a "perfectly deliberate pledge," to reassure the Mohammedans, that the British were not fighting to deprive the Turks of Constantinople. Without the aid of India, Turkey could not have been conquered, and nothing could be more damaging to British prestige in Asia than the feeling that Great Britain did not keep her word. Our legitimate peace aims in Turkey are, he said, three, as follows:

The first is the freedom of the Straits. The second is the freeing of all non-Turkish communities from the Ottoman army. The third is the preservation for the Turks of self-government in communities which are mainly Turkish, subject to two most important reservations. The first of these reservations is that there must be adequate safeguards within our power of protecting minorities that have been oppressed by the Turks. The second is that the Turk must be deprived of his power of vetoing the development of the rich lands under his rule which were once the granaries of the Mediterranean.

Premier Lloyd George said that he had the previous approval of Lord Grey, Mr. Asquith and Lord Robert Cecil when in his speech of January, 1918, giving the

THE DICTATOR OF FIUME

Gabriele d'Annunzio, the flying poet, still holds the city of Fiume in defiance of the Italian Government, the League of Nations, and the votes of the populace

war aims of the Allies, he had made the following statement:

Nor are we fighting to deprive Turkey of its capital or of the rich and renowned lands of Asia Minor and Thrace, which are predominantly Turkish in race.

Further the Allies publicly accepted Wilson's Fourteen Points and the twelfth of these reads:

The Turkish portions of the present Ottoman Empire should be assured secure sovereignty, but other nationalities which are now under Turkish rule should be assured undoubted security of life and absolutely unmolested opportunity of autonomous development.

Lord Robert Cecil denied that the pledge of January, 1918, was binding; it was a peace offer that was not accepted and so fell to the ground like the promise not to break up Austria-Hungary.

Mass meetings to protest against leaving Constantinople to the Turks are now being held in churches throughout Great Britain and the United States. The British Labor party, which is steadily growing in power, has taken direct issue with the Government on this question and has issued a manifesto demanding (1) that Constantinople be taken from the Sultan and made an international city under the auspices of the League of Nations; (2) that Armenia be wholly released from Turkish rule and be placed under a mandatory, preferably the United States, for a term of years; and (3) that the disposal of the rest of the Ottoman Empire be settled by local plebiscites except where the character of the population had been altered by Turkish massacres and deportations.

But Lloyd George has to consider the sentiment not merely of the Christians of England, but of the Mohammedans of the Empire. There are about a hundred million Mohammedans ruled by King George and four-fifths of these are in India. Most of the Indian and Egyptian Moslems belong to the Sunnite sect, who regard the Caliph of Constantinople as their spiritual sovereign. The other sect, the Shiites, who form a majority in Persia and a minority in India, do not recognize the Sultan as Caliph, but yet they would resent almost as strongly as do the Sunnites the eviction of the Sultan from his European city which he has occupied since

Ex-Premier Asquith came back into Parliament as an independent Liberal, having defeated both the Labor and Coalition candidates in the Paisley election. Mrs. Asquith aided actively in the campaign; this photograph shows her sitting on the platform during her husband's final campaign speech

International

It was in this equipment that Major Schroeder flew to a height of nearly 37,000 feet, surpassing all previous altitude records. An oxygen tank in the plane supplied oxygen thru the tube leading into his helmet. His clothes were electrically heated

1453. The division of the Moslem world is somewhat like the division of Christendom. The Protestants, altho they do not acknowledge the spiritual authority of the Pope, would nevertheless feel it as a blow to Christianity if the Turks conquered Rome and turned St. Peter's into a mosque.

Besides the union of the rival Mohammedan sects on this question the Hindus of India are joining with the Moslems in their opposition to the English. The leaders of both parties used their influence to prevent their people from participating in the celebration of peace and victory.

The Supreme Council instructed its representative in Constantinople, Admiral de Robeck, to inform the Turks that "if the persecution of the Armenians continues the peace treaty may be considerably modified." But the Turks who are making trouble in Armenia are insurgents over whom the Constantinople Government professes to have no control, so the warning is not likely to have much effect.

The United States Senate, notwithstanding its professed reluctance to interfere with the settlement of peace questions, took very decided and quite surprising action on the question of Thrace, which has puzzled the ethnological experts more than any other. Various plans have been proposed for partitioning this territory between the Greeks, Turks and Bulgars so as to recognize the principle of nationality as far as possible in this mixture of races. But the Senate, by an almost unanimous rising vote, passed a resolution declaring that all of the Thracian territory surrendered to Bulgaria and Turkey should be awarded to Greece, provided that an outlet to the Ægean Sea be given to Bulgaria.

This gives to the Greeks more than Premier Venizelos himself has seriously claimed and contravenes the principle established by President Wilson, that peoples should not be handed about without their consent. Greeks are in a minority in this territory as a whole, and it is highly questionable how the population would vote if they had a chance to express their preference in the matter.

Senator King of Utah has introduced a resolution into the Senate calling for the formation of three separate states: one of Constantinople freed from Ottoman rule, the second composed of the six Armenian vilayets and the third of the Turkish part of Anatolia.

French Railroad Strike

THE strike of the employees of the southern French railroads was of more than local importance, for it was not a mere dispute over wages but was engineered by the radical faction with intent to force the complete nationalization of the French railroads and perhaps even to lead to a dictatorship of the proletariat *à la Russe*. It failed, like the similar strike in England, because the public refused to favor such revolutionary tactics, and because the Government was prepared to make full use of the new means of communication and transportation, automobiles, motor trucks and airplanes. The French Government used a weapon that the British Government did not, the call to the colors.

The pretext for the strike was the suspension for two days of an employee named Campanaud for leaving his work to attend a union meeting to which he was not a delegate. The general manager refused to reinstate him, so almost all the men on the road, the Paris, Lyons and Mediterranean, walked out. The executive committee of the National Federation of Railway Men called for a strike of all the employees on all the roads, but not all responded. The traffic south and east of Paris was stopped for three days, but some of the other roads were kept running after a fashion. Paris was put on rations more stringent than during the war, and a thousand army camions were bringing food into the capital. The military airplanes carried mail and passengers to any part of France.

Then the Government issued mobilization orders to the 10,000 strikers which required them to report at once to the barracks and put on uniforms for army service. Agitators who advised the men to refuse to obey the orders were arrested for interfering with military measures. The soldiers were set to run the trains.

Finally the railroad union referred the dispute to the Federation of Labor (*Confederation Generale du Travail*) in the hope that that body would call a general

All previous altitude records in aviation were broken when Major R. W. Schroeder, of the United States Air Service, ascended 36,020 feet over Dayton, Ohio. At that height the supply in his oxygen tank failed and his eyes were frozen shut by the temperature of 67 degrees below zero. Major Schroeder lost consciousness and his plane fell five miles in two minutes. Then he became conscious enough to right the plane and automatically bring it to a safe landing on the flying field. He was taken immediately to a hospital and is expected to regain his sight

NERVE EXHAUSTION

How We Become Shell-Shocked in Every-Day Life

By PAUL VON BOECKMANN

Lecturer and Author of numerous books and treatises on Mental and Physical Energy, Respiration, Psychology, Sexual Science and Nerve Culture

THERE is but one malady more terrible than Nerve Exhaustion, and that is its kin, Insanity. Only those who have passed through a siege of Nerve Exhaustion can understand the true meaning of this statement. It is HELL; no other word can express it. At first, the victim is afraid he will die, and as it grips him deeper, he is afraid he will not die; so great is his mental torture. He becomes panic-stricken and irresolute. A sickening sensation of weakness and helplessness overcomes him. He becomes obsessed with the thought of self-destruction.

Nerve Exhaustion means Nerve Bankruptcy. The wonderful organ we term the Nervous System consists of countless millions of cells. These cells are reservoirs which store a mysterious energy we term Nerve Force. The amount stored represents our Nerve Capital. Every organ works with all its might to keep the supply of Nerve Force in these cells at a high level, for Life itself depends more upon Nerve Force than on the food we eat or even the air we breathe.

If we unduly tax the nerves through overwork, worry, excitement, or grief, or if we subject the muscular system to excessive strain, we consume more Nerve Force than the organs produce, and the natural result must be Nerve Exhaustion.

Nerve Exhaustion is not a malady that comes suddenly. It may be years in developing and the decline is accompanied by unmistakable symptoms, which, unfortunately, cannot readily be recognized. The average person thinks that when his hands do not tremble and his muscles do not twitch, he cannot possibly be nervous. This is a dangerous assumption, for people with hands as solid as a rock and who appear to be in perfect health may be dangerously near Nerve Collapse.

One of the first symptoms of Nerve Exhaustion is the derangement of the Sympathetic Nervous System, the nerve branch which governs the vital organs (see diagram). In other words, the vital organs become sluggish because of insufficient supply of Nerve Energy. This is manifested by a cycle of weaknesses and disturbances in digestion, constipation, poor blood circulation and general muscular lassitude usually being the first to be noticed.

I have for more than thirty years studied the health problem from every angle. My investigations and deductions always brought me back to the immutable truth that Nerve Derangement and Nerve Weakness is the basic cause of nearly every bodily ailment, pain or disorder. I agree with the noted British authority on the nerves, Alfred T. Schofield, M.D., the author of numerous works on the subject, who says: "It is my belief that the greatest single factor in the maintenance of health is that the nerves be in order."

The great war has taught us how frail the nervous system is, and how sensitive it is to strain, especially mental and emotional strain. Shell Shock, it was proved, does not injure the nerve fibres in themselves. The effect is entirely mental. Thousands lost their reason thereby, over 135 cases from New York alone being in asylums for the insane. Many more thousands became nervous wrecks. The strongest men became paralyzed so that they could not stand, eat or even speak. One-third of all the hospital cases were "nerve cases," all due to excessive strain of the Sympathetic Nervous System.

The mile-a-minute life of to-day, with its worry, hurry, grief and mental tension is exactly the same as Shell Shock, except

that the shock is less forcible, but more prolonged, and in the end just as disastrous. Our crowded insane asylums bear witness to the truth of this statement. Nine people out of ten you meet have "frazzled nerves."

Perhaps you have chased from doctor to doctor seeking relief for a mysterious "something the matter with you." Each doctor tells you that there is nothing the matter with you; that every organ is perfect. But you know there is something the matter. You feel it, and you act it. You are tired, dizzy, cannot sleep, cannot digest your food and you have pains here and there. You are told you are "run down" and need a rest. Or the doctor may give you a tonic. Leave nerve tonics alone. It is like making a tired horse run by towing him behind an automobile.

Our Health, Happiness and Success in life demands that we face these facts understandingly. I have written a 64-page book on this subject which teaches how to protect the nerves from every day Shell Shock. It teaches how to soothe, calm and care for the nerves; how to nourish them

Through them you experience all that makes life worth living, for to be dull, nervous means to be dull brained, insensible to the higher phases of life—love, moral courage, ambition and temperament. The finer your brain is, the finer and more delicate is your nervous system, and the more imperative it is that you care for your nerves. The book is especially important to those who have "high strung" nerves and those who must tax their nerves to the limit.

The following are extracts from letters from people who have read the book and were greatly benefited by the teachings set forth therein:

"I have gained 12 pounds since reading your book, and I feel so energetic. I had about given up hope of ever finding the cause of my low weight."

"I have been treated by a number of nerve specialists, and have traveled from country to country in an endeavor to restore my nerves to normal. Your little book has done more for me than all other methods combined."

"Your book did more for me for indigestion than two courses in dieting."

"My heart is now regular again and my nerves are fine. I thought I had heart trouble, but it was simply a case of abused nerves. I have reread your book at least ten times."

A woman writes: "Your book has helped my nerves wonderfully. I am sleeping so well and in the morning I feel so rested."

"The advice given in your book on relaxation and calming of nerves has cleared my brain. Before I was half dizzy all the time."

A physician says: "Your book shows you have a scientific and profound knowledge of the nerves and nervous people. I am recommending your book to my patients."

A prominent lawyer in Ansonia, Conn., says: "Your book saved me from a nervous collapse, such as I had three years ago. I now sleep soundly and am gaining weight. I can again do a real day's work."

The Prevention of Colds

Of the various books, pamphlets and treatises which I have written on the subject of health and efficiency, none has attracted more favorable comment than my sixteen-page booklet entitled, "The Prevention of Colds."

There is no human being absolutely immune to Colds. However, people who breathe correctly and deeply are not easily susceptible to Colds. This is clearly explained in my book NERVE FORCE. Other important factors, nevertheless, play an important part in the prevention of Colds—factors that, concern the matter of ventilation, clothing, humidity, temperature, etc. These factors are fully discussed in the booklet above mentioned, and I shall agree to send this booklet free to purchasers of NERVE FORCE.

No ailment is of greater danger than an "ordinary cold," as it may lead to Influenza, Grippe, Pneumonia or Tuberculosis. More deaths resulted during the recent "Flu" epidemic than were killed during the entire war, over 6,000,000 people dying in India alone.

Send for a copy of the booklet, "The Prevention of Colds." You will agree that this alone is worth many times the price asked for both books.

PAUL VON BOECKMANN

Studio 235, 110 West 40th St., New York

The Sympathetic Nervous System

Showing how Every Vital Organ is governed by the Nervous System, and how the Solar Plexus, commonly known as the Abdominal Brain, is the Great Central Station for the distribution of Nerve Force

through proper breathing and other means. The cost of the book is only 25 cents. Bound in cloth, 50 cents. Remit in coin or stamps. See address at the bottom of page. If the book does not meet your fullest expectations, your money will be refunded, plus your outlay of postage.

The book "Nerve Force" solves the problem for you and will enable you to diagnose your troubles understandingly. The facts presented will prove a revelation to you, and the advice given will be of incalculable value to you.

You should send for this book today. It is for you, whether you have had trouble with your nerves or not. Your nerves are the most precious possession you have.

London Daily Express

The perfect alibi

strike of all the unions. But instead of that the C. G. T. opened negotiations with the Government to submit the issues to arbitration. Premier Millerand proposed a settlement on condition that the men be not punished for refusal to work, that they lose their pay for the days they were out, that the system of penalties be investigated, and that the question of nationalization be studied by a commission. On these conditions the strikers returned to their posts.

The French Bolsheviks received another check at the national congress of Socialists. The delegates from Paris were instructed by their locals to vote for adhering to the Moscow International, but the National Socialist Congress held at Strasbourg voted down the proposal by two to one. The question is on what measures shall be taken to restore the International Workingmen's Association which was broken up by the war. The First International was formed at London in 1864, but was split by the Franco-Prussian war, when the radical faction, led by Bakunin, favored communism as manifested in Paris, and the moderate faction, led by Marx, stuck to straight socialism. The Second International was likewise brought to an end by the Great War and over the same question of communism. An effort was made to revive it in Switzerland last year, where a congress of Socialists and labor organizations of various countries, but not France, Belgium or Russia, repudiated the Russian communist program. Consequently a rival association, calling itself the Third International, was started at Moscow, but has only secured the adhesion of the extreme left wing of the Socialists of Europe and the United States. The French Socialists at the Strasbourg congress declared against both the Second and the Third International and called for a new organization.

On account of the delay in getting the League of Nations established France will be obliged to call to compulsory military service 276,000 young men coming of age in 1920. They will have to serve three years in the army. The present standing army of France consists of 794,000 men, of whom 510,000 are white Frenchmen and 284,000 are colored colonials.

Opening Up Russia

THE Supreme Council of the League of Nations, having decided to restore commercial relations with Soviet Russia, is now planning for a commission of experts to investigate internal conditions and arrange the conditions of trade. At the head of the commission will be Dr. Fridtjof Nansen, the Norwegian explorer, whose scheme for carrying relief into Russia last year was vetoed by the council. Premier Millerand of France proposes to send a financier to find out if the Bolsheviks are sincere in their offer to recognize the foreign obligations of the old empire and to safeguard foreign investments. If his report is satisfactory the French Government will recognize the Soviet. There will be no American representative on the international commission to Russia because the United States has not entered the League of Nations.

Walter H. Long, First Lord of the Admiralty, has informed the House of Commons arrangements have been completed for trade with the Russian coöperative societies. Twenty representatives of the Russian coöperatives have left Moscow for London and their London agents have gone to Moscow.

The Baltic States, which seceded from Russia and are now making peace with the Soviet, are being rapidly drawn into the commercial sphere of Great Britain. London financiers have advanced £3,000,000 to establish a national bank in Lithuania. For the next fifteen years, during which the political policies of the new republic are being developed and its commercial relations established, this group of British interests will have virtually a monopoly of its trade and finance. The British will act as agents for the sale of lumber, flax and grain of Lithuania and for the purchase of the machinery and manufactures to be imported.

Senator France of Maryland has introduced into the Senate a resolution calling upon the State Department to raise the embargo on the shipment of goods to Rus-

Still, there are signs of spring

The Shortest, Easiest and Surest Road to Prosperity and Success

A Subtle, Basic and Fundamental Principle of Success and Supremacy

THIS SUTLE PRINCIPLE in my hands, without education, without capital, without training, without experience, and without study or waste of time and without health, vitality or will power has given me the power to earn more than a million dollars without selling merchandise, stocks, bonds, books, drugs, appliances or any material thing of any character.

This subtle and basic principle of success requires no will power, no exercise, no strength, no energy, no study, no writing, no dieting, no concentration and no conscious deep breathing. There is nothing to practice, nothing to study, and nothing to sell.

This subtle and basic principle of success does not require that you practice economy or keep records, or memorize or read, or learn or force yourself into any action or invest in any stocks, bonds, books or merchandise.

This subtle principle must not be confused with Metaphysics, Psychology, New Thought, Christian Science, arbitrary optimism, inspiration or faith.

No one has yet succeeded in gaining success without it.

No one has ever succeeded in failing with it.

It is absolutely the master key to success, prosperity and supremacy.

MY EXPERIENCE

When I was eighteen years of age, it looked to me as though I had absolutely no chance to succeed. Fifteen months altogether in common public school was the extent of my education. I had no money. When my father died, he left me twenty dollars and fifty cents, and I was earning hardly enough to keep myself alive. I had no friends for I was negative and of no advantage to any one. I had no plan of life to help me solve any problem. In fact, I did not know enough to know that life is and was a real problem, even though I had an "acute problem of life" on my hands. I was blue and despondent and thoughts of eternal misery arose in my mind constantly. I was a living and walking worry machine.

I was tired, nervous, restless. I could not sleep. I could not digest without distress. I had no power of application. Nothing appealed to me. Nothing appeared worth doing from the fear that I could not do anything because of my poor equipment of mind and body. I felt that I was shut out of the world of success and I lived in a world of failure.

I was such a pauper in spirit that I blindly depended on drugs and doctors for my health as my father before me. I was a "floater" and depended on luck for success if I were to have any. I consciously or unconsciously believed that if I ever were to have health and success, the result would have to come through some element of ease or assistance or through some mysterious or magical source. The result of this attitude on my part was greater weakness, sickness, failure and misery as is always the case under similar condition.

Gradually my condition became worse. I reached a degree of misery that seemed intolerable. I reached a crisis in my realization of my failure and adverse condition.

Out of this misery and failure and pauperism of spirit—out of this distress—arose within me a desperate reaction—"a final effort to live"—and through this reaction, arose within me, the discovery of the laws and principles of life, evolution, personality, mind, health, success and supremacy. Also out of this misery arose within me

the discovery of the inevitable laws and principles of failure and sickness and inferiority.

When I discovered that I had unconsciously been employing the principles of failure and sickness, I immediately began to use the principles of success and supremacy. My life underwent an almost immediate change. I overcame illness through health, weakness through power, inferior evolution by superior evolution, failure by success, and converted pauperism into supremacy.

I discovered a principle which I observed that all successful personalities employ, either consciously or unconsciously. I also discovered a principle of evolution and believed that if I used it, that my conditions would change, for, I had but one disease—failure, and therefore there was but one cure—success, and I began to use this principle and out of its use arose my ambition, my powers, my education, my health, my success and my supremacy, etc., etc.

You also may use this principle of success deliberately, purposefully, consciously and profitably.

Just as there is a principle of darkness, there is also a principle of failure, ill-health, weakness and negativness. If you use the principle of failure consciously or unconsciously, you are sure always to be a failure. Why seek success and supremacy through blindly seeking to find your path through the maze of difficulties? Why not open your "mental eyes" through the use of this subtle success principle, and thus deliberately and purposefully and consciously and successfully advance in the direction of supremacy and away from failure to adversity?

I discovered this subtle principle—this key to success—through misery and necessity. You need never be miserable to have the benefit of this subtle principle. You may use this success principle just as successful individual of all time, of all countries, of all races, and of all religions have used it either consciously or unconsciously, and as I am using it consciously and purposefully. It requires no education, no preparation, no preliminary knowledge. Any one can use it. Any one can harness, employ and capitalize it, and thus put it to work for success and supremacy. Regardless of what kind of success you desire, this subtle principle is the key that opens the avenue to what you want.

It was used by Moses, Caesar, Napoleon, Theodore Roosevelt, Mrs. Mary Baker Eddy, John D. Rockefeller, W. R. Hearst, Herbert Spencer, Emerson, Darwin, J. P. Morgan, Harriman, Woodrow Wilson, Bryan, Charles Schwab, Cyrus Curtis, Lloyd-George, Clemenceau, Charles E. Hughes, Abraham Lincoln, George Washington, Marshall Field, Sarah Bernhardt, Galli-Curci, Nordica, Melba, and thousands and thousands of others—the names of successful men and women of all times and of all countries, and of all religions and of all colors make a record of the action of this subtle principle of success. None of these individuals could have succeeded without it—no one can succeed without it—no one can fail with it.

MY DUTY TO HUMANITY

Every one realizes that human beings owe a duty to each other. Only the very lowest type of human being is selfish to the degree of wishing to profit without

helping someone else. This world does not contain very great numbers of the lowest and most selfish type of human beings. Almost everyone, in discovering something of value, also wants his fellowman to profit through his discovery. This is precisely my attitude. I feel that I should be neglecting my most important duty to-

wards my fellow human beings, if I did not make every effort—every decent and honest effort—to induce every one to also benefit to a maximum extent through the automatic use of this subtle principle.

I fully realize that it is human nature for men and women to have less confidence in this principle because I am putting it in the hands of thousands of individuals for a few pennies, but I cannot help the negative impression I thus possibly create. I must fulfill my duty just the same.

I do not urge any one to procure it because I offer it for a few pennies, but because the results are great—very great.

This subtle principle is so absolutely powerful and over-mastering in its influence for good, profit, prosperity and success, that it would be a sin if I kept it to myself and used it only for my personal benefit.

So sure am I of the truth of my statements—so absolutely positive am I of the correctness of my assumption and so absolutely certain am I that this principle, in your hands, will work wonders for you that I am willing to place this principle in your hands for twenty-four hours at my risk and expense. You will recognize the value of this principle within twenty-four hours—in fact, almost immediately as you become conscious of it, you will realize its practicability, its potency, its reality and its power and usability for your personal profit, pleasure, advancement, prosperity and success.

Thousands of individuals claim that the information disclosing and elucidating the secret principle of success is worth a thousand dollars of anyone's money. Some have written that they would not take a million dollars for it.

You will wonder that I do not charge a thousand dollars for this information—for disclosing this principle, after you get it into your possession and realize its tremendous power and influence.

I have derived such tremendous results—amazing results from its power, that I am sure it will raise the entire human race to a new and higher level in present, as well as ultimate success. I, therefore, want every man, woman and matured child to have this key to success, prosperity and wealth. This is why I am willing to send it to any one—to any address, upon receipt of the mere cost of writing, mailing, composing and advertising it. There is no other obligation, neither now nor later.

Either send me one dollar now (the mere cost of writing, mailing, composing and advertising) or send the coupon without money and I shall furnish you with a full explanation of the nature of this subtle principle and how to use it for your personal success.

You would never forgive me, and I could never forgive myself, nor could the creative forces of the Universe forgive us, if I failed to bring you to the point of using this subtle principle of success. You would never forgive me if I failed to do for you that which you would do for me, if our positions were reversed.

ALOIS P. SWOBODA

2326 Berkeley Bldg., West 44th St.
New York City, N. Y.

Send me the explanation of how to use your subtle and basic principle of success.

I agree and promise to either email your letter to you within twenty-four hours from its receipt by me, or to send you one dollar (and seven cents collection charges) in full payment.

NURSERY RIMES UP-TO-DATE

Old King Cole His bowl is taboo
Is a sad old soul Tobacco is, too,
And a sad old soul is he— And on strike are his fiddlers three.

sia, to withdraw American troops from Russian soil, to arrange commercial credits for Russia, and

To convey to the people of Russia expressions of our appreciation and gratitude for their heroic part in the war and our felicitations to them for having overthrown a despotic government, and assurances of the desire of the American people to cooperate with them and to assist them in every proper and possible way in their efforts to establish institutions which will insure to them an ordered liberty.

Russia's exports before the war included about 9,000,000 tons of wheat and flour, 72,000 tons of butter, and 371,000 tons of sugar a year. Of the total exports 30 per cent went to Germany and 21 per cent went to the United Kingdom. Four-fifths of the flax of the world was grown in Russia, and the Irish and Scotch linen mills depended upon Russia for three-fourths of their flax. They are now so short of material that they are running at half capacity, and, unless the blockade of Russia is raised soon, they may be forced to shut down.

The southern drive of the Soviet forces broke Denikin's army in two. One part retreated eastward and took a stand behind the Don River. The other section, more demoralized, fell back toward Odessa, which they were unable to hold. The Bolsheviks claim that in their three weeks' campaign in the region of Tiraspol and Odessa they captured 12,700 prisoners, 342 guns, 23 armored trains, 5500 rifles, 15 airplanes and 390 motor cars. Denikin's fleet on the Caspian has gone over to the Soviet side and, since the Caspian is a closed sea, this puts its waters and shores, including the oil region of Baku and the Persian coast, in the power of the Bolsheviks.

The Oklahoma Legislature has ratified the equal suffrage amendment, being the thirty-third State to do so. The Oklahoma House desired an emergency clause which would exempt the action of the Legislature from the referendum, but the necessary vote could not be obtained in the Senate. It is not known whether the anti-suffrage forces will take active steps to compel a referendum on the question. Before the Oklahoma Legislature had acted, President Wilson sent a letter to the Speaker of the House urging favorable action and expressed the hope that Oklahoma would retain "its place as a leader in democracy."

Franklin K. Lane, former Secretary of the Interior, has included a very lively criticism of Washington bureaucracy in a letter to the President, reviewing the progress of the Interior Department. He concedes that the Government service includes men of ability and that "It is honest beyond any commercial standard." "But it is poorly organized for the task that belongs to it. Fewer men of larger capacity would do the task better. We have so many checks and brakes upon our work that the progress does not keep pace with the nation's requirements."

In reply to the request of the Salvador Government for an authoritative definition of the Monroe Doctrine, President Wilson referred to his address before the Pan-American Scientific Congress in 1916. In that speech the President asserted that the Monroe Doctrine "demanded merely that European Governments should not attempt to extend their political systems to this side of the Atlantic," and left open the whole question of the relation of American republics among themselves.

from the two forces at war, was represented by outstanding citizens. Then the Legislature buckled down to the job and in two weeks passed the law creating the Kansas Court of Industrial Relations and went home.

The Kansas Court of Industrial Relations provides that the operation of the great industries affecting food, clothing, fuel and transportation, be impressed with a public interest and subject to reasonable regulation by the State which shall have the power to hear and determine all controversies which may arise and threaten the continuity of such industries. It is required that all persons or corporations engaged in such industries must operate them with reasonable continuity, in order that the people of this state may at all times be supplied with the necessities of life. In case of controversy between employers and employees or between different crafts or workers, which threaten the continuity of such industry or endanger their peaceful operation, this tribunal, on its own initiative or on complaint, shall investigate and determine the controversy and make an order prescribing rules and regulations, hours of labor, working conditions, and a reasonable minimum wage, which shall thereafter be observed in the conduct of said industry until such time as the parties may agree. In short, pending such adjustment, the workers shall continue to mine coal. It is made unlawful for any person or association, operator or miner, to hinder production. In legalizing collective bargaining, full faith and credit shall be given to all contracts made in pursuance of said right. It gives to the Supreme Court of the state the power to bring about the speedy determination of the validity of any of the orders of the Industrial Court. It makes it unlawful for any firm, person or association to delay or suspend production or transportation of the necessities of life, except upon application to and upon order of the Industrial Court. It guarantees to every individual who testifies before it that he shall not be discriminated against by reason of his statement. It is made unlawful for any person or corporation engaged in the essential industries to cease operations for the purpose of limiting production, affecting prices or avoiding the provisions of this law. Provision is made, however, by which proper rules and regulations may be formulated to provide for the operation of such industries as may be affected by changes in season, market conditions, or other causes inherent in the nature of the business. It is made unlawful for any person or corporation to violate the provisions of the law creating this court or to conspire with others for this purpose, or to intimidate any person or corporation engaged in such industries with intent to hinder, delay or suspend the operation of such industry.

Persons or corporations violating this law are punishable by fine or imprisonment or both, and, finally, the law

Keeping the lines open 1918 1920

Are you running a home, a store, an office building or a factory?

Then perhaps you know how hard it is to get help and to get material for repairs or additions.

Think, then, how much greater are these problems in a business requiring hundreds of thousands of workers and countless items of equipment—a public utility, for instance, like the telephone companies.

They have thousands of exchanges and millions of miles of out-door construction to keep in order.

Their difficulties are increased many-fold over the average business because the engineering, manufacturing and installing of a modern telephone switchboard take at least two years.

In pre-war days, the telephone engineers had a way of looking forward. They undertook to estimate the growth of population and the opening of new streets, so that they might build with the probable needs of the future in mind.

For this expected demand they maintained reserves of plant equipment, which stood them in good stead when the war put a stop to customary building progress.

So while thousands of telephone men were running lines across shell-torn France, you could still call up the candy store and order your Sunday brick of ice cream.

But the Armistice opened the flood-gates to a torrent of new business, wellnigh overwhelming the country's telephone systems, with so many of their people still in service overseas.

That the lines of communication have since been kept continuously open is an achievement but little appreciated by the public.

It was made possible only through the efforts of the host of loyal telephone men and women every bit as faithful to the task as those who kept open the lines in France.

Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

provides that if all effort at adjustment of the differences shall fail and the continuity of any essential industry is threatened, then the state may have the power to take over and operate such industry until the questions at issue shall have been determined and the ordinary and orderly processes of production or transportation may be resumed.

Any increase in wages granted by the court shall be effective from the date of the beginning of the investigation and no costs or expenses of litigation are borne by anyone who makes complaint before this court. It is unnecessary to employ an attorney to make a plea before it.

I entertain the hope that we shall be able to insure to the people of Kansas at all times an adequate supply of those products which are absolutely necessary for their existence. By stabilizing the production of those necessities, we will also, to a great extent, stabilize the price to the producer as well as to the consumer. We will insure to labor steadier employment at a fairer wage and under better working conditions than it enjoys at present. We will prevent the colossal economic waste which always attends industrial disturbances, make the law respected and ultimately abolish intimidation and violence as a means for the settlement of all industrial disputes. A new day is dawning in Kansas to the mining industry. Whereas, heretofore, coal and mining was carried on but indifferently in the summer time, under this law miners can look forward to steadier employment and the public can anticipate beginning the winter with a coal reserve instead of a coal shortage. Under the

old conditions miners were employed only 211 days the year.

Fortunately, the miners are accepting the new arrangement. During the first week of the existence of the Industrial Court they brought several grievances before the court, although the court had been organized only a short time. Ignoring their own by-laws, the miners are coming directly and voluntarily before this industrial tribunal. They seem to realize that they have nothing to gain and everything to lose by holding out under the advice of unwise and selfish leadership.

Labor is not alone in accepting the situation created by this court. Essential industries affected by the new court are showing a like spirit. The overwhelming sentiment of the state favors the acceptance of the new order. A general feeling of optimism exists toward it, not only on the part of capital and labor, but among all classes from constitutional lawyers to tillers of the soil.

Only one other important measure was considered by the special session. A law was enacted placing stockyards and packing houses among the industries that are impressed with public interest, providing that power to regulate their operation as public utilities should reside in this court of industrial relations. The power to regulate feeding charges at stockyards, to prevent abuses or injustices to patrons of those institutions is vested in this court. Packing houses may be prevented from limiting production to affect prices or pursuing any policy deemed detrimental to the welfare of the public.

Topeka, Kansas

On the Outside Looking In

(Continued from page 394)

That is a question to be answered later. Now the question is how does its present existence and composition affect the United States as a non-member? In several ways worthy of consideration. First, the principal American nations, other than the United States, have entered the League by approving the Covenant as drafted at Paris without amendment or even interpretative reservation. All the South American continent except Chili and Venezuela have already entered the League and so have some of the Central and Island American nations. The area of America in and out of the League today is: In the League, 6,553 square miles; out of the League, 4,614 square miles. The United States and Mexico are together as non-members today. Suppose Mexico enters tomorrow with the United States still outside?

The American population in the League is fifty million. The American population out of the League is 144 million. If all American nations except the United States go in, there will be pretty nearly an equal American population in and outside.

Second. One article of the League (X) provides that each member of the League shall preserve the territory

and independence of all other members against external aggression.

Another article (XI) provides that "any war or threat of war is the concern of the whole League and the League shall take any action deemed wise and effectual to safeguard the peace of nations."

Another article (XVII) provides that the League shall take cognizance of any dispute between a member of the League and a State not in the League or between States not in the League. In case either or both the States concerned refuse to accept the League's good offices and judgments to the dispute, "the Council may take such measures and make such recommendations as will prevent hostilities and will result in the settlement of the dispute." This article provides further that if one party to such a dispute accepts the League's invitation that all parties concerned shall accept the obligations of membership in the League for that particular dispute, and if the other party declines and proceeds to war upon a member of the League, this constitutes *ipso facto* an act of war against all members of the League, and would require all member nations to apply the provisions of Article XVI.

The League is therefore not only

authorized but *required* by the Covenant to take cognizance of disputes between American States, not members of the League, and it acts customarily in such a matter thru the Council, and this Council is composed of one American State (Brazil), while the United States remains out of the League, one Asiatic State (Japan), and six European States, all monarchies but one (France), that is, Great Britain, Belgium, Greece, Italy, Spain. In American matters, therefore, the League acts as Brazil influences it to do, or it acts as Europe or Asia influences it to do with Brazil as the advocate of the American view instead of the United States and Brazil, as would be the case if the United States were in the League. It is plain, therefore, that with the League actually in operation and the United States not a member, Europe is set up as a rival of the United States in the affairs peculiarly American. This is a grave fact, but it is inescapable, as the Monroe Doctrine has been so interpreted by the United States that the United States has the right to require Europe (and Asia, too) to keep hands off in American affairs with certain defined limitations, as in the procedure taken by Great Britain, Italy and Germany against Venezuela with the consent and approval of President Roosevelt in 1908. Now the Covenant of the League *requires* the Council to take action as set out above (see Articles XVI and XVII), in disputes among American States, even those not in the League and in regard to questions which fall within the area which the United States has said are covered by the Monroe Doctrine. Furthermore, the principal nations of America have ratified the Covenant of the League, with these articles in it.

This creates a condition which is accentuated by the inquiry of Salvador, recently submitted to the State Department, as to the opinion of the United States regarding the Covenant of the League and the Monroe Doctrine in their bearing upon one another. That is in itself a large question, but its existence is not the least among the serious problems which arise with the League in existence and the United States not a member.

New York City.

If He Were President

(Continued from page 388)

he entered politics. Doubtless being so familiar with wealth, he would not at all be awed by it. The manner in which, as Governor, after appointing the State Council of National Defense, he stood by the Illinois miners, against men as influential as Frank S. Peabody, with the resultant appointment of a Fuel Administrator and a war price for Illinois coal, as well as other coal,—indicates his knack of amiably getting on with both sides.

As of labor, and to labor, he speaks in an idiom well understood. He once said: "There are things upon which all right-thinking men, without reference

This year you can give your lawn better care at less cost

All those who have large lawns to care for know only too well how difficult such care has been during the past two years. Many fine lawns have been badly neglected because it has been next to impossible to get the necessary help.

This year you can give your lawn the attention it requires and have the work done better and at less cost than was ever possible with hand mowers. The Ideal Power Lawn Mower will solve your grass cutting problems just the same as it has for hundreds of others.

Advantages of the Ideal

The Ideal is a power mower and roller in one and the sod is rolled every time the grass is cut. This keeps it smooth, firm and free from bumps. The Ideal is scientifically designed to keep lawns in fine condition. The weight is just right for steady year around work.

The Mower has a thirty-inch cut and one man can easily mow four or five acres of grass per day at an operating expense of about fifty cents for fuel and oil.

Cuts Close to Walks, Trees and Shrubbery

Machine turns easily and will cut close up to walks, trees, flower beds and shrubbery.

When running over walks, driveways, pavements, etc., the operator simply lifts the cutting mower from the ground by

means of a conveniently placed lever. This feature is also important in the early spring when it is desired to use the machine for rolling only. Simply lift up the cutting mower, add more weight if required and you have the most convenient power roller imaginable.

The success of the Ideal is due to its sturdy and powerful, yet simple, construction. No clutches or complicated parts to wear and get out of order. The Motor is built in our own shop and designed especially for the work.

Owners of large estates, public parks, golf clubs, country clubs, cemeteries, etc., are all using the Ideal Tractor Lawn Mower with great success.

Special Cutting Mower for Putting Greens

For work on golf courses we furnish, at slight additional cost, a special set of cutting blades for use on the putting greens. In less than five minutes the regular 30" blade can be substituted for cutting the fairway.

When desired, we also furnish, as an extra, a riding trailer which fastens to the frame and permits the operator to ride and at the same time have the same easy control as when walking.

You can secure the Ideal through your dealer direct or from our factory. Write today for catalogue and further details.

IDEAL POWER LAWN MOWER

"My Throat Hurts"

YOUR physician will tell you that sore throats are due to germs which children catch from one another in school or at play—that the germs multiply quickly if the child happens to be a little run-down, causing swelling and inflammation, and frequently tonsillitis, measles, etc. Formerly we tried to subdue these germs by means of gargles, but the modern physician advises the use of

Formamint

THE GERM-KILLING THROAT TABLET

Mothers will hail with joy these pleasant-tasting tablets which are ever so much more convenient than the painful gargle. Formamint is simply sucked like candy. As it melts, it sets free a powerful, harmless germicide which mixes with the saliva and thus continuously bathes the inflamed parts, destroying germs and arresting their spread, thereby often preventing serious infection.

Children like Formamint Tablets because of their delightful taste, and for grown-ups and children alike, they are a welcome protection against infections that enter the body through the mouth and throat—influenza, for example. During epidemics, Formamint should be in every household. Medical authorities, both here and in Europe, strongly endorse Formamint. Over 5,000 American physicians have recommended it in writing. 60 cents at all good druggists.

THE BAUER CHEMICAL CO., Inc.

to their station in life, must agree. One of these is, that the final test of civilization is the lot in life of the average man. . . I think we have all come, within the last two years, to have a larger vision of what our country means. I believe that in the fiery furnace of war a new brotherhood has been forged and that such brotherhood will manifest itself in these years of peace in all the questions which must arise from time to time in our industrial life. I do not mean to say that strikes will cease tomorrow. I do not mean to say that differences will not arise between the employer and his employees. But what I do mean to say is this: that unless this war has been in vain, when these differences do arise, the parties . . . will approach one another in a different and better mood and with some sort of feeling of human brotherhood in their hearts. And that, in itself, is a long step toward industrial peace. We were fighting for several things in this war—to which, by the way, he sent abroad a son, a sergeant—"We were fighting, among others, for the right of man to rule himself. We were fighting against the doctrine that human nature is so weak and so defective that the Almighty ordained that a few thousand of men should enjoy all the fruits of the earth and that the only use of the millions of men is to minister to their needs. . . We were fighting that ancient dogma. We were fighting also for that other thing—that when the people themselves decreed a law, that law is sacred and inviolate. . . I do not believe that the hearts of men are so different as we sometimes think. I have known men in all walks of life. I have known rich men, and I have known famous men, and I have known powerful men, and I was born and raised with just men and women, so I have had some experience of life, and there isn't much difference because of station in life between one man and another."

His former interest goes so far as a rare fostering and protection of mere birds; his farm, Sinissippi, is locally celebrated as a haven and reserve for birds and all their friends, and a rendezvous for ornithologists.

His interest in farming is also reflected in his interest in good roads.

In short, he was, as with no little satisfaction he told me, raised on a farm, lived on a farm, returned to the farm, then lived again more than twelve years on a farm, is now on a farm. Farming, in fact, always has been his real business.

I suggested the Treaty.

He said at once: "I should like to see the Treaty ratified."

"With, or without?"

"With reservations substantially as desired by the Senate. I do not think those reservations take the teeth out of the Treaty."

His record as a public servant rests on his achievements as Governor. His best achievement as Governor was his reorganization of the administrative machinery of the State. The need of a similar achievement in Washington is,

DAVID B. CLARKSON THE BOOK BROKER
403 CLARKSON BUILDING, CHICAGO, ILLS.

relatively, vastly greater, of far wider consequence. Accordingly, I asked him to state his views about the federal machinery.

"Well," he said, decisively and to the point, rising, and with amazing energy, "this is the way the whole machine in Washington has been developed: We established the Federal Department, as necessity arose, and thus created the ten Departments of government. Then, when Congress saw fit to authorize some new governmental activity, it created a bureau or a division, and by hit or miss that bureau or division was assigned to some Department or other. When Congress created a bureau or division it provided in infinite detail just what the power of its officials should be, so that the whole machine absolutely lacked, and lacks, elasticity, which is vitally important so far as practical administration of any Department, or, in fact, any organization, goes. And in doing that, Congress made, to all practical purposes, every bureau or division an independent agency."

"And then—?"

"Congress has continued, without any fundamental plan of organization being worked out, to add to the difficulties in the situation. The need of the Government entering upon a new activity arises; as likely as not the bureau or division set up to do the work is made a part of the Department that advances the need—that, I take it, is why we have the Coast Guard and the Public Health Service, for instance, in the Treasury Department. This haphazard allocation of functions has gone on thru so many years that we have no longer ten Departments in Washington, with a man presiding over each, and with every part of each Department responsible to him, but, instead, a vast aggregation—scores of bureaus and divisions in addition to, or supposedly a part of the ten central Departments, and each of these bureaus and divisions is, so far as administration and organization is concerned, practically independent. Clearly, you can't have efficiency of administration in the machine as a whole so long as the law fixes in detail the exact duties and powers of each of all these separate entities. There ought to be a basic reorganization in the governmental agencies; there ought to be much less law written upon each of the separate entities, so that the barriers between them can be broken down, so that the head of a Department or bureau or division can set up his own rules and regulations and employ more of his own initiative in prescribing the duties of his subordinates."

He concluded by remarking that, demonstrably, the Government should pattern its administrative plan, adjust its problems of personnel, and in general take heed of the example of the tried and proven corporation. "Once that example were utilized," he said, "the biggest business in the world promptly would reflect great betterment."

New Books for Many Moods

Paris and the Critics

The most powerful siege gun which has yet been fired at the Treaty with Germany is *The Economic Consequences of the Peace*, by John Maynard Keynes, British financial expert at the Peace Conference. No defender of the peace settlement can ignore this work, which combines a wide understanding of the European economic situation with an incisive and vigorous style. Mr. Keynes ignores the political clauses of the Treaty, except as to their economic effect; he is indeed rather contemptuous, one gathers, of such matters as the liberation of new nationalities and the other political tasks to which the Conference set itself. But on the reparations policy of the Treaty Mr. Keynes is merciless. It does not content him that the proposal for obtaining the "whole cost of the war" from the enemy states was abandoned; he insists that the claim for pensions and separation allowances was a breach of faith with Germany, since it does not relate directly to "damage to the civilian population." He also attacks as exaggerated the estimate of property losses to France and Belgium and believes that the whole sum demanded from Germany should have been limited to ten billion dollars. The Reparations Commission he stigmatizes as "an instrument of oppression and rapine," tho he hopes that its tyrannical powers will be exercised mercifully in practice.

Mr. Keynes' analysis of Germany's capacity to pay, or rather of her incapacity to pay, is highly valuable and his conclusion that the Allies have expected more than they will ever obtain appears quite just. But the scheme outlined in the Treaty is flexible in the extreme and there is no reason to believe that the men who will carry out the terms of the Treaty will give the worst interpretation to every doubtful clause. The chapter on "The Conference" is a relief from statistics and is, indeed, most lively and fascinating reading with unforgettable pen-pictures of Clemenceau, Lloyd George and Wilson. The hostile bias in these portraits is evident; for to Mr. Keynes Clemenceau was a reactionary nationalist bent on a "Carthaginian peace," Mr. Lloyd George a political chameleon, and President Wilson a self-deceived and incompetent "Nonconformist minister." His thesis that President Wilson met defeat at Paris is, however, qualified by the admission that President Wilson is "genuinely convinced that the Treaty contains nothing inconsistent with his former professions;" in other words, that Mr. Keynes knows better what President Wilson really meant by the Fourteen Points than does the President himself!

It is a relief to turn from Mr. Keynes' sombre and powerful indictment to a much lighter survey of the Peace Conference, *The Adventures of the Fourteen Points*, by Harry Hansen.

This is a lively, journalistic scrapbook of day by day impressions of the Conference and its issues and personalities. It will give anyone the atmosphere of Paris during the Conference and what might be called the social environment of the Treaty, tho it does not reveal any very intimate details of the negotiations.

Across the Blockade, by Henry Noel Brailsford, is another attack on the Peace Conference from a more radical point of view than that of Mr. Keynes. The most valuable part of the book is the sympathetic inside picture of Communist Hungary and of other states in eastern Europe during the hungry months of the spring of 1919. Due allowance must be made for the evident bias of the author, who was a passionate pacifist during the Great War and who is moreover distinctly prejudiced against the new governments of Poland and Czechoslovakia on economic as well as political grounds. He sympathizes with democratic more than with Bolshevik Socialism, but is apt to label republican parties which stop

Rumania should have been given their full territorial claims, believes that Bulgaria was let off too easily and wishes that full recognition had been given to Kolchak. One cannot resist the conclusion that the critics of the Conference to a great extent refute each other and thereby do something to redeem the reputation of the statesmen whom they unite in denouncing.

Dr. Dillon may irritate the reader by his cynical and Machiavellian political viewpoint, but his tales told out of school are certain to amuse. One of the "principal plenipotentiaries" confused Silesia in Prussia with Cilicia in Asia Minor. "An English-speaking statesman" urged Italy to export more bananas to redress the balance of trade. "A Secretary of State" pointed out to an amazed Pole that supplies could not be sent to Danzig without permission of Italy "because it is Italy who has command of the Mediterranean!" "One of the Great Four" asked an Armenian why he referred to the Turks as Kurds. The names in all cases are wisely suppressed, perhaps because the author, with his diabolical sense of humor, wishes the reader to fit them to as many persons as possible!

The Economic Consequences of the Peace, by John Maynard Keynes. Harcourt, Brace and Howe. *The Adventures of the Fourteen Points*, by Harry Hansen. Century Co. *Across the Blockade*, by H. N. Brailsford. Harcourt, Brace and Howe. *The Inside Story of the Peace Conference*, by Dr. Edward J. Dillon. Harper Bros.

Amateurs at Life

It is a little difficult to tell when you read *The Querrils* whether Stacy Aumonier is very unsophisticated or very artistic. He writes of the submerged tenth with so exactly the touch of detachment and distance with which the Querrils regarded themselves that one wonders whether he does it involuntarily or on purpose.

The Querrils are an upper-middle class English family who live an hour out of London in a pleasant world of their own, peopled by their immediate relatives and their intimate friends. They keep as far aloof as possible from the stress and unpleasantness of the world, tho the three sons get a taste of it in settlement work. They are all very fond of each other and so unselfish and considerate that they frequently lean over backward. They are, according to their friend, Tony MacDowell, "amateurs at life."

They're one of God's luxuries, and I'm not convinced yet that He can afford it. If the world were all Querrils, well and good. But . . . there's something about it almost sociologically perverted, like an attempt to divert the natural channels of human expression. It's a force which ignores the element of conflict in social evolution.

The war, which breaks upon them toward the end of the book, has a much less definite influence than the marriage of the eldest daughter and the arrest and imprisonment of the youngest son.

Harding in Brooklyn Daily Eagle

Held up

at all short of Socialism as "reactionary" and he does not approve of the idea of private property in land, no matter how thoroly distributed among the peasantry. If the reader will allow for the point of view, Mr. Brailsford's book will interest and instruct him.

An amusing contrast to the indictments of the Peace Conference by Mr. Keynes and Mr. Brailsford is Dr. Dillon's *Inside Story of the Peace Conference*. To the former English critics the peace settlements are objectionable because imperialistic and smacking of old-style diplomacy. Dr. Dillon, on the contrary, regards the peace makers as sentimental and ignorant idealists. He stands frankly for professional diplomacy, regards the League of Nations as a mistake, objects to the treaties guaranteeing minority rights in eastern Europe, thinks that Poland and

The Querrils are a problem, not quite so typical a problem, we are inclined to believe, as Mr. Aumonier thinks they are, but an interesting and important problem nevertheless. Mr. Aumonier doesn't succeed in solving them, as he evidently intended to do when he began the story, but he does suggest possible lines of solution, and the novel is quite worth reading, anyhow.

The Querrils, by Stacy Aumonier. Century Co.

Woman's Place

Of course we know that there's so much good in the worst of us and so much bad in the best of us and all that, but it is nevertheless extraordinary how any one who writes as well as Nalbro Bartley can write as badly as Nalbro Bartley. Perhaps it would be better to say, think, instead of write. She never writes well. But she does know how to tell a story, she does draw characters well and she does have thoughts on the modern social system that are both clever and constructive. *A Woman's Woman* has a real and interesting idea, the need for the home and the home-maker in modern society. Densie Plummer, who is the Victorian type of housekeeper, becomes weary of endlessly drudging, unappreciated by a family who consider her hopelessly old-fashioned; sells her home; goes to live in an apartment; takes up club work; finally becomes a woman of national importance, living in a hotel, too busy even for kitchenets, when she suddenly feels again the need of a home. The denouement is well brought about, tho we wish the author had explained how Densie in three weeks could find, buy, paint, decorate and completely furnish a good-sized house. The book begins exceedingly well—Densie and her daughters, Harriet, the social worker, and Sally, the butterfly, are very real people, the husband and son are very nearly as good—but in the middle the story collapses into rather vulgar, silly melodrama, shot with flashes of sane thinking and with a steady underlying purpose which make you follow it to its conclusion.

A Woman's Woman, by Nalbro Bartley. Small, Maynard & Co., Boston.

Ivan Speaks

A Russian nurse caring for Russian soldiers in the years 1915, 1916 and 1917 jotted down from time to time conversations between her patients, many of whom could neither read nor write, "detached utterances of wounded soldiers—lying in their cots—spoken without premeditation or thought of the nurse's presence," their ideas on life, religion, philosophy, the war. They are presented without background and without comment in *Ivan Speaks*, a remarkable little volume which reveals many things about the curious, fascinating and never, to an Anglo-Saxon, wholly comprehensible Russian mind. This is the sort of thing you find:

Whose is the blame? Who can be reproached with the sin? If we only knew that, if we knew! Is it the Germans, is it

BOOKS *With Vision*

IT is significant that never has the social and religious conscience of the world been so stirred as at the present time and nowhere is this so apparent as in this country. Men and women in all walks of life are reaching out for the reality of the vision that was the result of the world struggle. No longer can the spiritual

aspect of life be dis-associated from the economic, and it is to prove the truth of this that some of the clearest minds of the day are working.

The following books, chosen from the extensive lists of The Abingdon Press, while divergent in theme, all have this thought in common.

Some Aspects of International Christianity

The Mendenhall Lectures, Fifth Series, 1919

[By John Kelman

There are questions of the most vital importance on which every man must form an opinion. The bearings of these questions are not confined to the regions of expert knowledge; and there is a place for the impressions of the man on the street—his general sense of moral values, his common-sense view of relative importances, and the free play of his conscience upon the questions of the hour as he understands them. It is in his name and from his point of view that I have prepared these lectures.

—From Author's Preface.
12 mo. Cloth. In press.

Steps in the Development of American Democracy

By Andrew Cunningham McLaughlin

A study of democratic origins that flashes a vivid light upon the problems of the present day. A high-hearted call to America to play her part and act the democrat in the world life.

12 mo. Cloth. Net, \$1.50

The Church and World Peace

By Bishop Richard J. Cooke

A strong and timely discussion of the church in relation to the League of Nations and World Peace.

12 mo. Cloth. In press.

The Rebirth of Korea

The Reawakening of Its People. Its Causes and the Outlook

By Hugh Heung-wo Cynn

"'Mansei! Mansei! M-a-n-s-e-i!' 'Ten thousand years for Korea! Long live Korea!' Thus in the midst of mighty shouts the Korea that had been 'dead and buried' for eight and a half years 'rose from the dead' at two o'clock in the afternoon of the first day of March, 1919." With these striking words Professor Cynn begins his authentic account of recent happenings in Korea—a story at once graphic and compelling, pathetic and inspiring.

12mo. Illustrated. Cloth. Net, \$1.50

The Spiritual Meaning of "In Memoriam"

An Interpretation for the Times

By James Main Dixon

A vital and original study and appraisal of Tennyson's great poem. An interpretation not only of Tennyson but of the basic philosophy of an enduring civilization. 12 mo. Cloth. Net, \$1.00

Premillennialism

Non-Scriptural, Non-Historical, Non-Scientific Non-Philosophical

By George Preston Mains

A terse and trenchant critique of pre-millennial claims. It will be difficult for the advocates of this aggressive cult to confute the reasoning of these logical and close knit arguments.

16 mo. Cloth. Net, \$1.00

The advertisements have something to say to you

If a manufacturer could gather 30,000,000 prospective buyers into a large auditorium and talk to them regularly—by word of mouth—he would have no need of advertisements. *But he cannot.*

So he puts his words in type and talks to these same prospective buyers in the printed messages that you know as advertisements. In these pages you will find many such personal messages.

Some are large and some are small. They cover a wide range of subjects. They are worthy of your careful reading.

No manufacturer would spend his good money advertising if his merchandise were not of good quality and fairly priced. It wouldn't pay!

Don't miss the advertisements. They will save you money.

No. 11

the Pagans, is it the Austrians, or the Bulgarians? One's soul has been sold, and no man is guilty of the war. War itself has come from the other world, and war itself will finish itself.

Our mother sent for us all. I came from the factory, and these were her words: "Live, my son, long; but live so that your life may not seem long to any one else."

It is beyond human strength to destroy that monster—War. There is no end or limit to it. So how could anybody be leisurely thinking about domestic affairs or comfortable living? Think of your soul. That is what everything depends on in the next world. As to this world, our life in it can hold neither hope nor joy.

Ivan Speaks, translated from the Russian by Thomas Whittemore. Houghton Mifflin Co.

America Faces Her Future

"Reconstruction" is a magic word, and like most magic words it is ambiguous, elusive and frequently misleading. Probably somebody spoke it during the erection of the Tower of Babel and thus started the debate which interrupted the building. If anyone wishes to know what our leading men of affairs mean by *Reconstructing America* he may find it in convenient form in Mr. Edwin Wildman's collection of recent public statements by President Wilson, ex-President Taft, Mr. Hughes, Mr. McAdoo, Mr. Lane, Mr. Hoover, Mr. Gompers, Mr. Gary, Mr. Schwab and more than a score of other statesmen, captains of industry, educators and civic leaders. The particular topics briefly discussed include private versus public ownership of railroads and telegraphs, banking and national revenue, foreign trade, the position of labor, upbuilding the merchant marine, military preparedness, immigration and the best methods of Americanization. For those who prefer a full-length portrait to a group sketch *Labor and the Common Welfare*, a collection of addresses and writings by Samuel Gompers, may be recommended. The citations in this book give a very clear idea of the personality and dominant ideas of the chief of the American Federation of Labor. Especially evident in the work is the deep antagonism between the Socialist movement and the trades unionism represented by Mr. Gompers. The social philosophy underlying the whole work is nationalistic and individualistic and thus a whole world asunder from the class-conscious and cosmopolitan outlook of European labor.

The political dogmas on which American civilization is based are examined in *The Powers and Aims of Western Democracy*, by Professor Sloane of Columbia University. The author by no means holds a brief for the democratic theory; he points out that efficient and inefficient administration are equally possible under class rule or popular rule and he ranks German absolutism higher in the scale of civilization than the weltering anarchy of Slavic Europe. But his ultimate verdict, however cautiously worded, should be encouraging to all upholders of American ideals:

The democratic state of mind creates, slowly perhaps, but eventually, high efficiency in administration with an unsuspected contempt for the demagog shouting tyranny at every innovation, and does its creative work by a slow and painful, but scrupulous and safe, process of experimentation, of careful definition, of sound construction, and of verification.

Where Professor Sloane is judge, Professor Morse, late of Amherst College, was advocate. His *Civilization and the World War* is an eloquent defense of the "self-made" American citizen against the "government-made" subject of the German State. The book closes with a plea for a League of Nations which, at the time Professor Morse wrote, was still a dream of the future. President Hadley of Yale University in *The Moral Basis of Democracy* expounds American democracy from still another angle: that of religion. This guide book to Christian citizenship consists of Sunday morning addresses to the students of Yale. The main emphasis of these addresses is upon the fact that even the democratic institutions have triumphed over outside foes "the danger that they will break down thru the war of misunderstandings and passions within each community is greater than ever."

Ideals of America is another composite photograph of variant individual interpretations. It contains such essays as "Ideals in Philosophy," by Professor Harry Allen Overstreet; "Ideals in Labor," by John Frey, journalist of American trades unionism; "Ideals in Law," by Justice John Winslow of the Wisconsin Supreme Court, and "Ideals in Society," by Elsie Clews Parsons, a delightful essayist on woman's sphere. Each of the thirteen essays in this volume is a pleasant stimulant to thought, but it cannot be said that the reader can condense from them collectively a definite philosophy of American life.

According to Waldo Frank, whose pleasant, impressionistic essays on American life and history are collected as *Our America*, the reason why the spirit of the country is difficult to interpret is because America is still a promising chaos not yet solidified in any conventional form. "To offer it a specific voice is to strike it dumb," Mr. Frank believes that this country is still, as he expresses it, "pre-cultural," but he is hopeful of the day when the idealism of Greenwich Village will rescue us from bondage to the twin tyrants of Puritanism and Philistinism, his pet aversions.

Turning from philosophic interpretations of the American spirit to specific fields of national reconstruction attention is attracted by G. A. Weber's monumental reference work on *Organized Efforts for the Improvement of Methods of Administration in the United States*, which gives an account of the achievements of the official and unofficial agencies of the several states for improving the technique of government. The student of civics who wishes to know about the United States Bureau of Efficiency, or the Bureau of Research in Dayton, Ohio, or the Cali-

fornia State Board of Control, or the Supervisor of Administration in Massachusetts, or the North Carolina Legislative Reference Department will find Mr. Weber's work indispensable.

Democracy in Reconstruction, edited by Joseph Schafer and Frederick A. Cleveland and written by a dozen or more specialists in various branches of economics, is a sort of comprehensible-to-the-layman economic history with all the emphasis on the last few years and the future. It treats of labor, transportation, education and kindred subjects, in a somewhat elementary but clarifying and instructive fashion.

Under the very felicitous title of *The Land of Fair Play*, by Geoffrey Parsons, is camouflaged a text book in civics for children. The information given is accurate, adequate and well-balanced, but the most notable feature of the book is its modernism of treatment and outlook. It begins with the principles of government as illustrated by the organization of a baseball club and closes with a comparison of the American constitution and the soviet constitution of Russia.

Other works on national reconstruction take a propagandist character. *America's Tomorrow*, by Snell Smith, is a strange blend of religious mysticism and chauvinism. The author would have a federation of the world with a capital at Jerusalem, but he sees in the military might of the United States the only road to his ideal. Hudson Maxim contributes a rather ferocious introduction, in which he applauds Mr. Smith's blood and iron imperialism but says nothing encouraging about his ideal of eventual world peace. Samuel Peterson in *Democracy and Government* urges a varied program of constitutional reforms from a restriction of the franchise to a single-chamber Congress. David Jane Hill in *Present Problems in Foreign Policy* virulently attacks the League of Nations as inconsistent with American national sovereignty and, probably, with the American constitution. The hopelessly reactionary outlook of the book is amusingly illustrated in its citation of John C. Calhoun (page 167) as an authority as to what the constitution will permit the federal government to undertake today in the sphere of foreign policy. A useful appendix gives the text of the Covenant as proposed in February, 1919, and as amended in April, as well as the amendments proposed by Mr. Taft, Mr. Hughes and Mr. Root.

Reconstructing America: Our Next Big Job, by Edwin Wildman. Page Co. *Labor and the Common Welfare*, by Samuel Gompers. Dutton. *The Powers and Aims of Western Democracy*, by William Milligan Sloane. Scribners. *America's Tomorrow*, by Snell Smith. Britton Co. *Democracy and Government*, by Samuel Peterson. Alfred Knopf. *Present Problems in Foreign Policy*, by David Jayne Hill. Appleton.

One Chop Will Buy 12 Dishes Of Nutritious Quaker Oats

Save 90% And Serve Vastly Better Breakfasts

One dollar spent for Quaker Oats buys about as much nutrition as \$10 buys in meat and fish and eggs.

So a Quaker Oats breakfast, compared with a meat breakfast, saves you some 90 per cent.

And in oats you get the supreme food.

You get an ideal food—almost a complete food.

You get a food which, measured by calories, is twice as nutritious as round steak.

And you get the needed minerals.

What \$1 Buys

Note how much \$1 buys in Quaker Oats. It will serve a hundred breakfasts.

That same \$1 in some other foods will buy you only ten breakfasts.

Then compare by calories—the energy measure of food value. That's the way foods should be figured. You buy them for nutrition.

Here is what \$1 buys in calories at this writing in some necessary foods:

What \$1 Buys

At This Writing in Calories

In Quaker Oats -	18,000 calories
In Average Meats -	2,200 "
In Average Fish -	2,000 "
In Hen's Eggs -	1,400 "
In Broilers -	600 "

One needs variety in food, regardless of the cost. But the basic breakfast should be Quaker Oats.

That is the food which everybody needs. And its trifling cost will average up your food bills.

Quaker Oats

With That Exquisite Flavor

Get Quaker Oats to make this dish delicious. They are flaked from queen grains only—just the rich, plump, flavory oats.

We get but ten pounds from a bushel. This flavor has brought Quaker Oats worldwide supremacy.

Grandma Knows Musterole Is Best

Remember the time when you had that dreadful congestion of the lungs—and Grandma slapped a stinging, messy mustard plaster on your chest? How you writhed and tossed and begged Grandma to "take it off"?

That was many years ago. Now, Grandma gets the jar of Musterole, for now she knows Musterole is *better* than a mustard plaster.

She knows that it relieves colds, congestions, and rheumatic aches and pains.

And what is best, it relieves *without discomfort or blister*.

Musterole is a clean white ointment made of oil of mustard and other home simples.

Just rub it gently over the spot where there is congestion or pain. It penetrates down under the skin and generates a tingling, pleasant heat. Healing Nature does the rest. Congestions and pains both go away.

Peculiarly enough, Musterole feels delightfully cool a few moments after you have applied it.

Never be without a jar of Musterole.

Many doctors and nurses recommend it. 30c and 60c jars. \$2.50 hospital size.

The Musterole Co., Cleveland, Ohio

BETTER THAN A MUSTARD PLASTER

\$5.13 for 3

Duratex Guaranteed Shirts

Insured for 6 months' wear

Fine percale coat style shirts, assorted stripes, laundered or stiff cuffs. Neat and dressy.

The Straits of Panama

(Continued from page 393)

"But," shall say a third group of conscientious objectors, "how will you deal with the Chagres and its sudden and violent floods of forty feet?"

It is to be remarked that the great bugaboo of former days, the wild and uncontrollable Chagres, has ceased to be the object of the former outbursts of eloquence since it has been muzzled by the Gatun dam. It expands its fury now in a huge lake, the level of which it raises a few feet, when formerly the same output of savage waters raised the water level in a narrow valley about 40 feet.

During the process of transformation, which consists in the gradual lowering to sea level of the summit level, which is now 85 feet above the sea, the Gatun lake will gradually disappear. It will, therefore, possess a gradually lessened power of controlling the Chagres floods and of expanding harmlessly its waters.

But another lake will be created in the Chagres valley above Gamboa, that is, above the point where the Chagres enters the canal line. This lake will have its waters much higher than the Gatun lake. Their normal level will be 200 feet above sea level instead of 85. Its powers of controlling the Chagres will be just as great as the actual Gamboa lake. Its capacity of storing the water necessary for operating the canal during the dry season will be just as great as with the Gatun dam.

The valley will first be closed by a concrete dam behind which will be dumped all the excavation of the Straits of Panama. The valley will thus be filled behind the concrete dam by a mass of rock and earth covering several miles.

It will cease to be a dam, properly speaking. Its magnitude, its enormous proportions, will make it resemble a mountain transported into a valley and raising its level for eternity. Once the transformation shall be completed the water of the lake may be let off by appropriate discharge appliances. In this case the lake shall cease to be but a flood expander, and cease to be a reservoir.

In order to avoid even the shadow of an objection as to sediments brought into the straits it would be preferable to dig, on either side of the straits, a natural and separate channel for the tributaries of either side of the Straits. The channel on the South American side should also receive the waters of the high Chagres above the Gamboa dam. These two parallel channels must have a very low bed and a narrow section so as to generate every winter a substantial velocity to wash out sediments left by the preceding freshets.

The key, therefore, to the Panama problem is the technical solution determining how to pass from the first form to the second without interrupting traffic for five minutes. I do not wish to encumber this article by the

descriptions of this important but very easy solution. I have published it over and over again since I found it in 1887, and the last time was in my book, "Panama—Creation, Destruction, Resurrection." I am content to say here that this solution has never been challenged and that once the Gamboa dam has been erected with the new locks, the transformation will be a matter of dredging, pure and simple.

With modern methods of transforming rock into dredgible matter; with the ease of making a huge dump in the Gamboa lake in the middle of the Isthmus; with the simplification and economy which the electricity, generated by the falls from the Gamboa lake, will give for the work, the cost of the excavation of the straits will be incredibly small per unit after the locks and the Gamboa dam are created. In fact all the work will be done by nature and its forces, and the contribution of man, once nature is harnessed, will be extremely small.

No argument can be brought against this indispensable evolution of the great undertaking. The safety of the United States is at stake as much as the urgent necessities of the world traffic which will soon crowd the American gateway to the Pacific, if the necessary measures are not taken to allow a limitless traffic to pass thru this invulnerable waterway, the Straits of Panama.

France

Getting Into the Ship Habit

(Continued from page 391)

decided upon, the Government must pay the operators a fixed fee and a commission on receipts, taking whatever profit remains, and if there is no profit, standing the losses. The Shipping Board has thought it better to allow private capital to take these risks, since the same service will be secured under either course.

The method of its establishment, as I have said, is of secondary importance in the big problem of creating a permanent American merchant marine. We have ships a plenty, but still are without a permanent merchant marine. Ships tied up at our docks would be a liability rather than an asset. They are valuable only if we have in the shipping business the men, money and brains necessary to use them to greatest advantage.

These things we cannot get overnight. To get them will require time, habit, growth and individual capacity, initiative and enterprise. We have been told, and the country has been told, that if we reduce the price of our ships, shipping men will spring up everywhere to buy them, and that without further ado we will have created a permanent, privately owned merchant marine.

No argument could be more erroneous. A moment's thought will demonstrate that it is put forward, if not

with wholly selfish ends in view, at least with no thought of the interests of the Government.

We have in the United States at present only a few successful shipping companies. If we yielded to their desire and sold our ships at 40 per cent less than the cost of construction, they could absorb not more than 300 of our best hand-picked ships. Thus the Government would be left with 1800 ships of all sorts on its hands, which it would be compelled to operate in competition with the better ships of private owners. The 400 or 500 ships of the private companies would not give us a merchant marine adequate to meet the country's needs, but no buyers would remain for the others. Clearly this is not the way to establish a permanent merchant marine.

It is essential that we learn to think in terms of ships. Certainly we are not doing that today. Who loans money on ships? Who buys ship mortgages? How many of us are planning to send our boys to sea? Yet these things we must do before we get a great maritime nation prepared to buy over 2000 ships.

Some progress in the right direction is being made. Even now we have 160 firms or companies operating Shipping Board ships—operating them at as much profit as unsettled conditions permit, but nevertheless at a profit. These operators employ nearly 60,000 men. We are maintaining a recruiting service and schools to teach officers, engineers and seamen how to do the work, and fit them for the sea. They will be an important part of our foundation for a permanent merchant marine.

American investors are being urged to give more attention to foreign securities, thus assisting in the industrial rehabilitation of Europe and insuring larger markets for American goods. Their attention should be called also to the necessity of investing freely in ship securities and thus help with the work of building up a merchant fleet to carry our goods. Congress should pass a ship mortgage bill to guarantee such investors a lien for the purchase price of ships which will, in financial circles, have as much value as a railroad mortgage, and will insure freer investment in these securities.

Congress can assist in another way by the enactment of legislation for encouraging the establishment of new American marine insurance companies. American insurance is essential. The future merchant marine should not be dependent for ship insurance upon foreign companies.

However, it should be understood that the establishment of a permanent American merchant marine is a task that cannot be accomplished by any one or any number of government agencies working alone. It can be done only if all Americans of all classes pull together. I repeat here what I have said before: The tales of the sea must become the gossip of the nursery and the fireside. When this comes to pass America's position as a great maritime nation will be secure.

Washington.

ON RARE OCCASIONS, WHEN THERE WERE NO SHOES TO BE PEGGED, W.L. DOUGLAS WOULD GO TO A NEARBY MILL POND AND FISH FOR AN HOUR OR TWO. THIS WAS PRACTICALLY THE ONLY OPPORTUNITY HE EVER HAD TO PLAY

W.L. DOUGLAS PEGGING SHOES AT SEVEN YEARS OF AGE

W. L. DOUGLAS NAME AND THE RETAIL PRICE IS PLAINLY STAMPED ON THE SOLES OF EVERY PAIR OF SHOES BEFORE THEY LEAVE THE FACTORY. THIS PROTECTS THE WEARER AGAINST HIGH PRICES AND UNREASONABLE PROFITS

SEBASTIAN MANUFACTURING JULY 6 1876

W. L. DOUGLAS
"THE SHOE THAT HOLDS ITS SHAPE"

FOR MEN AND WOMEN \$7.00 \$8.00 \$9.00 & \$10.00 SHOES

BOYS' SHOES \$4.50 \$5.00 \$5.50

W. L. Douglas shoes are sold through 107 of our own stores direct to the wearer at one profit. All middlemen's and manufacturing profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W. L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-seven years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION HISTORY, CIVICS AND ECONOMICS

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. A Message from the United States Government. Getting Into the Ship Habit. By John Barton Payne.

1. "The tales of the sea must become the gossip of the nursery and the fireside." What does this sentence, and the one that follows it, indicate concerning the influence of reading?
2. Name some stories of the sea, that you have read, or that you have heard of.
3. Explain why the United States Naval authorities once distributed among United States sailors many copies of Southey's "Life of Nelson."
4. Read Tennyson's "The Revenge." Tell your class the story of the poem. Tell what effect the poem produces on the reader.
5. What American novelist was among the first to make stories of the sea popular?
6. What is the effect of Browning's "Hervé Riel"?
7. Write a letter to the principal of your school, telling why American boys and girls should read stories of the sea, and suggesting a list of at least five good stories suitable for school reading.
8. Write a paragraph based on the following topic sentence: "Ships alone do not make a merchant marine." Develop your paragraph by the method of negative statement.
9. Give a short talk in which you tell the condition of the American merchant marine in 1860.
10. If you have read Ernest Pool's "The Harbor" tell the theme of that book.
11. Write a paragraph on the following topic sentence: "The decline of the American merchant marine was due to natural causes." Develop your paragraph by the method of cause and effect.
12. Write an expository paragraph on the following topic sentence: "The World War strongly affected American interest in the merchant marine."
13. Write a brief for an argument on the following proposition: "An expanded foreign trade is essential if the American people are to maintain their present high standards of living."
14. Draw from the article five suitable subjects for debate.
15. Write a short editorial article on the thesis: "American goods should be carried in American ships."
16. Give a short talk in which you show what the United States must do in order to become a great maritime nation.

II. On the Outside Looking In. By Hayne Davis.

1. Explain why the title is a good title.
2. Give a clear explanation of some of the most important articles of the League of Nations.

III. If He Were President. Frank O. Lowden. By Donald Wilhelm.

1. What is the relation of the first sentence to the thought of the entire article?
2. In a single paragraph write a character sketch of Governor Lowden.
3. Imagine that Governor Lowden is to speak in your school, and that you are to introduce him. Prepare a suitable introduction.
4. Imagine that you are to nominate Governor Lowden for the Presidency of the United States. Prepare a suitable nomination speech.
5. From the record of Governor Lowden's life and work draw a series of principles that may be used as guiding principles.
6. Select from the quotations from Governor Lowden's speeches five sentences that you think notably true and notably emphatic.

IV. The Straits of Panama. By Lieutenant Colonel Philippe Bunau-Varilla.

1. Express the principal thought of the article in the form of a proposition suitable for debate.
2. Point out, in the article, examples of refutation.
3. Express in clear, emphatic sentences the principal reasons given by the writer in support of his proposition.

V. The Story of the Week.

1. Select the ten most important items of news in this number of The Independent. Write a single, expressive sentence for every item selected.

I. The Coming Presidential Campaign—"If He Were President," "Issues in the Empire State."

1. Write a brief account of the personal and political career of Governor Lowden. Does this career indicate that he is big enough to be President?
2. According to Mr. Wilhelm's description, what national problems could he probably solve satisfactorily? On what issues are you left in doubt?
3. What are the issues of the coming campaign according to the New York Republicans? The New York Democrats?
4. "The two parties have raised issues but have not joined issues." What facts justify this statement?

II. American Problems—"The Railways Unscramble," "Steel Does Not Dissolve."

1. What is the distinction between representative government and "direct democracy"?
2. What problems have been settled by the Esch-Cummins law? What railway problems still remain to be settled?
3. Write a brief history of the Sherman Anti-Trust Law and of two or three cases that have been settled under the law.

III. The League of Nations—"On the Outside Looking In," "Our Neighbor Up North."

1. Upon what grounds does Mr. Davis make the statement contained in his first paragraph?
2. What action has the council of the League thus far taken?
3. How would the international position of the United States be improved if we were members of the League?
4. On what grounds would the United States demand that Canada be not admitted to the League? On what grounds does Canada claim membership?

IV. Turks Massacre Armenians.

1. Trace briefly the history of the Turkish occupation of Constantinople and of European territory as far west as the Adriatic.
2. Give the history of the recession of Turkish power in Europe during the nineteenth century.
3. Why was it expected that, as a result of the war, the Turks would be expelled from Constantinople?
4. What do you think of Lloyd George's explanations of the Allies' determination to allow the Turks to retain Constantinople?

V. European Problems—"French Railroad Strike," "Opening Up Russia."

1. What were the issues involved in the recent French strike? Compare the French Government's method of handling the strike with our own method of handling the coal strike.
2. What steps are the European nations taking toward reopening trade with Russia? What is the present American attitude?

VI. Getting Into the Ship Habit.

1. "Sixty years ago the American merchant marine . . . was the envy of the world." In view of the history of the English merchant marine is this not an overstatement of facts?
2. What were the causes for the decline of the American merchant marine? What conditions require its reestablishment now?
3. What is Secretary Payne's judgment as to the wisdom of selling Government owned ships?
4. "We have ships a plenty, but still are without a permanent merchant marine." What does this mean?

VII. "Let the People Freeze."

1. According to Governor Allen what was the chief issue in the coal strike of last fall?
2. What three steps did Governor Allen take in meeting the issue of the strike? Was each of these steps a wise one?
3. Give a brief resumé of the functions and the powers of the Kansas Court of Industrial Relations.
4. What are the arguments in favor of such a court? The arguments against it?

The Calvert Mortgage Company

886 Calvert Building Baltimore, Md.

CHARLES M. SCHWAB

AND YOU - By George Creel

WHEN Edward N. Hurley, head of the Shipping Board, looked around for a man to put driving power behind America's gigantic shipbuilding program, Charles M. Schwab—"Charley" Schwab of the Bethlehem Steel Company—was the man chosen. He "delivered the goods."

As head of the Emergency Fleet Corporation his influence was electric. Almost his first act was an overnight revolution for the corporation—it suddenly found itself removed from its cramped quarters in Washington to a great building in Philadelphia—and hustling as though it were on the last lap.

Charles M. Schwab began his great career as a stake driver for the Carnegie Steel Company at Pittsburgh. His weekly wage then would buy you today a fair-sized breakfast, a moderate dinner, and send you to bed hungry at night in a cheap hotel. Yet, at thirty-nine, he was selected by J. P. Morgan to be the first president of the newly formed United States Steel Corporation—and given \$28,000,000 of the capital stock. Schwab is not a genius. Just a normal man with a normal brain who has thought beyond his job. He started from scratch—without "pull" or favor. And the fifteen men who now run the Bethlehem Steel plant for him today are just normal men with normal brains *thinking and acting* beyond their jobs. They, too, started from scratch. The present president of the Bethlehem Steel Company whose income last year aggregated \$1,000,000—was a \$75.00 a month crane man only a few years ago. The first vice-president began as a stenographer.

Schwab and J. P. Morgan

CHARLES M. SCHWAB'S striking success is due to *originality*, plus *initiative*, plus *personality*, plus *driving power*. To sum up, *doing things differently!*

For example: When the United States Steel Corporation took over the Carnegie Company, it acquired as one of its obligations—it really was an asset—a contract to pay Schwab a yearly minimum salary of \$1,000,000. J. P. Morgan didn't know what to do about it. He hesitatingly broached the subject to Schwab.

Schwab took the contract and *tore it up*. "I didn't care what salary they paid me. I was not animated by money motives. I believed in what I was trying to do and I wanted to see it brought about."

Schwab was *looking beyond*. He had conceived the idea of the United States Steel Corporation. He had "sold" that idea to the great capitalists of the nation. He wanted to work it out—to make the United States the greatest steel producing nation in the world. *And he did!*

The demand for men with Schwab's qualities—initiative, driving power, original thinking, and ready, forceful expression—was never greater than now. Nothing is so plentiful as opportunity. There are more jobs for forceful men than there are forceful men for jobs. As Mr. Schwab aptly remarks: "In the modern business world 'pull' is losing its power. Achievement is the only power. Captains of industry are not hunting money. America is heavy with it. They are seeking brains—specialized, active brains. Brains are needed to carry out the plans of those who furnish the capital."

America's cry is not for super-men. Listen again to Mr. Schwab: "I have found that when 'stars' drop out, their departments seldom suffer. And their successors are merely men who have learned by self-discipline and application to get full production from an average, normal brain. The man who attracts attention is not the dazzler—but the man who is thinking all the time, and expressing himself in little unusual ways."

CHARLES M. SCHWAB

Your Brain—How to Use It?

EVERY man and woman is endowed with mind. Your success is governed by your *use of mind*. The fellow who sits still and simply does what he is told will never be asked to do the big thing.

Men *make opportunity!* Just remember that every *external achievement* is first an *internal idea*. Each successful act is primarily an invisible thought. Right thinking, then, in the broad sense, means right action—thus *all success is founded on right mental activity!*

Schwab wasn't born successful. He had to learn to think through the hard knocks of experience. It took him years to develop the driving, eager mind that won for him his first lowly step in success. But just as everything moves faster nowadays, so does the development of brain power—for those who make the effort. It is quite possible today for any man in a few months to develop those mental qualities that early marked Schwab for success.

That possibility is in Pelmanism—the modern short-cut to the training of the mind—the bringing to consciousness of all those mental forces now lying at the bottom of a dream sea of inaction—the development of that mental muscle that makes you glory in the battle of life—that makes you want to win.

Pelmanism and Your Future

IT trains your mind to quick, constructive thinking—*right thinking*. You can straighten and strengthen it just as easily as the body can be strengthened—and do it just as scientifically.

Take the bank clerk for example: When he first starts he can add a column of figures with only average speed and accuracy. In time he can add four columns where previously he added one! Increased mental efficiency—mental training!

And *this is the duty of Pelmanism!* Its sole function is to develop the mind to right thinking—to bring out and strengthen such immeasurable qualities as will-power, concentration, ambition, self-reliance, judgment and memory. Pelmanism *can*, and *does*, substitute "I will" for "I wish."

It is not a mere "memory system." It develops *all* the mental powers. There is no "magic" or "mystery" about it—just the common sense application of *practical psychology*.

Increases Incomes

PELMANISM makes no promise to turn you into a "Charley" Schwab, but it does guarantee a quick and continuous development of the "Charley" Schwab success qualities.

Pelmanism is able to guarantee advancement and increased incomes for the very simple reason that it gives workers the qualities that employers are hoping for and searching for. Salary is no longer the determining consideration: the main thing is *intelligent service*.

There are 400,000 Pelman students in the world today. It is a positive and irrefutable fact that the vast majority of them have, through developed mental powers, increased their earning capacities from 20 to 200 per cent. And why not? Increased efficiency is *worth* more money.

Pelmanism points the way to cultural values as well as to material success. It opens the windows of the mind to the voices of the world; it puts the stored wealth of memory at the service of the tongue; it burns away timidity by developing self-realization and self-expression.

Pelmanism takes no account of class, creed, or circumstances. It has values for *all*.

The beginner will find the secret of promotion in it. The veteran "job holder" will get from it new courage, self-confidence and a resourcefulness that will lift him above his fears and out of his ruts. Executive heads will discover that PELMANISM takes up "mental slack."

Professional men—lawyers, doctors, clergymen, teachers, artists, authors—have come to the knowledge that Pelmanism will help them to surmount difficulties and achieve a greater degree of success in their vocations.

Women in commercial pursuits have the same problems to overcome as men. Women in the home are operating a highly specialized, complex business requiring every ounce of judgment, energy, self-reliance and quick decision possible to develop. Pelmanism meets these needs.

PELMANISM has its benefits for the youth, with mind to be trained, but it has even larger benefits for men and women past forty, whose minds have a tendency to "slow up." No one is too old for PELMANISM who has the will to be alive, virile and vital. (Signed) George Creel.

It Fits Your Time

PELMANISM does not ask you for fixed hours of attendance and set times for study. It fits into your time instead of demanding that your time fit into it.

The Pelman course comes in twelve lessons—twelve "Little Gray Books." They are sent one at a time, and the student fills out work sheets that are gone over with pen and ink by a staff of trained instructors—all men and women of the highest experience and qualifications.

A special system keeps the examiners in close personal touch with the students right through the course, and insures that *individual attention* which is so essential to the success of a study of this character.

How to Become a Pelmanist

YOU will find the answer in a booklet issued by the Pelman Institute of America and sent free on request. It is called "Mind and Memory," and it describes Pelmanism to the last detail.

It might truly be described as your first lesson in Pelmanism; for a thorough reading of it will start your mind Pelmanizing, just as it has the minds of many others. It balances big benefits against a low cost.

You want Pelmanism. Take your first lesson in Pelmanism *now!* Don't "put off!" Write your name and address in the coupon below at once and send it to the Pelman Institute of America, Suite 374, 505 Fifth Avenue, New York.

PELMAN INSTITUTE OF AMERICA,
Suite 374, 505 Fifth Avenue, New York, N. Y.

Please send at once and without obligation to me, a copy of your booklet—"Mind and Memory"—and such other literature as will tell me how I can become a Pelmanist.

Just a Word

We've moved! And we trust that every reader who has ever had a similar experience will register heartfelt sympathy along with his congratulations.

For the lowest point (we hope!) to which human despair can sink was reached when we first invaded our new quarters, stumbling over piles of office furniture en route, dropping into our old, familiar chair (to find that it had lost one castor and tilted in a roguish way better adapted to a venturesome young aviator), reaching for the telephone to start the day's work ("Sorry. But the telephone won't be connected for some time. There are 15,000 requests ahead of you in this district"), asking for the morning's mail (No mail till noon today!), and so on indefinitely! Even filling the fountain pen presented difficulties.

In some strange way the moving men had proved a magnet for the office shears. Ours were lost, and so were those of all from whom we tried to borrow (at least that's what they said). And whoever heard of editing without a pair of shears?

We all cursed progress that first day? Venturing outside the editorial sanctum involved a psychological test akin to that of the white rats in a maze. One editor tackled a little verse on the wall behind his desk (written to the rhythm of the carpenters' strident hammer blows)

Gin a body meet a body
Coming thru the aisle
Gin a body kick a body
Need a body smaile?

However we all did! And the worst is over now.

So all this is just by way of proving to you what we suspect you already took for granted anyhow, that men may come and men may go (even moving men) but The Independent comes out every week with the best that can be written on the world's news and what it means.

New Plays

A new and really eminent Shakespearian actor has arrived. Every one should see John Barrymore and his excellent troupe in *Richard III*. Perhaps the best presentation of the play in this generation. (Plymouth Theater.)

Ruddigore. Last year the Society of American Singers scored a hit by the revival of Gilbert and Sullivan's popular operas. This year they have achieved a still greater success by reviving an unpopular and forgotten opera by the same author and composer. Its very name was anathema to the prudish British of the mid-Victorian epoch but now it competes with the most modern of New York entertainments. (Park Theater.)

Remarkable Remarks

DR. FRANK CRANE—As you love me, cultivate a sense of humor.

THOMAS EDISON—Oh! I eat a Welsh rarebit for breakfast every morning!

SIR OLIVER LODGE—I am inclined to accept the New Testament record of miracles.

THE EMPEROR OF JAPAN—We hereby adjure upon our loyal subjects to fulfil our wishes.

ED. PINAUD—It has been necessary to increase our prices 35 per cent since the war began.

GENERAL DENIKIN—I will hang all who have been implicated in the vile reign of Bolshevism.

AMY LOWELL—I shall rejoice when the newspaper funny man is relegated to the limbo of forgotten things.

STUYVESANT FISH—The Covenant shines and it stinks, and it stinks and it shines like a mackerel lying in the moonlight.

MRS. H. B. FOSDICK—When there is a hole in the wall take a piece of soap and press it into the hole. It won't fall out as putty does.

MRS. VERA MOORE—How many mothers stop to think they can make good black bloomers for the children to play in out of old umbrella tops?

EX-PREMIER CLEMENCEAU—I shall love to watch my doctor hunt crocodiles. It will remind me of what I had to do at the Peace Conference.

LORD LEVERHULME, founder and head of Lever Bros., Ltd.—Capital is only character, and it has been character that was the basis of the credit of the United Kingdom.

COSTUME ROBERT E. JONES—I have always thought that I should like to costume a chorus for some musical comedy out of materials from the five and ten cent store.

DR. JAEGER—What every woman doesn't know is the fact that she can buy a make of woolen underwear for husband, son or brother that is non-irritable to the most sensitive skin.

HERBERT N. CASSON—If anybody must be thrown overboard to save the ship of state, why not begin with the thirty dukes and the thirty-nine marquises who got their lands from Henry VIII?

BERNARD SHAW—I am so far modern that I have come to the conclusion that what is wanted is a law that every building should be knocked down at the end of twenty years, and a new one erected.

HON. MISS HELEN SCOTT-MONTAGUE—The old Duchess of Cortland, the Duchess of Devonshire, the Duchess of Buccleugh and the Countess of Anglessa were all brought up in unbleached muslin underwear.

General Motors Trucks

ON rural motor express lines, in the heaviest city traffic, on the farm—wherever General Motors Trucks operate, their performance brings forth expressions of unqualified approval from thousands of satisfied owners.

GMC Trucks are built and backed by the exclusive truck building unit of the General Motors Corporation.

Typeless printing! Bricks are no longer made with straw--a better way has been found. By the elimination of type and cuts, the Mimeograph produces good printing *quicker* than it is produced by any other means—with less trouble—at small cost. And because it holds this tremendous advantage it is used in commercial, governmental and educational institutions throughout civilization as an efficient means of beating down costs and saving time. No special training needed for its operation. Duplicates letters, bulletins, forms, drawings, etc.—five thousand an hour! Costs little to install. Why not see what typeless printing will do for you—today? Get catalog “E” from A. B. Dick Company, Chicago—and New York.

When Will Taxes Come Down?

A Message from the United States Government

By Daniel C. Roper

Commissioner of Internal Revenue

WHEN will our tax laws be revised? This question is being asked on every hand as tax returns are being filed, and is of importance to every American who contributes directly or indirectly to the Government's revenues. Doubt as to what is to be the future tax policy of the nation is damaging to every interest. The most important thing that can be done for the taxpayer and the country at this time is to remove the doubt and uncertainty which accompanies the feeling that the tax laws are going to be constantly under revision and review. If Congress is not going to take up seriously the revision of the laws, it is in the interest of the Government as well as the business world that it should frankly and promptly say so.

There has been for many months past a great clamor for tax revision. It seems to me that definite heed should be given it, both by the legislative and the executive branches of the Government. Both should endeavor to eliminate the complications of the present law, to avoid as far as possible the shackling of business and to work out a permanent and simplified system of taxation. And to this end every taxpayer should become a student of the theory and practice of taxation and should strive to assist those whose duty it is to frame and administer the laws with suggestions growing out of his own experience and observation.

Revision of the tax laws does not necessarily involve a reduction in the amount of revenue to be secured by the Government from taxation. It might involve lowering some and increasing other tax rates, better to adjust our system to post war conditions.

When then can all taxes be brought down? Before that question can be answered we must consider and give answer to several others of even more fundamental importance. It is of importance that we answer them quickly, to be rid of the uncertainty I have spoken of above, but we have not yet the information necessary to answer them with wisdom.

PRACTICALLY every European government is at present considering the imposition of higher tax levies. Only the United States among the belligerents has been able to lower its war tax rates. This year's revenues from taxation and the sale of surplus war materials will be quite ample, it is estimated, to meet current governmental expenditures. Everyone agrees, I take it, that we should never reduce the revenues to be returned by taxation to an extent that would make new bond issues

necessary to defray the ordinary expenses of the Government.

The cost of government at present is high. Like the individual the Government can somewhat better its financial position by the practice of economy. But the cost of government in the main cannot be materially reduced until high prices come down, for the Government is as much affected by the high cost of living as the average citizen. It is important in this connection to consider whether heavy taxation is the cause, as has been many times alleged, or the effect of high prices.

Must we reduce taxes to reduce prices, or reduce prices to reduce taxes? I am of the emphatic opinion that high prices are due to other causes, principally to the condition of uncertainty in every line, and that very little of the responsibility can be laid to high taxes. It is true that many of our taxes tend in spite of everything to become consumption taxes. They are passed on and on until they can be passed no farther. But taxes are only a drop in the bucket of present high prices.

THE large tax levies made necessary by the war have made the tax item one of the most vital in every business. When the assets acquired by the nation during the war period are properly analyzed due credit will be given to the tax law for having impressed upon our people generally the necessity of keeping more accurate accounts. This will lead not only to more accurate records and hence to more honest accounting between taxpayers and the Government, but also to the reconstruction of business along more systematic and efficient lines. Persons will seek more accurate information regarding their business conditions and will be able more quickly to remedy defects and to conduct their business enterprises more successfully. It will be seen, therefore, that heavy war taxation has not been without its benefits.

Gradually our manufacturers are getting over their uncertainty as to the cost of labor and raw materials and uncertainty as to markets, and tho the uncertainty with regard to taxes remains, I think we could look forward with assurance to conditions permitting a reduction of the revenues to be secured from taxation, if we had merely to consider raising enough money to meet governmental expenditures.

But there are other things to be considered—and most important among them is [Continued on page 452]

Fiume—the bone of contention between Italy and Yugoslavia

Another Scrap of Paper?

Stern Facts That Must Be Faced in Solving the Adriatic Problem

By Captain Alessandro Sapelli

Owing to the recent postal and telegraph strike in Italy we did not receive the official message from the Italian Government to the American people scheduled for this issue of The Independent. We are substituting therefor this article by one of the best-informed and most prominent Italians in the United States, Captain Alessandro Sapelli, former director of the Italian Committee of Public Information and ex-governor of Italian Somaliland, in East Africa. Captain Sapelli prefers to give us an Italian message which is not official, but which expresses his earnest and carefully thought-out convictions on Italy's foremost problem today

HERE is an insistent rumor in diplomatic and journalistic circles to the effect that Signor Nitti, Italian Premier, whose patience has been put to a severe test by President Wilson, has made the following forceful declaration: "A million notes will not succeed in depriving Italy of the territories which are hers by sacred right, and whose occupation is an accomplished fact."

This was the textual contents of a cablegram sent from London to a New York newspaper under date of February 27.

The London correspondent of the paper in question has doubtless never even seen Signor Nitti, for, had he met him but once, he would not have attributed to the Premier words which that gentleman has certainly never pronounced and which he will certainly never utter. Perhaps Mr. Correspondent has considered himself authorized, we know not on what grounds or by what inspiration, to impersonate in Signor Nitti the Italian people, and has represented the Premier as having expressed what he, as a correspondent, considers to be the sentiment of the Italians upon receiving the new Wilsonian note. In this case the cable may, after all, reflect a truth, not an ungarnished one, be it understood, but, at least, a truth well veiled and duly censored.

It does not require much perception to see that the people of Italy and the Italians of Fiume, who for sixteen months have been awaiting a solution of the Adriatic question, must feel a sense of bitterness and rebellion as a result of the unjust accusals and un-

generous threats to which they have been subjected.

If twenty years hence (and time passes rapidly nowadays) one should read the events of these past few months, without reading the history of the war preceding them, he would certainly be convinced that the Croats, Slovenes, Bosniacs and Serbs, allied with the United States and associated with France and Great Britain, have fought and defeated, at Vittorio Veneto, the Austro-Hungarian Empire allied with Italy.

Italy, before allying herself with the enemies of the Central Empires, foresaw the possibility that her rightful claims might be contested, after victory, by companions in arms, who might, in some respects, have political interests differing from or opposite to hers. For this reason she prepared and accepted an equitable compromise, implying unquestionable renunciations, to complete the redemption of Italian land and peoples.

Italy thus defined the minimum which would also guarantee that, on a favorable conclusion of the war, her hopes would not be rendered vain and illusory as a result of pressure exerted by those very nations by whose side Italy had fought. This was the meaning and purpose of the Treaty of London, a treaty proposed and arrived at in 1915, based on ideas and principles then mutually agreed upon by all concerned and whose obligations Italy has fulfilled generously and without niggardliness.

Having, in order to avoid misunderstanding, drawn the attention of her new allies to the possibility of the contestations which have arisen [Continued on page 446

The Best Person in Our Town

When we asked the readers of The Independent last fall to tell us the story of "The Best Man or Woman in Our Town" the answers that came pouring in would have convinced the sourest pessimist that "all's well with the world." From all over the United States came the sketches of the "best" folks—stories that showed a surprising unanimity in their definition of "best"—in almost every case taking the word to mean: of upright character, helpful to many people, brave in fighting wrong-doing, a constructive power in the community—seldom great, never self-seeking. If these answers from The Independent readers may be considered a fair test America still holds to the good, old-fashioned standards of her pioneers. We judged the manuscripts which were submitted, in accordance with this attitude and chose for the first prize the sketch below, one typical of a large number. As many as possible of the other manuscripts judged worthy of publication will appear in succeeding issues

HE is a farmer, with little education and homely as a hedge fence. Never by any chance one of the "goody, goody" kind, but always and in every way dependable. Born of poor, obscure parents and starting in life for himself with nothing but one pair of hands, a clear head and intense personality tintured with bulldog tenacity, he has by dint of hard work,

close economy and tireless industry, surrounded himself with a well-tilled and well-stocked farm unincumbered by debt. He married early in life a woman whom neighbors say was never of much help to him, and who died leaving four children motherless. One of them married before her mother's death and one was large enough to keep house for her father. "Nothing particu-

lar striking about all this," you think? There may be nothing spectacular about my "best man in our town." But wait.

Mr. Hayden (which is not his name) was converted in middle life and joined our little church. Eventually he became an elder and Sabbath school superintendent, altho he can scarcely read a scripture verse without stumbling. "I can't teach a class," he said, "but I can run the school and keep others at work." And so for years, during ebb and flow of church life and community interests he has held a steady rein over our little school and manifested a personal responsibility for the well-being of every member thereof. One of us, a widow, lives alone. When she falls sick Mr. Hayden sees that her Sunday school paper is delivered, that her water pail and coal bucket are filled and that no want is unsupplied. A boy or girl goes away to school, and our "best man" follows with words of advice and offers of assistance in securing room and board. A member dies and he is on hand to oversee that a grave is dug, undertaker secured, carriages, autos, and needed supplies provided, the minister notified and music arranged for. Members move away and he manages to let them know that we consider them as still belonging

This "best" man would be the last to believe that he deserved such honor

to us. The church lawn needs mowing and his machine does the work. The walk is out of repair, and Mr. Hayden is "Johnny on the spot."

Membership in our little church is depleted by deaths and removals until a mere handful of the faithful gather Sunday after Sunday to study the Bible lesson, and contribute to "the boards." A preacher has been out of the question for several years, but Mr. Hayden has held the fort out of sheer persistence and our unbounded respect for his integrity.

That integrity is an inherent characteristic as the following instance will indicate. Our rural telephone has a rule, "Pay in advance, or no service." One recent night Mr. Hayden went to the phone to collect a crew of threshers for next day's work. "Nothing doing," came over the wire. "I'd like to know why," he asked. "Quarterly dues unpaid yesterday." In vain were protests made—"a pressure of local business had made him forget; he would pay tomorrow, but he must talk now." "No, a rule is a rule." Tired as he was after a big day's work he had to walk a mile to use a neighbor's phone. "I tell you I was mad enough to bite a ten-penny nail in two," he told me afterward. "They'll never get another cent out of me. I disconnected my phone that night and 'never again.'"

The next evening while he was milking one of his ten cows a scripture verse kept repeating itself in his mind; over and over again the words, "Owe no man anything," asserted themselves. "I knew I had had three months' telephone service for which I had paid nothing. My conscience would not let me off until that debt was paid. Prayer at home or in Sabbath school would be out of the question until a settlement was made." "And you've connected [Continued on page 459]

Farmer Hayden with his wife, by whose connivance we obtained these photographs of the exceedingly modest hero of the sketch

Master Workshops of America

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprises That Have Given the United States the Name of the Foremost Industrial Nation of the World

In 1883 the Peabody Coal Company was nothing but a small retail yard; today it operates thirty-six mines with an annual production of 18,000,000 tons, and is the only concern of its kind specializing in every phase of bituminous coal production and distribution

The Firm That Saved One Client \$1,000,000 a Year

By Edward Earle Purinton

AN amazing fact recently came to light in a Western city. A large corporation handling a product that almost everybody needs has materially reduced the price within five years during and after the war. And the profits of the company have grown, while the prices diminished!

Government reports indicate that dealers in other general commodities have, during this same period, raised their prices 100 to 200 per cent. How could any business organization cut down prices an average of 15 per cent a year and succeed, while most concerns had to increase prices an average of 30 per cent a year to keep from being ruined by the war?

Questioned on this point, a man with inside knowledge replied: "The company that made more money by asking less knows the science of economical production and distribution. Last year a saving of \$1,000,000 resulted from a single item—coal."

The firm alluded to above is a client of the Peabody Coal Company of Chicago. By handling the fuel problems of one of its clients so as to increase output, improve quality and lessen waste, the Peabody firm of coal engineers, managers and producers effected probably the most stupendous gain ever known to a business house in the practice of regular fuel economy.

The founder and chairman of the company is Francis S. Peabody, a national authority on the coal situation. He was director of coal production of the Council of National Defense in the early part of the war, and later was appointed assistant director of the Bureau of Mines by Secretary Lane. He served also as chairman of the board for regulating the storage of explosives, as a member of the Chicago Council on U. S. Junior Naval

Reserve Training, and in other capacities needing both expert knowledge and a patriotism that gets things done. The Canadian Government requested him to make a personal inspection of most of the mines and coal fields of Canada, which he promptly did, offering suggestions for increased production.

Back in 1883 the Peabody Coal Company was nothing but a small retail yard. It looked as dingy, dirty, ugly, bare and unpromising as the rest of its kind. But you can never judge the future of a business by its present location, size or appearance; the future is made by the keen vision, close aim, set purpose, full knowledge and firm will of the man at the head; and who can measure the future of a man?

Today this company has a reputation from coast to coast, operates thirty-six mines with annual production of 18,000,000 tons, has financed coal properties worth over \$35,000,000, and is the only concern of its kind specializing in every phase of bituminous coal production and distribution. *This company has no competitors.*

We asked an official of the company to explain the absence of competition. He said, "It may be due to the fact that such service as we render requires an immense amount of capital, a highly trained and efficient organization, and a good many years of experience in the work." The explanation is only partial. The broad fundamental reason for success may be that the company has applied to its organization and operation the telescope of principle—and the microscope of method. Great results are thereby guaranteed. Every business needs a telescope of principle and a microscope of method. The function of the telescope is to reveal the

ethical, social, psychological, industrial scope of organization; the function of the microscope is to reveal the mechanical, financial, technical, personal system of operation. Let us for a minute focus the business telescope and microscope on the Peabody Coal Company.

The principle is that of centralized management—with a new application. It is used in commerce by the department stores, was adopted in war by the Allies under Marshal Foch, but has never been properly extended to the unifying and retailing of professional service. A housekeeper can buy from a single store any of thousands of different household articles; but when a business man goes forth to buy the knowledge and skill of experts, he may have to shop in a dozen States—and then be disappointed. The vain search for technical authorities with brains properly filled but minds properly open costs American business men millions of dollars a year in time lost, energy lost, equipment lost, reputation lost.

Another handicap to be overcome is the distance between the average professional counsellor and the changing field of operations. He has no business of his own. He merely has regulation advice to offer on other men's problems. The method works in a trade or business not subject to rapid or violent changes; but where a national revolution, such as lately put the coal mines to the bad, hits a line of trade, the expert has to be in it or he ceases to be an expert. No outsider, whether financier, engineer, purchasing agent, production or sales manager could settle the troubles of a large coal operator or consumer in a crisis like that following the war. He would have to be first a large operator or consumer himself.

The Peabody Coal Company bases management service on ownership experience. A producing concern delivering as much as 2,000,000 tons of coal a year to a single customer, it is also a firm of consulting experts, having as clients large railroads, factories, chemical companies, banks, public utility corporations. Among the specialists on the staff are accountants, advisers, auditors, construction engineers, consulting, mechanical, mining, electrical and chemical engineers, financiers, fuel engineers, managers, producers, purchasing agents and sales agents. Note how these experts, by rendering a variety of services, all different but all inter-related, unite to form a complete system of management.

Francis S. Peabody, founder of the Peabody Coal Company, is an authority on the coal situation

They tabulate, notate and correlate the results of their own vast experience for the benefit of their customers and clients. They investigate and examine coal properties, advise on their commercial value, prepare plans for opening and developing mines and fields. They appraise lands and properties for bond houses, banks and coal operators needing financial backing.

They operate mines owned by others for their own account or for the joint account of the owners and the Peabody Company. They operate mines owned by large consumers of coal, supply them with the tonnage needed, and dispose of the remainder of the output for their account. They act as selling agents for owners of coal properties and for bond houses and banks controlling such properties. They act as agents for the sale of coal produced by companies whose output is too small to warrant their maintaining selling offices. They act as purchasing agents for consumers of coal.

They serve as consulting engineers, making recommendations for improvements or changes in operating methods to secure increased output or more economical operation. They advise on markets for present and future mining output. They finance coal properties which have had the approval of their engineering and sales departments. They advise concerning quality of coal best suited to the consumers' needs and equipment, with recommendations to effect savings in power plant and reduce or eliminate fuel difficulties.

They set up cost sheets and cost accounting books, furnish cost statements, devise methods of auditing, keep the daily books, and do all other necessary accounting for active mining properties. They design and erect mine buildings and machinery, tipples, washers, power plants, rescreening plants and other mining adjuncts or equipment. They purchase mine supplies and machinery for other plants and customers. They invest their own capital in opening and developing coal lands owned by others and approved by themselves.

What are the advantages to users of a system like this? Prices are lower; for example, the company buys every year several million dollars' worth of mining tools, machinery and supplies, with the benefit from these wholesale purchases going to the clients of the company. The difficulties of a business are more easily and effectively removed; the problems of management overlap in departments such as buying and accounting, producing and distributing, advertising and selling; where you have experts in all such departments consulting each other as well as you, the combined results are bound to be more satisfactory, and less costly. A regular supply of coal is guaranteed, with health of employees conserved, lay-offs and shut-downs reduced to a minimum. The consumer is not limited to any grade, locality or variety of coal; his needs are studied and the coal best adapted to them is [Continued on page 455]

HAND PICKED COAL

The needs of the consumer are studied and the coal best adapted to them is furnished from the most suitable mine in the company's field, which extends over an area of six States

What Is Americanism?

By Edwin E. Slosson

THE war has put a new course in every curriculum. The demand of the day is that we shall consciously teach what we have unconsciously become. Scores of agencies have sprung up for the teaching of Americanism. Money is pouring out lavishly for the cause. Zealous and devoted men and women, old and young, have responded to the call for volunteers and are training themselves for this new form of national service. There is no cause more worthy; none more needed. It is because the peoples of the Old World had not learned the lesson of Americanism that the Greatest War came upon them and it is because they will not learn it now that the Great Peace is still delayed.

America has a message. It is a message of peace and good will to all men. It is meet that we say it over to ourselves, that we may not forget it in the turmoil of antagonistic voices and the despair engendered by distress. Faith is what we need, faith in God and country, faith in our institutions and ourselves. We must study our history and learn what has made our nation strong and unified. Our name is our ideal, the United States. Our duty is to justify the prophetic title that the founders of the republic dared to call it. We must manage to convey its meaning to the aliens who come to us with alien ideas hard to eradicate, with outlandish traditions incompatible with ours. We must inspire them and their children and our children as well with the true spirit of Americanism.

What is that spirit? It is most succinctly expressed in our national motto. Every American, however poor, carries in his pocket a Government medal of silver or nickel with this inscription, *E pluribus unum*. "Of many, making one;" or to put it in other words it means, "the unification of diversity." Note that it does not mean "the obliteration of diversity." It means many minds, one heart; many roads, one goal; many ways, one purpose; many races, one nation. The American revolutionists, like the French, believed in the political trinity of Liberty, Equality, Fraternity. But their creed should not be misread as Liberty, Uniformity, Fraternity. Quite the contrary, they were bent on sweeping away the artificial and traditional inequalities of men that all might be born free and have an equal chance to develop their diverse abilities in fraternal unity. The best text book of Americanism is still the Declaration of Independence, and we might well revive the obsolete custom of reading it once a year. Some of our new teachers of Americanism do not seem to be familiar with its Magna Charta.

The "Melting Pot" metaphor is sometimes misconstrued thru inattention to its grammatical form. The participle is in the present tense. A "Melting Pot" means a pot that is kept melting—that is to say, in a fluid condition so that each individual particle may find its proper level according to its own specific gravity, the scum to be skimmed off and the dregs to be discarded. It does not mean that sometime the contents of the pot are to be poured out to set in a rigid mold like the cast nations of the Old World. If America ever cools off and solidifies that is the death of Americanism. We Americans do not believe that people should be pressed into the same mold, machined to the same pattern. It was to escape such a process that many of us or our ancestors came to America.

America was populated by the persecuted. Puritans from England, Huguenots from France, Germans from the Rhine, Catholics from Ireland, Czechoslovaks from Austria-Hungary, Armenians from Turkey, Jews from Russia, these but a few of those who fled to America for freedom from

the religious, economic, racial or military oppression at home. All these were protestants and non-conformists in the original sense of these words, whether they were Catholics or Congregationalists. They were a chosen people—chosen to be kicked out from their native lands. Whether our fathers came over in the "Mayflower" along with a shipload of furniture and pewter-ware or whether they came over later in the more comfortable accommodations of a steamer steerage it was mostly because they were considered undesirable citizens that they were forced or permitted to depart.

America is a chosen land—selected out of all parts of the world as their future home by those who desired or were obliged to leave their native countries. This is an honor that we should appreciate and endeavor to deserve. The United States is a synthetic nation. Other countries "just grewed," like Topsy. Ours is the conscious and considered creation of its people. European and Asiatic countries are almost entirely populated by those who were born there and did not have energy enough to get away. Our population is largely composed of those who were not born here and had energy enough to come. What is called patriotism is sometimes not love of country but mere laziness. Our patriotism is less alloyed with this element than any other, for a large proportion of Americans love America because they have lived elsewhere. They came here because they thought they would find it best; they stay here because they have found it best. Americanism is an elective course.

Our form of government is no hand-me-down from a former generation, no misfit borrowed from another land. It is made to measure and is remade to fit. Our social system is more of a skin than a coat. It grows with us. Every man his own tailor is the law of democracy. The King of France said, "I am the State." It was a lie and they cut off his head for it. The American citizen says, "I am the State," and it is the literal truth. All men are monarchs. This develops a sense of responsibility. In other lands the people can complain, "Why don't *they* do it?" In America we can only wonder, "Why don't *we* do it?"

CONSEQUENTLY the first lesson to be taught to an immigrant is that patriotism in the American sense is a different thing from Old World patriotism. Americanism does not mean loyalty to a king; it does not mean attachment to a particular spot of ground; it does not mean conformity to a fixed code of customs; it does not mean the perpetuation of traditional institutions; it does not mean aversion to novel and foreign ideas; it does not mean hostility toward those who differ from us.

Americanism is one of the fine arts, the finest of all the fine arts, the art of getting along peaceably with all sorts and conditions of men. We Americans have had more experience in the practice of this art than other nations and it is not undue boasting to say that we have acquired a certain proficiency in it. A steel mill may contain twenty different nationalities and they do not quarrel any more than so many Irishmen or Poles in their native land. A city block is a map of Europe in miniature. The immigrants try to keep up their Old World antipathies. Their children when they go to school together call each other names and stretch their little necks trying to look down on each other. Then they grow up together and go into partnership or inter-marry. There are few Old World feuds that, if let alone, can resist the solvent atmosphere of America.

In the light of our history and our social system we can

Americanization? They'll Say It Is!

An experiment that may prove to be the biggest piece of work the American army ever did began at the Recruit Educational Center at Camp Upton about a year ago with some illiterate foreigners recruited into the United States military service. In six months these men had become first class American citizens and first class soldiers. The photograph above, taken after six months training, shows what has been done

When a picked squad of these "made-in-the-army Americans" were sent on a tour to show other parts of the country the success of the Americanization experiment one of them wrote this letter from Niagara Falls. He had begun learning to write English only six months before, remember! The letter proves his progress in the classroom; the photograph of him in the lower right corner of this page shows his acquisition of a soldierly appearance that West Point might envy. The impetus that made the United States army an Americanization agency came when it was found that one in every four drafted men could not read nor write English. In development battalions these men got a start. Whether or not the work is to continue in peace time is another story

One thing that never fails to impress a visitor to the Recruit Educational Center is that the men can all sing "America"—all the verses, all the words. Below is a typical classroom in English. Besides making a soldier and a citizen of its recruit the American army offers, too, to teach him a trade. To sum it up the Recruit Educational Center is good business for the army—it furnishes more and better soldiers; good business for the recruit—it increases his education and his earning capacity; and good business for the nation—it makes intelligent, patriotic, disciplined citizens

define the distinguishing characteristics of Americanism and of its opposite as follows:

AMERICANISM	ANTI-AMERICANISM
Cosmopolitanism	Exclusiveness
Catholicity	Intolerance
Eclecticism	Compulsory uniformity

The true American then is fond of travel and accustomed to associate with men of various nationalities; he not only tolerates views other than his own but is anxious to hear them and he selects from the ideas that come from far or near those that seem to him sensible and worth trying. He is always eager to tell or to hear some new thing, but it is the practical inquisitiveness of the Yankee, not the idle curiosity of the Athenian.

The spirit of Americanism is not confined to any particular race, language, land, creed or form of government. Altho "made in America" it is not patented. It may be exported. In fact it has been carried to the Old World by millions of missionaries, the immigrants who, having lived among us for a few years and imbibed something of the genius of the place, have returned to their native lands and implanted there certain of these New World notions. The traveler in Europe and Asia may happen anywhere upon Americanized individuals, Americanized homes, even Americanized towns. This reflex action of emigration is too often overlooked.

In politics the American spirit finds expression in our unique combination of diversity in unity, the federal system. An effort is now being made, tho not with the advice and consent of the Senate, to extend something of the system to the world as a whole in the form of a League of Nations, but the world does not seem ripe for it yet. The Anti-American spirit dominates Europe and controls the making of the map. The Allied Powers, freed from American influence by the withdrawal of our representatives from Paris, are trying to herd the human race into separate corrals, with barbed wire fences around each petty people, to draw boundary lines around those who claim the same ancestry, speak the same language and profess the same creed. They aim to secure an artificial unity by means of a compulsory uniformity. If they succeed they will restore the crazy-quilt map of the Middle Ages before the world had been bound together by rails and telegraph wires. All Europe seems mad with the mania of xenophobia. A dozen new nationalities have arisen, each gathering her skirts about her to avoid contact with her neighbors. It is political sectarianism carried to the extreme. The smaller the country the more intense the nationalism. The new boundary lines of Europe and Asia are being drawn in the spirit of hate.

The American ideal is the opposite of this. Our guiding spirit is love, not hate. We would lay the foundations of a new state in hope not fear. Holding that all men are equal we are willing to call them brothers. Our kind of nationalism is not exclusive. Our ideal of patriotism is not national selfishness, it is universal commonwealth.

But all Americans are not yet Americanized and it may be that the flood of reaction now sweeping over the world may even carry our own country away with it.

Must We Choose?

MOST of the presidential candidates so far mentioned seem to belong to two classes—those who could be elected but cannot be nominated, and those who can be nominated but could not be elected.

The Folly of Fences

ITALY and Yugoslavia are on the verge of war because Italy demands the little strip of land between the Wilson Line and the Pact of London Line. Yugoslavia refuses because the territory in dispute contains 40,000 Slovenes who do not want to come under Italian rule. But before the war

40,000 Slovenes were coming to the United States *every year* and nobody thought anything about it. There will be no peace for the world until statesmen realize that people are not rooted to the ground like stocks and stones, and that if you pen them up they will jump fences.

Understanding Our Government

By Franklin H. Giddings

WHEN Dr. Butler refused to authorize a resolution in the Republican State Convention instructing New York delegates to the National Convention to support him as a candidate for the Presidency, he took an unequivocal stand for representative government in the sound meaning of that much misunderstood term. So also did Vice-President Marshall when he declared the other day that he believed in "representative democracy" and not in "socialistic democracy."

There is reason to fear that only a small percentage of American voters know what representative government is. Our state and national governments are representative in theory and in law, but the word is not often heard in these days and the clear understanding of it, which the student of history discovers in the public documents and discussions of our earlier period, has nearly been lost. In large areas the idea itself has fallen into discredit, and "direct democracy" has won popularity.

More can be said for direct democracy than for representative government misconceived and degraded. When the representative has become a rubber stamp, voting only as instructed by constituents, or, when (a yet worse fate) he has become a coward, afraid of his district—he is an evil influence and the world would be better off without him. True representative government is possible only when the representative is no less independent than responsible, knowing that he has full discretion to safeguard the interests of his constituents, as the lawyer has to safeguard the business of his clients, or as a physician has to safeguard the life and health of his patients.

The superiority of representative government to direct democracy is consequent upon the fact that not all citizens are equally competent to legislate. In theory representatives are chosen from the relatively competent. In practice they not always are. Partial failure of the system is attributable to the unfortunate circumstance that the relatively incompetent voter is often so deplorably incompetent or intellectually so dishonest that he cannot see or will not admit that another man has more sense than he has.

To make a bad matter worse, there has long been in the United States an industrious teaching of the nonsense that all citizens are, in fact, equally fit to hold office, in particular, to serve in municipal common councils or boards of aldermen, in state legislatures and in the Congress at Washington. The Declaration of Independence said that men are created equal, and the Jacksonian democracy took up the proposition in a serious way. That sentence in the Declaration was a piece of political tomfoolery adopted in face of the protest of a clear-headed Democrat, Thomas Paine, who urged that the proposition should read "men are created equal *in respect of their rights*," which would have been true and worth saying.

Notwithstanding these offsets and limitations, representative government does, in a measure, put the actual business of law making and administration into the hands of men somewhat above average ability. This happens because, with now and then an exception, a man cannot get elected to public office unless he is known to his constituents, and as a rule he cannot become known until he has accomplished something in business, law, education, or civic activity. The requirement is not great and the level not high. Yet on the whole it is an observable fact that the more

important the office, the bigger is the man chosen to fill it.

For direct democracy one sound argument may be advanced. In the New England town meeting, in popular voting on state constitutional amendments, and in states which legislate by referendum, voters are compelled to pass judgment upon things as well as upon persons. They have to think about affairs and policies. That this necessity has an educational value is not disputed. It tends to make the mass of voters on the whole more competent than they would be if their only political activity consisted in giving power of attorney to representatives.

While no way has been found, or is likely to be found, to make a democracy fool proof, experience indicates that the best working system is a combination of direct democracy with representative government. The town meeting has had an honorable record. It has been a good school. In the commonwealths great issues are discussed and thought about by all citizens, and are most wisely decided by popular vote. But for legislation in general and for efficient administration, some degree of expertness is required. Positive talent is called for, and a politically organized population makes a fatal blunder when it does not delegate these duties to selected men; a truth that always has been recognized in the town meeting itself which, while voting on the particular items of business set forth in the warrant, has also elected "selectmen" to carry out the popular decisions.

Nothing would so improve the quality of American politics in these days of unrest and experiment as a sound understanding of the nature of representative government and the common sense reasons for it. The problems of legislation and public policy were never so difficult as now. They are of baffling complexity, while at the same time their solution is imperative. They involve enormous financial risks and burdens. They call for the most delicate adjustments of social rights and duties. They include the tremendous interests of health and education, of prosperity and peace. They demand, therefore, that before the public by referendum or otherwise gives its final verdict upon them, the most patient and intelligent study and the fullest discussion be given to them. This is equivalent to saying that they call for initial handling by men of demonstrated ability, selected from the great body of citizens and entrusted with both discretion and responsibility.

Cause and Effect

OUR home-grown Bolsheviks have discovered that "direct action" leads directly to direct reaction.

That Long, Long Trail

COME to think of it, we are still at war with Germany and Austria-Hungary.

Unlearned Lessons

THE unlearned lessons of the Great War: Don't make agreements with your Allies that you cannot carry out and don't make demands upon your enemy that he cannot carry out.

The Farmer on Daylight Saving

By L. Wayne Arny

AS a purely municipal affair, daylight saving admits of no controversy. City people want it and want it badly. Its advantages are so manifest that several cities are debating the advisability of individual adoption of the time change, irrespective of what may happen elsewhere. States in which the majority of the population are industrially engaged are strongly in favor of it and to them it seems strange that any class should oppose it.

The opposition, however, is strong, and comes almost

entirely from the farmer, who is now aroused to the point of preparing the most orderly and well organized fight that he has made on any minor issue for a long time. The outcome is interesting largely because it involves the city and the country in a contest, the issues of which are as clear cut as could well be imagined. The city people want daylight saving and the country people do not; and so the battle is on.

In justice to the farmer, however, some survey should be made of the reasons for his stubborn opposition. It is perhaps natural that the man on the street should condemn him for trying to take away the pleasures of an extra hour at golf or the opportunity for a longer motor trip before dark. He does not realize that the farmer has some very definite reasons for his opposition.

In Massachusetts there was recently sent to all of the farmers a questionnaire asking certain directly aimed questions on this subject with a view to estimating the exact proportion of farmers who opposed daylight saving. It must be remembered in this connection that Massachusetts is not an agricultural state and so the actual number of farmers there is relatively small. On the other hand, the results may be taken as fairly indicative of farmers' opinions everywhere, since the points involved are common to all farmers and their reasons for opposition would probably hold in all states.

An analysis of the returned questionnaires showed that 797 farmers are opposed to daylight saving and 114 favor it. The outstanding reason for their opposition is the fact that a large part of their field work such, for instance, as haying, must be done by the sun, regardless of arbitrary time standards. It seems impossible to use the extra hour in the morning to advantage since the dew is still on the ground at that time and the fields cannot be economically worked. On the other hand, a farmer usually considers the afternoon hours of more value than those in the morning; but under the altered time schedule he must stop when conditions are most favorable for work.

Of course, he has the option of working as long as he pleases, but he cannot compel his hired man to follow his example. As one farmer stated on his questionnaire: "It is a serious matter to the farmer when several men have to wait an hour and a half or more in the morning during the haying season before beginning work, or were employed during that hour and a half on some unproductive enterprise, while the best hour of the day, that in the afternoon, is lost. This results in an increased cost of hay, which is the important factor in milk production."

It is also interesting to note the hours of work which many farmers reported. The average day, as given by the questionnaires, begins at 5:35 a. m. and ends at 6:17 p. m. The great majority of farmers complained that it was necessary to begin work earlier under the daylight saving routine. Answering the question as to the actual loss sustained by daylight saving, practically all answers were based on an estimate of one and one half hours lost per man per day. The majority also reported a greater difficulty in holding hired help, and still others said that their children did not get enough sleep; that their cows would not come home at the early hour, thus making it necessary to take time to get them; that the poultry could not adjust the clock hours and the work hours so as to maintain production; and many other less important objections were voiced.

In short, the farmer has some very definite reasons for opposing daylight saving; definite enough in fact to arouse him to fighting pitch. If he must go back to altered time he is determined to find consolation by making the consumer pay the additional bills, rather than pocketing the loss as he did last summer. This would, of course, result in an appreciable increase in the cost of such products as milk, butter, eggs, fruit and cereals; an extra burden which the

These snapshots of the Curb show the actual happenings of the day in the greatest money market in the world. Above is a window man giving quotations on an oil stock to his representative on the Curb below

Here is an active moment in trading on the Curb. Each man is signalling with his fingers the price which he bids for an offered stock

The Curb looks like a fishermen's convention when the men get on their sou' westers for a day of brisk business in the rain. Perhaps the analogy holds for the "poor fish" they catch, too

Windows are so valuable along Wall Street that they are divided into dugouts, each with its telephones and group of brokers' assistants. The man at the left records orders inside. The story goes that he hasn't eaten lunch sitting at a table for three years

One of the big quotation boards in the private office of a firm of brokers. Ticker news of stocks is listed here for the early information of customers

consumer might find wholly unwelcome. He is perfectly willing to have the city man work or play according to any time schedule that pleases him, just so long as his own working hours are not disturbed or the train times changed.

The whole thing is significant, for if the farmers in Massachusetts succeed in defeating the bill, those in other states undoubtedly can do the same thing with less effort, particularly in the middlewestern states, many of which are more extensive in their agricultural interests. Whether we will have daylight saving or not is a much less vital part of the contest than is the question of whether the farmer has the necessary power to defeat an issue that is held in such favor in the cities. If he succeeds, the victory will very materially strengthen his morale for other contests of greater political or economic significance.

New Need for Esperanto?

IN the case of most international conventions a version in one language, customarily French, is taken as the original text. The Treaty of Versailles, however, stipulates that the French and English texts shall have equal authority. But a perfectly equivalent translation of anything more complex than the multiplication table is impossible and already controversies have arisen over supposed discrepancies in the two versions. So the Esperantists of Paris have published their "Kontrakto de la Ligo de Nacioj" with the suggestion that by making Esperanto the official language of the League all disputes would be avoided.

Label Your Guests

THE greatest test of the human memory is prompt and certain association of the faces and names of casual acquaintances. A false confidence is worse than avowed ignorance. When introducing Mr. Thomas Jones to Miss Angelica Robinson, it is safer to say "er-Mr. Ggrmp meet Miss, what's your name?" than to venture boldly "Mr. Thomas Smith meet Miss Adelaide Higginson." Now, if it were only the rule at formal parties for guests to wear their names tastefully labeled on some conspicuous portion of the costume, or if they could don labels at the door (either hung around the neck or pinned to the lapel), the task of the introducer would be so easy as to be almost superfluous. Mr. Jones might even venture up directly to the lady, take a swift glance at her name-plate, and begin the conversation with the ease of an old and friendly acquaintance—"Miss Robinson, have you been to the opera lately?"

The Biggest Thing in the World

By Hamilton Holt

THE Rev. Charles M. Sheldon, author of "In His Steps," asks us to tell him briefly what is "the biggest thing in the world."

The biggest thing in the world is religion. For on religion depends one's conduct. And on one's conduct depends one's usefulness, happiness and success.

Next to religion the biggest thing in the world is for a man to make a living and a woman to make a home.

But religion, making a living and making a home are largely personal problems. They must be solved by the individual.

There are four other "biggest" problems in the world that cannot be solved by the individual, but only by individuals working in coöperation.

Without undertaking to state them in the order of their importance, we may mention first the economic problem, which is largely a problem of the just distribution of wealth; second, the race problem, which is largely the problem of how to substitute hopefulness and helpfulness for hatefulness and despair over those large sections of our

country where two or more races are forced to live side by side; third, the woman problem, which deals with the new relations of woman or the relations of the new woman to eugenics, the home, business, education, the state, etc.; and fourth, the peace problem, which is nothing but the substitution of coöperation for competition in international affairs.

These four social problems are fundamentally problems of justice. The economic problem is the problem of class justice, the race problem is the problem of race justice, the woman problem is the problem of sex justice, and the peace problem is the problem of international justice.

The biggest thing in the world today, therefore, is:

1st. To get religion.

2nd. To make a living and create a home.

3rd. To devote what time is left to the promotion of economic, race, sex and peace justice.

What's the Use?

THESE sanitary cups are fine things, no doubt, but did you ever notice that nine people out of ten stick their fingers into them to open them up? Or if they are the penny-in-the-slot kind did you ever see the man load them into the glass cylinder without sticking his fingers into them? And fingers as a rule are dirtier than lips and dirt sticks to paper more than to glass.

Competition as Angel and Devil

By Preston Slosson

THE return of the ships and railways to private owners after a brief experiment with public control and the fact that this return seems to meet with the general approval of American public opinion points to some serious handicap which government ownership suffers in comparison with private initiative. Perhaps the clue is to be found in the statement of Mr. Lane when he left the Department of the Interior. He said that in honesty and ability Washington officials ranked high, but many of them feared to assume responsibility or introduce changes, since successful innovations brought no personal profit and failure might lead to reprimand or dismissal. Mediocrity is the safest quality for an official, routine his easiest method and precedent his surest guide.

There can be no doubt that competition and capitalistic methods, whatever their faults, are a main source of the productive wealth of the nation. The fierce rivalry of the market eliminates the inefficient farmer or storekeeper as surely as the natural struggle for existence eliminates the weaklings of the animal world. Old machinery and old methods are thrown pitilessly on the scrap heap. With direct personal profit as the reward of greater efficiency it is no wonder that "the magic of private property turns sand into gold."

Yet we all know the other side to the picture. Competition reverses the moral law by making human personality a means to the creation of wealth. It is all very well that we should scrap our machines but it is not so well that we should scrap honorable and kindly lives simply because they cannot find an immediate place in the industrial system. Many people find the risks of competitive industrialism the very salt of existence, but others weary of living continually on the edge of a precipice with the poorhouse at the bottom and long for the guarantees against poverty which Socialism promises.

We are thus confronted by the apparent dilemma that either we must give competition free play with the resultant poverty, anxiety and class bitterness, or restrict competition and run the risk of stagnation and bureaucratic routine. The problem before us is to devise an industrial system which will combine the greatest insecurity for methods with the greatest security for persons.

The Story of the Week

The Heart of the Covenant

PRESIDENT Wilson's letter to Senator Hitchcock, leader of the supporters of the Treaty with Germany in the Senate, disposes finally of the hope that he would accept the reservations which the Senate has adopted and particularly the proposed modification of Article X of the League of Nations Covenant. In eloquent phrases he claims this article as the "essence of Americanism" and the fruit of our victory. If we should repudiate the principle that all nations are to be secured against assault and invasion we reduce the guarantees of peace in the Covenant to "a futile scrap of paper." By so doing we would encourage the imperialistic spirit which exists in "other nations" as well as Germany.

The President's letter seemed to offer an opening for compromise when he admitted that there could be "no objection to explaining again what our constitutional method is and that our Congress alone can declare war or determine the causes or occasions for war, and that it alone can authorize the use of the armed forces of the United States on land or sea." But in his opinion the reservations which have hitherto been proposed were not explanations but nullifications. Anything amounting to an amendment of the Treaty was inadmissible and he could not understand "the difference between a nullifier and a mild nullifier."

It is evident that in President Wilson's mind Article X is not only "the heart of the Covenant" in the sense of being its most valuable part, but in the literal meaning that the whole Treaty could not live without it, as a man would die if wounded in the heart. Only this can explain his adamant resolution to yield nothing on the one reservation which irreconcilably divides the Senate and which seems to make ratification impossible unless a compromise is reached. The other reservations on the Lodge list have been successively adopted, with but few ameliorations, by mechanical majorities. The reservation on Article X was reserved to the last for the decisive struggle which will determine whether the Treaty will live or die.

The latest form of the reservation to Article X as proposed in the Senate runs thus:

The United States assumes no obligations to employ its military or naval forces, its resources or any form of economic discrimination to preserve the territorial integrity or political independence of any other country, or to interfere in controversies between nations whether members of the League or not, under the provisions of Article X, or to employ the military or naval forces of the United States under any article of the Treaty for any purpose, unless in any particular case the Congress, in the exercise of full liberty of action, shall by act or joint resolution so provide.

Reluctant Democrats

THE Democratic party is not finding it so easy as the Republicans have found it to induce candidates to come forth and declare themselves. Mr. Hoover and Mr. McAdoo, regarded by many Democrats as the best Presidential timber in sight, have both repeatedly refused to enter the primary contests. Their supporters do not take these refusals too seriously, as there is a strong possibility that most of the delegates will go to San Francisco unpledged and that the real contest over the nomination will come on the floor of the convention itself. Mr. McAdoo has given color to this hope by informing his Georgia supporters that it was "highly desirable that every effort should be made to send uninstructed delegates from every state where possible." He said that he would regard it as a duty to accept a nomination that came to him unsolicited, but that his chief concern was with principles and not with persons and the time for selecting candidates has not yet come.

Mr. Hoover simply informed the Democratic state committees in California and Georgia that he was "not a candidate." These refusals do not seem to have lessened his general popular support in the Democratic party and they have roused hopes among his Republican supporters that he was purposely avoiding a Democratic nomination in order to identify himself with the Republicans. In recent public addresses Mr. Hoover has covered a wide field and

What Wilson Thinks of Article X

For myself, I feel that I could not look the soldiers of our gallant armies in the face again if I did not do everything in my power to remove every obstacle that lies in the way of the adoption of this particular article of the Covenant, because we made these pledges to them as well as to the rest of the world, and it was to this cause they deemed themselves devoted in a spirit of crusaders. I should be forever unfaithful to them if I did not do my utmost to fulfill the high purpose for which they fought. . . .

I am sorry to say that the reservations that have come under my notice are almost without exception not interpretations of the articles to which it is proposed to attach them but in effect virtual nullifications of those articles. . . .

Article X as written into the Treaty of Versailles represents the renunciation by Great Britain and Japan, which before the war had begun to find so many interests in common, in the Pacific; by France, by Italy, by all the great fighting powers of the world of the old pretensions of political conquest and territorial aggrandizement. It is a new doctrine in the world's affairs and must be recognized or there is no secure basis for the peace which the whole world so longingly desires and so desperately needs. . . .

Every imperialistic influence in Europe was hostile to the embodiment of Article X in the Covenant of the League of Nations, and its defeat now would mark the complete consummation of their efforts to nullify the treaty. I hold the doctrine of Article X as the essence of Americanism. We cannot repudiate it or weaken it without at the same time repudiating our own principles.

The imperialist wants no League of Nations, but if, in response to the universal cry of the masses everywhere, there is to be one, he is interested to secure one suited to his own purposes, one that will permit him to continue the historic game of pawns and peoples—the juggling of provinces, the old balances of power, and the inevitable wars attendant upon these things. . . .

I hear of reservationists and mild-reservationists, but I cannot understand the difference between a nullifier and a mild nullifier. Our responsibility as a nation in this turning point of history is an overwhelming one, and if I had the opportunity, I would beg every one concerned to consider the matter in the light of what it is possible to accomplish for humanity, rather than in the light of special national interests.

stated his position on many issues, almost as if they were the campaign speeches of an avowed candidate. He urges the immediate ratification of the Treaty and emphasizes the terrible effect which our delay has had on the economic situation in Europe. He speaks of the differences over details of the reservations as "secondary questions." He approves a Federal budget system, a large merchant marine under the American flag, operation of the railway facilities of the country by private capital and initiative, a friendly attitude toward organized labor with recognition of collective bargaining, and higher salaries for teachers.

Senator Pomerene of Ohio has eliminated himself from the Democratic race. He gave as one reason for his refusal that he was unwilling to split the Ohio delegation. This seems to imply that Governor Cox will get the Ohio delegation as an unopposed "favorite son" at the San Francisco convention.

Palmer Is Willing

AT least one Democrat of national prominence and in good standing with the Administration has admitted his willingness to enter the Presidential race. For a long time Attorney General Palmer was as coy as any of the other Democrats mentioned as President Wilson's successor. At a recent banquet in Philadelphia, Mr. Palmer declared that the Presidency "has never been within the scope of my ambitions. I had the desire to be the Attorney General of this country since I was a boy and now that this desire has been realized I would be satisfied to go back to the practice of my profession." He admitted, however, that he would approach a nomination in "the proper spirit" if one were offered him. On the following day, March 1, he formally consented to let his name go before the Georgia primaries.

In his telegram to the Democratic state committee of Georgia, Mr. Palmer said that he supported the record of the Wilson administration "in every phase." It is not yet known whether President Wilson actively desires the nomination of Mr. Palmer or of any other particular candidate, but the fact that Mr. Palmer continues to hold cabinet office and that he emphasizes so strongly his solidarity with the policies of the Administration will cause him to be widely regarded as acceptable to the White House. In his recent speeches the Attorney General has stood uncompromisingly for the ratification of the Treaty with Germany and is willing to carry the issue into the campaign if the Republicans force him to do so. He has defined his position on the industrial question in the following terms:

The most pressing need of the hour to stabilize the industrial situation is to build machinery which will give to both employer and employee the facts surrounding their relations with each other. There need be no restriction of the rights of men to strike and no compulsory arbitration of difference if provision is made for the great American public to be advised of all the facts in relation to every dispute in the industrial world so large as to effect in its consequences a considerable portion of the public.

Stock Dividends Are Not Income

THE Supreme Court declared on March 8 that stock dividends are not taxable as income and cannot be brought within the scope of the sixteenth amendment to the Constitution. Chief Justice White and Justices Pitney, McKenna, Van Devanter and McReynolds concurred in the decision. Justice Pitney declared:

The essential and controlling fact is that the stockholder has received nothing from the company's assets for his separate use and benefit; on the contrary, every dollar of his original investment, together with whatever accretions and accumulations have resulted from employment of his money and that of the other stockholders in the business of the company, still remains the property of the company and subject to business risks which may result in wiping out the entire investment.

Having regard to the very truth of the matter, to substance

Sydney (Australia) Bulletin.

A barnyard lesson in politics

and not to form, he has received nothing that answers the definition of income in the meaning of the Sixteenth Amendment.

Without selling, the shareholder, unless possessed of other resources, has not the wherewithal to pay an income tax upon dividend stock. Nothing could more clearly show that to tax a stock dividend is to tax a capital increase and not income than this demonstration that in the nature of things it requires a conversion of capital in order to pay the tax.

Justices Holmes and Day, in a dissenting opinion, considered that a stock dividend was taxable within the intention of the sixteenth amendment. Justices Brandeis and Clarke in another dissenting opinion charged the majority of the court with taking a narrow and technical view of dividends which would permit corporations to avoid taxation on a large part of what was really income by distributing profits in the form of securities instead of cash. Decisions by a bare majority of the Supreme Court have become rather frequent of late on questions involving the power of the Federal Government over private corporate wealth, as in the refusal to decree a dissolution of the Steel Corporation and the present interpretation of the income tax. Such decisions have, of course, entire legal validity, but they are certain to provoke popular criticism.

Congress is particularly discontented, as the decision not only deprives the Government of a very important source of revenue but compels the refunding of millions of dollars already paid out in taxes. Apparently nothing short of another constitutional amendment, which might require years to bring into effect, will reopen this channel of taxation, and in the meantime new taxes must be devised to meet the threatened deficit. The stock market, on the other hand, reflected the decision in a rapid rise of values on exchange. Early rumors that the Supreme Court had sustained the tax on stock dividends caused something

like a panic in Wall Street and there was heavy selling of stocks until the full verdict was known and an equally rapid recovery took place.

Rallying the Wets

THE counter-revolution against prohibition is now in full swing, altho it is still limited to a very small section of the United States. A motion to repeal the Volstead Act was defeated in the House of Representatives by 254 votes to 85. The vote disregarded party lines and forty-four Democrats joined with forty-one Republicans in the attempt at repeal. Five representatives who had formerly supported the Volstead Act changed their votes and one former opponent voted to uphold it. The main object of the wet minority in Congress is to raise the alcoholic limit of one-half of one per cent to a point which would permit the sale of beer and light wines.

New Jersey, the heart and center of the anti-prohibition movement, has adopted a law permitting the sale of beverages containing not more than three and one-half per cent of alcohol by volume. This would satisfy the demands of the brewers, but the conflict of the New Jersey law with the Volstead Act will necessitate a decision by the courts. New Jersey has already brought suit before the Supreme Court of the United States against both the eighteenth amendment and the Volstead Act.

New York, tho more divided in sentiment, is also considering legislation at variance with the provisions of Federal law. The anti-prohibition fight in that state at present centers around the attempt to secure an investigation of the methods of propaganda employed by the Anti-Saloon League and its aggressive leader, Mr. Anderson. By a vote of 61 to 52 the Assembly approved a resolution for the investigation. The Democrats voted almost as a unit for the inquiry and the Republicans were divided. With the trial of the five Socialist Assemblymen-elect still in progress and an elaborate investigation of the Anti-Saloon League scheduled the legislature will have little time to spare for its regular duties at the present session.

New England also shows signs of reaction from prohibition. Recent elections in the towns of Massachusetts and Vermont show a decided trend of sentiment in favor of license. In both states towns which hitherto had been dry strongholds were flooded for the first time in many years.

Life after death?

West of the Appalachians the indications of wet sentiment are few and far between, but in Wisconsin the legality of the sale of two and a half per cent alcoholic beverages has been carried into the Federal courts.

Wilson Denounces Secret Treaties

PRESIDENT Wilson has once more interposed the shield of his authority between the young states of Albania and Yugoslavia and the Great Powers of western Europe. A recent joint note of the French and British Premiers assured the President that it had not been intended to seek a solution which could not meet with American approval, but that the absence of any American representative from the Supreme Council had made it difficult to find a basis of universal agreement.

In reply President Wilson reaffirmed the advantage of adhering to the agreement of December 9, which "afforded a summary review of these points of agreement of the French, British and American governments." He agreed, however, to limit the State of Fiume to the city if both the Italians and Yugoslavs desired to abandon the earlier plan of a large buffer state of which Fiume would form a part. But to other proposed changes he could not consent, notably the partition of Albania.

The suggestion that the Allies might have recourse, if compromise negotiations failed, to the Treaty of London especially roused the ire of the President. On this point the American note states:

The definite and well-accepted policy of the American Government thruout its participation in the deliberations of the Peace Conference was that it did not consider itself bound by secret treaties of which it had previously not known the existence. Where the provisions of such treaties were just and reasonable, the United States was willing to respect them. But the French and British Prime Ministers will, of course, not expect the Government of the United States to approve the execution of the terms of the Treaty of London, except in so far as that Government may be convinced that those terms are intrinsically just and are consistent with the maintenance of peace and settled order in southeastern Europe.

President Wilson admitted the disadvantage of the absence from the Supreme Council of an American representative with plenary power, but pointed out that on several occasions "decisions in the Supreme Council were delayed while the British and French representatives sought the views of their Governments." In conclusion he ex-

pressed "the earnest hope that the Allied Governments will not find it necessary to decide on a course which the American Government in accordance with its reiterated statement will be unable to follow."

Shipping Board Gives It Up

THE Shipping Board has announced that it will no longer operate shipping on behalf of the Government. The freight and passenger rates established by regulation of the Board are cancelled as from March 1 in so far as the public is concerned. Of course this step does not destroy the Government's title to the shipping which it still holds or compel the Shipping Board to make immediate sale of vessels publicly owned. Government ownership is one thing and Government operation is another, and it is the latter which is now abandoned.

The ships hitherto operated by the Shipping Board will now be managed by private agents with whom the Board has concluded contracts. The vessels are valued at \$200 a deadweight ton, for the purpose of calculating profits. Operating agents are permitted to retain ten per cent of all net profits up to fifty cents a ton per month, twenty per cent on net profits over fifty cents a ton and not over a dollar a ton per month, and twenty-five per cent on all profits in excess of a dollar a ton. They are permitted to fix their own rates on a competitive basis.

Shipping circles believe that with the withdrawal of the Shipping Board tariffs, American steamship companies will be able to lower their rates and compete with foreign merchant ships which have recently been taking away trade from the Americans. It is generally expected that Government ownership will soon follow the fate of Government operation and that the former German liners and the cargo ships built during the war will all be sold to private owners, in spite of the objections which have been raised to "selling out."

The Red Deluge

SIBERIA is rapidly becoming Bolshevist territory. The Soviet government at Vladivostok is reported to be seeking political affiliation with the central government at Moscow. Western Siberia seems altogether lost to the counter-revolutionists. A force of 35,000 anti-Bolshevist troops, most of them refugees from Omsk, is reported

© Keystone View

One of the popular demonstrations held thruout Germany to protest against delivering German war criminals to the Allies for trial. This mass meeting took place recently in Munich

to have assembled at Chita in eastern Siberia under the authority of General Semenoff. These troops are said to be inadequately supplied with food and arms, demoralized by their retreat and discontented with their leaders. It is freely predicted that General Semenoff will be fortunate to escape from the fate of Admiral Kolchak, as he is even more unpopular with the troops and the peasantry. Like all the news which has come from Siberia in recent months, these reports are based largely on hearsay and speculation, but the strongest opponents of Bolshevism agree that the situation in Siberia is more critical than at any previous time.

Nor is the prospect more hopeful in Russia. Denikin is on the defensive in the south. The border states of the west are negotiating for peace, and Lenin has given haughty warning to the Poles that unless they moderate their peace proposals they will receive "a blow that will not be forgotten." According to reports from Helsingfors the Bolsheviks on the Finnish border have taken the offensive and threaten to overrun Finland. The Finnish parliament has appropriated twenty-five million marks for national defense.

To military are added political successes. The recent Soviet elections at Moscow gave the Bolsheviks four-fifths of the deputies; the others being Menshevist Socialists or independents. Nothing else, of course, was to be looked for in an election conducted on the narrow Bolshevik franchise and under Bolshevik domination. How much freedom is granted to opposition parties may be judged from the execution of Nossar, organizer of the revolution of 1905, on the charge of publishing a pamphlet against Trotsky. The execution took place at Kiev. In spite of the almost uniform success of the Bolshevik forces, some of the opposition leaders have not despaired. Prince Lvoff, premier of Russia after the overthrow of the monarchy, has sent a warning to the Allies that "the Russian people will not consider themselves bound by any treaties the Soviet may conclude with other nations."

Five Reigns of Terror

THE execution of Nossar proves that Isaac Don Levine, American war correspondent in Russia, was premature in declaring that the reign of terror was over. Nevertheless Mr. Levine's analysis of the nature and extent of the Bolshevik atrocities is the clearest light that has yet been thrown on a very confused and uncertain subject. He says that there were five distinct "reigns of terror" which ought not to be confused, as they were carried out by dif-

© Kadel & Herbert

The immigration station at Ellis Island, deserted at first during the war and later turned into a soldiers' hospital, is back on its old peace-time basis examining and passing thousands of immigrants into the United States. High wages and the comparatively sound economic conditions in the United States are attracting men and women of all nationalities to this country

ferent persons for different reasons. The first, and by far the most important, were the atrocities of the battlefield during the civil war between the Bolshevik and anti-Bolshevik armies. Several thousand prisoners seem to have been wantonly put to death by both sides, often with inconceivable cruelty. These executions ceased with the triumph of the Moscow Government over the armies of Kolchak.

The second type of atrocities occurred when armed bands from the hungry cities which were the centers of Bolshevism raided the country in search of grain and other supplies. Peasants refusing to surrender their food were shot or imprisoned to frighten other hoarders. About a year ago the Bolshevik leader Kalinin exerted himself to put a stop to these executions and recently they have become infrequent. The third reign of terror was the work of the peasantry who rose against the nobles and landowners. This was the earliest of all the series of outrages and seems to have existed extensively even under the Kerensky Government, which deplored but could not check them. The Bolsheviks permitted the uprising to burn itself out, which it gradually did after the landowners had been slaughtered or evicted and the peasants were in possession of the lands they coveted. It is worth noting that in this case, as in so many others, the history of the French revolution exactly parallels that of the Russian. In the summer of 1789, while quite moderate men were ruling in Paris and no legal terror existed whatever, the disorder in the country districts was at its height. In later years of the revolution, while guillotines were busy in the cities, the peasantry were relatively quiet, for their revenge was already slaked.

The fourth reign of terror was an uprising of the Bolshevik workmen in the towns against the bourgeoisie and the Social Revolutionists, who were accused of trying to assassinate Bolshevik leaders. Because carried out by mobs, as a sort of wholesale lynching, this movement was known as "mass terrorism." Mr. Levine estimates that some 3000 fell victims to the proletarian fury.

The fifth reign of terror, the only one for which the Moscow Government was directly responsible, tho it sometimes permitted or encouraged the other four, was the series of executions carried out against counter-revolutionary leaders. Like the "mass terror" these executions were designed as an answer to the policy of assassination pursued by the Social Revolutionists; tho, of course, among the 4000 that perished by the verdict of Bolshevik tribunals there were many who had sinned against the Bol-

shevist rule only by word or thought. Most of these executions took place during 1918.

If Mr. Levine's estimates are anywhere near the truth, and they are certainly the most plausible which have been given to the public, the Russian revolution has not been more bloody than the French revolution, especially if allowance is made for the much vaster scale of the movement and the larger population involved.

Italy's Claims in Africa

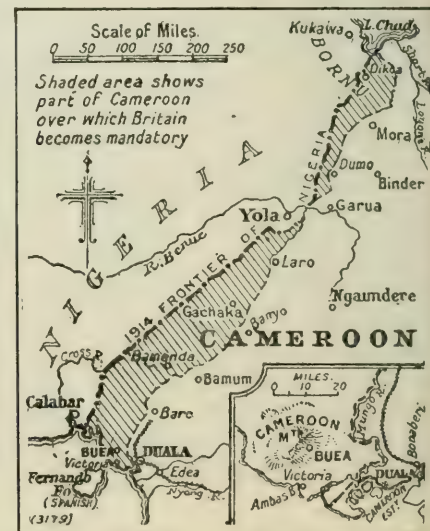

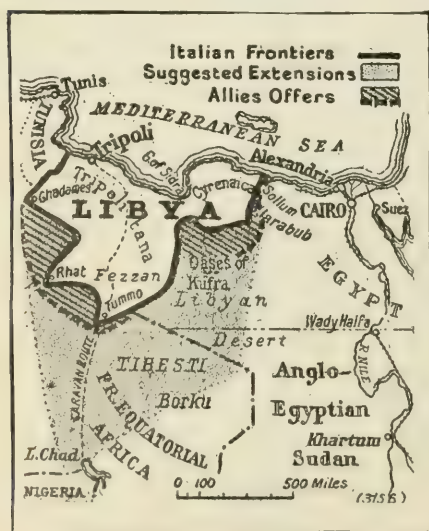

NO war in history has afforded such prizes to the victor; none previous has involved such extensive territorial changes as the conflict now closing. The ownership of almost all of the continent of Africa and a large part of the continent of Asia was at stake. Never before has the fate of millions of square miles and hundreds of millions of people been decided by a single war. England alone has gained an area greater than the whole of the United States and the other Allies, France, Italy, Belgium and probably Japan, have acquired territories greater than the mother country.

The partition of these unprecedented spoils of war has brought the great alliance almost to the breaking point. Alto the Allies had made secret agreements for the disposal of the territory to be conquered, they could not provide in advance for all contingencies and they did not anticipate so overwhelming and complete a victory. Consequently there have been acrimonious discussions at Paris and local conflicts of authority in Africa and Asia.

Before Italy would come into the war she secured promises of expansion in Europe, Asia and Africa. Her demands were cut down somewhat by the insistence of Russia, France and Great Britain and finally fixed, tho rather indefinitely, in the Pact of London, April 26, 1915. The clause relating to Africa is Article XIII, which reads:

Should France and Great Britain augment their African colonial dominions at the expense of Germany, those two Powers recognize in principle that Italy will be entitled to claim some equitable compensations, notably in the regulation in her favor of questions concerning the frontiers of the Italian colonies of Eritrea, of Somaliland, and of Libya, and of the neighboring colonies of France and Great Britain.

Now the outcome of the war has enabled France and Great Britain greatly to "augment their African colonial dominions at the expense of Germany," so Italy claims her compensations. Then, too, France and England are trying to cut down the Italian claims on the Adriatic so as to

THE PARTITION OF THE GERMAN AFRICAN COLONIES

Italy asks for an extension of her Libyan territory as far south as Lake Chad. The Allies are reluctant to grant such a concession. Note the heavily shaded area

Italy wants to get all of British and French Somaliland and a large slice of British East Africa. The British are willing to concede only the heavily shaded sections

The German colony of Cameroon goes mostly to France, but Great Britain gets a slice adjoining British Nigeria and including the great Cameroon mountain

give the infant state of Yugoslavia a better chance for life and they have offered to compensate Italy out of Africa.

But the claims of Italy are so sweeping as to cause consternation to her allies. She demands an extension of Libya (Tripoli) southward clear to Lake Chad. This comprizes the old caravan route across the Sahara. Italy further wants the whole of French Somaliland and British Somaliland, also large sections of British East Africa and of Anglo-Egyptian Sudan. This means that France would have to cede to Italy the Red Sea port of Jibuti, which is the only French port on the Suez Canal route to her possessions in Madagascar and Indo-China. Jibuti is also the port from which starts the only railroad leading to Abyssinia. In 1906 France, Britain and Italy agreed to have equal opportunities in Abyssinia, but Italy now demands exclusive political and commercial rights in that country, which means of course its ultimate annexation by Italy. Abyssinia is now the only independent country in Africa with the nominal exception of Liberia, which is virtually a protectorate of the United States, its founder.

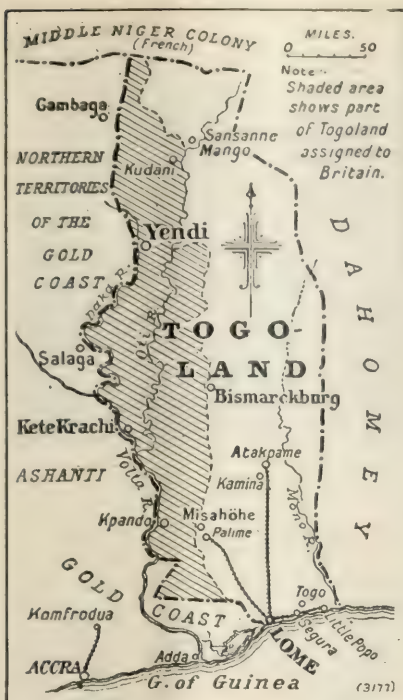

Italy's aspirations are not confined to Africa, but she asks, in addition to Somaliland, a foothold on the opposite side of the Red Sea in Arabia.

That Italy is entitled to some equivalent for the extensive acquisitions of her allies is acknowledged, but Great Britain is reluctant to grant her possession of territory on both sides of the outlet of Suez Canal, and France inquires why Italy cannot build her own railroads into Abyssinia from the Italian port of Massawah instead of taking over the French port and railroad.

The Partition of the German African Colonies

WITHOUT waiting upon the League of Nations which, according to the Covenant, has the duty of assigning mandatories, the Allied Powers are dividing the conquered territories to suit themselves. German Southwest Africa, which was won by the Boer and British forces, is to go to the Union of South Africa. In the conquest of German East Africa the forces of Great Britain, Belgium and Portugal participated and the territory is to be divided among these three powers. The British and French combined in defeating the Germans in Togoland and Cameroon (Kamerun), so these powers will share the two colonies. The dividing boundary lines as determined by mutual agreement are given in the accompanying maps.

France gets the lion's share of both Cameroon and Togoland doubtless in compensation for the much more extensive British acquisitions in other parts of Africa. Nine-tenths of Cameroon goes to France, but the Britain retains a strip along the Nigerian frontier, about 750 miles long and a hundred miles wide at its broadest point. This makes a continuous passage, except for the water-gap of the Benue river, from the Atlantic ocean to Lake Chad. The British have reluctantly conceded the port of Duala to the French, but have retained possession of the whole of Cameroon mountain with a watershed of over 7000 square miles. This is a volcanic peak of 13,370 feet, the highest

In the partition of Togoland, France gets about two-thirds adjoining French Dahomey and England gets one-third adjoining the British Gold Coast

in West Africa, and called by the natives "The Mountain of Thunder," for it is still active. On the coast of Cameroon at the foot of the mountain is Amba Bay, where in 1858 the British Baptists established a colony for freed slaves like the American Liberia.

Of Togoland the French get two-thirds and the British the rest. In 1884 when Germany entered upon a policy of expansion most of Africa was already taken up, but a strip of coast, thirty-two miles long, was found unclaimed in between the British Gold Coast and French Dahomey and this the Germans appropriated. Using this as a base they endeavored to secure a large area of the hinterland, but were held in check by the combined efforts of the British and French. The Togo lagoon had been the resort of slavers, but the Germans constructed a port at Lome with all the modern conveniences and ran railroads into the interior. They had made plans for the systematic development of the country and would have derived an immense revenue from it if the war had not taken it from them. This is one of the richest and most populous parts of the continent. Palm oil is its chief product,

of great importance now that it is being used for margarine as a substitute for butter and beef fat. The French get the whole of the Togo coast, including the port of Lome.

Taming the Turk

THE presentation of the conditions of peace to Turkey is now slated for March 22. These terms will be more severe than was at first predicted; perhaps more severe than was at first intended. Renewed and continued massacres of Armenians in Cilicia have had their effect even on callous professional diplomats, and the outburst of public sentiment when it was learned that the Turk was to retain his old position in Constantinople has not been without result. English and American opinion have been more aroused than French, in spite of the fact that the worst massacres are taking place in regions claimed for a French mandate, but even in France the *Matin* denounces the Sultan's Government as "the most immoral which Europe has ever known."

There does not seem any present likelihood that the decision on Constantinople will be changed, as both England and France fear the effect on their tens of millions of Mohammedan subjects if the cross should replace the crescent in a Moslem holy city. But there is much talk of cutting down European Turkey to little more than the city of Constantinople and awarding the greater part of Thrace to the Greeks. In Asia the Turks will hold only those parts of Anatolia not subject to a French or Greek or Italian mandate. The pre-war Turkish debt will be apportioned among the liberated States and protectorates formed out of the old Ottoman Empire.

The new Ministry in Turkey is more militant than the old and seems disposed to reject the terms of peace if it finds them too severe. The British favor a military demonstration at Constantinople to overawe the Government and show that the Allies still have might as well as right on their side. But the Moslem bandits of Anatolia and Kurdistan are not ready to obey the Sultan to their disadvantage and so it is possible that pressure at Constantinople must be supplemented by costly punitive expeditions.

Among the numerous advantages of this solution of the housing problem is its elasticity of plan—simply add units as necessary

Living in a Roundhouse

The housing problem is one of the most troublesome which confronts the world today and it is indeed fortunate that necessity is the mother of invention. Mr. C. N. Wisner of New Orleans has planned a dwelling built on the plan of the sectional bookcase. The house is made up of room-units. Each room is a cylinder of concrete cast in a steel mold, costing about \$500 to construct and ready to occupy within forty-eight hours after the order reaches the house builder.

Your family grows and one room no longer contents you. Another concrete cylinder can be built and joined to the first by a hallway or closet. Thus like the chambered nautilus you can continually enlarge your mansion as need requires until your lot is all built over. If the concrete walls seem too bare and

plain, you have carte blanche to decorate, paint or fix over as you will. Molded concrete is the ideal house-building material for cheapness, speedy construction, durability and safety from fire.

The greatest novelty is, of course, the cylindrical shape. But most houses and rooms have been built in square form not because it was the most beautiful or convenient, but because wooden logs are straight. There is no more reason why concrete structures should be shaped like wooden houses than that electric light globes should be shaped like candles or lamps. The cylindrical house has the advantage of saving material in construction and of being the easiest of all houses to clean. Imagine the convenience to the busy housewife of a room with no corners!

Idolatry and Influenza

A new argument for foreign missions has been brought forward by *The Interchurch Bulletin*. It is pointed out that all world-wide epidemics have originated in and spread from the non-Christian parts of the earth, particularly from Asia. The plague of the Middle Ages which repeatedly swept Christendom from end to end came from the east, and so did the recent universal scourge of influenza in spite of its bearing the label "Spanish." No other part of the world suffered so severely as India. *The Bulletin* sums up its conclusions in the phrase, "A medical missionary in the Orient now is worth ten doctors in the Mississippi Valley in warding off disease."

Of course no one but a Christian Scientist would contend that the higher death rate of the heathen world is due directly to religious opinions. Climate and not creed is the original handicap of Asia and Africa. But it is true that the attitude of the western civilization toward the hostility of nature is one of combat, whereas the Oriental religions teach indifference and submission. The favored lands east and south of the Mediterranean have no greater enemy than Mohammedanism which teaches that none may escape the death which is "fated."

The problem of redeeming Asia Minor is fundamentally a problem of sanitation; but sanitation cannot progress in view of the slothful obstructionism of a government and people who view western science with the eyes of religious prejudice.

In India and the Orient generally the problem becomes more acute because religion is not only indifferent to sanitation, but positively hostile. Whenever the British Government tries to clean up India a great popular clamor arises that some dirty temple has been profaned or some religious rite (such as drinking the polluted water of the Ganges) has been interfered with. Buddhism discourages the killing even of noxious animals, such as the insects and rodents which carry disease. Nearly every form of heathenism has some sacred cow or sacred cat or other holy animal which must not be slain by the government inspector. It is hardly too much to say that every superstition in the world stands guardian over some disease. The missionary must first root out of people's minds the irrational taboos which stand in the way of civilization before the official dares to interfere. Even when a nation, such as Japan, does not accept the whole of Christianity it will at

least borrow the sanitary code of Christendom from the teachings of the medical missionary.

Page Mr. Smith

Smith College desires that every person bearing the historic name of Smith contribute one dollar to the Endowment Fund of \$4,000,000, the "drive" for which is now in full swing. Even if we set aside the Schmidts and the Smythes and the Goldsmiths and the Smithsons and all other of the offshoots of the Great Clan, it is evident that the trumpet blast from Smith College should arouse millions of valiant clansmen to the financial rescue of their totemistic college. If the Smiths who have earned a place in the American Who's Who should each contribute a dollar about \$275 would come from this restricted group of eminent men. Call the name aloud in the Senate, and the presiding officer will ask "Do you mean the Honorable Senator from Arizona or Georgia or Maryland or South Carolina?"

How the name echoes down the corridors of history from the mythical days of Tubal Cain and Wayland Smith to the latest governor of New York! Adam Smith, who invented the science of economics. Gerrit Smith, the abolitionist. Goldwin Smith, scholar and publicist. James Smith, who signed the Declaration of Independence. Captain John Smith, the colonist of Virginia whose exploits so enliven our school histories. Joseph Smith, founder of the Mormon Church, whose polygamous doctrines have no doubt been in part responsible for the prevalence of the august name of the founder. F. Hopkinson Smith, artist, author and engineer. Sydney Smith, the great English wit of his generation. William Smith, called the "father of English geology." Nor least of all, Miss Sophia Smith, founder of the college which bears her name.

Profoundly warranted is Chesterton's tribute:

It would be very natural if a certain hauteur, a certain carriage of the head, a certain curl of the lip, distinguished every one whose name is Smith. Perhaps it does; I trust so. Whoever else are parvenus, the Smiths are not parvenus. From the darkest dawn of history this clan has gone forth to battle; its trophies are on every hand; its name is everywhere; it is older than the nations, and its sign is the Hammer of Thor.

Did the Peace Conference Work?

According to Captain Tardieu, himself one of the French Peace Commissioners: *The Treaty with Germany was studied in detail by fifty-two technical commissions in 1646 sessions. There were twenty-six field missions to investigate conditions. The Supreme Council held seventy-two joint sessions; the Big Four held 145 sessions; the Foreign Ministers Council held thirty-nine sessions.*

Men, Mice and Milk

The Connecticut Agricultural Experiment Station has arrived at the conclusion, derived from a long series of experiments, that neither men nor mice can thrive without the food elements contained in milk and absent from the vegetable kingdom. Albino rats were chosen as the chief subjects of experiment because their diet was more easily controlled and observed under laboratory conditions than that of larger animals. But we are assured by Miss Edna Ferry, an expert of the Connecticut Station, that the results of these experiments apply as definitely to human beings as to rodents.

The rats were fed carefully balanced rations of the necessary food constituents, proteins, fats, carbohydrates and salts. The proportions of these food elements were almost exactly the same as in milk, but the protein used was derived from wheat flour. The result in every case was to stunt growth or to stop it altogether. When one-third of the wheat protein was replaced by an equivalent amount in the form of meat, eggs or milk the animals grew at a normal rate. Milk and eggs were slightly more efficient as body builders than meat. When protein from corn was used alone the effect was even worse than with the exclusive wheat diet. The animal lost weight rapidly and died almost as soon as if no food were eaten at all. When some amino-acid was added to the corn protein life was maintained but growth still re-

mained backward. It required the addition of casein from milk or cheese to bring the unhappy rat back to normal development.

Miss Ferry illustrated the upshot of one experiment in terms of human life. A rat was kept stunted for about a fifth of its life on vegetable protein and then casein was added to the diet. Within a few months it was as large as any normal rat. "Calling a man's span of life seventy years the case would be somewhat like that of a boy kept as a healthy infant in arms until fourteen years of age, weighing perhaps sixteen to twenty pounds, and who, by a change in diet when fourteen years old, attained a man's size and weight at the age of twenty-one."

Courtesy of Connecticut Agricultural Experiment Station.

This chart illustrates the typical recovery of a rat which had declined on a diet lacking the so-called water-soluble vitamine, when the animal was given milk which contains this vitamine. Without the milk the rat would undoubtedly have been dead in a few days

The butter fat in milk is also of high importance. If a young rat is fed with a normal ration except that all fat supplied comes from lard or vegetable oils it will grow normally for about eighty days and thereafter decline in weight, suffer from sore eyes, and eventually die. A small amount of butter fat added to the diet restores health and permits gain in weight to continue. Many children in the famine-stricken regions of Europe have been observed to suffer from ulcers on the eyeball. It was learned that they had been fed on bread and skim milk. As soon as they were given whole milk or cod-liver oil their eyes began to recover and most of them were saved from blindness. For adult rats and men, however, butter fat does not seem so indispensable.

Milk contains all the needed food elements in due proportion and is the only food which does so. Milk sugar has the same food value as cane sugar. Milk protein is as good as meat protein, and milk is far cheaper than meat in proportion to the protein supplied. Milk fat, as can be seen from the price of butter, is one of the most highly valued fats. Milk also contains valuable mineral salts which are inadequately supplied by most foods. Finally milk contains all three of the "vitamines" which are essential to growth: the fat-soluble vitamine, the water-soluble vitamine and the vitamine which prevents scurvy.

"Civilization," says the Connecticut Report, "follows the cow."

Clad in Cartridges

The Government plans to dispose of a huge quantity of cartridge silk this summer. Ten million yards of the silk will be sold at once and the Bush-McLane Company holds an option on some fifteen million more yards, covering the balance of what the War Department had on hand when

Courtesy of Connecticut Agricultural Experiment Station.

There's a moral in these contrasting photographs of young rats fed on a good and a bad protein. The two upper rats are five months old and have been fed on diets exactly alike except that the one at the top had casein from milk on which it grew normally, and the one in the middle had gliadin from wheat flour on which it could not grow at all, so that when it was five months old it weighed exactly the same as the rat at the bottom which is in normal condition but only one month old

peace was signed. The quantity of cartridge bag cloth then ready for use was sufficient to have lasted eight or nine months with three or four million men on the fighting line. It was made in five weights, due to the fact that large cannon require larger bags of powder for the charge.

Altho this cloth has never before been made or used for civilian purposes it is adaptable to many. Government experts have listed two hundred possible uses for the silk. These include, for example, umbrellas, men's summer suits, lingerie, blouses, shirts, evening gowns, petticoats, clergymen's robes, spats, upholstery, household draperies, flags, book covers, painter's canvas, tents, awnings and trimming for women's hats. To popularize the new material Vice-President Marshall, Secretary Baker of the War Department, Secretary Daniels of the Navy and other officials have had suits made from it, and Mrs. Marshall, Mrs. Baker and many ladies of Washington society wear cartridge silk gowns.

Steam Versus Gasoline

The rising price of gasoline inevitably keeps the question alive as to whether the steam or gasoline propelled car will be the ultimate survivor.

It is generally conceded that the steam automobile has the following advantages:

1. It burns completely a low grade fuel.
2. It can accelerate its speed rapidly without gear shift or clutch manipulation.
3. It has a simple control by a throttle valve.
4. It has less vibration.
5. It has high torque at low speed.
6. It has a greater overload capacity.
7. It has a smaller number of moving parts.
8. It has a greater ability to reverse at full speed.
9. The engine will not stall at a critical time.
10. It eliminates transmission, gearshift, clutch, flywheel, drive shaft, universal joints, and ignition system.
11. It has freedom from carbon and knocking.
12. It requires no valve grinding.
13. It has no engine racing.
14. It has no smoky exhaust.

The disadvantages of the steam car are as follows:

1. It takes longer to get up steam in a cold boiler.
2. There is danger from fire and explosion.
3. There is much labor and expert knowledge required to get up steam and to handle the dirty parts.
4. The boiler has a short life.
5. There is disagreeable noise from fire and water pumps.
6. There is continual packing of the joints.
7. There is difficulty of maintaining an even automatically controlled steam pressure.
8. It uses two fuels, both under high pressure.
9. It has short water mileage.
10. It has troublesome freezing problems in cold weather.
11. The boiler coils get sooty.
12. Very few garage mechanics know how to repair it.

Say Now, Shibboleth

The Rev. James Hill tells of one method used by the British during the Great War to prevent enemy aliens from landing at Liverpool under the pretence of being citizens of friendly countries. New arrivals, no matter how impeccable their credentials, were arrested if they mispronounced in German fashion the following sentence:

The thieves thought, altho they made a terrible mistake, that their path was smooth and threaded the way to the haven of their hopes, but there were thorns and thistles there.

Thirty men who had passed all other tests of nationality were tripped up by this sentence.

Odds and Ends

Argentina grows 1,700,000 tons of linseed a year.

There are seventeen cables across the Atlantic Ocean.

At the end of 1919 there were 7,602,000 automobiles in use in America.

Mount Holyoke College for Women has just made Bible study an entrance requirement.

The 2000 chaplains who served so heroically with the A. E. F. are proposing to create a special organization. A bill to

establish a chaplains corps is now before Congress.

Thrifty New England holds two-fifths of the savings bank deposits of the United States.

Czechoslovakia contains nearly four-fifths of the mines of the old Austrian Empire.

A forty acre orange grove has just been sold in Florida for \$18,000, whose yield the past season was \$6000.

The soldiers who returned last year have taken up about 1,000,000 acres of free lands in Western Canada.

The American Red Cross during the war received \$400,000,000 in contributions and spent \$273,000,000 in relief work.

The Coast and Geodetic Survey has just made a new outline base map of the United States—19½ inches by 25¼ inches. Price 15 cents.

The 53,234 separate telephone lines in the United States operate 28,827,188 miles of wire and connect 11,716,520 telephones and 21,175 public exchanges.

Father Ernest Dimnet, the well known French priest and critic who is now in the United States giving the Lowell Lectures at Harvard, is also collecting funds for the destitute children of the city of Lille. Contributions can be sent to him in care of Henry Clews & Co., 15 Broad Street, New York City.

Western Laurels

The big state of the Pacific coast is going to make the big state of New England look out for its educational laurels. Throop College in Pasadena, California, has been renamed the California Institute of Technology and has entered on a phase of expansion which bids fair to equal the achievements of Massachusetts "Tech." The institution has recently received two gifts of \$200,000 each for research in physics and chemistry, and \$800,000 for general maintenance on condition that the sum be increased by other gifts to \$2,000,000. Funds have also been established to construct new physical and chemical laboratories and

a laboratory for aeronautical research.

The new faculty includes such men as Dr. Arthur Noyes in chemistry, Dr. Bateman in physics and Professor Perigord in economics and history; while arrangements have been made for part-time instruction by Dr. Millikan and Dr. Michelson in physics and Alfred Noyes in English literature. The name of Amos Throop, the founder, will be perpetuated in the chief college building, now Pasadena Hall, but henceforth Throop Hall. President James A. B. Scherer has cause for congratulation for the splendid growth of the institution.

Throop Hall, the present administration building of California Institute of Technology

Charting as a Pathway to Success

By B. C. FORBES

Mr. Forbes is a recognized authority on large-scale finance and business, and the foremost interpreter in America of the careers of the leading Napoleons of Finance and Marshals of Industry in the country.

"I want facts, facts, facts," declared the man who looks after two-thirds of the entire world's telephone business. And when he gets facts which he particularly wants to emphasize and to make stick in the public's mind, he presents them in chart form. For illustration, see the back cover of the American Telephone and Telegraph Company's annual report. There you will see how Chairman Theodore N. Vail pictures the growth of his colossal company.

"I don't want you to guess. I can guess myself. I want you to know," Judge Gary once reprimanded a private secretary who, in reply to a certain question, gave a non-committal answer. Throughout the world's greatest industrial organization, the United States Steel Corporation, charts are freely used to keep executives accurately posted.

In another industry in which America eclipses the rest of the world charts are daily relied upon to an extent which has won world-wide recognition. I refer to the National Cash Register Company. The dynamic head of it, John H. Patterson, insists upon everything being charted, from the contents of a helpful book which he wants to visualize for his force, to the company's output.

Frank A. Vanderlip declared during the feverish expansion of the National City Bank of New York during the war that it would have been impossible for him to keep track of the growth of the business had not charts been used to illustrate graphically and simply every phase of the institution's operations. No financial institution ever utilized charts half so freely. I have been privileged to examine many of these charts and they give a lucid picture of the bank's activities even to a layman like myself.

A page or two of charts and graphs can reveal to the banker and the business man and the stock market operator more information, and in an infinitely more effective manner than can be brought out by mountains of percentages, decimal fractions and other figures. The New York Annalist, for example, attaches such importance to charts that it often uses them on its front cover.

One of the most telling advertisements ever used by the railroads consisted of a pictorial representation of "The Railroad's Dollar." This little picture emphasized as no mere figures could ever have emphasized the extraordinarily large part of the railroad's income which goes direct to labor in the form of wages and also indirectly to labor for the purchase of equipment and other materials. It also drove home to the politicians and agitators among the public how very small a part of every dollar of earnings goes to stockholders.

A representative of Swift and Company told me recently that "The Swift Dollar" was regarded by them as perhaps the best "argument" they had ever devised to demonstrate to the public just what becomes of the money received by the packers, and he added that they had received requests for these "dollars" from every part of the country.

We all know, too, that Government and army headquarters during hostilities, depended less upon masses of intricate figures than upon charts.

By such means a clear, correct picture could be obtained of the swaying fortunes of war throughout every theatre of operations. Coleman Du Pont, builder and owner of the great-

est office building in the world, told me that he spent at least six months more than any other man probably would have spent over the original plans for the Equitable Building (New York), before one brick, or one stone, or one girder was laid upon another.

"The extra six months thus spent saved me millions of dollars, for fewer changes have had to be made on this building than any other huge building I know of. And its success is testified to by the fact that we have a waiting list of tenants big enough to fill the building twice over."

This roll-call of facts, incidents and anecdotes demonstrates the part now played by charts in the conduct of modern affairs, and reveals also the importance attached to them by the brainiest and most successful of our business and financial leaders.

More. It suggests one pathway by which ambitious young Americans can climb towards the top. It discloses, does it not, that the man who can acquire a mastery of charting is thereby fortified with power—knowledge is power—calculated to fit him to exhibit his worth to his superiors? J. Ogden Armour tells his lieutenants: "I don't want you to come to me for decisions. I want you to come to me with decisions."

Don't you see how much better equipped the junior executive or other official who can compile a pointed, illuminating, self-explanatory chart is than any of his colleagues to lay before his president a proposition and decision? Is it not plain that Mr. Armour or any other executive wrestling with a hundred daily problems will welcome a visit from a man who presents his propositions or decisions in such a way that they can be grasped in half-a-minute or half-an-hour instead of being confronted with a bewildering mass of statistics which would take them a day or half a week to digest? The prime problem of every captain of industry, every financial leader, every transportation giant, every colossus in any walk of life is to utilize every moment of his working time to the most profitable advantage. His time is his fortune. How he uses his time decides whether he is to rise to higher and higher success or whether he is to lose out in the battle of business.

There is not one of these Napoleons who would not single out for advancement, for greater responsibility, and for closer connection with himself, any employee who devised some method or means whereby the solution of problems could be made easier and, therefore, quicker. Suppose some alert employee came forward with a chart or series of charts, or even inspired a superior to adopt the use of a chart or series of charts, which really helped the president to grasp a situation more clearly and rapidly, isn't it morally certain that either instantly or in course of time the president would discover the identity of the genius who had contrived to make the running of the business easier, more scientific and, therefore, more successful?

Wideawake business men are beginning to sense not only that charts can help them to do their work more expeditiously and more accurately, but they are beginning to discern that charts and other graphic illustrations can be introduced, with wonderfully successful results, to interest workers, to arouse their enthusiasm, to give them a broader grasp of their duties and to stir up in them interest in the progress of their concern.

"The way to succeed when you are an employee is to make yourself as useful as you can to your employer," John D. Rockefeller once enunciated to me as a basic rule for the attainment of success.

For all these reasons, and others not here enumerated, there is full justification for describing the studying and mastering of charting as one pathway towards the summits of success. B. C. Forbes
Copyright 1920, Business Charting Institute.

Note:—No one man is perhaps better equipped by actual experience to tell the true value of charting as a means of increasing one's earning power than Mr. Forbes. Many people use charts but do not get the full value because they do not understand how to apply charts to business principles.

For over twenty years a group of leading business and university men have been collecting the proven fundamental principles of charting. These have now been completed in simple, easy to understand form and instantly usable style.

This complete work is now offered you by the Business Charting Institute, No. 5, No. Wabash Avenue, Chicago, at a very moderate cost.

This master training in charting as applied to business principles consists of fifteen lessons and three lectures.

With these you can now

Analyze by charts	Save by charts
Buy by Charts	Manage by charts
Convince by Charts	Prove by charts
Decide by charts	Read by charts
Think by charts	Invest by charts
Study by charts	Organize by charts
Work by charts	Plan by charts
Teach by charts	Talk by charts
Sell by charts	Advertise by charts

If you are an employer or an ambitious employee—if you have your eye on bigger business or a bigger job, or are bent on making your own work more effective and valuable—learn Charting and apply it to your work. Let us show you—let us send you the first of these fifteen lessons, as a sample—Free.

Remember no one ever attained success without grasping opportunity. This may be your opportunity. It costs nothing to find out. Don't delay. Cut out, fill out and send coupon today.

Another Scrap of Paper?

(Continued from page 426)

at the Peace Conference, Italy was entitled to anticipate that her moderate requests, corresponding to no more than her rights and necessities, and sanctioned by the majority of the people involved, should be fully accepted.

But in spite of this Italy must now suffer the indignity of having her rights disputed and discussed, not even on a ground of intrinsic or objective reasoning, but merely to comply with the claims of the same Slavs who, up to the last moment, contributed toward the defense of the common enemy and dedicated all their forces and energies to battle against Italy. On the basis of a principle which has been violated, with the manifest consent of the very ones who established it, in favor of France in the Sarre Valley, of England in Europe, in Africa and in Asia, of Japan in Shantung, of Serbia in Macedonia and in Hungary, Italy is notified that the treaty, which she signed in good faith, must be considered merely as a scrap of paper.

And because, on the basis of that same principle, Fiume, which has for many centuries waived its right to self-determination, has finally decided to join the Italian Kingdom, a threat is made to blockade Fiume and to commercially boycott Italy, should she insist on supporting the just aspiration of the Fiumans.

If the Italian people and the Italians of Fiume have said that which the London correspondent attributed to the tongue of Signor Nitti, and even if they have said it in ruder and far less parliamentary manner, they are not, after all, entirely to blame.

"Scrap of paper" is a contemptuous phrase too widely used by France and England during the war to incite hatred against Germany, and we are sure that neither France nor Great Britain would greatly relish the rebound of this accusation. We believe that even Clemenceau was in all good faith when he telegraphed to Signor Luzzatti, the most peaceable of all Italian statesmen, saying: "We will never consider as a scrap of paper any treaty which bears our signature."

Concerning the threat of boycott we believe that it did not make a very serious impression on the Italian people. The boycott threatened has actually been in effect against Italy since last year. No credit has been granted to her; the American Red Cross has been ordered to remove all its units from Italy and station them in Yugoslavia; national charity works have been administratively sabotaged, as well as the shipments of foodstuffs and coal, and nevertheless the Italian people has not died of hunger nor has it yet surrendered to the menacing current of Bolshevism.

The blockade, however, is a slightly different matter. It is true that recently there has been, in all the countries of the world, such a decided deviation from the proper discrimination between justice and injustice, lawfulness and

unlawfulness, liberty and tyranny, that in the face of it the nations are assuming, in their diplomatic relations, a crudeness and incivility which would be intolerable between individuals of even mediocre breeding. But a blockade is unmistakably an act of war which can compare with submarine warfare, and we do not believe that either the Allies or their associate would dare to commit a deliberate act of war against Fiume without the consent of their legislative bodies.

Let us be concise: We think they would not dare to do this, not for fear of being accused of wrongdoing—diplomacy has the power to commit greater and far more sinister crimes without running the risk of a reckoning—but because they dread the ridiculous light in which they would be placed by such an action. Fancy the roar of laughter which would shake the world at the announcement that the United States, France, Great Britain, Italy and Serbia, naturally, had declared war on the 40,000 Italians of Fiume!

There is no doubt that the dread of the ridiculous must have stimulated the minds of the diplomats, who, like so many Olympian divinities, had grown living among the clouds. They rubbed their eyes, looked hard at the chaos they had brought about, and at the late moment perceived that neither Yugoslavs nor Italians had accepted the proposals of December 9. Neither country seemed to be interested in the suggested free State of Fiume.

"The President," said a New York paper which is anything but anti-Wilsonian, "now recognizes the force of this argument by expressing his willingness to let Italy and Yugoslavia settle the matter between themselves. provided the two do not attain agreement at the expense of a third party. The reference is here to Albania."

At last! After sixteen months of long deviation and harsh disputes, here we are at the point from which we should have started. The road to an understanding between Yugoslavs and Italians would have been clear sixteen months ago, but is it so today with all the thorns, the stones and the mud cast upon it by diplomacy?

The general good will of the Italian delegates cannot be doubted. Count is now no longer kept of the proposals which they, the Italians, have accepted and which have been rejected by the Yugoslavs. Signor Nitti's good intentions are above all suspicion, and we believe unquestioningly the cables which announce that he has already consented to enter into direct negotiations with the Yugoslav Government.

Will this last attempt at conciliation be successful?

Positively not if the negotiations are to be made with Dr. Trumbich, the man who, on April 10, 1918, signed the Pact of Rome, according to which Italians and Yugoslavs bound themselves to settle all their differences by friendly arbitration, and the very next

day began a preposterous anti-Italian propaganda in the United States and in Europe, a campaign which he carried within the very walls of the Peace Conference; the man who refused each and every compromise suggested by the Italians, by the Allies and by their associate; the very man who prides himself of having the support of financiers, politicians and editors, and boasts of an unflinching pull with the White House.

Perhaps it will be successful if things are left in the hands of the Serbian Minister Pasich, provided, of course, that he still remembers his statement of August 6, 1916: "We cannot deny the incontestable right of Italy to the hegemony of both sides of the Adriatic. We are only looking for an economic outlet . . ." adding that he considered this economic outlet more than sufficiently represented by a three-mile strip of territory between Ragusa and Cattaro.

Perhaps a satisfactory arrangement will be arrived at if Mr. Pasich is still the man who, when recently interviewed in Paris, declared: "Italy and Serbia will find in the Adriatic not a boundary line, but the highway which will connect them for the development of their reciprocal trade."

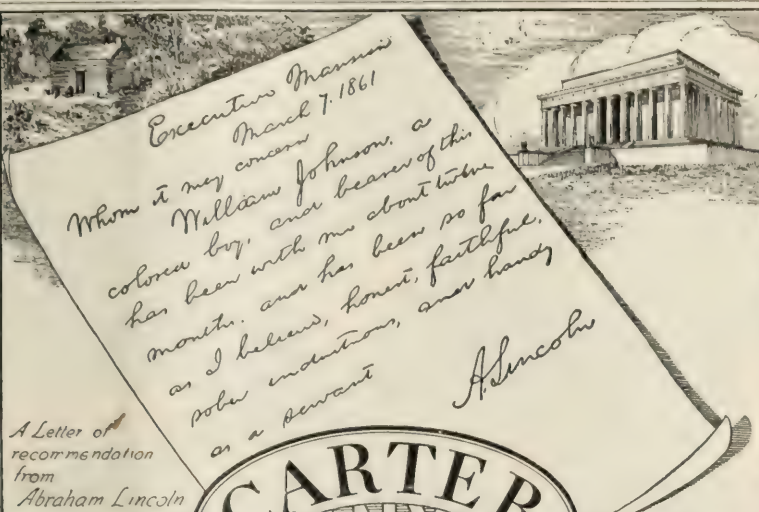

But most certainly a happy solution of the Italian and Yugoslav controversy would be forthcoming if the Allies and associate should join in making plain to internal agitators and speculating outsiders that they will permit neither the questioning of the validity of a treaty made and interpreted in all good faith, nor the denial to the Fiumans of their sacred right to choose their own destiny.

It is clear that France and Great Britain intend to do it. From the latest communication of Lloyd George and Millerand to the State Department it is evident that if the Yugoslavs should remain stubborn in their refusal to modify their claims, the Allies shall be forced to present once more before the Government at Belgrade, in form of ultimatum, the dilemma which provoked the recent notes from their associate.

They could take no other action. The reception given by the Senate of the United States, which is the rightful guardian of the spirit and text of the Constitution, to the proposed Triple Alliance and the League of Nations as it is drafted, has convinced the Allies that Italy's help in the future evolution of European affairs is indispensable. They have understood, tho rather late, that peace cannot be assured without a sincere agreement between France and Italy, and that the latter will be able to decide her future political course only after having received the legitimate satisfactions and guarantees which are due her.

The majority of the American public, with its unflinching sense of justice, has realized that it would be ungenerous to force upon the Italian people the disillusionment of a diplomatic defeat in lieu of the compensation due in acknowledgment of their enormous sacrifices and magnificent victory.

\$5.50

W. L. Douglas shoes are sold through 107 of our own stores direct to the wearer at one profit. All middlemen's and manufacturing profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W. L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-seven years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

President W. L. DOUGLAS
SHOE COMPANY.
169 SPARK STREET,
BROCKTON - MASS.

And finally, President Wilson himself, in his recent note, has, with his words admonishing against infringement of the rights of Albania, sounded a warning to the Yugoslav leaders. The President knows better than anyone else how large a share Italy has taken in the improvement of conditions in Albania. Schools have been built, factories established, roads and bridges constructed, hospitals founded, marsh lands drained and sanitary conditions improved all thru Italy's efforts. But it is not in the interest of Italy to own Albania, while it is in her interest that Albania should not be owned by any unscrupulous neighbor.

"The flag of Italy stands now for the right of the Albanian nationality and the warding off of enemy influences alongside of the scarlet flag of Scanderbeg, a guarantee and an anticipation of time when the latter will fly securely from the Albanian heights for a United and Independent Shkiperia, such as her poets, her warriors and her patriots have dreamed of for centuries." (From a letter written from Albania by Miss Amy Bernardy).

The Italians have therefore reason to believe that their patience and compliance will, at length, be justly appreciated and compensated, and that the Yugoslavs themselves will acknowledge that Italy has never aimed at anything if not to strengthen her bonds of friendship with Serbia, friendship of which Italy has given tangible proofs before, during and after the recent war. The materialization of the Italian hope will end forever the Adriatic dispute and secure to Europe a lasting peace.

At any rate, it is our opinion that the Adriatic question might be considered closed even if Italy should receive a new and keener disillusionment, due to a new change in the policy of France and Great Britain.

The Italian people realize the necessity for a period of tireless work. They intend and want to assure for their country an economic future which they have already shown themselves able to achieve.

But the soul of the Italian laborer will not be illumined by a vision of peace. The heat of glowing furnaces will only perpetuate the memory of the burning affront received in payment for the priceless blood shed generously on a common battlefield. Tho he forgets the plowshare, the man at the anvil will not forget how to temper the sword or how to mold the cannon, and his thought will be one with that of millions of other workers, and will be that of other peoples who have been forced to yield, but will never consider themselves defeated.

Would this state of mind constitute a firm foundation for an effective League of Nations?

New York, March 2, 1920

How To Use The Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 311 Sixth Avenue, New York.

Pebbles

Where there's a still, there's a way.—*Detroit News.*

"You say Simpkins has become a miser?"

"Yes; every night he counts his bottles."—*Judge.*

"Do you play bridge?" she asked him as they stopped before the swollen brook.—*Purple Cow.*

Tim—I've got to work hard next year.

Tam—Why, aren't you coming back to college?—*Gargyle.*

We don't mind feeding the small nations, but we should like them to stop fighting between meals.—*Brooklyn Eagle.*

It looks as if repairedness were going to cost Germany more than preparedness did. *Columbia (Ohio) State Journal.*

It still looks in this League of Nations business as tho Wilson may have had the vision, but the Senate is going to insist upon having the revision.—*Manila Bulletin.*

S. S. Teacher—Now, boys, who can tell me who the apostles were?

Wide-awake Willie—I can. They were the wives of the epistles.—*California Wampus.*

Black is the principal shade in the new German flags. It serves the double duty of signifying that nationality's record and its mourning for the consequences.—*Baltimore American.*

Dean—What is density?

Hausen—I can't define it, but I can give an illustration.

Dean—The illustration is good, sit down. *Arguean.*

"I'm applying for that job—and can recommend myself as a man of unflagging industry."

"You won't do—we want a man to stop trains."—*Yale Record.*

Maid—Oh, madam!—the master is lying unconscious in the hall with a large box beside him and crushing a paper in his hand!

Mistress—Then my new hat has arrived at last.—*Passing Show.*

Fond Mother—Tommy, where did you get that black eye? Didn't I tell you good little boys never fight?

Tommy—Yes, and I believe you, ma. I thought he was a good little boy until I hit him, then I found he wasn't.—*London Opinion.*

"Daddy," asked a mite of eight summers, "God makes us do the good things, doesn't he?"

"Yes," replied the father.

"And Satan makes us do the naughty things?"

Again, yes.

"Well, who makes us do all the funny ones?"—*London Post.*

"Young man," said the fond father, "in giving you my daughter I have entrusted you with the dearest treasure of my life."

The young man was duly impressed. Then, during the few minutes of impressive silence that followed, he heard the patter of rain against the window pane.

"Gracious me!" he exclaimed, "it's raining, and I haven't my umbrella. May I borrow yours to get to the station?"

"Young man," said the fond parent, "I wouldn't trust anybody on earth with my umbrella."—*Blighly.*

Murphy Univernish

Impervious to Boiling Water

BEAUTY of course, but cleanly, sanitary beauty—beauty that endures—that is every woman's ideal of home decoration.

This Spring, use Univernish. Use it on *all* woodwork. Use it because it is beautiful, but more important still, because it stays beautiful under repeated scrubbing with boiling water.

Use Univernish in kitchen and bathroom, on outside of doors, on hall and vestibule floors, on window sills, on table tops—wherever woodwork is exposed to water, boiling, hot or cold, hot liquids of all kinds, ammonia, alcohol or powerful cleaning agents which destroy ordinary varnish.

But this is not all. Wherever, *out-doors or in*, you want a varnish for *hard* service under worst conditions, Univernish will do the work.

We authorize your dealer to refund the purchase price if you try a can of Univernish and it turns white or otherwise fails to please you.

Univernish is furnished not only as a clear varnish but in six beautiful wood colors, Light Oak, Dark Oak, Bog Oak, Mahogany, Walnut and Green.

A Number of Things

By Edwin E. Slosson

Kipling must be happy now that his poem, "The Bear That Walks Like a Man," is again popular and appropriate after having been for five years tabooed in English society as impolite to a noble and loyal ally.

In cases where a professor complains that he has been fired from a university for heresy, religious or political, it is promptly proved by the trustees that the real reason for the dismissal was what the divorce courts call "incompatibility of temper." But trustees should bear in mind that the world cannot well get along *without* certain gifted individuals whom it is quite impossible to get along *with*.

The disappearance in such swift succession of Generals Kolchak, Denikin, Yudenitch and Petliura, and the simultaneous expansion of Soviet Russia in four directions, reminds me—or anyhow I am not likely to have a better chance to lug the story in of the tragic tale of "Algy and the Bear." The story is told in three chapters, *viz.*:

Chapter I—Algy met the bear.

Chapter II—The bear was bulgy.

Chapter III—The bulge was Algy.

Here is a chance for big game hunters from the London Times of December 17, 1919:

GENUINE OFFER BRONTOSAURUS.—Four ex-infantry officers will UNDERTAKE an EXPEDITION in SEARCH of the ABOVE REPTILE provided expenses are paid by wealthy interested person.—W. G., Box V.462, The Times.

What a pity Roosevelt is gone! He would have been delighted to lead such an expedition and the 42-centimeter gun would have been just the weapon for the job.

In the good old days English law allowed the husband the use of a stick "no thicker than his thumb" in keeping his wife under the necessary discipline. Now an Englishwoman in suing for divorce on the ground of cruelty alleges that her husband threw a pillow at her. Thus one by one husbands are being robbed of their historic rights and deprived of the means to compel that obedience to which the wife is pledged by the marriage service. If the married state is not a League to Enforce Peace what is it?

All right, friend Slosson, we will endeavor to stand "A Number of Things," such as "Live Remarks by Dead Authors," on one condition and that is that you explain to us whether "Widow Cruce's oil" (which did not appear in your article as quoted and therefore cannot be attributed to someone else), is a joke, a blunder of the compositor, that scapegoat of all literary Israelites, or merely a *lapis lazuli*.

South Bend, Indiana

J. D. L.

No, that biblical allusion was not a *lapis lazuli* or typographical error, but one of the stories with which it was allowable to alleviate the solemnity of a Sunday afternoon in my childhood. Its quotation marks were worn away long ago.

There are various ways of sizing up applicants for positions of trust. Gideon selected his band by noticing whether the men drank up or drank down. Csarni selected his band by the color of the eyes. Csarni was commissioned by Bela Kun to organize a group of two hundred terrorists to start the Bolshevik revolution. He rejected all candidates with blue eyes because, he said, "I know men and I know that blue-eyed men are prone to steal."

So it seems that those of us who have the misfortune to have been born with blue eyes must remain outside the inner circle of the Bolsheviks. We are not honest enough. Now if it were only our hair that stood in the way of advancement we could use silver nitrate on that. But our eyes predestine us to belong to the bourgeoisie.

The young son of the professor had reached the collecting age. He took a whim to moths and soon had a drawerful. His father, watching the development of his passion, and seizing upon the psychological moment when the perceptive mass was at its maximum and the will to learn had been aroused, suggested to him to go down to the public library and get some books on the subject. The boy did so and came back with a couple of volumes which he set about reading with great eagerness. But they failed to interest him and after running over the leaves with increasing dissatisfaction he threw them aside. His watchful parent then approached and asked:

"Didn't you find what you wanted?"

"Nope."

"Why not?"

"Don't seem to be anything about moths in 'em."

"Did you pick out the right books?" asked the professor.

"Sure, I did," replied his son. "I looked up the names in the card catalog. One of them is 'Moths' by Ouida, and the other is 'Advice to Young Mothers' by some doctor."

Stephen Leacock has a double reputation. He is a professor of economics and a writer of nonsense. For a long time he was able to keep his two vocations sufficiently separate but now they seem to be getting mixed. We have not so far noticed any admixture of economics in his "Further Foolishness" or the "Larger Lunacy," but on the other hand listen to this from his recent article on the advance of prohibition in one of the most serious of British reviews:

Let the employer wait a year or two and then see how social discontent will spread like a wave in the wake of prohibition. The drinkless workman, robbed of the simple comforts of life, will angrily demand its luxuries. A new envy will enter his breast. The glaring inequalities of society will stand revealed to him as never before. See to it that he does not turn Bolshevik.

It is dangerous to let out such secrets. What if one of these vile social-

istic sheets should happen to see this and publish it as a confession that the capitalists were keeping the workman blind drunk so that he cannot discern "the glaring inequalities of society," lest he should, when sufficiently sober, angrily demand, for the first time, the luxuries of life!

As a matter of fact when a community adopts prohibition the horny handed son of toil does not angrily demand the luxuries of his betters. He goes and buys 'em. Take Kansas for instance. Before 1890 there was a wave of social discontent, known as Populism which sounded as scary as Bolshevism does now. But after the people adopted prohibition the poorhouses and jails gradually closed up, and now the drinkless workman rides around in his own automobile and "the glaring inequalities of society" have practically vanished.

But the funniest thing about Leacock is that the Bolsheviks are prohibitionists! If a Russian workman got thirsty he had to desert to the other side where Kolchak was setting up the vodka to all comers. Perhaps that is why his soldiers could not stand their ground.

Having dictated a dozen letters to my stenographer, I turn for a change to the latest volume of the Loeb Classical Library laid on my desk for review. It is the works of Ausonius, whom, I am obliged to confess, I never heard of before, but it appears that he was a Roman rhetorician who lived in Gaul in three hundred and something A. D. As I run over the pages, I think how those old codgers would open their eyes if they could see our modern inventions and time-saving devices, such as shorthand, for instance. Then my eye lights upon this poem:

Puer, notarum praepetum
sellers minister, advola.
bipatens pugillar expedi,
cui multa fandi copia,
punctis peracta singulis,
ut una vox absolvitur.

But I will not pretend that I read the left hand page of these Loeb classics. Of course I could—that is, if I had had a classical education—but to save time I read the right hand page and so—to save the reader's time—I will quote from that version:

Hi, boy! My secretary, skilled in dashing shorthand, make haste and come! Open your folding tablets wherein a world of words is compassed in a few signs and finished off as it were a single phrase. I ponder words of generous scope; and thick and fast like hail the words tumble off my tongue. And yet your ears are not at fault nor your page crowded, and your right hand, moving easily, speeds over the waxen surface of your tablet. When I declaim, as now, at greatest speed, talking in circles round my theme, you have the thoughts of my heart already set in wax almost before they are uttered. I would my mind had given me power to think as swiftly as you outstrip me when I speak, and as your dashing hand leaves my words behind. Who has already told you what I was but now thinking to say?

Now, what I want to know is where old Ausonius got that stenographer and how much he had to pay him and what system of shorthand he used.

"Say it with Flowers"

And Your Easter Message Will LIVE!

Whose Birthday comes in

EASTER and flowers—how inseparable! Through countless ages, the unfolding of bud and blossom has symbolized the life reborn.

Lilies of immaculate loveliness—roses in the glory of their beauty—flowering plants that perpetuate their joyous message—all are most appropriate tokens for Easter-tide.

The florists displaying the "Say it with Flowers" emblem are members of the Society of American Florists, and can serve you best in your purchase of flowers.

2004

Your local "Say it with Flowers" florist, within a few hours' time, can deliver flowers to any part of the United States and Canada through the Florists' Telegraph Delivery Association.

When Will Taxes Come Down?

(Continued from page 425)

our war debt amounting to some \$30,000,000. A part of this debt will be paid from other sources, but the larger proportion can be cleared only by taxation. Shall it be cleared by this generation, or are we justified in passing it on to our children and their children's children to be paid off in easy installments? To answer this question we first must know—if we mean to be just—what we got out of the war: Whether we shall pass on to generations to come benefits gained by our sacrifices in blood that give us the right to ask that they make up our sacrifices in money.

The war was fought "to end war." It was the inspiration of this holy cause that gave to us and our allies the victory. Will this purpose be achieved as a result of this generation's suffering? It is still too early to answer, but we soon shall have some evidence upon which to base our judgment.

Looking back we must realize that no more difficult task ever engaged the minds of men than that attempted by President Wilson and his colleagues at Paris. The difficulties they encountered in their effort to realize in a treaty of peace the things for which the war was fought were so formidable that a perfect result was impossible. However, in every great reform a beginning must be made—and a beginning toward permanent peace was made at Paris. A world constitution for peace was given by the conference to the peoples. It is in some respects inadequate and imperfect, but is, nevertheless, capable of expansion and perfection and I firmly believe the ultimate accomplishment of its purpose.

We can draw light for our guidance at this juncture from our first experience as a nation. The loose collection of peace treaties that existed before the European war I think we can compare to our own Articles of Confederation, and to the inadequate tribunal established at The Hague, we can compare our first Continental Congress.

The basis for preserving peace and establishing a situation in which men and states could move with confidence was made useless in both cases by the conflicting interests and the selfishness of the states and nations represented. The Confederacy was a compact of compromise under which life soon became intolerable. The people were without confidence in the Federal Government and suspicion existed everywhere.

Finally there was called the constitutional convention of 1787. This convention, like the conference assembled at Paris for drafting a world constitution of peace, engaged upon what seemed to be a hopeless task. But in the end, after many trials and threats of disruption, the present constitution of the United States was brought forth.

In its entirety the constitution was not acceptable to any of the contending factions. It was far more bitterly attacked when laid before the state legislatures for ratification than the

League of Nations Covenant has ever been. Ultimately it was adopted by the thirteen States—and it began immediately to gather strength. The people were not wholly satisfied by any means, but tried to make the best of it, and by doing so greatly improved the constitution. In the course of years our constitution has been materially altered thru interpretation and formal amendment.

The American Constitution today is no academic paper. It has endured for a century and a half and has successfully sustained free government thru a period of time in which more changes have taken place than in a thousand years before. Essentially it was sound and true when adopted and it is essentially sound and true today—and so, I believe, it always will be.

This other constitution—the world constitution of peace given the nations by the conference at Paris—needs only the same loyal support from the peoples of the world that was given the American Constitution by the American people to make it capable of sustaining free government without war thruout the world. Its fundamental principles are right. Gradually those details that need correction will be corrected, if we boldly take the first step and give it our adherence.

It is not the League of Nations in itself that will prevent the recurrence of war, but the confidence of the people that it will have this effect. If we ratify without destroying this constitution, it seems to me there will be no reason why we should not reduce taxation for this generation and permit the generations to follow to contribute something for the benefits we shall have handed down to them.

If, on the other hand, the war we have fought turns out to have gained us nothing but a temporary respite from armed conflict and aggression, how then can we ask our children to share the burden we have laid upon our country? The wise thing to do, and the just thing to do, if the League of Nations is not brought into being, will be to increase our taxes and pay off the war debt as quickly as possible, in order that future generations may be left free to prepare for the wars they will have to fight.

Washington, D. C.

From a college girl's letter: "We have even been able to keep Trotsky's picture above the mantelpiece in the red room, but in this case Miss X adopted a subterfuge which seems to me rather questionable. She told H. 3d that it was a portrait of Nicholas Murray Butler."—*New York Tribune.*

The train was crowded, and a woman, not content with a seat for herself, had spread her belongings over another.

A man, when a courteous request to clear the seat met with no response, cleared it very carefully himself and then sat down. "I should like you to know," she said, "that I am one of the directors' wives."

"Can't help it, madam," he replied. "If you were the director's only wife I should do the same again."—*Pittsburgh Chronicle-Telegraph.*

A GOOD FLORIDA (17c) LUNCHEON

Along about Christmas time a little town in Florida held a Farmers' Rally, and the Clubwomen were able to give the 500 persons in attendance a splendid Noon-luncheon, according to press reports—for 17 cents per plate. Most of the articles appearing on the Menu were home-grown.

The High-Cost-of-Living today is bearing down most heavily on salaried folks—office managers, clerks, professional men, and others of that class. According to Bradstreet's, living costs stood last December at 131 per cent above pre-war level. Profiteering, extravagance and inflation of the currency all have their effect, but the real, fundamental, underlying cause of our troubles is UNDER-PRODUCTION.

Florida growers, however, need worry but little about their own living costs, when you consider the big prices they receive for luxuries shipped north in mid-winter. The Christmas strawberries brought them from 90c to \$1.00 and as high as \$1.46 per quart, after shipping and selling expenses were paid. In December Green String Beans brought close to \$6.00 per hamper in New York. Tomatoes shipped to Northern markets brought \$2.75 to \$4.00 per crate, and Peppers \$3.25.

The Leesburg Commercial states: "We visited a twelve acre farm Saturday—ten acres in fruit and the crop sold on the trees this season for \$10,000 cash. Cost of production was \$1,100, leaving \$8,900 for interest on the investment—nearly 18 per cent on a value of \$5,000 per acre."

These are not "Pipe Dreams"; they are **Florida Facts**. Grove land that is at present in an uncultivated state will not last forever in Florida—note the lesson of California. I own and am offering for sale in Orange County some of the finest orange and trucking lands in the state.

Truck gardeners near Orlando cleared as high as \$1,500 an acre from head lettuce last year. We have copies of their signed testimonial letters in our book. Many of these truck gardeners are Northern men and they know our summer climate is cool and more pleasant than in Northern states.

Here is OPPORTUNITY reduced to its simplest terms. All you need is a moderate amount of capital and a little knowledge of farming. We will clear and cultivate your land on our fair and equitable **TEN PER CENT ABOVE COST PLAN**. Send for our Big Free Book—**TWENTY ACRES AND PLENTY**. It tells all about our dollar-an-acre monthly payments, sick and out of work clauses and other attractive features. Address Sylvester E. Wilson, Dept. G4, Orlando, Florida.

(NOTE: Mr. Wilson is Treasurer and principal owner of the Produce Reporter Company, Chicago, publishers of the "Blue Book" which is to the Fruit and Produce Trade what Dun's and Bradstreet are in other commercial fields.)

Independent Opinions

The possibility of acquiring some of the tropical territory in America now held by European powers is attracting more attention than ever before because of the opportunity for expansion in this direction. We have loaned billions to England and France on which we cannot even collect interest, and these Governments should welcome a proposal to liquidate part of their obligations by the transfer to the United States with the consent of the native population of the American possessions which are of little use to them, but which would be of inestimable value to us. Here is a letter from an American business man on this point:

Five years ago I was in the West India Islands and Demerara. British Guiana is hardly scratched and is a wonderful sugar country. If we had it we could build a railway across it to Brazil and wake up both countries. The closer we get to Brazil the better for both of us. Every island on the Caribbean would surely be an asset if we owned them. No other country can make so much of them: Their trade is naturally only in the United States. Barbados is a wonderful cross roads. Now it has only an open roadstead but it could easily and at not much expense be made into a fine safe harbor, by building around from a point one-half mile below the present small harbor entrance. England fooled away \$10,000,000 on barracks at St. Lucia; enough to make the harbor at Barbados; and used them just one year. There they stand idle. Last winter I went to Venezuela and stopped both ways at the Dutch islands of Curacao. This is only an hour's sail from Venezuela or Colombia and both are liable to cause us trouble. Curacao has a wonderful inner harbor about one by ten miles, deep water. The entrance from sea goes thru the city, 300 feet wide and probably 1800 feet long. Opens south, so no sea ever comes in as winds always last. The banks around the lake like harbor are high enough so the whole United States navy could hide there and not be seen from the sea. Here the coffee is brought by stream from Lake Maracaibo and transferred to the larger boats for New York. Big boats cannot get into Lake Maracaibo. The climate of Curacao is very good; no high hills so wind blows freely over it.

A. G. SHERRY

Troy, New York

Now that America is washing her hands of all foreign responsibilities and refusing to support the independence of the Asiatic peoples whom we helped to free from the Turk, it is time for us to dig out of our circulation files a letter from an American missionary who tells of what he saw in the region that was once the earthly Paradise, but under the Ottoman has become quite the opposite. In reply to his letter complaining of not receiving *The Independent* regularly we wrote on April 19, 1918, asking for a better address and our letter reached him at Bagdad a year later, to which he answered:

I am sorry you had trouble in getting *The Independent* to me, and I appreciate your request for a better address—which I hope to have soon. Now the war is over and we can make confessions. I confess to the weakness of having often wished for a

better address for myself and family, and a safer one for we have been living in hell, tho it is not spelled that way on the maps, and being a respectable paper *The Independent* was not allowed to come in. Those of us, who have lived where the races mingle but do not mix and where the hatred is older than the oldest antiques they sell have seen, I think, the worst features of the war.

To the civilian in that section hell is that period which elapses between evacuation and occupation, when one devil is going out and another devil is coming in and the imps are without a commanding officer. That is when hell holds holiday.

Another hell is when the pestilence gets loose in a besieged throng of refugees cowering in their hiding places, packed as closely as an Arab packs dates in a skin. We were in that hell, too. Half of the ten thousand people were down with typhoid or typhus at one time and half of the other half were just convalescing. Three doctors, God bless them, they have all since died of cholera, tended the five thousand sick. Under the taunts and gibes of the enemy we carried out our dead daily. They were buried in big pits where we placed them in layers of a hundred and spread a little earth over each layer. Passing thru the ranks of the enemy the dead were robbed of their winding-sheets and spit upon while the half-dead bearers were kicked like dogs, and more than once the diggers of the grave had to hide among the dead to escape the rain of bullets that were poured in upon the lifeless bodies.

And we had another hell of civil war and famine. This was not the scarcity of food kind of famine. It was the real thing one reads about in the ancient histories of the race. A woman gave her grand piano for 72 pounds of poor flour. When grain became scarce cats and dogs disappeared from the land, then the newly buried dead were taken from their graves and children were stolen for food. In those days the streets of the city were littered with the dead and passersby thought nothing of it. No, *The Independent* could not get in there. There was a great gulf fixed; no one came in; no one went out. Then came the time when the people tried to get to the British lines running and fighting thru enemy territory and that was perhaps the worst hell of all. They started out 70,000 strong a broken, frightened, uncontrolled throng of families with not more than 10,000 rifles untrained, undisciplined. Families were divided and lost: they died of famine and thirst, by plague, fever and the sword and the bones of half of them lie bleaching along the 500 miles of their march over mountains and valleys and deserts. A nation lost.

Dear frind i am dropping you a few lines to ask you a little about writing a story i wold like to know a little about it i am writing one now and i thot maby thar is some thing about writeing one for it will be a good one after i get it wrote it will be a few days befor i will have it Wrote but it will be a good one it is about a boy that was white out a mother after he was 8 years of age and after i get done white this one i have a few moor that i wold like to Write and i wold love to know a little about writeing them i thot maby thar was some thing i shold know about Writeing a story wold it is all i know what to Write so i will close

We fear that our friend needs to know more about authorship than we have space to tell him.

The Firm That Saved One Client \$1,000,000 a Year

(Continued from page 429)

furnished from the most suitable mine of the company's field, extending over an area of six States. News of late developments, economies and improvements is supplied to the customer in the form of practical recommendations, that he may handle fuel problems in the most expeditious and least expensive way.

Now as to method. A Peabody coal mine is a beautiful piece of work. The seam of coal is "undercut" along the bottom, then drilled and charged in two places, to get more uniform and complete results when explosion occurs. The track of the car into which miners load coal follows the progress of the work, being extended as the mines develop, so that pit cars can always be run right up to the coal to be loaded, with no time or energy lost in superfluous hand labor. An electric motor hauls the train of ten to twenty loaded cars to the elevator. The construction of this provides for a double hoist. Cars returning empty on the hoist are automatically and promptly pushed off by the loaded cars being pushed on. A steel and concrete floor at the opening of the mines renders the track stable and gives a weatherproof, easy footing for the miner.

Coal is dumped from pit cars in the tippie onto screens, which by the law of gravity and a shaking motion of their own classify and deliver coal in various sizes. Inspectors stand at the screens or picking tables to clean the coal further as it passes to the cars. Great care is necessary to avoid breakage after the coal is screened. Chutes leading down from the tippie to the railroad cars are lowered clear into the cars, dropping the coal a very short distance. The modern tippie, made of steel, concrete and sheet metal, accommodates five tracks underneath, rendering possible the screening and loading of five different sizes of coal at the same time. A permanent fan house of brick supplies good ventilation.

But the main object of our visit to the company was to secure expert opinion for the lay reader on the entire coal situation, so that everybody could, by taking thought and action for himself, be a committee of one to save coal, prevent shortage and reduce prices. We had first consulted editors of national coal trade journals and other neutral authorities, who agreed that the Peabody officials were the best qualified of any body of men to furnish this advice.

"When a coal shortage occurs, people naturally think the mines are running out. They are not. The mines of America can supply 40 per cent more coal than the possible demand of this country. Five classes of people are involved; the operator, the miner, the dealer, the Government official, and the purchaser or consumer, are each partly responsible for the crisis that lately developed in the coal fields. The only way to avert a coal famine is by a long

Industrial Valuations

OCCASIONS constantly arise in business where sound policy dictates the necessity of knowing what a plant or business is worth.

The real worth of an enterprise does not consist of a summary of the cost of the buildings, machinery and equipment, although accurate information on the physical components of a plant is necessary.

LOCKWOOD, GREENE & Co. service in industrial valuations includes not only the listing of the machinery and the buildings, but also includes an opinion as to what the plant is actually worth.

This opinion takes into consideration such matters as labor and transportation conditions, the competitors situation in the industry

and the possibilities for plant enlargement—in short all of the facts entering into the success of a plant.

If a manufacturer is considering changes, relocations, extensions or remodelings, he probably will act with more intelligence with reliable figures as to the real worth of his plant before him.

LOCKWOOD, GREENE & Co. have a special service for bankers and investors by which they determine the real value of a plant behind securities.

LOCKWOOD, GREENE & Co. organization comprises engineers and manufacturers so that in studying a plant, we consider it not only from an engineering, but from a manufacturing point of view.

BELGIUM BY A BELGIAN

A Short History of Belgium

By **Léon Van der Essen**
of the University of Louvain.

It is a fascinating and authoritative account of the past of this country from 57 B. C. to the end of the Great War. The author tells how the nation balked German might and "stood the test in the hour of the Great Trial."

Red-blooded Americans will read this vivid narrative with pleasure.

\$1.50, postpaid \$1.65.

Introduction to the Peace Treaties

By **Arthur Pearson Scott**

Assistant Professor of History, University of Chicago.

This book will give you an understanding of the causes of the war, the aims of the belligerents, the peace proposals, and the framing of the Treaty of Peace. It is also a comprehensive explanation of the League of Nations and the location of new national boundaries. The author has made available information of vital importance to every American citizen. *Ready in May.* \$2.00, postpaid \$2.15.

The University of Chicago Press
5751 Ellis Avenue Chicago, Illinois

"I Now, Hear Clearly" You Too, Can Hear!

Inasmuch as 350,000 users have testified to the wonderful results obtained from the "ACOUSTICON," we feel perfectly safe in urging every deaf person, without a penny of expense and entirely at our risk, to accept the

Famous Acousticon For 10 days' FREE TRIAL No Deposit—No Expense

Since the perfecting of our new "Acousticon" it is smaller, better and just as strong as ever. Just write saying that you are hard of hearing and will try the "Acousticon." The trial will not cost you one cent, for we even pay delivery charges.

WARNING! There is no good reason why every one should not make as liberal a trial offer as we do, so do not send money for any instrument for the deaf until you have tried it. The "Acousticon" has improvements and patented features which cannot be duplicated, so no matter what you have tried in the past, send for your free trial of the "Acousticon" today and convince yourself—you alone to decide.

Dictograph Products Corporation
1320 Candler Building, New York

pull, a strong pull and a pull altogether, in the direction of more production and less waste. The five individuals concerned have each a number of things to do in the case.

"The operator should first make sure that his mine will pay for working at all, and become a satisfactory, permanent investment. High cost mines are of three sorts: Those with poor quality or deficient quantity of coal, those with bad location relative to the market, and those economically good but handicapped by inefficient management. The first two classes are hopeless; the third class may often be rendered highly productive thru a change of management, or improvement of mining methods, or installation of modern machinery, or location of a better market. There are too many operating mines in existence. The poor ones are a drag on the country.

"The operator should know that he has minimum costs and maximum production, as compared with the records of other mines and the possibilities of his own. These facts and figures may be had only from personal investigation by engineers of broad training and experience. The fact that preliminary consultation is usually, and always should be, given free puts the responsibility squarely up to every owner and operator. A typical example of waste occurs in leaving large amounts of coal in the mines, in the form of roofing and pillars to support the roof. After the mine has been worked out or abandoned for a time, it is impossible to recover such coal. Probable dangers of liability and loss should be recognized and prevented in advance of opening every mine.

"The operator should see that his workmen have comfortable homes, facilities for recreation, prompt and skillful medical attention wherever needed from accident or illness. One reason why so many coal miners demand such high pay is that money is about all they get from their employers. Industrial conditions and relations are inferior to those of the modern factory. When you treat men like beasts you may expect them to grab and snarl in the manner of beasts. The problem of the floater is also concerned here; every man must be made to feel at home in the place where he works. A coal miner is a human being. His employer dare not overlook the fact.

"The operator should improve conditions for himself by joining regional and national movements and associations of other operators. The geographical position of the coal producer and the nature of his work tends to keep him out of touch with the trade leaders, by whose concerted action alone can business organization and Government coöperation be made effective.

"The miner has responsibilities unlike those of the operator, but equally important. He should do some thinking before he talks or acts in a way to cause a strike or other stoppage of industry. He must remember that thousands of German spies, Bolsheviks and I. W. W. anarchists, whose

function is to serve as human bombs and destroy everything in sight, have been planted in American mines, factories, railroads and shops, and have been chiefly responsible for most of the strikes since the war. He should reflect that United States secret service men have caught prominent agitators with large sums of German money paid them for agitation; it is probable that the fellow who talks loudest against the operator is laughing up his sleeve at the stupidity of the miner in listening to such talk, and will laugh louder if he succeeds in shutting down the mines and making the operator and the miner both lose money.

"The miner should be fair to the operator, as he expects the operator to be fair to him. Numbers of coal producers have testified before investigating committees that last year they ran their mines at a loss in conforming to the Government program of wages and prices. In the period since the war the comparative earnings of miners have been greater than those of operators. The miner should be content with an honest wage. He should not be willing to be a profiteer, and thus force his employer to be one also, or fail to earn a living. A late report from the Southern Operators' Association compiling figures on ten Illinois mines shows that the average daily earning of the machine operator was \$9.53, while the pick miner made \$8.51, and even the loader received \$8.08 per day. There were 207 working days in the year, so the worker who ran the machine earned \$1,972.71, the man who wielded the pick earned \$1,761.57, and each had 158 idle days in the year! About two-thirds of the loaders, diggers and machine men received \$8 or more every day they worked. This was about twice the average full-time salary of professional men like preachers and ministers, who have spent long years and large sums of money in preparation for their life work. Is it fair? Should the miner, any more than the producer, take selfish advantage from the fact that people must have coal? Less rule of gold and more Golden Rule is needed thruout all industry.

"The dealer also has a vital part to play. He should always handle coal prepared by modern methods to insure quality, purity, fair price and prompt delivery; not only will he keep his trade thus, but he will help create demand for the coal guaranteed best by nature and process, to the discouragement of incompetent producers who are marketing inferior grades. He must select coal for his customers not only by size but also by sources and the mineral content. Certain mines from certain localities produce desirable coal for steam use, others for domestic use, others for the blacksmith, others for the gas or coke manufacturer, others for the metallurgical chemist. A Pure Coal Law is needed for industries as much as a Pure Food Law was needed for the individual. The retailer is the only man at present in a position to serve as investigator and inspector of the method and output of the operator.

"The Government officials, of one kind

or another, should make several moves to relieve the situation. The best way to conserve the coal supply is to pass laws correcting the wasteful methods of mining; natural resources belong under the jurisdiction of the country possessing them, and if squandered by any class of citizens, they should be conserved by law. All would gladly conform to reasonable, scientific regulations.

"Other abuses, in the opinion of many operators, are the chronic shortage of cars and indefinite hold-up of shipments, the diverting or side-tracking of cars, and the confiscation of coal by the Railroad Administration. As high as 50 per cent of the shipments of a certain company, the officials declared, recently went to the wrong consignees, and as low as 25 per cent of the normal car supply further demoralized the business.

"How can a man safely produce goods when the time, destination, amount and cost of delivery are uncertain? The Government could, and we believe should, empower a commission of representative character to do for the whole bituminous industry what the Roosevelt commission did in 1902 for the anthracite.

"Before taking up the final point, that of the consumer's share in the solution of the nation's coal problems, we would state the chief problem fully. *More regular operating time* would lower cost and price, raise output, insure delivery and hasten satisfaction to everybody. The average operating time of all mines in the United States before the war was less than 200 days. For various technical reasons mines cannot be closed a third of the time without large expenses that raise prices, or danger of losing the property altogether. Most people buy coal for the year in the fall or winter, and cease to buy in the spring and summer. This unequal demand creates shortage in cold weather and stoppage in warm. Coal mines are generally in a mountainous region where space for storage is not to be had, so the product can be dug only as fast as shipped, and shipped only when ordered.

"The railroads haven't enough cars to move the tremendous quantities of coal now bought from September to March. The operators cannot pay overhead and wages to keep the mines workable yet not working 100 days in the year, without putting up the price in winter. The miners are discontented with so many idle unproductive days, and wouldn't be human if they didn't make trouble, or leave and disorganize the work. And the consumers, getting too little coal or paying too much for it, really cause the chief trouble themselves!

"Last year The National Coal Association spent a good many thousands of dollars in advertising to all consumers the patriotic and selfish wisdom of buying coal early. Some responded, more did not. I would make this my first point in my list of suggestions to readers at large.

"1. The consumer should buy half his coal for the year in April, May or

Auditing

The Famous Accounting Guide

By R. H. MONTGOMERY, C. P. A.

Ex-President of the American Association of Public Accountants

Sent for Your Examination

"Auditing: Theory and Practice"

It is the standard modern guide to the solution of auditing problems in general, and at the same time a volume of intense reading interest.

This Well-Known Book

will be found in practically every big accounting firm, in the offices of great corporations, on the desks of treasurers wherever important accounts are kept. Every competent accountant and auditor is supposed to be thoroughly familiar with it.

Shows Clearly How to Make Audits

This all-inclusive guide goes directly to the heart of the essential features of an audit. It gives in specific, understandable, interesting chapters, the kind of direction you could otherwise gain only through years of trying experience and some of it perhaps never in that way. It lays down the foundation principles, shows how to begin work, gives fully and explicitly the procedure for making both balance sheet and detailed audits, conducting investigations, handling depreciation, preparing certificates and reports.

Settles Doubtful Matters Almost Instantly

In general accounting work its 800 pages are a veritable accounting encyclopedia packed with exact, experience-tested facts. Hardly a situation can arise where you cannot turn to your copy of "Auditing" for practical suggestions on what to do, how to save time, avoid unnecessary work and distinguish the vital from the incidental.

Insures Exact Financial Statements

In preparing important financial statements, where you must be sure you're right, Mr. Montgomery's judgment and experience are simply invaluable.

RONALD PRESS CO.

Business Publications
20 Vesey Street New York

40 Different Lines of Business

from department stores to banks and public utilities are covered. Its eminent common-sense is of great actual work-a-day value to the professional, while it is *positive accounting "nourishment"* for the student. It is a veritable "tool-chest" of accountancy.

The Whole Subject in a "Nutshell"

To any man who is considering the study of accountancy, it gives at little cost an organized mastery of the subject from beginning to end. Accountants and auditors in all lines of business in every state join in enthusiastic praise of Mr. Montgomery's work. "Just what I've been looking for. No accountant should be without it," writes A. R. Cochran, Spence Baggs Store Co., Ohio. "Wouldn't part with my copy for many times its cost."—D. S. Fills, C. P. A., North Carolina. "Couldn't be more complete."—P. L. Louks, Detroit. "Have just taken five copies."—Charles Neville & Co., Savannah, Birmingham, etc. "More than a book—an institution."—H. K. W. Scott, Minnesota.

Packed With Facts Every Accountant Needs

The five principles of balance sheet audits.
13 rules for verifying inventories.
The different business customs in figuring interest.
The best way to treat a profit on the sale of fixed assets of a concern.
Where to find 75% of defalcations.
The 18 rules for partnership agreements.
A safe definition of "surplus."
How to start a perpetual inventory of stock on hand.
The right place on the balance sheet to show reserve for working capital.
How to locate errors.
Profit and loss accounts for holding companies.
Handling treasury stock on the books.
Profits: Legal and accountants' definitions.
The best form for balance sheets.
Points about statements for credit managers.
What not to put into a report.

EUROPE IN 1920

THERE have always been many incentives to travel abroad—rest, recreation, desire for familiarity with the enjoyment of the historic spots, the architectural monuments, the art treasures of the Old World. This year there is added to all these existing appeals, a new force that draws one's eyes and heart to the rising sun. It is the desire to pay homage to those who have fallen, and see with one's own eyes the scenes of the world's greatest war.

Our large organization has acquired the most valuable practical experience in connection with the special conditions existing to-day and is completely prepared to give the smooth-working, helpful, comfortable service for which the name of Thos. Cook & Son stands.

Become a Master of Language

In 15 Minutes a Day

Sherwin Cody, the well-known teacher of practical English, has perfected a new patented invention which, in 15 minutes of your daily spare time, will quickly give you unusual command of language. Students of this "100% Self-Correcting Method" secure more improvement in five weeks than had previously been obtained by other pupils in two years. 15 minutes each day of YOUR spare time can now, thru Sherwin Cody, make you speak or write clearly, forcefully, correctly, and convincingly.

"100% Self-Correcting Course"

The average person in business is only 61% efficient in the vital points of English grammar. That is because the methods of teaching English in school left the student only a hazy idea of the subject—the "rules" did not stick in your mind. But Sherwin Cody's new invention upsets all old standards of teaching English. And it overcomes the only weak point in instruction-by-mail. It actually takes the place of an instructor at your elbow. It assigns you lessons in Letter Writing, Spelling, Punctuation, Grammar, Reading and Conversation, corrects them for you, and anticipates your questions. It even guides your paper and assigns you your class percentage till you reach the 100% mark.

Interesting Free Booklet

Mr. Cody has written an interesting booklet explaining about his new course in detail. If you feel your lack of Language Power. If you are ever embarrassed by mistakes in grammar, spelling or punctuation, if you cannot command the exact, correct words to express your ideas, this booklet will be a revelation to you. Send for it now. Learn how Sherwin Cody's new invention makes command of language easy to gain in 15 minutes of your daily spare time. Mail a letter or postcard for this booklet, at once.

Brooks Appliance Co., 490-G State St., Marshall, Mich.

June. He will save about 10 cents to 50 cents a ton, as the price goes up, starting with June, approximately 10 cents per ton per month. He can store the year's supply with safety: the danger of fire in the few varieties of coal that ignite thru spontaneous combustion has been overcome by storage in water in specially constructed pits. Coal should be stored always at the point of consumption, never at the point of production. Many grades will stand in the open for years with but slight, if any, deterioration.

"2. The consumer should buy from a dealer who fully describes the superiority of his method and product of mining so as to be convincing, who invites comparison with other products and prices, and who sells coal from a mine with resources, construction and management such as to guarantee permanency of fuel supply.

"3. The consumer should freely consult the dealer on all problems relating to coal. If the dealer cannot or will not offer a solution directly or by introduction to authorities who can, it is time to seek another dealer better informed and intentioned.

"4. The consumer should investigate all heating devices on the market said to promote economy by conserving waste heat. About 40 per cent of the national coal supply is lost thru defective combustion, circulation, ventilation or equipment. Most of this waste can be prevented.

"5. The consumer should obtain free literature on the entire subject from the great fuel experts, now to be had from the U. S. Fuel Administration, and the Bureau of Mines, also from The National Coal Association, headquarters, Washington, D. C. Our Government supplies the most and best literature on practical, scientific themes of any in the world; many of our personal problems would be solved for us if we would consult Federal authorities more frequently and fully. To cooperate with such agencies for the benefit of the public is a fixed purpose of this company."

May we add a word? To aid economy and production, we ask our readers to observe two requests. First, every one who in his or her home or place of work gets heat, light or power from coal, put on your calendar memorandum for next April, May or June: "*Buy next year's coal now.*" Second, everybody, whether in this class or not, think of one acquaintance who is a large or even a small consumer of coal, hand this article to him, and mark the sentence above. Little things; but fraught with great results if each of our several hundred thousand readers will only do them. Will you?

Mother—Shame on you, Dorothy! The idea of letting a boy whom you've known only a week, kiss you! Why, when I was your age a girl was considered vulgar who would let a boy even hold her hand until he'd known her several months.

Daughter (innocently)—And didn't you say once, mother, that it used to take you two weeks to go from New York to Chicago?—*Yale Record.*

The Best Person in Our Town

(Continued from page 427)

your line with central again?" I ventured. "No, and I'm not going to until some crooked work I know of is straightened out."

When the United States became involved in the world struggle, a son of Mr. Hayden and two sons of his wife (he had married a second time, one of our beloved church members) entered the United States service. Mrs. Hayden's boys were both married and one of them left a wife and three little children. The homestead doors of our "best man" were opened wide for war widows and war orphans, and all their wants were supplied during the long years of warfare.

Nor were they allowed to consider themselves a burden. While "daddy" fought for democracy in France, and the other two boys were in camp ready to go, "grandpa" never faltered. One of the brave sons succumbed to pneumonia in camp, was brought home and buried in the home cemetery with military honors, and the widow was made to feel solid ground of helpful sympathy beneath her feet. Love and goodwill toward these dependents were manifest in every act. Those children love and respect their grandpa as much as they do their father and now that the latter is "home again from a foreign shore," they are loath to leave the shelter of grandpa's fireside for their own.

I am sure our community will be slow to recognize the personality of my "best man" and surer still that he himself will be shocked if he ever sees this. But if "pure religion, undefiled, is to visit the widow and the fatherless in their affliction," the genuine article is his.

Wife—When you walk, why do you make so much noise, John?

Hubby—I've got my heavy underwear on.—*Medley.*

To Whom It May Concern—Of, pertaining to, and concerning the redundant terminology, superfluous nomenclature, excessive wordiness, and abundant tautology of law, equity, jurisprudence, or legal science, be it stated, affirmed, and declared that the purpose, aim, intent, design, end, effect, and consequence, thereof, therefrom, therein, and thereon is completely, entirely, totally, and perfectly to befuddle, puzzle, bewilder, confuse, nonplus, and mystify the layman's intellect, understanding, reason, and mind.—*The Docket.*

A doughboy brings this ship story home with him. Among the passengers on the ship was a man who stuttered badly. One day he hurried up to the captain and started: "Th-the-the—"

"I'm very busy now," interrupted the captain. "Tell the mate here."

But the mate also was busy, and the stutterer finally came back to the captain. "Look here, man, sing it! That's the only way," urged the officer.

So, beginning in a tragic voice, he chanted—

"Should auld acquaintance be forgot and never brought to mind? The blooming cook fell overboard and is 20 miles behind."—*Capper's Weekly.*

The Wisdom of Facts

Sound business judgments are guided by facts.

The business interests served by the National Bank of Commerce in New York are large. Through its extensive relations with the structure of commerce and industry, this Bank is able to draw widely from original sources for the facts of business. It devotes unusual effort to gathering and presenting these facts to its friends.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government. When Will the Taxes Come Down? By Daniel C. Roper.

1. Does the article contain any one sentence that presents the writer's principal thought? If it does, point out the sentence, and explain its meaning. If it does not, write a sentence that will give Mr. Roper's principal thought.
2. Write an original short sketch that will show, by the narration of a specific instance, how an individual contributes directly or indirectly to the Government's revenues.
3. Find examples of balanced construction in sentence formation.
4. Give the syntax of any five infinitives that occur in the article.
5. Point out interrogative sentences that are used for emphasis.
6. "The cost of government is high." Write an original short story that will show clearly, without your saying so in words, that good government is worth paying for.

II. Another Scrap of Paper? By Alessandro Sapelli.

1. Write a short, but emphatically worded brief, that will show the course of the writer's thought.
2. Write a similar brief that will show the thought of people who do not agree with the writer.
3. Define the following words: insistent, impetuous, renunciation, redemption, sanction.
4. Find, in a large dictionary, the derivation, or history, of every one of the words named above.
5. At one place the writer says: "Let us be concise." Imagine that you are the managing editor of a periodical. Prepare a set of rules that will aid your writers in being concise.
6. "Diplomats, like so many Olympian divinities, had lived among the clouds." Explain the reference to "Olympian divinities" and "clouds."
7. Name the Olympian divinities who take part in the story of "The Odyssey." What are the personal characteristics of every such divinity?

III. Master Workshops of America. The Firm That Saved One Client \$1,000,000 a Year. By Edward Earle Purinton.

1. After you have read the article write a letter, as if to a friend who is about to start in business, and tell him how he can make his shop a "master workshop."
2. Explain the figure, "The telescope of principle—and the microscope of method."
3. Give a short talk in which you explain what is meant by "Brains properly filled and minds properly open."
4. Write a short story that will tell of the success of a person with "brain properly filled and mind properly open," or of the failure of a person of an opposite type.
5. Explain how it is possible to apply the principles mentioned in the article to the conduct of a newspaper stand.

IV. What Is Americanism? By Edwin E. Slosson.

1. Formulate Dr. Slosson's definition of "The true spirit of Americanism."
2. Give Dr. Slosson's interpretation of "The Melting Pot Metaphor."
3. Explain the sentence, "The United States is a synthetic nation."
4. Point out sentences that are strikingly original and emphatic.
5. Point out metaphorical expressions.
6. Read aloud any paragraph that you think especially worthy. Give a short talk in which you explain and emphasize the thought of the paragraph.

V. The Best Person in Our Town.

1. After you have read the article write a somewhat similar short composition on "The Best Student in Our School."
2. Imagine that you were invited to spend a week with "The Best Person in Our Town." Write an interesting account of your visit, narrating incidents that will illustrate the man's character.

VI. The Story of the Week.

1. Select from the news of the week an article that especially appeals to you. In that article find a long, exceedingly expressive sentence. Explain the meaning of the sentence. Then give the syntax of every word in the sentence.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Problem of Taxation—"When Will Taxes Come Down?" "Stock Dividends Are Not Income."

1. Under what provisions of the Constitution are the present Federal taxes levied?
2. What were the chief sources of revenue under the revenue laws of ten years ago? What are the chief sources now?
3. What, according to Commissioner Roper, are the indirect benefits of the present revenue law?
4. How does the commissioner answer the question put in the title of his article?
5. Upon what grounds did the Supreme Court declare the stock dividend tax unconstitutional? What will be the effect of the decision?

II. Basic American Principles—"Why We Have Representative Government," "What Is Americanism?"

1. What is the distinction between "representative government" and "direct democracy"?
2. Upon what ground does Professor Giddings assert that "... experience indicates that the best working system is a combination of direct democracy with representative government"?
3. Pick out the topic sentence in each of Dr. Slosson's paragraphs and develop the topic in your own words.
4. "The logical solution would not stop at municipal home rule, but would make the greater city a separate state." State the advantages and the disadvantages of such action. What steps would have to be taken to bring about this result?

III. Italy, The Allies and The United States—"Another Scrap of Paper?" "Italy's Claims in Africa," "The Partition of the German African Colonies."

1. How does Signor Sapelli justify the Secret Treaty of 1915? How does he propose to settle the dispute over Fiume and the Adriatic coast?
2. What claims does Italy make to territory in Africa? How are these claims met by England and France?
3. Indicate on a map the proposed divisions of African territory. How will these accessions of territory benefit the English, the Italians and the French?

IV. Candidates for President—"Reluctant Democrats," "Palmer Is Willing."

1. Why is the Democratic Party finding it difficult to get candidates to declare themselves?
2. Which of the three candidates discussed in these articles is the most available Democratic candidate?
3. Draw up a platform upon which each could run.

V. Master Workshops of America.

1. What general impressions do you get from reading this article?
2. "Every business needs a telescope of principle and a microscope of method." How does the Peabody Coal Company illustrate this statement?
3. Discuss the mutual obligations of operators and coal miners as set forth in the article. The obligations of the Government.
4. Summarize the advice given to coal consumers.

VI. The Farmer's Viewpoint on Daylight Saving.

1. What are the economic and social advantages of daylight saving?
2. What is the basis for the farmer's opposition to the law?
3. In view of the arguments on both sides, what action would you recommend?
4. Is there any one arrangement that would equally suit the country and the city dweller?
5. Should or should not cities have daylight saving? Please back up your statement with five reasons.

Remarkable Remarks

HERBERT C. HOOVER—Money is nothing.
LADY ASTOR, M. P.—I hate the word prohibition.

SENATOR CALDER—I want to be nominated for the Vice-Presidency.

BLASCO IBANEZ—American women should be large and eat a great deal.

PRESIDENT LAWRENCE LOWELL—Democracy is despotism tempered by insanity.

ELIZABETH CONE—The more loving the woman the sooner she gets what she wants.

GEN. ROBERT LEE BULLARD—Governors Island is nothing but a series of hen houses.

HEALTH COMMISSIONER COPELAND—There is no excuse for the rise in the price of coffee.

JAMES GIBBONS HUNEKER—If Wagner had been alive today he would have written *vers libre*.

SECRETARY FRANKLIN K. LANE—Everybody in Washington seems to be afraid of everyone.

W. J. BRYAN—The average New Yorker thinks he is taking a journey if he goes 100 miles.

EX-SECRETARY WILLIAM C. REDFIELD—It does not pay to order food over the telephone.

KING GEORGE—I am glad that prices in these islands are appreciably lower than elsewhere.

CARDINAL O'CONNELL—The man by every nature and divine right is the head of the family.

OLIVER HERFORD—It is a pity that London has no sky-scrapers for no sky needs scraping more.

ADMIRAL LORD FISHER—Every fool knows that every war begins where the last one left off.

PROF. ALBERT BUSHNELL HART—Look at General Wood's face and you will know that he is a big man.

FRANK B. GILBRETH—People don't realize the amount of time that is lost in getting ready to do things.

JOHN D. ROCKEFELLER, JR.—The whole social, and business and financial structure is built on truth and honesty.

SENATOR J. HAMILTON LEWIS—The ambition of every Englishman is to have a railway compartment to himself.

SIR OLIVER LODGE—I believe that the destiny of the human race on the planet is largely in the hands of America.

MISS KEITH CLARK—The Italians are not a romantic, sentimental people living on moonlight, roses and nightingales.

LENIN—Out of one hundred supposed Bolsheviks one will find one Bolshevik, thirty-nine criminals and sixty fools.

RABBI LEO M. FRANKLIN—Our work is godless, our pleasure is godless, our homes are godless, our hearts also are godless.

HON. MISS HELEN SCOTT-MONTAGUE—Nowhere in the world do women wear such foolish and senseless underwear as in America.

JAMES M. BECK—The dead Washington is a more potent force in controlling the destinies of the American people than the living Wilson.

BERNARD SHAW—The conscientious objectors can pass the Kantian test: "Would it be well for all the world if everyone did as I am doing?"

REPUBLICAN CHAIRMAN WILL H. HAYS—The duty of the Chairman of the National Committee is to elect the candidate and not select him.

ROGER W. BABSON—As purely a statistician, I wish to say that statistics have taught us conclusively that the greatest factor in business life today is religion.

MINNIE MADDERN FISKE—It is difficult to believe that the woman lives who would consent to wear trapped furs if she was obliged to witness the tragedy of their procuring.

DEAL R. O'HARA—Give the Dames control of the post office for twenty-four hours and they will have Mary Pickford, Carrie Nation, and Lydia Pinkham on postage stamps.

The Cover

The Victory Medal which is reproduced on the cover of this issue is to be awarded to commemorate the service of every man who fought in the United States Army for the cause of the Allies in the Great War. The illustration shows the reverse of the medal; on the obverse is the figure of a Winged Victory resembling somewhat our Statue of Liberty. The medal is to be of bronze, suspended on a ribbon of double rainbow design symbolizing the dawn of a new era of peace after storm.

Plans for this Victory Medal were begun in the spring of 1918, while hostilities were still at their height, by an agreement among representatives of the various allied and associated nations at war to adopt a single service medal for all combatants, symbolizing the union and solidarity of purpose which animated the countries fighting against Germany and her allies.

After the armistice an interallied commission met in Paris and decided to abandon the original plan of an identical medal for all the Allies, but to keep an identical ribbon, allowing each nation to design its own medal from general specifications drawn up by the commission.

The design accepted by the United States Government was made by J. El. Fraser and published for the first time in the Military Insignia Number of the *National Geographic Magazine*.

STEINWAY

The Instrument of the Immortals

There has been but one supreme piano in the history of music. In the days of Liszt and Wagner, of Rubinstein and Berlioz, the pre-eminence of the Steinway was as unquestioned as it is today. It stood then, as it stands now, the chosen instrument of the masters—the inevitable preference wherever great music is understood and esteemed.

Up the Line from Cantigny

The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

STANDING in the beautiful American cemetery at Suresnes, where the Stars and Stripes wave in the shadow of the Tricolor on Fort Mont du Valerien, and looking across the winding Seine and the tree tops of the Bois de Boulogne to the far panorama of Paris along the eastern sky, the majestic breadth of the scene is so impressive that sense of detail is lost in the vastness and sweep of it. So it is, but in immeasurably greater degree, when one contemplates the history of the world war as, emerging from the smoke and thunder of the actual conflict, it recedes slowly into the past. The sense of detail is baffled by its stupendous proportions, its infinite complexity. In a struggle in which virtually all the nations of the earth were in battle array, in which armies were almost as numerous as regiments had been in previous wars and in which a Gettysburg or a Waterloo might figure as little more than a skirmish, it is only by detaching a well-defined segment from the whole that any examination remotely approaching a detailed study can be made. The part played by the United States forms such a segment.

The United States participated in the war during the last eighteen of the fifty-two months of its continuance; United States troops were in the fighting line, aside from their presence in training sectors, during only the final six months of that time. Yet, altho her national resources were less strained and altho she placed in the field fewer men than any one of her three chief allies, America, in that brief period, marshalled in the olive-drab uniform of her armies nearly 3,700,000 men, of whom she actually threw into the arena of her last and greatest battle about 1,200,000 troops; an army in itself about four times as large as any that had existed in the authentic history of the world up to the beginning of the great war.

In undertaking a study of the operations of such vast forces in the comparatively limited space of a series of magazine

articles, it is apparent that, even tho it be strictly limited to their combat activities, little attention can be devoted to minor details on the one hand, or, on the other, to broad aspects of the war as it involved the efforts of our Allies. While endeavoring to avoid the impression of distortion liable to be created in dealing with only one portion of a subject, attention must nevertheless be focused upon the work of the American troops themselves, whether they were serving, as was often the case, under British or French higher command or were gathered together in armies wholly American in composition.

The combat operations of the American forces in Europe naturally divide themselves into several phases, some of them determined by the progressive development of the American army itself under the command of General Pershing, and some by the location of certain detached American divisions operating with the Allied armies. Practically all new divisions, after their arrival in Europe, underwent a final period of combat training in stabilized sectors somewhere along the Western front. These combat training periods, altho often intensely interesting in detail, presenting many stirring episodes of trench warfare and not a few such spirited engagements as the repulse by the 26th Division of the German attack on Seicheprey, in the St. Mihiel Salient, on April 20, 1918, did not, naturally, exercise a determinative influence upon the progress of the war and they will not be discussed in these articles. The phases of American battle operations proper were as follows:

1st.—The period, which may conveniently be considered in one article, during which, by their first large scale attack, at Cantigny, American troops proved to the world their aggressiveness and striking power and also during which several American divisions fighting defensively in the Marne salient gave equally decisive proof of their grim tenacity in defense by contributing in large

The American Troops Never Retreated

From the time the Yanks went into battle until the armistice was signed theirs was an unflinching, forward march to victory. That record makes an inspiring story—one that every American should know by heart.

We accordingly asked Captain Hanson months ago to write for The Independent readers a thoro-going, authoritative account of just what our troops did on the battle line in France. Written from full access to the official war records, after careful research, and with the background of his own experience overseas, the series of articles by Captain Hanson which begins in this issue of The Independent presents the first complete story in true perspective of just what the Yanks did over there.

Captain Hanson will tell the story in ten chapters, to be published monthly, each one in itself a complete narrative of one of the "American Battles"—Cantigny, the Marne defensive, the Aisne-Marne counter-offensive, the St. Mihiel operation, the Meuse-Argonne operation—Part I, the Meuse-Argonne operation—Part II, operations east of the Meuse, Blanc Mont, the Battle of the Hindenburg Line, operations in Belgium. The articles will be illustrated by official maps and photographs taken from the war records by the United States Signal Corps.

measure to the halting of the formidable German advance on Paris.

2nd.—The Aisne-Marne counter-offensive, in which four American divisions furnished the main driving power that broke down the German salient on the Marne and decisively turned the tide of the war and in which five other American divisions, after assisting to repulse the last great German attack, bore a conspicuous part in the pursuit of the enemy to the Vesle.

3rd.—The capture of St. Mihiel salient, in which the newly created First American Army achieved in its first operation one of the most startling and brilliant victories of the entire war.

4th.—The battle of the Meuse-Argonne, by far the greatest single battle in the history of America, in which the hinge of the German Western front was slowly crushed in and the surrender of Germany rendered inevitable.

6th.—The operations east of the Meuse, by which the fortress of Verdun was finally extricated from its close investment of four years and the enemy driven from his mighty defenses on the Heights of the Meuse.

7th.—The capture of Blanc Mont, in which the 2nd and 36th United States Divisions, acting with the French army of General Gouraud, captured one of the most formidable positions of the enemy on the Champagne front and hastened his retreat to the Aisne.

8th.—The battle of the Hindenburg Line, in which the 27th and 30th United States Divisions took a vital

share in the storming of that reputedly impregnable position north of St. Quentin by General Rawlinson's Fourth British Army and the subsequent pursuit of the enemy to the Sambre River.

9th.—Operations in Belgium, in which the 37th and 91st United States Divisions, fighting with the Sixth French Army of General de Boissoudy, cleared the watershed between the Lys and the Escaut rivers, captured Audenarde and forced the passage of the Escaut.

Taking up, now, the first phase of American operations as outlined above, it is only necessary for one to recall that dark and anxious spring of 1918 to remember that probably never during the three years and ten months in which the world had been at war had the situation of the allied powers of civilization been so obviously critical, if not desperate, as it was at the end of May, 1918. So long and desperate had the conflict already been that both the Central Powers and the Allies were, in a moral sense, nearly at the point of exhaustion. But, with the collapse of Russia, Germany had been enabled to marshal practically her entire combat army on the Western front where, rushing the fight with all the fury of her final concentration of strength, she had nearly overwhelmed first the British and then the French armies by her terrific drives into the Amiens, the Armentieres and the Marne salients.

To offset the disastrous fact of the loss of Russia the Allies had only a glittering hope—America. At the

Part of the operation map used in the engagement of the First Division at Cantigny on May 28, 1918. The oval shaped lines indicate the zones of operation of the various battalions. The irregular line running thru the map at the right is the front line trench with the successive support lines behind it. The sector had been attained by the Germans in their March offensive

end of May, 1918, America had been in the war for more than a year. But carried away, as America at her best can be, by the fervor of a splendid inspiration, she had begun by laying the foundations of her effort so broad and deep that she would be able eventually to beat Germany singlehanded if necessary, and on March 21, when the enemy broke thru on the Cambrai-St. Quentin front, of the vast host of American troops in training or ready for training at home, only about 300,000 had actually reached Europe. Electrified by the mighty German lunge and responding instantly to the urgent appeals of her allies for men, America then began pouring her troops overseas in such increasing volume that in nine weeks she had doubled her army in France, having 600,000 men there at the end of May.

But, altho in numbers this was a formidable mass of troops, one vital question concerning them still remained to be answered: how well could they fight? Four American divisions had already served with credit in quiet, stabilized sectors, but none had taken part in a great battle, either defensive or offensive. No American, knowing his countrymen, could doubt for an instant that when put to the supreme test they would acquit themselves as well as the best. But it was not surprising if the mass of Frenchmen and Englishmen, both in the armies and at home, unfamiliar with the past record of Americans as soldiers, but aware thru bitter experience of the terrible nature of present day warfare, should have hung upon the answer to that question with grave anxiety. It so happened that the answer, decisively favorable beyond the most sanguine hopes, was to be given during that gloomy period of

Captain Joseph Mills Hanson, commissioned in the Field Artillery of the United States Army, was in overseas service a year and a half, took part in three major engagements, and after the signing of the armistice was assigned to write for *The Stars and Stripes* the story of what part each American division had taken in the fighting. He has had unusual opportunities, in preparing these articles for *The Independent*, of making a thoro study of the official records at the War Department in Washington and at General Pershing's headquarters

late May and early June when morale, all thru the Allied armies and nations, was at its lowest ebb; when a final proof of American valor and determination could exercise its most heartening effect upon drooping spirits in France and England and bring the greatest dismay to that German overconfidence which, at the moment, was giving itself typical expression in the press of the Empire in a torrent of sneering arrogance.

The circumstances leading up to the dispatch of the First American Division to the Cantigny sector, north of Paris—the first active sector to be occupied by American troops—require a word of explanation. From the hour of his arrival in France until the hour in which the armistice was signed, the unswerving purpose of General Pershing, Commander-in-Chief of the American Expeditionary Forces, supported by the weight of competent American military opinion, was the formation of a unified American army; working always in the closest coöperation with the French and British armies but operating with its own bases, communications and supplies upon its own sector of the Western front. He was firmly convinced that only by

so operating could the maximum efficiency of American arms be developed and the maximum results of the American effort be obtained for the common cause. It was difficult for him to always adhere to this purpose because the British and French authorities, owing to the sad depletion of their own man power in the long struggle, were often importunate that he dissipate his troops in small units, even as replacements, among their diminished organizations. But he never lost sight of his aim and his wisdom in [Continued on page 490]

The Inside Facts

On Government Control of Railroads

A Message from the United States Government

By Walker D. Hines, Director General of Railroads

FEDERAL control of railroads was a temporary war measure, adopted on short notice, carried forward under extraordinary difficulties, and terminated as soon as Congress could adopt legislation. It would be greatly in the interest of clear thinking on the part of the public to view the work of the Railroad Administration on its own merits, but it is undoubtedly difficult to avoid being misled by outside or incomplete factors which largely occupy the public thought.

A large class approaches the matter in a state of mind which insists that the Railroad Administration must have been a political machine (altho it was wholly free from politics), must have been a Government bureaucracy made up of office-seekers without interest in the public service (altho its organization was made up almost entirely of expert railroad men and earnestly sought to render the best service possible under the difficult conditions), and must have been a failure because it was a form of Government ownership (altho it had, generally speaking, neither the characteristic advantages nor the characteristic disadvantages which would have come from Government ownership). A large class sees only increased costs, labor unrest, despite increase in wages, and inadequate facilities. In every other activity it sees the same things and correctly attributes them to the war. In the case of railroads, it attributes them to Federal control.

A large class sees a deficit in railroad operations. It does not inquire whether the deficit was due to the cost being larger than under private control or merely to the policy of refraining from sudden and premature rate increases. It regards a deficit, even tho the cost is

Paul Thompson

General Director Hines took over the management of the railroads for perhaps the most difficult period of their term under Government control, when the war stimulus was gone and the problems of reconstruction were crowding for solution. This photograph of Mr. Hines was taken on the platform of his private car during one of his tours of railroad inspection

reasonable and the reasons for avoiding a rate increase are good, as conclusive proof that the public has sustained a burden which would not have been sustained if the public had been made to pay the same burden thru increases in rates.

With such confused cross-currents of reasoning on the subject, it is difficult to obtain a correct estimate at the present time of the results of Federal control. Nevertheless those results are important and creditable.

The results of Federal control have been: It made practicable a war transportation service that could not have been otherwise obtained; its unification practices have increased the utilization of the inadequate supply of equipment so that an exceptionally large transportation service has been performed in the busy periods of 1919 with a minimum of congestion; it met the emergency of the unprecedented coal strike in a way which private control could not have done and absorbed a heavy financial loss on that account which would have proved highly disturbing to private control; it provided more additions and betterments and equipment than private control could have provided during the difficult financial period of 1918 and 1919; it dealt fairly with labor and gave it the

benefit of improved and stabilized working conditions which were clearly right; it not only did not cost more than private control would have cost during the same period, but cost considerably less on account of the economies growing out of unifications, and the total burden put upon the public (thru rates and taxes) on account of railroad costs was substantially less than would have been necessary if the railroads had remained in private control and rates had been raised

enough to preserve their credit; it protected the investment in railroad properties, whereas without Federal control those investments would have been endangered; and it turns the railroads back to private control functioning effectively, with a record of exceptional performance in an exceptionally difficult winter, despite the disruption caused by the coal strike, and in condition to function still more effectively with the normal improvement to be expected in the weather and in other conditions.

The passenger service during Federal control has exceeded all previous records. The service in 1917 was far ahead of any year up to that time, but each of the two succeeding years showed a far greater service. Stated in round figures, there were 39,000,000,000 passenger miles in 1917, 42,000,000,000 in 1918 and 46,000,000,000 in 1919. A substantial part of the movement in the last two years was the movement of the 4,000,000 troops to camps, between camps, to embarkation ports, and from the debarkation ports thru the

various processes of demobilization, home. But as the troop travel fell off the civilian travel increased in greater proportion.

Since there have been virtually no additions to passenger or sleeping car equipment in the last two years, the trains were inevitably crowded to a large extent. Altho the trains were heavier than before, on the average the percentage of trains on time and making up time was as good as in the past when travel was more normal, and on some important lines was better.

The freight service presented unusual fluctuations. The year 1918 represented the maximum freight service ever performed. The year 1919 was a combination of "feast and famine." On account of the readjustment, and to a large extent stoppage, of industrial activity after the armistice, there was an abnormal and highly costly slump in freight business in the first six months of 1919. This resulted in a very large demand for transportation being postponed and held in abeyance and this delayed demand mani- [Continued on page 495]

We Are Desperate!

A First-hand Story of the Present Situation in the Near East
By General Antranik
The Armenian Leader

IN the name of all those Armenians, whose story you can read in more than a million nameless graves and in the name of the million of living Armenians, I express my thanks to the Americans for their interest in my country. But I must also endeavor to make you see that while we sit here, hundreds of Christian women are in captivity under the very guns of the Allied fleet in the harbor of Constantinople; and every Armenian in the valleys and mountains of our country is in danger of death.

The plan of the Turks is the complete extermination of all Armenians. The world knows the unspeakable methods used. We know they have been buying ammunition in large quantities. We hear they are mobilizing. They plan to finish their horrible work in the spring. Only America can prevent their doing so.

You must understand that our nationhood is just as precious to us as yours to you. We are a very old people. We have given much to the cause of freedom, far more, in proportion to our numbers, than any other belligerent in the Great War.

We cast our lot with the Allies at the beginning. We remained faithful to the end. To illustrate, my detachment of volunteers fought with-

General Antranik is worshipped by his countrymen for his heroic fighting in their defense against the Turks. During the first two years of the war he organized seven Armenian battalions which formed the backbone of as many Russian divisions, each taking part in from thirty to forty battles against the Turks. After the Russian revolution these Armenian troops, left alone in Turkish Armenia, mobilized 25,000 soldiers from the refugees and for three months in continuous battle kept the Turks out of the Caucasus. Later in Persia these same ragged, starving soldiers under General Antranik fought another hard campaign against the Turks. Will America let them be annihilated now?

out interruption from the first days of the war. After the collapse of Russia and the Treaty of Brest-Litovsk, deceived and abandoned by the Georgians, betrayed by the Tartars, we defended the front alone for seven months, and retarded the Turkish advance, and rendered signal service to the British Army in Mesopotamia, as Lord Robert Cecil officially testified. We were fighting to protect our refugees long after the armistice was signed. Now, eighteen months after the armistice was signed, the Turks and others go on exterminating our people because they are Christians.

Our people, of whom a majority are peasants, are hard-working. It has always been so. They have always been thrifty and proud. They have always earned their own livelihood. They want to go back to their hearthstones. Scattered everywhere they await word. We expected in the settlement of the Armenian question that the Allies would not desert us. If all now desert us, I say again, after what we have done in the past, we shall take up arms once more and continue fighting for our liberty until the last Armenian is dead.

By raising her mighty hand, even semi-officially, America can save Armenia and the East. In the name of all the martyred

hosts of my countrymen, in the name of three million Armenians, I pray it can and will.

According to the Allies, we were to expect help from America in the reconstruction of Armenia. We expected that America would accept a mandate for Armenia. We put our great hope in America. We expected troops and officers and administrators to help us reorganize our country. The help and voice of America would help Armenia to stand on her feet. We would have a chance. We could reconstruct the country. We are accustomed to doing things. Our people are accustomed to responsibilities and influence. But how shall we begin when our country is as now, surrounded and invaded by enemies?

Again, we were led to expect a mandate for Armenia, but it is eighteen months since the armistice was signed and the Turks are preparing, without interference, to destroy our people.

In a very short time the Bolsheviki will occupy Baku, the great petroleum and railroad center. The Georgian people, in the Old Russian border lands, are partly Bolsheviki; and their centers are in the hands of the German reds. The Georgians know the Russians are coming and want to seem in sympathy with them.

The Russians wish to believe in the integrity of America. I do not believe America would harm any small republic in the East.

The Russians, in the old days, built the railroad lines centering in Baku. They are opposed to the British in the East. If the British, whose soldiers, like the French, are very tired, interfere, they will bring a big force and smash them, and Persia and India will rise against the British.

You can see, if America comes forward, even semi-officially, and says that Armenia should be free, the Russians will not interfere, nor will the British or French or Italians. In that case the Turks will not offer opposition and no fighting will happen.

There is no other salvation for our people in the East. The Turks are so situated it is impossible for us to have any peace, for five-sixths of Armenia is in Turkey. The Turks are encouraged by the delay in America. The delay also endangers the strength of the British in the East, and the settlement of all questions there. If America were playing a part in the League, she would be in better position to help in such matters.

If America cannot help us diplomatically, then, I beseech you, let us defend ourselves against the Turks and Kurds and Tartars, the enemies of Christianity. We fought during the war with antiquated Russian ammunition. We fought well. If we had ammunition and supplies we could raise 100,000 men, 50,000 in Turkish Armenia, 50,000 Russian Armenians. The first month, I could mobilize 20,000 Turkish Armenians. In three months, 40,000 or even 60,000 would be ready and most of them would be expert soldiers. Here in America there are 10,000 to 15,000 young Armenians ready to go to the defense of their country. But before we can do this, we need some officers to help train our men, and supplies. Everything all over the world is in the hands of the Americans. The little we need to take a stand for our country and our flag would make no difference.

When I speak of officers, I mean soldiers; also, I mean administrators to help our own administrators. We have many Armenians who are expert administrators, but, in the situation, we need some to help them, for a time.

The English-speaking people in the country are many. More than 50,000 speak English, and many speak Italian. We have writers, clerks, technical men, merchants, so on. But they need an outside force to help them organize themselves. During the first few years we must keep an army to protect our country, but its size can be decreased step by step. Even a few Americans would help greatly now. They might be brought back in a year and others might be sent. In five years, we would, I think, be ready to go ahead alone. Then Armenia would be free. It would mean little to America; it would mean as much to Armenians as the freedom of America means to you. And in the end America would be repaid, economically, even, many fold. We have many products, some industries you have not. We will have our country then. Armenians from all over the world will gather there again, and our sacrifices for the Allies would not have been without fruit.

This Spring we are without hope unless America intervenes. The Turks are preparing. We have news that they are already mobilizing. The Near East will be in a turmoil unless America raises her mighty voice before it is too late. My personal judgment is that America alone can prevent disaster.

So gruesome a picture as this would be taboo in *The Independent* if the seriousness of the situation in Armenia now did not demand forceful illustration. These victims of a Turkish massacre typify thousands of Christian Armenians slaughtered by the Turks since the signing of the armistice. General Antranik's article does not overstate Armenia's need for immediate aid from America

The Best Person in Our Town

These are the second and third prize articles in The Independent contest on "The Best Man or Woman in Your Town." The article that won the first prize was published in last week's issue; several other articles judged worthy of a prize will appear from week to week

Ask Mr. Fred!

"MOTHER! May I ride with Mr. Fred? He's at the corner."

"Yes, child," glancing at the dancing blue figure in the doorway. "Only be back in time for dinner."

Blue suit is off like a flash, and mother turns to her Saturday baking with an easy mind, knowing he is safe and happy for the rest of the morning.

Mr. Fred delivers groceries to a village of less than a thousand. But that bald statement gives no notion of his value to society. He used to drive a placid horse; but Mr. Fred was not the man to take chances with mothers' pets, of whom he carried loads daily. "I tie him every place I stop," he assured anxious parents. Now that the horse is replaced by an auto truck, new complications have arisen. I grieved to hear that Mr. Fred had been obliged to stop taking the children because they meddled with the levers and distracted his mind. But when I questioned him he replied, unruffled:

"There was one boy meddled with the starter, and I knew he might get hurt, so I told him he'd have to get out this time. I didn't jaw him, I just told him. And next time he was all right." Mr. Fred has added child training to his other manifold duties!

Old ladies who want to spend the day with friends at the other end of the village watch for our accommodating grocer's man, who sets them into his auto, chair and all, and takes them to their desired haven. Clad in his blue apron, hatless, coatless, too, till late in the fall, hailed by all who have garden sass to sell, or lawn mowers to mend, or errands to be done or questions asked, he goes his blessed way. It is he who breaks the news of birth or death from door to door, and many a neighborhood happen-

ing is spread abroad by his kindly lips that were never heard to speak ill of man, woman or child.

If you need a nurse or a hired girl or a washwoman or a seamstress or a man to clean the cistern, you tell Mr. Fred and he finds one for you. If you have forgotten how to measure a cord of wood, you ask Mr. Fred. He brings your express parcels, he totes your washing, he amuses your children by the hour. The sure cure for all perplexities is "Ask Mr. Fred." I have been guilty of hastily telephoning an order to his store just for the comfort of having him drive up and inspect my chimney when it had caught fire, and tell me it was all right.

Mr. Fred has two favorite recreations. They are putting out fires and climbing great heights. He has a genius for arriving at the point of danger in the nick of time. One morning, entering Professor A's kitchen, he found the walls in flames [Continued on page 485]

Mrs. Oliver Made Good

Mrs. Oliver evidently finds time in her busy career to help hunt gophers, one of the pests of North Dakota

WHEN America shook itself and uttered a deep roar nearly three years ago, signifying to the wide world that the slumbering giant had been goaded a bit too far, the vibration was felt in every remote part of the big fellow's system. To shift the figure of speech, the bugle call was heard in the quiet hamlets of the vast interior, where the war was only a vague dream. Such a little town was Hansboro, North Dakota, way up near the Canadian boundary, with a weekly newspaper edited by F. J. Oliver, Chief Quartermaster Fleet Naval Reserve, and his wife, Edith.

Oliver was promptly called to active duty.

Mrs. Oliver thereupon assumed entire charge of the paper, which means in plain United States that she not only edited it, but set type, mailed copies, ran presses, and rustled for news and advertising. Anyone who has had experience in running a newspaper knows what is expected of the "editor." Mrs. Oliver performed all these tasks practically unaided, from the time war was declared. Her severest test came late in August, 1918. She issued the paper alone one Friday, distributed the type and collected all day Saturday, and at 4 a. m. Sunday morning baby Frances Mae was born. That week Mrs. Oliver edited the paper in bed, and the next following issue was partly set by her. She has the record of editing every issue since she took over the job and missing setting but one edition, finding time meanwhile to keep a home and be a mother to a very healthy little girl.

The Hansboro News, by the way, is a very creditable little newspaper, well filled with both local and world news, and boasting of the title "the county official paper." Thru the columns of [Continued on page 485]

Mr. Fred delivers groceries. But that bald statement gives no notion of his value to society. To the youngsters of the town, and to their mothers, he's the "deus ex machina"

Shall the Great War Fail?

By Thomas Steele

PERHAPS there never was a European conflict, even including the Great War itself, in which the interests of the American people were more involved than the present civil war in Germany. If the Prussian militarists or Communists should succeed in overthrowing constitutional government in Germany the liberties of the whole world would be once more at risk. The peace would become an armistice, the League of Nations a defensive alliance, the Treaty a scrap of paper, and a policy of intensive "preparedness" a necessity for every free nation on the earth.

The peril would be none the less real for not being immediate or obvious. While a large French army is stationed on the Rhine ready to seize Essen at the word of command no German Government will commit such folly as an open defiance of the Allies. Nor is it probable that an attempt will be made to restore the discredited Kaiser whose personal safety appears to depend on staying on neutral soil. A new Government may even remain republican in form for some time to come, as did the rule of the first and the third Napoleon in France. But one has only to know the men at the head of the counter-revolution to be aware that the wild beast of Prussian militarism which took five years and seven million lives to cage has once more broken loose in central Europe.

The greatest sin of the Peace Conference is one that critics, even of the liberal school, have strangely overlooked. To be sure it was only a sin of omission, but nations have incurred damnation for what they have failed to do as surely as for what they have done amiss. In all the eighty thousand words of the Treaty with Germany there is not one which guarantees the maintenance of democratic and liberal government in Germany or offers it the slightest encouragement. Presumably the former Kaiser cannot be restored, since the Treaty embodies an indictment against him, but there is nothing to prevent the restoration of the Hohenzollern dynasty under some other Prince. There is nothing to prevent the restoration of monarchical rule in every one of the German States or even the establishment of absolute military dictatorships and the extinction of every constitutional liberty. By the terms of the Treaty which they have signed and ratified the Allies are debarred from lifting a finger against the new outburst of Prussian militarism unless it overflows the boundaries of Germany.

Had they been dealing with a nation which cherished freedom the Allies might have been justified in leaving German constitutions to German wills. But until the revolution of 1918 Germany had never breathed a single breath of free air. Economically on a level with England or the United States, Germany was politically on a level with Mexico or Venezuela. A military dictatorship, which has never been thinkable in this country and which even volatile France has never tolerated since 1870, was only too evident a danger in the inexperienced German Republic. New born constitutions are fragile and their mortality is great. After long centuries of dynasticism the German mind was but partly awakened to the possibilities of democracy. The army still regarded itself as the master rather than the servant of the people.

The internal condition of Germany is of vital concern to all who would make the world safe for democracy. Reaction in Germany will bring reaction in all the neighboring republics as surely as one rotten apple in the middle of a barrel spoils the rest. Already Hungary, moved by the same spirit as that which strives for mastery in Germany, is thinking of crowning a Habsburg ruler of the

once republican Magyars. German Austria cannot escape the reverberations of a counter-revolution among the other German States. Poland, with its aristocratic traditions, might be induced to "dignify" and "stabilize" its government with a crown. When Russia ceases to be Bolshevik it will be much more apt to become Czarist if its most powerful neighbor once more submits to the yoke of the Junkers. The little republics of Finland and the Baltic, vacillating between German, Russian and Swedish influences, will be continually tempted to become monarchies like the neighboring Powers. Even democratic Czechoslovakia has recently been discussing the establishment of a life Presidency, which is but one step from hereditary rule.

If the Kings came back alone the harm might not be so great. But with them, or even in advance of them, will come militarism, aristocratic privilege, caste and court tradition, the restoration of the landed estate, and the whole bureaucratic machinery of the old régime. In 1848 half of Europe was swept bare of every vestige of rank and title, but within two years nothing remained of the great revolution save a few half-hearted constitutional reforms. Restoration never quite restores, but revolution may lose nine-tenths of what it has momentarily won. 1918 was 1848 repeated; will 1920 be 1850?

Within a few days the German counter-revolution has been trampled under foot by the men whom the German people freely chose to represent them and we hope that so severe a lesson will be given to the usurpers that never again will any German faction dare to appeal from the ballot box to the sword. But should this not be the case the Allies, who cannot interfere directly, should hold the new Government to strict accountability for the fulfillment of every letter of the Treaty. Indulgence to German dignity and to the economic needs of the country has rightly been advocated of late in Washington and London, but such indulgence is only the due of a democratic and liberal Government which by its very existence helps to strengthen the new won liberties of the other democracies of central and eastern Europe. To the Prussian Junkers we owe no mercy. Rigid justice is good enough for them. If this policy is announced and enforced the German people will find that the choice between domestic liberty and slavery is also the choice between a friendly and a hostile world. Let the United States be the first to give a word of encouragement to the struggling German people and a word of warning to their old oppressors who seek once more to ride and ruin Europe.

To a Live Nation

The embalmed heart of Kosciuszko, which has been enshrined in a bronze urn in the chapel of the Chateau Rapperswil near Zurich, is now to be brought back to Poland in state. When will people become Christian enough to distinguish the soul from the body? Or when will they become scientific enough to know that the cardiac muscle of a dead patriot is of no value to a live nation?

The Supreme Menace

By Franklin H. Giddings

THERE is apprehension in the hearts of men. A sense of undefined danger pervades civilization. Where the peril is or what it is, the bearers of rumor do not agree. One tells us that militarism was only defeated, not vanquished, in the European war, that it bides its time, and

Red Dawn in the Land of the Rising Sun?

One of the most important events in Japan during the last half century is the recent movement for universal suffrage. This parade in Tokio was the expression of a nationwide agitation combining the labor forces, the so-called "intellectuals," and the Reds

The originator of the universal suffrage movement in Japan, Mr. Yoshiyuki Imai—"John the Baptist" is the popular name he goes by among his followers. Mr. Imai was formerly a professor in the Imperial University, and an author. He is considered the brains of the campaign for democratic suffrage in Japan now

The Gompers of Japan is Mr. Bunji Suzuki, president of Seiyu Kai, the Japanese Labor Party, which has a membership of half a million. Mr. Suzuki, who is a radical, represented Japanese labor at the peace conference

"Free speech" is the slogan of this banner in the foreground of a mass meeting demanding universal suffrage in Japan. Under the present laws there are such property and educational qualifications that only about ten per cent of the men vote. The recent agitation asks that both property and educational qualifications be abolished and that women vote as well as men. In the center of this circle is the most significant banner, the insignia of the Workingmen's Council

The photograph at the right is significant, said a Japanese commentator, in showing the impression that the suffrage agitation has made. The authorities did not think it wise to suppress the demonstration, but the police guard is far out of proportion to the requirements of an ordinary meeting

Red was the predominant color in the Japanese suffrage demonstrations. Besides the official banners there were many impromptu displays such as this red mat mounted on a bamboo pole carried by a sudden convert

will come back. Another tells us that the old social order has broken down, that Bolshevistic revolution is only the beginning of disintegration, and that chaos and famine impend. Commingled with these forecasts of evil we detect notes of worse despair. The human mind itself, they seem to say, has lost poise and integrity. The clearness of vision and the firmness of grasp which in the nineteenth century read the riddles of nature and directed her energies upon the attainment of human ends have failed, and once more educated men are drifting back to the creeds and the superstitions of savagery, babbling of the occult, and gibbering of ghosts. Yet no one is sure that these voices are real, or that the warnings which they seem to speak have cause. The fear of the world is like the shuddering of nature before the typhoon, the approach of which is felt but not otherwise known.

The barometer, it is true, foretells the tempest, but few there be that read it.

Strangest thing of all is the cause of the dread. It is in the will of the people that fear. It is not a Freudian complex. Rather it is a failure of resolution, a hesitation and faltering, a paralysis, akin to prostration. Men are not facing the facts of life. They are not doing the things that are "up to them" to do. They are not conscious of dereliction, but derelict they are and failure fills them with uneasiness.

The facts that they should face and meet are these:

More than half of the population of the world is still barbaric in feeling and in purpose. It has not become humane or peace loving. It loves pomp and rude splendors. It is cruel and ruthless. It reacts in wild tumult to the excitements of war. It passionately loves power, and dreams of domination.

Centuries must pass, milleniums perhaps, before the process of education and moral evolution can so far do their work as to fit this part of the world's inhabitants to be counted on to keep the peace from inward impulse, and, from motives of conscience and reason, to strive for the higher achievements of civilization.

Into the hands of barbarians science has placed weapons of terrible effectiveness: arts of military organization and maneuver, explosives of terrific force, deadly gases, aeroplanes and submarines. Barbarism is equipped, or soon will be equipped, to try out its plan to conquer and to dominate.

The barbarism here meant is not exclusively identified with entire nations and peoples. It is a sinister element in every nation. It is a part of every people. The barbaric nations as such hope to fly their flags thruout the earth. The barbaric classes hope by revolution to set up their dictatorship thruout western civilization.

A powerful barbarism is an appalling menace; but it is not the supreme menace that threatens civilization at this hour. The supreme menace is the indifferentism, the negligence, and the procrastination, the paralysis of will that seems to be affecting the civilized minority of the world's population.

This minority should at this moment be facing and mastering the facts. It should be developing and marshaling resources. It should be preparing all citizens for intelligent action in peace or in war, as fate may decree. And it should be perfecting an organization thru which the total power, military and industrial, legal and educational, intellectual and moral, that civilization can command, could be brought to bear at a moment's notice to meet barbarian attack.

A carefully constituted League of Nations would be the beginning of such organization and of such preparedness. It might save mankind from another thousand years of darkness. Does civilization intend to make the beginning? Can it arouse itself from lethargy? Does America intend to do its part? Can America awake?

?

Lots of people who believe in Hoover are puzzled to know what Hoover believes in.

An American City-State

By William Brand

THE American State is not as efficient a unit of local public spirit as it should be. Carved out, somewhat arbitrarily, along lines of latitude and longitude, the states but rarely correspond to natural units of settlement. This does not matter very much where the population is agricultural. North Dakota may not be very appreciably different from South Dakota, but it is not divided against itself, it is a typical and uniform slice from the great wheat belt of the upper Mississippi. But the development of great industrial and commercial centers in states still mainly agricultural creates internal frictions of serious import. The great cities, half conscious of their needs, demand municipal "Home Rule," concentrate their attention on municipal politics, and grow indifferent to the general affairs of the state which touch them so remotely. Perhaps this is one reason why the legislatures of such states as New York, Illinois and Pennsylvania reach so low a level of civic patriotism.

The case of New York is the most striking. "Up-state" and "the city" are about equal in population and in every way are contrasted. The common language of politics recognizes this sharp difference, as when a Republican candidate comes "down to the Bronx" with a majority sufficient to overcome the city vote, which is cast against him as a matter of course. Urban New York is a cosmopolitan center with a population largely Irish, Jewish and Italian. It is wholly devoted to commerce and industry. It is Democratic in politics, with a strong Socialist minority. It is, like other great cities, very lax in its ideas on the liquor question, Sunday amusements and the like. It has an oceanic climate. It regards the State Government at Albany as an incubus rather than as an aid and its voters are incomparably more interested in the election of a mayor than in the election of a Governor and legislature.

Rural New York is exactly the opposite. It is mainly agricultural, for the industries of the up-state cities do not eclipse in importance the dairies and orchards which surround them. Its population is mainly of old Dutch or Yankee stock. It is Republican in politics and has a panic fear of the very word "Socialism." It is strict and Puritanic on the liquor question and Sunday amusements. It has an inland climate, very cold in winter; more like that of New England than that of New York City. It is greatly interested in state politics and the state government is able to do a good deal for its welfare.

The logical solution would not stop at municipal Home Rule, but would make the greater city a separate State. Two governments, national and municipal, are adequate to all the needs of New York City and the elimination of an intermediate set of state officials would simplify administration. New York City would be free from the rule of the "Albany ring" and rural New York from the menace of Tammany Hall; each would suffer only from the evils for which it was directly responsible.

There are ample precedents for the city-state. One of the best features of the German constitution was the independence of the Hansa Towns of Hamburg, Bremen and Lübeck, self-governing in all things save for the concerns of the whole Empire. If we disdain to borrow a good idea from our enemies, we may copy the Swiss cantons, some of which are rural districts and others strictly urban. The very large city has problems which are of a totally different order from those of the country or the middle-sized town, and the conditions of urban life develop a dis-

tinctive attitude on the part of city dwellers toward those problems.

How many American cities should be made into independent states is perhaps a question. New York is a clear case, tho at just what point the city limits should cease may rightfully be debated in Yonkers and rural Long Island. Chicago and Philadelphia have certainly sufficient population to be ranked among the greater states. The test in every case should be the wishes of the local population, for it would not be right to put asunder urban and rural communities which a common state patriotism may join together. But there should be no objection to a constitutional amendment permitting any community of at least a million population to constitute itself by plebiscite a sovereign commonwealth within the Union.

The Newly Poor

Reduced to its lowest terms the industrial problem resolves itself into these three factors: the proletariat and the profiteeriat are trying to expropriate each other, and the salariat is getting squeezed out in between.

Which Is the Working Class?

By Preston Slosson

NOW that the eight-hour day in industry has been written into the statute books of many states and nations and even into the Treaty of Peace with Germany, the radical wing of labor unionism is demanding the six-hour day as the next logical advance; reformers being always fond of even numbers, there has not been much talk of compromise on the basis of seven hours! British and American coal miners, always in the forefront of an industrial movement, are urging the combination of the six-hour day and the five-day week; giving thirty hours of work to 138 leisure every week.

Be it well understood that nobody begrudges the miner, steel worker or engineer as much leisure as the advance of the sciences of industrial production will permit, nor is it the present purpose to guess where that limit lies. It is intended only to point out that there are neglected classes of the community, a submerged "seven-tenths" as it were, who have not shared the shortening of the industrial week. If radical labor proposes to create a new leisured class it is one thing; if it intends to give leisure to all classes the task is an ambitious one indeed.

We do not have exact statistics for the working week of any but workers in the mines, workshops and factories. If such statistics existed, we venture to say, the difficulty of a universal thirty-hour week would appear more evident than when we think only in terms of trades-unionized labor. Let us glance for a moment at a few random samples from the unorganized branches of the American "working class":

1. *The Farmer.* Agricultural labor still occupies more than a third of the population listed in the census as "gainfully employed" and thus the farmer's working week is the most important of all from the viewpoint of the greatest good to the greatest number. Whether employing hired labor or not the average farmer is a hard worker and he usually manages to keep his employees and the other members of his family busy too. On dairy farms the working day begins before daylight and closes after sunset the year around and there is no real vacation. The farmer's labor varies greatly with the season; on some farms, especially those with but little livestock, the winter's work may be limited to a few routine chores, but the harvest season often brings with it a fifteen or sixteen hour day for weeks together. We cannot place the average working week of the American farmer at less than sixty hours, or twice the week now demanded by radical union labor.

2. *The Housewife.* The majority of married American

women do most of their own housework without assistance. Because the census foolishly labels the work of the wife and mother as "no occupation," we tend to overlook this large and important class of labor. The saying is that "Man works from morn to set of sun, But Woman's work is never done," and there have been many American mothers who have kept as close to the twenty-four hour day as nature will permit. But the invention of improved methods of housekeeping has won some leisure for women, especially in the cities, and there are usually two or three hours free in the afternoon for visiting and two or three evenings a week which may be devoted to the theater or to parties. Perhaps seventy hours a week in rural districts and fifty in towns will hit the American average, altho a wider variation exists in this class than any other.

3. *The Clerk.* Bookkeepers, store clerks, cashiers, stenographers, shipping clerks and minor public officials average close to the standard forty-four hour week, at least in large business houses or in public employ. In country stores they work longer hours, but perhaps less intensively. The chief grievance of this class from the standpoint of hours is that whenever business is too active, or the personnel insufficient, there must be overtime work to bring "the books" up to date; and this overtime is usually unpaid.

4. *The Shopkeeper.* In the United States the small shop in town or country opens at eight or nine in the morning and keeps open continuously (save on Sundays and perhaps Saturday afternoons) till eight or nine in the evening. It is not so in France, where fashionable Paris shops are open from nine to twelve and from two to five; thus realizing the six-hour day. Are we willing to adopt this Paris custom?

5. *The Business Man.* Barring housewives, Presidents and farmers in haytime, no American works either so intensely or for such unreasonable hours as the business executive. Very few successful enterprizers average less than fifty hours a week, and many, and those the wealthiest, work every waking hour and dream business at night. It is probable that the "dollar-a-year-men" at Washington during the war averaged a ninety-hour week, and that even in private life they exceeded seventy hours. That is why so many die of heart-failure ten years before they ought to!

6. *The Teacher.* We hear a great deal about "academic leisure" and common opinion reckons the short day of the teacher as some compensation for his or her short wages. It is true that vacations are long, unless the teacher fills them with other work, such as tutoring, writing books or professional study. But the working week during the academic year is always from two to three times the number of hours actually spent in classroom, because lessons must be prepared and thought out in advance, examination papers must be corrected, and innumerable reports must be made.

7. *The College Student.* He is commonly believed to be the most leisured of human beings, and sometimes he is. But in any case he spends from fifteen to twenty-five hours a week in classroom or laboratory, and if he expects to win good grades he must spend at least an equal length of time in preparation. About half of the college students of the country, it is probable, are partly or wholly self-supporting, and must add five or ten hours a week of gainful labor to their academic program. It seems fair to say the college student's working week varies from a minimum of thirty to a maximum of more than sixty hours; counting all "extra-curricular" campus activities as leisure.

8. *The Soldier.* Here is another case of the variable work. In a sense always on duty, the soldier may, in peace time or in a "rest" camp behind the lines in war, be limited to six or seven hours of duty, not including his nights of sentry work. But at the front work is continuous to the point of physical exhaustion; nor is fighting always the easiest kind of work. They say it annoyed soldiers after being un-

der fire for thirty-six hours to hear of strikes at home which hindered their food and ammunition from reaching them.

The Socialists, of course, will abolish the soldier and the business enterprizer, and perhaps he will find some way of reducing the hours of the teacher and the clerk. But we do not envy him the attempt to apply the thirty-hour week to every farm and every home. Yet until he does so, he should not speak of those who work the shortest hours as the only true "working class." There are many classes in the United States, if we choose so to designate each economic group, but a "working" class does not exist. There is only a working nation!

Another Boost for California

The English, in their endeavor to free their country from all dependence upon America, have started in to make All-British motion picture films—and have sent a company to Los Angeles to take them! The non-actinic atmosphere of the British Isles is no substitute for California sunshine.

Literature Versus the Law

By Allen Campbell

FROM the days of Robin Hood and the Grettir Saga to the latest film melodrama the outlaw has been the pet of the authors' guild. The bold buccaneer, the romantic road agent, the gentleman cracksmen, and the innocent suspect "hounded by the minions of the law" have in turn furnished hero timber to dramatist and novelist. It is true that, for once in a way, Conan Doyle made the detective Holmes as fine a figure in the eyes of youth as Dick Turpin, Raffles or Jesse James. But nine times out of ten the man "within the law" is represented as outside the pale of literary tolerance. The judge is frequently the oppressor; the detective, the sheriff and the scheming prosecuting attorney are sinister figures, and the policeman, alas, is comic relief.

In part this is due to the sound, old romantic tradition of piling up the odds against the hero. Obviously the criminal faces a formidable foe when he challenges the whole of organized society, and society is always unable to get as enthusiastic about itself and its defenders as it can over its daring challengers. The "enemy of the people" is the darling of the reading public, as Ibsen and Shaw discovered to their no little profit. But intermixed with this wholesome glorification of the Ishmaels of the world there is frequently a definitely propagandist tendency to dis-

credit the bench and bar and the whole machinery of law enforcement.

As a rule this propaganda is ruined by overstatement. That innocent men are sometimes convicted is not an argument against imprisoning the guilty but only for greater care in ascertaining who the guilty are. That judges are sometimes corrupt and prison wardens sometimes brutal proves nothing but that any system works badly when bad men are in power. It needs no witness from heaven to tell us that. Far more subtle and effective is the indictment when handled by a literary genius like Victor Hugo, Brioux or Galsworthy, to show the inhumanity of the legal system even under normal circumstances when the convict is not exceptionally virtuous and the men of law are not incredibly malevolent. The novels of Charles Reade and of Upton Sinclair, powerful as they are, leave the reader with the feeling "well, after all, things are seldom as bad as that." But Brioux's "Red Robe," recently given in New York as "The Letter of the Law," leaves the chill conviction that "things are as a rule like that." A man, probably but not certainly innocent, is acquitted after a trial in which the judge and prosecutor, bent on making a reputation, use every fair or unfair legal method to make certain a conviction. Such an incident might well occur in America as well as France and such moral overstrain on the prosecution may easily result in convictions secured by skill of presentation rather than by weight of the evidence.

In such studies of the inherent weakness of law literature fulfils one of its highest functions, as a court of appeal from human justice to poetic justice. But poetic justice is as liable to abuse as legal. Some radical sociologists have been tempted to make out a general case against the existence of any criminal law at all, which is certainly not supported by the literary evidence in the case. If the prison sentence of Jean Valjean had been proportioned to his actual offense and if the police had not continued to hold him as a suspect after he had once paid his debt to society, Hugo's indictment of Javert's ideal of rigid justice would lose much of its force. If solitary confinement had been abolished in English prisons we wonder if the weak and rather rascally convict hero of Galsworthy's "Justice" would command so much of our sympathy. If the French system of examination of the prisoner were altered far less wrong could have been done under cover of the "Red Robe." In short, the dramatists and novelists have more successfully waged war against the alterable incidents and details of criminal justice than against the principle itself. Even the law is entitled to its day in court.

Death A-Walkin'

By Will W. McCrae

Death came a-walkin' down de road—

Death did.

Death came a-walkin' down de road

Lifted from me my heavy load—

Death did.

Death foun' me at de ole washtub

Singin' 'bout Jesus an' his lub—

Death did.

Now Sistahs, dis am what He say;

"You'se been 'mancipated. Pray."

Death did.

*He took my han' an' led me out,
Den all de angels 'gan to shout;
An' as we rose troo heaben's blue*

He sent dis message back to you—

Dat if'n you work an' trust an' pray,

You'se gwine to shake dat tub some day—

Death did.

So staht like me de upward road

A-prayin' Him for to lif'n de load;

An' as you rise troo earf's black clouds

You'll fin' 'em full of cast-off shrouds.

But soon de dahkness you'll be troo

An' fin' all things am changed to new.

Den all earf's troubles—work an' things—

Will be forgotten, as on wings

You fly o'er heaben wif de blest

An' rest—an' rest—an' rest!

The Story of the Week

The German Counter-Revolution

THE democratic Government in Germany was temporarily ousted from Berlin by the most reactionary political group in the country. President Ebert and Premier Bauer were replaced, at least in those parts of the nation which went over to the new Government, by Dictator Wolfgang von Kapp and Chancellor Karl von Helfferich. On March 13, a military *coup d'état* of General von Lüttwitz at Berlin, followed by similar seizures of power in other important cities and by the arrest of several ministers of the constitutional Government, put the republic at the mercy of the militarists.

The causes of the counter-revolution are confused and complex. There had been, first of all, a stir of anti-foreign sentiment shown by frequent insults to members of Entente military missions in Germany. The Pan-Germans exploited this growing spirit of chauvinism by hints that a really "strong" Government would compel a revision of the terms of peace and would not permit such humiliations as the trial of German officers accused of violating the laws of war. In the second place, there was a sharp conflict of opinion between the Socialists and the other parties on the issue of confiscating the Hohenzollern property in Germany; the conservative and even the middle-class parties insisting that these enormous revenues were private property and must be left intact in spite of the overthrow of the dynasty.

A more important factor in the situation was the attempt of the conservative parties to make the German

Keystone View

THE MILITARY LEADER OF THE
COUP D'ETAT

The Ebert Government was expelled from Berlin by a revolt of the troops headed by Major General Baron von Lüttwitz, who became commander in chief of the Kapp Government. He was Military Governor of Belgium in the early days of the war, and in the last German advance, just two years ago, he commanded the corps that inflicted a fatal blow on the Fifth British Army under General Gough north of St. Quentin. He married in 1892 an American girl, Mary Cary of Chicago

President a powerful ruler elected directly by the people, whereas the Socialists preferred that he should be chosen, after the French style, by the National Assembly. The conservatives hoped that if the President were chosen by popular election General von Hindenburg would win by appealing to the public as a military hero and symbolic national leader, after the precedent of Napoleon Bonaparte, Louis Napoleon and General Boulanger. Many conservatives would doubtless be content with the strong government of a military dictator for a sufficient period of years to root out the tendencies toward Socialism arising in a period of poverty and defeat. Others of Hindenburg's supporters, however, considered him only a means to an end, the real object being the restoration of the Hohenzollern dynasty. They regarded him as a useful stop-gap until the time was ripe to restore the monarchy, as the French royalists considered Marshal MacMahon in the early days of the Third Republic, and as the Hungarian royalists have regarded Admiral Horthy.

But the German reactionaries were not sufficiently patient to await the elections scheduled for next autumn. They feared that the Socialists might succeed in their policy of subordinating the President to the National Assembly. They feared also that their conspiracy to turn the republic into a dictatorship, and, if possible, into a monarchy, might be discovered. On March 12 it was reported that War Minister Noske had ordered the arrest of Dr. Wolfgang Kapp and Captain Pabst on the charge of attempted counter-revolution. General von Lüttwitz and other military leaders were mentioned in the Socialist press as implicated in the movement. Noske struck at the right men, but he struck too late. The conspirators were already prepared and the next day witnessed the revolution.

The Insurgent Leaders

DICTATOR Wolfgang von Kapp was born in New York City, the son of Friedrich Kapp, a German liberal who emigrated to the United States after the unsuccessful revolution of 1848. As a boy young Wolfgang was even more Americanized than his father and annoyed him by refusing to speak any language but English. During the war he became noted as one of the leaders of the militarist faction in the Reichstag. He joined with Admiral von Tirpitz in the demand for unrestricted submarine warfare and also in organizing the so-called "Fatherland Party," the most chauvinistic of political groups.

Chancellor Karl von Helfferich, Finance Minister under the monarchist régime, recently acquired fresh distinction by entering into a lawsuit against his republican successor in office, the Catholic leader Erzberger, whom he accused of deceit and political corruption. Helfferich was fined 300 marks for falsely charging Erzberger with the intention of handing him over to the Entente Powers, but Judge Baumbach ruled that his other charges against Erzberger were valid. This decision placed a weapon in the hands of the militarists, who were able to cite the Erzberger case as evidence of the dishonesty of the republican politicians whom they intended to sweep out of power.

Other leaders of the new revolution are also, practically without exception, men who had held power in the days of the monarchy. General von Lüttwitz, the Commander in Chief, was at one time Military Governor of Belgium. Foreign Minister von Jagow held his present office during the

early days of the Great War. In spite of their sinister antecedents, the leaders of the counter-revolution have disclaimed any intention of endangering the peace of Europe or restoring the Hohenzollerns. In a proclamation issued by Dictator Kapp foreign nations were assured that the new Government will carry out the Peace Treaty "as nearly as the execution of the treaty is possible and does not mean self-destruction."

Rallying Round the Republic

IN spite of the careful planning and energetic action of the conspirators the German Government seem to have succeeded in the attempt to save the liberties of the nation. They replied to the proclamation of Dictator Kapp with a counter-appeal to the workers to join in a general strike. In Berlin and other cities the labor unions responded and the usurping Government was seriously embarrassed by the paralysis of industry in the very centers of its power. Unable to carry on the Government, von Kapp and his colleagues resigned.

Other parts of Germany, especially in the more democratic west and south, refused to join the counter-revolution. Officials of the constitutional Government who had escaped arrest established a temporary capital in Stuttgart and were soon in touch with all parts of the country. In a few towns the reaction against the counter-revolution was so strong that attempts were made to establish Soviet rule. Spartacism, crushed a year ago, is now once more a factor in German politics. In general the Socialist party, the liberal republicans, organized labor and non-Prussian Germany refused to recognize the new Government, which drew its strength from the army and from the conservative and royalist parties of the old Kingdom of Prussia.

The counter-revolution received even less encouragement abroad than in Germany. No nation recognized the Kapp Government. The Supreme Council did not intervene directly, but notified the Netherlands Government that the Allies expected a close watch kept on the Kaiser to prevent any restoration of the Hohenzollern dynasty. The French were especially alarmed at the new menace, and the imperialistic portion of the press took advantage of the occasion to preach the necessity of detaching the Rhineland from the rest of Germany.

Serious conflicts took place between the forces of the two governments in Dresden, Hamburg, Leipsic and many other cities. A German cruiser is reported to have bombarded the workingmen's quarter at Kiel, killing hundreds of persons. Altho the counter-revolution was largely in the interest of Hindenburg it does not appear that the Field-Marshal committed himself to the Kapp Government.

Flensburg Stays German

A first canvass of the vote in the second plebiscite zone in Schleswig shows 48,148 Germans to 13,025 Danes. The election was held on Sunday, March 14, nearly five weeks after the first Schleswig zone had voted to rejoin Denmark.

The result of the vote is not altogether surprising,

THE SCHLESWIG PLEBISCITE
The shaded area north of the first black line is now Danish. The second zone shown on the map has voted to remain German

since the Danes were doubtful of success in the second zone and refused to contest any part of Schleswig south of this zone, altho the Paris Peace Conference had offered to constitute a third plebiscite zone. The vote vindicates the judgment of the Danes, since southern Schleswig is even more strongly German than central Schleswig, and a vote in the south would have been but a useless formality.

The German strength was concentrated in the city of Flensburg, the largest city in central Schleswig, which voted for Germany by a majority of 7495 to 1358. In the more rural sections the Danes were stronger and some rural communes along the northern border of the second zone may be added to Denmark as a result of the election. The new frontier will be delimited by an International Commission acting under the authority of the Supreme Council at Paris. The commission will assign northern Schleswig definitely to Denmark

and draw a line thru central Schleswig corresponding as closely as is practicable to the preferences of the different communes of this region as revealed by the plebiscite. Flensburg will almost certainly be assigned to Germany.

The Danes accept the result of the election, but they have many complaints to make of the manner in which the Germans conducted themselves while the voting was going on. A police officer is said to have been drowned by a German mob at Horsboel and the office of a Flensburg newspaper, friendly to Denmark, was wrecked by political enemies. Allowance must be made, however, for the fact that

PRESIDENT AND MRS. EBERT

The former harness maker has maintained the government of the German republic in spite of attacks from both the reactionary uprising under Wolfgang von Kapp and from the Communists' threats of a general strike and revolution at the other extreme

at the time of the election Germany was convulsed with civil war and political excitement was thus at a higher pitch than even the plebiscite by itself could have brought about.

The Victory of the White Eagles

THE Russian Bolsheviks are now attempting to renew negotiations with Poland and Finland looking toward a peace such as was concluded with the Baltic States. Victorious over Russian counter-revolutionists, the Reds have not yet attained military superiority over the Poles. If we are to believe the optimistic accounts from Warsaw the battle of Mozir may rank among the decisive conflicts of the present age. Mozir is an important railway junction southeast of Minsk and its capture threatens the whole line of communication between the Bolshevik forces in the central and in the southwestern parts of Russia.

The Poles captured about a thousand Bolshevik prisoners, a number of cannon, an armored train and a great store of military material and railway supplies. The Red army retreated in great disorder across the Dnieper river. According to accounts of the battle both sides made use of armored river gunboats. A number of these are listed among the war booty which fell into the hands of the Poles as a result of the victory.

The Finns also have repelled Bolshevik attacks in Karelia and a successful counter-attack pierced the Russian lines. The Bolshevik Government announces that it is ready to open negotiations for peace with Finland. The chief question at issue is whether the frontiers of Finland shall be limited to those of the ancient Grand Duchy or extend to cover the Finnish-speaking peoples of Karelia on the east. With Poland the case is reversed, as the historical boundaries of the nation are wider than the ethnographic and the Poles wish to realize some kind of union with the Lithuanians, white Russians and Ukrainians who inhabit the eastern parts of what was the Commonwealth of Poland before the first partition of what was once extensive territory.

© Underwood & Underwood.

The master of the situation now in new Poland is General Joseph Pilsudski, appointed commander-in-chief when the Polish territories were evacuated by the Germans. This photograph shows him receiving bread and salt from the Jews of the delivered country according to their ancient custom. General Pilsudski represents the radical faction of the Poles, while Paderewski represented the aristocratic faction, but the two men have worked together for the regeneration of Poland. It is interesting to recall that General Pilsudski organized a Polish legion which coöperated with the Austrian army against Russia early in the war

Keystone View.

Proclaimed King of Syria, Prince Feisal, son of the King of the Hedjaz, is said to have been selected by the Syrians as the ruler of the Kingdom of Syria which they have set up in defiance of the Allies. The Prince has been considered a protégé of the British, but of late he seems to be leaning toward the French

Syrians Declare Independence

A national congress of Syrians held at Damascus proclaimed Syria to be an independent state on March 8, and it is reported that Prince Feisal will be made King. Prince Feisal is son of the Emir of Mecca, whom the British made King of the Hedjaz. Colonel Lawrence, a young Oxford orientalist, aided Prince Feisal in organizing an army and sweeping back the Turks and Germans on the eastern side of the Jordan while General Allenby on the western side advanced northward thru Palestine. Whether Feisal has broken with the British and gone over to the French or is determined to play a lone hand, or has made a bargain with the Turkish Nationalists, is not yet apparent. The last seems possible for the Arab troops have recently taken an aggressive attitude toward the British in Mesopotamia on the east and toward the French in Armenia on the west. They have forced the British out of towns they had occupied on the upper Euphrates and they helped expel the French and Armenians from Marash.

This new nationalism may seriously upset the plans made for the partition of Turkey in the treaty now being prepared by the Allied Powers. For the Syrian Nationalists claim Mesopotamia, which has been assigned to the British, Palestine, which has been assigned to the Jews, and Cilicia, Alexandretta Beirut and Lebanon, which have been assigned to the French. The French military in their occupation of the Syrian coast since the armistice have often offended both the Christian and Mohammedan population and many of the Christian Syrians are said to support the independence movement. A Syrian congress was held in Cairo on December 15, which declared in favor of a united Syria stretching from the Gulf of Akaba on the south to the Taurus mountains on the north, and from the Mediterranean on the west to Mesopotamia on the east, with a democratic federal government giving equal rights to all religions. The Cairo congress expressly reserved the question of independence or a mandate, but the Damascus congress has gone farther and claims complete independence.

The Supreme Council in its official *communiqué* places

upon America the responsibility for the troubles of Armenia:

While the indeterminate attitude of the United States toward Turkey presents evident difficulties, it may be said that the American Government has been urged to take part in the measures for the protection of the Armenians, and that leading statesmen are painfully conscious that without American coöperation no ideal solution of the Turkish problem can be expected.

England and France are heavily overburdened with the duties they have already accepted and are faced with the possibility—thru their efforts to bring some order out of this chaos—of new troubles such as America has never to fear. They will suffer for their faults, but if the remnant of the Armenian race should suffer further some responsibility must fall also upon the nation which, associated with this problem by many fine traditions, is for such a purpose the strongest and freest of all.

On account of the massacre of Armenians about Marash the Allied Powers have decided to discipline the Sultan by an occupation of Constantinople, tho it is not apparent how this will differ from the present situation for the city has been garrisoned by Allied troops ever since the armistice.

The French and British have agreed in deference to Mohammedan sensibilities to allow the Sultan to retain nominal sovereignty over Constantinople, altho the Straits of the Bosphorus and Dardanelles are to be kept under international control. Former Premier Birand accuses the British of privately negotiating with the Sultan to secure their own interests in Turkey and he publishes in his paper, *Eclair*, a secret treaty which was concluded last September and of which a copy, he says, has fallen into the hands of the French Foreign Office. According to this the Sultan is to remain in Constantinople on condition

that he renounces in favor of the English all claims to Cyprus, Egypt, Mesopotamia and Kurdistan and accepts a British mandate for the rest of Turkey. These proposals the British delegates were to support at the Peace Conference.

The Partition of Turkey

IT is easy to say "let the subject nationalities under Ottoman rule be given independence," but when it comes to carrying out such a plan the difficulty arises that these nationalities are in a minority in most of the territory which they claim. That they may have been reduced to minorities by wholesale massacres and deportations by the Turks does not alleviate the situation, however much it may arouse our sympathy for them and increase our aversion for the oppressors. A minority government may of course be set up by force of foreign arms, but this can hardly be regarded as an extension of democracy or favorable to permanent peace. Altho we may well think that the Moslems have forfeited all claim to consideration, yet they remain as an alien and unassimilable majority of the population in many places. The United States Senate declared by a rising vote that Thrace should be turned over to the Greeks, yet the Greeks are a minority of the entire population of this peninsula. The same is true of the Smyrna district, which the Greeks claim. Palestine, that has been promised to the Jews as a national home, contains only about one-eighth Hebrews. Everybody favors an independent Armenia, but it is impossible to draw the boundaries of any considerable area in which the Armenians will be

THE DISSECTED MAP OF TURKEY

A look at this puzzle map will show why the peace treaty with Turkey is not yet ready to deliver for signature altho sixteen months have elapsed since the armistice. The Allies cannot agree among themselves, to say nothing of agreeing with the Turks. By tracing out the boundary lines it will be seen that the various claims overlap, as they do in an oil field during the boom. For instance, a congress of Syrians at Damascus has proclaimed the independence of united Syria extending from the Gulf of Akaba on the south to the Taurus Mountains on the north and from the Mediterranean on the west to Mesopotamia on the east. This territory, however, is also claimed in part by the British, the French, the Arabs, the Armenians, the Turks, and the Jews

Thomas in Detroit News

Tired of waiting

in the majority. The Arabs are in a minority in a considerable part of the Syrian territory which Prince Feisal claims. Moslems form a large majority of the inhabitants of Constantinople and this interferes with the plans of those who desire to have the city placed under the control of one or more of the Christian powers. There are few Frenchmen in Cilicia and the Syrian coast, which France demands, and few Italians in Adalia and the Dodecanese which Italy demands.

Doubtless a certain voluntary segregation would follow partition for the scattered nationals would be drawn to the country under their own control. For instance, after 1912 when the Greeks, Bulgars and Serbs annexed the most of European Turkey large numbers of the Turks migrated, more or less willingly, into the regions remaining to them in Thrace and Asia Minor. But such migrations, however much they may be facilitated or enforced, will never result in securing pure populations and eliminating the question of subject races, for the Armenians, Greeks and Jews belong to the trading classes and will in any case scatter among the cities of the Levant whatever the sovereignty. It is evident that the Turkish problem cannot be solved by the simple plan of parceling out the country among the various nationalities. Some method, then, will have to be devised to protect both minority and majority rights and allow for the gradual development of liberal and democratic institutions.

President Wilson on Russia

IN a note to the Premiers of Great Britain, France and Italy, President Wilson proposes a conference on March 20 concerning the resumption of trade relations with Russia. In this note the President proposes the abolition of all restrictive measures on trade and expresses the opinion that the blockade of Russia was a purely war measure which is no longer justified. The American Government, however, while not prohibiting citizens of the United States from trading with Russia, warns them that they do so at their own risk under existing conditions.

Official recognition of the Soviet Government by the United States is still withheld because of the uncertainty of reform in the Bolshevik régime and the difficulty which experience has shown in diplomatic dealings with it. "The United States does not even think it possible to resume with Moscow the semi-official relations which were prolonged until 1918."

President Wilson's statement brings the United States into line with the present Russian policy advocated by the leading statesmen of France, Britain and Italy. This policy is one of economic intercourse with Russia, preferably through cooperative associations not directly affiliated with any Government, combined with refusal to grant political recognition to the Bolshevik Government or any other Government claiming authority in Muscovite Russia.

Completing the League

THE United States and Venezuela have still to enter the League of Nations. Certain other nations, notably Germany, Soviet Russia, Turkey, Austria, Hungary and Mexico, have not yet been invited. The rest of the world is adhering to the Covenant. Within the last few days Denmark, Sweden, Norway, the Netherlands, Switzerland, Argentina, Chile, Paraguay, Persia and Spain have added themselves to the League. All of these nations were strictly neutral during the Great War and were therefore not among the "charter members" who entered the League of Nations by reason of being represented at the Paris Peace Conference, but they have accepted the invitation to join which was extended to them in the Peace Treaty. It is true that among the belligerent Allies a few have been slow to ratify the Treaty, but none save the United States alone delayed because of the provisions of the Covenant.

A precedent for American reservations may perhaps be found in the special assurances requested by Norway and Switzerland before joining the League. Norway inquired if the League required its members to keep up a military establishment. Lord Robert Cecil assured the Norwegians that the Covenant "was never meant to put on any member of the League the burden and duty to keep up military forces." In other words the League may agree on limitation of armament but cannot limit the extent of disarmament.

Switzerland asked that her policy of permanent neutrality be considered compatible with membership in the League and that her adhesion be subject to the approval of a popular plebiscite. This plebiscite will be held in a few weeks and that it will result in an affirmative answer is hardly in doubt.

ALICE IN BLUNDERLAND

Lodge Triumphs

ARTICLE X of the Covenant of the League of Nations has been tagged with the Lodge reservation. This reservation, in its final form, reads as follows:

The United States assumes no obligations to preserve the territorial integrity or political independence of any other country by the employment of its military or naval forces, its resources or any form of economic discrimination or to interfere in any way in controversies between nations, including all controversies relating to territorial integrity or political independence, whether members of the League or not, under the provisions of Article X, or to employ the military or naval forces of the United States, under any article of the Treaty for any purpose, unless in any particular case the Congress, which under the Constitution has the sole power to declare war or authorize the employment of the military or naval forces of the United States, shall, in the exercise of full liberty of action, by act or joint resolution, so provide.

All attempts to reach a compromise were unavailing and several substitute reservations were rejected. Finally the amended Lodge reservation was offered. The Senate first voted to substitute it for the original resolution and then to adopt it as a condition for the ratification of the treaty. On the final roll call the reservation was carried by 56 votes to 26. The remarkable feature of the vote was that Senator Lodge succeeded in rallying to its support the entire body of Republicans, including both the "mild reservationists," who would have accepted a much more moderate limitation of Article X, and the "bitter-enders," who intended to vote against ratification even with reservations. The majority was made up of forty-two Republicans and fourteen Democrats; the minority of twenty-six Democrats.

President Wilson let it be known that he regarded the proposed reservation as entirely unacceptable, and his decision prevented the more loyal Administration senators from surrendering to the Republicans on Article X in order to save the treaty from destruction. The Democratic minority who rebelled against the Administration position include two very different sections: those who, like Senator Reed, of Missouri, are enemies of the Covenant and favor all reservations which will limit it, and those, such as Senator Ashurst, of Arizona, who favored the Lodge reservation as the only way to get the treaty ratified and thus make possible American participation in the League of Nations.

West Virginia to the Rescue

THE most romantic chapter in the ratification of the equal suffrage amendment by the state legislatures has been provided by West Virginia. This was one of the few states which both friends and opponents of the amendment placed in the doubtful column. The House of Delegates favored suffrage by the narrow margin of 47 votes to 40, but in the Senate there was an unbreakable tie of 14 votes to 14. It proved impossible to effect any transfer of votes from one side to the other and therefore each looked for outside aid. Two Senators were absent. Jesse A. Bloch, in favor of woman suffrage, was spending a winter vacation in California. A. R. Montgomery, a convinced opponent, had moved to Illinois.

Senator Bloch was informed that his vote was needed to break the tie and he thereupon made a lightning trip in special trains across the continent to save the situation. At one part of his course an aeroplane was offered for his use. The anti-suffragists, seeing that Senator Bloch would probably arrive in time, tried to offset his vote by that of Senator Montgomery, but the Senate voted that the latter had lost his residence in the state. This decision determined the fate of suffrage and it was duly carried on reconsideration in the Senate. The anti-suffragists threaten to contest the legality of the West Virginia ratification in the courts. There is also a legal question concerning the ratification of the amendment by Ohio.

The legislatures of Delaware and Washington meet on March 22. If they both act favorably, and if the legality of ratification is upheld by the courts in the states which have already ratified the nineteenth amendment, all constitutional requirements for the establishment of nationwide equal suffrage will be satisfied. This means that women will vote not only in the coming Presidential and Congressional elections but in most of the spring primaries.

All of the leading candidates for President in both political parties favor woman suffrage. Among those who have recently returned favorable in answers to a questionnaire of the National Woman's Party are General Wood, Governor Lowden, Senator Harding, Senator Johnson, Senator Poindexter, Attorney-General Palmer, William G. McAdoo, James W. Gerard and William Jennings Bryan.

The Harbor of Delfshaven as it appeared to the Pilgrims. It was from the East India House (right) that "The Speedwell" sailed

Europe Celebrates "The Mayflower"

Four nations are to participate in celebrating the Tercentenary of the sailing of the Pilgrim Fathers. Holland will open the festivities on August 29 at Leyden, the city from which the Pilgrims emigrated on July 31, 1620, and continue them until September 4. Delfshaven, Rotterdam and Amsterdam are to share in the ceremonies.

The English portion of the program will follow immediately after that of the Netherlands and will last one week. The observance of the United States and Canada, which calls for mass meetings in seventy American cities, will occur during Thanksgiving week (November 21-29), terminating with a national gathering at Madison Square Garden, New York, to which representative citizens from the entire country, as well as from abroad, will be invited. November 21 is to be observed as Mayflower Sunday.

From a national standpoint the purpose which it is hoped to achieve by this celebration is the emphasizing of the spiritual significance of the westward journey of the Pilgrims and the reinterpretation of their ideals in terms of democracy. This should make a strong appeal to the spirit of heroism as expressed in service in striving to help meet America's present problems. From an international aspect it is not to be forgotten that this coöperative observance affords an excellent

opportunity of cementing the bonds of inter-racial goodwill already implanted.

The Netherlands program provides for a two-day "Congress" at Leyden University, which will be addressed by American and Dutch orators. On September 2 it is the purpose to carry the American members part way to Delfshaven by canal, traversing the route followed by their ancestors. At Delfshaven a popular concert of American and Dutch sacred music will be rendered in the Cathedral of St. Lawrence, one of the most impressive churches in Holland, seating 5000 people. This is to be the crowning event of the celebration in this country.

It is expected that this celebration will have a tremendous appeal to the imagination and emotions of the Hollanders, such as no event which the present generation has lived thru can equal. Acknowledgment will be made for the inception in the minds of the Pilgrims of the ideas of states rights and federal government by their twelve year sojourn in the land of freedom. It is hoped that a permanent memorial may be erected at Delfshaven.

The Netherlands committee includes several Ministers of State, an ex-Premier, the chief burgomasters and the leading governors of provinces, representatives of universities—especially Leyden—and historians. Dr. Henry Van Dyke of Princeton and Dr.

J. Rendel Harris of Manchester, and Viscount Bryce, champion of American institutions in Europe, represent America and England.

The American Mayflower Council is headed by President Wilson and ex-President Taft as honorary chairmen; Dr. Van Dyke is honorary secretary; President Henry Churchill King of Oberlin College is chairman. Various vice presidents represent different sections of the United States and Canada. Mr. Hamilton Holt, editor of The Independent, is treasurer.

Japanese Proverbs of Women

(Compiled by Mr. Akimoto Shun)

"New" women are created to replace good women.

If you want to love women begin by spending money.

Women who remember shop signs and trademarks make good wives.

Pride goes before a fall, especially in beautiful women.

Women and mountains should be looked on at a distance.

Women fall in love with their protectors, men with women.

Men who can neither brag nor flatter need not fear being loved by women.

Rather than make love in clumsy language bite your tongue out.

Plain women bewail their misfortune in proportion to their learning.

When marriage agents praise any woman for her virtues you may be certain that it is another way of saying that she is ugly.

Women who seek liberty too often lose it.

A wife who does not know how to please her husband makes him commit no end of blunders.

Men who like to take photos with their wives are henpecked.

'Tis women who know they are ugly that powder their faces.

Women admire women of their own type.

The secret of winning the woman who jilts you is—perseverance.

Women understand men; those who understand women are also women.

Poisonous flies carry shiny wings, bad women pretty faces.

Men laugh with their hearts, women only with their mouths.

A Four-Legged Tree

The possibilities of influencing tree-growth are amusingly illustrated by an American or white elm which stands near the State highway in the town of Bridgewater, Mass. The man

Parson Brewster's first sermon to the Pilgrims after landing. The military figure standing with bowed head in the foreground is Captain Miles Standish

who "constructed" this tree as an entrance to his home was laughed at for his pains, but time has demonstrated that his faith was not misplaced. He took four sapling elms and planted them in a group, binding them closely together about twelve or fifteen feet from the ground. In time the trunks grew together, giving them the appearance of a single tree "on stilts." It is known as the "wishing tree," and small boys and girls in the locality believe that by walking in and out among the four legs of the trunk, a wish made in the process will come true.

This home-made wishing tree was trained the way it should go when it was young, and when it was old it did not depart from it.

Gospel Salesmanship

Once the United Simultaneous Evangelistic Campaign gains momentum Billy Sunday may be replaced as a headline news feature in the daily and religious press. Not that there is to be any resort to the same rip-roaring, devil-damning dramatic methods by National Campaign Director Theodore S. Henderson or any of his teammates. On the contrary the proposed plan of action calls for a sober and sensible stimulation of individual effort, but in its comprehensiveness—taking in the entire country and including, as it does, several coöperating agencies—the present campaign is in somewhat the same relation to a tabernacle gathering as smashing of the Hindenburg line compares to hitting a homer over the garden wall.

The psychology of this Lenten campaign is founded upon the principle of salesmanship rather than an appeal to prejudice or the emotions. "Gospel Salesmanship" and "take someone your size" are terms frequently employed to convey the idea of obligation for each one to get into the game and enthrall his every-day associates for better living.

"Every Christian an evangelist and every church a center for evangelism" is the general slogan of the campaign.

The pith of the message to industrial workers is contained in the caption, "The workingmen of America for the Master Workingman of Galilee."

Specialists in various types of religious work, representing several different societies and boards, met with Bishop Henderson of the Interchurch World Movement in New York on February 28 and 29 to listen to addresses and draw up recommendations.

Dollar-a-year-men have been proposed as the executive heads of states, one of their duties to be the enlistment of business men. Other plans call for shop meetings for employees; noonday business men's theater meetings; Lenten teas for women; evangelistic letter writing, parlor meetings, evangelistic salesman's classes to study methods of reaching men on the same basis as one would sell life insurance or automobiles.

"We must raise the spiritual temperature of the church," says Bishop Henderson. "A religious revival will not come so much by organization as by communication."

Cut Out and Read Once a Week

Never be idle.
Make few promises.
Always speak the truth.
Never speak ill of any one.
Keep good company or none.
Live up to your engagements.
Be just before you are generous.
Earn money before you spend it.
Drink no kind of intoxicating drinks.
Good character is above all things else.
Keep your own secrets if you have any.
Never borrow if you can possibly avoid it.
Never play at any kind of games of chance.
Keep your promises if you would be happy.
Make no haste to be rich, if you would prosper.
When you speak to a person, look him in the face.
Save when you are young, to spend when you are old.
Never run in debt unless you see a way to get out again.
Avoid temptation, thru fear you may not withstand it.
Ever live (misfortune excepted) within your income.
Small and steady gains give competency and tranquillity of mind.
Good company and good conversation are the sinews of virtue.
Your character cannot be essentially injured except by yourself.
If any one speaks evil of you, let your life be so that none will believe him.
If your hands cannot be usefully employed attend to the cultivation of your mind.

Odds on Sabrina!

Sabrina, the traditional goddess of the Amherst College even classes, and for thirty years the object of the keenest interclass rivalry, has at last been captured by the odd classmen. Almost immediately after the appearance of the statue at the recent Amherst Alumni Banquet at Boston she fell into the hands of the odds, crowning many

years of continued endeavor with the brightest success. Since 1893, the famous statue of the river nymph, around which centers one of the most unique college traditions in the country, had been in the safe keeping of the even classes.

The Copley Plaza banquet hall was turned into an uproar when suddenly during one of the last speeches, two large doors were flung open and the 300 pound statue of Sabrina, under a huge awning in the shape of a champagne bottle, was rolled out on the platform. As unceremoniously as she appeared, so she disappeared, with pursuit effectually prevented from the inside by the strenuous efforts of the even classmen. A truck was waiting without to convey the goddess once more to a safe, secluded haunt, but her guardians too lightly estimated the sleuths of the odd classes. The truck had not proceeded far when it came upon a blockade of hostile cars, and vainly seeking safety thru a snowdrift, it became firmly stalled. The Sabrina guardians were quickly overpowered by a superior number of the odds, the goddess transferred to a waiting car, and Sabrina was soon speeding across

Sabrina, the river goddess over whom Amherst undergraduates have fought for thirty years or more, was captured by the odd classes this spring after twenty-seven years' possession by the even classes

Harvard bridge, thru Cambridge, and out into the country and the unknown.

Early in the morning the tolling of the chapel bell, the roar of a fraternity canon, and the reports of pistols announced to Amherst College the fact that Sabrina had fallen into the hands of the odd classmen. A huge bonfire was built on the campus, and the night resounded with the frenzied shouts and celebrations of the odd classmen. For the first time in twenty-seven years Amherst awoke to hear the Sabrina song chanted by the odds. In chapel the strains of the Doxology gave way to the stirring air of "All Hail Sabrina," and the odd classmen marched

out in a body, declaring a Sabrina Day and no classes. The capture of Sabrina was due chiefly to the efforts of members of the class of 1919, and the College body had little to do with it.

The famous bronze goddess, representing the British river nymph celebrated in Milton's "Comus," was presented to Amherst College in the eighties and long occupied a place on the campus. The presence of the grace-

ful goddess, however, was too much for the humorous tendencies of the Amherst student, and the statue was subjected to many ridiculous indignities. Vari-colored coats of paint, and various articles of clothing adorned her person on successive mornings, and at length '90 kidnapped her entirely to appear at a class banquet. Recaptured by '91, she was turned over to '93, who lost her when a member of '94 signed an ex-

press receipt for the statue after it had attended a '93 banquet at Springfield. Since then Sabrina has been kept without a break by the even classes, hidden in haunts that varied from the bottom of the Connecticut River to a lonely farmhouse in Vermont. A volume has been written about the adventures of Sabrina and the present episode has added another thrilling chapter to her history.

What the Draft Brought Out

By Professor William B. Bailey of Yale University

IT has been fifty years since there has been the war necessity of testing the physical fitness of the young men of this country. We had seen the death rates in this country decreasing and our success at the Olympic games had led us to think that we were preëminently a race of athletes. When the first selective draft of 1917 was made about 2,500,000 out of a total of about 10,000,000 young men between the ages of 21 and 30, inclusive, were examined physically by the local boards. Of these about 730,000, or 30 per cent, were rejected on physical grounds. Between June, 1917, and May, 1918, 867,877 of the accepted recruits were sent to mobilization camps, and

of these 37,959, or 4.37 per cent, after having been accepted as qualified by local boards, were rejected at the camps. In addition to this number, 126,329 who had been seen by the medical advisory board were sent to the camps, bringing the total to 994,206. Out of this million 52,918, or 5.32 per cent, were rejected. This does not mean that these young men would not have been able to enjoy good health and do good work in civil life. Flat foot or under weight may not have handicapped them for civil occupations, but they were not equal to the task of walking long distances daily and carrying a load of at least forty pounds on the back.

Slightly over half of the total defects was for flat foot and yet only about 2500, or 1.4 per cent of those with this impediment were rejected. In the same way, altho there were nearly 25,000 with throat defects, only sixteen were rejected. On the other hand, over 90 per cent of those suffering from nervous and mental diseases were rejected, and nearly as large a proportion from diseases of the heart and circulatory system. What we were after was men who could stand the stress and strain of army life, and men whose condition was such that they were likely to break down under

this tension must be rejected. After having the number of recruits reduced 30 per cent by the local boards, it was somewhat discouraging to find that over 50,000 of this selected million were rejected at the mobilization camps. It was, however, a cause of considerable satisfaction to learn that nearly 650,000 were accepted as qualified without defects.

Although rejections from certain causes were much more frequent among the recruits from the rural districts, the general results of the physical examinations of the urban and rural recruits showed a larger proportion accepted without defects from the rural districts.

	Urban Per Cent	Rural Per Cent
Accepted without defect....	61.74	66.74
Accepted with defect.....	33.49	28.30
Rejected	4.77	4.96

Seven girls from the Freshman class of a college in Kyoto, Japan, when questioned, had never heard of Christ.

A recent photograph of a new Polish postage stamp exhibits Paderewski with his locks trimmed a trifle.

The angle of 75 degrees has just been found by experiment to give the greatest degree of safety to a ladder.

Letter carriers in the state of Washington have affiliated themselves with the American Federation of Labor.

Within the past generation the average yield per acre of wheat in the United States has increased 25 per cent.

There are enough illiterates in the United States over ten years of age to make a state as populous as Illinois.

The telephone wires of the United States would encircle the earth at the equator one thousand times if laid end to end.

The petroleum supply of the United States, it is estimated, will be exhausted in thirty years at the present rate of consumption.

Edison's great-grandfather lived to be 104, his grandfather to be 102, and his father to be 94. He himself is a youngster of 73.

A press dispatch from Mexico City states that Dr. Benito Sanches has discovered a serum that cures typhus fever within forty-eight hours.

Seventy-five colleges and universities are conducting campaigns for increase of endowment funds amounting to more than \$200,000,000.

Ask Mr. Fred!

(Continued from page 469)

above the range and not a soul in the house. Stepping quickly outside he spoke to a mason who was provisionally mixing mortar next door. "If you'll hand me that hose and turn on the water," quoth he, conversationally, "I'll put out this fire." In two minutes he was off to the next customer.

A small boy alone in a house found an electric iron in a bed and in the innocence of his heart turned on the current. An hour later he ran to Mr. Fred's store shouting "Fire!" Mr. Fred knows the geography of every kitchen in town, and tho the smoke was blinding, he crawled along the floor to the sink and found the pail of water he was sure would be there, and another catastrophe was averted.

More spectacular was his exploit in climbing a sixteen foot wall, no ladder being handy, by gripping the corner boards with his strong fingers, aided only by the rubber soles of his shoes. The difficult part of the feat was getting onto the roof once he had reached it. Leaning back from the eaves, he flung himself upward and forward, with only the shingles to give a precarious hand-hold. It sounds as impossible as Jean Valjean's climbing the angle of the convent wall; but presently, behold! there stood Mr. Fred on the ridgepole, remarking casually, "Now if you fellows will hand me up a pail of water, I'll put out this fire."

Lately we had a visitor in our town; one who had long dwelt among us, well beloved, and was now a college president elsewhere. When he rose in the pulpit, he said, smiling upon us, "I thank you all for your kind invitations to dinner, but I had already promised Fred Campbell."

What is Mr. Fred's reward, aside from the glory of entertaining college presidents? "His reward is that he is that kind of a man." An Emersonian reward, but can you better it? The highest praise I have ever heard given a newcomer to our town was, "He's another Fred Campbell!"

He feeds the hungry. What could a Hoover more? He is beloved by his fellow townsmen, and his life is full of interests. He passes every one of G. Stanley Hall's four tests of "the aim of education": "To teach us to delight in what we should; to earn a living; to become a good neighbor; to enrich the life of our time."

MAFRA WRIGHT NEWHALL.

Olivet, Mich.

Mrs. Oliver Made Good

(Continued from page 469)

The News Mrs. Oliver actively aided the Red Cross, Liberty Loans, Recruiting Campaigns and War Workers. For her pluckiness and devotion to duty at a time when the country needed the assistance of all newspapers she has won the admiration of the whole community, and even the school children look up to her as "the best."

"The White-Collar Poor"

The "High Cost of Living" is a misnomer, because with most people it is no longer "Living" but a mere **Existence**. An Economist of National reputation recently stated that the man with an income of \$2,000 is now actually drawing \$870 worth of purchasing power, compared with the value of the dollar in 1913.

The hardest hit class of people are those who have been designated recently by a prominent newspaper as "The White Collar Poor." It is estimated there are 4,000,000 workers in clerical occupations and professional services—clerks, office managers, salespeople, and small business men, who work with their brains rather than with their hands.

Why not work with your hands as well as your brains? Men are growing rich in our part of Florida, cultivating a bit of land. Some of them can hardly sign their names, yet they are making big money. Three and four profitable crops can be grown in one year from the same land.

I own and am offering for sale in Orange and Seminole Counties some of the finest orange and trucking lands in the State. The land now offered for sale is not in a solid body, but is interspersed with groves and farms, some of them worth from \$500 to \$1,000 an acre.

Buy your land NOW, on easy monthly payments—while it can be had at a reasonable price. You can develop it when you like. At the time this advertisement is being written (February 26), ordinary oranges are being sold at \$4.00 and \$4.25 per box—**on the tree**. Oranges in Central Florida cost about half as much to produce as in California.

We will plant and care for a grove for you, under our Ten-Per-Cent-Above-Cost-Development Plan, and effect a saving of nearly fifty per cent, as compared with prices now being charged by ordinary grove planting organizations.

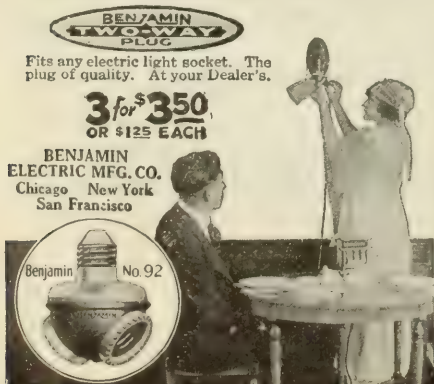

Truck gardeners near Orlando cleared as high as \$1,500 an acre from early vegetables last year. We have copies of their signed testimonial letters in our book. Many of these truck gardeners are Northern men, and they know our summer climate is cool and more pleasant than in Northern States.

Send for our Big Free Booklet—"TWENTY ACRES AND PLENTY." It tells all about our dollar-an-acre-per-month payments, sick-and-out-of-work clauses, and how your family, in the event of your death, will get your farm without the payment of another single penny, according to the terms of our contract. Address Sylvester E. Wilson, Dept. G5, Orlando Florida.

(NOTE: Mr. Wilson is Treasurer and Principal Owner of the Produce Reporter Company, Chicago, publisher of the "Blue Book" which is to the Fruit and Produce Trade what Dun's and Bradstreet are in other commercial fields.)

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government. The Inside Facts. By Walker D. Hines.

1. Make a summary of "the inside facts" presented in the article. Number every point that you notice, and arrange the points so that they will at once appeal to the eyes, and will be emphatic.
2. Imagine that Mr. Hines is to prepare a debate on the subject of the article. Write the proposition on which he would debate. Write a short brief that will show the principal arguments that he would present in support of his proposition.
3. Prepare a numbered list of the principal arguments that his opponents might present.
4. Explain, by reference to the article, how Mr. Hines would refute the arguments of his opponents.
5. In a single paragraph explain what have been the results of Federal control of the railroads.
6. Prepare a formal announcement, such as the Railroad Administration might have prepared to announce its policy.
7. Give a clear explanation of the following sentence: "A common understanding between management and employees is of paramount importance in promoting justice." In order to make your explanation clear invent an illustration that everyone will understand.

II. Up the Line from Cantigny. By Captain Joseph Mills Hanson.

1. By what means does the writer make the opening of the article add to emphasis.
2. Prove that Captain Hanson wrote from a carefully prepared plan.
3. Show how the writer gives coherence to the article, and thus increases its clearness.
4. Draw from the article points that tend to increase one's pride in the United States.
5. Find a paragraph of vivid description. Read the paragraph aloud. Explain by what means the description has been made emphatic.
6. Find in the article mention of some personal incident. Imagine the details that have been omitted, and expand the incident into a well told narrative.
7. Summarize what the article tells you concerning the characteristics of American soldiers.

III. We Are Desperate. By General Antranik.

1. Imagine that you are General Antranik. Give, before your class, such a speech as he might give before any audience of American citizens.
2. Draw up a set of resolutions based on the article. Prepare to explain or defend any resolution that you make.
3. Imagine that you are the editor of an important daily paper. Write an editorial article based on what is said by General Antranik.

IV. Literature Versus the Law. By Allen Campbell.

1. Explain the following sentence: "Literature fulfils one of its highest functions as a court of appeal from human justice to poetic justice."
2. Tell the story of Jean Valjean. If you have not read "Les Misérables" consult Synopsis of Books in "The Warner Library of the World's Best Literature."
3. Tell the story of Robin Hood.
4. Consult any encyclopedia for information concerning Charles Reade. Then explain why he is mentioned in the article.

V. Odds on Sabrina!

1. Explain what part Sabrina plays in Milton's "Comus."
2. Tell the story of the statue of Sabrina, as the statue might tell it.

VI. Europe Celebrates the "Mayflower."

1. Write a picturesque description of one of the two pictures that illustrate the article.
2. Prepare a short address suitable for presentation on the Tercentenary celebration of the sailing of the Pilgrim Fathers.

VII. The Best Person in Our Town.

1. Explain in what respects the article, "Ask Mr. Fred!" is well written.
2. Write a similar article about someone you know who "Teaches you to delight in what you should; to earn a living; to become a good neighbor; to enrich the life of your time."

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Up the Line from Cantigny.

1. Give a brief account of the history of the American army from the outbreak of the war to the date of the first American offensive at Cantigny on May 28, 1918.
2. According to Captain Hanson what were the nine phases of American operations during the war? Locate each of these operations on the map.
3. Describe briefly the battle conditions in the spring of 1918 before the Americans came into the line.
4. Reproduce Captain Hanson's description of the battle of Cantigny. What was the moral effect?

II. The Inside Facts.

1. What conditions led the President to take over the railroads in December, 1917? Did the results justify this executive act?
2. Outline the chief criticisms of the Federal railroad administration.
3. What, according to Director Hines, were the chief accomplishments during the period of Federal control?
4. Did the railroads degenerate or improve during the period of twenty-seven months?
5. "The railroads went back to private control on March 1 without the slightest hitch or confusion," etc. Under what conditions was this transfer made?

III. "The German Counter-Revolution," "The Insurgent Leaders," "Rallying Round the Republic."

1. Contrast the second revolution in Germany with the Bolshevik *coup d'état* in Russia. Why is the second revolution in Germany reactionary while the second revolution in Russia was radical?
2. Who are the leaders of the counter-revolution? Upon what classes do they depend for their support?
3. What were the causes of the counter-revolution? What are its chances for ultimate success?

IV. Conditions in the Near East—"We Are Desperate!" "Syrians Declare Independence," "Partition of Turkey."

1. What claims have the Armenians to the independence which they desire to have the United States guarantee?
2. If help does not come to Armenia what will be the political result?
3. If Syria becomes an independent state how will France, Great Britain and the new Jewish state in Palestine be affected?
4. What are the various nationalist claims in the Turkish empire? How can these claims be satisfied?

V. An American City-State.

1. Do the facts set forth in this editorial apply to the community in which you live?
2. Give some of the problems of local government which could be settled more easily if communities like New York City and Chicago were completely separated from the states of which they are a part?
3. "There are ample precedents for the city-state." What are some of these precedents? How did these communities govern themselves?
4. In view of Article III, Section 1, of the Constitution is an amendment such as is suggested in the last sentence necessary?

VI. Europe Celebrates "The Mayflower."

1. What four nations may rightfully participate in a "Mayflower" celebration? What share has each of these four in the "spiritual significance of the westward journey of the Pilgrims"?
2. What facts will probably be emphasized in the Dutch celebration? The English celebration? The American celebration?

VII. Lodge Triumphs.

1. Read Article X of the Covenant of the League of Nations and the Lodge reservation. What is the effect of the reservation?
2. What is your understanding of the terms "mild reservationists" and "bitter-enders"?
3. If the Senate ratified the Treaty what action will the President probably take?

VIII. West Virginia to the Rescue.

1. What is the present status of the nineteenth amendment? What further steps are necessary before the amendment becomes a part of the Constitution?
2. Compare the provisions of the proposed nineteenth amendment with those of the fifteenth amendment. Is there any likelihood that this amendment will be interpreted as the fifteenth amendment has been interpreted?

Independent Opinions

One of our subscribers has put to us some shrewd questions on the habits and customs of the species Politician. Without denying that the ways of this animal are still much debated by zoölogists, we have hazarded provisional answers. If any other reader can throw more light on the subject we would be grateful to hear from him thereon.

Q. What becomes of the scores of investigating committees appointed by Congress and of which we hear so little afterwards?

A. They die a natural death of ennui after completing an exhaustive report which nobody ever reads.

Q. Why a thrift week to educate the common people when the powers that be at Washington refuse to perfect a budget system and save millions for the country?

A. Because it's always easier for the other fellow to economize.

Q. Why so few Congressmen are present to respond to recall, when they are hired to make laws?

A. Because committee business is allowed to conflict with the time allotted, to business in full session, and committee business is an elastic term.

Q. Why so many Cabinet members resign because they cannot live on their salary, when they know at the beginning what their salary is?

A. Because the cost of living looks bigger when they get to Washington, D. C.

Q. Why so many ordinary citizens are wasting their time months in advance, laying their ropes for the nomination for President, when they should be attending to other business?

A. Because every child hopes to be President some day, and we are most of us still children.

Q. Has the office of President come to be so ordinary that any old thing thinks he can fill it?

A. The ordinary man usually thinks that he is the exceptional man.

Why America should protect Armenia against massacre by the Turks and partition by the Allies is explained by the Director of the Armenian National Union of America in a letter from which we quote a few passages:

The recognition of integral Armenia as an independent state will prevent the division of Armenia among European powers. It is apparent that under the secret treaty of 1916, to which England, France and Russia are parties, Armenia was to have been divided between them, without, of course, consulting the wishes of the Armenians. The provisions of this treaty violate the principle enunciated by the President and incorporated in the Treaty with Germany, viz.: "Certain communities formerly belonging to the Turkish Empire have reached the stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the mandatory."

Armenia's contributions in the present war entitles her to independence. From the beginning of the war these people refused offers from the enemy and threw in their lot on the side of the Allies. Over 150,000 of them served on the eastern front with Russia. After the Russian collapse

Is it worth 16½ cents a day to you to know that your cost figures are right? To know that your invoices are right? To know that your bills are checked accurately, payrolls figured correctly, chain discounts, interest and all your other figure-work positively correct?

Is Accuracy Worth this Much to You?

At a maximum cost of 16½ cents a day the Monroe Calculating Machine will do all your figure-work for you. It will not only do your adding but multiplies, divides and subtracts as easily as other machines add. Surely 16½ cents a day is a negligible cost when you measure the value of the Monroe in terms of accurate figure-work, the elimination of costly errors, and the extra time it gives your employees for other work.

The explanation of the Monroe is simple. It finds the answer by the simple method—direct from problem to result. That is why, even with an inexperienced operator, the Monroe outfigures other calculating machines. That is why you can actually multiply and divide on the Monroe at the same time, in one action—by a few easy turns of the crank. A constant, visual proof of accuracy is always before you on the Monroe. Every factor of your problem is shown either on the Monroe keyboard or in the Monroe proof dials. On the Monroe you can see as you go that your answer is correct.

Says the Bethlehem Steel Co., So. Bethlehem, Pa.

".... the services we are receiving from the Monroe Calculating Machine are all that can be desired in our particular line. It has come up to all our expectations and has expedited the handling of our work—so much so—that we now feel we cannot do without it."

Convince yourself. See the Monroe in action on your daily business problems in your own office: chain discounts, cost finding, figuring interest, payrolls, extending invoices, etc. If it's worth 16½ cents a day to have your figure work accurate it's worth a two cent stamp to mail the coupon below and learn conclusively why the Monroe means—

Faster Figuring — Absolute Accuracy

Training for Authorship

Dr. E. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *"Real teaching."*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

the Armenians, single-handed, resisted the Turko-German advance towards Baku in the Caucasus. They kept the Turks fighting in the Caucasus region, and, according to Lord Cecil, they thus helped the success of the British campaign in Mesopotamia and Syria. In France only one-tenth of the Armenians who joined the "Legion Etrangere" returned alive. Over 8000 Armenians, mostly volunteers from the United States, fought in Palestine under General Allenby, who has credited them with valor and glory. When the United States entered the war hundreds of Armenians in this country volunteered and thousands were drafted, and many of these died on the field of battle. "The Armenians have therefore been belligerents. Their losses, due to the war, which exceed a million (out of a nation of four and a half million souls) are proportionately much heavier than those of any other belligerent."

M. VARTAN MALCOM

Washington, D. C.

The mail service is getting worse and worse. Sometimes a letter is delayed in delivery for weeks and what is more remarkable we have just received the following news item which is apparently fourteen years ahead of time. But we are relieved to learn that Congress will by that time be improved by the application of Binet-Simon tests to eliminate the morons.

NINETY CONGRESSMEN FAIL TO PASS

Proved Inefficient by New Government Test

Washington, December 20, 1933 (Special).—The Federal Efficiency Commission has completed the grading of the examination papers of the new House of Congress, which was seated on the first Monday of December. The law providing for this test was passed by the last Congress under tremendous pressure from outside sources, and amid stormy scenes on the floor. It provides that every member of the lower branch of the national legislature must upon election, and within fifteen days after being provisionally seated, pass an efficiency examination to determine whether he is properly equipped to handle the affairs of Government with average intelligence.

The first trial of this law has already proved its usefulness. The Government is spared the humiliation of supporting ninety men in the national legislature who by their ignorance and inefficiency would only waste the people's time and money, and who would be certain to obscure every large issue by their unintelligent utterances. These men will be returned to their constituencies and the vacancies thus caused will be filled by special elections. This is the first time in the history of the country that Congress has been placed on the same high level of efficiency required of the Civil Service.

"Does your cook try to make food go as far as possible?"

"Yes; some of it all the way from our residence to hers."—*London Opinion.*

Tess—Jack says my mouth is the prettiest he has ever seen.

Bill—Indeed? Well, I'll put mine up against it any time.—*California Pelican.*

She (exasperated)—Upon my word, I often wish God had made me a man.

He (risking it)—Perhaps he has, Ger-tie. Haven't you ever thought about me?"—*Sydney Bulletin.*

Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

Letters to the Great and the Near Great

By John Citizen

Postmaster-General Burleson,
Washington, D. C.,
Dear Sir:

Almost every member of President Wilson's cabinet of 1913 has resigned. Don't you think that Bryan, Garrison, Gregory, McAdoo, Glass, McReynolds, Redfield, Lansing and Lane have set you an awfully good example?

Inquisitively yours,
JOHN CITIZEN.

Comrade Nick Lenin,
Chaos-on-the-Blink, Russia,
Dear Comrade:

You are, I suppose, entitled to due meed of congratulation on the defeat of your opponents north, south, east and west on the borders of Soviet Russia. It is not equally clear that their defeat is your victory.

You dreamed no doubt of a world in which political government had ceased to be; all activities being carried on in loosely federated industrial communes. All men and women would be equal; all property would be common; all human activities would be free and unconstrained. In the meantime you would have nothing to do with bourgeois nations and Leagues of Nations and least of all with bourgeois trade.

The result is that you have established a highly centralized political government in which the Soviets have become little more than agents of your policy. Most of the property, especially the peasants' land, remains in private hands. You timidly predict that within twenty years or so electric power may be developed in the Urals in such a way as to enable the Government to undertake productive industry on a really considerable scale. To prevent production from ceasing altogether you have called in the services of bourgeois experts and paid them many times the wages of ordinary labor. You have done nothing to equalize the classes, but have only substituted a small, privileged group of town laborers for the old bureaucracy. You have not only begged peace from the bourgeois nations, but have attempted to buy it by promises of capitalistic commercial concessions in the very heart of your dominions. You have abandoned free speech, the free press, free assemblage, the right to strike, and all other liberties and have reintroduced compulsory military service and compulsory labor. Your communist Utopia turns out to be undistinguishable from a very backward and badly mismanaged Central American dictatorship, half mortgaged to foreign investors.

Was it worth while overturning the Socialist Government of Kerensky and carrying on more than two years of civil war to arrive at this result?

Compassionately yours,
JOHN CITIZEN.

A Diversity of Splendors

ALL that the Old World has to offer and more, infinitely more, is to be found in your own United States. The quiet waters of a tropic sea, or the sun splashed peaks of snow-crowned mountains; the golden light that floods the fields of Italy, or the haunting charm of long forgotten hamlets—people, places, customs and creeds and the fascination of finding them, lie at your very threshold.

When traveling this season, assure yourself of unalloyed enjoyment by converting your cash into

“the BEST funds for travelers”

“A·B·A” American Bankers Association Cheques

Unlike cash, “A. B. A.” Cheques are not almost a certain loss if lost or stolen for they cannot be cashed without your countersignature in the presence of the acceptor;

Unlike personal cheques, “A. B. A.” Cheques automatically identify the holder and are universally accepted by banks, hotels and tradespeople and transportation companies;

Unlike letters of credit, “A. B. A.” Cheques do not make the holder dependent upon banking hours, but they can be cashed whenever and wherever presented.

Issued by the American Bankers Association, consisting of 20,000 leading banks, and sold in denominations of \$10, \$20, \$50, \$100, in dignified compact folders. Safe and convenient to carry.

"He Wrote on Asbestos and Dipped His Pen In Tabasco"

—said **ELBERT HUBBARD**

Red hot words came from Brann's flaming pen, scorching and branding fraud and fakes—but always the Truth as Brann found it.

A man of heart and honor, he unloosed his pen in a scathing verbal warfare on all and everything that appeared to him to stand between the sunlight and his ideals. "He took the English language by the tail and snapped its head for his own delectations and the joy of the onlooker," said

Brann, the Iconoclast
Elbert Hubbard.

Truth that Made the World Blush for Shame

Vice and sham and greed, as they stalk through society leaving behind them a trail of misery trimmed in scarlet, were flayed unmercifully and in smashing triphammer words by Brann—the constructive iconoclast.

He was a builder of homes—a builder of purity and righteousness. He fought and died for religion and truth and justice. With a simple, homely logic Brann used as his weapon—words.

The Wizard of Words

With straight-from-the-shoulder English Brann battered at fraud or hypocrisy, show or pretense, falseness or deceit—regardless of what he brought down upon his own head. He was a constructive thinker in the broadest and best sense of the word.

If you are a Lawyer or Minister, Business Man or Writer, Public Speaker or Banker—if you are a lover of good literature—if you want to improve your talking and writing ability—if you want something that will make you think deeply and sincerely—you must read Brann.

NOW IN 12 MASSIVE VOLUMES The Complete Writings of BRANN, THE ICONOCLAST

You may have the entire set of 12 handsome volumes—3800 pages—for free examination in your own home. Read the volumes for five days—return them if you are not pleased. If you decide to keep them, send only \$1. then \$2 a month for a few months. This introductory offer has been accepted by thousands of people. The first edition is nearly exhausted. The demand has actually been tremendous. A second edition must be printed but the price will be higher because of increased costs of production.

SEND NO MONEY

Mail the coupon NOW. Send no money. Examine the set free. 12 volumes—3800 pages. Printed on Bangalore Antique Finish paper. Bound in rich green Flaxenweave cloth, silk banded, gold tops, backs illuminated in gold stamp. Size of page 5 1/4 x 7 1/4 inches. Remember, this five day offer involves no cost or obligation on your part. Take advantage of the low price. Mail the coupon NOW.

Up the Line from Cantigny

(Continued from page 465)

keeping it ever before him was amply demonstrated in the end by the accomplishments of the American army at St. Mihiel and in the Meuse-Argonne campaign.

But, as regards the military situation in the whole theater of war, General Pershing had also always been a warm advocate of unity of command for the Allied armies on the Western front under one competent generalissimo. When, following the reverse to the right wing of the British armies on March 21, this vitally important end was at last realized by the appointment of Marshal Foch to the supreme command of the French, British and American armies on April 3, General Pershing at once gave the most practical proof of his faith in the value of the measure by placing all of his young divisions which were available at the disposal of the Marshal to help meet the crisis, either as complete units under French or British corps and army command, or, if they were insufficiently trained for that, then for use by brigades or regiments in French or British divisions. He made only one express stipulation: that at the earliest practicable moment they should be returned to him for incorporation in an American army.

Thus it was that, under the orders of Marshal Foch, the First Division went to the Amiens salient and, a little later, the Third, Second, 28th and 26th Divisions to the Marne salient and the 42nd to the Champagne front, all during the period in which the Allied armies were still on the defensive. Most of them were placed in positions of the highest importance because they were vigorous and unwearied; because they were large, each one containing about twice as many men as the average British or French divisions of the time, but, more than all, because in such important places they could demonstrate once and for all their military qualities and settle every doubt as to the part they would be able to play in the future prosecution of the war.

Altho it had undergone unusually rigorous experiences during an aggregate of about three months' service in "quiet sectors" near Toul and Nancy since its first arrival at the front in October, 1917, the First Division had never been in a place of such activity as it entered on April 25, 1918, when it took over the sector opposite Cantigny, about thirty kilometers southeast of Amiens, from two French divisions in the Sixth, later the Tenth Corps area of General Debeney's First French Army. The sector was at the most advanced point attained by the Germans in their March offensive and they had never relinquished here the threat of pushing on to the coast and cutting the last congested railway lines connecting La Havre with the British front. They maintained an unceasing and lively artillery fire upon the en-

tire American front and rear areas and indulged in a great deal of infantry activity. The sector was at the time, in short, one of the most sensitive on the entire front.

But the First Division was of a mettle to meet the enemy more than half-way in anything he might undertake. Its commander, Major General Robert Lee Bullard, who in the course of the next few months was to rise to the rank of Lieutenant General and the command of the Second American Army, was a man of that keen, nervously energetic type whose dry sense of humor humanized his high ideals of duty and his insistence upon strict discipline, while it enhanced his ability to command both the confidence and affection of his men. All of the brigade commanders were later to become the heads of corps or to occupy positions of equivalent responsibility; most of the regimental commanders were to have divisions and many of the majors and captains were destined eventually to command at least their own regiments. As for the enlisted personnel of the division, it had been picked from the best of the old regular army of the United States. The Germans soon learned the spirit of the newly arrived Americans, whose months in quiet sectors had not dulled their pugnacious desire to "go after" the enemy and who strove in bold trench raids and patrolling, both by day and night, to make conditions in this semi-stabilized sector as much like open warfare as possible.

The part of the front line taken over by the First Division extended from a point about four kilometers west of Montdidier on the highway between that city and Rouen, northward for five kilometers to the Montdidier-Amiens road at Hill 112. The American front ran over rolling ground which generally commanded lower ground before it excepting near the center of the sector, where a sharp pocket existed across a valley. On the crest north and east of this valley the enemy held the village of Cantigny, a place, formerly, of about 150 inhabitants. Large clusters of woodland behind Cantigny furnished convenient cover for the German supports, while the valley of the Avre River, about three kilometers east of the village, gave further good artillery and reserve positions. In a word, the enemy here possessed a strong point from which to project further attacks westward and by which to cover the approaches to the Avre, flowing northwest from Montdidier to Amiens; a stream for which he had fought hard in his March offensive. But the low-lying reentrant was a correspondingly weak link in the American front. So, after having measured strength with the Germans and found them by no means invulnerable, the American command planned a local offensive for straightening the reentrant by the capture of Cantigny and also for seizing its observatories.

No precautions were spared to insure the success of this first offensive operation of American troops in Europe, which, if it went thru smoothly, would have a very cheering effect upon the Allied armies, somewhat dispirited by recent reverses. Already the morale of the division rested upon the substantial foundation of training for offensive combat upon which the American commander-in-chief had insisted from the first. In the Allied armies nearly four years of trench warfare had somewhat blunted the offensive spirit, theoretically the basis of training in all armies. But, realizing that aggressiveness is at the root of the American character, General Pershing, as early as October, 1917, had announced that

all instruction must contemplate the assumption of a vigorous offensive. This purpose will be emphasized in every phase of training until it becomes a settled habit of thought. . . . The rifle and the bayonet are the principal weapons of the infantry soldier. He will be trained to a high degree of skill as a marksman. . . . An aggressive spirit must be developed until the soldier feels himself, as a bayonet fighter, invincible in battle.

Thus grounded, on the nights of May 23 and 24, the 28th Infantry, under the command of Colonel, afterward Major General, Hanson E. Ely, which had been selected to make the attack, was relieved in front line by Colonel Frank Parker's 18th Infantry and went back to a training area at Maisonnelle-St. Eusoye. Exhaustive study of maps, photographs and post-card views made before the war and examination of prisoners and, especially, of refugee inhabitants of Cantigny, had given to the American officers an intimate knowledge of the town, the turnings of its streets and the location and construction of practically every house, cellar and machine gun nest within its confines. In the training area, upon a terrain prepared beforehand in practically exact duplication of Cantigny and its approaches, Colonel Ely's regiment, accompanied by French auxiliary troops, went thru a complete rehearsal of the attack. It then returned to line, relieving the 18th Infantry on the nights of May 26 and 27.

The attacking troops were practically all in their jumping off positions by 3:30 a. m., May 28. They were to go over the top at 6:45 a. m., after an artillery preparation lasting for one hour. Of the three attack battalions, the one on the left was to strike due east, clearing the top of the hill crest north and northeast of Cantigny and keeping liaison with the flank of the 152nd French Division, on its left. The center battalion, supported by twelve French tanks and a platoon of French flame throwers, was to mop up Cantigny with its right companies while those on the left, regardless of fighting in the town, were to keep on across the plateau north of it and consolidate on the objective line in conjunction with the left battalion. Two companies of the right battalion were to assure the cleaning up of the south part of Cantigny, while its extreme right com-

W. L. Douglas shoes are sold through 107 of our own stores direct to the wearer at one profit. All middlemen's and manufacturing profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W. L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-seven years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

WONDERFUL SCIENTIFIC GAME

PSYCHOLOGY OF THE HAND
SIMPLIFIED

A wonderful and comprehensive language resides in the hand. This great new game translates the language of your hand and the hands of your friends in a way that is absorbing, amusing and instructive. Never a dull moment where Psychology of the Hand is played; so different and refreshing. Based on scientific fact, you may even discover unsuspected hidden traits that will contribute to your business or social success. Give your friends the game treat of their lives by introducing them to Psychology of the Hand. It never grows old.

If your dealer cannot supply you, we will mail the game with complete booklet of instructions, postpaid, for \$1.25.

pany was to advance over the open ground south of the place and assure liaison with the American regiment next in line. One company of engineers was distributed along the front, one machine gun company was attached to each battalion and advanced with it, while two companies of the 18th Infantry, under Major Theodore Roosevelt, Jr., were subject to Colonel Ely's orders as reserves. In brief, the operation was arranged in accordance with all the latest and most approved theories for an attack with limited objectives. It remained to be seen whether the young troops from overseas, even with such painstaking arrangements, would be able to take their objectives or whether, having taken them, they would be able to perform the still more difficult task of holding them.

It was known that the enemy's front was occupied by the 271st and the 272nd Infantry regiments of the German 82nd Reserve Division, each with one battalion in front line, one in support and one in reserve. These regiments were reckoned as above the average of the German army in quality and size, their companies each numbering about 160 men.

At 5:45 a. m. there opened a terrific artillery preparation on Cantigny laid by about 250 guns, ranging in caliber from the 75s of General Summerall's divisional artillery to the 280s and other heavy guns of the French corps and army artillery. At 6:45 a. m., while the French artillery continued its fire of neutralization, the American light pieces pulled their fire back on the initial barrage line, 300 machine guns suddenly added a tempest of bullets to the flashing barrier of shells and the infantry, leaping from the shallow trenches, swept out close behind the barrage as it rolled forward.

From the American lines the spectacle was terrible and magnificent. Cantigny, crumbling beneath the rain of steel, lay with its falling walls and shattered trees half revealed thru the smoke and the dust and debris tossed aloft by the bursting shells, while down the slope of the shallow valley the blasting tempest of the barrage tore asunder the earth and the matted belts of German wire and behind it moved the olive-drab waves of infantry, engulfing like a rising tide, the successive lines of German trenches and their terrified defenders. With kindling eyes the observers, among whom were General Pershing, General Bullard and many other American as well as French officers, watched the triumphant progress of the attack which every moment was demonstrating more clearly the superb discipline and resistless spirit of the American troops.

The enemy, completely demoralized by the terrific bombardment, was unable to lay an effective counter-barrage and his infantry and machine gunners were overwhelmed by the American bayonets and by the tanks and flame throwers before they could rise from their shelters to offer resistance. Within thirty-five minutes the attacking line, overrunning and mopping

up Cantigny, had advanced to its objectives at all points and was consolidating the new front across the open ridge. With the ruins of Cantigny as a new strong point in the center, the American positions now commanded all the German lines on lower ground to the north and east. In the attack 225 prisoners, including five officers, had been taken, together with sixteen machine guns and about 500 rifles.

The young troops from overseas had worked the first part of their problem; they had taken their objectives in dashing style. The second and harder part of the problem was now before them; namely, the holding of these objectives. It could not be expected that the Germans would permit such a success of the raw Americans against their veteran battalions to go unchallenged. Nor did they.

Hardly ten minutes after completing their advance, Colonel Ely's men were attacked from the Bois de Fremicourt and the Bois de Lalval which, as has already been said, lying northeast of the new American front and close to it, furnished extensive cover for the massing of the German infantry. The attack was quickly repulsed, but before noon the enemy's artillery fire gradually grew heavier until it became a deluge which for the next seventy-two hours not only tore to pieces the newly conquered ground but swept the country in rear of it for several kilometers. Counter-attack after counter-attack by the German supports and reserves was hurled back, sometimes by the artillery alone, often only by the close fighting of the infantry. Many officers and enlisted men distinguished themselves by acts of individual heroism. Lieutenant Colonel Robert J. Maxey, 18th Infantry, went forward with the first wave and, tho mortally wounded, gave detailed instructions to his second in command and then caused himself to be carried back to his regimental commander with important information before he died. Captain Henry E. Mosher and First Lieutenant Robert B. Anderson, 28th Infantry, were both killed while consolidating the position with utter disregard for their own safety. Second Lieutenant Max C. Buchanan walked up and down in front of his line, instructing and encouraging his men, until killed by a shell. Corporal Lewis Kowaski captured a machine gun, used it in helping to break a German counter-attack and a little later led the way to a dugout which he had located in capturing the gun and assisted in taking nine prisoners. Corporal Robert Finnegan concealed the fact that he was mortally wounded and continued firing his automatic rifle until he became unconscious from exhaustion. Private Tony Lubeck lost his life in stalking enemy snipers in a wheat field. Corporal Leon E. Harlow, of the 7th Field Artillery, under smothering shell fire repaired the telephone line which carried information back to the batteries from the front, until, becoming disgusted with the frequency of the breaks, he proceeded to carry the messages himself thru the bursting shells.

By such deeds and uncounted other ones of equal luster did the young soldiers of the New World prove to foe and friend alike their ability to hold their own against any foe, while above them the planes of the French 42nd Aero Squadron, by night and day keeping the front lines in communication with the posts of command at the rear, observing the enemy and, in turn, holding the German air craft back from the American zone, were a constant reminder to them that their veteran allies of the French armies were shoulder to shoulder with them in the common struggle.

It was only on the morning of May 30, after seven distinct counter-attacks in which he had lost, so it was estimated, about 1000 men killed and wounded besides the 225 captured, that the enemy, finding further sacrifices utterly vain, at length resigned the palm of victory to the new foe from across the sea. The Americans had lost in the struggle 199 officers and men killed, 652 wounded and 16 missing. Every French corps and division commander in the vicinity of Cantigny hastened to General Bullard's headquarters to express to him and to General Pershing their enthusiasm and their admiration for the fine performance of the American troops, while Premier Clemenceau and General Petain, commander-in-chief of the French armies, gave the crowning evidence of the joy of France by journeying there to congratulate the victors. On the 30th of May the German hosts, having broken thru the Chemin des Dames front on the 27th and poured southward across the Vesle, were approaching the Marne between Rheims and Chateau-Thierry. But even in the hour of this seemingly crowning disaster, a thrill of exultation and hope passed thru every Allied country because of the victory of the First American Division, with its heartening promise for the future.

Washington, D. C.

He—Reggie's girl has money to burn.
She—Yes, I hear she's looking for a match.—*Princeton Tiger.*

Professor—What is your answer to the problem?

Student—Mine is two, sir.

Professor—Minus two. Correct.—*Froth.*

I nearly lost my ring in the bath tub last night while taking a bath.

Mrs. Morton (angrily)—Tommy Horton, what made you hit my little Jimmy?
Tommy—He struck me wid a brick.

Mrs. Morton (more angrily)—Well, never let me hear of you hitting him again. If he hits you, you come and tell me and I'll whip him.

Tommy (in disgust)—What! He hits me wid a brick, and you have the fun of lickin' him for it? Not much.—*Blighty.*

Those White Teeth

Ask People How They Get Them

All Statements Approved by High Dental Authorities

Millions of teeth are being cleaned in a new way. You see them everywhere—white, glistening teeth.

Ask about them. The owners will tell you, probably, that they use Pepsodent. They have found a way to fight the film which causes most tooth troubles.

Millions have already proved it. Leading dentists everywhere advise it. And over 6,000 new people daily write us for a 10-Day Tube.

Why Teeth Discolor

A viscous film forms on the teeth and coats them. You can feel it with your tongue. Modern dentists know this film to be the teeth's great enemy.

It clings to teeth, enters crevices and stays. The tooth brush does not end it. The ordinary tooth paste does not dissolve it. So it remains to do a ceaseless damage, until removed by cleaning in a dentist's chair.

Film is what discolors—not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So, despite the tooth brush, all these troubles have been constantly increasing.

Now We Combat Film

Dental science, after years of searching, has found a way to combat film. Five years of careful tests have proved this beyond question.

The method is now embodied in a dentifrice called Pepsodent. It complies in all ways with modern dental requirements. And a 10-Day Tube of this tooth paste is now sent free to anyone who asks.

Let Your Mirror Tell

Make this free test. Look at your teeth now, then look in ten days. Let your mirror tell the story.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

Science has lately made this method possible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. So it long seemed barred. But a harmless activating

method has been found, so active pepsin can be every day applied.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how the teeth whiten as the fixed film disappears.

The results are quick and evident. They are all-important. You will never go back to old methods when you know them. For the sake of cleaner, safer teeth cut out this coupon now.

ESTABLISHED 1865

European Securities and the Average Investor

By Luigi Criscuolo

THE war ended before most of us expected it and the result was that we were unprepared for the economic problems the future would bring. All countries found themselves loaded down with debts, interest upon which had to be paid, their factories on a war basis, manufacturing principally objects for destructive purposes or necessities for use of the men in the armies. With the end of the war, the problem was: how to change all of these industries into organizations manufacturing goods which could be sold abroad and help create credits to balance the enormous national debts. This was particularly so in the case of the other Allies toward the United States or England.

Following peace, vast numbers of men were released from the armies. Arriving in the cities and finding no immediate employment, disgusted with the war, it was easy for the agitator to convince the ex-soldier that something was wrong with the "system." The result has been a wave of unrest in Europe that has elected radical members to many parliaments. Our own country has been similarly affected. We have had, too, our strikes, our agitations, our deportations of radicals.

But these are novel conditions which will disappear with time. Normal human beings want to work and produce, something for sustenance, something for recreation, something for a rainy day or old age. The whole world is beginning to enter a period of reconstruction—not radical revolution—but constructive, industrial reconstruction in which war damages will be repaired and industries will resume on a profitable and competitive basis. In order to begin to accomplish this, Europe in particular needs raw material. She can only obtain it from North and South America, Japan, China and other countries where, in nearly all cases, European currencies are at a discount great or small.

When Europe gets down to work, produces a new stock of goods and finds new or old markets to take them, there is no doubt that every country will increase its wealth and annual income. The war has enabled many countries to reform their industrial plants so that great quantities of goods can be produced where before the war only moderate amounts were produced. Nations which have abundant man-power can always produce something which some other country wants, given a raw material to transform into an object of commerce. Of course, some European countries have been engaged in an orgy of spending money for luxuries, paying fabulous prices, but that is only a temporary condition which we also are experiencing in as large a degree.

Europe is not bankrupt nor likely to be so. The countries which are in difficulties have had to suspend gold payments, they have unduly inflated their currencies, they may pay interest or

principal on this debt in paper rather than in gold—but that only applies to their internal debt, which is mostly held by their own subjects. External loans are, of course, payable in the currency of the country where those loans were placed originally. Foreigners holding internal loans payable only in the currency of the issuing country are now at a disadvantage considering the fact that at this writing one can get a pound sterling for \$3.40 against a normal of \$4.86, a franc for 14.25 cents and a lire for 17.90 against a normal of 19.3 cents, a mark for 1.10 against a normal rate of 23.80 cents, and so on.

But that is where the investor's opportunity comes. Times will become normal once again within a decade or so. The wise man is he who buys when others are obliged to sacrifice. Europe is being reorganized but is *not insolvent*. Any reorganization proposition that is intrinsically sound will make money for the investor who seizes the opportunity and puts some of his funds in it. We have an identical opportunity in the case of Europe. Countries with centuries of civilization behind them are not going to quit merely because they have indulged in a costly war. There have been such wars before. They are going to produce enough in as short a time as possible to pay their debts and then work some more to accumulate a surplus.

Europe may have political and industrial disturbances, ministries may rise and fall, monarchies may become republics, and republics may change to monarchies. But back of all we have the natural resources which cannot be destroyed and the earning power of human beings who continue to multiply and labor in one or another vocation. No people who defaulted in their just debts could continue to trade with civilized nations on terms of equality. European people belong to a civilization that values business honor even if treaties are sometimes considered "scraps of paper."

The American people could help restore the world to a normal basis by abstaining from the purchase of luxuries and buying instead the securities, external as well as internal, of European nations. Italy has just launched an internal loan of fifteen billion lire, bonds of which can be purchased in the United States at about \$50 per 1000 lire as compared with about \$193 in normal times. Italy is also about to offer an issue of \$25,000,000 6½ per cent bonds at 97½. France is considering the offering here of a large issue of internal bonds payable in francs but having a feature under which each year a portion of the issue will be redeemed at 150 per cent. Belgium is making a similar offering. These issues afford an opportunity for profit and even conservative investors may purchase and put away substantial amounts of these bonds in order to reap a profit in the next decade.

The Inside Facts

(Continued from page 467)

fest itself with intensity at the very time crops had to be moved, so that the demand for freight transportation in the fall was more acute than ever before. In October a larger freight service was performed than in any preceding October, so far as the records show, and it was done with less congestion and less car shortage than had been manifested before in autumn months of heavy business.

The ability of the Railroad Administration to perform so large a freight service in the fall of 1919, with so little congestion and car shortage and in spite of extraordinary difficulties, was due to its ability to unify control of locomotives and cars, divert freight from one line to another, apply embargoes promptly and with a view to the best handling of the general situation and to regulate the forwarding of freight by the use of the "permit system." This system is a method whereby, in circumstances making congestion probable, freight of the kinds likely to contribute to congestion at certain terminals or destinations is not allowed to be loaded except as and when permits are issued upon showing that the freight can be moved to destination and there promptly unloaded by the consignees. This permit system is one of the most important methods of avoiding or minimizing congestion in times of heavy business.

It has been the policy of the Railroad Administration to consult, and respect as far as practicable, the wishes of the public. To this end a Division of Public Service was established to insure adequate recognition of the reasonable demands of the public, close coöperation was established with the State Railroad Commissioners, the shipping public was given equal representation with the railroad managements on the thirty-three freight traffic committees established by the Railroad Administration thruout the country to deal with rate matters and was given a representative on each of the seventy-three terminal committees created by the Railroad Administration to facilitate the handling of traffic thru the important terminals.

The Director General has felt a keen sense of responsibility to railroad employees. He believes that those who do not earn their living by their daily labor generally fail to appreciate adequately the importance which the laboring man justly attaches to protection from favoritism and arbitrary action so that he may reasonably be assured a self-respecting career in the work in which his lot has fallen. The rights of property seem to be susceptible of much more clear-cut definition and protection than the rights of labor and yet the former, tho highly important, cannot exceed the importance of the latter.

The Railroad Administration has endeavored to act in accordance with these principles and in accordance with the further principle that a common understanding between the management and the employees is of paramount

Put Your Money in a Guaranteed Institution

When you deposit your money in the Bank of North Dakota, you can go home and tell your wife that it is in a state institution—a bank that is owned, operated, managed and controlled by the state of North Dakota, whose taxable property is estimated by the state tax commissioner to be upwards of two billion dollars.

All deposits are tax free and guaranteed by the state of North Dakota. The Bank of North Dakota was created by the citizens of North Dakota and is supported by the faith and integrity of the whole state. Checks and remittances at par. Four per cent paid on time deposits of \$500 or over from outside the state of North Dakota.

There is a world of interest in reading ADVERTISEMENTS

This publication is far brighter and more interesting for the advertisements it contains. You get information from them. You learn all about many things that are of so much personal importance in your life. They keep you posted. They tell you what is new and desirable.

Sometimes they keep you from making an unwise purchase by pointing out just the reasons why one article suits your needs better than another.

Reading advertisements helps you to economize. You know that economy is not alone a matter of saving money but of spending money to advantage. Advertising identifies goods of unquestioned value.

When a manufacturer puts a name on goods and tells you about them you may be sure they are worth while because it does not pay to advertise merchandise that is not good.

Make a practice of reading advertisements. Read them as news from the business world, published for your benefit. They will help you to live better and dress better and make more of your income in every way.

No. 12

importance in promoting justice and also a sense that justice is being done.

To carry out these principles definite rules were established to prescribe reasonable working conditions including regulations concerning discipline, seniority, etc., and bi-partisan Boards of Adjustment were created to deal with grievances which could not be settled locally on the railroads.

As a result of these defined working conditions and these Boards of Adjustment, the employees generally have felt that they were much better protected than formerly against arbitrary action. On some of the largest railroads in the country, with the strongest and most effective managements, not a single case has come to one or more of these Boards of Adjustment; the local managements have dealt with the classes of employees represented on such Board or Boards so reasonably as to obviate the necessity for appealing thereto any grievances at all and the committees representing the employees have adopted a reasonable attitude and avoided appeals to the Boards of Adjustment. Eventually this same successful treatment should be manifest on all the railroads and as to all classes of employees, if the system shall be maintained in some proper form.

There has been a great deal of misconception and some misrepresentation as to the extent of the wage increases made by the Railroad Administration. The average of the increases made, when measured by the increases in the rate per hour, is about 100 percent or slightly over, as compared with the years of 1913 and 1914. It is believed that this is by no means out of line with the increases made in other industries. The reports of the Department of Labor show that the increases in the steel and iron industry in the pay per hour have been about 120 percent in the same period. Of course the employees have not received an average increase of 100 percent in earnings, because their workday has been shortened, generally speaking, to eight hours; so manifestly an increase of 100 percent per hour in pay is partly offset when the hours are reduced.

As the result of my continuous contact with this subject and repeated discussions concerning it with railroad operating people throughout the country, my deliberate judgment is that Federal control has not cost a cent more than private control would cost in the same difficult period, but on the contrary has cost considerably less. I believe that the private control which existed in December, 1917, if it had continued during the increasing war stress of 1918, till the armistice, and during the even more difficult period of reconstruction since that time, would have encountered in the aggregate substantially as great increases in cost as the Government has encountered and would have been wholly unable to realize many important economies which have been accomplished thru unification and which have helped to offset partly the aggregate increases in cost.

It would be surprising if complete analysis did not indicate a more favor-

able showing as to operating costs by this large private enterprise with unbroken continuity of management and policy extending over a period of nearly twenty years and its ability to plan with confidence for the future, than by the Railroad Administration. The latter was created almost overnight as a war emergency and avowedly as a purely temporary expedient; was unable to create a really permanent organization or to hold thruout even its temporary life some of its experienced members; and was without opportunity to carry out comprehensive policies of a reasonably permanent character either as to capital expenditures or as to operation.

This illustration of the largest private enterprise is made simply to emphasize the fact that the railroads like other industries were subject to the conditions growing out of the war and the purchasing power of the dollars expended by the railroads for operating expenses was affected as in other industries. Undoubtedly the same condition would have been experienced if the railroads had been in private control. They would have had to pay the increased cost for materials and supplies and, as is indicated by the above discussion respecting the relations with labor, the average increases in wages by the Railroad Administration were in line with those in private industry, and there is no reason to believe that the railroads under private control would have avoided corresponding aggregate increases.

The resulting favorable showing made by the Railroad Administration has been influenced in part by the economies which have been possible as a result of the unification of terminals and ticket offices, elimination of circuitous routes, pooling of repair facilities, common use of parallel main tracks, etc.

The excess of operating expenses and rentals over operating revenues for Class I railroads for the 26 months' period was \$715,500,000. In considering this figure the following analysis is worthy of attention:

If the general rate increase had been effective January 1, 1918, instead of in June, 1918, this amount would have been reduced by\$494,000,000

If for the months of January and February, 1920, the railroads could be paid a rental proportionate to the normal earning capacity of January and February as shown by the test period, instead of receiving the full two-twelfths of a year's rental, this amount would have been further reduced by approximately 49,000,000

If the coal strike had not taken place, this amount would have been further reduced by most, if not all, of the actual deficit shown in these two months, aggregating... 114,000,000

Undoubtedly a large part of the deficit in the first six months of 1919 was due to the slump in freight business. The total deficit in these months (included in the \$715,500,000) was..... 292,500,000

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

6% NET For 49 years we have been paying our customers the highest returns consistent with conservative methods. PERKINS & CO. Lawrence, Kans.

These considerations emphasize that the figure which is taken as representing "loss due to Federal control" is in no sense chargeable to Federal control as against private control.

The real cause of the deficit has been not that the cost was greater than it would have been if the railroads had been operated under private control, but that in view of the sudden increases in costs on account of the war it was not feasible to increase rates soon enough to meet the increased cost of Federal control, and, as the cumulative effect of this cost began to be more clearly defined, it seemed inexpedient to make an additional general increase in rates because it seemed in the public interest to defer such action until more confident calculations could be made rather than to upset the complicated rate structures of the country by a premature and inaccurate additional rate increase based on temporary and abnormal conditions.

Moreover, the Federal Control Act contemplated that the President should increase rates to meet the cost of unified control. The unified control was temporary. It was clear that the increase in rates which would be necessary to make the railroads self-supporting under private management with an adequate credit to enable them independently to finance their capital requirements would have to be constructed on a different basis and would in all probability be much greater than would be required for the mere purpose of meeting in full the cost of unified control. Hence a further rate increase during Federal control in addition to that which was made in June, 1918, would also have been admittedly inadequate to meet the situation upon the return to private control. It therefore seemed far better to let the matter be adjusted once for all upon the return to private control than to have an intermediate and inconclusive step which would be seriously disturbing to the rate structures of the country. The general increase made in June, 1918, tho formulated with the greatest practicable care, has kept thirty-three rate committees thruout the country working for eighteen months endeavoring to "iron out" complications which arose and about twenty thousand rate authorities have been issued to make readjustments which were deemed appropriate. Certainly a similar task ought not to have been undertaken again during Federal control under conditions insuring that the work would be premature, inaccurate and inadequate for the purposes of the permanent rate structure of the country.

The deficit, therefore, has not been due to the cost of Federal control being greater than the cost of private control would have been, but to the justifiable policy of protecting the public interest thru permitting a portion of the necessary increase in cost being temporarily met out of the general Treasury rather than out of an unnecessarily disturbing temporary additional rate increase for purposes of the unified control which was about to end.

Know Your Problems

Difficulties are often encountered by even the largest investors when an exacting opinion or authoritative statistics are wanted.

To help investors, both large and small, analyze their problems, we are distributing two valuable booklets.

1. **Grey Book**—graphic facts of price fluctuations.
2. **White Book**—latest facts about more than 500 companies.

Either or both on request together with our pamphlet showing how you can buy securities on our **Monthly Instalment Plan**.

THE INDEPENDENT
311 Sixth Avenue New York

The railroads went back to private control on March 1st without the slightest hitch or confusion, with equipment and track in condition to function effectively, with a basis laid for the amicable adjustment of important pending wage questions and with a gratifying record of a heavy business handled during the winter in spite of extraordinarily severe weather and in spite of the persistently hampering influences resulting from the coal strike. In January, 1920, a considerably larger freight business was done than in the corresponding month of any of the three preceding years and there are similar indications for the early part of February. The Geological Survey of the Department of the Interior shows that the output of bituminous coal transported for the first seven weeks of the year 1920 "far exceeded its nearest competitor, 1917, by one and a third million tons."

During Federal control with unavoidably inadequate equipment, an unprecedented public service has been performed, great progress has been made in protection of the just rights of labor, the cost has been kept below what it would have been under private control, and, at the end of Federal control, the railroads have gone back functioning efficiently and capable of continuing to do so.

Washington, D. C.

Man proposes; but woman gets him to!
—Blighty.

Dr. Percy Stickney Grant.

Shame upon you and your kind!

You should stick to solemn cant,

Keeping all else from your mind.

Still: if they expel you, pause

Till you've told me, I beseech,

Where you may be found, because

I shall want to hear you preach.

—New York American.

The visiting Methodist parson was addressing the Sabbath scholars at Devil's Elbow on the beauties of heaven and the virtue of preparedness for translation thither at a moment's notice. "Now," he said, "hands up all of you children who are ready to go to heaven now." A forest of hands arose—all but that of little Ernest, who sat downcast and embarrassed. "Ah," said the parson, "there's a little boy with his hand not up. Why aren't you ready to go to heaven, my lad?" Ernest looked up for a brief instant, and then down again. "I got two rabbit traps set," he said.—*Sydney Bulletin*.

"Where are you going

My pretty maid?"

"I'm going ashopping,

Sir," she said.

"May I go with you,

My pretty maid?"

"Why, yes, certainly; if you'll agree to chase with me from one store to another, up and down stairs, and in and out of elevators, the way I've got to; wait for me to have a fitting; help me pick out some bridge prizes; give me the benefit of your advice in selecting Christmas presents for my four brothers; take me to lunch somewhere; carry a few bundles and bring me home in a taxi.

"Sir," she said.—*New York Sun*.

Scores of chemists

Many chemists help to solve your food problems—which are also our problems.

At our Chicago plant alone we have a laboratory with 70 chemists; and we have 10 more laboratories at other plants. The experts in this department analyze all raw materials used, to test their purity.

They supervise the admixture of preparations that are used in curing meats—thus insuring the uniform and standard quality that has made our hams and bacons the leaders in the trade.

They are continually experimenting to find new uses for by-products so as to prevent waste, and they are always striving for more economical methods of manufacture.

And our whole expense for chemical research and analysis is only $\frac{1}{100}$ of a cent per pound of product sold. Broadly speaking, this is not an expense, it is an economy!

This is the kind of service that can be best given by a large business organization.

New Plays

Look Who's Here. An average musical comedy, spectacular and gorgeous. (Forty-fourth Street Theater.)

Medea. the most blood-curdling and therefore the most popular of the tragedies of Euripides, is staged by Maurice Browne in very artistic style. The chorus is finely grouped and the declamation of Ellen van Volkenburg as "Medea" and Ralph Roeder as "The Messenger" is excellent. (Garrick Theater.)

Remarkable Remarks

CHARLES M. SCHWAB—Concentrate.

ADMIRAL SIMS—Hindsight must not be blind sight.

HERBERT C. HOOVER—I am for President Wilson's leadership.

W. J. BRYAN—The action of the Senate made my blood boil.

SIR OLIVER LODGE—I have seen objects move without contact.

EX-CROWN PRINCE WILLIAM—I get very homesick sometimes for my country.

MARSHAL FOCH—How did I win the war? I did it by smoking my pipe.

SENATOR KENYON—It's about time we stop demagoging about Great Britain.

J. H. HUNEEKER—Indians, snow scenes and nudes should be ruled out of every art haunt.

CARDINAL O'CONNELL—The women are becoming masculine and the men are becoming effeminate.

JOHN D. ROCKEFELLER, JR.—Your character is what you are; your reputation, what men think you are.

THOMAS A. EDISON—I expect that moving pictures will take the place of most books below the ninth grade.

LADY ASTOR, M.P.—A woman of twenty-one, or even of eighteen, is far older and wiser than a man of twenty-five.

WILLIAM WRIGLEY, JR.—Advertising is pretty much like running a furnace—you have got to keep on shoveling coal.

FATHER JOSEPH H. McMAHON—Prohibition is a religious error founded on the Protestant doctrine of the total depravity of man.

SECRETARY BAKER—We have lost the spiritual leadership of the world and abandoned the spirit of Chateau Thierry and the Argonne.

EDUCATIONAL EXPERT LOUISE CONNOLLY—When a man proposes the girl is thinking all the time what would be her answer if they were in a play.

GENERAL PERSHING—Whatever service I have rendered in cooperation with or in command of our young manhood I owe to my mother's early teaching.

The Candid Candidate

"What are the issues?" we mildly inquired. The candidate gave us a look of disdain; "What are the issues?" he paused and per-spired.

"Don't be so stupid! The issues are plain. Our party believes in the good of the Nation, We're going to go in and untangle this muss."

He waggled his finger in stern indignation. "What are the issues? The issues are us!"

"What do you stand for?" we waited his answer.

He thumped on the desk with his sinewy hand.

"Pray do not be foolish, no woman or man, sir,

Can have any doubt as to just where I stand.

No person dare make the insulting sugges-tion

That I lack convictions for which I would fight.

Without reservations I'll answer your question.

"What do I stand for? I stand for the right!"

"What are your views on the League reser-vations?"

He beat with his fist on his opulent vest.

"Why ask me," he cried, "for renewed declarations?

My views on that subject I've often ex-pressed.

The highest convictions of honor shall guide me,

My views are straightforward and honest and fair;

No matter tho critics may scorn and deride me,

They'll be in the platform; just look for them there."

"What about liquor?" He pounded the table.

"I cannot," he said, "answer questions all night;

But if I'm elected I know I'll be able To settle that problem, and settle it right.

Don't ask for the details; I cannot disclose them;

To tell you about them would hardly be wise;

But this much is certain, that when the world knows them

They're sure to delight both the wets and the dries."

—New York World.

from Rigoletto*

Victor Records

As famous for their fidelity
as for the artists they present

Absolute faithfulness of reproduction is the one essential the greatest artists demand in the making of talking-machine records.

Because of their dominant position in the world of music, because of the pride they take in their art, it is a prime requisite that their interpretations shall be reproduced in all their original beauty.

It is highly significant that the world's greatest singers and instrumentalists have entrusted their art to the Victor and Victor Records as the one medium through which they themselves wish to be heard.

There are Victrolas in great variety of styles from \$25 to \$1500, and any Victor dealer will gladly play any music you wish to hear. New Victor Records demonstrated at all dealers on the 1st of each month.

What's Wrong with Labor?

A remarkable study of the experiments in industrial government thruout the United States that have proved successful from the standpoint of both employers and employees

The Ground Work

By Professor John R. Commons of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcolm Sharp,
Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

WE visited some thirty establishments from July to September, and Wisconsin to Maine. We prepared by studying industrial government in books, papers and pamphlets from Russia to Australia. We selected as large a variety of types that had successful experience as we could find. America has examples of every kind, from industrial autocracy to revolutionary democracy.

We specialized somewhat, had different points of view, each a different bias toward capitalism, Socialism, unionism, or individualism. One of us took constitutional government in industry; another took the employers' scheme of factory administration; another the wage-earners' scheme of democracy; another, due process of law in industry; another, national collective bargaining.

We spent from one to five days together or separately in each establishment with the managers and with the employees. What we were looking for was successful experiments along new lines that people are talking about. We wished to get something practical for the several employers in Wisconsin who contributed toward our traveling expenses. We avoided fresh experiments and selected those that went back before the war.

We saw indeed that they were experiments. We have not agreed on any conclusion of universal application. We certainly saw no automatic self-solution of the labor problem. We saw a problem that never will be settled, but is being settled every day.

We naturally distinguished personality from system. But we found that even that distinction was treacherous. Gradually certain establishments began to stand out as distinctive. Each had something that was unique. Sometimes its distinction sprang from its system of organization; sometimes from a dominating personality that seemed to override system. Yet even that personality had a system.

We tried to find something on which to hang the facts in each business concern. One of the concerns stood out as a struggle for power of organized capital and organized labor; another was just plain health and happiness for its workers; another was faith in people of all sorts and conditions; several were faith in the management; another was getting employees to think about the future of the business; another was cooperative speeding-up; another was minute measurement of human motives in terms of money; another was emancipation from absentee owners and government by the imaginative minds active in the business. All were trying to sell efficiency to democracy.

ALL of them, of course, had features in common, but these ruling ideas stood out rather clearly as we neared the end of our journey when we could look back and compare them one with another.

All of them were very alive and were making great changes in short periods both in system and personality. One was passing from autocracy into government by employees; another from scientific management into unionism; another from welfare into self-government.

One interesting fact was found: the sudden or gradual moral conversion of an employer from business to humanity. Employees noted it, and could not at first believe it, or were still incredulous, and told us about it, and so did the employer himself. In some cases it was unionism or strikes that did it. In others it was business foresight of the labor problem. In others it was sermons by an industrial evangelist.

We noted also certain obvious contrasts. In one case output had fallen off two-thirds, wages had doubled and prices took care of both. In others, efficiency had increased nearly as much as wages, so that the increased cost of living was nearly paid for by increased output per man. In some cases wages had not kept up

with the cost of living; in others they had far exceeded the increased cost. In some cases labor-turnover was down at astonishingly low figures compared with the industrial world in general. In some cases seasonal industries had been stabilized so that no employee is laid off. In others a reserve army is depended on for elasticity. In others the rapid growth of the business has overcome instability of employment.

The Independent has asked us for a series of articles on these experiments in Industrial Government. We do not say Industrial Democracy. We find widely different things done in the name of democracy. The main thing is that they are being done by very vigorous men and women, who are going after things, and are making things buzz. Every one of them is a live idea getting itself into action. Forms of government are adapting themselves to ideas and conditions.

Yet we are not under illusions. We looked up experts in industrial government. It is astonishing what easy marks for experts many employers have become. From all sides and several vocations these experts are coming in and setting themselves up. They get long-distance calls from employers to hurry up and come at

once. They lift the employers' pocketbook at will. One would think that the capitalistic system is crumbling, in that employers have lost the power of discipline. In some cases we found that they had actually abdicated and turned the labor end of their business over to professors. Just what it all portends is a puzzle. It may be the temporary scarcity of labor, and employers will regain their independence when the panic comes. Wise ones are preparing for it.

We do not convince ourselves that the establishments which we visited are typical of industry as a whole. They seem, indeed, to be successful, with one exception, for the present along new lines. One of these employers said that 25 per cent, another that not more than 10 per cent, would be a liberal estimate of the proportion of employers in general who were alive to the new labor situation and were meeting it in the new way in which they themselves were trying. That is the general impression. Labor seemed to have its innings in the summer of 1919. Capital will come to the bat in due time. We shall then know whether the experiments of our selected establishments are forerunners or foredoomed.

Where Everybody Likes to Talk Shop

The First of Ten Monthly Articles by Professor Commons and His Colleagues on the Big Plants That Are Finding a Way Out of Labor Troubles

THE Manager was attending a committee meeting. He would be back in his office in about an hour.

The offices might all be schoolrooms. Plain tables, many chairs, walls hung with charts and diagrams—that is the academic and utilitarian background for the transaction of business at The White Motor Company of Cleveland, Ohio.

The time of waiting passed quickly. We were making a rather furtive inspection of the charts and blue prints on the walls, when a dark, energetic looking man came forward and offered to explain any of them which we did not understand. We expressed surprise at the unusual spectacle of a company posting for public consumption the facts which are usually held as inviolate secrets. It was almost embarrassing to have thus boldly thrust upon us information the like of which we had sought always modestly, often vainly, and had usually received only in the strictest confidence. We might even have been rival manufacturers, for all the company knew of us, diligently inquiring into their trade secrets.

We also expressed our interest in the prominent place given in the diagrams to the Department of Industrial Relations.

The dark young man thereupon introduced himself as the Director of Industrial Relations. We recognized him at once as a departure from the ordinary run of things—a new type of Industrial Director. We had heard of him before from labor officials in the city; he was formerly President of the Cleveland Federation of Labor. And apparently he is still greatly respected by his former co-workers in the labor movement.

We were deep in his theories of the part the worker should play in management and in responsibility for producing, when the General Manager came in abrupt-

ly. He was quite taken, he told us, with an idea that had just occurred to him and which he wished he had thought of in time to take up with his men. Unfortunately the committee had disbanded and the men had gone back to the shops. So there was nothing for him to do but wait until it should meet again two weeks later. He turned to us with the same eagerness to give and to take which he must have had in the meeting just dismissed. The committee, as he explained to us, is composed of from twenty to fifty employees, each one of whom has been elected by a group of ten fellow employees to be part of a giant shop committee, to attend meetings for one year, and to report back to his constituents as much information as he is able to absorb and impart.

The "shop committee" as it appears here is a unique institution. It is not a union committee; it is not a workmen's council; it is not a "company union." It lays no claim to being a form of "industrial democracy," and it has nothing to do with collective bargaining. It is simply one of the essential parts—perhaps the most important part—of the great big scheme of thinking and planning for the future which makes the White Motor worth thinking about and writing about. The "shop committee" is just a mammoth forum, divided up into sections which meet every alternate week to talk over with the manager or his assistants any part of the whole industrial problem from the situation in Russia and Australia to the answer to the question, "Where will the White Motor be when the conditions change?"

Some kind of readjustment, declare the management, is bound to come. It does not make much difference what kind of a change is coming if we are only ready for it. White Motor wants to be ready. Anybody, be he capitalist, socialist, radical, or trade union agitator, is welcome to come in and tell the management what kind

L. 222006A

Part of the engine machinery department in the White Motor Company's factory where every man employed has a chance to understand what the big executive plans and problems are so that he can think about the future of the business

of a change *he* thinks is coming. The manager invites information and goes after it. He searches the papers, radical and reactionary, foreign and American. He gets every slant possible on human thought and action. And he seems to have here in his plant a germ of almost every great movement which is shaking the world to-day. Whichever one of these ideas wins out, the White Motor has a chance of passing over

gradually into the new régime without any violent upheaval.

We asked this unusual manager to consider us one of his committee and give us exactly the kind of thing he had been handing out to his men the hour before, or previous hours. He agreed, and this is what he gave us:

"We do not know which way the country is going. A financial readjust- [Continued on page 28]

Mr. O. F. Carpenter is a specialist in labor problems who has made extensive studies abroad

Instructor in Factory and Office Administration at the University of Wisconsin, Mr. A. P. Haake pays attention to the problems of the employer

There is no greater expert on labor problems and causes of labor unrest than John R. Commons, professor of political economy in the University of Wisconsin. He has served on the United States Industrial Commission, the Industrial Commission of Wisconsin and the United States Commission on Industrial Relations and has been president of the American Economic Association. Last summer, before beginning to write this series of articles, Professor Commons made a thorough survey of various experiments in industrial government being made by some thirty establishments from Wisconsin to Maine. He had a tremendous background, having written, among other books, a History of Labor

Jennie McMullin Turner was the Labor member of the Wisconsin Minimum Wage Board

Malcolm Sharp was another valuable collaborator of Professor Commons in gathering material for the series of articles to appear in The Independent

JUSTICE BRANDEIS

JUSTICE PITNEY
(ASKING A QUESTION)

JUSTICE DAY

JUSTICE MCKENNA

CHIEF JUSTICE WHITE

THE Honorable, the Supreme Court of the United States."

A gavel taps. The whispering ceases. Everyone stands as the nine black-robed justices file into the chamber.

There is a mechanical nodding of heads by the attendants as they pass and a "good morning" from each in acknowledgment. Solemn small boys push large leather chairs under the descending justices and when they have settled. . . .

"Oyez, oyez, oyez, all persons having business before the Honorable the Supreme Court of the United States are admonished to draw near and give their attention for the court is now sitting. God save the United States and this honorable court."

The crier a stiff, swallow-tail coated young man, having played his part sits down. The gavel falls more softly. The others sit. And then, if it is a decision day. . . then begins the torture for the reporters.

They are stationed at small tables of a size to carry potted plants, directly in front of the long bench, their profiles to the justices. The reading of decisions begins. "I am directed by the court," each justice announces in turn, "to render its opinion in case number so-and-so." And he does.

There is immediate activity among the reporters. They are quickly, but very quietly, running thru their

JUSTICE PITNEY

JUSTICE BRANDEIS

Live Wires Under

By Richard
Illustrations by

papers. Sheets are taken out, pencils dash madly, then the copy begins to fly in short slips over their shoulders. Each piece is passed from one to another until it reaches the ante-room where the messengers are waiting. The messengers race one hundred yards thru the capitol and up a flight of stairs to the Senate press gallery, where the telegraphers sit ready to relay the news to the outside world.

Every case is of importance to some person or some group of persons, large or small. Nearly every case involves large sums of money. It is therefore of the highest importance that the news of each decision be given quickly and accurately. Competition among the reporters is fierce. Subscribers to their wire and ticker services are waiting. Minutes count. Editions are going to press. A minute lost may mean an edition missed in the city where the decision is the day's big story. At the same time an error in an important case may cause the loss of millions in "the street."

The justices are venerable men. Their legalistic phrasing is difficult to understand and their voices are not always clear. A word obscured by the confusion of arriving or departing spectators may hold the key to the whole riddle. The decisions always are a riddle when they start.

Usually the decisions are very long. The reading of some will take more than an hour. The words that establish beyond question how the case has gone—"judgment affirmed" or "judgment reversed"—come at the very end. The reporters cannot wait.

The reporters listen close—

ly while the facts in the case are reviewed. Which way is the opinion tending? Any sentence or the emphasis given to any word in the reading may give the clue to that word at the end—the word the reporter most wants to know. When by various straws he has established to his satisfaction which way the case is going, the reporter starts his bulletin back over his shoulder on its way to the wire. Then he sits in horrible apprehension, forbidden to consult with his fellows, fearful that he may have gone wrong.

CHIEF JUSTICE WHITE'S FAVORITE WAY OF CARRYING HIS ROBE

Many a good man has felt his heart sink when a justice has read "but on the other hand" and steered thereafter toward a conclusion of which he gave no hint before—a conclusion diametrically opposed to the bulletin just sent. Undoubtedly the Supreme Court is the most nerve-racking and the least sought after of all Washington assignments. It is "the graveyard of newspaper reputations." The wonder is that the errors are so few.

The far-reaching consequences of an error in Supreme Court reporting were vividly demonstrated a few weeks ago when the court handed down its decision in the case of Eisner vs. Macomber. The question involved was the constitutionality of the law taxing stock dividends as income. The decision was anxiously awaited in Wall Street. Selling orders, to take effect if the Supreme Court decided stock dividends were taxable, had been piling up in the brokers' offices for months.

Justice Pitney started reading the decision. "Macomber coming" was flashed across the wires. Then the reporters waited—waited for that line that would give them the

answer. In due course it came, but, as sometimes happens, different interpretations were put upon it by the different men.

The representatives of the United Press, the Central News and the Dow Jones ticker service were convinced that the decision of the lower court would be reversed and sent bulletins that stock dividends were taxable as income.

The Associated Press reporter reached the opposite conclusion and bulletined the subscribers of that service that stock dividends were not taxable. The International News Service man was uncertain, and though he saw the others sending hasty bulletins, he stuck to his orders, binding in such a case, awaited the final words and got it right.

The tickers carried the incorrect report. The brokers dumped their stocks upon the market. Some stocks gave twenty points. And when the news was corrected millions were lost in the violent reaction. A test suit has been brought against Dow, Jones & Company by an investor who sustained losses and claims the erroneous report was due "to the negligence, carelessness and recklessness of the defendant, its servants, agents and employees." If damages are awarded in this case many others will be brought.

All these consequences followed upon three quick pencil strokes at three of the small tables directly in front of the Supreme Court bench. A line drawn thru the wrong word by a Supreme Court reporter may cause damage far greater than the false report of the armistice.

It comes about in this way: For each of the thousand or more cases before the court there is prepared in advance a "dummy." The [Continued on page 31]

The Story of Our Air Mail

A Message from the United States Government

By Albert Sidney Burleson, Postmaster General of the United States

THE airplane has been tried and found by the Post Office Department to be a commercial success. Not only is its service in its own field speedier and more efficient than the transportation of letter mail by train, but it is actually less expensive. The postal airplanes are saving money for the Government.

On May 15 the Air Mail will round out its second year of continuous service. Nowhere else in the world has such a system of mail delivery been in uninterrupted operation for so long a period. Everything has been concentrated on obtaining results—and astonishing results have been obtained, of which the public knows almost nothing.

Air mail fields have not been made into show grounds. Mail planes have not been decked in gaud and tinsel. There have been no rides for advertising or propaganda purposes. It may not be surprising, therefore, that the American people know so little of the mail plane's sweeping success. We have felt that the greatest handicap that commercial aviation faces is the spectacular phase of flying, stunting and racing. Aviation has so long been exploited as a sport and a show that the public has not been able to visualize it as a practical instrument of commerce.

But consider the record the postal planes have made. During the twenty-two and a half months it has been in operation

the Air Mail has carried more than 25,000,000 letters between Chicago, Cleveland, New York and Washington, at better than twice the speed of the Congressional or the Twentieth Century Limited and it has to its credit a performance of 91½ per cent, working day in and day out, summer and winter, across the mountains and up and down the sea coast.

More than 500,000 miles have been traveled by the postal planes to date—and but five mail pilots have lost their lives. On the fields one mechanic and one spectator have been killed. Two pilots have been seriously, but not permanently injured and not more than half a dozen have been hurt or shaken up badly enough to lay them up for more than a few hours.

The first thing the Air Mail Service had to demonstrate was that the airplane was a practical carrier, capable of giving reliable service every day in all kinds of weather. That has been demonstrated—and that is important. On the route between Cleveland and Chicago the air mail established a world record of 205 consecutive 325 mile non-stop flights without a single forced landing. On only one route, that across the mountains from New York to Cleveland, has the record of performance been less than 90 per cent and there it was better than 80 per cent. By reason of the great speed of the airplane the small percentage of failures did not delay the mail beyond the time

Western Newspaper Union

For years campers in Yellowstone National Park, unlike their less fortunate neighbors, have had butter, eggs, milk and meat delivered at their back door. Now comes along Uncle Sam in his airplane with the mail

it would have taken to carry it by train.

We have had some terrific problems in ice and snow flying to meet. When one remembers the numbers of trucks and street cars snowbound in the larger cities and the number of trains annulled and running hours late, it is possible to gain some idea of the efficiency of the air mail when it is said that between New York and Washington the planes during the month of February made thirty-six successful flights out of a possible forty-six and between Cleveland and Chicago forty-one successful flights out of a possible forty-eight.

The Air Mail is no longer a special service for a class of letters upon which extra postage is paid. Air letters go at the same rate of postage as train letters—two cents an ounce. The air mail simply supplements the great railway mail transportation system. Its schedules are so woven with the train schedules as to expedite important letter mail by from twelve to sixteen hours.

On each route we count upon being able to save one business day in the delivery of first class mail. This is of the greatest importance to business, as business is beginning to realize. When checks are put thru the clearing house a day earlier than they otherwise would be a full day's interest is saved. The filing of orders is expedited a day and all other [Continued on page 35]

International

When the aerial postal service celebrated its first birthday at College Point, Maryland, Postmaster General Burleson congratulated aviator Dana C. de Hart on 191 successful trips between Washington and New York. In the twenty-two and a half months the air service has been in operation it has carried 25,000,000 letters between Chicago, Cleveland, New York and Washington

Did We Demobilize Too Soon?

A Message from the British Nation to the American People

By C. A. McCurdy, K. C., M. P.

Head of the British Ministry of Food

IN Europe we are just awakening from a great illusion—the illusion of Peace. It has taken us twelve months to realize that the wastage of five years of war cannot by any human effort be made good in a few months of peace. The signing of the armistice in November, 1918, was for the European peoples something more than a message of hope. It seemed a day of resurrection for humanity after five years of death. If at the beginning of the war there were a few people who doubted whether victory over the German armies could be obtained without a struggle lasting over years, there were none when peace came who could entertain any doubt that with peace would come immediate relief from all the burdens under which Europe had been crushed by the war. The enormous feeling of happiness that the war was at last ended blinded the eyes of the allied peoples, alike to the true economic conditions which had been created on the European continent, and the magnitude of the task of reconstruction which lay before them. During the last years of the war there had been a continued growth of coöperative effort on the part of the Allies, assisted by the United States, to deal with the economic difficulties which pressed so heavily on the Allies. Inter-Allied Councils had been formed to coördinate purchases of essential foodstuffs, and a nucleus of a League of Nations had been brought into existence. With the coming of peace there came from many quarters demands for the abandonment of these Inter-Allied arrangements, as being no longer necessary. A process of demobilization of the Inter-Allied executives was commenced. Commitments were liquidated, Inter-Allied organizations were destroyed, the peoples of Europe hastened to get rid of a war-time machinery, which they believed to have served its turn, and to be no longer necessary.

Unfortunately many of the evil effects of the war were not at once apparent. Reviewing the situation as we can see it today more clearly than in the first intoxication of peace, we see that at the beginning of last year supplies of food were short thruout almost the whole of Europe. An immediate famine was averted by the shipment of food to Europe, but the conditions which had to be remedied were by no means temporary in character. Large tracts of land in Europe had been ravaged by actual hostilities. Lack of fertilizers had brought about a great decrease in the yield of the soil of a large part of Eastern and Central Europe. In Poland, Rumania and Yugoslavia, where the occupying armies had eaten up all food stocks, famine conditions prevailed. Europe was for the time be-

© Kadel & Herbert

Mr. McCurdy's appointment as Food Minister of Great Britain was made after this article was written. The post carries power to prosecute food profiteers

ing dependent to an enormous extent upon supplies of food from overseas, and the decrease in the effective carrying capacity of the world's merchant shipping made it a matter of extreme difficulty to bring to Europe the additional food-stuffs required. Transport on the continent itself was in an utterly chaotic condition. Great parts of the railway systems had been destroyed by military operations, and the formation of new states, strongly nationalist in feeling, led to the creation of customs and transport regulations which further impeded the rapid interchange of commodities and traffic. So far as industry was concerned, the warehouses of Europe had been emptied of supplies, and the machinery of production had been wholly disorganized, and

in part destroyed. Mines and industrial machinery had been destroyed in Belgium, France, Poland and Italy. Raw material was exceedingly short. For five years millions of workers had been withdrawn from productive employment. They returned to the arduous task of recreating ruined industries in a mood of extreme weariness. But the peoples of Europe failed utterly to realize the magnitude of the task which lay before them. In Great Britain there was a persistent demand of removal of every form of control which had been found necessary to regulate prices and to ensure supplies during the war, based on an almost

universal belief that the revival of trade and prosperity would come naturally, and come soon. There was one shadow in the picture, which it was impossible for even the most optimistic to ignore—the actual famine and starvation which even then lay heavy on Central and Eastern Europe, and from the very first day of the armis- [Continued on page 37]

Stenson in Dayton Daily News

Double, double, toil and trouble

Plain Speaking from China

By Dr. Sun Yat Sen

The First President of the Chinese Republic

Dr. Sun Yat Sen is recognized as a patriot even by those who hate him, and in China there are many who feel that way toward him. They can't help it. He spoils all their plans. When a small group of Chinese militarists planned with Japanese militarists for the consolidation of the country, so that Japan could more easily conquer it, Dr. Sun Yat Sen went down to Canton and pulled five of the best provinces out of the government. When the northern and southern militarists had come to terms as to what they could get for themselves out of the peace between them, Dr. Sun injected the parliamentary issue into the debates and broke up the Peace Conference. Dr. Sun is spoiling things again. Just now the officials are trying to borrow money from America and Dr. Sun points out forcefully that China wants American machines, not loans

CHINA does not need money. We need brains and machinery, but not money.

It is not China that has been constantly borrowing.

The Peking Government borrows. Americans must recognize that the Peking Government does not represent the country. Nor does the Canton Government represent the country. It is represented more nearly by the merchants here in Shanghai, by the growing middle class which is carefully leaving politics alone and which is devoting itself to building up the industry of the country.

Young China, the China of the Students' Movement, of the anti-Japanese Boycott, of the encouragement of native industry, of opposition to signing the peace treaty, is the China which will have to pay any loans made today. And whether they will pay them or not depends upon the character of the loan rather than the force of the lender. One can always scuttle the ship—when it is impossible to do anything else. And Japan and the rest of the world, if it forces on us political loans, is forcing also upon itself the dangers of just such a situation.

We have plenty of raw material here . . . more perhaps than any other nation in the world. We don't need to import a thing and the day will come when we won't import much. But our needs are increasing and our processes of production are slow. Furthermore, we can buy your manufactured articles cheaper than we can make them, because we do not yet understand large scale production and we have not organized industry on a modern basis. But that state of affairs cannot go on forever. The day is fast approaching when China will use her own resources and her own labor to produce what she needs. If we want to go about it slowly, stupidly, we can wait until we have made our own machinery, but that is an uneconomic method. But why should we be made either to remain backward and weak or to borrow money on the security of our sovereignty. No other nation is given that alternative. Why force it on China? Japan has been forcing it on China, but we believe that America is our friend. Therefore we want to borrow from America

Dr. Sun Yat Sen

two things, machines and experts to teach us how to run them.

Capitalists are used to dealing with governments. They like to make loans which are secured by a government. But the downfall of Russia, Germany and the Balkans must have convinced bankers that governments are not very safe propositions. The French thought that the autocracy of Russia would live forever and that their investments in that autocracy would be safe forever. But it is not working out. The awakening of the masses in every country and the determination of the masses that their future shall not be mortgaged to finance the inefficiency and selfishness of the present has made loan-making to governments an unsafe business proposition. Do you really believe that the people of the tiny nations of

Europe will ever be in a position to pay their tremendous war debts? Do you think that any nation can determine its own future when that future is mortgaged to the bankers of another nation? I should not believe so.

The capitalists have always lent money to the Chinese Government, but that won't work out either. When a genuine, people's parliament meets, we shall repudiate every loan that the Peking Government has made unconstitutionally and if, for instance, Japan wants to fight us for the money, let her come here. It will only involve the world in another war, in a banker's war. But we shall do it. Every boy in every school in China, every girl in every school in China, is pledged to that. They can destroy us for their dollars, but we are big enough to bring them down with us. Every banker lending money to the Chinese Government is paying in advance for his own financial funeral.

Your American bankers are making the mistake of imitating their British and Japanese predecessors. They are dealing with the Peking Government. Some of them insulted us of the south by suggesting that they would give us a share in the spoils. We don't want any spoils. We want to be boycotted as we want Peking boycotted. We are neither of the north nor of the south. We are Chinese without discriminating [*Continued on page 36*]

They Kept Us Out of Peace

By Hamilton Holt

THE Senate of the United States has again run true to form. In 1897 it refused to ratify Cleveland's arbitration treaty with Great Britain. In 1904 it refused to ratify Roosevelt's arbitration treaties with ten sister nations. In 1912 it refused to ratify Taft's all-inclusive arbitration treaties with Great Britain and France. And now last week it refused a second time to ratify Wilson's Covenant of the League of Nations.

I sat in the Senate gallery thruout the entire session on "black Friday," March 19. From eleven a. m. to seven p. m. I listened to Senators Brandegee, Walsh, Lenroot, Pomerene, Ransdell, King, Smith and Owen consume eight hours with their oratory. Not one of them, except possibly Walsh and Owen, had anything new or important to say. The same old arguments were reiterated that have filled the *Congressional Record* daily for over a year. And then came the vote. Again the Wilson Democrats combined with the "Irreconcilables" and again the majority reservations were defeated. This time, however, twenty-one Democrats accepted the Lodge reservations instead of seven who voted for them when the treaty was first rejected on November 19.

I must confess that the only faction of the Senate which has my respect are the Irreconcilables. They have been totally wrong on the merits of the issue. They do not represent five per cent of the public sentiment of the country. Every straw vote so far taken conclusively demonstrates this. But they have persistently, consistently, openly and above board voted to kill the treaty; and by throwing their votes now on this side and now on that they have completely outwitted the rest of the Senate and so far come off victorious.

Senator Lodge has played the same game in this fight that he did when he killed the Taft arbitration treaties in 1912. That is, he did everything he could by word and deed to discredit and defeat the treaty while it was being debated in the Senate, and then when the final test came voted for it. There is overwhelming circumstantial evidence that Senator Lodge and a majority of his Drastic Reservationists are "Irreconcilables" at heart, tho they voted finally for the Covenant.

THE Mild Reservationists likewise who have received so much praise in some quarters have not always voted as they felt. There can be little doubt that they were intellectually almost completely in accord with President Wilson on the whole issue. They would undoubtedly have been glad to see the Covenant accepted without any reservations whatsoever. And yet, when the final show-down came, party pressure prevailed and they lined up with Senator Lodge for nullifying reservations.

As for Senator Hitchcock and his followers, this may be said: By offering to accept the Taft reservation on Article X, they conceded before the final vote the entire substance of the Lodge reservations. In fact the Taft reservation was even more drastic than the Lodge reservation. Yet when they found that Senator Lodge could not be budged, they defeated the whole treaty on a matter of phraseology.

Thus the Senate of the United States has misrepresented the American people. It has made vain the sacrifices of our boys, whose blood reddens the soil of France. It has heartened our enemies. It has destroyed the moral prestige of America abroad. It has refused America's cooperation in saving half the world from barbarism and famine.

So much for the Senate. The President, too, must take some share of the blame. He was eternally right in his purposes. But he has shown a woeful lack of tact in dealing with the coördinate branch of the treaty making power. I

believe that he was right in going to Europe. From my study of the Peace Conference on the ground, I am convinced there never would have been a League of Nations without the presence of the President in Paris. It was a clear case of a man throwing the great weight of his personal prestige in the balance and thereby turning the scales in his favor. What matter if he did tarnish his popularity at home and abroad? The verdict of history will do him justice, if not his own day and generation.

BUT suppose after he had returned home with the revised Covenant in his pocket he had called together the Foreign Relations Committee of the Senate and address them somewhat as follows:

"Gentlemen: I am very sorry I could not take you all to Paris with me. I would have enjoyed having the benefit of your continuous advice during the trying days of the peace negotiations. But, as I could not take you all, I am sure you will agree with me that perhaps it was just as wise not to take any of you. Now, in any gathering where men of different views meet for common action, there must necessarily be much give and take. I naturally had to compromise here and there, but I think I compromised less than did the representatives of the other nations. At all events, I did the very best I knew how, and I am confident I got all I could get under the circumstances. I shall be delighted to tell you about anything you may wish light upon. I think I can make plain that any one of you would have probably acted as I did under similar circumstances. I am ready to go into the minutest details with you if you desire, and Mr. Tumulty will give you my papers—confidential and otherwise.

"I am sure I have not agreed to anything that would violate the United States Constitution. I think I have not done anything that endangers the prestige, security or rights of our beloved country. It is now your duty under the Constitution to go over my work with the strictest scrutiny, and if you find, perchance, that I have made any mistakes, I shall be very grateful if you will point them out. I assure you I will do everything in my power to rectify them.

"Now, gentlemen, my part of the job is done. I pass this work over to your good keeping. I am worn out. I am going off for a rest, but whenever you want me I shall be at your disposal."

If the President had taken some such attitude as this, perhaps the Senate would not have acted so obstreperously. But he ignored their repeated requests to put all his papers at their disposal; he let it be known that there must be no dotting of i's or crossing of t's in the Covenant, and finally in his speaking tour to the Pacific Coast he appealed directly to the country over the heads of the Senate. Woodrow Wilson is a good fighter, but he is evidently not a good conciliator. He is a great statesman, but a poor politician.

And now what can be done? Apparently there are only two courses of action:

First, the President can re-submit the treaty to the Senate with or without reservations. But that will doubtless be useless unless at the same time he absolves his followers from personal allegiance to his leadership and asks them to yield to Senator Lodge.

Second, the issue can be taken into the campaign. What effect this will have no man can foretell. There are too many factors in the case to make prophecy profitable. But it would seem likely the issue would solidify the Democratic party and split the Republican party in two—for de-

spite all its wriggling the Republican party cannot exculpate itself from the charge of starting and successfully carrying out a policy of knifing the treaty. All honest Republicans must admit this. But even if every Senator whose seat expires on Election Day is succeeded by one who will vote for the League of Nations, there will still be two or three votes short of a two-thirds majority to pass the treaty.

The Senate has failed to act.

The President cannot act without its consent.

The issue is now before the American people.

Nothing is settled until it is settled right.

The League of Nations

GREAT inventors rarely die rich. Their patents fall into the hands of others who make money out of them and the inventor gets little save the moral satisfaction of having enriched the community. Such may be the fate of the United States if we stand outside the world organization which we did so much to contrive.

That Monroe Doctrine

WITH most of the Latin American countries now members of the League of Nations it looks as tho we would exclude ourselves from any influence over Latin-American affairs by staying outside the League.

Where East Is West

By Sidney F. Gulick

FOR fifty years California has been the scene of repeated waves of anti-Asiatic feeling. During the seventies, eighties and nineties of the last century those waves of feeling were directed against the Chinese. For two decades now they have been hurled against the Japanese.

In 1907 Japan made an arrangement with the United States to stop all new labor immigration. This is known as the Gentlemen's Agreement. The anti-Japanese agitation subsided for a season, but in 1912-13 it was suddenly revived by politicians on the charge that the Japanese were a serious menace because they were buying up all the choicest agricultural lands. The agitation led to the enactment of the "Anti-Alien Land law" in 1913.

After the law had been passed it became known that Japanese ownership of land in California was, all told, the trivial amount of 12,726 acres, out of a total of 27,931,444 acres of farm lands, of which 11,389,894 had been improved.

The new agitation began in the spring of 1919. The attack this time is novel. The charge of race inferiority, so vigorous in 1907 and 1913, has been dropt. On the contrary, their essential equality is freely granted—at least in argument. The charge now is that, violating the Gentlemen's Agreement, they have been entering in such large numbers, have such a high birth rate and are buying up such large areas of land in the names of their infant children that the economic and numerical supremacy of the white race of the Pacific Coast is seriously threatened.

That Japan has not been "flagrantly violating the agreement" is manifest on examining the statistics. Japanese immigration fell from 30,226 in 1907 to 3111 in 1909, the first year of the full operation of the Gentlemen's Agreement. Since July 1, 1908, while 79,738 Japanese have entered continental United States, 68,770 have departed, leaving a net increase by immigration of only 10,968, two-thirds of it, perhaps, settling in California. Of those admitted, however, nearly one-half (32,879) were "former residents," while 24,298 were "wives," including "picture brides," 10,417 were "children," and 12,108 were "laborers returning with proper passports." The agitators ignore all facts like these.

The hysteria over "picture brides" and their babies is

amazing. Senator Phelan says the brides numbered 13,913 between 1915 and 1919, and all agree that each bride has a baby yearly. Some say that this is the contract the brides make with the Japanese Government when getting their passports. If the statements were true, reckoning in the "brides" and "wives" who arrived before 1915, Japanese babies born in California ought to number about 20,000 a year, whereas the figure reported by the California State Board of Health for 1918 was 5365.

The economic objections to the Japanese are not that they are lazy, licentious, diseased, shiftless, quarrelsome, ignorant, lawless, or criminal. Not at all. "The reasons are complimentary rather than otherwise," says Mr. McClatchy, the leader of the present anti-Japanese agitation. The Japanese "has energy and ambition. He will work very long hours. He is sober and industrious; he is generally law-abiding. He has great powers of coöperation. The combination of these qualities makes him an economic machine against which it is hopeless for the white race to compete.

"The objections are that the Japanese are non-assimilable. They don't intermarry and we wouldn't want them to intermarry. The Japanese is always a Japanese. The Japanese are rapidly securing control of everything."

The figures quoted to prove these charges fail to do so. No comparative figures are given—merely the statement issued by Japanese themselves. According to this statement, altho the Japanese raise 90 per cent of the berries and large percentages of a few other things, they raise only 13 per cent of the grapes, 23 per cent of the green vegetables, 16 per cent of the rice, 10 per cent of the cotton, and 4 per cent of the fruits and nuts. None of these figures are 100 per cent, as they should be to prove the agitator's contentions.

Japanese cultivate about 366,000 acres, of which they now own only 30,000. The total Japanese population in 1918, according to Japanese consular statements, was approximately 68,000. The total population of California is about 8,200,000.

"Today," says Mr. McClatchy, in some startling assertions made in regard to Florin, California, "there isn't a single one of those five and ten acre pieces of land that isn't in the hands of Japanese. The whites have melted away. Several years ago there was a newspaper of Sacramento delivered to the white people in carts. Today there isn't a white person to deliver it to. Today there is not a single white family or person in that strawberry district."

The best reply to these statements is to quote from a correspondent in Florin, an American citizen well acquainted with the Japanese there:

I cannot account for statements of this kind because they are not fact. It is true that the *Bee* carrier only covers a small portion of the route where formerly deliveries were made—all this, however, was before the days of Rural Free Delivery. If I were to say that a couple of hundred copies of the different Sacramento papers, including the *Bee*, were now delivered on the four R. F. D. routes in the Florin District, I am sure I would be far inside the figures.

The statement is so often made that the Japanese send all their money home that many people believe it. I can only say in refutation of this that I know them to be extravagant buyers of all classes of goods. Today there is hardly a Japanese strawberry or grape grower in this vicinity that does not possess an automobile, high-priced at that, and I hadn't noticed a Japanese manufacturer's name on them either.

Livingston is a town where Japanese Christians some years ago established a "colony" entirely Japanese. Their manner of life and relations to their American neighbors completely refute the sweeping assertions that Japanese are inevitably a menace. A resident of Livingston, an American citizen, has recently sent the writer the following letter:

The Japanese residents of this community are of rather a high class, all of them well educated, owning their own farms for the most part, having purchased most of them previous to August 10, 1913, at which time the California Alien Land Act went into effect. They occupy a section of territory pretty much to them-

selves, having secured the land in a body and colonized it, developing it principally to fruits and vines. They have proved themselves to be desirable citizens, sober, honest and industrious.

They do not lower the standard of living; they are ambitious to own and to live in just as good houses as their neighbors, to wear just as good clothes and drive just as good horses and automobiles. They pay just as high wages as others in the community and employ, very largely, labor of other nationalities. I do not believe that the Japanese such as we have here drive out desirable white citizens. Of course they take the place of unsuccessful farmers at times, as all good farmers do, whatever their nationality.

As to their being good citizens, I cannot speak too highly of the patriotism of the local Japanese. In every Liberty Loan Drive, Red Cross Drive, War Savings Stamp Drive, Y. M. C. A. Drive, and all of the various drives undertaken during the war these people did more than their share. They did not have to be solicited in this connection, but sent their own representative to ascertain what was expected of them in each case and then went it one better. They have their own church and kindergarten, where their children are taught the English language before entering the public school. They have their own Protestant pastor and hold regular Christian services in their church. In view of the mass of misinformation which is being circulated in this connection, I am glad to be able to say something in justice, on the other side.

Great is the power of politics to create situations. The tense psychology of California over the Japanese is real and earnest. The agitators would have Congress pass laws that are dangerous and un-American. They would exclude from American citizenship American-born children either of whose parents is an Asiatic. They do not see that California would herself be the first and chief sufferer from such a law. It is to be hoped that sane Californians—of whom there are plenty—will soon speak out, both for the sake of California and also for that of the whole country.

And the Cat Came Back

A CAT is said to have nine lives. The Treaty of Peace has thus far been killed only twice in the Senate. Reports of its death may therefore be greatly exaggerated.

Rash Speculations

THE Bolshevik or Communist Party has carried the Moscow elections by an overwhelming majority. Seeing that the franchise is carefully withheld from classes inclined to capitalist principles, and that until recently it has been fatal and is still unsafe to be active in politics save as a Bolshevik, the result of the election is not so surprising as the fact that apologists of Bolshevism cite it triumphantly as evidence of the satisfaction of Russia with its Communist régime. We may soon expect the more optimistic Republicans, taking courage from the triumph of the obvious in Moscow, to venture even money on their chances of carrying Vermont, and their opponents will breathe a long sigh of relief when they learn that at last Georgia has gone Democratic!

A Flaw in the Machine

By William Brand

PERHAPS the most needless defect in our constitutional machinery is the overlapping of one administration upon the time which should belong to the next. For four months after the election of a new President and a new Congress the nation is governed by men who at best are acting under an outworn popular mandate and at worst have been definitely repudiated at the polls. From the first week in November to the first week of the following March the United States ceases to be a responsible democracy.

To make matters worse, these are the very months in which Congress meets to legislate. Next November the whole House of Representatives and one-third of the Senate may lose their seats. Nevertheless the old House and the old Senate will meet in December and pass such laws or block such laws as they choose until the fourth of March.

Unless the new Congress is then called into special session it may be thirteen months before the people's chosen representatives meet to carry out the will of the voters. In most countries it would be considered a scandal if a newly chosen parliament waited thirteen days before beginning its work, and it would be an act of revolution for the old parliament to meet at all.

When the Electoral College was a real factor in the election of a President, and when communications between one part of the country and another were so slow that it required many weeks to determine who was elected to every seat in Congress, there was some excuse for the four months' delay. Today there is no such excuse. It is simply a denial of the first principles of democracy to take a popular mandate hot from the furnace of an election and lay it aside for months until it has grown stale and cold. Sometimes practical mischief is added to theoretical injustice. Suppose Lincoln had taken office in December, 1860, instead of March, 1861, would he not have been able to cope with the movement toward secession far more effectively than Buchanan, who had no mandate from the voters to do anything? The precious months thus lost might have saved the United States from civil war or at least enabled the Government to crush the rebellion in the bud. In American business the saving of time is everything; in American political machinery time is reckoned as of no value at all.

An Irish Bull

A SINN FEIN proclamation refers to the assassination of "the first republican Lord Mayor of Cork." We shall next expect to hear the Sinn Feiners alluding to De Valera as "the first republican King of Ireland." The present German Government is officially styled the *Reich-Republik* or "Imperial Republic." It is hard to change all one's clothes at once.

The High Cost of Isolation

CONGRESS is premature in discussing military reorganization while the Treaty with Germany is still unrati-fied. Obviously the armament which we shall need depends altogether on whether we are coöperating with other civilized nations or playing a lone hand against the world. The alternative to the League of Nations is universal military service and the world's largest navy.

An Open Door to the South

By Edwin E. Slosson

THE action of the Senate in rejecting the German treaty postpones indefinitely our participation in the League of Nations and compels us to consider what we can do to compensate for the disadvantages of our voluntary exclusion from the greatest trade combine that the world has ever seen. According to Article 22 of the Covenant undeveloped territories taken from Germany were to be assigned to various members of the League as mandatories in order to "secure equal opportunities for the trade and commerce of other members of the League." If, then, we were in the League we would not care who ruled them, for all we ask is a fair chance at their trade, but so long as we are out of the League we shall be dependent upon those who are in it unless we hasten to secure such territory as can supply us with the products which we cannot raise at home.

It is quite misleading to call tropical territories "dependencies." Politically they may be, but economically the case is reversed. England is dependent upon Egypt and India for her cotton, upon the West Indies for her sugar, upon Malaya for her rubber and upon Africa for her palm oil. France is dependent upon Africa for meat and grain. It is the so-called "mother country" that is the real "dependency." No country can in the future hope to compete

The Man for Mexico

Henry Morgenthau has sprung from the position of successful real estate merchant in New York to that of one of America's foremost diplomats in the short space of President Wilson's administration. He was sent to Turkey as United States Ambassador in 1913 and won immediate distinction by his skilful and constructive handling of the complicated problems in that post. After the Great War began he was also in charge of the interests in Turkey of Great Britain, France, Italy, Russia, Belgium, Montenegro, San Marino, Serbia and Switzerland. He came back to the United States to aid in President Wilson's campaign for reelection in 1916. It seems probable that his appointment as United States Ambassador to Mexico will soon be announced.

in world trade unless it controls a large extent of tropical territory or has equal access to it. What the West was to the young men of the nineteenth century the South will be to the young men of the twentieth century, for in that direction lie the only undeveloped lands left on the globe. They may not be suitable for colonization, but they are open to development.

The victory of the Allies has given them the opportunity to divide up among themselves the whole of Africa, except little Liberia, and a large part of Asia and the Pacific. Great Britain has in the last five years annexed or gained control of territory greater in extent than continental United States. France, which before possessed overseas territory surpassing the United States by a million square miles, has greatly expanded her domain.

Italy and Japan have made immense gains of undefined extent. We Americans do not envy our comrades in the war. We rejoice that they are reaping the reward of their hard-won victory. We are glad to see the lands that have been misruled or neglected coming into such good hands. We do not ask for a share in the spoil. We entered the war without any selfish motive or hope of gain. We threw in our lot with theirs because we felt that it was a battle for the right. We did not bargain in advance and secure a secret promise of future annexations as did other nations. We have presented no bill for services rendered overseas. We have demanded no damages. We make no claims for compensation now. We ask nobody, enemy or friend, to give us an acre of land.

But we cannot help observing that the last of the waste lands of the world are now being divided up and that the United States is being left without adequate sources of supply for some of the essentials of civilization. We feel, therefore, that our associates in the war ought not to regard it as an unfriendly act if we ask them to sell to us at a fair price some of their surplus real estate. Uncle Sam has never felt that a friendly offer to dicker ought to be resented as an insult.

Now it so happens that the leading powers, Great Britain and France, have an opportunity to grant our desires without material sacrifice and indeed to their advantage and relief. They own various islands in the Caribbean and enclaves on the mainland of South and Central America which appertain geographically and economically to this hemisphere and which would greatly gain by being transferred to the United States with, of course, the consent of the inhabitants. The question of payment need not bother us for we have already more than paid for them. We have loaned \$4,277,000,000 to Great Britain and \$3,048,000,000 to France. We cannot even collect interest on this money now for fear of embarrassing our European friends and there is no possibility of recovering the principal in the near future without throwing their financial system into bankruptcy and doubtless involving our own. But if we should take over any of the European possessions in the country south of us as part payment for the nine billion dollars that we have loaned Europe we could in a short time develop their resources sufficiently to recover our money. The mere transfer would readjust exchange rates and restore the value of the pound and franc, thus enabling us to regain our European trade.

The three Guianas offer the only extensive tropical territory that could be obtained by the United States without interfering with American republics. If we could purchase one or all of them it would cut down taxation by recovering part of the \$9,000,000,000 we have loaned Europe and would reduce the high cost of living by providing us with a nearby supply of valuable home-grown tropical products

Fortunately the most valuable of this territory is that which it would give the European Powers least pain to part with, that is the three Guianas, British, French and Dutch. The Netherlands, altho not directly involved in the war, might well consider a proposition to purchase since their West Indian possessions are not profitable to them as are their East Indian islands. According to Dutch parliamentary papers just received the United States has been negotiating with the Netherlands for the purchase of their American territories. The slender tie between Dutch Guiana and Holland is practically broken already for during 1917 and 1918 no Dutch liners visited the colony.

Last October Lord Rothermere in the London *Sunday Pictorial* suggested that British Guiana and West Indies might be ceded to the United States in part payment of England's debt. Lord Rothermere is the brother of Lord Northcliffe, editor of the London *Times* and the most powerful journalist in England, so naturally this advice aroused widespread discussion. Senator Kenyon in the *Congressional Record* of March 6 makes the same recommendation from the American point of view. How the people of the British West India islands would vote on the question cannot be told till they get a chance. It is said, however, that the sentiment for annexation to the United States is growing and we know that many prefer American to British rule because we see them coming to us by thousands. We are annexing the people whether we annex the islands or not.

In the case of the Guianas the situation is reversed for in purchasing them we should be getting land with few people. Their combined area is larger than California and the population is about as scanty as when we took over California. In British Guiana the Europeans number only 3700, about one per cent of the total, and not all of them are Britishers. The population is decreasing rapidly and land going out of cultivation notwithstanding the high price of sugar. The interior is largely uninhabited and unexplored, but is known to contain gold, diamonds and, what is more needed, petroleum. Under American administration, and by means of American machinery, it could supply us with incalculable quantities of sugar, rice, rubber, coffee, cocoa, beef, hides, hemp, coconut oil, fruits and alcohol for motor fuel. The acquisition of any one of the three Guianas would afford us an opportunity to run a railroad from the north coast to the southern boundary where it would tap the upper Amazon and eventually connect with a railroad to Rio de Janeiro and Buenos Aires. Brazil is the most friendly to us of all the Latin American republics and as neighbors the two countries could work together. None of the republics would have reason to resent it even if we acquired all of the European possessions south of us for it would be merely carrying out the Monroe doctrine to its logical conclusion.

Canada, we know, is ambitious to annex some of the British possessions in the West Indies. This would certainly be better than to leave them in their present state of European dependencies, but would not be as good for them as annexation to the United States. If Canada should consider herself aggrieved by the transfer of any of the British possessions to the United States she might be compensated by the cession of the panhandle of Alaska.

The Story of the Week

The Slaying of the Treaty

ON March 19 the Senate of the United States refused to approve the Treaty of Versailles and the Covenant of the League of Nations therein contained. This is the second occasion when the Senate has rejected the treaty, as just four months earlier the Republicans failed to secure the necessary two-thirds vote for the treaty with the Lodge reservations and refused to accept the treaty without these reservations. After the first defeat an attempt was made to arrange a bi-partizan compromise which would retain the substance of the reservations in a form less likely to offend friendly foreign powers. This attempt failed, and the Senate was once more confronted with the alternative of adopting the Lodge program or defeating the treaty altogether.

The vote in favor of ratification was 49 to 35, with twelve absent Senators paired on the question. Seven more favorable votes would have compelled the President to accept the Republican reservations or refuse to ratify on his personal responsibility. These necessary suffrages could not be obtained because the majority of Democratic senators agreed with the President that some of the reservations were impossible to concede.

Owing to the confusion of issues between the treaty itself and the reservations which the Senate had attached to it, the final vote does not in every case indicate the personal opinion of the senators. Some opponents of the treaty voted in the affirmative for the sake of the reservations, and some opponents of the reservations accepted them to save what was left of the treaty. The twenty-eight Republicans voting for the treaty included the whole of the "mild reservationist" and "strong reservationist" groups. The twenty-

George Whitelaw in London Passing Show.

THRU DISTORTED GLASSES

Uncle Sam: "Colly! It's shameful the way Jawn bullies them Irish patriots!"

one Democrats who took the same stand included both reservationists and friends of the treaty. The Republican opposition of twelve included only the Borah group of "bitter enders," but the Democratic opposition of twenty-three included two or three who were hostile to the whole treaty even with reservations, and also the "Administration" senators who accepted the leadership of Senator Hitchcock in an uncompromising battle against the Lodge program.

The Irish Reservation

BEFORE the final vote on the treaty with Germany was taken a reservation which had not been a part of the Lodge program was added. Senator Gerry, Democrat, of Rhode Island, offered a reservation worded as follows:

In consenting to the ratification of the Treaty with Germany, the United States adheres to the principle of self-determination and to the resolution of sympathy with the aspiration of the Irish people for a government of their own choice, adopted by the Senate, June 6, 1919, and declares that when such government is attained by Ireland, a consummation it is to be hoped is at hand, it should promptly be admitted as a member of the League of Nations.

There was little disposition, especially on the day after St. Patrick's, to oppose directly a declaration for Irish self-government. But some of the senators, and among them Mr. Lodge, opposed the Gerry reservation on the ground that it was worded too broadly and by approving "self-determination" in the abstract would stamp with approval all possible secessionist movements, past, present and to come. On the other hand, Senator Thomas, of Colorado, urged the specific inclusion of a declaration for Korean independence in the phrasing of the reservation. After a prolonged debate and the rejection of many amendments the Gerry reservation was affirmed by a majority of 38 to 36. This vote was later reaffirmed by 45 to 38.

Of course, this reservation was a serious blow to the

Harding in Brooklyn Daily Eagle

No bathing beyond the ropes

hopes of those who expected the treaty to be ratified. As it formed no part of the Lodge program, it gave opponents of the reservations an excuse to say that ratification was now more burdened with conditions than in November, and that instead of compromising the Senate majority was adding to its demands. Moreover, it conveyed a direct insult to the British Government which made it improbable that Great Britain would accept our ratification under such conditions. It was even charged that the Irish reservation had been offered with the intention of blocking the plan to ratify with the Lodge reservations.

Other reservations not in the Lodge program were freely offered, but without success. The most important of these, by Senator Lenroot, declared that the United States would view "with grave concern" any menace to the freedom and peace of Europe. It was virtually an amendment to the reservation on Article X designed to conciliate the supporters of President Wilson. But the Democrats condemned the Lenroot proposal as meaningless and it was unacceptable to the "bitter enders." So this last attempt at conciliation went down to defeat.

Towards Industrial Peace

THE Industrial Conference, constituted by President Wilson several months ago to make proposals for harmonizing the interests of the employers, the public and the employed, made public its report on March 20. Stress is laid on the benefits of direct representation of

the workers in shop management, tho no legislation is recommended on this point since the form which such representation should take "may vary in every plant." If the employers and the operatives in a given plant are unable to settle an industrial dispute, an endeavor should be made to reach an adjustment thru local boards subject to the general authority of the National Industrial Board at Washington. No penalties are contemplated for strikes against the decision of boards of inquiry but public opinion is relied on to compel the party in the wrong to surrender.

Vice-chairman Herbert Hoover of the Industrial Conference explains the proposed mechanism of industrial settlement as follows:

The regional chairman, as soon as informed of an industrial situation in which action is desirable, will call upon both parties to enter a conference. If the invitation be accepted, the participants enter with the specific agreement that they will be bound by the findings; if the invitation is declined or ignored by either party, the chairman then selects two members from the employees' group and two from the employers, not involved in the dispute, to act as an "investigating committee." The disputants have the privilege of entering this committee, but should they do so it immediately becomes a conference as in the first instance and drops the inquiry feature to take up that of arbitration. The investigation is conducted with the sole purpose of securing and publishing the facts that lie beneath the original dispute.

Samuel Gompers, President of the American Federation of Labor, sharply attacks the report of the Industrial Conference as a blow at the power of the labor unions. He objects particularly to the reference to labor representation in the individual plant, declaring that "Unavoidably organization with independent shop units of the employees is a menace to the workers, for the reason that it organizes them away from each other, and puts them in a position where shop may be played against shop."

Senator Newberry Convicted

SENATOR Truman H. Newberry, of Michigan, former Secretary of the Navy in President Roosevelt's Cabinet, has been convicted of violating the Corrupt Practices Act and sentenced to two years' imprisonment and a fine of \$10,000. Sixteen other defendants were convicted with him and sentenced to various fines or terms of imprisonment. Many others were acquitted.

The case arose out of the bitter and closely contested fight between Mr. Newberry and Henry Ford for the Senate in 1918. Mr. Newberry was elected, but by a very narrow margin of votes, and Mr. Ford charged numerous violations of the election law and demanded a recount. The trial was prolonged for many months and perhaps is not yet completed, as an appeal will be taken to higher courts.

Omaha, Nebraska, has erected this \$30,000 hangar for the aerial mail service to the city begun on April 1. On another page of this issue Postmaster General Burleson tells in detail what the United States air mail has done in its two years of service

Thomas in Detroit News

You can't fool Grand Rapids on furniture

The specific charge proved against the Michigan Senator is that of knowingly causing to have spent on his campaign more than the law permitted. It was not proved that the money was spent for dishonest purposes, but the open violation of the law limiting campaign expenditures was construed as a criminal conspiracy.

The result of the trial does not of itself exclude Mr. Newberry from his seat in the Senate. This may be lost in one of two ways. A recount of ballots may elect his rival, Mr. Ford, or the Senate may rule that the seat is vacant. If Mr. Ford were seated the effect on the balance of parties would be of vital importance, for the transfer of one vote from the Republican to the Democratic side of the Senate would tie the parties, with the casting vote in the hands of the Democratic Vice-President.

Naval Battles at Washington

ADMIRAL Sims has been giving important testimony before the Committee of the Senate investigating naval affairs. His general contention is that the war was prolonged by the refusal of Secretary Daniels and other officials of the Department of the Navy to follow expert professional advice. Specifically the Admiral charges that the convoy system for American ships passing thru the submarine zone was not adopted until several months after he had recommended it; that warships badly needed in the fighting area were needlessly detained to protect the American coast; that an obsolete signaling code was used by transports and convoys in spite of his protests; that the morale of the navy was injured by careless distribution of honors to naval officers whose only distinction was losing the ships in their charge, and that the instructions of the Navy Department frequently showed a distrust of the Allies.

Secretary Daniels has asked Congress to approve a naval building program for sixty-nine ships with a cost estimated at \$195,000,000. He pointed out that the failure of the Senate to approve the League of Nations Covenant had made it impossible for him to consider disarmament, and that until the question of our membership in the League was settled one way or the other no naval program could be definitive. The House of Representatives is, however, in an economical mood and drastic reductions from the departmental estimates have been advocated in committee.

The Army and the House

THE House of Representatives on March 18 approved a substantial increase in the standing army of the United States. The majority for the passage of the Army Reorganization Bill was 244 to 92. The opposition was led by Representative Dent of Alabama, ranking Democrat on the Military Committee, whose motion to recommit the measure to committee with instructions to reduce the number of enlisted men and officers to the pre-war standard was defeated by a vote of 115 to 222.

By the provisions of the bill the peace time army is fixed at 299,000 men and 17,800 officers. The combat force provided for is 250,000. Aviation and the chemical service are organized as separate corps. The army appropriations will be for a force slightly below the legal maximum since it is not expected that the army can be immediately recruited to its full strength. No provision is made for compulsory military training; that issue will probably not be settled until after the coming political campaign.

American Aid for Europe

THE Treasury Department announces that of the ten billion dollars' worth of credits which Congress has authorized the Government to grant to Allied nations \$9,659,834,649 has been loaned and that no more advances would be made at present. It has been proposed that instead of making fresh loans the United States would permit the Allies to defer the payment of interest for three years.

Great Britain at present owes to the United States \$4,277,000,000; France, \$3,047,974,777; Italy, \$1,621,338,986; Belgium, \$343,445,000; Russia, \$187,729,750. Other nations with smaller debts to the United States are Rumania, Yugoslavia, Greece, Cuba, Czechoslovakia and Liberia. All of these debts, except perhaps the Russian, are "good," but few of the nations involved can meet interest payments at the present time without straining their financial system to a dangerous extent. This being so, it is considered good business as well as good philanthropy to waive immediate payment.

The House of Representatives has voted by a majority of 283 to 12 to authorize the United States Grain Corporation to send 5,000,000 barrels of wheat flour to Austria, Poland and Armenia.

The Seacoast of Bolivia

A strange triangular international tangle has arisen in South America. The republic of Chile holds the provinces of Tana and Arica, valuable for their nitrate deposits, and, because they are located at the junction of the three nations of Chile, Bolivia and Peru, Peru has never relinquished her claim to these provinces and has for some months past been eagerly pressing for a plebiscite. Bolivia, which is an inland state, is now demanding access to the Pacific in the same region. Feeling between Peru and Bolivia has risen to such a point that on March 14 a Bolivian mob attacked the Peruvian legation in La Paz, the Bolivian capital.

The United States Government sent a word of warning to the Bolivian Government not to permit a war to arise with Peru. The Bolivian Government restored order in the city of La Paz and apologized to Peru for the attack. The Bolivians also have a grievance; they complain that a colonel in the aviation service was attacked and injured by a Peruvian mob in revenge for the attack on the Peruvian legation. Chile, being in possession of the disputed region, remains complacently neutral. As all three countries are members of the League of Nations, the territorial dispute may go to the League for settlement in case there is serious danger of war.

Low in the London Star.

“— Who laughs last?”

South Africa Turning Republican

WE hear a great deal about the republican movement in Ireland, but very little about the republican movement in South Africa, altho the latter is a much larger, richer, more populous and more important country. The recent elections for the South African Parliament show that the two old parties, the South African and Unionist, have lost ground and the two new parties, the Labor and Nationalist, have gained. The two old parties represent in general the rival white races. The Unionists are mainly British, who naturally are strong for maintaining the connection with Great Britain. The South African party is mostly composed of Boers and they naturally are not so keen about the empire, tho they do not think it opportune or necessary to break away. The Laborites regard industrial questions as more important than political, but are inclined toward republicanism in their sympathies. The Nationalists, under the leadership of General Hertzog, have come out openly for secession and complete independence. General Hertzog, who had fought the British for three years in the Boer war, tried at the outbreak of the Great War to start a rebellion against British rule, but he was suppressed by his former companions in arms, Generals Smuts and Botha, then at the head of the Government of the Union of South Africa. After the armistice he slipped away to New York and thence to Paris to present the claims of South Africa to independence before the Peace Conference. Receiving no consideration there he returned home to start a political campaign for secession and is receiving considerable support, as may be seen by a glance at the following figures showing the strength of the various parties in the old and the new Assembly:

SOUTH AFRICAN HOUSE OF ASSEMBLY			
Party	1919	1920	
South African	53	40	
Nationalist	28	43	
Unionist	38	25	
Labor	5	21	
Independent	6	2	

General Smuts, who on the death of Botha succeeded to the premiership, takes the ground that South Africa already has all the independence she wants, for the British Empire was virtually dissolved by the Great War when the dominions were admitted as Allies at the beginning and at the end were given separate votes in the Assembly of the League of Nations. In his speech at Blomfontein opening the campaign last December he said:

The secession movement is unnecessary. Those who carry on the movement are fighting a British Empire which no longer

exists. It ceased to exist on August 4, 1914. It is perfectly easy to coöperate with a League of Free States such as the empire now is. There is to be no more imperial domination. They are to be masters of their own fate, internally and externally, in time of war and in time of peace.

As may be seen from the above table, General Smuts's party, the South African, has fallen behind the Nationalist, and in order to command a majority he will have to gain the support of either the Unionist or Labor parties. He bids for the former by declaring secession unnecessary and unwise at present. He bids for the Labor support by declaring that “the great task before us is no longer racial but industrial.”

The Union of South Africa as a member of the League of Nations has been awarded the mandate over German Southwest Africa, a vast and valuable territory. But Nigeria, a still greater prize which was promised ultimately to the U. S. A., has not yet been given over to her by the British Government, and doubtless would not be if the Union secedes. This is a strong practical argument in favor of remaining in the empire and may well outweigh the desire of the Boers for a formal independence.

Murder of the Mayor of Cork

ASSASSINATION, it seems, is a game two can play at. Following numerous murders of British soldiers and policemen and the public attempt to shoot Viscount French, Lord Lieutenant of Ireland, on his way from the station to the palace, the Sinn Fein Lord Mayor of Cork has been killed. Presumably this is a reprisal for the Sinn Fein outrages, but the assassins have not yet been discovered. A band of masked men entered his house at one o'clock in the morning of March 20 and shot him with a revolver. The murderers then rode away in an automobile. Two days previously the Lord Mayor had received a letter warning him that he was doomed, but he took it for a joke. Thomas MacCurtain, the Lord Mayor, had been imprisoned in England for complicity in the Irish rebellion, but when the Sinn Feiners won at the recent election he was elected to the mayoralty by the Cork Corporation. Three days before his death an attempt had been made to kill Professor Stockley, a Sinn Fein alderman of Cork. On the same night of the assassination of the Lord Mayor and only two hours earlier Constable Murtag had been shot dead in the street.

The next morning the green, white and orange flag of the Sinn Fein was floated at half-mast over the City Hall and a mourning card over the main entrance was inscribed: “Closed in consequence of the death of Thomas MacCurtain, first Republican Lord Mayor of Cork.” His body, clothed in the uniform of the Sinn Fein Volunteers, lay in state in the City Hall.

The British military authorities are taking precautions to prevent a second Easter rising. The constabulary has been increased and raids on buildings suspected of containing concealed weapons are frequent. Tanks patrol the streets at night and airplanes keep watch by day. A number of prominent Sinn Feiners caught in a round-up in County Kerry were carried off to England on a destroyer. The exceptional powers authorized by the Defense of the Realm Act during the war are being made use of to suppress sedition. In Dublin a number of soldiers leaving a theater and singing “God Save the King” got into a fight with a crowd of civilians and a man and a woman were shot and several others wounded.

Five Days Dictator

DR. Wolfgang Kapp, who assumed the office of German Chancellor and General Provisional Director at Berlin on March 12, was five days later a weeping fugitive trying to escape trial for high treason. The Kaiser goes on cutting wood at Amerongen under double guard.

The Prussian troops who marched into the capital under the old flag singing the old war songs were compelled to beat a retreat amid the jeers of the common people. From a window in the Hotel Adlon a woman fluttered her handkerchief in friendly farewell, seeing which the crowd smashed in the doors of the hotel. The retiring troops, who were just passing out thru the Brandenburg Gate, halted long enough to turn a machine gun on the crowd, which left fifteen wounded men on the pavement.

The Junkers had convinced themselves that the country was ripe for a counter-revolution, which, if it did not lead to a restoration of the monarchy, would at least drive from power the low-born Socialists, mechanics, harness makers and Jew journalists who were in the republican government. But they failed to understand that there had been a revolution in the spirit as well as in the political forms of Germany. As a military maneuver the *coup d'état* was carried out perfectly. It was shipwrecked on psychology. The soldiers and officers of the old army in many cases refused to obey the call of Lüttwitz. The staffs of the administration in many cases refused to work under Kapp. The militarists counted on Field Marshal von Hindenburg, whom the German people once idolized, but he declined to join in the movement except as a mediator with the Ebert Government. They counted on ex-Minister of Finance Helferrich, who had been forced out of the Cabinet, but he also stood aloof.

The collapse of the counter-revolution was primarily due to the "direct action" of the federation of labor unions. The General Baron von Lüttwitz had seized the city he was not able to feed it. His soldiers could erect barbed-wire barricades across the streets, but they could not run the trolleys without electricity. Dictator Kapp decreed the death penalty for all strikers, but there were more people to be executed under this decree than there were people to execute them, so it remained in innocuous desuetude.

At a secret signal from the Socialist headquarters the city was deprived of light, power, gas and water. The factories were shut down and the shops were shut up. No newspapers could be printed. The telephone and telegraph wires were useless. The hotels and restaurants were left without cooks or chambermaids. Since Berlin, like every great city, lives from hand to mouth, the stoppage of food trains meant starvation or capitulation within a week. General von Lüttwitz had been outgeneraled by the general strike.

Between Reds and Reactionaries

THE Government which was set up in Germany after the armistice, and which carried to conclusion the peace negotiations, was a coalition of the moderate parties, excluding on the right the monarchists and militarists and on the left the communists and radicals. The dominant group were the majority Socialists, that is, those Socialists who supported the Government during the war tho working meanwhile for peace. The Center or Catholic party, who aided them in these efforts, joined with them after the war in forming the coalition government of the new republic. But the minority or Independent Socialists, who, like the Socialists of the United States, opposed the war, have never been reconciled to the new régime and have several times tried to overthrow it and set up some sort of a soviet system. The nucleus of this communistic faction is the group of Spartacans started by the late Karl Liebknecht. Their strength lies chiefly in the industrial region of the Rhine provinces, while the Junker party at the other extreme is strongest in the agricultural districts of East Prussia.

The malcontents of all factions have hitherto been kept down by the vigorous measures of the Minister of Defense, Gustav Noske, who, tho a Socialist, has shown himself

quite as severe toward the Left as toward the Right, and so has incurred the hatred of both sides. But the Kapp revolt seems to have taken him by surprise and the militarists with a few thousand troops took possession of Berlin. The Ebert Government fled from the capital to Stuttgart, where the National Assembly was called and preparations made to wage war against the reactionaries. But the failure of the militarist *coup d'état* was due more to the labor unions, which by calling a general strike paralyzed the new régime by threatening to starve out the capital. Having thus come to the aid of the Ebert Government in its hour of danger, the laborites took advantage of their power to impose their own conditions. They demanded (1) the punishment of the leaders in the Kapp *coup d'état* and of all officials supporting it; (2) the immediate extension of socialistic legislation and the nationalization of the coal and potash mines; (3) the democratization of all administrations and the dismissal of all who have proved disloyal to the constitution; (4) the dissolution of the old reserve regiments and their replacement by a new militia composed of workmen and school teachers; (5) confiscation of all land improperly or unintensively cultivated; (6) the resignation of Gustav Noske and Dr. Karl Heine, the Prussian Minister of the Interior.

These demands of Labor were substantially conceded by the Government, but the more insistent demand that the trade unions decide who shall be members of the cabinet and direct the course of labor legislation was refused by Chancellor Bauer as going beyond the constitution. But Noske has been dismissed and probably a new Government wholly composed of Socialists will replace the coalition cabinet.

But these sweeping concessions have failed to satisfy the Left and Soviets of the Russian model have been set up in many cities of the industrial region east of the Rhine. Since all the able-bodied men of Germany are trained sol-

Keystone View.

The Kosciusko Squadron, which is made up of American aviators and mechanics who volunteered last summer in Paris to go to the aid of Poland, has been fighting all winter against the Bolsheviks. Major Cedric Fauntleroy, of Chicago, is in command

diers and experienced in warfare and since arms of all sorts are to be had in abundance, it was easy for the Communists to raise and equip an army of several thousand men within a few days. In many places the established authorities gave way without resistance; in other cases the Communists took the town by assault or laid siege to it in regular military fashion. For instance at Essen, where the Krupp steel works are, the Spartacans surrounded the City Hall and placed trench mortars and four-inch guns in position to bombard it. They then delivered an ultimatum to the police to surrender within half an hour. The police complied and marched out with their arms, but these were taken away from them and they were run off to jail.

In many places there has been heavy fighting and hundreds have been killed. Where the Communists have established themselves they are imposing strict order and taking active measures for food distribution, for they fear famine more than the Government forces. The sale of alcoholic liquors is absolutely prohibited as in Russia and Hungary under Soviet rule. Since the region under Communist control is the Ruhr valley, which is to supply the coal for France according to the Treaty, it may be necessary for the Allied troops on the other side of the Rhine to intervene.

Red, White and Green Russians

RUSSIA is a kaleidoscope in which color combinations form and dissolve with such swiftness as to dazzle the eye. There are first the Reds or Bolsheviks, once a disorderly rabble of revolutionists, inspired by fanaticism or incited by hope of plunder, but now, as their enemies testify, a strictly disciplined and competently commanded army. Secondly there are the Whites—not the race known as White Russians who neighbor the Poles on the east, but the forces under Denikin, Kolchak and Yudenitch, who have been fighting the Bolsheviks on all sides. They have been armed, aided and advised by the Allies for more than two years, but have failed to win either the campaigns against the people they fought or the affections of the people they ruled. Thirdly there are the Greens, bands of deserters or disaffected from both camps, workmen who have found the discipline of the Soviet shops too tyrannical, bourgeois who have been robbed of home and position by the Reds, soldiers who have become disgusted with the incapacity or cruelty of the White officers; many such have taken to the woods as did Robin Hood's Merry Men in the days when Merry England was in a state like Rueful Russia now. Then there are the Nationalists flying their parti-colored flags, at least fourteen more or less clearly discernible nationalities, fragments of the old Empire, struggling to achieve independence and obtain recognition. Lastly there are the Anarchists who fight under the black flag against all forms of organized society and property rights. Besides these there are innumerable other militant factions, plain bandits, or pseudo patriots, or local vigilance committees, or sectarian bodies, or personal retainers, having no common purpose, but all adding to the common disorder and de-

struction. These irregular bands flourish mostly in No Man's Land between the regular armies, which is not a narrow zone between two trenches as it was in France, but an undefined area, sometimes including hundreds of square miles. When we see the word "advance" in a Russian despatch we may safely assume that what has happened is that one side or the other has loaded its available troops on armored cars and sent them forward until they found the tracks irreparably obstructed or held by a superior force. When we see the word "victory" it most likely means that the Red or White soldiers and irregulars finding themselves outnumbered have spontaneously retreated, deserted or gone over in a body to the other side.

For instance the Moscow wireless proclaims to the world this week that in the Kuban country the Soviet forces have captured 21,000 prisoners, a large number of guns and much booty. This does not necessarily mean a hard fought battle, but it shows rather the demoralization of the anti-Bolshevik forces in the south of Russia. General Denikin has put up the longest and hardest fight of any of the White leaders and he has received most aid from the Allies. But now he has lost his headquarters, Ekaterinsdar, and has retreated to Novorossisk on the Black Sea coast where he is under the protection of the guns of the British fleet. It is doubtful if he can long hold even this post for he is said to be beset by 9000 Greens, mostly deserters from his own army and using against him the guns furnished him by the British Government.

Denikin's forces have consisted of two distinct and rather discordant elements; first the Volunteers, largely officers of the Czar's army and members of the aristocracy and bourgeoisie who fled from Soviet Russia to escape persecution and despoilation; and second, the Cossacks of the Kuban and the Don who had been the most trustworthy troops of the old régime and who feared that the Bolsheviks would deprive them of their privileges and their property. But when the Cossacks found that Denikin would not recognize their independence but was using them for the restoration of integral Russia, in which they might have less liberty than before, they began to fall away. Denikin suppressed the Kuban parliament at Ekaterinodar by the use of his troops, but this was no advantage in the end for it offended his most effective forces. When he had to fall back before the Bolsheviks, the Cossacks deserted by thousands and turned Red or Green.

As a last resort Denikin, like Kolchak, tried to make friends of the elements he had alienated. He relinquished his dictatorial power and placed himself in subordination to an elective assembly of the United Cossacks. A new government was organized, responsible to this Assembly and composed largely of Socialists. But it appears that this change of policy was made too late to save either Denikin or the Kuban Republic for the Bolsheviks are rapidly covering the country between the Black and the Caspian and may soon reach the Caucasus.

Telephoning by Light

Among the inventions resulting from the war is a new method of sending sound by light rays. Signaling by flashes of light is one of the oldest methods of communication at a distance. Even the Indians send messages by waving a blanket in front of a bonfire. The mirror has been used from ancient times and in a perfected form as the heliograph has long been employed for military telegraphy. But to transmit sound by light is a problem that so far has not been practically solved. It involves three processes: first transforming sound waves into light waves, these into electric waves and then back into sound waves. The first transformation can be accomplished by throwing a beam of light against a mirror attached to the vibrating diaphragm of a speaking tube or trumpet. The fluctuating ray of light is caught at the other end on a selenium cell in an electric circuit. Selenium is a metal that varies in its resistance to the passage of an electric current under the influence of light so that as the light becomes brighter and dimmer the current wanes and waxes. The third part of the process, changing these electric fluctuations into sound waves, is easily accomplished by interposing an ordinary telephone receiver into the circuit.

Graham Bell, who invented the common telephone, also devised in 1880 the photophone in which a silvered diaphragm caught and reflected a beam of sunlight into a selenium receiver. But the range of this instrument was limited to 200 yards. A few years before the war the German Government set Ernst Ruhmer to experi-

menting on the problem. He used the electric arc instead of the sun as the source of light and varied the brightness of the arc by fluctuating the current with a microphone. This is said to carry several miles, but is limited by the power of the light.

During the war the British Admiralty employed A. O. Rankine to work out a practical device for the navy and he succeeded in making a small instrument which, using a six-inch lens and set on a tripod like a common camera, will carry speech eight miles or farther. The chief difficulty has been that the vibrations of the diaphragm caused by speaking into the sound-box are very rapid and amount to only a few thousandths of an inch and they must be magnified so as to make considerable changes in the reflected light. How this difficulty was surmounted is described in *Nature* of

THE RECEIVER OF THE RANKINE PHOTOPHONE

The beam of light, whose fluctuations correspond to the sound waves of the voice, is caught by a lens and focussed on a selenium cell in circuit with a telephone receiver. The cell alters its resistance as more or less light falls on it and so causes the electric current from the battery to fluctuate in intensity. This sets the diaphragm of the telephone receiver into vibration and reproduces the original sound of the voice of a person who is speaking into the transmitter several miles distant

February 5 and illustrated in the accompanying diagrams.

The light from the sun or an electric arc is focussed by means of the first lens upon a small mirror connected by a lever to the diaphragm of the sound-box. Just beyond this lens the beam of light is split up into strips by passing it thru a grid composed of equal and parallel strips alternately opaque and transparent. After reflection from the mirror the split-up light, now fluctuating in accordance with the sound, is sent thru a second grid and a lens that brings the beam into parallel form for transmission to the receiving station.

There it is focussed on a selenium cell which causes the current to vary so as to set in motion the diaphragm of a telephone receiver and so reproduce the original sound.

Since the mirror of

the transmitter is so set as to turn at an angle with the vibration due to the sound, a very slight shift of the mirror shuts off a large proportion of the light.

The light telephone is of course limited to points within sight of each other and so cannot have the range of the wireless telephone using electric waves. But it has the advantage of the latter in that it can be directed toward a particular spot and cannot be overheard or detected by those not in the line of it. The British warships on patrol in the North Sea during the war were forbidden to use the wireless unnecessarily for fear of betraying their presence to the enemy, but by means of the silent searchlight the correspondents could send their messages to the shore and the marines could give a ball with music played by a band on a battleship two miles away.

When Tommy Came Back

The British Government has made an agreement with nearly ten thousand private firms with an aggregate staff of 1,650,000 men that they will employ disabled soldiers equal to five per cent of their establishment. This would give provision for more than 82,000 men. The actual number now employed by these firms, according to the statistics of the Bankers Trust Company of New York, is 97,000; so that the employers have been better than their word.

Out of approximately 4,500,000 service men demobilized less than eight per-cent were still on unemployment allowance. Of the disabled men only 40,000, exclusive of those still in hospital, are still awaiting employment. The Government does not put the entire burden on private business. Figures furnished by Premier Lloyd-George to the National Federation of Discharged Soldiers and Sailors show that the Government civil service has employed disabled men up to eight per-cent of its total personnel.

The Premier's report indicates that Government training schemes for disabled men, inclusive of maintenance allowances, will cost about \$100,000,000. The British have thus acknowledged in generous fashion the debt of honor which they owe to the men who were wounded in the service of the Empire.

Coin and Currency

Gold is our standard of value and medium of circulation. It is still the standard of value but it no longer circulates very much. Even silver, Bryan's once famous cheap money, is now so dear in many parts of Europe as to be unobtainable. In Paris recently

THE TRANSMITTER OF THE RANKINE PHOTOPHONE

The light from an electric arc is passed thru the first lens which focusses it upon the vibrating mirror and thru the first grid which shreds the beam into strips alternately light and dark. A voice speaking into the trumpet sets the diaphragm in vibration and this by means of a small lever moves the mirror accordingly. The light reflected from the mirror strikes the second grid and more or less of it goes thru according to the particular angle of the vibrating mirror at the moment. This fluctuating beam is then made parallel by the second lens and so sent to the receiver which is at a distance

Tell Your Troubles to the Visiting Nurse

If your part of the country would like to build up an adequate public health system, why don't you pattern it on the Visiting Nurse Service of New York City, which started some years ago in the Henry Street Settlement and has now spread to fourteen centers? The Henry Street Settlement has launched a million dollar campaign to extend its work in Greater New York. Other cities have modeled their Visiting Nurse Service along the lines mapped out by the Henry Street Settlement. Why don't you, too, fall in line?

The most eminent public health experts credit Miss Lillian D. Wald, founder of the Henry Street Settlement, with having built up an indispensable part of the modern public health system.

As Professor Welch, head of the Johns Hopkins School of Hygiene and Public Health, has pointed out, "There is no more striking demonstration of the value of public health nursing to a nation than that which is furnished by the work of the Henry Street Settlement. The activity of the Visiting Nurse Service administered by the community in so many different ways that could not have been foreseen, and the fact that the service began in a small way and has grown so rapidly and to such an extent proves that it has filled a very genuine need in the community."

The Health Commissioner of New York, Doctor Copeland, in dwelling on the valuable work of the Settlement during the influenza epidemics, said that without its help the results might have been tragic indeed. During the recent epidemic in New York City only 4 per cent of the sick were cared for in the hospitals, while the responsibility for the remainder was shouldered by the Visiting Nurse. In normal times 90

per cent of the people are sick in the homes and only 10 per cent go to the hospitals.

During 1919, Miss Annie M. Goodrich, Director of Nurses, announced that the Visiting Nurse Service administered by the Henry Street Settlement made 273,768 visits and did bedside nursing for about 45,000 patients in their homes—a larger number than the aggregate of the patients cared for in the five largest hospitals of New York City.

A striking instance of the part these Visiting Nurses play in safeguarding the city's babies was illustrated in some recent statistics given out by the Henry Street Settlement in connection with decreased infant mortality. As a result of a carefully planned program put into operation about two years ago, the infant death rate under one month was reduced from 37 to 9.8.

Sir Arthur Newsholme, the eminent English physician now lecturing on Public Health at Johns Hopkins University, was much impressed by his recent visit to the Settlement. "The whole of London," he said, "has been mapped out into areas (in the same way that Henry Street Settlement has sectioned off the City of New York), for each of which nursing is provided."

How Forests Help Fish

At first thought the connection between fish and forests does not seem self-evident, save that they begin with the same letter and are both a source of wealth to northern latitudes. But *The Pittsburgh Post* has shown that the destruction of forests in western Pennsylvania has been a serious injury to the trout streams. In many cases streams, once filled with brook trout, have run dry in summer because the land had been cleared of timber.

Even where the streams are not

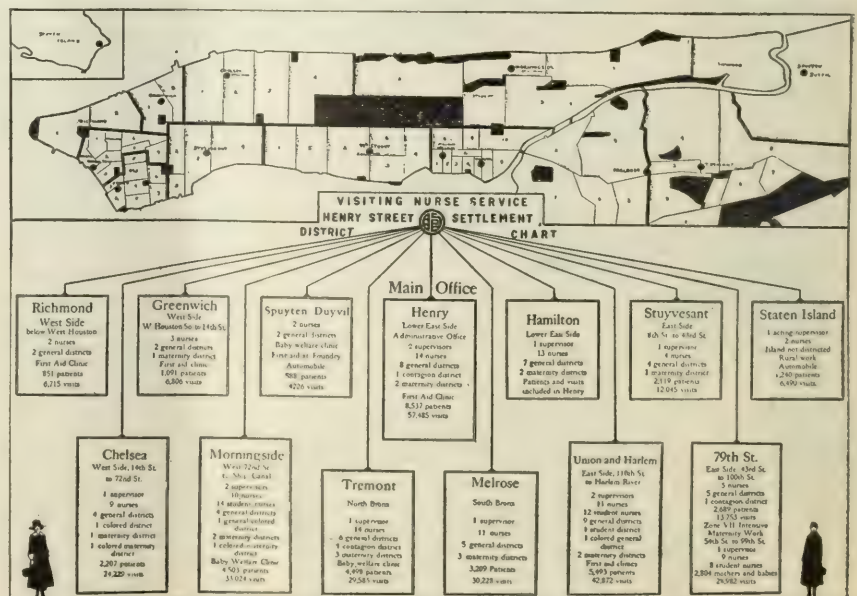

Henry Street Settlement, founded by Miss Lillian D. Wald, is known the world over for its work in the slums of New York

change for a five franc note was always given in postage stamps because silver francs were hoarded, melted into bullion or smuggled out of the country. Paper money, recklessly printed and inadequately supported by a gold reserve, is tending to drive all coinage out of circulation.

The Russian Soviet Government has been a sinner above all others in issuing paper currency, but has discovered that some metal reserve is necessary to support its roubles. It is reported that the Russians propose to back their currency by the platinum in which Russia is so rich. This, if true, is the wisest step which the Bolsheviks have taken in a long time, for platinum is a more valuable metal than gold and the Russians have enough to support a considerable credit. But it is only too probable that the Russians will leave the platinum in the ground while they fail to redeem their paper.

Platinum has been rising in value relative to other commodities, just as gold has been falling. If a platinum-gold alloy coin had been made the standard of value prices would have been almost stationary until the Great War flooded the world with paper currency. This would not have been a double standard of coinage, like the "free and unlimited coinage of gold and silver at sixteen to one," because if the gold and platinum were in the same coin neither could drive the other out of circulation. The appreciation of half the coin would have cancelled the depreciation of the other half! But such a convenient divergence could not have been foreseen and might not be repeated in another decade. A permanently stable standard of value can only be obtained if adjusted directly and frequently to conform to the price index of many commodities, such as proposed by Professor Fisher.

This chart of the Visiting Nurse Service in New York City suggests the organization that could be followed in any city, large or small

Quality Fittings for Every Building

Every building, small or large, should be planned for maximum comfort, convenience and durability, and this applies particularly to the plumbing, heating, ventilating and sanitary fixtures.

CRANE

high-quality products, backed up by Crane national service, make it possible to equip a small cottage or a great public building with equal assurance of detailed satisfaction, and with ample choice of types and design in each instance.

Experts in the numerous Crane exhibit rooms throughout the country are ready to give practical assistance in selecting the proper fixtures for any purpose. Call upon them.

Crane
72-Inch Gate Valve

When it is considered that a man six feet tall could stand in the opening of this mammoth valve, a striking insight is gained into the scope of Crane manufacturing.

completely dried up by deforestation serious injury may be done to fish life. Trout require cool water, and in some shallow brooks this can be obtained in hot weather only by the overshadowing branches and foliage of trees along the banks. Anyone who has bathed in the open air in summer knows what a difference there is between shaded water and water directly in the glare of the sun.

A really abundant supply of water is especially necessary where industrial establishments have contaminated the streams. A survey made by United States engineers showed that a heavy discharge of acid from an industrial plant into the Ohio river destroyed fish life for 275 miles. Forests on the watersheds of river tributaries by increasing the volume of water in summer would dilute the acid below the danger point and so would conserve fish life.

Civilization Is Good for Eyes

Professor Moulton of the University of Chicago in a recent article in *Visual Education* combats the popular idea that wild animals have better sight than man and that the savage is superior to civilized man in the keenness of his vision. He has tested Indians and Mexican laborers who spend their lives in the open and finds that even for distant objects their sight discrimination was not as good as that of white Americans. The Arabs are famous as observers of the stars and yet they have given the name of "the Test" (for eyesight) to the little star near the larger one at the bend of the handle of the Big Dipper; a star easily seen by any American of normal vision.

This improvement of eyesight Professor Moulton interprets as a response to the increasing need for sight discrimination with the advance of civilization. An animal sees only what he needs to see. The pupils of the eyes of herbivorous animals are elongated horizontally to focus sharply on vertical lines such as grasses present. On the other hand, the pupils of the eye of the cat and other carnivorous animals are longest vertically so that

they can focus easily on the swift lateral movements of their prey. Man needs eyes for the most varied purposes and has the best "all round" optical apparatus in nature. The invention of printing, the practice of careful detailed handwork, the introduction of artificial lights and other changes in human life which civilization has introduced have created new needs unknown to the barbarian.

The only danger is that new habits may be introduced faster than the evolution of the eye can meet them. Professor Moulton instances the practice of reading by inadequate artificial light. Our ancestors, except when they hunted by night, used only sunlight for their work. Sunlight is equivalent at its brightest to the light of sixty thousand candles within one yard's distance of the eye. It is to this standard that our eyes are accustomed. Illuminating engineers place the minimum light for reading without strain at six or ten candlepower at the distance of one foot. If a book or paper is read four feet away from the source of light there should be from ninety-six to one hundred and sixty candlepower at the source of illumination. The illumination of libraries, schoolrooms and the like is usually below this margin of safety.

All in One Motion

An engineer of the San Francisco street railways has perfected an apparatus for tearing up and loading the strips of asphalt pavement between car tracks in one operation. It works with as much speed and ease as peeling a banana, and the old process of attacking pavements with picks and axes has been discarded. When in operation the scoop of the device is forced under the asphalt to start it. The car is then started ahead, moving under trolley power, and the strip of asphalt is raised up an incline and over into the body of the car behind. When the car is full, it is uncoupled from the scoop and hauled away, and another empty car comes up to take its place.

This street peeling machine in San Francisco answers admirably the problem of labor shortage

The American Association of University Professors, sometimes called the Professors Labor Union, consists of 2378 professors from 147 institutions.

If all the insane persons in the United States were confined in one institution it would house more persons than live in Seattle or Indianapolis.

The United States has the same percentage of Jewish population as Rumania. There are twenty Jews in New York City for every one in Palestine.

Nevada is the star state in supporting its Christian ministers. The per capita contribution for pastors' salaries averages \$11.12 per year per church member.

Governor Brough, of Arkansas, has just appointed a state commission on race relations, consisting of ten white and colored men, with the Governor himself as chairman.

France wants 22,000,000 tons of coal and \$145,000,000 worth of food stuff from us in 1920. Italy wants \$800,000,000 of raw materials, coal especially. Belgium wants \$100,000,000 in cash.

The average American consumes about eighty pounds of sugar a year; half of which comes from Cuba and the other half is raised in the United States or its dependencies.

The streams of the United States have an estimated capacity of 320,000,000 horse power, if they could be fully utilized; of this about 54,000,000 horse power is practically available and less than 5,000,000 horse power is actually used.

Since the Senate has held up the Peace Treaty the Stars and Stripes are getting so unpopular in England that American film producers have been advised by their foreign representatives to "put the soft pedal" on Old Glory in films for foreign consumption.

American marines in Hayti have been embarrassed by the fact that since they cleaned the jail of Port au Prince and instituted three good meals a day a number of natives who have committed no crime have smuggled themselves in.

Letters to the Great and the Near Great

By John Citizen

Mr. William Randolph Hearst
New York American Office

Dear Sir:

If in your busy journalistic career you find time to consult a few books of reference you will discover (1) that the United States is still in a state of war; (2) that it is at war with Germany and Austria; (3) that it is not at war with Great Britain; (4) that it is not at war with Japan. Your newspapers seem to labor under a delusion on these little matters of detail, and accuracy in small things is essential to a first-class journalist.

JOHN CITIZEN.

Senator Reed,
Washington, D. C.

Sir:

Mary Citizen and I do not often find much pleasure in reading the *Congressional Record* in spite of all your endeavors to lighten its style. When you compared one of your Democratic colleagues to a "brass monkey" we enjoyed the quip, but unfortunately your speech of March 3 preserved a similar levity where levity has its dangers.

For example you said that to compare the United States with Great Britain is to compare "the shepherd dog that guards the sheep at night and dies in their defense and the grey wolf that comes to tear their throats and suck their blood." This may or may not be good propaganda material to send to pro-German constituents; you, as an experienced politician, are a better judge of such questions than I am or could wish to be, but it is no light responsibility for a Senator of the United States to denounce a friendly Power in such unmeasured terms as would make him ready to go to war if similar insults were offered to his own country.

Was the British Lion a "grey wolf" when the American Eagle joined him in defense of the ravaged sheepfolds of Belgium and northern France? Did we fight on the wrong side in the Great War? If so, it is a pity you did not speak earlier. You should have warned us in time that in entering the war we were leagued with wolves. You should have voted consistently against all military appropriations and lifted up your voice in season and out of season on behalf of innocent Germany and honest Austria and gentle Turkey so sorely wronged by the Entente imperialists. Now that the war is won it is too late to say that thousands of American boys died in an unjust quarrel.

Stick to brass monkeys and let grey wolves alone.

Admonishingly yours,

JOHN CITIZEN.

ARCO WAND VACUUM CLEANER

CLEANS all over the house. Gets the surface and ground-in dust, grit, lint, threads and trash with a few moment's easy stroking without moving heavy furniture. No heavy or noisy machinery to drag around. The accumulations do not have to be handled, but are piped into the sealed dust bucket of the machine set in the basement. Does away with extra help. Makes the home sanitary.

Easily installed in *old or new* Residences, Apartments, Theatres, Churches, Schools, etc. Made mounted on truck for factories, offices, etc. Send for illustrated catalog showing its construction and labor saving uses.

Don't Wear a Truss

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. NO obnoxious springs or pads.

MR. C. E. BROOKS

Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today.

Brooks Appliance Co., 490-G State St., Marshall, Mich.

Where Everybody Likes to Talk Shop

(Continued from page 5)

ment is certain to come. But whatever the result White Motor wants to survive, and wants to govern itself and not be dictated to by outsiders. How can we survive and keep control of this business among ourselves whichever way the country goes? And what is there in it for you to have the White Motor keep on in the way it has started, regardless of what happens outside?

"Let us see. There are three hundred manufacturers of motor trucks in America. A large number of them will go to the wall. We manufacture about ten per cent of the total output of the country. We want to keep that ten per cent. If we do we shall have to keep on absorbing our ten per cent of all those that go under. That means that we shall need to double our plant in, say two years, and, triple it in five years. Now, if we double or triple our plant what will it mean for us?

"Well, we doubled it during the past five years and here is what it meant:

"While our plant value increased from \$1,879,000 in 1914 to \$3,650,000 in 1919 our production value increased from \$9,000,000 in 1914 to over \$35,000,000 in 1919. This means that five years ago for every dollar we invested on our plant we produced about \$4.80 worth of motor trucks, and this year for every dollar in the plant we produced \$9.60 worth of trucks.

"The number of employees has more than doubled. The average number of men in 1914 was 2202; now it is 5475. The production per man in 1914 was 1-92/100 trucks; in 1919, it was 2-75/100 trucks, an increase of 43 per cent.

"We have increased the earnings of our employees from an average of \$15.03 a week in 1914 to \$31.64 in 1919, or an increase of 111 per cent. Our total pay roll for factory employees in 1914 was \$1,688,000, now it is \$8,835,000.

"All this has been done without any material increase in the price to the purchaser of our trucks. Our price has been increased only 10 per cent, at a time when all prices, wages, and cost of material have gone up 50 per cent, 100 per cent, or more.

"Looks wonderful, doesn't it? Can we keep it up? See where we must be to double in two years and triple in five years, if we can keep it up. The figures given below show the estimated factory value of production for each of the next five years:

FACTORY VALUE OF PRODUCTION

1920	\$ 51,961,350
1921	67,244,100
1922	82,526,850
1923	97,809,600
1924	113,092,350

"The big thing is, where are we going to get the capital in order to expand? The business that does not expand is really falling behind. We must expand further than our competitors, or else we are falling behind. If we take five years we can probably build up our plant out of earnings. If we

have to go too fast in order to take up our share of the business of those who fail we may have to go and get outside capital. As long as we have the present control you can be certain that the present labor party policy will be carried out. Our policy has been in the past and is now, to limit payment of dividends to 8 per cent on capital stock."

On what devices does the White Motor depend for keeping up and increasing production?

The White Motor has neither any system of bonuses, premiums or piece rates. Everything is a straight day wage. No time and motion studies, no specific inducements to individuals to increase their output.

There is, of course, a very careful system of scheduling the work thru the factory and there is a standard output figured out for a year ahead showing how many trucks must be made if they keep up to the plan of expansion. The year's output has been narrowed down to four types of motor trucks, with some variations within the types, and all models are scheduled for erection daily. The figure of each day's output of completed trucks is filed with the various superintendents so that the organization is familiar with the result of each day's work and the production both of completed trucks and the main assemblies, such as engines, axles, and transmissions, is published each month in the regular issue of the White-Book so that the workmen are kept informed concerning the product of the factory. No individual is speeded up by a piece rate, bonus or premium—the whole factory is simply watching that the schedule is met or exceeded. Then, if a department falls behind, or if the whole factory falls behind, the fifty-eight hundred employees want to know where the fault lies. The committees and the management begin to inquire. Cases come along occasionally where the men in a department freeze out a loafer. The management is proud of the fact that they seldom fire a man, and, most of all, that the men seldom quit.

The turnover records are astonishing. During the year 1919 the rate was about 24½ per cent. It got as low as 1.23 per cent in February; as high as 2.65 per cent in May. In 1916 the turnover was the highest—77 per cent for the year; in 1917 it was 66 per cent; in 1918, it was 63 per cent, but this should come down to 54 per cent after deducting army enlistments. The average for other factories that year in Cleveland and vicinity was stated by the company to have been about 300 per cent.

To sum it all up, what are the White Motor's substitutes for the motion studies, piece work, profit sharing and all the other scientific methods of appealing to the individual for increased profit?

Isn't it something like this? Think-

ing and planning for the future. Keeping the mind of every man away from whatever there is of dullness and monotony in his task. Just touching the imagination; arousing in every heart zeal for progress and pride in a great common enterprise; lighting up the most menial and stupefying task with the rays of a great industrial vision.

But all this is not as easy as it may sound. How are you going to get a good red-blooded workman to sit down and be lectured to on the subject of a great industrial vision? How are you going to get him to believe that expansion has something in it for him?

The White Motor Management does it by the policy of honesty and openness. It furnishes copies of its annual report to all employees requesting it, and sets forth in the White-Book the essential facts contained in the report. The White-Book is sent every month into the homes of every employee and it forces information about itself not only on the men but also on their wives and families. It shows what they have to fear and what they have to hope, and then promises to keep faith with them in sharing prosperity with them.

It does not offer all this information in the name of industrial democracy. The shop committee in the White Motor Company was started neither as a grievance committee nor a legislative body. The idea back of it was not in any sense the idea back of the inside organization of workmen which union men are accustomed to designate with greater or less scorn as "a company union." The company has never made any attempt to give the employees any degree of industrial self-government. One of the objects of this committee was apparently exactly the opposite—it was that some day employees may assume a greater or less degree of self-government, and if this company is going to be one of those which survive it must prepare the workmen to exercise intelligently whatever degree of power they may have. It is not for the company to give power, it is for it to give the information which may save it when the workmen have power. The company is not trying to determine the form of organization under which the power may sometime be wielded. The company keeps in its employ strong, responsible, intelligent leaders of every variety of organization which is likely ever to be in control. This seems to be all that it cares to do toward securing a safe transition into any form of industrial government which may come. Which form this industrial government will take is still a question.

Many trades are to be found in the factory, most of them at least partially organized. Cleveland is one of the most highly organized cities in the country, so that altho White Motor has an open shop policy, a large part of the men probably are or have been at some time members of the union of their trade. No union, however, has ever presented a demand to the company. Informal shop committees have asked for wage increases or other changes in condi-

Orlando is Calling You

Do you want to get away
From the **grind** of every day—
From the **drudgery** of things you have
to do?

Do you want to settle down
Near a lively, busy town,
Where the **joy of living** will appeal to
you?

Do you want to scent the breeze
Coming through the orange trees?
Do you want to hear the birds call—
loud and clear?

Are you seeking perfect health
That's combined with certain wealth
And an income from an orange grove
each year?

Do you want a piece of land
That will grow to beat the band
All the different garden crops that you
enjoy?

Do you want to make a "nest,"
And a permanent bequest
For the future welfare of each girl and
boy?

Do you want a sunny clime
Where there's fishing all the time?
Where there's ducks and deer and quail
and other game?

Where the summer climate's cool,
And within each lake and pool,
You can swim in January—just the
same?

Do you want to buy this land
On an easy-payment plan—
Just about what you pay each month
for cigars?

Do you want to read a book
That will make you want to look
On the **finest land that lays beneath the
stars?**

tions, and their requests have been
listened to, but the unions have not
interfered in the question of wages.
Only once have they shown any great
degree of activity and that was when
the men got an idea that a change of
management was impending. Then how
can the White Motor Company get
production like this on a straight
hourly rate?

In the long run, according to the of-
ficials of the company time rather
than piece rates will prove to be the
cheapest. It costs too much to hurry.
It is more economical to employ a
young man and keep him until he
grows old, than to wear out a man,
or lose him when he is still young.
They point to their average age of
over thirty-five and their annual turn-
over 24½ per cent in connection with
their increased per capita production
figures. Time and motion studies, they
maintain, are almost necessarily liable
to grave error. They are not elastic
enough. In order to be fairly accurate
they need to be taken on very hot days
and comfortable days; early in the
morning and just before closing time;
early in the week and late in the week;
during periods of political and indus-
trial turmoil, and during periods of
political and industrial calm. They
vary under conditions of domestic dif-
ficulty and domestic tranquillity. Hu-
man beings are not constant in their
ability to perform. Their attainments
must be measured over reasonably long
periods.

Is there any other factor that can
help to account for increasing per
capita production on an hourly rate?

When you offer desirable conditions
you get your pick of employees.

As might be expected there is never
any lack of applicants for work at the
White Motor. As a matter of fact, the
employment department takes about
one out of every thirty or forty ap-
licants. Two conditions are required of
each one who is employed; he must
live in Cleveland and he must have
taken out his first citizenship papers.
Preference is given to married men
and returned soldiers. The word "he"
is used literally here. It means what it
says. The company aims to pay a fam-
ily wage and endeavors to employ fam-
ily men. Much of the work could be
performed by women, but it is the in-
tention of the company to use only
men.

There is in the White Motor plant
a considerable amount of "service
work." It takes the usual forms of
furnishing lunch and medical aid.
Then there is the consultation bureau
where legal aid and other forms of
advice are dispensed on company time.
The company shows that this is no loss
to them since it furnishes a convenient
place to transact the necessary busi-
ness for which employees might other-
wise have to lay off during working
hours. And it is on record that the men
themselves once petitioned to have
more men in the Industrial Service De-
partment to answer their requests in
order that they need not spend so
much time away from their work.

The foremen and all executives get

a special kind of service work. It is
one hour a day in the gymnasium, on
company time, and it is mandatory. If
a foreman cannot arrange his work so
as to be away from it for an hour, he
is not the kind of a foreman they
want. This is the White Motor course
of instruction for foremen and execu-
tives—it gets them acquainted with
each other undressed; it keeps them
in splendid physique; and it keeps
them from indigestion and getting
cross and sour with their workmen; it
keeps them at the top notch of initia-
tive and pep.

The educational work does not stop
with the shop. There are in addition
the classes of Americanization. Sus-
picion need not be aroused here with
regard to employers' propaganda. The
man at the head of Americanization is
a man of liberal thought. He attends
national Socialist conferences and he
is first of all a teacher and an Ameri-
can. He has lived in this country
twenty years. There are only thirty
men out of fifty-eight hundred em-
ployees who have not taken out their
first papers, and that is because they
intend to go back to Europe soon. The
teacher in Americanization has con-
nected up with the public schools and
three hundred men are in the classes
an hour a day on their own time. The
company gives them fifteen minutes on
company time to wash up and reach
the Public School.

The cost of all this work is figured
out for the men and they see that it
takes eight cents a day from their pos-
sible wages. But they see that it adds
much to their actual wages.

Is anything more needed to explain
why they work as they do? What is
back of it all? Not a strong union with
power to secure for the men the bene-
fits of increased production. Not in-
dustrial democracy. Not a premium
or a bonus.

Nothing but a knowledge of all the
facts which the company itself pos-
sesses; the company's verbal assur-
ance that it will do certain things in
the future; the company's reputation
for keeping faith with employees in
the past; for not having tried to "put
anything over," and, added to this, the
knowledge that the company has not
weeded out of its employ all those who
disagree with the present industrial
system. On the contrary, it has delib-
erately encouraged the presence of
strong and trusted leaders of the
people, in whom they have confidence
and on whose judgment and intentions
they can rely. Real power is here—po-
tential largely, but power which makes
it possible for the men at the White
Motor to accept their responsibility
and satisfaction in thinking and plan-
ning for the future.

Live Wires Under Heavy Insulation

(Continued from page 7)

"dummy" is worked up by the reporter from the papers filed with the court. The Associated Press "dummy" in the stock dividends case read:

Bulletin

Washington—Provisions of the income tax act of 1916, taxing as income stock dividends declared by corporations out of earnings and profits accruing subsequent to March 1, 1913, were held *constitutional—unconstitutional* today by the Supreme Court.

If the decision of the lower court was reversed the second of the italicized words was to have been stricken out and if sustained the first. The "dummy" system was devised by Supreme Court reporters years ago as a means of saving minutes. After the first bulletin has gone there is, of course, much more to write, but it is the first bulletin that is important.

The Associated Press man in this instance crossed out the word *constitutional* which made his dispatch correct. Three of the others struck out the wrong word before sending their "dummys" on the race for the wire.

Since this occurrence several of the news associations have memorialized the Supreme Court in the interests of newspaper accuracy to reform its procedure. They have asked that their representatives when the reading of a decision starts be handed either a memorandum giving the result in plain everyday English or a full printed copy of the decision so that they may turn to the last page and find the precious words "judgment affirmed" or "judgment reversed."

Under pressure from the press practically every other governmental agency has made its practise in giving out news for the public conform to the convenience of the reporter. All but emergency statements and those of minor importance by the State, War and Navy Departments and the Department of Justice, for instance, are given out to be held for release at a specified time. This gives the press men time to digest the contents and write intelligent and accurate stories hours before they are scheduled to appear in print. The Lansing-Wilson correspondence containing the first news of the resignation of the secretary of state was given out in this way . . . and in no case was the release on this important story broken.

The President's speeches always are handed to the newspaper men in printed form immediately before their delivery. Senators and representatives give "advance" on their set-speeches days ahead of time, and usually the stories are in type in every large newspaper office, being held merely for a flash release when the speaker takes the floor. In arranging the national political conventions first consideration is given to the location of the press stands and the placing of telegraphers so that the news may be transmitted accurately and at highest speed.

How to Use the Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address The Independent, 311 Sixth Avenue, New York.

Can the Supreme Court of the United States, the most powerful tribunal in the world, be made to conform to the convenience of the press? It is doubtful. Nevertheless, the news associations feel that it is in the interest of the public as well as in their own interest to make a try. And they have done so.

When Justice Brandeis became a member of the Supreme Court he started the practice in reading lengthy decisions in important cases of announcing the result in advance. This was of the greatest assistance to the newspaper men, but the practice has been followed only in those cases of the highest national importance, whereas every case, however limited the interest in it may be, is of tremendous importance to some state, some city, some corporation or some person.

Advance information on Supreme Court decisions is not asked or desired by the news agencies. Few Washington correspondents would care to accept the responsibility that would go with the possession of such information. They have no scruples about seeking out a "leak" thru which to secure information on executive sessions of the Senate or secret meetings of Congressional committees, but it probably never has occurred to any Washington newspaper man to fix up a "leak" out of the Supreme Court.

One newspaper man has, however, detected such a "leak" and an investigation of it has been made by the Department of Justice. The evidence produced by this investigation has been laid before a federal grand jury in the District of Columbia and a set of indictments is in preparation.

Marlen E. Pew, former chief of the War Department News Bureau and now general manager of the International News Service, learned last November that advance information on the forthcoming decision of the Supreme Court in the Southern Pacific oil lands case had been offered to certain persons in New York by a Washington lawyer. He investigated. He secured what he believed to be absolutely convincing evidence that a "leak" from the Supreme Court existed, and then, without publishing the story, he came to Washington.

On the night of November 20 at 8 o'clock he was ushered into the library of the Rhode Island residence of Chief Justice Edward D. White. The chief justice was awaiting him.

"Incredible! Impossible!" Justice White exclaimed when Mr. Pew began his story. Similar rumors had come to his attention many times during the last few years. All of them had proved to be without foundation. The chief justice thumped the table. He was angry. He had no desire to continue the interview. Mr. Pew played a trump.

"The decision in the Southern Pacific oil case," he said impressively, "was rushed thru by the Supreme Court at the last minute. I do not know why, but I know it was."

Justice White was staggered as if by a blow. He took Mr. Pew by the shoulders and looked into his face.

"How do you know that . . . ?"

"Wait . . ." he said as Mr. Pew was about to answer.

He went to the door and called to someone in the hall.

"Milly, you can go down stairs. I'll call you if I want you."

Then he closed the door and turned the key in the lock. Coming back he said:

"No one but a member of the Supreme Court could know that. How did you know?" There was a pathetic appeal in his voice.

It came to him from a friend, Mr. Pew explained. The friend, whose name he gave, had been offered and had secured the court's decision in the Southern Pacific case the day before it was rendered.

"The court decided the Southern Pacific case only the middle of last week," Justice White said feebly. "I did not know myself that it was to be handed down Monday."

Tears coursed down the cheeks of the venerable justice as he listened to the remainder of the story.

"For twenty-seven years I have guarded the secrets of the Supreme Court," he cried, "and never . . . never has there been anything like this."

The famous Standard Oil decision he had written with his own hand, refusing to entrust it to any stenographer or printer. The decision when printed covered two newspaper broad sides.

"That, my son, was an arduous labor," he sighed.

Mr. Pew spent three days reviewing with Justice White the evidence he had secured. Then the Bureau of Investigation of the Department of Justice was set to work. How William J. Flynn and his assistants, with the co-operation of the newspaper man, secured the evidence upon which the Government asked for indictments is a tale that would thrill even so hardened a reader of detective stories as President Wilson. Its details will be brought out at the trials.

How do leaks from the Supreme Court happen? There are only a limited number of ways in which they can possibly happen. One famous leak in a decision on a far-reaching cotton case came thru the secretary of one of the justices. He afterward confessed to having sold the information for money.

A leak could—but never has—come from the shop where the Supreme Court's decisions are printed. The court's printing is not done at the Government Printing Office but at Pearson's Printing Office, a private shop.

Like the President's messages, the decisions are set up in short "takes" by many typesetters, no one man being permitted to know what material the others have. Pearson's Printing Office has done the Supreme Court's work for nearly fifty years. Assembling the type and the actual printing of the decisions is done by a few old and trusted employes. Not one of them has ever "leaked" on a decision.

There was once a supreme court justice—the late Justice Harlan—who himself gave advance information on forthcoming decisions, quite unknown-

ingly, of course. He used to lecture to law classes at Georgetown University.

A sharp New York brokerage firm learned that Justice Harlan in his lectures frequently would take cases before the Supreme Court, discuss the arguments on both sides and then announce that in such a case such-and-such a decision was inevitable. He would never refer to the cases by name and usually would somewhat alter the circumstances, but the principles of his supposedly imaginary cases often were identical with those of important cases before the court.

In this brokerage office there was a clever young lawyer. He was sent to Washington, matriculated as a law student in Georgetown University and sat in Justice Harlan's classes. He familiarized himself with the principles of all the cases before the court in which his firm could possibly be interested. On several minor cases he was able accurately to forecast the Supreme Court's findings.

Then one day Justice Harlan discussed a case which the lawyer was able to identify as an important industrial case before the court. Advance information on this decision would enable his firm to make a killing in the street. Soon he heard Justice Harlan asserting that in such a case the decision could not be otherwise than unfavorable to the corporation in question.

He sent a wire to New York and the brokerage firm, counting upon a fall in the prices of the corporation's stock as a result of the forthcoming decision, sold short to the limit. But the decision when it came down was in the corporation's favor and the brokerage firm was practically wiped out.

At the end of the decision there was a line in small italics:

"Mr. Justice Harlan dissents."

Like O. Henry, the Supreme Court puts the kick in the last line. Only with the Supreme Court the last line is somewhat longer delayed, and the real story comes thereafter.

Washington, D. C.

Small Man (in the street car)—Have you plenty of room, madam?

Fat Lady—Yes, thank you.

Small Man—Well then give me a little, please.—Widow.

Host—Ah, these now are what you may call cigars. I bought five pounds' worth the other day.

Friend—What an enormous supply you must have got.—Blighty, London.

Charles E. Hughes was urging a group of soldiers to keep up their war insurance policies.

"I know it's hard," he said. "Of the 4,000,000 policies written during the war over 3,000,000 have lapsed. This shouldn't be.

"Duty is always hard, boys. Yet we must do it. A little lad entered a general store the other day.

"Well, son, what do you want to buy today—candy?" said the storekeeper.

"You bet I do," said the urchin, "but I've got to buy soap."—San Francisco Chronicle.

Note how lather acts when Shavaid is used

How they bring a simpler, easier way to shave, a real delight. How this way saves time and keeps the skin in fine condition. A free trial tube will give you complete evidence.

SHAVAID, a scientific discovery, softens the beard instantly. It does away with all other preparations, such as hot towel applications and severe rubbing.

Merely coat the beard completely with Shavaid, then apply your favorite lather. Then shave.

And it will be such a shave as you've never experienced before. The blade will glide over smoothly, and there won't be that old-time pulling.

Then afterwards! That cool, soft effect—a perfect shave, even if closer than usual.

The right way

Note that Shavaid does away with hot towel applications and rubbing in the lather.

Both are bad for the skin. Heat brings the blood to the surface at the wrong time. It induces abrasions. And then you have to use a styptic stick.

Hot towel applications open the pores. The natural oiliness of the skin is removed, giving it that drawn feeling.

Shavaid keeps the skin normal. It protects the skin while softening the beard. And abrasions cannot be so frequent.

Note also that you merely apply the lather over Shavaid—then shave, without the usual rubbing in. This saves time and does away with mussiness.

No after-lotion

Shavaid gives a luxury shave, for it is in itself a cooling, healing emollient. It takes the place of after-shaving preparations.

In fact, when you use Shavaid, there is no need for doctoring the skin afterwards.

It keeps the cuticle firm, smooth and in healthy tone. You'll appreciate all this, once you use Shavaid. You'll discard all the frills.

You'll agree with thousands of men the nation over that shaving comfort has come at last, after all these years.

Find out for yourself

Prove all we say at our expense. Merely send us your name and address on the coupon and

we'll be delighted to mail you a free tube of Shavaid, enough for a trial.

This offer as you see, comes from Bauer & Black, noted for 25 years for its activity in inventing and perfecting new helps for mankind.

Send today for your trial tube, together with our booklet entitled: "A simpler way to prepare your face for shaving."

Then you can get Shavaid from your druggist at 50c per tube. Or, if he hasn't obtained his supply yet, we'll be glad to fill your order direct.

Shavaid

Softens the beard instantly

—apply to dry face before the lather.

Saves time and trouble

—no hot water, no "rubbing in" of the lather.

Protects the face

—skin remains firm and smooth.

Removes the razor "pull"

—harsh ways age the skin prematurely.

Replaces after-lotions

—Shavaid is a cooling, soothing balm.

Chautauqua Public Assembly

Summer of 1920

The activities of Chautauqua Institution fall under three general heads: The Public Assembly, the Summer Schools, and the Home Reading Work.

The Summer Assembly is held in July and August. This year the formal opening date is July 1, the closing date August 29. (Chautauqua is a popular summer resort, and many roomers and cottage owners come in the spring and stay until well on in autumn.)

For these eight weeks a brilliant program is arranged, with lectures and addresses, dramatic and other entertainments, vocal and instrumental music. The best public speakers and musicians are engaged, and the platform utterances have recognized national importance and immediate popular interest.

Here is a College of the People held in the Summer City by the Lake. Fifty thousand persons attend annually. The lectures and entertainments are given in open-air structures, "halls without walls." The program events are interspersed, at your pleasure, with the varied outdoor amusements and recreations of a high class summer resort, and the gate fee giving entrance to the grounds covers admission to these edifying and entertaining events.

The program of public speaking is arranged in a succession of

The Story of Our Air Mail

(Continued from page 8)

business dealings generally felicitated.

We shall be able to save two business days on a new route we are planning between New York and San Francisco. If the Post Office Appropriation bill, making funds for this route available, is passed before the end of May, we shall have the planes constructed and ready for service in September. The planes will be of two types, one a huge plane of large carrying capacity for the heaviest leg of the trip between New York and Chicago, and the other a swift, high-altitude machine for flight across the Rocky Mountains.

When this route is established the time taken to carry first class mail between New York and San Francisco (90½ hours west bound and 102 hours east bound) will be cut to fifty-nine hours. In order to get a letter from New York to San Francisco by Friday noon in the train mail, it would have to be mailed sometime before 6 p. m. on the previous Monday, whereas a letter mailed any time up to midnight Monday would be delivered by air mail to San Francisco on Thursday afternoon. However the train scheduled to arrive at San Francisco at 12:30 p. m. is generally so late that delivery of the mail by carriers cannot be made until the following morning. And, again, if a close connection at Chicago is missed—it is missed 26 per cent of the time—the letters must lie over another twenty-four hours.

On the New York-San Francisco route night flying is to be attempted for the first time by postal planes. We are at present developing a gigantic lamp, throwing a white beam high in the air, to serve as lighthouses for our ships of the air. Night flying will be undertaken only across the prairies where the country is one broad landing field. It will be attempted nowhere else, for the first consideration in this service is safety.

In seeking to make flying safe for its pilots and their cargoes, the Post Office Department has developed many wonderful devices of the greatest service in the commercialization of aircraft. The very first flight went wrong because of the vibration and spinning of the plane's compass. Under the encouragement of the Post Office Department a new compass was developed, a globe compass, which made it possible for the plane to go thru all stunts without spinning the compass card. The compass was later improved by the Navy Department and is now the very highest type for airplane flying.

The next trouble corrected was the "fouling" of the spark plugs. That was one of the troubles with the Liberty engines. An inventor who had been unable to get any encouragement elsewhere came to us with a self-cleaning spark plug. We gave him an engine and a field to experiment, and now that spark plug is standard equipment.

Our aviators, forced to fly in all kinds of weather, sometimes found difficulty in locating their fields when the earth was covered with fog. The Bureau of Standards at our request developed a set of sirens and microphone that allowed the aviator to catch the sound waves above the roar of his engines miles away. The Navy Department developed at the Air Mail field at College Park, Maryland, the "seven step amplifier" upon which information was given the United States by the British Government, after a German plane with similar instruments had been brought down.

It was soon discovered, however, that flying fields could not be located exactly by sound. Then there was developed an amazing invention enabling an aviator to know, thru a barrage of radio waves surrounding the field, just when he was above the center of the field. Reaching the neutral spot he could spiral to the ground thru clouds and fog without danger of a mishap.

When the service was first started we adopted the standard 200-foot wireless tower at our fields, but it soon became evident that we would lose many men thru coming in contact with these towers in foggy weather. It was then we developed the 57-foot tower now in use. We have an antennae on a 20-foot tower at College Park that has a signalling radius of 200 miles.

An enormous step forward in commercial aviation was made when the Army developed a reversible propeller, which allows a plane to "back water" in the air, and come to a stop on the ground in 200 instead of 800 feet. The Department also is watching with closest attention the experiments of the French Government and of American inventors with the helicopter, which will permit planes to ascend and descend in a vertical line.

The thing that militates against the wide commercial use of airplanes at the present time is the fact that less than one-fourth of the weight driven thru the air can be a commercial load. Seventy-five per cent of the carrying capacity of the airplane of today is used in the transportation of "dead" weight, that is the engines, oil, gasoline and water.

The Thomas Morse Company is now completing for the Department four planes that will carry each a mail load of 1500 pounds out of a total weight of 5400 pounds. Its perfection will mark a great advance in the business of commercial flying.

All these things are by-products of the Department's effort to give the country the best possible air-mail service, but in themselves they are invaluable. After safety in its air service the Department's next consideration is economy.

Many of our planes have been salvaged from the War Department's surplus supplies and rebuilt for com-

CON-SER-TEX

Canvas Roofing That Lasts

Spring is here and the proverbial April shower is on its way—your outside surfaces must be waterproof.

CON-SER-TEX Canvas Roofing

is the ideal material for covering roofs, porch floors, sleeping balconies and for all similar work.

Inexpensive and easy to lay—provides an even, attractive surface—won't crack, shrink, stretch, peel, rot or leak. Changing weather does not affect it. Its cost is nominal—and it lasts for years.

Tell us the size of the space that needs covering and we will send samples and a copy of "Roofing Facts and Figures."

mercial work. Our aviators, except in unusual circumstances, must hold down to a speed of eighty miles an hour, altho the planes can go much faster. At eighty miles an hour, the engines last longer, and the cost of operation is lower.

What has been the cost of this service to the public? Those prepared to read a large figure will be surprised to know that it is not costing the public one cent, but is saving the Government more than \$100,000 a year. It costs considerably less than \$400,000 a year to operate a 1500 pound mail capacity airplane one round trip daily between New York and Chicago, and by the establishment of such a schedule the Post Office Department has been able to discontinue nearly \$500,000 worth of railroad distributing space and clerical hire.

The point is that a 60-foot mail car is a traveling post office, filled with racks and sacks and all sorts of heavy equipment. As a means of saving time the mail is sorted and made ready for distribution on the trip. The airplane carries no such equipment, of course, but it saves so much time that the sorting can be done in the regular course at the end of the route.

A mail plane with but a 400 pound carrying capacity has displaced a 60-foot car between Cleveland and Chicago and the same size plane has displaced another car between New York and Washington. The car service between New York and Washington cost at a rate of \$162,000 a year, whereas the faster service by airplane costs only \$120,000—a straight saving of \$42,000.

The work the Post Office Department is doing thru the air mail service is the only effective aid and encouragement that has been given commercial aviation in this country. It would be worth maintenance on that score alone. Its results and its records of operation are constantly being given to business men who are giving consideration to entering this transportation field.

On this point the Senate Committee on Post Offices and Post Roads in recommending passage of the post office appropriation bill said:

The committee believes that the aerial mail service has justified the appropriations which were made to inaugurate that service. Greater progress has been made by the Post Office Department in demonstrating the commercial possibilities of airplanes during the last twenty months than had been made theretofore by all departments or agencies of the Government. Airplanes may never be practical as vehicles for carrying all the United States mails. The postal experiment has shown, however, that some of the mails can be carried by planes without material loss. It has shown to private enterprise what can be done. Aircraft is in its infancy, and it would be most unwise for the United States to ignore the art now. The Government alone is capable of making the great experiments necessary to develop the possibilities of aerial navigation.

The Department has always taken the position that when American capital is ready to enter the aerial trans-

portation field, it will be glad to advertise for contracts for carrying mails by airplanes over such routes as will greatly improve the service and show a relative reduction in the cost of transportation and distribution.

The pending Post Office Appropriation bill authorizes the Department to let such contracts and also changes existing law so that mail matter may be transported over water by hydroplanes, instead of merely by steamships or sailing vessels.

These two provisions will permit the Department to give even greater encouragement to commercial flying than it has in the past. Business men will be better able to finance ventures in aerial transportation if they can be sure of one source of revenue in carrying the Government mails, instead of having to rely solely upon freight and passenger traffic. We have now pending applications for contracts for airplane mail service by private companies to Havana and the Bahamas as well as between important centers in the United States.

No one can tell what developments the future will bring, but the Post Office Department at present has no theories that all the United States mails can be carried by airplanes at any time in the near future. All the airplanes in the world today could not carry one day's letter mail in this country. We must continue to rely principally upon the great railway transportation system, but I can see no reason why we should not look forward to having practically all our important commercial mail transported between the larger cities by airplane within a relatively few years.

Washington, D. C.

Plain Speaking from China

(Continued from page 10)

adjectives and we feel that if money is to come from America, we want it to come in the form of machinery, of engineers, of efficiency experts, of management.

My proposal is that American capitalists join with Chinese in the creation of national industry. The Americans put up the money for the machinery, and for the payment of the foreign experts. The Chinese will put up the money for the raw materials and human labor. That the partnership be as far as possible on a fifty-fifty basis and that the Americans be given a fairly large but not exorbitant return on their capital. This proposition ought to be worth while to American capitalists, who are hampered by so many things in their own country. I would suggest further that the Americans provide clauses in the contracts, so that the Chinese can put them out after a stated period. The underlying principle should be a short time investment with a large profit. The guarantees on this proposition would not be as gilt edged as a government loan is said to be, but how gilt edged are the Trans-Siberian bonds today? And what do you know about any government tomorrow.

There is another issue involved: China cannot forever go on buying things that she can easily manufacture at home. The thing is too absurd. China will sooner or later manufacture her own things. Your manufacturers will never be able to compete in China with China-made things. Therefore either you start plants here or sooner or later you will have to get out of the Chinese market. Why then not open plants here? Why not make things here?

Shanghai

Did We Demobilize Too Soon?

(Continued from page 9)

tice, when the British Government gave orders to divert their wheat cargoes then due, to any port in Europe where food was most needed, the Allied Governments recognized how urgent were the necessities of some of the belligerent peoples. Great measures were taken to relieve the situation which everyone regarded as temporary, and no one will forget the great part which was played by the United States in that work.

At the same time the Allied Governments set to work on their task of completing peace treaties which should replan the map of Europe on principles of nationality and justice. I think it right to say here that the history must be the final judge of the success of their efforts, the task which they had to perform was a task quite beyond the powers of men to hope adequately to perform in any period that could be measured by months. It is perhaps true to say that during the whole of last year the statesmen of Europe were engaged in a work of political reconstruction which was more than sufficient to use the energies and resources of them all.

In the meantime the hopes of an early restoration of economic prosperity gradually dimmed before the cold logic of facts.

Today we are just beginning to realize that the Germany is defeated, peace, political and economic, has still to be won. We are beginning to understand that if it took five years to defeat Germany, it may take at least another five years before we can make good the wastage of war and put an end to the tragic suffering of tens of millions of European peoples. It is a weakened and impoverished Europe which has to take up the task. Fifteen million workers in the prime of life have been lost by death or mutilation in the war and the psychological effects of the tragic experiences through which the survivors have passed cannot be expected to pass away at once. Until the workers of Europe are at least supplied with adequate food and the raw materials necessary for their industries, we can hardly expect any speeding up in the output of European production.

So far as Great Britain is concerned our recovery has been on the whole satisfactory. We have succeeded beyond our hopes in passing the demobilized soldiers into employment. We

For Every Kind of Building

In homes, clubs, office buildings—in fact wherever people live or work—greater protection from the weather is assured through the use of Chamberlin Metal Weather Strips. They are considered essential in modern building construction.

Home owners realize that Chamberlin equipment effectively prevents dangerous draughts, shuts out soot and dirt and also conserves fuel by keeping the heat in.

Those who are responsible for larger buildings find that greater economy, cleanliness and satisfaction are secured when Chamberlin Metal Weather Strips are on the windows and doors.

Over a period of 26 years Chamberlin equipment has proven its value. Every year more and more Chamberlin Strips are installed. We guarantee them for all time, install them ourselves through branch service offices located in the larger cities. You are assured of complete satisfaction.

Send for Chamberlin Booklet

Plan to put Chamberlin Metal Weather Strips in your home now. Write us for our booklet "26 years of weather stripping." It contains interesting information for home builders and home owners.

sell it.

are already, in spite of a vast ineffectiveness which the war has created, commencing to live within our national income. Apart from the item of housing, which will involve an expenditure that can hardly be met out of current income, I think we have come to the end of our borrowings, and are commencing the period of repayment.

But we realize that even in Great Britain no return to anything like normal prosperity is possible as long as the rest of Europe is suffering. The disorganization of Central and Eastern Europe is reflected in the high cost of living which still mounts month by month in this country as in every other country in Europe.

After the Napoleonic wars the prices in this country rose to their highest level in the fifth year after the war. I hope we shall be more fortunate, but I do not think that we have as yet come to the highest level of prices by any means. The world's supplies of all essential commodities are substantially below the world's demands, but at present the purchasers are restricted. Central Europe, Eastern Europe and Russia are not yet effective competitors in the world's markets owing to political disturbances, of exchanges and finance. When those great areas are in a position, as I hope they soon will be, to get their peoples once more to useful work, the world's demands will expand far more rapidly than any probable immediate expansion of supplies, and with the expansion of demand will come, in the absence of international control, a further upward bound in the level of world prices.

I believe there is an idea in the United States that a good deal of the present economic distress in Europe is due, to put it bluntly, to the laziness of the peoples. This is, I am convinced, a profound injustice. Some allowances must in the first place be made for the weakness of our common humanity. In all times of great catastrophe in the world's history, when the angel of death has passed, whether in earthquake or pestilence, wrecking the handiwork and destroying the lives of men, there is always a period of reaction when a shocked and tortured humanity finds it difficult to once more settle down to normal life. It was so after all the great plagues of Europe. Following the famine and the pestilence comes a period of apathy when it is difficult to rouse the survivors to a new will to live and work.

But in Europe there are other causes more obvious to those who know the facts, which operate powerfully against the resumption of industry. The survivors of the war have been weakened during the last years of the war, and for twelve months since, by the lack of food sufficient to maintain bodily strength. It is true of a large part of Central Europe today that the supply of food is not nearly sufficient for the maintenance of health, and if the half-starved peoples still suffering from shock of war and all its privations, had all the will in the world to resume work, the raw materials of industry are lacking,

and in many parts of Europe, in Italy, Rumania and France, factories and workshops have still to be restored or rebuilt. At present Europe is like one of those pumps with which it is impossible to draw water until you have first poured some in.

Taking Europe as a whole today the urgent need is still foodstuffs and raw materials. The Supreme Council of the Peace Conference at its recent sittings in London fully recognized that fact, and recognize the further fact that in this matter the interest of the weakest and most unfortunate country must be the concern of all. It is in the interest of every one of us that those countries which are still suffering most, no matter whether they were allied, neutral or enemy countries during the war, shall be enabled promptly to restart their industrial life. It is not on grounds of humanity alone. It is a matter of business, and we are going to deal with it on a business footing. The British Relief Missions have been withdrawn—not because the need for relief has ceased, but because no useful purpose could be served by the retention of Government Relief Missions whose funds were wholly insufficient to alleviate the conditions of Europe. We are withdrawing the Relief Missions not because for one moment we intend to abandon those countries to their fate, but because we are determined to find, together with all our Allies, better and more comprehensive schemes for attaining the same purpose. It has become clear that to continue to provide food without at the same time providing raw materials for reestablishing credit, and enabling industry to be restored, is merely to aggravate the present problem.

Side by side with the material steps which the Allied Governments are considering, steps will have to be taken to recreate the will to work among European peoples. The first step, as the Supreme Council has recognized, is to redouble our endeavors to bring to an end the hostilities in those parts of Europe where peace has not yet been restored. And the second to assure to the workers in the more highly industrial Allied countries like ourselves an assurance that the burden which they are called upon to bear in recreating the wealth of Europe shall not be aggravated by the selfishness of the profiteer who finds in the economic difficulties of the world an opportunity for his own profit.

The need of Europe today—indeed the need of the whole world, is greater production. The granaries and warehouses of the world, depleted by war, have yet to be refilled. The position in Europe is such that we realize that this task can only be accomplished, if it is to be accomplished, in time to save the world from untold suffering, if the energies of Europe, demobilized in November of 1918, are remobilized for the work of reconstruction with the same spirit of coöperation as marked the efforts of the Allies in the Great War.

W. L. Douglas shoes are sold through 107 of our own stores direct to the wearer at one profit. All middlemen's and manufacturing profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W.L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-seven years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

Not Merely a Bird House - But "A Bird Homestead" It's the DODSON

The Dodson Bird House attracts and wins the birds, and it's the same Dodson House to which the same little songsters return every year. A study of bird life has shown that returning birds, with uncanny accuracy occupy the house they left in the Fall, if it is there.

The sturdy Dodson House is there—just as strong, but more inviting; as it has aged. Constructed of thoroughly seasoned Red Cedar, Oak, Cypress and selected White Pine, nails and cleats coated to resist rust, painted with strictly pure lead and oil, permanency is assured.

Order Now—Songbirds protect trees, shrubs and flowers from insects. Mr. Dodson will supervise proper location for his houses—insuring success if transportation and expenses are provided.

Free Bird Book—sent on request, illustrating Dodson line, giving prices, also beautiful colored bird picture free.

JOSEPH H. DODSON, Pres. American Audubon Ass'n.
762 Harrison Avenue Mankakee, Illinois
Dodson Sparrow Trap guaranteed to rid your community of these quarrelsome pests. Price \$8.00

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government. The Story of Our Air Mail. By Albert Sidney Burleson, Postmaster General.

1. One of your friends says to you: "Carrying mail by air is of no real use today; it's only for 'show' purposes." Express, in full sentence form, the points that you might present in answer. Number every sentence.
2. Imagine that an airplane, used for carrying the mail, is both patriotic and gifted with the power of speech. Write what such an airplane might say concerning its work.
3. Write an original story concerning a business house that used the airplane service for much of its mail. Make your story show the effect of such service.
4. Write a dialog between an official of the Postal Service and an inventor. Tell what the official says about the difficulties that interfere with sending mail by airplane, and what the inventor replies.
5. A taxpayer says: "This airplane talk is all nonsense!" Write a letter to the taxpayer, proving that the use of airplanes in the postal service will save him money.
6. Imagine the utterly impossible—that you make a visit to a person of your own age, three hundred years in the future. Tell of your visit, emphasizing the use of airplanes.

II. A Message from the British Nation to the American People. Did We Demobilize Too Soon? By C. A. McCurdy.

1. Give a clear explanation of what is meant by the expression, "The illusion of peace."
2. "Many of the evil effects of the war were not at once apparent." Write two contrasting paragraphs, in the first one telling of the immediate evil effects of the war; in the second telling of the evil effects that developed later.
3. Explain the cartoon, "Double, double, toil and trouble." Tell why the cartoon is peculiarly effective.
4. "Peace has still to be won." Give a short talk in which you explain some of the means of winning peace.
5. Someone says, "What do I care about Europe!" Explain, as if to such a person, why suffering in one country affects all other countries.
6. Imagine that Mr. McCurdy had been obliged to write his "message" on a postal card. Write the "message" that he might then have written.

III. What's Wrong with Labor? By Professor John R. Commons.

1. Find in the article a number of words that are likely to need definition for the members of your class. Prepare clear definitions of those words.
2. The writer says one interesting fact was found: "The sudden or gradual moral conversion of an employer from business to humanity." Write an original story that will illustrate a "sudden" or a "gradual" conversion of an employer.

IV. When Everybody Likes to Talk Shop. By Professor John R. Commons.

1. Explain what advantages the writer gains by using the narrative form in presenting exposition.
2. Tell exactly what is meant by "A shop committee."
3. Tell how an ordinary storekeeper could apply the "shop committee" system to the conduct of his store.
4. Imagine that the principal of a school asked the pupils of the school to apply the "shop committee" system to the conduct of the school. Imagine that you visit such a school. Write an article on your visit.
5. Prepare one side of a debate on the proposition: "Resolved, that the 'shop system' develops good American spirit."

V. Live Wires Under Heavy Insulation. By Richard Boeckel.

1. Prove that the title is effective. Explain its meaning.
2. Imagine that you are the person who suggested the illustrations, and their arrangement. Write a letter to the editor of The Independent telling exactly what you propose, and giving your reasons.
3. What is there in the plan and style of the article that shows that the article is the work of an experienced writer?
4. Show how the article makes effective use of anecdote. Explain how you can make use of anecdote as a means of improving your written work in school.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Problem of Industrial Relations—"What's Wrong with Labor?" "Where Everybody Likes to Talk Shop." "Toward Industrial Peace."

1. Try to state in a brief paragraph the general problem which Professor Commons and his colleagues set for themselves.
2. Quote various sentences which prove that the following is the keynote of Professor Commons' article: "One interesting fact was found: the sudden or gradual moral conversion of an employer from business to humanity."
3. "Labor seemed to have its innings in the summer of 1919. Capital will come to the bat in due time." How do you interpret this statement?
4. What form of industrial organization exists in the plant of the White Motor Company? On what devices does the company depend for keeping up and increasing production?
- II. "Did We Demobilize Too Soon?"
1. Explain the opening sentence in this article.
2. What are the evil effects of the war which have become apparent in the last sixteen months?
3. "Today we are just beginning to realize that . . . peace, political and economic, has still to be won." What facts justify this statement?
4. What steps, according to the author, must still be taken in order to bring real peace to the world?

III. Peace with Germany—"They Kept Us Out of Peace," "Slaying the Treaty," "How the Senate Voted."

1. Review the history of our peace negotiations since the signing of the armistice in November, 1918.
2. How did the Senators from your state vote on the Treaty? To which faction in the Senate did they belong?
3. Why does Mr. Holt declare that "The President, too, must take some share of the blame?"
4. In view of the action of the Senate, how are we going to resume peaceful relations with Germany? Meanwhile, what dealings can we have with that country?

IV. Plain Speaking from China.

1. If American and European bankers lend money to the Government of China, to what uses will such money be put?
2. Explain this statement: "Every banker lending money to the Chinese Government is paying in advance for his own financial funeral."
3. Why does Dr. Sun want American bankers to lend money for industrial enterprises in China rather than for Government projects?

V. Conditions in Germany—"Five Days Dictator," "Between Reds and Reactionaries."

1. What is meant by the statement that the counter-revolution was "shipwrecked in psychology"? that "The collapse of the counter-revolution was primarily due to the 'direct action' of the federation of labor unions"?
2. Explain the first sentence in the second article. From among what classes in Germany does each party chiefly draw its strength?
3. What has been the net result of the counter-revolution?

VI. "Live Wires Under Heavy Insulation."

1. Why did the author choose the above title for his article?
2. Describe briefly the process by which a decision of the Supreme Court is transmitted to the public. Why is it so highly important that there should be no errors in the newspaper reports of Supreme Court decisions?
3. Explain the following newspaper terms: "dummy," "advance," "release," "leak."
4. What does the last paragraph in this article mean to you?

VII. The Story of Our Air Mail.

1. Is Postmaster General Burleson justified in regarding the air mail service a commercial success?
2. What are some of the problems that the air mail service had to meet and solve?
3. Aside from the benefits derived by the Post Office Department, what value has the air mail service been to the people of the country?

Remarkable Remarks

LADY ASTOR, M.P.—Women are reasonable.

WILLIAM BARNES, M.P.—I am for hanging the Kaiser.

HERBERT C. HOOVER—I refused every bribe in Europe.

ED. HOWE—I rarely see a sensible thing written about health.

ART CRITIC J. G. HUNEKER—Art and democracy have nothing in common.

NOVELIST BLASCO IBANEZ—Every American man is afraid of his wife.

JOHN D. ROCKEFELLER, JR.—No civilization can rise above its womanhood.

GERALDINE FARRAR—We are paying more attention to our feet than we used to.

HUGH WALPOLE—"Wuthering Heights" is the greatest novel in the English language.

REV. DR. ROLT-WHEELER—The emigration to hell from America now exceeds that from England.

DOROTHY DIX—No man can exist without some woman to tell him how handsome and wonderful he is.

CHARLES M. SCHWAB—I have paid in my establishments in bonuses more than I pay to my stockholders.

MRS. WOODROW WILSON—The White House will gladly cooperate in the "Save Money and Meat" campaign.

SENATOR J. HAMILTON LEWIS—Annette Kelloggman has done more for women's styles than Old Mother Hubbard.

W. J. BRYAN—The average New Yorker does not know a great deal about the sentiment throughout the rest of the country.

SECRETARY FRANKLIN K. LANE—Washington is a combination of political caucus, drawing room and civil service bureau.

SENATOR MOSES—Senator Kellogg and I have been united in the bonds of political wedlock by the Rev. Woodrow Wilson.

JOSEPH WADE—If I wanted to become a tramp, I would seek information and advice from the most successful tramp I could find.

REV. B. G. BOURCHIER—If I had my way, I would have emblazoned on our banners, "God Save the King and Beer for the British People."

ELINOR GUNN—Choose navy tricolette for the foundation and then panel it and have a smart little jacket of navy Poiret quill or gabardine.

LORD FISHER—Every airman knows that when the last war left off such a bombing

The Cover

It would be interesting to know how many of our readers guessed that the youngster with his dog on the cover of this number of *The Independent* is a sure-nough hero! We must admit we never should have suspected it if the caption under the photograph from which this reproduction was made hadn't told the whole exciting story.

Johnny and the dog (whose name, unfortunately, wasn't famous enough to be mentioned) were part of a crew of twenty-four men whose ship, the "Sydnaes," was disabled in mid-ocean. For twelve days they drifted on the open sea, and Johnny at real sacrifice to himself saw to it that the dog was taken care of all that time.

Finally a Norwegian liner happened along and rescued the twenty-four men and captain—and the dog. They were brought into New York where, after getting more attention than they had been used to, Johnny and the dog are rather inclined to stay.

Pebbles

"Yes, they say he is an indulgent husband."

"Wonder what he indulges in now."—*The Siren*.

Sir Oliver Lodge will find numbers of people in this country anxious to commune with departed spirits.—*Greenville (S. C.) Piedmont*.

A girl dusted her face with powdered alum instead of the conventional beautifier, and the next morning there was a young man in town who couldn't pucker his lips to whistle.—*Great Bend Tribune*.

"I know a man that has been married thirty years and he spends all his evenings at home."

"That's what I call love."

"Oh, no, it's paralysis."—*Widow*.

He wore one night a flannel robe, Which brought on perspiration; This caused the robe to shrink so much He died from strangulation.

—*Boston (Mass.) Transcript*.

"The railroad superintendent says there was a washout on the line Monday."

"That's just the day for it."

"Why?"

"Monday's wash day."—*Evening World*.

A BOLSHIE REFORM

A certain young Bolshie named Xvznq (pronounced Ern), said, "Over a new leaf I will turn.

I've wasted much oil

My neighbors to boil—

In future the beggars must burn."

—*London Opinion*.

When the Clock Strikes Four

MORNING'S duties done. Luncheon over until another day. An hour or so for just what she wants to do. And then—that enchanting bit of afternoon when friends drop in to enjoy her tea and her cozy hospitality. In this cheery, restful setting, how important is the silent part that *silver* plays—casting its lustrous spell over the whole environment—stimulating, by its brilliance, the wit and warmth of chatter—and yet, withal, so suggestive in its enduring beauty, of those lifelong friendships made and maintained over a cup of fragrant, refreshing tea.

Progress Follows the Fleet

A Message from the United States Government

By Josephus Daniels, Secretary of the Navy

THE United States is accustomed to thinking of its navy as a fighting organization. And it is... perhaps the most efficient fighting organization in the world today. National defense is the main purpose of its existence, but the navy is very much more than a powerful fighting machine. The by-products of its preparation to fight have contributed in the past and will contribute in the future in an even greater measure to the peaceful progress not only of the United States but of the entire world.

In the life of this nation there has been, on an average, one war in every twenty-nine years. If the navy in the twenty-six years of peace—for a war usually lasts three years—had occupied itself only with getting ready and keeping ready to fight, the feeling of safety it afforded would be worth many times what it cost.

But the American navy in the intervals of peace has not concerned itself merely with practice and drill and maneuvers. It has demonstrated in many ways its necessity as a peace time institution. In its contributions to the spread of knowledge, the charting of the seas, the discovery of new lands, the extension of commerce by opening new doors to peoples hitherto unknown, the cutting down of the time required for ocean voyages, the cheapening of ocean traffic, the pioneer work of securing victories by diplomacy, the aid it has given in feeding starving peoples—in these and many other ways the American navy has been the pathfinder and the world is its debtor.

We are hoping in the future the intervals between wars may be longer and the wars shorter, or that they may disappear altogether. I am confident that this will come to pass. The world after four years of war has entered into a psychological twilight zone. It is a time when America, for instance, has permitted to be done in her name a thing that is un-American. It is, however, no time for despair. The mistakes that have been made will be corrected. Ultimately there will come, I am convinced, an international organization, with the United States as one of its members, for the abolish-

ment of war and the preservation of world peace. When that time does come there will be ushered in a golden age of discovery and exploration. And in the work of advancement the American navy will play, as it has in times of peace in the past, no small part.

Just as in the construction of a man-of-war there is required the work of more trades than in any other kind of construction, so the navy, in its organization, utilizes a greater number of the sciences and arts than any other organization of its kind ever known to the world. For instance in addition to a great gun factory and many other industrial plants, the navy maintains a large number of shipyards for the building and repair of its vessels. It is one of the largest employers in the United States, and has therefore to deal with the problem of labor as well as difficult problems of civil and mechanical engineering.

The science of navigation, a special branch of the astronomical science, is practiced on every ship that sails the seas. For accurate navigation there are required correct tables of the position of the stars at all times, chronometers for determining the correct time, compasses for telling direction and instruments for observing the heavenly bodies.

In the navy everything having to do with navigation is concentrated at the Naval Observatory at Washington, which checks and corrects chronometers, and studies compass problems and naval instruments generally. The Observatory publishes the Nautical Almanac, which like the charts and manuals devised by the Hydrographic Office of the navy, are used by mariners thruout the world.

The Naval War College, founded primarily for "the study of problems of modern warfare," is one of the few institutions in the United States in which close study is given to the science and problems of international law. It falls to naval officers more than to any other group of our citizens to apply the rules and principles of this science and they are among the leading authorities on the subject in the United States.

Everyone knows of the pioneer [Continued on page 74]

Secretary Daniels seems to be using the toy battleship as a crystal ball in which to tell the future of our national prosperity

"We've Struck a Gusher!"

Some Funny Things Happened in Texas
When the Oil Boom Swept the State

By
Chester T.
Crowell

Copyright, International Magazine Company, Permission Cosmopolitan Magazine.

After four years of crop failure, in the spring of 1919 the farmers of Central West Texas were twice blessed —with bumper wheat crops and with an oil boom that sprayed liquid wealth over the entire countryside

THE story of Aladdin's lamp finds a rival in what has happened in Central West Texas during the years 1918 and 1919. In order that you may adequately appreciate the enormity of the change let us begin before the discovery of oil there and take a look at the country and its people.

Central West Texas has rich soil but very uncertain rainfall. Nearly every spring the cotton, corn, wheat, sorghum grains and cattle present a picture of prosperity which soon begins to fade over wide areas where rain fails to fall at the time needed. It is a country sorely afflicted by disastrous hail storms which beat the crops into powder, sometimes just before the harvest. Wheat is harvested there in June and July.

The soil is sandy and loose. I have known dry winds to blow a crop clear out of the ground after it had progressed halfway to maturity with wonderful promise. Most of the farmers and some of the ranchmen owed land notes. One or two good seasons would have made them independent. But the irregularity of the seasons kept them living on hope—and hundreds of them failed every year.

In 1915 there was a complete crop failure in spots as big as the smaller New England states. In 1916 these spots were larger and more numerous. In 1918 the grass did not even come up in the spring anywhere in Central West Texas. Thousands of farmers nearly starved to death. They came out of West Texas in covered wagons by the thousands. Whole train loads of men, women and children were sent away to work in munition factories.

As a result of the general conditions Central West Texas has most of the Socialist population in Texas. It is probably the only state in the Union where the Socialists are mostly farmers. The last good crop they had made in that part of the state was made in 1915. There was a general spirit of utter discouragement.

In October of 1917 the McClesky well near the little town of Ranger in Eastland county on the Texas & Pacific Railway began gushing one thousand barrels a day of high grade petroleum. There had already been quite a bit of interest stirred up in prospecting for oil

because shallow wells in the town of Brownwood were producing two to twelve barrels a day from a depth of only 200 to 300 feet. Scores of these wells were drilled in back yards and on vacant lots. Adventurous souls began to lease the mineral rights on lands at twenty-five cents to one dollar an acre. In hundreds of instances this lease money prevented farmers from actually starving. The credit of the whole section was about exhausted by the bad years of 1916 and 1917.

The rush to Ranger was true to form for a western boom. Millionaires seeking leases wrapped themselves in blankets and slept on the ground. It was the coldest winter the state had ever known. Influenza broke out and killed scores of people. But the leasing went on. Automobiles were shattered on almost impassable roads by men who cared nothing for expenses if they could only buy leases.

Then followed the attempts to haul drilling machinery and supplies thru the mud. A man and team brought fifteen to twenty dollars a day. Soon there was a shortage of drillers and they were paid up to twenty-five dollars a day. Laborers were paid ten. Men stood in line behind each chair or stool in a restaurant waiting hours to get a bite to eat. The population of Ranger is now 25,000.

In the summer of 1918 a wild cat well on the Burk-burnett townsite near Wichita Falls and almost due north of Ranger came in a gusher. There was a new rush, more exciting than any of the others, because this townsite was subdivided and each lot became the basis of an oil company. Leasing spreads out a hundred miles in all directions from each discovery well. Literally hundreds of millions of dollars poured into speculation in leases which the farmers and ranchmen sold. Thousands of these hard pressed pioneers received more for their leases than they had paid for their land in fee simple.

In September of 1918 the Hog Creek Oil Company's wild cat well came in a gusher near the little community called Hogtown in southern Eastland county. A new rush followed. Hogtown is now called Desdemona.

It was not long before the single track railroads serving the oil territory had to declare embargoes on freight in order to move in enough food to prevent these millionaires from starving to death. At one time in 1919 there were 2200 freight cars consigned to Ranger alone resting on sidetracks all the way to St. Louis. There were practically no terminal facilities in any of the oil towns and freight was often unloaded two or three miles out—wherever the car happened to be found.

Soon the ranchmen, farmers and merchants began to play the oil game as well as the big companies. Groups of men in a club or office in some distant Texas city would make up a pool and send one of their number to buy leases as a speculation. Crooks whose only purpose was to sell stock would buy a wildcat lease and drill a well—because the law required that much—and some of them to their utter astonishment struck oil. Such accidents nearly wrecked their plans, but in most instances they were careful to see that the stockholders got no dividends.

Under the Federal Government's revised system of taxation—revised to encourage production of oil needed to prosecute the war against Germany—an offset was allowed for drilling expenses. This made it possible for the large companies to use for the drilling of wildcat test wells money they would otherwise have paid into the Federal treasury. They reversed their old time plan of letting "the sucker" do the exploring, and began drilling scores of wells far from proven territory.

To make a long story short the oil fever swept the largest state in the Union, leaving no part of it unaffected. Hundreds of miles from Central West Texas men began drilling wells in Duval county, south of San Antonio near the Rio Grande River. And they struck oil. They also found oil near San Antonio. A great revival of exploration occurred near Houston, where the oldest and most famous wells of the state as well as large refineries are situated. New pools are still being developed there.

At the present time I would estimate that not less than 5000 oil wells are being drilled or have been contracted for and will be drilled in Texas. Some of these will cost more than \$100,000 each—and may prove dry holes. Some will cost only \$2,000. Perhaps a safe average would be \$30,000 each. Moreover, it is practically certain that less than one-third

Copyright, International Magazine Company. Permission Cosmopolitan Magazine.

Uncle Bob Wash, on the Buck Waggoner ranch, didn't like to see teams trampling his wheat even when the land on which he had sown it brought in one hundred million dollars' worth of oil for his employer

Copyright, International Magazine Company. Permission Cosmopolitan Magazine.

Miss Sugar Lane stopped dressmaking when the boom struck Wichita Falls and became an oil magnate

of them will produce. Those which do strike oil will make new millionaires. It is one of the most alluring and dangerous gambles on earth. The average on wildcat wells is about one producer in forty, but naturally most of the wells are being drilled in what is called proven territory—tho there is no certainty even one hundred yards from a gusher.

But oil was not all that came to drouth stricken Central West Texas. In January of 1919 more rain fell than during the entire year of 1918. The year 1919 was the best that country has ever known. Every crop planted was a tremendous success and sold at high prices. Hundreds of men rented wheat land from absentee farmers at one dollar an acre and made twenty-five bushels to the acre. Such was the state of mind that some wheat gamblers wouldn't pay even one dollar an acre cash rental, but took the land on shares. In those cases the landowners also profited. West Texas had the highest grade cotton in the state. It sold at thirty to forty cents the pound. Cotton pickers were paid six to twenty dollars a day. Country merchants did such an enormous business that the wives of wealthy men were called behind the counters to serve as clerks and wait on the newly rich cotton pickers. Today Texas and more especially Central West Texas is simply wallowing in money. Thousands of those who went away in covered wagons and perhaps saw their teams starve on the road have returned in Pullman drawing rooms.

Quite naturally the acquisition of so much wealth by persons not accustomed to it has not been good for all of them. Many tragically funny things have happened. One sees country women dressed like Christmas trees. Silly boys wreck high priced cars to "show off." One man bought a ticket to St. Louis, "going to see the East," and after checking his baggage tore up the ticket, thinking he had no more use for it. Some have moved into little nearby towns thinking they are in cities where they can "do society." Some have built extravagant homes that would give an architect or interior decorator delirium tremens.

But these are exceptions. These instances have been grossly and insultingly [Continued on page 72

If He Were President

The Independent's Series of Articles of Some Likely Candidates for 1920, Presenting the Views of Leading Republicans and Democrats on the Vital Issues of Today

A. Mitchell Palmer

Including an Interview with the Attorney General
By Donald Wilhelm

AT the present writing many Democrats, even others, hail Attorney General Palmer as preëminently worthy of the White House. Certainly he easily demonstrated himself the most impressive "possibility" put forward at the Democratic National Committee banquet in Washington.

The esteem of him rests, basically, not merely on his personal force and excellence as an orator, but also on his record—his record, especially, of the last three years. His record, more than that of any other "candidate," hangs these days in the balance. The characteristics of the other candidates, Mr. Hoover, Mr. McAdoo, General Wood, are massed together and well defined. For the others there are more or less constant and predictable reactions and redactions. For Mr. Palmer everything depends—!

To illustrate, let us venture into the Department of Justice, to which, by the way, Mr. Palmer has given admirable impetus by his hard-driving, ceaseless enterprise, and ask him a question about the high cost of living, of which he is principally the official custodian.

"The fact is," he said, "we started this campaign against the high cost of living in the period of scant demand and large production—along about the first of August. That is the time when the necessities of life are produced in the largest amount and consumed in the smallest. Men and women do not eat or wear so much in midsummer as in winter, of course. We are now"—this was in December—"in the period of scant production and largest demand. The range of prices is always upward from midsummer to midwinter. In the years whose figures I have examined, the range of prices has been very much more decidedly upward than in the present year, when there has been practically no upward trend of prices during the last four months. That fact indicates that either our campaign, or something else, has resulted in holding the lines steady and keeping prices from going up. And if prices can be kept from going up for a reasonable length of time, they are bound to sag."

© Clinedinst, from Keystone View.

At the beginning of the war Mr. Palmer offered his services to the Government and was made Alien Property Custodian. In this office he uncovered nearly a billion dollars' worth of enemy property in America and at the time of his resignation was virtually head of a huge trust company comprizing 32,296 trusts

"But why?" you asked.

"Because as production begins in the spring and is anticipated in the markets, prices are going to fall. Moreover, there are prospects that exports are not going to be so large as was anticipated, because of financial difficulties. The rate of exchange will affect prices.

"Then," he said conclusively, fingering an unlighted cigar and leaning forward, with a shove of his powerful chin, "I can say that I am not only expressing the language of hope but the language of confidence when I say that the peak has been reached and we are *now* on the downward trend."

He went on: "Our effort to lower prices thru legislation and law enforcement has been sincere, strong, well started. If it does not succeed, at least we shall be

able to say that, in the circumstances, we have done the best we could. But"—this decisively—"it will succeed!"

"You mean, Mr. Attorney General—?"

"I mean that if people believe in our effort to lower prices, prices will come down."

He explained: "I don't like to use the word 'psychology.' It is abused. But I insist that if you make the people believe prices are going to come down, prices *will* come down. Why? Because people will not buy in a full market, and that fact in itself would tend to decrease demand for large supply and work to lower prices."

At once it may be said that economists, who have less faith in "psychology" than in the relentless working of economic law, will look askance on Mr. Palmer's conclusions. First, as a matter of theory; second, because most of them accept as axiomatic the rule that prices cannot be controlled or profiteering eliminated by proclamation or prosecution; third, because they instinctively doubt if any one, especially any Washington official, can vitally alter, except in emergency, the "psychology" of the whole American people; fourth, because they insist the facts are in—that prices have risen, to prove which not a few have discovered evidence, or proof, in the statistical conclusions of the Bureau of Statistics of

the Department of Labor, and in other experienced and skilled agencies. Indeed, that bureau's figures, which are published periodically, indicate that "the lines have not been held steady," that prices in December were the highest of all, and were excelled by no others except those in January!

On the other hand, the fact remains that if Mr. Palmer was the Cabinet member who volunteered, in the pinch, to try for a hit with, and at, the high cost of living—well, his friends say he was the "pinch-hitter."

He was a valorous "pinch-hitter" also after an attempt was made to blow him and his family to atoms, after still another bomb was sent him thru the mail. Mr. Palmer calmly put the Bureau of Investigation, in his department, to work. After a campaign that was carried on for months and is still under way, his men gathered in the rebels. As a part of his campaign he represented to Congress the need of drastic legislation, and, of course, from the prosecutors' point of view, great difficulty long has been apparent in getting convictions for treason or sedition. He did *not* write either the Sterling or Graham measures. However, as Mr. Palmer got the credit, he must stand the responsibility for the campaign on radicalism, and howsoever carefully it was carried on, there are signs that it will in some measure recoil on him. Also, it was just such a drive, apprehended to endanger freedom of press and speech, that resulted in the extinction of the old Whig party and the birth of the Republican party.

But, granting this, you hear friends of Mr. Palmer say that what they call the "Red terror" was extending itself, not only to local soviets but into the ranks of conservative labor, and that if the Communist plan to connive little strikes, then strikes of whole industries, then a national strike of all, had been carried on, where would prices be? Where would the Government of these United States of America be? Had it not been for the intervention of Mr. Palmer?

You hear them say, also, that Mr. Palmer, by preparing to bring criminal and civil proceedings against the packers under the Sherman Anti-Trust law, forced them to terms, and, as he explained to the Senate Committee on Agriculture and Forestry, was able to achieve an unexpected victory, and was able, without years of litigation, to dictate to the packers the manner of their surrender of their conclusive competitive superiorities in hundreds of lines other than their slaughtering, preparation, and packing of meat foods; and, in addition, to keep the Government free to prosecute the packers howsoever it may later wish.

Press Illustrating

Mr. Palmer and his little daughter, Mary Dixon Palmer, in his Washington home, which the Reds attempted to blow up at the time of his investigation into their activities

"We have," he said, "taken these defendants out of every business except that which is usually the business of the butcher, the meat business, and the products which are generally handled by butchers—butter, cheese and poultry. We have got them back, it seems to me, to the business which they originally went into; and, as to that business, we have bound them by per-

petual injunction, restraining them from agreeing or combining or arranging to do anything which is an attempt to monopolize that business or in restraint of trade in that business.

"In other words, we have, as to the meat business, an injunction of exactly the kind that the Sherman anti-trust law contemplates for the Government to get against men charged with a conspiracy in restraint of trade.

"The second thing that we have done is to restrain and enjoin them forever collectively and individually and in every other fashion from engaging in any unlawful trade practices. The result of that would be that any person or any concern, the Government, or any individual who was able to show an unlawful practice by these defendants or any of them will be permitted to come into court in this very case and present a showing which would entitle them to adjudication against the defendants for contempt. Those are all the things that we could possibly accomplish by a bill and an adverse decree."

On the other hand, you find, in the reports on the packing industry of the Federal Trade Commission, Part II, that on May 10, nearly a score of years ago, in 1902, the Department of Justice filed a petition in equity for an injunction against the packers. A temporary injunction was granted; then, on May 26, 1903, a permanent injunction, which, as modified later by the Supreme Court, specifically enjoined the packers and all their representatives and attorneys from conspiring to thwart competition in bidding for live stock or in selling it, from raising or lowering prices [Continued on page 63]

Wide World

As Attorney General, Mr. Palmer reorganized the entire Department of Justice and investigated, among other things, the packing industry, the Reds, the causes of the high cost of living and the claims of the coal miners. But he's a "rotten golfer," say his friends, because even when he's playing he wants to talk shop

From Paris to London we flew in an open plane where the passenger sat deep in a cockpit behind the pilot

A Long Way from Earth

The plane in which I first went over the Channel had a cabin more comfortable than a Pullman car

By Harold Howland

A story that will give you the sensation of having
been over the London-Paris air route for yourself

THE letter and the telegram were clearly incompatible. They had no common divisor. The one commanded me to the discussion of a contract down in Fleet Street at ten thirty the next morning. The other set the hour of three thirty the next afternoon for an interview in an office on the Place de la Concorde. Both appointments were imperative. It was to accomplish precisely these two things that I had crossed the Atlantic. I could not go back with either undone. But both my correspondents—it was the devil's own luck—informed me that it was tomorrow or not at all for the next month. One was off for the moors of Scotland—an Englishman's shooting engagements are sacrosanct; the other was sailing for America, of all places! But I must see him in Paris among his official surroundings.

Now Paris is 250 miles from London. Even if the Channel tunnel were already built, five hours by rail direct would hardly do the trick. The present day method of rail, steamer and rail does not contemplate, or permit, doing business in both cities the same day.

I left the breakfast table of my hotel in Trafalgar Square much harassed in mind. Which of the two engagements should I forego? Evidently it must be one or the other. But which? As I dodged the motor-Juggernauts under the Nelson monument London was winning. In Cockspur Street, Paris got the upper hand. At the foot of the Haymarket the London contract made

its insistent claim again; I couldn't go away and leave that unsettled. As I went up the steps of the club in Pall Mall it looked as tho I should be leaving for Paris by the night boat; that opportunity must not be overlooked. Then appeared the god from the machine.

An Englishman's assistance is never intrusive. But if he offers it, the offer is sincere, and the help will be effective. It is like the old aphorism anent the difference between a diplomat and a lady. "When a diplomat says 'yes' he means 'perhaps,' when he says 'perhaps' he means 'no,' if he says 'no' he is no diplomat. But when a lady says 'no' she means 'perhaps,' when she says 'perhaps' she means 'yes,' if she says 'yes' she is no lady." So when an Englishman says that a thing "may be accomplished," it is as good as done. My English friend heard the tale of woe that I was too American or too little English to keep to myself, took his pipe from between his teeth, and said, "Why not both?" "Very nice," I replied, with some heat and much irony. "But it can't be done. London to Paris in five hours! I haven't wings!" "No," said he, his pipe where it belonged again. "But I have. Want 'em?" I could only nod a stupefied assent. He continued, "Get your passport vised today, telegraph your man in Paris that you'll be there, keep your Fleet Street appointment in the morning, and be ready at your hotel—it's Morley's, isn't it?—at eleven thirty with only a small bag and a heavy coat. A car will call for you." It sounded like a rather vague "perhaps"; but I knew he was no diplomat, so it must mean "yes." I asked no questions, and followed his instructions to the letter.

At eleven thirty the next morning, my London business satisfactorily done, I was ready; and so was the car. As the commissionaire reached to open the door for me, the chauffeur remarked, "Good morning, sir. Here is your ticket, with Mr. ———'s compliments." I grasped it, murmured something, got in, and, as the car slipped under the Admiralty Arch into the Mall, set myself to guessing. (If you are an American in England, you must guess; the English expect it of you.) But indeed I already knew; and I was not altogether sure that I liked the knowledge. I was going "over" the Channel in very truth.

The ticket was as matter of fact as any railway ticket. It called for a passage by the London-Paris Air Express from London to Paris and return. If I had bought it, it would have cost me forty guineas—something like \$200 at the pre-war rate of exchange, but not so much nowadays.

Coming back from Paris "we got lost in the mist," as the pilot said later, "and went over to the war for a while. We made our schedule tho"

As the car shot out thru the London suburbs to Hounslow, where the aerodrome of our departure was, I thought of former trips across the Channel. I remembered the first, as a somewhat callow youth, when I forgot in the wee sma' hours that things which go over the rail to windward are likely to return with distressing suddenness. I remembered the latest, under full war conditions, when I left London after an early breakfast and reached Paris long after midnight. I had seen the Channel choppy and mischievous; I had seen it calm under a night of fog, with the white phantom of Beachy Head coming up with the dawn; I had seen it ruled across with the dot and dash line of the buoys supporting the great steel submarine net, spattered with inquisitive trawlers, and hovered over by watchful blimps and planes. I wondered how it would look this time. I wondered when I should see Paris.

At the Hounslow aerodrome everything was quiet and unhurried, with that deceptive British casualness which tends to drive a high strung Yankee crazy until he has learned to understand it—and sometimes after. A stray watchman directed me tentatively into an improvised office. A government officer, with an abstracted air of having his whole mind on something really important and fearfully remote, examined my passport and permitted me to fill out and sign a document recording my mother's maiden name, where my grandfather was born, why I wanted to go to France anyway, and other important trifles. No one prevented me from walking out on the great flat ground which in the days of the air raids on London must have been as crowded and busy as it was now idle and deserted. There a single biplane stood in front of the hangar, with a mechanic or two busy over its engine, a young officer in flying rig smoking in utter detachment, and several other men standing about with no apparent concern in this world or any other less than a dozen light-years away. One of them diffidently suggested looking at my ticket. He glanced at it and handed it back. I gathered from the general atmosphere that if I wished to climb into the machine no one would object. I did so. Someone took my little bag and stowed it in a locker. The hinged roof of the little compartment in which I sat was pulled into place and fastened. The man who had looked at my ticket suggested that if I wanted to have one of the sliding windows open it should be on the port side. The flying officer had climbed to his seat forward of my cabin and was hidden from me by the bulkhead. I glanced at my watch. In thirty seconds it would be twelve thirty. The mechanics took hold of the big propeller out at the plane's nose. Someone said quietly, "Contact." They whirled the propeller. The engine began to bark, to stammer *crescendo e accelerando*, to roar. We lumbered off across the field in a wide sweep.

"Taxiing" over a flying field is not the poetry of motion. The field is too rough, the machine too heavy. But

The cabin of an Airco plane, with its comfortable chairs and table, is as pleasant a place to lounge and as efficient a place to work in as a study on terra firma

presently there comes a moment when the bumping ceases; it is like slipping in a motor car from a rutted dirt road on to an asphalt boulevard. You instinctively look over. The ground is farther away. It continues to drop. That is all. You are off.

Now I had a moment to consider the compartment in which I sat. It was perhaps three feet wide by six long by seven high. It contained two leather covered seats facing each other, with a narrow table or shelf between them. If I had not been alone, my companion's knees would have brushed mine under the table. An arched roof, with two sliding windows on each side, kept out the wind and made the cabin intimate and cosy. On the table before me were two fascinating instruments. The dial of one was graduated in miles, and it was only a moment or two before the needle had reached the 100 mark, where it hovered gently with occasional swings up and down between 97 and 106. The figures on the other dial were in thousands. The needle swung slowly thru its arc to the figure 3000, and there it stayed with hardly a quiver for an hour or more. We were flying three-fifths of a mile above the earth at a speed of 100 miles per hour. I had no compass, but any good woodsman knows that when the sun is shining his watch will show him the north quite as well. Our course, I discovered, was southeast by south. The straight line to Paris gives you the longest flight across the Channel; so the Air Express is accustomed to take a course like a dog's leg golf hole, crossing the water in the neighborhood of Boulogne.

"And how," I can hear you asking impatiently, "did you feel? Comfortable? Cold? Nervous? Seasick? Scared? Deafened?" Let me see if I can tell you. Comfortable? Yes, as an old shoe. The seat was a lot better than a Pullman chair, for it fitted snugly and was innocent of that peculiar construction behind the head which seems expressly planned to paralyze the neck muscles. Cold? No, merely bracingly cool. The forward port window was slid open, and there was plenty of fresh air; but an overcoat, an Angora waistcoat, and a traveling rug made all serene within. Nervous? Frankly, yes. But nerves depend so definitely on temperament; and one who is absurdly nervous in a motor car on a solid road at a speed of 30 miles an hour could hardly be expected to be stolid and phlegmatic on his first ride at 100 miles an hour 3000 feet above the friendly, walkable earth. But the nervousness was no [Continued on page 69]

Striking proof that air travel is no longer a novelty—a page of Mr. Howland's passport vised "Paris par air," "France by air"

The State of the Union

By Archer Wall Douglas

THE wonder is, and still the wonder grows, that business should so survive and prosper in these troubled and uncertain times. Altho facing the immediate certainty of a declining European market for our commodities, Americans are gambling on margins in the grain pits and stock markets, speculating wildly in farm lands in the West, investing in wildcat oil schemes.

Yet, despite sinister and untoward elements, there is an inherent strength in the business situation. City dwellers and men of affairs have a delusion that their enterprises and their financial influence are the compelling power in the country's progress and advancement. In spite of the truth of much they claim, it is none the less a fact that the great centers depend for their very existence upon the wealth and productive power of the vast number of little known, unnoticed, but decentralized and democratic localities that form the backbone of the nation.

The answer to the riddle of our present prosperity lies almost wholly in the sound conditions underlying the home industries of these smaller communities,—communities that are largely self-supporting and self-contained.

Out in Central Arizona, around Phoenix, for instance, they are raising the priceless long staple Egyptian cotton, forty thousand bales, two million dollars in value in 1919, where only a few years ago there existed only the forbidding and sterile desert. And all because of the great Roosevelt dam that impounds and distributes the waters of the Salt River in life-giving irrigation. In this same belt, Arizona is producing alfalfa for growing herds and cantaloupes in hundreds of carloads for shipment to the great eastern cities. Farmers are doing the same thing in the once hopeless desert of the Imperial Valley in California, and in much greater volume, because the Colorado River has been turned in on the once parched land.

GO eastward thru southern New Mexico and Texas, along the Gulf Coast, and up the Atlantic seaboard to Chesapeake Bay, and you will get the story of cotton, a small crop but at prices higher than in fifty years. Early fruits and vegetables are going northward in literally thousands of carloads week after week. The entire Florida peninsula makes its living largely from garden truck and fruits.

Iowa, likewise, is full of prosperity, for its farmers had a great corn crop in 1919—the largest of any state in the Union. It also has more hogs than any other commonwealth. Also much livestock. And Iowa farmers are among the most efficient agriculturists in this country, typifying that widespread advance in intelligent farming that is spreading all over the West and South.

There are many oil fields, too, in Texas, Illinois, California, Oklahoma and Kansas that add daily to the output of wealth and money spending. Tulsa, Oklahoma, was once only a water tank station. Today it is "going on" to one hundred thousand inhabitants and is incredibly rich. All because of oil. The Miami district in northeastern Oklahoma was unheard of till a few years ago, when some of the richest zinc deposits in all the world were discovered there.

Across the line is Missouri, the greatest poultry state in the Union. Eggs and poultry are now high priced and in great demand. So the farmers' wives of Missouri market fifty million dollars' worth of poultry products annually.

Still further north, in Wisconsin, there are more blooded dairy cows than in any other state in the Union. The dairy interests of Wisconsin, mostly farmers, market two hundred million dollars' worth of their products each year.

There are many silver mines in Colorado and Montana, and they are running full time. For a silver mine today is more valuable than a gold mine. Also in Colorado, sugar beets are a good crop, commanding high prices, and the sugar beet mills are running day and night. There are vast groves of pecans in Texas, and eastward to Georgia, and the demand for these nuts has built up a great business.

The two northwestern counties of Arkansas had a great apple crop last year and they are getting high prices for it because of the high grade of the fruit and its attractive appearance. Georgia sent over eight million dollars' worth of fresh peaches to market in 1919, and has much spending money in consequence.

From East Texas, south and east to the Gulf and to the Atlantic Ocean, there is a vast belt of yellow pine forest, which is full of sawmills getting out lumber at extravagant prices to satisfy an apparently insatiable demand for building material.

TODAY there is much business in the three-fourths of the country ruled by the farmer, because the farmer is buying liberally. Not only is he buying the things that he needs to conduct his farm, but he is installing every known convenience and comfort for himself and his family. Running water and electric lights for his house, new labor saving household devices for his wife and family, new furnishings for his home, pianos, records, and always automobiles. He can do these things because the 1919 crops brought him much money. So long as he continues to buy, there will be a great volume of business in most of the country.

The small towns, which make business for the big towns and the great cities, are also buying, because the farmer is their most important customer. Then, too, many a little town has a manufacturing plant, a shoe factory, or a lumber mill, or a cotton mill, or a cement factory, or an overall factory. The workingmen in these plants are getting the highest wages in their history, and they are spending them freely, extravagantly, foolishly. This is typical of manufacturing cities and towns all over the country. For business thrives on spending, not on saving. The consumer is buying as he never bought before, despite the unusual and often unwarranted high prices of commodities. Both the purchasing power of the consumer and the volume of general business are at flood tide. The producer in every line, agricultural and industrial, finds his products in constant and unceasing demand.

Contrary to much that is said and preached, however, the average business man realizes perfectly well the unnaturalness and artificiality of the present situation. He knows that it cannot last a great while longer, for sooner or later there must come a slowing down of pace, a lessening in demand, and a consequent recession in prices. But he does not believe that such a change is yet upon us, or that it is immediately imminent. Meanwhile he is perfectly content to take a gambler's chance and to make the most of the situation while it lasts. Until this point of view is altered, matters will go on much as now.

The Penalty of Insolence

THE public will stand being robbed but it will not stand being mocked. "What are you going to do about it?" was the phrase which wrecked the Tweed ring. The famous quip, "The public be damned," has cost the railroads hundreds of millions of dollars. The Kaiser's alleged reference to the "contemptible" British army was the best recruiting

KILLING TWO BIRDS WITH ONE SHOT

How

sergeant England ever had. We all remember the effect of the remark of a German official about "idiotic Yankees" in stirring up war sentiment in this country, just as a Spanish diplomat's reference to President McKinley as a "cheap politician" was one of the stimulating causes of the Spanish war. In every case there was real injury lying behind the insult but it was the insult which could not be forgiven.

We recall all this history to remind a certain opponent of rent legislation at Albany, who is reported to have declared that "we landlords want all we can get," that he is invoking ruin on his cause. The people will listen to reasonable arguments even in defense of unreasonable profits, but they will not listen to unreasonable arguments even in defense of reasonable profits. Point out the heavy expenses of the landlord in higher taxes, labor costs and repairs and you may defeat hostile legislation, but deny the right of the State government to protect the tenant and it will enact the most vindictive and confiscatory laws just to spite you. The American voter will not take a "dare."

Cultivating the Mob Mind in Colleges

By Edwin E. Slosson

EASTERN papers are very much excited over the condition of the Normal School at Fort Hays, where, it is said, a student soviet is in control and "the ducking of the faculty has become an almost hourly occurrence" and the riots "almost have resulted in the loss of two lives." It seems that Miss Loos, Professor of Eugenics—which I understand is Greek for Good Breeding—advised the students to duck anyone, man or woman, who refused to turn out on the following day to help construct a running track. The students took the advice literally and three men—not twenty-three as the "almost hourly" in the despatch would imply—two professors and one student who declined to comply with the students' ultimatum were thrown into the pond. One of the professors telegraphed to Topeka for protection, apparently expecting the Governor to call out the militia. But the matter was referred back to the county attorney who decided that the blame lay with the professors for not obeying the students. "It was," explains the financial secretary, who seems to be the chief authority in the institution, "simply an expression of college spirit, nothing more."

He is quite right. It was nothing more than an expression of college spirit and the same sort of college spirit finds some sort of expression in every college that I know. Therein lies the danger of it. For it means that our educational institutions are deliberately training the youth of the nation in the habit of mind that is most destructive to democracy, the tyranny of the majority.

I don't see that it makes much difference in principle whether the ducking is done to faculty or freshmen. It is not so much a question of latitude in discipline as it is of longitude in geography. In western institutions there is no such great gulf fixed between teachers and students as in the East. The older colleges of the country are organized on the principle of a hierarchy, from top to bottom. The order might be put into mathematical form as

trustees	:	faculty	::	faculty	:	students
president	:	professor	::	sophomore	:	freshman

But in some of the western states the board of trustees has been found superfluous and has been eliminated. And where all who teach—or occupy a teaching position—are indiscriminately called "professors," usually in one syllable, academic rank is hard to maintain. Instructors and students mingle freely and voluntarily share each other's labors and pleasures.

This is democratic. But enforced extra-curricular activi-

ties and compulsory conformity to custom or costume are essentially anti-democratic, for real democracy depends upon respect for individual rights. The Declaration of Independence of the nation is based upon the declaration of the independence of the individual contained in its preamble. Yet is there to be found in America any social group where the right of an individual to deviate from his fellows is more restricted and overruled than on a college campus? Possibly in some backwoods community of Mormons or Mennonites.

I know of universities where unwritten law compels the freshmen to wear skull caps on the campus and the faculty to wear mortar-boards at commencement. The freshmen have the advantage for the skull caps are cheaper and more comfortable. I have seen students ducked in the fountain of the largest university in the world for wearing socks or neckties of a shade ruled out by other students. What happens to a student who refuses to contribute to the athletic club funds even when it means going without food, clothing or books? If by any mischance a Quaker like Dalton, the father of the atomic theory, or a non-conformist like Priestley, the discoverer of oxygen, should have conscientious objections to standing during the singing of the college song or to saluting the college flag the career of such promising young chemists would be nipped in the bud. Such petty scruples against compliance with custom are doubtless unreasonable, but the right to be unreasonable is one of the inalienable human rights and the one most frequently in demand.

One of the worst features of collegiate conformity of opinion and conduct is that it makes hypocrisy compulsory. I have heard of institutions where the student who would be popular had to affect idleness and indifference to his studies and to indulge his love of learning at night and behind curtained windows as tho it were a secret vice. The pacemaker is as unpopular in college as in a union shop. There is the same tendency to resort to "direct action" against any innovator or newcomer. A band of sophomores will haze a freshman with the same zest as a bunch of strikers beating up a scab. Workingmen usually lack the advantage of a college education, but they often display the real college spirit.

College spirit of the kind that manifests itself in "direct action" and sabotage is traditional and seems to be dying out in most institutions. It is not peculiar to Kansas, as the New York papers would have us believe. It did not originate in that state, but was introduced in imitation of the older colleges of the country. I know that because I was on the spot when it was done. A lot of young instructors had been imported from eastern institutions to the University of Kansas in the early nineties and finding there a complete absence of class distinctions and what they call "college spirit" they set themselves to inculcate this. It puzzled the students at first to understand the meaning and object of it all. I remember a group of students coming to one of these instructors in class feuds and inquiring, "Won't you explain it over again to us? Are the freshmen and sophomores enemies of the juniors and seniors or are the juniors to help the freshmen in their fights against the sophomores and seniors?" But the students showed themselves really very apt at such lessons and before the year was out we had a flag rush that was equal to any in the oldest colleges, including the customary casualties.

Sporadic student pranks are not to be taken too seriously, even when they involve some violence, for they are mostly meaningless. But we cannot take too seriously a persistent tendency toward minority suppression, even tho it manifests itself in cold shoulders instead of cold baths. Freedom is not seriously endangered because occasionally a professor is discharged from a smaller college for teaching evolution or from a large college for teaching revolu-

tion. But it is endangered when students combine to make the campus uncomfortable for non-conformists of any kind. It would be fine to see every student and professor voluntarily come out to work together in constructing a running track—or if such a thing were conceivable, in building a road as Ruskin tried to get the Oxford students to do. But it would be a wicked thing to compel them to come for it would mean the destruction of the genuine college spirit that is supposed to be displayed by such spontaneous and unanimous action. It does not matter whether the objectors be truly conscientious or merely contrary, whether they be too busy or too lazy to turn out, coercion is equally wrong. Compulsory coöperation—that is the spirit of the soviet, whatever it may be called. The sensational papers declare that Bolshevism is being inculcated in our universities. So it is, but the papers are looking in the wrong direction for it. It is not so often taught by the instructors as it is practiced by the students. The danger lies in the dictatorship of the scholariat.

What is called "self-government" in colleges is often nothing of the sort. It may be mere mass-rule. Instead of being governed as formerly by the more mature and presumably wiser minds of the faculty the students are set to govern—not themselves—but each other. Sometimes student government is better than faculty government; sometimes it is worse. Either is equally far from the ideal of self-government, that is the government of each individual by himself in accordance with the dictates of his own conscience and in willing coöperation with his fellowmen. To do that requires a strength of character and wisdom of mind as yet beyond the capacity of students—or their elders.

The relation of the Many to the One is the most difficult problem in politics as it is in metaphysics. But far as the goal may be from us, it should be the aim of education to strive toward it or at least not work against it.

It Would Be a Dull World

THE trouble with suppressing the free speech of the Red is that at the same time and by the same act we suppress the reply which might be made. To abolish one side of a debate abolishes also the other, since no debate can exist if only one point of view is permitted. Think how dull it would be for a Republican stump speaker to live in a state where there were no Democrats! Think what a loss it would have been to Roman Catholic controversial theology if there had been no heretics! To a man of real convictions the greatest possible nightmares would be a world in which his burning arguments would forever smolder to extinction in the lukewarm water of acquiescence.

Three Vicious Bills

By Franklin H. Giddings

IF worse legislation than Mr. Lusk's New York State Senate Bills 1272, 1274 and 1275 has ever been proposed in any American legislative body, no record of it survives in history. These bills are politically vicious and offensively un-American. They are the kind of thing that we associate with the Robespierres, the Lenins and the Trotskys; or, to go a little farther back, with the legislation that flourished in the England of Charles II, and called forth such withering analyses as the political writings of John Milton.

Bill No. 1272 is entitled "An act to amend the executive law, in relation to powers of attorney general with respect to prosecutions for criminal anarchy, and making an appropriation therefor." It creates an "organization" and "facilities" for prosecuting violations of laws relating to anarchy. The organization is to consist of deputies as-

signed or appointed by the attorney general of the state and of "investigators, translators, stenographers, process servers, and clerical and other assistants." These persons "shall be deemed confidential agents of the attorney general, and their appointment, promotion, demotion, or removal shall not be subject to the provisions of the civil service law or rules of the state civil service commission." Of course not! Such a piece of decency and legal propriety might be highly embarrassing to so precious an "organization," for creating and maintaining which, and for providing "facilities" for which, the sum of \$100,000 is appropriated. In other words, a gang of political house men and retainers, responsible to nobody but the attorney general, is to be called into existence and fed at the public trough up to \$100,000 to discover and punish political crime! If Lenin or Trotsky, to say nothing of the Russian bureaucracy under Czardom, has ever conceived anything to beat that, Mr. Lusk or his friends ought to provide the public with a micrometer (at state expense) to measure the difference.

Bill No. 1274 is entitled "An act to amend the education law, in relation to licensing and supervision of schools and school courses, and making an appropriation therefor." It provides that "no person, firm, corporation, association or society shall conduct, maintain or operate any school, institute, class or course of instruction in any subjects whatever" without a license from the University of the State of New York, exception being made of public schools of the city; union, free and common school districts of the state; educational institutions now or hereafter incorporated by the university of the state, or admitted to membership in it; and "schools now or hereafter established and maintained by a religious denomination or sect well recognized as such at the time this section takes effect." In other words, no old lady could teach a class in knitting, no rural district could have an old-fashioned singing school, no man or woman could organize and teach a class in dancing or in fiddling, no woman's club could study Browning, nobody could teach a class in bookkeeping, or stenography, or type-writing, nobody could coach a boat crew or a baseball team, until for \$5 paid a license had been obtained from the university of the state, without becoming "guilty of a misdemeanor" and liable to punishment "by a fine not exceeding \$100 or by imprisonment not exceeding sixty days." To buy and organize the omniscience called for by this act, the sum of \$10,000 is appropriated. It seems inadequate.

Bill No. 1275 is entitled "An act to amend the education law, in relation to the qualifications of teachers, and making an appropriation for expenses." It provides that, in addition to present requirements for certification of qualification for employment as a teacher in the public schools, every teacher "shall obtain a certificate" which shall set forth that he is "of good moral character, and that he has shown satisfactorily that he will support the constitutions of this state and of the United States, and that he is loyal to the institutions and laws thereof." This certificate is to be issued by, or under the direction of, the commissioner of education and in conformity to rules to be adopted by the regents of the university. So far the provision is eminently proper and expedient. It is, however, further provided that the certificate may be revoked by the commissioner of education on the ground that the holder of it is not of good moral character, or for act or utterance showing that he will not support the constitutions of the state and the nation, or that he is not loyal to the institutions and laws thereof, and no provision of any kind is made relative to the procedure by which such charge shall be established. In other words, as the bill stands the commissioner of education is given the powers of a despot to determine who shall and who shall not teach in the public schools in the state of New York.

Further characterization of such legislation would be

Daisy Ashford's Not the Only One

These youngsters are all
famous, and all but one
are under ten

The youngest star on Broadway, Lillian Roth, is nine years old and has played already in six important roles. This season she is Babbie in "Shavings," a notably successful comedy from Joseph Lincoln's Cape Cod stories. Two of its scenes are in a toy shop, and so in spite of being famous Lillian can still play with her dolls

Because he broke all records in entering college at the age of fourteen they let him wear a cap and gown his freshman year to have this picture taken. Edmund Moore Hamilton isn't a one-sided boy prodigy; he makes amazing progress in his college work, surpassing at fourteen the work of students from seventeen to twenty, and he takes a healthy all-round interest in things outside the classroom, too

Ever since the age of five Sammy Reschewski has been known as a famous chess player. Now at eight years old he is champion of Berlin, where he recently played a match in which he won thirty - two games and lost only one

Singing in "Zaza" at the Metropolitan Opera House before she is seven seems a promising start for Ada Quintana, a little Italian girl. Already she is choosing between two careers; Geraldine Farrar has offered to be her sponsor in moving pictures; Mr. Gatti-Casazza advises her instead to "dress plainly, learn honesty and modesty, have her voice thoroly trained — and become a second Patti"

Natalie Ormsby (right) has been on the road at seven, playing in the Marjorie Rambeau Company. She is credited with having the best speaking voice of any child on the stage. but she hankers already for the money to be made in the movies

The Wanamaker prize in a general competition of paintings and drawings by young people from nine to seventeen years old went to Marie Kempton, aged nine, whose creative imagination has never been hampered by any lessons in technic. She is going to be a leader of the Modernists when she grows up

Technic, on the other hand, still maintains its place in athletic achievement. Little Cameron Coffey (left) is famous as a perfect springboard diver from a height of ten feet. He was taught to swim almost as soon as he could walk by Vance Vieth, coach of the Los Angeles Athletic Club

tautological. This sort of thing is not Americanism. It is Leninism; it is pure and unalloyed Bolshevism, which means that it is neither more nor less than newfangled jargon for tyranny.

The Mosque and the Skull

THERE are many good reasons why the Turks should be deprived of Constantinople and several bad ones. Probably the worst is the one which seems to have most influence in English ecclesiastical circles, that is, that the Mosque of St. Sofia should again become a Christian church. But the Mohammedans have been worshipping in it for 467 years and that ought to give them some right to it. If priority of possession is to determine property rights we shall expect the Christians, if they get St. Sofia, to restore its eight columns of porphyry to the Temple of the Sun at Baalbek and its two columns of verde antique to the Temple of Diana of Ephesus from which they were purloined.

If Christians need a church in Constantinople let them build a new one. If they cannot build a bigger, better and more beautiful one than Justinian did this proves that Christianity is in a lower state than it was in the Byzantine period, and if so it does not deserve consideration. If Christians really possessed Holy Wisdom they would not demand the shrine of it. If a clause is inserted in the Turkish treaty calling for the surrender of St. Sofia it will be as much of an absurdity as Article 246 in the German treaty in which England demands the return of the skull of the Sultan Mkwawa, late of Tanganyika Territory.

The Emancipated Puritan

By Allen Campbell

NOW that we are about to celebrate the tercentenary of the Pilgrims it is just as well to ask ourselves frankly: "Are we ashamed of the Puritans?" If not, it is because we are as a people resistant to propaganda. For many years past Greenwich Village essayists, decadent poets, artists of the new schools and supercilious critics have been industriously creating a legend about the Puritan, till the word itself has become an insult even worse than "bourgeois," "philistine" or "mid-Victorian." According to the legend the Puritan was conventional, conservative, bigoted, superstitious, hostile to all freedoms of thought and expression and, even in the seventeenth century, decidedly behind the times. His force of character is conceded, but intellectually he is regarded as beneath contempt. Emancipation and modernism are measured as the square of the distance away from Puritanism.

Those who by conviction or temperament are naturally averse to the Puritan have, of course, the right to their point of view, but it is a pity that they should denounce what they have never studied. Very few eager enemies of Calvin's doctrines could pass an examination on the Shorter Catechism, and very few critics of what they suppose to be the Puritan moral tradition ever read a word of Milton or Jonathan Edwards. It is as if some clever young essayist attacked Marxian Socialism on the ground that it taught polygamy and that it had failed when tried in Utah; or pointed out to the Anti-Saloon League how brilliant was the life in the Parisian *salon*, or gently reminded the Catholic Church that free silver was now a dead issue.

The Puritans were a group of rationalist radicals who figured prominently in the history of England, Scotland and the American colonies in the seventeenth century. They were very intolerant, but not in the sense of resisting innovations; they were intolerant of existing institu-

tions as are the Socialists of today. They greatly shocked respectable Anglicans by insisting that marriage was a civil contract rather than a religious sacrament, tho not all of them went as far as Milton in upholding the right of divorce. They were, it is quite true, austere and strict in their personal conduct, but they used a plainness of speech in denouncing moral evils that no modern writer would dare imitate. They were especially concerned with the defense of free speech and the "freedom of unlicensed printing," and the noblest vindication of a free press which exists anywhere in literature may be found in Milton's *Areopagitica*.

In civil affairs their ideal was a democratic republic. No institution ever devised by the extremest modern radical can surpass in directness of popular rule the New England town meetings. Like the Russian Reds they thought it small sin to kill a king. They were responsible for popular revolutions in every country where they had a considerable following. It is true that they were constructive as well as destructive; they could found a commonwealth as well as upset one, but that was because they were sufficiently rationalist to think thru a subject to its logical conclusion and not stop half way with the mere act of rebellion.

The Puritan leaders were not wholly exempt from the superstitions common to all sects and classes of their day, but they were distinguished by an eager intellectual curiosity and a fondness for scientific and philosophical speculation. They distrusted emotional and mystical religion and worshiped by preference in "meeting houses" as bare as barns so that nothing would distract their attention from the exercise of pure thought. Their religious service did not consist in the symbolic ritual favored by the Catholics and Anglicans, or the elaborate musical programs of the modern fashionable church, or the popular hymns and emotional sermons of the revivalist evangelical churches. Essentially their service was a long lecture on metaphysics. None but a nation of philosophers could have created, or even endured, the Puritan sermon. It is not strange, therefore, that Scotland and Massachusetts have produced so many leaders in the various fields of science.

It is commonly assumed that modern science has "disproved" the theology of Calvin. Doubtless its phraseology has become old fashioned and some of its conclusions are offensive to many of us. But what people have objected to in this theology is really its ruthless logic; their hearts have revolted against the extremes to which the Calvinists pushed the general Christian doctrine of divine omnipotence. Nearly all Christians admitted divine foreknowledge, which implied divine foreordination, and all that Calvinism did was to point out that as a logical consequence free will was impossible. "Predestination" is simply a technical name for the doctrine of determinism widely held by scientists and philosophers who do not claim to be Christian at all. Anyone who believes in the absolute regularity of natural law is half a Calvinist, and if he also believes in God, and in the Christian revelation, he is wholly one.

We have one great superiority to the Puritans, we are more soft-hearted. We have one great inferiority, we are less hard-headed. Today we prefer rhetoric to cold logic and mystical aspiration to solid lumps of theological doctrine. We wrap our beliefs in the rich trappings of historic ritual. We dodge the conclusion of a train of thought. We turn from the plain and prosaic Puritan conception of church and state to the symbolism of sacred crosses and sacred flags. Puritanism is too advanced and rationalistic for us; it has more of the white light of reason than we can endure.

The Story of the Week

Is Socialism Treason?

A majority of the New York Assembly has voted to expel the five Socialist members of the Assembly, Messrs. Claessens, Waldman, Solomon, De Witt and Orr, on the recommendation of the Judiciary Committee. The majority report is based not on the personal disqualifications of the five assemblymen, but on the broad ground that membership in the Socialist party is itself an act of disloyalty and renders any candidate elected on the party ticket incapable of taking a legally valid oath of loyalty to the Constitution.

The majority report even ventures to recommend special legislation making it impossible for the Socialist party, as at present organized, to present a ticket to the voters this fall. On this point the report states:

We recommend that appropriate legislation be enacted to the end that hereafter no party, group or political organization in which aliens are acceptable as members, or whose principles, policies and program are responsive to or determined by an organization, national or state, composed of persons not members of the electorate of the nation or state, shall be privileged to occupy the position of a political party on the official ballot of this state.

Senator Borah Is Bitter

SENATOR Borah has accused the supporters of General Wood and Governor Lowden with trying to capture the Republican nomination by spending huge sums of money in the pre-convention campaign. He has introduced a bill in the Senate requiring all persons or organizations contributing more than \$100 to any campaign fund to make public, thru immediate notification to the Attorney General of the United States, the identity of the contributor and the amount contributed.

Senator Johnson immediately claimed merit as a candi-

Charles R. Crane has been appointed by President Wilson as United States Envoy to China, a post of increasing importance in view of China's commercial and social development. Mr. Crane was given a similar appointment to China by President Taft in 1909, but resigned before he assumed his official duties. He was chairman of the finance committee for President Wilson's campaign in 1912. Shortly after that he refused the offer of an appointment as United States Ambassador to Russia

date exempt from Senator Borah's strictures, since he had no large campaign fund behind him and was forced to make most of his canvass personally. He advocated that a legal limit should be placed on campaign expenditures and declared it "a national scandal the manner in which people are exploiting certain candidates just as if they were a patent medicine or a new soap." He contends that the North Dakota and Minnesota delegations are incorrectly attributed to General Wood and that the North Dakota delegation and part of that of Minnesota should be counted for him.

General Wood declares Senator Borah's attack "entirely unwarranted" and intended to influence the result of future primaries. Senator Moses of New Hampshire, campaign manager for General Wood, denied that any money had been improperly spent and defended the expenditure of campaign funds for legitimate publicity work.

Hoover Speaks Up

AT last Mr. Hoover, the mystery candidate, has followed the example of other Presidential possibilities and yielded to the enthusiasm of his friends. Hitherto he has refused to let his name go before the primaries of either party and has steadfastly declined to be considered as a candidate or even to say which party would receive his support in the coming elections. But in a recent message to the Hoover Republican Club of California he declared his preference for the Republican party on two conditions; that the party be progressive on domestic issues and that it stand for the ratification of the treaty with Germany.

Mr. Hoover says in part:

I understand that there is a great wish among the Republicans of California to have opportunity to express themselves in favor of the League of Nations, with proper reservations safeguarding American interests, as opposed to the extreme view advocated against any League at all.

If the Republican party, with the independent element of which I am naturally affiliated, adopts a forward-looking, liberal, constructive platform on the Treaty and on our economic issues, and if the party proposes measures for sound business administration of the country and is neither reactionary nor radical in its approach to our great domestic questions, and is backed by men who undoubtedly assure the consummation of these policies and measures I will give it my entire support.

While I do not and will not myself seek the nomination, if it is felt that the issues necessitate it and it is demanded of me, I cannot refuse service.

The South Dakota Primary

THE most interesting, because the most actively and closely contested, primary election thus far held was the Republican primary in South Dakota on March 23. Four candidates had carried on active publicity campaigns within the state: Major General Leonard Wood, Governor Lowden of Illinois, Senator Johnson of California and Senator Poindexter of Washington. General Wood was successful, with over 29,000 votes. Governor Lowden was a creditable second, with more than 25,000, and Senator Johnson a close third with over 23,000. Senator Poindexter, altho he had personally campaigned in the state, obtained less than a thousand votes. The Democratic primary was captured by Mr. Gerard, former ambassador to Germany.

General Wood is far in the lead of his competitors in securing instructed delegates. Of 188 Republican delegates

chosen by convention or by primary before the end of March, seventy-nine were pledged or instructed to further the Wood candidacy. Very few of the other delegates thus far chosen are instructed for anyone, tho Virginia's delegates at large have been instructed to support Governor Lowden. The sentiments of the uninstructed delegates are, of course, a matter of guesswork, but it appears probable that most of them will vote either for Wood or Lowden when they get to Chicago.

The Republican situation seems to have taken the form of a contest of General Wood against the field. Wood, Lowden and Johnson may be classed as "favorites"; that is, as candidates making an active canvass in all parts of the Union. Governor Allen of Kansas, Governor Coolidge of Massachusetts, Senator Harding of Ohio, Senator Poin-dexter of Washington, Senator Borah of Idaho and Senator Watson of Indiana form the group of "favorite sons"; that is, candidates who rely on local support to give them standing before the convention. There is a third group of "dark horses," men widely considered for the nomination but whose chance of nomination does not depend on instructed delegates, but arises from the possibility of a deadlock in the convention itself which will compel the nomination of a compromise candidate. Such are Mr. Hoover, President Butler, General Pershing and ex-Justice Hughes.

Tornadoes Smite West and South

A series of destructive tornadoes on March 28 caused wholesale loss of life and property in the states of Illinois, Indiana, Ohio, Missouri, Wisconsin, Michigan, Georgia and Alabama. The northern storm resulted in 105 deaths; the southern storm in 55. Illinois was the most severely injured of the northern states, with a death toll of more than thirty and a property loss variously estimated from \$20,000,000 to \$50,000,000. A number of suburbs and towns immediately west of Chicago were completely wrecked; among them Melrose Park and Elgin. Western Ohio suffered almost as severely.

Atlanta, Georgia, was the center of the southern storm belt as Chicago was of the northern. The city itself was badly damaged and a number of smaller Georgia towns were practically wiped out. Lagrange reports twenty-six dead and more than a hundred injured. Several hundred houses were destroyed with a property loss of at least \$500,000. West Point, Georgia, also felt the full fury of the storm; at least ten were killed and many injured. Red Cross and emergency relief organizations are rushing food and supplies to the ravaged areas.

Coal Strike Called Off

BEGINNING with the first of April, Federal control ceased over the coal industry of the United States. President Wilson in his letter of March 23 to the regional conferences entrusted with the negotiation of new wage contracts said that he expected both the operators and the miners to abide by the decision of the United States Bituminous Coal Commission "notwithstanding the fact that it is not unanimous." He declared that he had come to the conclusion that it was inexpedient for the Government to continue price control "so that on and after April 1, 1920, no Government maximum prices will be enforced." He added, however, that he wished to "impress upon the coal operators the extreme importance not only of their complying to the fullest extent with the laws against combinations in restraint of trade and against profiteering, but also of their exerting themselves affirmatively to prevent exacting of unreasonable prices for coal."

The miners agreed not to call a strike, provided all wage agreements reached subsequently to April 1 were made

Thomas in Detroit News

The human wishbone

retroactive to that date. The majority decision of the Coal Commission grants the miners an advance in wages of 27 per cent in place of the 14 per cent previously awarded by Fuel Administrator Garfield. This will increase the aggregate annual payroll of the bituminous coal mines by about \$200,000,000 a year. The contract on this basis will expire on March 31, 1922, as it is effective for two years. The eight hour day is retained; the miners' demand for the six hour day and the five day week being rejected as "clearly uneconomic." The miners at first insisted on both the thirty hour week and a 60 per cent increase in pay, and claimed that the war profits of the coal operators were sufficient to justify all these demands. At a later stage in the discussion they offered to compromise on a 35 per cent advance of wages and the seven-hour day. While disappointed at the final report of the Coal Commission, the miners are pleased at being granted almost twice the increase awarded them under the decision of the Fuel Administrator.

Mexican Politics

MEXICO, like the United States, will hold Presidential elections this year. The state governors of the republic have agreed on a joint program designed to eliminate the factor of unfair pressure by the public authorities on the voter which has been so notorious in all previous Mexican elections. The governors also declared that they would refuse to recognize any Congress or President that was not lawfully elected. If performance is as good as promise Mexico will have no more revolutions to overturn the verdict of the ballots.

The leading candidates for President have also "taken the pledge" not to dispute the result of the election by armed force. Carranza does not appear to be a candidate to succeed himself. Ygnacio Bonillas, Mexican ambassador to the United States, is the Administration candidate. The group which he heads is dubbed the Civilian Party, to indicate the elimination of militarist influence from Mexican politics. His chief rivals are both military men, General Obregon and General Gonzales. All three candidates profess a desire for friendly relations with the United States.

The Carranza Government is more nearly in control of

Underwood & Underwood.

This is how an airship looks in process of construction. It is the R-38, bought from Great Britain by the United States Navy, and, in this photograph, being examined in its shed at Bedford, England, by Commander Dyer and Lieutenant Commander Coil of the United States

the situation than at any previous time. Villa is the only bandit of renown who is still active. Several Americans have recently been captured and held for ransom by Villa's followers.

The Mexican Government announces that Henry Morgenthau is acceptable as Ambassador of the United States, in succession to Henry P. Fletcher. Owing to the prolonged absence of Mr. Fletcher in Washington, the United States has had to transact affairs at Mexico City thru a chargé d'affaires, and the resumption of normal diplomatic intercourse is welcomed by both countries. The Mexican Government announces that it will resume the payment of interest on its foreign debt, about one-third of which is held in the United States. Thus Mexico sets a good example to more than one of our European debtors!

Independent Canada

THE nationhood of Canada, as an independent and equal partner of that subsidiary League of Nations the British Empire, has been vigorously reaffirmed by Canadian statesmen in recent Parliamentary debates. In discussing the Bulgarian treaty Mr. King, the opposition leader, declared that "We do not want a condition brought about whereby the full autonomy of this Parliament will be in any way impaired or by which we will not be able to continue our status as a free self-governing nation, which status we are privileged to enjoy at the present time." Sir George Foster, acting Premier, replied that no responsible English statesman had hinted at Imperial centralization. Mr. Beland said that, "We have only to reaffirm the position taken last year as to the supremacy and sovereignty of the Canadian Parliament in the matter of participating in war." Mr. Doherty, Minister of Justice, declared that the ratification of a British treaty with respect to Canada depended on the signature of the Canadian representative and the approval of the Canadian Parliament.

Mr. King advocates a constitutional reform which would permit Canada to revise her constitution at will without even a formal reference to the British Government. At present an amendment to the Canadian constitution, con-

trary to the practice of Australia and South Africa, must be approved by the British Government since it amounts to an amendment of the British North America Act, establishing Canadian home rule, which was passed by the British Parliament. It is true that this assent is never refused, but many Canadian nationalists are impatient of any legal form which reminds them of the old days of colonial dependence.

Mr. Rowell, President of the Canadian Privy Council, has declared that if the United States should enter the League of Nations with a reservation against the separate representation of Canada in the League Assembly, Canada would refuse assent, even if Great Britain agreed, and in that case "the reservations would not go into effect because they were not assented to by the Allied and Associated Powers"; which logically implies that Canada is a "Power" distinct from Great Britain.

How May Peace Come?

THE second rejection of the Treaty of Versailles leaves the United States still "in a state of war" with the German Empire, with Austria and with Hungary. Our relations with these countries are governed by the terms of the armistice which ended actual hostilities. This puts us at so obvious a disadvantage in our economic relations with enemy countries, as compared with competing nations who are now at peace, that Congress is seeking a way to evade the consequences of the Senate's action.

The Republican majority in the House of Representatives and in the Senate plan to put thru a resolution simply declaring war with Germany at an end. Should the President veto such a resolution they trust to obtain the necessary two-thirds vote of both Houses to override the veto by appealing to war-weary Democrats. In any case a veto would enable the Republicans to accuse President Wilson of preventing peace. But the legal and political pitfalls which surround this course are numerous. A mere declaration of peace would not give the United States any of the rights guaranteed to the United States under the Treaty; whereas a resolution, such as that proposed by Senator Knox, which contained provisions safeguarding American rights and privileges as secured in the Treaty of Versailles, would almost certainly require the assent of the President as relating to the treaty making power. Moreover, since the United States has refused assent to the Treaty, the other Allied and Associated Powers might refuse to sanction such an arrangement.

Another course would be to negotiate a separate peace with Germany. This cannot be done, however, save on the initiative of the President. Nor are the President's opponents any too anxious to undertake the responsibility of shutting the United States outside the Peace of Versailles. The most promising way out would be for the President to resubmit the Treaty, either with the necessary reservations to secure the approval of the Senate or with a tacit understanding that the reservations will be accepted if the Senate insists on attaching them to the Treaty.

German Government Stands

THE German republic has given substantial proof of its stability by withstanding assault from both flanks. First the reactionaries from the agricultural regions of the east under Dr. von Kapp and General Lüttwitz seized Berlin and attempted to overthrow the Ebert Government and a few days later the radicals of the industrial district of the west revolted and established communes in the Ruhr valley. The first menace, the *coup d'état* of the Right, was quickly quelled by the use of the republican army and by a general strike. The second could not be so easily dealt

with for the threat of a strike has no terrors for those who are themselves strikers and the Government forces could not be used against the insurgents, for according to Article 43 of the Treaty only a limited number of German troops are permitted within thirty miles of the Rhine. President Ebert asked the Allied Governments to be allowed to send forty-eight regiments into the Ruhr valley to put down the Communists. England, Italy and the United States were willing, but France refused. The French, who are always working to extend their military control over more German territory, proposed that the forces of the Allied and Associated nations now on the Rhine be employed to put down the rebellion, but neither the British nor American Governments would consent to this. The American troops on the frontier are in a peculiarly difficult position since the United States alone is still at war with Germany and an advance of the American army across the Rhine would be regarded as a hostile invasion and might precipitate a conflict. The French Government, failing to get the consent of England, Italy and the United States to an extension of the area of occupation, then agreed to allow the Ebert forces to be employed in the neutral zone on condition that Allied troops—meaning practically French—should occupy Frankfurt and Darmstadt, the most important German cities in the west, but England refused her consent to this.

But altho the military operations of the German Government were thus restricted by the disagreement of the Allies, the Communists will probably be compelled to surrender, sooner or later, and the soviets that have been set up will be dissolved.

The military leader of the Spartacans is Captain von Beerfelde, formerly of the German General Staff. Three years ago he was being highly praised by the Allied press for having disclosed the Lichnowsky memoirs which revealed the machinations of the German Government to bring on the war. For his opposition to the continuance of the war he was arraigned for high treason, but before he could be convicted the old régime had fallen.

England and Belgium in Africa

THE conquest of German East Africa was one of the most romantic and remarkable campaigns of the Great War. That a few thousand Germans, cut off from the home country and without the means of making or importing arms and ammunition, should be able to hold out for four and a half years against overwhelming forces, fully supplied with munitions, and attacking from all four sides at once, and that enough of them should remain to surrender after the armistice, would be incredible if it had not happened before our eyes.

According to the Berlin treaty founding the Congo Free State in 1885, the basin of the Congo River as well as Lake Tanganyika was to remain forever open on equal terms to the trade of all nations and immune from all warlike operations. The United States took a leading part in this movement and was the first nation to recognize the Congo Free State. At the outbreak of the Great War both Belgium and Germany appealed to the United States and to the other powers signatory to the Treaty of Berlin to use their influence to prevent carrying the war into Africa, for fighting there, whichever won, could have no influence on the final issue of the war and the only effect would be to devastate the country and kill off the natives. But the United States paid no attention to the petition.

First the Boers and British tried to conquer German East Africa conjointly as they had German South West Africa, but they did not find it such an easy job, so they called in the aid of the neighboring nations. The Belgians attacked from the western or Congo side, while the Portuguese attacked from the south. The Belgians, entering from the northwest corner, swept clear the table land between the

two lakes, Tanganyika and Victoria Nyanza, and it fell to their fortune to take the German capital, Tabora. When it came to the partition of the spoils there was some controversy among the Allies. The Portuguese and Belgians claimed a considerable share on the ground that their aid had been indispensable to the victory. The Portuguese were appeased by the promise of a slight rectification of the southern frontier in their favor, but the Belgians demanded about a quarter of the territory, including both banks of Lake Tanganyika. But this lake, the longest in the world, forms a link in the Cape-to-Cairo route that the British have been aiming to complete ever since Cecil Rhodes projected it. The Germans blocked their plan by taking the whole territory between Tanganyika and the ocean, but the overthrow of Germany in the Great War removes this obstacle and leaves the way clear to construct a north-and-south transcontinental Africa railroad.

The British contended that Lake Tanganyika formed a natural boundary to the Belgian possessions on the east and that to give the Belgians the northwest quarter of German East Africa would be to annex to the Congo land whose natural outlet is toward the east and to separate tribes who belong to the same race and political group. Further, the British argued that Belgium already possess a million square miles of African territory, more than such a small country could properly manage, as the Congo scandals proved.

But the Belgians, like the French and Italians, insisted that England had acquired thru the war such immense territories in Africa, Asia and the Pacific that it would be ungenerous of her not to grant a little of it to her Allies. Finally England consented, and an agreement was reached by which Belgium was to get the provinces of Ruanda and Urundi, as shown on the map. The territory thus ceded amounts to 18,000 square miles, that is, nearly twice the size of Belgium. It is high lying and healthy, probably hab-

BELGIAN GAINS IN AFRICA

The British Government has conceded to Belgium the northwest corner of German East Africa in recognition of the aid given by the Belgian troops from the Congo in the conquest of the German colony. The dividing line agreed upon between England and Belgium is as marked upon the above map from the London Times, but with the proviso that if the transcontinental railroad to be run from Tabora to Uganda requires it the boundary above Bugufi shall be shifted ten miles or more to the west

itable by white men and likely to become one of the great cattle countries of the world.

The British retain about 95 per cent of German East Africa, which will henceforth be known as "Tanganyika Territory." They get complete control of the railroad which the Germans had completed just as the war broke out to connect the coast with Tanganyika. But Belgium is guaranteed the free economic use of the line from the lake to the sea, as well as special port privileges at the eastern terminus, Dar-es-Salaam. The Belgians can run their own cars thru to the ocean on this railroad.

The north-and-south railroad which the British are to construct will run thru Tabora into British Uganda, and the Belgians have consented to draw back their eastern boundary, tho not more than ten miles, in case it is found that the valley, thru which the British railroad must run, is within the Belgian cession.

A curious feature of this affair is that both the British and the Belgians are supposed to take and to hold this territory under a mandate from the League of Nations, yet it does not appear that the League has even been consulted as to who shall have the mandates for this or any other of the German colonies. Their ownership has been settled in all cases by private agreement between the countries most concerned. In this way it has been already arranged that Japan should have the German islands north of the equator and Great Britain those south of it; that Australia should have New Guinea and New Zealand Samoa; that German South West Africa should go to the Union of South Africa; that Togoland and Kamerun should be divided between France and Great Britain and East Africa between Belgium and Great Britain. The Italian claims in Africa we discussed in The Independent of March 20. The partition of Turkey is still in dispute.

Wilson and the Turkish Problem

THE partition of the Ottoman Empire is a question in which the United States is much concerned, both on philanthropic and commercial grounds. Many Armenians, Syrians and Levantine Jews and Greeks have found refuge among us, and we have always endeavored to alleviate the sufferings or facilitate the release of those who remained under Turkish tyranny. But since we are not in the League of Nations we are not even being consulted as to the arrangements now being completed by the Allies

which will determine the political and commercial relations of the Near East for generations to come.

Consequently the President has taken occasion to ask for information as to what measures are being taken to secure a just and permanent peace and to safeguard the equal rights of nations like the United States, that did not take a direct part in the conquest of Turkey. Perhaps the most significant clause in the President's note is the concluding paragraph, in which he asks for "the open door" in Turkey, such as Secretary Hay insisted upon in China:

Let me say in conclusion that it is the understanding of the Government of the United States that whatever territorial changes or arrangements may be made in the former Ottoman Empire such changes or arrangements will in no way place American citizens or corporations or the citizens or corporations of any other country in a less favorable situation than the citizens or corporations of any power party to this treaty.

In accordance with the principle enunciated in his Fourteen Points the President says that the Armenians should have "easy and unencumbered access to the sea," and suggests that Trebizond on the Black Sea be given to Armenia. The Allies propose to leave this in the hands of the Turks and put off the Armenians with the inferior port of Lazistan, while shutting them off altogether from the Mediterranean. He also objects to the great powers completely reversing their policy and retaining the Turks in Constantinople. On the question of the partition of Thrace he adheres to the recommendations of American experts that the line should be drawn on racial lines, tho he says nothing about a Bulgarian port on the Aegean Sea. This passage is so important that it must be quoted intact:

As for Thrace, it would seem right that that part of East Thrace which is outside of the zone reserved for Constantinople should become part of the Kingdom of Greece, with the exception of the northern part of the province. As this, the northern part, is clearly Bulgarian in population, justice and fair dealing demand that the cities of Adrianople and Kirk Kilisseh and the surrounding territory should become part of Bulgaria. Not only is the claim of Bulgaria worthy of most serious consideration on ethic and historical ground, but it would also seem that Bulgaria is entitled to have its claim to this territory favorably considered, in view of its having been compelled to surrender purely Bulgarian territory and many thousands of Bulgars on its western boundary, on no other grounds than the rather doubtful grounds of securing a strategic frontier for Serbia.

The President says that he assumes that the boundary between Turks and Arabs will be drawn along the ethnological frontier, and, if not, he asks what reasons the Allies have for not drawing the line in such a way. This obviously refers to the current rumors that this line is not being drawn according to racial rights but in compliance with the secret Sykes-Picot treaty between France and Great Britain during the war.

It will be remembered that Great Britain and France promised to give Constantinople to Russia in the event of victory, but the withdrawal of Russia from the war not only nullified this agreement but left Russia out of the peace conferences. But President Wilson speaks up in defense of Russia's future interests as follows:

This Government is convinced that no arrangement that is now made concerning the government and control of Constantinople and the straits can have any elements of permanency unless the vital interests of Russia in those problems are carefully provided for and protected, and unless it is understood that Russia when it has a Government recognized by the civilized world may assert its right to be heard in regard to the decisions now made.

Industrial Conscription in Russia

THERE are two difficulties in the way of getting a clear idea of Russia. One is that it is so various and the other is that it is so changeable. The most contradictory statements made by eye-witness may both be true in reference to different places or different times. So it happens that the same word may totally change its

PARIS LAUGHS AGAIN

Mi-Carême in the spring of 1920 was once more celebrated in Paris as it used to be before the war. There was a queen of the festivities, honored by President Deschanel and the city officials of Paris, there were parades and fêtes and general joyous confusion, and there was a special celebration to Monsieur Charlie Chaplin, king of the movies in France as well as in America

Pebbles

It must be true as reported that jazz is dying. There is no other way to account for the weird noise it makes.—*Toledo Blade*.

The Bride—Oh, Jack, I could sit here forever!

The Groom—So could I, darling. Let's go back to the hotel and have lunch first.—*Life*.

"All I did," said the profiteer, "was to take advantage of an opportunity."

"Well," answered the patriot, "that's all Captain Kidd used to do."—*Boston Transcript*.

Archie—I hear that Joe is in the life class.

Hal—Where, at the art institute?

Archie—No; in the state penitentiary.—*Auroran*.

Affable Waiter—How did you find that steak, sir?

Guest—Oh, quite accidentally. I moved that piece of potato and there it was, underneath.—*Blighty*.

We would like to know how much Elihu Root gets for selling his legal ability to the brewers. We used to hear about "Hire's root beer," but now it is "Beer hires Root."—*Reform Bulletin*.

Matron—Clarice, did that young man smoke in the parlor last night? I found matches there.

Clarice—Oh, no. He just lit a match to see what time it was.—*Siren*.

"I want to apply for a position as an expert amanuensis."

"Well, what's stopping you?"

"How do you spell the pesky word?"—*Louisville Courier-Journal*.

Guy—What do records cost nowadays?

Mabel—Well, sir, for fifty cents you can have "Smiles"; for a dollar, "Kisses," and for a dollar and a half "You'd Be Surprised."—*Princeton Tiger*.

"Times have changed," sighed Uncle Bill. "Times have surely changed."

"What makes you think so?"

"A little family party I attended last night. The women folk talked politics while the men folk got off in a corner and exchanged recipes."—*London Opinion*.

"Have you ever appeared as a witness in a suit before?" asked the bully-ragging attorney.

"Why, of course!" replied the young lady on the witness stand.

"Then tell the jury just what suit it was!" demanded the attorney.

"It was a blue suit, with a white collar and white cuffs, and white buttons all the way down the back," replied the young lady.—*Cincinnati Inquirer*.

On a certain evening last autumn a group of farmers sat around the stove in the general store and joined in a general and heartfelt complaint about the ravages of the potato bugs.

"The pests ate my whole potato crop in two weeks," said one farmer.

"They ate my crop in two days," said a second farmer, "and then they roosted on the trees to see if I'd plant more."

A salesman who was traveling for a seed house cleared his throat.

"That's remarkable," he said, "but let me tell you what I saw in our own store. I saw a couple of potato bugs examining the books about a week before planting time to see who had bought seed."—*Chicago Daily News*.

Are we grown-ups still hooking a ride?

We live high in America. Still, not everyone can afford to come down to work in his limousine—yet.

Most of us depend on the street cars. But we're not inclined to enthuse over the service they render.

We don't often consider that without the street railway system the city life of today would be an impossibility.

How else could we travel quickly and cheaply, several miles several times a day? Communities would shrink and property values fall.

Ask the real estate man how much less your house would be worth if you had to walk even ten blocks for a street car. Or study the curve of increased valuations along the path of a new carline that links city with suburb and reaches out beyond into green fields to bring even the farmer within this great civic family.

How eloquent of the get-together instinct in us mortals.

What is it worth to us, this utility that has directed the very growth of community life? Surely the value is something more than the five or ten cent piece we flip into the coin-box. It is a question of our whole well-being in a modern environment.

As a people we are very fair in our collective dealings when we once have facts to guide our judgment.

It looks now as if the street railways by and large are underfed, as if for years they have been living on hope while slowly starving—and not saying much about it.

It may be that our car riding for the past while has not been fully paid for.

If this is true—we all ought to help fix it—not necessarily because the street railway says so, but because in our living we need the service the street car gives.

meaning in a few months. For instance, Bolshevism, that is, as the policy of the dominant party in Russia is still called by the outside world, is almost the opposite of what it was when it first came into power two and a half years ago. It is equally alien to our ideas and perhaps even more abhorrent, but not for the same reason. At first Bolshevism seemed indistinguishable from anarchy, where all law, order and compulsion were abolished, where individual liberty and decentralization were carried to the extreme, where every factory was run by its own workmen, each having an equal voice in its management, and where the voluntary coöperation of local groups would replace all political and commercial organization and regulation. Now Bolshevism has taken quite the opposite tack and is tending toward the most highly organized, completely centralized and strictly disciplined form of government that the world has seen; more rigidly regulated than the bureaucratic and militaristic Germany of the old régime, but without its efficiency.

This transformation has been effected thru the army. Attacked on all sides by counter-revolutionists supported by the Allies, the Bolsheviks were forced to devote all their energies to the organization of military forces. This task they accomplished with surprising success and have now an army said to number more than two million and manifesting better spirit and leadership than any it has encountered. Having defeated its foes on all fronts we might suppose that the army would be disbanded and that the soldiers, at least those whose term of conscription had expired, would disperse to engage in such work as they could find. But no. Trotzky, who had organized this vast military machine, was not willing to let go of it so he had himself transferred from the War Department to the Labor Department and took the army with him. In explaining this new policy before the Third Soviet Congress of Moscow on January 25 he said:

Many of the army have already accomplished their military task, but they cannot be demobilized. Now that they have been released from their military duties they must fight against economic ruin and against hunger; they must work to obtain

fuel; they must take part in clearing the lines of snow, in repairing roads, building sheds, grinding flour, etc.

We have already organized several of these armies and they have been allotted their tasks. One army must obtain foodstuffs for the workmen of the districts in which it was formerly stationed and it also will cut wood, cart it to the railways and repair engines; another army will help in the laying down of railway lines for the transport of crude oil. A third labor army will be used to repair agricultural implements and machines and, in the spring, will take part in the working of the land.

At the present time among the working masses there must be the greatest exactitude and conscientiousness, together with responsibility to the end, and there must be the utmost strictness and severity both in small and great matters. If the most advanced workmen of the country will devote their thoughts, all their will and all their revolutionary zeal to the cause of regulating economic affairs, then I have no doubt that we shall lead Russia on a new free road, to the confounding of our enemies and the joy of our friends.

Soviet Shop Management

CONSIDERABLE progress has since been made in carrying out this remarkable program, altho it is too early to say anything about its success. Every able-bodied man and woman from the age of sixteen are registered and are set at what is considered by the commissaries to be the most needed and profitable work they are capable of doing, wherever that may be. Instead of reducing the hours from eight to six or less as was at first proposed, the working day has been increased to ten hours and in many cases to eleven or more. In the Tambov steel works, for instance, the union voted to set aside a hundred men to aid in the repair of railroad rolling stock. They will work eleven hours a day, including Sundays, and the rest of the workmen agreed to lengthen their day sufficiently to keep up the regular output of the shop as high as before.

It was found that the system of equal pay by the hour resulted in inefficiency and slackness, so pay by the piece has been commonly substituted with extra pay for overtime at the rate of one and one-half for the first two hours and double pay thereafter. The men themselves hunt out slackers and sometimes treat them with brutality. Machinery has been speeded up and various labor saving devices introduced. No strikes are allowed. Absence without leave is punished as severely as in any army. Those who have short hours or light labor will sometimes volunteer to do extra work without pay in some factory short of hands. The billboards are covered with recruiting posters such as:

Without locomotives no transport; without transport, no bread but death. All able bodied men to the repair shops!

In order to encourage the spirit of emulation the military system of daily *communiqués* has been kept up and one can read of victories achieved on the factory front or the fuel front by this or that detachment of the "First Revolutionary Army of Labor." The orders of the day may mention a striking feat of bridge building by a company of carpenters or commend the economies of a certain factory. Workmen are not permitted to interfere with the business management of the establishment or its technical affairs. These are in the hands of experts appointed by the central office of the Soviet Government. Commerce is regulated so as to avoid the waste of competition and unnecessary transportation. For instance, each locality gets its fuel from the nearest mine or forest and its products from the nearest factory. All the schools are industrial so as to teach every child a trade.

The coöperative societies which a short time ago the Allies were proposing to use as a medium of trade with Russia have now been absorbed into the Soviet system by the simple device of issuing a decree that all citizens should be considered members of the coöperative societies. As Lenin says: "All Russia will become a united Russian Coöperative Society of Workers—that is our aim."

London Punch

Welsh Wizard: "I now proceed to cut this map into two parts and place them in the hat. After a suitable interval they will be found to have come together of their own accord—(aside)—at least let's hope so; I've never done this trick before"

If He Were President

(Continued from page 47)

or fixing uniform prices for meats, from curtailing the quantity of meats, from establishing and maintaining rules for the giving of credit to dealers in such meats; from imposing uniform charges for cartage and delivery, from monopoly, etc.

As to all that, the Attorney General said: "You remember, that there was an exception in that decree which opened up a pretty wide door. They were not permitted to do any of the things which amounted to a combination or agreement with respect to marketing their products unless it was necessary to prevent waste."

He explained, when I asked the benefits of the present injunction on the packers:

"If there is anything in free competition, and the freedom of all men to engage in business, which has a tendency to decrease prices, certainly this agreement with the packers does. When the packers opened the door to all these vast businesses, they made possible full and free competition to everyone who wants to go into those businesses free from the menace of the tremendous aggregation of power heretofore exercised by them. It is the old question of the relative efficiency of autocracy against the freedom of democracy."

Along with these complex and vital deeds, it will be remembered Mr. Palmer ended the coal strike with prowess the nation did not expect to be displayed in the Department of Justice.

Mr. Palmer gave the Senate Committee on Agriculture, when it frankly questioned whether he was "bargaining" with the defendants, this statement, which is characteristic.

"I do not care whether the defendants are rich or poor. Where the law gives to the Department of Justice the option of going into the criminal courts or the civil courts, the Attorney General ought to take the responsibility of deciding; and as long as I am Attorney General I will take this responsibility of deciding which of those processes is in the interest of the people and in the interest of justice. To show you that the laws of the Department of Justice are no respecter of persons, let me call your attention to the fact that when the coal strike broke, the Department of Justice had the option of going into the criminal court and arresting the miners for a violation of the Lever Act, which was a criminal statute, or it might have gone into the courts with a writ of injunction to restrain them from further continuing in that criminal act. Will you say that because these men were poor, because they were laboring men, that therefore I forgave them the crime when they violated the Lever Act and went into a civil court in order to get my remedy and have it properly carried out? And yet that is exactly what I did. I could have put these defendants in the coal case as defendants in criminal cases and probably have sent them to the penitentiary for a violation of

that law. But I did think that what we wanted to make was progress; what we wanted to accomplish was some good; what we wanted to do was to get results. And if these men, whether honestly mistaken or dishonestly mistaken in the violation of the law, could be brought to boot and get results for the people, that was the thing to do.

"In the case of the miners, when we got to the very point of contempt proceedings, we made no agreement with them. The Government of the United States makes no contract with defendants, but we told them what the law was, what the Government's position was, and that they could take it or leave it, and the miners surrendered to the Government, just as the packers have surrendered to the Government."

Now, when Mr. Palmer resigned as Alien Property Custodian, in most spectacular fashion, he had made the utmost of a seemingly unimportant office given him in response to a telegram to the President, offering his services at the beginning of the war. He uncovered nearly a billion dollars worth of enemy property in America and at the time of his resignation had exactly 32,296 separate trusts in his province—was head, as it were, of a huge trust company. In his dramatic and relentless utilization of his office, he stepped on the toes, by the way, of the interests of Senator Frelinghuysen of New Jersey. When he was made Attorney General by recess appointment of the President, Senator Frelinghuysen broke the traditions that the President shall have free right to choose his Cabinet, and that any man who served in Congress shall not have confirmation of his appointment to an office opposed. Mr. Palmer made short work of Senator Frelinghuysen and Senator Calder. His appointment was approved unanimously in committee, and promptly confirmed by the Senate. Meanwhile, this busy Quaker, from Stroudsburg, Pennsylvania, overhauled, in plan and personnel, the Department of Justice, which, with some eighty branch offices, is, no doubt the largest "law business" in the world.

Reorganizing the Department of Justice was a task in itself. Driving at the packers was another task in itself, requiring months of work. Grappling with the high cost of living another. Grappling with the coal miners another. Being legal adviser to the United States Government, including extensive activities in relation to the enforcement of prohibition, another. Withal, any trained organizer can see that he is a wise and powerful enough administrator to have done with detail. He never writes a brief, of course, which his predecessor, Mr. Gregory, frequently did. In short, he interpreted newly and effectively, the functions and acts of the Attorney General. The proof lies in the fact that he is said to have achieved more in one year as Attorney General than any predecessor ever achieved in four.

We know then that "President Palmer" would be a man of tremendous energy. It is a fact, certainly, that

"Mr." Palmer "kills" his secretaries, and works night regularly and does a vast deal of work while traveling, after locking himself in a Pullman compartment, where he is free from interruption. But, on the other hand, there is a distinction between enterprise and real achievement, you hear, and are left wondering how much of his achievement is enduring, and whether it is enduring enough to weigh heavily at the Democratic convention and thereafter. Probably so.

It is worth noting that the President and the present Attorney General have not been altogether congenial spirits in time past. He did his part in electing President Wilson, by holding, against bitter assault, all but two of the Pennsylvania delegation in line. The President offered to make him Secretary of War, which office was not exciting then, which office, you hear, the President was sure this Quaker would not accept. It is a long story, but interpreted at this juncture makes one doubt if "President" Palmer would, despite "Mr." Palmer's assertions at the "Donnybrook" Democratic dinner, carry on in the spirit of President Wilson.

Being a Quaker, he interpreted the war to be a kind of holy war. Being a Quaker, he has a great strength in his lifelong belief in the equality of men and women. He is on the honor rolls of all suffrage organizations and knows that women, as both the national chairmen and almost everyone agrees, may dominate the next campaign. In that respect the wisdom of Mr. Palmer's conclusiveness anent interpretation of prohibition is manifest; the women of the country made prohibition into an amendment, as well as their own enfranchisement into an amendment. When in the House of Representatives—where he served on Ways and Means, one of the most important committees—he was one of the sponsors for the well-intended Shafroth-Palmer suffrage measure, which gave way at last to the Susan B. Anthony amendment. Of late, too, he has added to his suffrage laurels, has gone to exceptional lengths to hasten ratification of the amendment.

Turning, now, to another large group vote, that of the farmers, he frankly admits that he is far more interested in production than in agriculture itself. Nevertheless, it may be conjectured, he would be canny enough to pick his subordinates skillfully and it follows that one cannot conceive him doing the vast deal that President Wilson has done for agriculture during the last seven years with so little recognition therefor as has been accorded the President.

As to labor, he has always been an understanding friend—which made his use of the injunction against the miners all the more interesting.

Delving under the outward signs, one divines in the Attorney General a forceful man of great "hitting ability"; and it is to be remembered that Colonel Roosevelt said that if you must hit, hit hard.

Washington, D. C.

The Measure of Progress

The progress of the past, as well as that of the future, is measured by criticism—for criticism exists only where there is faith in ability to improve.

We do not criticise an ox cart or condemn the tallow dip, for the simple reason that they are obsolete. During the reconstruction period through which our country is now passing, if the public does not criticise any public utility or other form of service, it is be-

cause there seems little hope for improvement.

The intricate mechanism of telephone service is, under the most favorable conditions, subject to criticism, for the reason that it is the most intimate of all personal services.

The accomplishment of the telephone in the past fixed the quality of service demanded today; a greater accomplishment in quality and scope of service will set new standards for the future.

Here Are Books—and Books

Socialism in the War

Red is a color of many shades and Socialism does not mean to one country what it does to another. *British Labor and the War*, by Paul U. Kellogg and Arthur Gleason, is characteristic alike in the story it tells and the manner in which it is told of the common-sense practicality which has won so many victories for British labor. The book is a very solid and matter-of-fact compilation of the debates at labor conferences, the statements of policy by Socialist leaders and the attitude of various factions toward the war, the party "truce," the Stockholm Conference, Mr. Gompers, economic boycott after the war and many other questions of similar order. It is almost impossible for anyone not directly acquainted with English life and politics to understand the powerful position of the Labor Party and the nature of its policies and leadership without the aid of such a study as this.

The Re-Making of a Mind, by Henry de Man, is the personal story of a young Belgian Socialist who served his country in the Great War both by actual fighting in the trenches and by diplomatic missions to Russia and America. Few books give so pleasant an impression of the author's personality; one feels that if Belgian Socialism can count many men so sane and kindly the future of the country will belong to the party. Belgian Socialism is, indeed, little more than British laborism; M. de Man confesses that "I would no more identify myself with the Socialist Party of America than

with the Russian Bolshevik." He is a strong admirer of President Wilson:

I had but two days of real happiness at the front. The first was that February day when I read President Wilson's address, formulating a constructive program to the end that from this war should arise universal democracy and the independence of nations. A lump came into my throat at the idea that henceforth I need no longer fear I was going to die for a miserable delusion.

One of the most attractive pages of the book describes the evening in 1915 when he discussed old days and old friendships in Germany with another Belgian soldier under the very fire of the enemy. Such a combination of unrelenting determination to overthrow the foe with complete freedom from all irrelevant prejudice raises the book morally a thousand heavens above ordinary pacifist or war propagandist literature.

Very different from the Socialism of Britain or Belgium is that of Germany. *German Social Democracy During the War*, by Edwyn Bevan, might well have been named "the history of a party with an uneasy conscience." In the incessant bickerings of the pro-war majority, led by such men as Scheidemann, Ebert and Noske, and the anti-war minority, including Haase, Bernstein, Liebknecht and Kautsky, we can discover not only the divisions which rent the party but the mental disquiet and smothered moral insurgency of each individual Socialist, divided between loyalty to internationalism and loyalty to a Kaiser-ridden Germany which could never be quite blended into one emotion. Mr.

Bevan does not carry the story to the revolution, but his pages bring out clearly the personality and war record of the men whom the revolution has placed in control of the destinies of the Fatherland.

Socialism at its worst is the burden of Ariadna Tyrkova-Williams' history of the first year of the Russian revolution *From Liberty to Brest-Litovsk*. The author is not without anti-Socialist bias; she disapproves not only of the Bolsheviks but of Kerensky and his followers. But the facts here recorded of the methods by which the Bolsheviks wrecked the war effort of Russia and made surrender inevitable, of the persecution of the Constitutional Democrats and the suppression of all civil and political liberties, of the violent suppression of the Constituent Assembly and the murder of some of its members after the Bolsheviks had long professed the convening of this body to be one of their chief political aims—all this, supported by numerous citations from the speeches and writings of Bolshevik leaders, will be most impressive to all who keep even an approximately open mind on the Russian question. *Siberia Today*, by Captain Frederick Moore, who served with the American army in Siberia, is an interesting journalistic account of the way in which Bolshevism spread over Siberia, helped alike, in the author's opinion, by the cunning of unscrupulous "Red" agents, the banditry of Semenov's Cossacks, the astounding ignorance and stupidity of the peasantry and the feeble and uncertain policy of the Allied and Associated Powers.

British Labor and the War, by Paul U. Kellogg and Arthur Gleason. Boni and Liveright. *The Re-Making of a Mind*, by Henry de Man. Scribner's Sons. *German Social Democracy During the War*, by Edwyn Bevan. Dutton & Co. *From Liberty to Brest-Litovsk*, by Ariadna Tyrkova-Williams. Macmillan Co. *Siberia Today*, by Capt. Frederick Moore. Appleton Co.

A First-Class Spy

They met in Africa, the English baronet and the German nobleman who had been at Eton and Oxford together as boys and who looked strangely alike. Each of them had dark things in his past which had caused him to leave his native land, and there in the jungle they told each other their stories. Then in the tropical night, one of them vanished. A few months later Sir Everard Dominey returned home after an absence of ten years. His friends found him greatly changed; he was a far stronger character and he was also a very rich man. Six months after he had come home the great war began. Was Sir Everard Dominey the Englishman or the German? You may guess as much as you like but not until the very end of *The Great Impersonation* will you know. E. Phillips Oppenheim knows how to make a mystery really mysterious. But even better than an atmosphere of mystery Mr. Oppenheim knows how to create an atmosphere of

UNKNOWN WATERS

An illustration from Rockwell Kent's "Wilderness," a journal of quiet adventure at Fox Island off the coast of Alaska, published by G. P. Putnam's Sons. As Dorothy Canfield says in a foreword to the book, "it carries one out of fussy complications to a long breath of relief in the fewness and permanence of things that count." It is easy to agree, too, with Mrs. Canfield's tribute to Rockwell Kent—"The man who can extract the whole quaint savor out of that magical, prosaic, humorous moment of human life, the first stretching yawn of the early morning, that man can make me believe that I, too, see the north wind running mightily athwart the sky"

opulent wealth. The Carlton Grill and the taxi cabs, the jewels, the ancestral portraits and the countless housemaids are old devices but the hero of *The Great Impersonation* makes one remark which in its suggestion of sheer magnificence and luxury outstrips anything else we know. Sir Everard has spent the first night after his return to England in his great country house. The next morning he addressed his valet: "Parkins, find out where the nearest bath-room is."

The Great Impersonation, by E. Phillips Oppenheim. Little, Brown & Co.

The Unsolved Problem Novel

This seems to be the age of the unsolved problem novel. In the days of the problem novel your author raised a question with the introduction of his heroine and then proceeded to give you an answer. You might or might not agree with him, you usually didn't, but at least he had ideas of his own, clear-cut and definite, to offer you. Now your author sets the problem, gets you thoroly interested in it, has his story revolving around it and then finds that it is insoluble, at least so far as he is concerned, so he decides to give it up and finish the story, but to do that without solving the problem requires a good deal of brute force and is apt to leave his book overweighted at the bows. This is probably due not so much to deterioration in authors as to the unprecedented number of insoluble problems surrounding us at the moment.

An excellent example of this new school of fiction is *Helena*, the last novel by Mrs. Humphry Ward, who died on March 24 after a long lifetime of literary achievement.

The problem of *Helena* is the after-the-war girl.

"Of course, they're awfully nice girls—most of them," said Mrs. Friend, with a little, puzzled wrinkling of the brow.

"Ripping! Done splendid war work and all that. But the older generation, now that things have begun again, are jolly well up a tree—how to fit the new to the old. I have some elderly relations at Oxbridge—a nice old professor and his wife. Not stick-in-the-muds at all. But they tell me the world there—where the young women are concerned—seems to be standing on its head. Well, as far as I can gather—I really know her very slightly—my little cousin Helena's in just the same sort of stage. All we people over forty might as well make our wills and have done with it. They'll soon discover some kind device for putting us out of the way. They've no use for us. And yet at the same time the fathers and mothers who brought them into the world still insist on clucking after them, or if they can't cluck themselves, making other people cluck."

This is the problem as seen by the handsome and distinguished middle-aged male guardian of the beautiful and headstrong Helena and the first clashes between their respective wills are distinctly interesting. Then, of course, she begins to fall in love with him and to grow more subdued and womanly, but whether this is Mrs. Ward's ultimate solution for the after-the-war mania we never discover for a melodramatic ex-wife of the guardian's inconveniently turns up to die in the

nearby rectory. Helena, who had not completely fallen in love with her guardian, has a temporarily broken heart and then decides, for no apparent reason, to marry an agreeable young man who has been kicking about since the beginning of the story. She provides wives for one or two of her other suitors and the guardian decides to take on a lady whom the author has spent quite a bit of previous time in informing us he would not marry and why. Possibly a happy, but certainly neither a satisfactory, a convincing nor a constructive conclusion.

Helena, by Mrs. Humphry Ward. Dodd, Mead & Co.

A Little Light

The spectacle of a popular novelist writing seriously and effectively of the Polish question is one of the interesting minor results of a war in which states learned to utilize the many and varied talents of their many and varied sons. If no one told you that *The White Eagle of Poland* was written by E. F. Benson you would not be apt to suspect it, for it is not a subject which can be made either amusing or entertaining and we usually expect him to be both. However, he treats a complex, serious subject clearly, vigorously and as simply as it can be treated. He has no doubts about the seriousness of the issue he is attacking:

Tho her (Germany's) armies might be beaten in the field, and tho she might be compelled to accept a peace without other annexations, coupled with the retrocession of Alsace and Lorraine to France, with the restoration of Belgium and the re-establishment of Serbia, if she could make an arrangement about Poland and the problems of her eastward expansion which are bound up with it satisfactory to her own statesmen, she would be entitled to consider herself at any rate undefeated. For the economic and political victory she would have won would fully compensate for a disaster to her arms, and in ten years or less she could be the aggressor in another war which would in all probability leave her mistress of the world.

The chief drawback about the book is that it is not strictly up to date, at least in the present sense of that phrase when the daily papers find it difficult not to be behind the times. It was written during the war, but the facts, political, historical and ethnographic, have not changed, merely been added to, and any one who wants to comprehend the situation and the probable results of that section of the treaty will find E. F. Benson's exposition helpful and clarifying:

On one point he is particularly insistent, the future relations between Poland and Russia:

It is vital and essential to the peace of the world, unless by the "peace of the world" we imply a complete Germanic domination of the world, that a united and independent Poland should voice the will of a free people, and that her cry of "Liberty" should be echoed by Russia. Anything that makes for discord between the new Russia and the new Poland is a nail driven into the coffin that contains the corpse of a free world.

We are still looking for light on Russia. Some day perhaps the citizens of the United States will give up in despair the reading of books on that obscure subject; now they hurl themselves hopefully on each new publication as it appears on the chance that it may shed a ray of light. One of the newest, Arthur Ransome's *Russia in 1919*, does shed a ray, quite a sizable ray, but unfortunately the publishers claim that it makes the entire gloomy prospect perfectly clear and the reader, expecting much, is disappointed. Mr. Ransome throws some highly illuminating sidelights, but he does not completely clarify the entire situation. He himself makes no bones about the lim-

The Labrador doctor

itations of his book. In the introduction he says:

My object has been narrowly limited. I have tried, by means of a bald record of conversations and things seen, to provide material for those who wish to know what is being done and thought in Moscow at the present time and demand something more to go upon than second-hand reports of wholly irrelevant atrocities committed by either one side or the other.

The book is a sort of diary of conversations with prominent men, scenes, some of them of historic importance, others merely significant of the trend of the times, observations on manners and customs under the soviet government. It is vivid, interesting and illuminating, tho it does not by any means tell the whole story.

The White Eagle of Poland, by E. F. Benson. G. H. Doran & Co. *Russia in 1919*, by Arthur Ransome. B. W. Huebsch.

Dr. Grenfell's Autobiography

"I have long been resisting the strong pressure from friends that would force me to risk having to live alongside my own autobiography." When a man prefaces his book like that and begins the first chapter with the remark, "To be born on the 28th of

February is not altogether without its compensations. It affords a subject of conversation when you are asked to put your name in birthday books," you can be pretty sure that he will not bore you by taking himself too seriously nor by expecting you to be interested in the minutest details of his existence simply because it is his existence. The *Labrador Doctor* has too interesting a story to tell to find it necessary to linger over trivial details. There are plenty of little incidents and anecdotes but they are there because they illustrate some point in the main theme. Dr. Grenfell tells his story in the same simple, friendly, interesting manner in which he talks. The story of his boyhood, of his hospital and slum work in London, of his work among the North Sea fishermen explain in large part why he was so successful with the *Labrador* work for which he is best known and an account of whose various phases fills the larger part of the book. The fact that he apparently looked on his hospital experience in France as something in the nature of a vacation gives a striking idea of the dangers and difficulties of his regular work. *The Labrador Doctor* is a unique and a picturesque character but his most outstanding qualities are his friendliness and his absolute sincerity.

A Labrador Doctor, by Wilfred Thomason Grenfell. Houghton Mifflin Co.

"Memory, a Jumble of Sketch and Etching"

When John Masfield writes about the sea it matters very little whether he does it in poetry or prose, you see it and smell it and taste the salt spray.

When we shoved off again for the ship the haze was so thick that we could not see three feet in front of us. . . . We were a long time rowing, for we did not know where we were, and the tide swept us down, and the bells and sirens puzzled us. Once we lay on our oars and rocked in a swell while some great steamer thrashed past hooting. The bells beat now near, now very far away. We were no longer human beings, but things much greater or much less. We were detached from life and time. We had become elemental, like that fog that hid us. I could have stayed in the boat there, rowing thru the haze, for all eternity. The grunt of the rowlocks, and the wash and drip of the oars, and the measured breath of the men behind me, keeping time to me, were a music passing harps. The strangeness and dimness of it all, and the halo round the coxswain's lantern, and the faces half seen, and the noises sounding from all sides impressed me like a revelation.

A Tarpaulin Muster is a collection of tales and sketches almost all of which have appeared in English or American periodicals. Some of them are full-fledged stories, some of them are mere pictures, flashes of vivid memory, scraps of old conversations, some of them have nothing to do with the sea, but they have all a beauty, a haunting poetic quality, a hint of something behind which leads you on.

A Tarpaulin Muster, by John Masfield. Dodd, Mead & Co.

A Long Way from Earth

(Continued from page 49)

different in the one case than in the other, and if anything somewhat less annoying. Seasick? Not a particle; but then it takes the Channel at its most cantankerous to disturb this particular traveler. Scared? Honestly, not a bit. Deafened? Well, there you have an interesting phenomenon. Of course there was noise, incessant, unescapable, peculiar. It seemed like a mighty wind beating on a great vessel of brass. But I had no real conception of its intensity till I tried an experiment. I addressed a remark in an ordinary tone to the surrounding air. But I heard nothing at all. Then I raised my voice. Still nothing. So I shouted, sang, almost shrieked. Still it was to my ears as tho nothing had happened. Plainly the roar of the engine was no pigmy's whisper. When I had reached Paris, it took my ears several hours to regain their normal tone. But it was curious that even after I had proved what an uproar that engine was making it did not sound really loud to my ears. Merely persistent and irritating.

For an hour we flew steadily over the rich and lovely country that is England. First the suburban towns, neat and geometric; then the open country, an orderly pattern of dark green hedges on a lighter background, with here and there a cluster of trees as setting for a country house with its outbuildings and trim gardens. About and between the square drawn fields wound the hedge marked roads. Straight across the landscape like a guide to our flight ran the bright trace of a railroad, an occasional toy train crawling along with its floating streamer of sooty black. There is no visual sense of speed in air travel, either for yourself or for the earthbound things below. The dashing express with its fifty miles an hour is a loitering worm. Your own speed of twice that rate has no reality; the earth half a mile below marches majestically backward like the stars in their courses on a summer's night.

At the half hour the town of Tonbridge Wells slipped smoothly into place beneath us, held the eye for a few minutes with a comfortable impression of uniformity, orderliness and warm color, and gave way to the Downs. In the Gilded Chamber of the House of Lords the Lord Chancellor sits in gown and wig on the crimson covered woolsack, symbol in the olden days of Britain's wealth and economic power. The Woolsack is the symbol, the Downs are the reality. They stretch out far as eye can see, even from our lofty eyrie, like a giant's game-board set for a new and intriguing kind of chess. The surface of the board is the fresh, perennial green of luscious grass, the dividing lines between the squares the green-black of hedgerows. Each square bears in one corner a round spot of mirrored light, each square is spotted with a pattern of tiny white stones. There is no field without its pattern, there are no two fields with patterns alike. Common

CHICAGO, ILL. NOIS

Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein,

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

The Book of the Hour

THE EASTERN QUESTION AND ITS SOLUTION

By Morris Jastrow, Jr., Ph D., LL.D.

Author of "The War and the Bagdad Railway"
12mo, Cloth, \$1.50 net

The war is not over, nor will it be until the Eastern Question is disposed of. This is the book of the hour on one of the most absorbing problems before the Allies at this time. Professor Jastrow is an authority on the ancient and modern East. His discussion of the question is timely. He shows the reason for the failure of the European policies, and gives an illuminating survey of the present situation.

KING JOHN

Edited by Horace Howard Furness, Jr., A.B., Litt.D.

A New Variorum Edition of the Works of William Shakespeare

Edited by Horace Howard Furness, Ph.D., LL.D., Litt.D. and Horace Howard Furness, Jr., A.B., Litt.D.

"The most scholarly edition of Shakespeare that the world has ever seen. It is not only the best edition, it is indispensable."—William Lyon Phelps, Lampson, Professor of English Literature, Yale University.

The value of this edition to lovers and students of Shakespeare, teachers and the theatrical profession is plainly evident. It should also grace the library of every editor, author, and cultured man or woman.

Royal octavo, gilt top, uncut edges, cloth, \$6.00 net per volume. Half morocco \$9.00 net per volume

THE BOOK OF COURAGE

By John T. Faris \$1.50 net

This is a dynamic book. It stirs one to action. The advice is practical. The many story illustrations apt and to the point. The author shows truly how courage is an essence of life itself.

THE ORIENT IN BIBLE TIMES

By Elihu Grant Illustrated, \$2.50 net

A fascinating volume, presenting a wonderful and historically accurate panorama of the Oriental world—its peoples, civilization and history during Bible times. This work is very complete and comprehensive.

THE WORKER AND HIS WORK

Compiled by Stella S. Center

12 illustrations, \$2.00 net

The romance, the wonder, the social significance of modern work is told in a series of remarkable stories by Arnold Bennett, Maurice Maeterlinck, Eden Phillpotts, Angela Morgan, H. G. Wells, Henry van Dyke and others. Illustrated with reproductions of famous paintings and sculptures.

THE TRUTH ABOUT SPIRITUALISM

By "Rita" (Mrs. Desmond Humphreys) \$1.50 net

The outcome of many years' of spiritualism, dealing especially with the higher aspects of the subject. A book which the author felt strangely "impelled to write."

The Report of the Seybert Commission on SPIRITUALISM

\$1.50 net

A re-issue of a volume which covers one of the most thorough investigations of the truth of spiritualism ever attempted. If you want the facts read this book.

sense tells me that those patterns are the source of the wealth in the British Woolsack, of the inevitable roast mutton on the British dinner table. But fancy, flying up here beneath the clouds, declines the solid fact, and sets itself to spinning out the rules by which the giants who laid out the board must play the Olympian game.

After the Downs the Channel. As we cross the sandy flats of Dungeness, the needle of the instrument at our left begins to swing. When the water is below us it has gone to 5000 feet. We have climbed for precaution's sake. If an engine failure were to come with the Channel underneath it would be wise to be high up so that we might plane down in safety to the nearer shore. The Channel lies flat and gray, just ruffled with a gentle wind. It is dotted with little boats, steamers and sailing vessels, and a string of barges in tow. Twenty minutes we fly above it, and we're over. We cross the coast of France midway between the smoky city of Boulogne and the sandy mouth of a little river, which the map thinks should be the Lys. Farther to the west a greater river can only be the Somme.

Now our course changes and we fly due south for Paris. The roar and beat of our engine has never changed its note a semi-tone. Our speed is constant; only our height drops down to 3000 feet again. It is a little cooler now. I tuck the blanket closer around my legs, and venture to shift and stretch a bit. At first I sat as though the whole balance of the plane depended on my individual motionlessness. I know all about canoes, and this seemed quite the same, until I knew it better. Then I realized that its balance was not so much a question of its center of gravity as of its speed and other elements. I might move about within the limits of my narrow compartment almost at will without the plane's resenting or even noticing it.

Above England and the Channel the air had been ideal for smooth flying. But now it waxed "bumpy"; and "bumpy" air is disconcerting to the uninitiated. Your plane is flying smoothly on an even keel when suddenly it strikes a thank-you-ma'am. It jolts over the obstruction to a quivering of its wings to regain its balance and slide down the other side. It is the bump and the succeeding tilting and shivering of the plane's wings that are disturbing; the slide down is actually pleasant. The disturbance of mind and nerves seems to come from the instinctive realization that there is nothing whatever that one can do, no matter what the plane may take it into its head to perform. Your pilot is as completely removed from you as if he were visiting the mountains of the moon. You are alone, helpless, irrevocably committed to a power which is the resultant of the strength and skill of your pilot and the lawless and capricious energies of the elements. There is none of the satisfaction and confidence that comes from pitting your own ability and your own will against the power of nature. That is the pilot's satisfaction. Yours is only

the pleasure of an adventure and a gamble—with rather high stakes. It is a long way to earth!

The pleasant land of France is as good to look upon as is England, but it is different. There are no hedges in France; one cannot tell from this high how the fields are divided. England is green; while France is all shades of brown and ochre and umber.

Two hours of steady flying, with never a hesitation of the engine and never more than a moderate bump-jiggle-slide of the plane itself, and a heavy smudge of smoke and mist appears lying low on the horizon. One suspects Paris. Another ten minutes and the needle of the altimeter begins to swing again, but this time down. We coast down the air in a great curve, and almost before the passenger is ready our wheels have touched the ground and we are taxiing clumsily across the flying field toward the little group standing before the hangar. My watch says 2.42—three minutes before the scheduled time. I clamber out, to be welcomed by the company's representative, have my little bag perfunctorily chalked by the customs officer, shake hands with my pilot, step into a motor and in twenty minutes get out at the familiar American Express Company's office in the Rue Scribe. So this is Paris. Just the same as ever, spacious, cheerful, comely, delightful. But never before three hours and a half from London!

Four o'clock finds me at ease in the office on the Place de la Concorde, and my business well under way. The letter and the telegram have been reconciled; the impossible has been done. My air-legs are still with me a bit, and my ears are veiled with a persistent murmur. But I would not go back to London any other way for twice the price of the ticket.

The next day but one the flight was repeated, in reverse. I was now a veteran air traveler. So quickly does the human mechanism adjust itself to new experiences. Doubtless the air was quite as "bumpy," but the nerves had relaxed their tension, and the pleasure was doubled in consequence. It was two hours and thirteen minutes from Le Bourget to Hounslow this time; and I marveled at the precision with which the schedule was maintained. It was the more remarkable for that we had come a longer way this time.

As we descended from the machine my pilot—he was a Colonial and therefore not afraid or reluctant to speak to a fellow being without the inspection of credentials—remarked cheerfully, "I got lost in the mist over there, and we went over to the war for a while. Did you see that village that had been wiped out by shell fire?" I had noticed it with interest. "That was why," he continued, "we struck the Channel so far to the west and had to go up the coast toward Boulogne. We made our schedule all right tho." I continued to marvel; but he waved it aside as a matter of course. Their orders were to keep to the schedule; so they did. That's the British of it, even when it's Colonial.

Nevertheless I expressed my surprise and admiration once more at dinner that evening to my friend who had made the miracle possible for me. But I found that it *was* a matter of course.

"We do keep to schedule," he said. "The London-Paris Air Express is never so late as the London-Paris train, except on the few days when the weather is so bad that you would think we ought not to try to make the flight at all. Look at this record of what we have done." I looked and my wonder grew. It read like this:

Flights scheduled	86
Flights accomplished	83
Prevented by weather	1
Interrupted by weather	1
Interrupted by mechanical defects.....	1
Number of miles flown.....	20,750

"And now," he said. "Consider this. In those six weeks there were only eight days that were officially reported as 'favorable for flying'; there were 18 days reported as 'unfavorable for flying'; and there were 10 days reported as 'unfit for flying.' If we had failed to make our trips on the 'unfit' days only, we should have missed 20 flights instead of two, as we actually did. If we had done the trick only on the 'favorable' days, we should have made only 16 flights. In point of fact, we made 83, or more than five times as many. Not half bad, is it?"

Since then, I have seen the complete record of the Air Express in the eleven weeks until it was discontinued for the winter. Here it is:

Flights scheduled	166
Flights accomplished	149
Prevented by weather	8
Interrupted by weather	6
Interrupted by mechanical defects..	3
Number of miles flown	39,000

There should be added to this:

Accidents	None
Injuries	None

This record of 90 per cent achievement and of 100 per cent safety is a splendid feather in the cap of the Aircraft Transport and Travel, Ltd., and of the parent company, the Aircraft Manufacturing Company, familiarly known as the Airco. But it is more than that. It is convincing proof that aerial travel is not only coming, but is here. I have tried it and I know. It is safe, certain, comfortable, delightful, and, above all, swift. It is true that it is not cheap. But that is only reasonable. As Mr. G. Holt Thomas, the founder and managing director of the Airco enterprises, has pointed out, we always pay for speed. We pay more for a taxi than for a trolley, more for the Twentieth Century Limited than for an ordinary express, more for a telegram than for a letter. We ought to pay more to go from London to Paris in three hours and a half than to go by boat and train in seven hours. There is little likelihood that, in the present state of the art, any of the normal flow of travel will be diverted from the usual routes. But taxicabs do not divert travel from the trolley lines and the subways. They supplement them. They provide something different for people who want it badly and are ready to pay for it. So it will be with the air, until—but who would dare to prophesy?

Lucky Boy

to have a food confection waiting after school. And to have it Puffed Wheat, which is whole wheat, steam exploded and made easy to digest.

Millions Now Enjoy Them

There are millions of lucky children now who revel in Puffed Grains. American homes are now enjoying some 750 million dishes of Puffed Grains in a year. And this is why:

These bubble grains have made whole grains enticing.

Prof. Anderson's process—steam explosion—has made digestion easy and complete.

Once they were breakfast dainties. Now they are all-day foods. Millions of dishes are served in milk for suppers and between meals.

Millions are mixed with fruit.

Millions are crisped and lightly buttered for hungry children to eat like peanuts—dry.

All Shot From Guns

Puffed Grains are shot from guns. By steam explosion they are puffed to eight times normal size.

Every food cell is thus blasted and fitted to digest. Every atom feeds.

These scientific foods are also the most delightful grain foods known. They are airy, flimsy, nut-like—flavorful food confections.

In every home such foods are needed several times a day.

**Puffed
Wheat**

**Puffed
Rice**

**Corn
Puffs**

Also Puffed Rice Pancake Flour

Pancakes with Nut Flavor

Now we have added Puffed Rice flour to a perfect pancake mixture. The Puffed Rice makes the pancakes fluffy and gives a nutty taste. You have never tasted pancakes so delicious. When you order Puffed Grains order Puffed Rice Pancake Flour as well. Simply add milk or water—the flour is self-raising—and hear what your people say.

TIMELY BOOKS

For Every Lover of the Child

THE NATURAL HISTORY OF THE CHILD

By DR. COURTENAY DUNN

Cloth, \$2.00 net

A treasure-house of childlore full of the most curious information culled from the annals of bygone days and interestingly compared with present-day conditions.

The Book of the Hour!

THE UNSOLVED RIDDLE OF SOCIAL JUSTICE

By STEPHEN LEACOCK, B.A., Ph.D.

Professor of Political Economy at McGill University, Montreal.

Cloth, \$1.25 net

"Mr. Leacock presents the case for orderly and evolutionary progress sanely and attractively, as against anything violent or revolutionary. Although his book is not humorous, humor has no doubt helped and been a first aid to sanity."—*New York Sun*.

Of Special Timeliness!

IRISH IMPRESSIONS

By GILBERT K. CHESTERTON

Author of "Heretics," "Orthodoxy," etc.

Cloth, \$1.50 net

"Something everybody ought to read. At his best, G. K. C., the critical essayist, can be in dead earnest and highly edifying on large and important subjects more agreeably and divertingly than anyone else we know. 'Irish Impressions' represents him at his best."—*New York Sun* (Editorial)

An International Success

THE SILENCE OF COLONEL BRAMBLE

By ANDRE MAUROIS

Cloth, \$1.25

This book has run through seventeen editions in the original French. It is an extremely amusing account of an English regimental Mess by a young French officer who was attached as an interpreter.

"We've Struck A Gusher!"

(Continued from page 45)

exaggerated. Most of the people have remained country people. They have built or are building better homes and barns, windmills, silos, buying better cattle and hogs and giving liberally to churches, schools and hospitals. The most important thing they are doing is building dams to conserve the storm waters of their streams so they will not suffer if they have another drouth. Before 1925 there will have been invested upwards of \$50,000,000 in small water conservation projects.

Those people are my friends and neighbors. I know them intimately and I know that most of the things that have been written about their waste of their money are either not true or give an inaccurate impression because the constructive side of the story is omitted entirely. What is actually happening is that a territory nearly as large as the state of New York is firmly launching itself upon the road to secure annual production of tremendous importance to the nation after having been an agricultural gamble since the first white man ever went there.

But I must not refuse to tell you some of the amusing things that happened. For instance, there was the queer old man with the constitutional grouch who had a small and extremely sandy farm near a large well that had opened a new pool. All the other lands around the well had been leased by the company which drilled the discovery well; leased long before drilling operations on the discovery well began. But the queer old man with the grouch would lease to no one. When the big well came in he was offered all sorts of fortunes for his puny forty acres, but he would listen to none of them. He announced that he would form a company of his own and drill his own well. That sounded good to the crooks as well as the honest men in that field and every one was ready to assist him in the enterprise. Omitting the details of their futile efforts, it may be stated briefly that no one could do business with him and all reluctantly gave up. Eventually he obtained sufficient credit to bring to his land a small drilling outfit that was not at all fitted for that field. It would drill a hole only about five hundred feet deep at the most, while the oil sands had been found at 3300 feet.

During this time the big company had drilled in several more deep wells, all of which were gushers, and the field was rapidly being developed. It was impossible to obtain sufficient steel tankage, so the big company made earthen tanks. The neighborhood came to be known as a "tank farm," which is the regular oil term. The little drilling outfit, under the constant scrutiny of the grouchy old man, reached a depth of twenty feet and struck oil. The well looked good for about ten barrels daily under a pump. The old man was entirely satisfied. He told the driller not to go another foot. Then the old man

installed a hand pump and went to work in person. The big oil company bought his oil. It also put down a shallow well near by, but got no oil. The geologist was called upon. A careful examination of the oil was made. It was of exactly the same quality as that coming from the deep well. A little more investigation resulted in closing a leak in a nearby earthen tank and the old man's well went dry. He is now trying to get credit to drill another.

Then there was the Hebrew junk dealer who came with the first rush of people to the new oil town of Ranger in Eastland County. He bought leases right and left until all his money was gone, and then he traded his second-hand automobile for one more lease. Two days later he rushed into the office of the lawyer who had been handling his papers and shouted: "We got to make that crook sued in the courts. He tells me six miles away is production and it's no production twelve miles away."

"All right, I'll draw up the papers," replied the lawyer. "What was the consideration in that transaction?"

"My automobile," shouted the junk dealer.

"Come in tomorrow and sign the petition," instructed the lawyer.

The following day the junk dealer stormed into the office, panting, and mopping his brow, altho it was a cold day.

"Have you made him sued?" he shouted.

"Of course not. You have not signed the petition," said the lawyer.

The junk dealer grabbed the petition and tore it up.

"Two miles away comes in a well," yelled the junk dealer. "It's all right. Don't say nothing. Don't do nothing." He rushed out of the office.

The following day the junk dealer was back again more excited than ever. He opened the conversation with a stream of exclamations mixed with profanity.

"We got to have a lawsuit, anyway," he shouted. "Look what he hands me." The junk dealer exhibited a paper which a deputy sheriff had just given him. The lawyer examined it carefully. The man who had traded his lease for the second-hand automobile was suing, alleging that the automobile was no good. He also had heard about the oil well two miles away.

Then there was the ranchman who constructed the most peculiar dam any of his hired help had ever heard of. First of all, he placed four pieces of twelve-inch casing in the bottom of the dam so the water could flow thru, and then he built a dam twelve feet high across a creek that flowed only a few times during the year. It was the mystery of the neighborhood. There was no other dam like unto it. When an extremely heavy rain fell about two months after the completion of the dam the ranchman spent the entire night.

on the dam. The hired men enjoyed the joke hugely. In the morning they went down to see how the boss liked it. The boss had just plugged the casing a few minutes before they arrived. The torrent following the rain was rapidly subsiding. Backed up against the twelve-foot dam was \$20,000 worth of oil which had flowed out of an earthen tank constructed by an oil company four miles above. The oil company had neglected to provide a way for the water to get out, but the ranchman had let it out thru the bottom of his dam. Under the law it was his oil and he sold it promptly.

When the state of Texas passed laws which put horse racing out of business it was a severe blow to C. W. Connollee, of Eastland, county seat of Eastland County. He did not care for the gambling, but he liked to see the horses go around the track. His people

Knott in Dallas News.

The modern Pied Piper

came from Kentucky, and the extensive lands he owns near Eastland were originally intended for grazing fine horses. And for that purpose they were used for many years.

Connollee's lands now raise more oil wells than horses. It would be difficult to determine just how wealthy Connollee is. At any rate, whenever Eastland issues some bonds or needs a few hundred thousand dollars cash on its corporate securities Connollee generally takes the entire issue to save time and expense. Wealth meant races to him, so he constructed one of the finest race tracks he could imagine. He bought fine horses. And now, when he is in the mood for it, he invites out a few friends, the jockeys trot out the horses, and Connollee sits on the fence and cheers his favorite.

Connollee also likes good theatres, so he decided to build one that will cost probably \$200,000. It will be within a block of the log house which the family used when the town was established. Eastland now has a population of about 10,000 and is growing rapidly, but before oil was struck in October of 1917 it boasted only 800 citizens. Connollee has built a magnificent hotel also and is planning another that will be far

better than the first. Within a block of the site of the original log house more than \$1,500,000 worth of buildings are under way, most of them his.

When the announcement was made about a year ago that Eastland oil men were going to build a railroad north and south, nearly every one smiled because the war was on and the Government had the railroads, and it didn't seem possible that a little community like that could undertake a project which would cost several millions. Agents of the trunk railroads whose lines ran near by looked into the matter and dropped it from consideration. A few months ago Eastland capital alone had been invested to the extent of a quarter of a million dollars, and the work of grading was progressing steadily. The railroad folks looked into the matter again and took an operating contract, guaranteeing the investors 6 per cent on their money. The investors were delighted. They had not expected such good luck. They simply wanted a railroad and proceeded to build one. They assumed it probably would not be any wonder as a money maker. But their steadfastness in sinking perfectly good dollars in an investment field about which the railroad companies had theories of their own was too much. The Texas and Pacific Railway Company signed up to operate the road and make it part of its own system.

New York City

Progress Follows the Fleet

(Continued from page 43)

work in aviation done by the navy when the N. C. planes first successfully crossed the Atlantic. Up to the present they have been the largest boats of their kind in existence, weighing loaded more than 30,000 pounds. The value of the multi-engine type with which the boats were equipped was demonstrated in the trans-Atlantic flight and the seaworthiness of the vessels was shown by the experiences of Commander Towers, when he landed and rode out a gale. European nations today are developing giant planes with power plants subdivided into different units, as were those of the N. C. planes, with the idea of improving the aeroplane's reliability.

Today the navy department is building a dirigible in this country for the purpose of beginning a rigid program and a contract has been made for a large dirigible in England, which will arrive in this country in the spring of 1921. These two vessels will be the American pioneers of their class. Their activities will be limited, however, by the lack of hangar facilities now existing, and unless Congress sees fit to extend these activities, the operations of these craft must be limited to areas on the east coast.

Both on the east and on the west Coast naval aviation has been requested to coöperate with fishing interests, with the idea that an observer in an aeroplane is well placed for observing schools of fish and it has been repeatedly shown that the interests of fish-

ermen have been advanced thru the agency of aircraft.

At San Diego it is reported that catches of sardines have been greatly increased thru the coöperation of aviation. On the east coast the station of Hampton Roads is coöperating with the fishermen there. Naturally this work is experimental only, and is not allowed to interfere with the regular operations of the air station.

The navy is frequently called upon to utilize its aircraft to search for vessels overdue or delayed in coastal voyages. Now that commercial flying is not uncommon in southern parts of the country, between Cuba and the Bahamas, naval aviation has several times lent assistance to travelers who have been put to inconvenience or endangered thru engine failure.

The navy has been requested to lend assistance in the northwest in patrolling the national forests in search of forest fires and in the Sacramento Valley for the purpose of observing rising waters during the flood season. Up to the present, however, the navy has not been able to give such assistance because of the shortage of funds and personnel.

This partial summary of the work of the navy department in time of peace would not be complete without some mention of the Experimental Model Basin at Washington, where private ship building companies have made free use of the navy's facilities for improving the shapes and lines of their vessels, and some mention of the Naval Experimental and Research Laboratory at Annapolis, which altho primarily for naval use, has given to the country much valuable information on engineering subjects generally.

No more valuable studies of scientific problems have ever been made in this country under Government auspices than those made prior to and during the war by the Naval Consulting Board, of which Thomas A. Edison was the chairman. This board still is in existence and may be called into the service of the Government at any time there arises a difficult problem in either the peace work or the war activities of the navy.

With the return of stable conditions thruout the world we shall be ready to take up again—and upon a larger scale—the works of exploration and discovery which in the past have been so large a part of the American navy's daily task. In the days to come American vessels will sail every sea, chart every river and the nation will see its flag floating above commerce laden ships in every harbor.

The new world will be no abiding place for men with eyes turned backward. Reactionaries in politics and in geography will be relegated to the museum and the new leaders will make Charles Wilkes and Matthew Cailbraith Perry and Matthew Fontaine Maury their examples as they go forth in search of new worlds to conquer . . . to conquer as Wilkes, Perry and Maury made their conquest. They will conquer by service.

Washington, D. C.

SHUMATE RAZOR

SMOOTH!

"YES! AND IT'S GUARANTEED TO KEEP MY FACE SMOOTH FOR LIFE"

SHUMATE RAZORS are so good that we guarantee them for life. Here's the reason: The blade is made from tungsten alloy steel, which takes a keener edge than any other steel can -- and holds it. You can use a SHUMATE for years without honing. The secret of this wonderful steel is ours alone, and we guard it jealously.

Written Guarantee with Each Razor

Buy a SHUMATE RAZOR and use it, not only a few times, but as long as you like. If you decide after an exacting trial, that you don't like it, we'll exchange it for a new one without a word.

Ever recline in a barber's chair and almost go to sleep as you experienced that delightful, soothing sensation when his razor swept your face clean? And have you said to yourself "I wish I had a razor that would perform like that"? A SHUMATE will do it and -- keep on doing it.

\$2. Send us \$2.00 and the SHUMATE Barber razor will be sent to you postpaid. If your beard is extra wiry, we recommend our \$3.00 SHUMATE RAZOR, specially ground for this purpose. In remitting, give us your dealer's name, and a chamois lined, rust-proof case will be included with your razor.

First aid in every household —Musterole

Cough, cough, cough. How it racks little Dorothy and passes on to mother and grandma and holds a croup danger for all the little ones!

Hurry, there, with the Musterole, that pure, white ointment that is better than a mustard plaster—and it will not bring a blister. Massage it gently over the chest and neck. Feel the tingle, then the cool delightfulness as Musterole searches down. It will penetrate, never fear. It will rout that old congestion clear away.

Musterole is a pure, white ointment made from oil of mustard and a few home simples! Musterole searches in under the skin down to the heart of the congestion. There it generates a peculiar congestion-dispersing heat. Yet this heat will not blister. On the contrary you feel a relieving sense of delightful coolness. Rub Musterole over the spot. And you get relief while you use it; for Musterole results usually follow immediately.

On no account fail to have a jar of Musterole handy. For coughs and colds and even the congestions of rheumatism or lumbago Musterole is wonderful. Many doctors and nurses recommend Musterole.

30c and 60c jars—\$2.50 hospital size.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government. Progress Follows the Fleet. By Josephus Daniels.

1. Make a list of the benefits conferred upon the country by the United States navy. Write one, well-formed, expressive sentence concerning every benefit that you name.
2. Write a story in which you present a character sketch of a person not in favor of the United States maintaining a large navy. Then tell of some event that brought home to him the fact that the navy confers priceless benefits upon the country.
3. Imagine that a prize has been offered for the best short article in answer to the question: "How does the United States navy help people who are far removed from the sea?" Write the article.

II. If He Were President: A. Mitchell Palmer. By Donald Wilhelm.

1. Give a short nomination speech in which you present Mr. Palmer as a suitable candidate for the Presidency of the United States.
2. Select from the article the point that seems to you the strongest one made in favor of Mr. Palmer. Develop the point in full as if it were a point in a long argumentative composition.
3. Draw from the article information concerning the way in which the writer prepared it. Explain how it is possible to apply his method of composition to your own work in composition.

III. A Long Way from Earth. By Harold Howland.

1. How much of the article serves as introduction? What does the writer accomplish in the introduction?
2. Show how the writer combines narration, description, and exposition without making any violent breaks in the course of the article.
3. What methods does the writer follow in order to make his descriptions clear?
4. Point out examples of simile and of metaphor in the article. Tell why the figures have been employed.
5. Draw from the article material to prove the proposition: "The airplane is now a satisfactory means of travel."
6. Write a short prophecy concerning the future use of the airplane.

IV. We've Struck a Gusher! By Chester T. Crowell.

1. Prove that, in some ways, Texas has duplicated the story of Aladdin's lamp.
2. Re-tell, orally, any of the anecdotes in the article.
3. Write an original humorous story in which you tell of the possible experiences of an imaginary person who rose suddenly from extreme poverty to extreme wealth, because of the finding of oil on his property.
4. Imagine that you owned some Texas land on which a "gusher" was struck. Write your own biography, as it might be if you were to become extremely wealthy.
5. Someone asks: "What is oil? How did it get into the ground? Why can't we find it anywhere?" Consult any good encyclopedia, and prepare a satisfactory talk in which you give clear answers to the questions.

V. The Emancipated Puritan. By Allen Campbell.

1. Explain why it is appropriate for the United States to celebrate the tercentenary of the Pilgrims.
2. Tell the story of John Milton's work for the Puritan cause.
3. Exactly what is Milton's "Areopagitica"? Name other examples of Milton's prose.
4. "We prefer rhetoric to cold logic." What does the statement mean? Is it true?
5. Explain the sentence: "We dodge the conclusion of a train of thought."
6. Explain the following expressions: Greenwich Village essayists; decadent poets; supercilious critics; philistine; mid-Victorian.

VI. Cultivating the Mob Mind in College. By Edwin E. Slosson.

1. What sort of government does Dr. Slosson believe is best for a school, or college, or country?
2. Draw from the article suggestions that will help you to write on the subject, "How My School Can Aid in Bringing About Good Government."
3. Explain in full the phrase, "The tyranny of the majority."

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Campaign—"If He Were President, A. Mitchell Palmer," "The South Dakota Primary," "Senator Borah Is Bitter," "Hoover Speaks Up."

1. Using the material in the article on Mr. Palmer write a platform of about five hundred words so as to bring out the views of the candidate on important current issues, foreign and domestic.
2. What is Mr. Palmer's solution for the high cost of living? What do you think of his remedies?
3. Compare Mr. Hoover and Mr. Palmer as administrators and men of business. What positions did each hold during the Great War?
4. Define "favorite," "favorite son" and "dark horse." Read Lord Bryce's description of the Presidential Convention in "The American Commonwealth."

II. The Conquest of the Air—"Progress Follows the Fleet," "A Long Way from Earth."

1. Summarize what Secretary Daniels tells of the development of naval aviation. For what reasons, do you suppose, does the Department of the Navy undertake the building of aircraft? How can an aerial fleet cooperate with a sea fleet in war?
2. Study the record of the London-Paris Air Express in the statistical summary at the end of Mr. Howland's article. What does it reveal as to the possibilities of aircraft for commercial purposes? Do you think that the airplane can compete effectively with the train and the ship in passenger traffic? In freight traffic? In mail transport? Give your reasons.
3. Reread Secretary Burleson's article in The Independent of April 3, 1920.

III. American Resources—"We've Struck a Gusher," "The State of the Union," "Coal Strike Called Off."

1. On an outline map of the United States show the distribution of natural resources and products indicated in Mr. Douglas's survey of the state of the Union.
2. Mention all the sources of power you can think of. Why are coal and oil at present the most important industrial fuels? In what states are they found? What possible substitutes can you suggest when the oil wells and coal mines give out?
3. Describe the effects of an oil boom on land values. If you were in the Texas legislature what laws would you propose to restrict land speculation or direct it into safe channels? Do you think the Single Tax a satisfactory remedy?
4. Give an account of the settlement of the coal crisis.

IV. Bolshevik Russia—"Industrial Conspiration in Russia," "Soviet Shop Management."

1. Describe the organization and direction of Russia's "labor army."
2. Compare the hours of labor prevailing in Russia with the standard set by the American labor unions.
3. What methods does the Russian Government use to stimulate increased production?

V. Political Intolerance in America—"Three Vicious Bills," "Cultivating the Mob Mind in Colleges," "Is Socialism Treason?"

1. Show the similarity between intolerant suppression of minorities on the college campus and the same phenomenon in a state legislature. Do you think that schools and colleges are giving adequate training in habits of personal independence and of respect for the rights of others?
2. How would you define "liberalism"? In what ways is the word misunderstood?
3. Do you think that membership in a revolutionary political party can disqualify an elected candidate from office? Are Socialists permitted to sit in European Parliaments?
4. What political liberties are guaranteed by the constitution of your State?

VI. The Problem of Mandates—"England and Belgium in Africa," "Wilson and the Turkish Problem."

1. What does the League of Nations Covenant have to say respecting the distribution of "mandates" and how does it define the mandatory system?
2. What is the policy of the "open door"?
3. Enumerate the points on which President Wilson differs from the European Allies with respect to the partition of Turkish territory.
4. What effect do you suppose the refusal of the United States to enter the League of Nations will have on American influence in the settlement of the Turkish question?

New Plays

Probably the funniest bridegroom ever seen on or off the stage is in *Mrs. Jimmie Thompson*, an entertaining comedy with a leap year motif (Princess Theater.)

The Blue Flame gives Theda Bara every opportunity to display her particular type of vampirism under circumstances that are frequently interesting, but never convincing (Plymouth Theater.)

Lasse is a modern musical comedy with the fresh flavor of an old Scotch ballad. We are grateful to the twentieth century for Dorothy Dickson's dancing and to the Victorians for the charm of the costumes and the tuneful lilt of the songs. (Nora Bayes Theater.)

Pebbles

He tore at the scented letter,
Blushed and then turned pale.
"The female of the species
Is more deadly in the mail."

—*Gargoyle*

The fellow who plays poker
Should take this fact to heart:
His "ante" and his "uncle"
Will not be far apart.

—*Boston Transcript*.

Flip: What is the difference between a trolley car and an orchestra?

Flip: I dunno.

Flip: A trolley is run by a motorman and an orchestra by a conductor.—*Froth*.

"Why did you tell him you had to go to the dressing room for some cold cream?" asked the chaperone.

"I had to do something to get the chap off my hands," answered the co-ed.—*The Seven*.

Sympathetic Parson—And how is your poor husband, Mrs. Jones?

Mrs. Jones—He suffers something awful with his foot, sir, and I know what it's like because I've had it in my eye.—*Blighly*.

"You don't see much of those old time courtly bows."

"No?"

"Now, my son's idea of saluting a lady is to shift his hat from the back of his head to the front."—*Pittsburgh Post*.

"You will need a trained nurse for your wife."

"Certainly, doctor. I'll attend to that right away," said the husband.

"Speaking as an old friend of the family, I can tell you how to hasten your wife's recovery."

"How?"

"Engage the prettiest nurse you can find and show her a little attention in the sick room. We'll have your wife on her feet in a jiffy."—*London Opinion*.

Remarkable Remarks

THEDA BARA—There are no vampires.

EVANGELINE BOOTH—There is no death.

CHARLES M. SCHWAB—Enemies don't pay.

SENATOR CURTIS—The more candidates the merrier.

QUEEN MARIE—I have several very smart crowns.

UNCLE JOE CANNON—A man has a right to run for president.

VIOLET LEROY—Most girls can talk volumes without sitting in a library.

EDUCATIONAL EXPERT LOUISE CONNOLLY—All the world tells their confidences to a fat woman.

FRANK B. GILBRETH—It should be realized that a person's true purchasing power is his producing power.

HUGH WALPOLE—The most marvelous novel in the world is Dostoevsky's "The Brothers Karamasov."

JOHN D. ROCKEFELLER, JR.—I keep busy because I realize that the devil has lots of work for idle hands.

DOROTHY DIX—If you don't tell your husband that you love him and admire him some other woman will.

EX-PREMIER CLEMENCEAU—I have always held that reptiles as well as human beings should keep their mouths shut.

H. W. GOSSARD—Do not think because you are of full proportions you must resort to cumbersome corset contrivances.

J. G. HUNEKER—The apples of the Spanish girl in the picture of Matisse are as blazing stars in a firmament of dead dogs.

NOVELIST BLASCO IBANEZ—Every American man has a mental picture of his wife standing behind the door with a rolling-pin.

HENRY COLLINS—A green hat over a white dress is quite charming, while a white hat over a green dress suggests the ludicrous.

GOVERNOR HENRY J. ALLEN—A man will stand up and fight for his own home, but he won't put up much of a fight for his boarding house.

WU TING FANG—The only two countries in the world where I should like to live are China and Ireland: they are the only two countries where the Irish do not rule.

ED. HOWE—The world's favorite bad man, John D. Rockefeller, has given another \$100,000,000 to the Rockefeller Foundation, devoted to the good of humanity.

Picture-power! Could you tell how Napoleon looked if you had never seen his likeness? That new plan or design of yours—can you by mere words get other people to visualize it? You can quickly and easily put pictures or designs in your letters, bulletins, instruction sheets, etc., if you use the *Mimeoscope*, a simple contrivance which tremendously extends the usefulness of the Mimeograph. With it drawings, pictures, electrical and mechanical diagrams, designs, maps, plans, forms, etc., are traced upon the Dermatyl stencil and speedily printed. No especial experience or skill required. Typewritten matter and drawings duplicated in one operation on the same sheet. No expensive plates, no type forms to set. Five thousand well-printed sheets an hour—and no time wasted in getting ready. Napoleon defeated the Austrians because, he said, they did not know the value of ten minutes. Here is an hour and a dollar saver. An idea well pictured is rarely forgotten. Booklet "E" tells you all about the Mimeoscope and the Mimeograph. A. B. Dick Company, Chicago—and New York.

"We Don't Want Nuthin' New"

A Suffragist's Interview with the Delaware Legislators

By Clara Wold

Illustrations By Lou Rogers

Representative Lloyd of Sussex led the fight in the House against woman suffrage

"Bull" McNab, Democrat, and political old-timer, is an anti-suffragist who "will never change"

THE quiet of Delaware has been rudely broken. Even the sedate pre-Revolutionary streets of Dover, the capital, have been upset with a sudden and unwelcome scurrying here and there of strange people.

Ancient trees that overshadow the village green, where Delaware's troops were reviewed before marching against the forces of King George, have been startled into a flutter of waving, chattering boughs. Around the green still stand the old brick houses of the 1770's; the whipping post grimly lifts itself beside the jail; the statehouse looks the same as ever it did, but there go in and out of its dignified colonial doorway—suffragists!

Many strange things have come to pass on and around the old green. There was a time when slaves were bought and sold there; there was a later time when King George was burned there in effigy; only the next day the old tavern, where muddy and weary riders were wont to find cheer in the name of King George, was decked out with a new signboard. A few strokes of the paint brush, and King George's head had vanished and in its place appeared the other George. Straightway King George's Inn became George's Tavern.

In all the years that have followed, the history of Delaware and of Dover has been enacted on or near this green. Delaware has a fine sense of pride in her traditions and has carefully guarded her ancient customs. For four generations she has watched the country on the outside change. New states have been added, even new ideas. But in Dover life continued much as it did in 1775. Around the green live the descendants of Delaware's most solid families. They sit in the same chairs. They sleep in the same beds. They grow gilliflowers and Sweet-Williams along the same brick paths.

The old whipping post of Dover can still be seen from the Senate windows

That was the life of Dover until the suffragists arrived three weeks ago.

They came to tell Delaware to give the vote to women. And Delaware refused to have anything to do with votes for women. For two weeks these women walked in and out of the statehouse, stopping Senators and Representatives, almost as tho they already had the vote. They told these men, "who certainly knew more about the affairs of Delaware than a pack of women could or ever would," what Delaware ought to do. They said that Delaware, the first state to sign the Federal constitution, was antiquated and slow.

Delaware women themselves began saying things about their own state. Suffragists, themselves, they reminded outsiders that the state of Delaware was thirty-third down on the list of states educationally.

As if that weren't bad enough, more women came to Dover, who said that women didn't want the vote at all.

It was all pretty difficult for Delaware, which really hadn't thought much about this woman suffrage question until a month ago. But Dover had to meet the situation and Dover met it with colors flying. Those who didn't want suffrage flaunted bright red roses for the anti's; those who did want it wore yellow daffodils and proudly walked to and from market. Bearded farmers, who came into town for the week's marketing, went forth decked with a red or a yellow flower, usually the former. School children took up the fight, according to the conversation that went on at home. Clerks in the stores vacillated for a time but eventually the storekeeper, his clerk and his errand boy came forth bravely in red or yellow. Even legislators, who had thought they would never listen to women, appeared one day with a red rose, the next day with a yellow daffodil.

The Republicans should have been ready to give their votes to the suffrage amendment, because the National Republican Committee had called upon them to do so. And yet from Sussex County, with ten representatives, all Republicans save one, not a favorable vote could be mustered. Delaware is a thoroly Republi-

Senator Price is the only Senate Democrat in favor of suffrage

or to Vermont, both Republican states with Republican governors. The Governor of Connecticut refuses to call a special session of the legislature, but suffragists claim that they have enough votes in both houses in that state to pass the amendment, and add that Connecticut is the one state that can have a special session if a majority of the legislature demands it.

The situation is tense for the Democrats and the Republicans, but in Delaware members of both parties refuse to become embroiled in any such controversy.

"Delaware has been able to take care of herself, so far," said one particularly stubborn legislator, "and I guess she can do what she thinks is right without women trooping in from everywhere else to tell us what to do."

Others briefly dispose of the matter with, "Delaware never had women voting and Delaware don't care to try nothing new now."

When the question of suffrage came to a vote in the House last week, it was introduced by the only pro-suffrage Democrat there, Mr. Hart. His was a short speech, but it was spoken with the conviction of a man who had been marked for years by his neighbors as "believin' in woman suffrage." When he had finished no one had anything to say either for or against the bill. Without debate, the amendment lost with twenty-two votes against and only nine for.

Anti-suffrage representatives of the state of Delaware and anti-suffragist women rejoiced mightily. They climbed onto the press table and cheered till their cries resounded thru all the rafters in the statehouse, "Delaware has been true to her traditions." Then

can state and as such the Democrats in both houses of the legislature seem to have decided to leave the responsibility of defeating or granting woman suffrage to the Republicans.

Ever since Washington, the thirty-fifth state, ratified the amendment, suffragists have pointed out to politicians that it is the thirty-sixth state to ratify that will win the glory of having at last got suffrage for women. Members of the National Woman's Party, which has always held the party in power responsible for any delay in suffrage, have reminded the Republican party that women will remember next November who gave the final vote for the amendment. If Delaware does not ratify and if Democratic North Carolina fails, then suffragists will take the amendment to Connecticut

Senator Ghormley defies the whole pack of woman suffragists to change a Delaware legislator's mind

Alfred I. Du Pont blossoms into a daffodil

brought to a vote prematurely as the other one was. Delaware was to be educated this time before the vote was taken.

Women from all parts of the state have written letters to representatives telling them that they had never supposed the amendment would fail to pass. Some men wired congratulations to the opposition; others wired wrathful criticism.

The one message that everyone in Delaware read and talked about was from Alfred I. Du Pont, one of the most prominent Republicans in the state. For a year Mr. Du Pont has kept out of politics. Before that he was a bitter opponent of another member of the family, T. Coleman Du Pont, also a Republican. For thirteen years these men have lined up on opposite sides in Republican affairs. When T. Coleman Du Pont announced that he was in favor of the suffrage amendment not one word was heard from Alfred I., who is said to control Sussex County and its nine Republican representatives. The days went by with T. Coleman Du Pont doing everything to get Republicans to vote for the amendment, which was defeated, with every Sussex man voting against it.

Then Alfred I. Du Pont announced his position on the question. There would be another vote on the suffrage bill. This time the bill would be put before the Senate and then the House. Alfred I. Du Pont thought Delaware ought to pass the amendment and he hoped that every representative from Sussex and from other parts of the state would vote for it.

Nine votes are needed in the House to pass the bill. There are nine good Republicans in Sussex. Mr. Du Pont trusts the bill will pass. The suffragists say they know it will pass.

Mr. Lyons, leader of the Republicans in the House for the amendment, says that Mr. Du Pont's interest "will help materially."

Representative "Bull" McNab, Democrat, stands squarely against suffrage.

"I will never change my vote on the amendment as long as I am in the legislature," he told me. "In the first [Continued on page 115

they went home. But on the morrow suffragists were still waiting at Dover for Delaware to pass the amendment. Delaware had not disposed of suffrage nor the suffragists. There they were talking about another bill that was before the Senate of Delaware calling for ratification of the suffrage amendment. That bill, they said, would not be

The genial Mr. Lyons is Republican House leader for suffrage

For Our Mutual Benefit

A Message from the Italian Government to the American People

By Guglielmo Marconi

AMONG all the unexpected and surprising results of the great war which ended a year ago, there is none more unexpected or more surprising than the disagreement between Italy and the United States on the subject of the Adriatic. It is a result which, because of my great admiration for the American people, and for American ideals, I regret deeply and sincerely.

I do not propose for one moment to enter into a discussion of the Adriatic controversy, but I do wish to place on record my firm opinion that no cause of disagreement between the two countries can ever become a durable or really important one. Too many of my countrymen have helped by their physical labor to spread the civilizing influence of roads and railways in the United States; too many of them have found a welcome in the great Western Republic and, above all, there are too many gravestones and crosses bearing Italian names in the American military cemeteries of France, for that to be the case. If a small cloud has arisen on the horizon of our friendship it is nothing but a cloud and, as such, it is destined to melt away. The help of America has been too valuable to us and too much appreciated by all that part of our population which counts, for us not to strive in every possible way to keep our mutual friendship and respect unsullied.

Unfortunately there has been in the past and there continues to exist a great lack of reciprocal knowledge between the two countries which must necessarily be harmful to Italo-American relationships. On the whole and speaking in a very general way this lack of knowledge has led the Italians while appreciating in the highest degree the great qualities of the American people, to ignore the faults which they possess in common with all truly great nations. And, on the other hand, this same lack of knowledge has led the Americans to lay more emphasis on our faults than on our qualities or our merits.

The cause of this is self-evident. The mass of the Italian people are only acquainted with the most superior and cultivated classes of Americans who visit Italy while the great mass of Italians who visit America and help to form American popular opinion re-

© Harris & Ewing

Probably few people would dispute the statement that the modern world owes one of its greatest debts of gratitude to Mr. Marconi for his invention of wireless telegraphy. It was in 1899 that the first wireless communication was established between France and England; since then there has hardly been a year in which some new Marconi invention has not bound the world closer together by improving the means of communication. Mr. Marconi was awarded the Nobel Prize for Physics in 1909, and he has received other honors too numerous to mention. Aside from his preeminence in world affairs his position as a Senator of Italy gives especial point to this official message on Italo-American relations

garding Italy and Italians belongs almost entirely to the ignorant and uncultivated classes. If ninety or ninety-five per cent of the Americans who visit Italy consisted of railway and dock laborers, push-cart vendors, and the smallest kind of shopkeepers I have no doubt that in the popular opinion of Italy, Americans would certainly not be regarded as they are. And, unfortunately, the great majority of Italians with whom the American people is acquainted belong to the almost entirely uneducated classes.

It is all the more necessary, therefore, that Americans should realize that Italy has produced for twenty centuries and still continues to produce a large number of men who would be preëminent, even in the United States, as great leaders of men, captains of industry, statesmen, university professors, scientific and literary men and artists, and when I say artists I do not mean merely actors, singers or musicians, but great creative minds whose work, in certain departments of art, is unapproachable in any other country in the world.

Putting aside for the moment these merely sentimental considerations, it should be self-evident that an increase in the commercial relations between Italy and the United States could only be of mutual benefit to the two countries.

From the American point of view and putting matters on the most utilitarian footing, Italy is a country which it will pay to help. In the first place Italy presents the almost unique spectacle of a country which, while possessing no appreciable amount of those two essentials of modern industry, coal and iron, has nevertheless managed to develop great industries such as those concerned with the manufacture of automobiles and electrical machinery. I think I do not err when I state that Italian automobiles were winning races all over the world quite a considerable time before the colossal development which has taken place of late years in the automobile industry in America. And, altho the statement may come as somewhat of a surprise to many people, I am certain I do not err when I say that some of the first turbines to be installed in the power houses at Niagara were manufactured by the Tosi brothers at Legnano, near [Continued on page 103]

Uncle Sam, Money Lender

A Message from the United States Government to the American People

By Eugene Myer, Jr.

Managing Director of the War Finance Corporation

UNDER an Act of Congress approved April 5, 1918, the War Finance Corporation was organized as a temporary and emergency agency to furnish financial assistance in the public interest to industries engaged in activities necessary or contributory to the prosecution of the war, to banks, bankers and trust companies that had aided or were aiding such industries, and to savings banks and building and loan associations when advances were deemed necessary or contributory to the prosecution of the war or important. By an amendment to the original act, provided March 3, 1919, the powers of the Corporation were enlarged so as to enable it to assist in promoting American commerce during the period of readjustment after the war by extending credits to banks that had financed exports or to exporters themselves when they were unable to obtain necessary credit facilities from banking institutions or from the public.

The capital stock of the Corporation is \$500,000,000; all of which has been subscribed by the United States of America. It is authorized to issue and have outstanding at any one time its bonds in an amount aggregating not more than six times its paid-in capital, or a total of \$3,000,000,000. Under this authorization only \$200,000,000 5 per cent. bonds have been issued, dated April 1, 1919, and maturing April 1, 1920. A substantial part of this issue has already been retired and the balance will be paid on maturity.

The Corporation is empowered to purchase, sell or deal in bonds and obligations of the United States issued or converted after September 24, 1917, and thru the exercise of this power it has been and is a large investor in Liberty Bonds, Victory Notes and Treasury Certificates, with funds not otherwise employed.

The Act provides that the primary function of the Corporation was to assist in financing banks which financed business operations necessary or contributory to the prosecution of the war, by enabling banks to pledge as collateral security with the Corporation for loans, the notes or other obligations of business so assisted. This war time plan permitted the financing for a period of not over five years of long term loans in a manner similar to that in which short term paper could be discounted at the Federal Reserve Banks. Direct advances of the funds of the Corporation to industries necessary or contributory to the prosecution of the war could be made only to a limited total amount and under exceptional circumstances.

BEFORE the end of the first year of the Corporation's operations, it developed that the financial situation of the banks and the unexpected termination of the war made extensive advances to banks, bankers, savings banks or building and loan associations unnecessary. The larger part of the advances made because of the war emergency were direct loans to industries resulting from exceptional considerations. And partly because of the early ending of the war, but even more because of the care of the Board in lending only in suitable cases and with proper security, even such direct advances were relatively small in amount, representing only a small fraction of the possible \$500,-

000,000 stock subscribed and \$3,000,000,000 bond issue which could have been available.

As of November 30, 1919, the date of the last annual report, the following total amounts had been advanced:

Banks, bankers and trust companies..	\$5,259,777.61
Railroads	204,794,520.00
Public Utilities	39,661,400.00
Warehouse receipts	25,211,500.00
Industrial corporations	23,795,343.75
Cattle loans	7,779,826.13

Total\$306,502,367.49

In this connection the following table of advances and repayments up to November 30, 1919, the date of the latest annual report of the Corporation, may be of interest:

Year ended November 30, 1918:

Advances	\$90,374,722.43
Repayments	56,160,321.60
Outstanding at close of year.....	34,214,400.83

Year ended November 30, 1919:

Advances	\$216,127,645.06
Repayments:	
Previous year's advances \$10,569,787.94	
Current year's advances 142,708,835.17	

	153,278,623.11
Net increase in loans.....	62,849,021.95
Outstanding at commencement of year.	34,214,400.83
Outstanding at close of year.....	97,063,422.78

SUBSTANTIAL assistance has been given to public utilities and to railroads, both of which represent industries which for reasons peculiar to themselves had been unable during the war period and immediately thereafter to draw upon the security market on a large scale. Considerable assistance was also given to the cattle raising industry in drouth-stricken territory. The real aid which the Corporation rendered during the emergency period was, however, far greater than indicated by the above figures for the reason that by furnishing its funds upon the condition that the applicant raise additional amounts from banks or other sources, it was often possible to secure assistance in excess of the actual amount of the War Finance Corporation advances. The usual method followed in furnishing financial assistance to public utilities was to participate in the financing by taking a part of loans and to stipulate that the remaining part be placed elsewhere. The same method was applied in its advances to railroads under Federal control, and thru the coöperation of the corporations and bankers, funds far in excess of its advances were obtained, in all probability far in excess of what could have been obtained had it not been for the element of confidence injected into the situation by the fact of the Corporation's participation.

When the signing of the armistice in November, 1918, brought the prosecution of active hostilities to a close, the Board of Directors decided that no industrial operations could any longer be considered necessary or contributory to the prosecution of the war and no further advances were made upon this ground, except insofar as they might have a vital part to play in the demobilization of our army, as in the case of the railroads under Federal control. Master Workshops of America

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprizes That Have Given the United States the Name of the Foremost Industrial Nation of the World

The first switchboard was capable of serving only five subscribers—today the world's largest single telephone switchboard, at the Chelsea Exchange in New York City, accommodates 10,000. When you realize that the common office variety of telephone has 224 highly developed and coördinated parts, you can understand why it has taken forty years of experience and research, and hundreds of thousands of dollars, to produce a satisfactory multiple switchboard with its outfit of accessories

Good Pointers for Your Own Business

In This Story of Western Electric, the Biggest Industry of Its Kind in the World

By Edward Earle Purinton

EVERY largest business of its kind should be thoroly studied by every business man of any kind. It is always a combination of improved methods of thinking, planning and working that makes a business the largest of its kind. The adoption of similar methods would make any business larger and better—larger because better.

As the world's largest telephone manufacturer and electrical jobber, the Western Electric Company holds a position unique in both size and character. The first telephone was not developed until 1876—today more than 10,000,000 people in the United States have telephones. The number of daily messages carried by the Bell System over telephone and telegraph wires exceeds 30,000,000; and the Western Electric Company makes or furnishes practically the whole supply of apparatus and equipment needed for this huge volume of business.

The telephone is a commercial and social necessity. Granted, but this fact does not explain the marvelous growth of the telephone system. The need was here before we knew it. Our descendants will regard as necessities of civilization many public utilities not now in existence. Only the early recognition of a great human need and the full response to it and supply of it changes the inarticulate need to a mechanical necessity.

Furthermore, it isn't how much we feel a need but how well it is met that creates a popular demand. The telephone reduces to minutes or seconds the hours or even days formerly required to complete a long-distance transaction; but you and I wouldn't use the kind of telephone, crude, slow, costly and unreliable, that existed before the Bell and Western Electric engineers tackled and solved the new, difficult problems of scien-

tific sound analysis, vibration test and voice transmission.

The first switchboard was capable of serving only five subscribers—the modern switchboard accommodates ten thousand. It took years of experiment and research, and hundreds of thousands of dollars, to produce the first satisfactory multiple switchboard. The plain-looking desk stand of your office telephone has 224 separate parts, developed and coördinated by staff groups of the best mechanical, chemical, industrial, electrical and manufacturing engineers available in America; the slightest variation in material or manufacture of any of these 224 parts might cripple your telephone, and must not be allowed to occur.

Did you ever see a picture of a human voice? Western Electric takes these photographs, and tabulates results, in order to adapt the telephone mechanisms to the sound waves entering the mouthpiece.

Hundreds of examples like these could be mentioned, illustrating our point, that the telephone, or any other great utility, grows universally popular not as it merely fills a universal need but as it first anticipates the need, then fills the need promptly, courteously, scientifically, cheaply and effectively. The whole Western Electric policy has been to think first how to serve the customer better; and to achieve this aim, large sums have been gladly spent, without regard to sales or profits.

I have studied closely many of the world's largest corporations. I find this truth common to them all: The heads of these houses are more anxious to do good than to make money; you can stir their active interest in a plan to benefit their patrons or employees, or the general public, when you could not even get a hearing on

a plan to fill the pockets of the owners with money; the real game of life to them is to pile up greater and better work for the joy of doing it.

A special service undertaken for its chief customer finally made the electrical supply business of Western Electric the world's largest. The Bell Company formerly purchased its vast stores of materials and supplies in the open market, its various branches often competing rather than coöperating, and with prices higher because purchases were made in small lots. By taking over the entire purchasing and distributing function, Western Electric not only reduced costs and guaranteed uniform deliveries for the Bell Company, but in the end produced great economies for its own organization, since the multiplication of buying power always means thrift for the buyer.

Acting as supply agent for the telephone companies, Western Electric is not only prepared to furnish equipment for every electrical need, but is organized to purchase every other kind of material and commodity, from soap to automobiles. Evolving first a system of specification, construction, standardization, inspection and coördination applying to its own products made for the telephone companies, Western Electric merely had to extend the principle and method to the selection and purchase of other equipment and supply materials.

Forty-five warehouses under Western Electric management hold today the stocks formerly carried by local telephone companies. These houses, located at central points thruout the United States, gather together the products of hundreds of factories, carry them in stock, and deliver them as wanted by the user.

THE relationship here outlined is unique, but has been pronounced by State and judicial commissions economically sound, as it has been proved by its originators financially profitable to both customer and dealer. The innovation has demonstrated the folly of the old idea that it is "good business" to grab all you can get and treat competitors like foes. And, further, it has marked out a new angle to the discussion about the superfluity of the middleman. A jobber is a middleman; Western Electric is a jobber, and only as a jobber and manufacturer combined can serve patrons to the best advantage. Should, then, the middleman be straightway abolished? Or should his method, perhaps his motive, be changed?

The President of the Western Electric offers an opinion. "Our products were made not primarily to sell, but to work continuously and with low maintenance cost. The record of a half century proves that this was fundamentally the right policy upon which to build."

When you put an altruistic motive into the heart of a manufacturer or dealer, and a scientific method into his head and hands, the customer will think not of the price but of the value of his product. It isn't high price, but low value, that a real man hates.

Uniform principles underlie all departments, whether planning, engineering, designing, purchasing, manufacturing, selling, legal, financial, or secretarial. One principle is that the doctrine of individual efficiency permeates the company from the operative in the factory to the salesman of the goods—a policy that puts

every man on his own feet, making him responsible for his own failure, and giving him credit for his own success. Another principle is that organization changes must represent a growth in the men of the company as well as its departments; for as fast as new men are capable of assuming new responsibilities, the company organization

The first instrument thru which speech sounds were transmitted electrically was not developed until 1875. To be sure this primitive phone reduced to minutes or seconds the hours previously required to complete a long-distance transaction; but you and I wouldn't use the kind of telephone, crude, slow, costly and unreliable, that existed before the Bell and Western Electric engineers solved the new problems involved

must be constructed so as to utilize their abilities.

Here the question "Why?" always precedes the question "How?" Small men, small concerns, neglect or reverse this order.

Perhaps the greatest amount of original work has been done by the engineering department, composed of several hundred highly trained chemists, physicists, and electricians, recruited from the graduating classes of the big universities and foremost technical schools. We mention some of their notable inventions and improvements of recent date, about which the public knows little or nothing.

The portable railway telephone, carried now by train crews for emergency calls, enables the victims of accident, stoppage or other mishap [*Continued on page 106*]

Altho the executive offices of the Western Electric Company are located in New York City, the factory occupies a broad space almost 1000 miles away, at Hawthorne, Illinois, just outside Chicago. Its buildings have floor space of 2,750,000 square feet

The World's Round Table

An Allegory

By the Rev. Charles M. Sheldon

Besides being pastor of the Central Congregational Church in Topeka, Kansas, Dr. Sheldon is the author of many books on religious subjects—among them two that attained the popularity of "best sellers": "What Would Jesus Do?" and "In His Steps"

Seated at the head of the Table, presiding, The World. Around the Table, Capital, Labor, Politics, The Press, The Pulpit, The Theater, The University, The Farm, Militarism, Society, Extravagance, Science, The Average Man, All Peoples. Standing behind the World, Jesus Christ, The Son of Man.

THE WORLD: We are met to discuss the present situation, and find, if we can, a remedy for the unrest, the hatred, the suffering, the wrong of the times. Also it will be in order to declare whether we are progressing, and if so, in what direction, for movement does not always mean upward. Let each one at the Table speak his mind freely and briefly, and discussion will follow.

CAPITAL: The remedy for the World trouble is more business. Production is the one essential. Sound finance, safe investments, large enterprise, but above all, production, production, production! The World needs material prosperity. Capital holds the key. Without money nothing can be done. It is true that the present is uncertain on account of tendencies in the industrial world looking towards coöperation and schemes of partnership. Capital is looking at these tendencies and movements with interested gaze, but withholding snap judgment of them. Meanwhile, the key word is production. Money is a magic word, and nothing can be done without it, but production, the servant of money, is at the present time the word to emphasize.

LABOR: Our rights is the key word. Shorter hours, better housing, coöperation and sharing in all industries. We are tired of producing. We have been producing for centuries, since the time of the pyramids. We want partnership. We do not care to produce unless we can share. Above all, our rights must be maintained.

POLITICS: The real remedy is found in more laws. Laws against strikes, against anarchy, against foreign entanglements, and World complications. Also party loyalty above mere sentiment or international interests. Let Europe take care of her own affairs. Why should America try to regulate the governments of any country but her own. Our hands are full. Above all, put the emphasis on more legislation. Legislate the world into good behavior.

THE PRESS: A variety of remedies is the remedy for the present situation. What will cure one person will kill another. Multiply the remedies to fit the different diseases of the World. There is no one remedy that will cure. We believe in progress, especially the kind that advertises. We also believe that the World as a whole is progressing upward. The printed page is several centuries ahead of the paleozoic. The scarcity of paper prevents us from enlarging on these things as we would wish, but the remedies are, as said, of a multiplied form. No one can announce a specific for all the ills that the World is heir to.

THE PULPIT: Religion is necessary. Sectarianism has become unpopular, but denominational war cries for rallying religious forces are still powerful. The church is moving on towards some new experiments, but no

one form of religious forms of life has yet been found. We are living in a transition period. Old things are passing. It looks as if the common trend of thought is towards a general consensus of belief in the power of the Gospel, but there is no one definition of it. The world is getting on upwards. People do not go to church as they used to, perhaps, but neither do they go to the saloon, as they used to.

THE THEATER: We are not in the reform business. The people need entertainment, and we are trying to give it to them. If sex problems and sensation tableaux are what the people want we stand ready to furnish the matter. We are after the money, and it does not pay to be too particular. We are often told by the critics that the stage and the film are great educational forces, and we believe it. How far the people are being influenced for the upward progress by what they are now getting is a question. We are frank to say we are not so much interested in that as in the money part of it.

THE UNIVERSITY: Teaching is the poorest paid of all professions next to the ministry. Our remedy for the World's troubles is more education, but at present the need of bigger salaries to pay the grocer is a bigger issue than reforming the universe.

THE FARM: People must eat in order to live, and the farmer holds the key to existence. Our remedy for the World's troubles is not a six hour day of work, but bigger pay for the food produced. We are going to sell out and move into town and spend the rest of our lives running around in our little car unless the World recognizes our basic importance to the life of mankind. We are the final word when it comes to living, and congresses and legislatures have not given us a fair deal.

MILITARISM: The Great War is over, but it is not safe to bank on any lasting peace. War is a thing so deep seated in human nature that there will always be war. The only safety for the nations is strong preparedness. Let us be ready for any emergency. We do not know when the fire will burst out again. Millions should be appropriated of the people's money to equip large armies and navies and store up vast material. No one can tell how soon we shall need them.

SOCIETY: On with the dance; let jazz be unconfined. "Jazz," by the way, has never been defined. We are proud to say we have found the definition. Jazz is mental, physical, and moral nervousness set to so-called music. The results of all the jazz will be seen in the next generation, and some of it can be seen while you wait. The important things of the World are dress, money to buy it, receptions, dinners, theaters, dances, and getting your name into the Sunday supplement. We don't pretend to offer a remedy for the World's unrest. We don't recognize any particular trouble anywhere. Life seems good to us.

EXTRAVAGANCE: Buy more and pay the price. What is the use of all this fuss about the high cost of living if you have the money? Champagne at \$20 a quart tastes better than at \$10. Give the merchant a chance. He has to live.

[Continued on page 112]

Why It Can't Be Done

By Franklin H. Giddings

Professor of Sociology and the History of Civilization at Columbia University

THE mail brings from Lincoln, Nebraska, but not from the pen of Lincoln's best known statesman, a letter of inquiry which reflects the mind of millions of men and women on the subject of human betterment.

The writer says, "I am only a boy. I have made no study of social reform. But the action I am pleading for seems so immediately necessary that I have felt justified, compelled to write you at once."

Thousands of presumptuous authors have stated the matter more bunglingly than this boy and have floundered in their own intellectual bog worse than he does. Nevertheless, our young friend is blind to two or three of the most obvious facts of life, and his fine moral enthusiasm will be wasted unless he has the good sense and the intellectual power to learn certain important things.

Here are his questions. "Why can't poverty be abolished? Why can't the state tear down the wretched dwellings of the poor and replace them by decent homes? Why can't industrial experts be sent to the countries which are industrially backward? Why can't a far better system of education be established? Why can't the church send her best clergymen to those who need them most? Why can't the slum dwellers all over the world be Christian in fact as well as in name? In short, why can't vigorous, thoro reform be carried out which will lift the poor of all the world to a far higher position?"

It would not be easy to set forth a more vital lot of questions in a more clean cut fashion. It is highly creditable to this wide awake lad that he has been able to formulate them so well. His belief that all these things might be done is proof of his moral earnestness. What a wonderful world we might have if they could be!

There are difficulties, he recognizes, but he thinks he sees how to overcome them. "Reformers must coöperate. This is far too important a subject to allow differences of opinion to interfere with the general result. And reform should begin at once."

Now just why can't all this be done? Why cannot poverty be made an end of? Why cannot everybody be well educated? Why cannot slum dwellers all over the world be made Christian in fact as well as in name?

THERE are three outstanding reasons, and many others not quite so obvious. Here are the three outstanding ones:

First, the enormous amount of money that it would cost to get these results, if they could be had by merely expending money, cannot be obtained by solicitation or taxation. The men and women that have money won't give enough of it to pay the bill, and the men and women who vote won't vote to raise the amount by taxation. And if all the young men and young women in the world who feel as warmly about it as our correspondent feels were to spend their entire lives in trying to persuade the owners of wealth and of votes to raise the required fund, they would not succeed in persuading 10 per cent of them, all told.

Second, if the persuading could be accomplished, that

would be only a beginning of the gigantic task. It would be necessary to go on generation after generation obtaining the revenues to carry on the work. Otherwise everything would sink back into the old ignorant and miserable way. It would be necessary to obtain this revenue in addition, let us remember, to the vast sums required year by year to keep the world as well clothed and fed as it is today, and to keep up the wherewithal of production, namely, mills, machinery, railways, steamships, and all the rest. And if the population of the earth is to go on increasing, as it probably will, the capital fund and the subsistence fund must both increase.

ALL this means that if we are to abolish poverty, educate and Christianize everybody, production must be increased. But this is precisely what the wage-earners and the slum populations of the world are doing their best today to prevent. They are trying to get a six-hour day and a five-day week and to spend a third or a half more of their time in non-production than they are spending that way now. Therefore our young reformers who would abolish poverty must not only persuade the possessors of wealth and of votes to make a beginning, but they must then persuade the world's producers to change their minds on the subject of the best employment of their time. This undertaking might require even more well spent lifetimes than undertaking number one.

Third, neither of these two requisites to the abolition of poverty and the instruction of all mankind could be achieved by haphazard effort by men and women working at cross purposes. This fact our correspondent perceives. Reformers, he says, must coöperate, and he adds, "This is far too important a subject to allow differences of opinion to interfere with the general result." Here, then, is a third job, and the biggest one of the three. The differences of opinion exist. There are almost as many different opinions as there are human beings. Who, then, is to harmonize them? How is the coöperation of reformers to be brought about?

Who will undertake this educational campaign and find the funds to carry it on? And what measure of success will presumably be attained?

If our young friend at Lincoln and fifty or sixty million alert minded persons besides will think about these three obstinate facts hard enough and long enough, they will in all probability conclude that it would be unwise to undertake too much at a time. Substantial progress has been made in the last million years or so in ameliorating the human lot, and since the fifteenth century the amelioration has gone on rather rapidly.

Poverty can be diminished. Education can be improved and extended. Whether slum dwellers or mansion dwellers can be made Christian in fact as well as in name remains to be seen. At any rate, a good deal that is worth while can be done on one condition, namely, that mankind is willing to go on learning and working instead of quitting, soldiering, picketing and throwing monkey-wrenches into the machinery.

We are all puzzling nowadays over the problems of reconstruction. Perhaps you will find some of your own questions answered here.

Undiscovered Candidates

By Hamilton Holt

WHEN the people of the United States come to choose from among themselves a President the two main considerations that sway their judgment are the candidate's ability and availability.

The ideal candidate is manifestly the man who is both able and available. Most people would admit that Messrs. Wilson, Taft, Hoover, Bryan, Hughes, McAdoo, Wood, Palmer, Johnson and Baker are of sufficient political distinction, probity and experience to discharge with credit the duties of Chief Magistrate. But whether any one of them except Herbert Hoover or possibly ex-Secretary McAdoo could be nominated, or if nominated elected, is a question upon which wise men may differ. There is no doubt but that all these eminent men have the ability, but have they the availability?

When the average party manager finds that all the known men of first-rate ability are for any reason unavailable, he usually turns to the known men of second-rate ability. This is where he makes his mistake. What he ought to do is to turn to the un-

known man of first-rate ability. For the second-rate known man can never become a first-rate man, whereas the first-rate unknown man will very soon become known.

Applying the foregoing observations to present candidates, I respectfully ask whether it would not be wise for the Republican convention, if it thought that Hoover, Taft, Hughes, Wood and Johnson were unavailable, to pass over such second-rate known men as Harding, Lowden, Poin-dexter, et al., and consider such first-rate but comparatively unknown men as Governor Coolidge of Massachusetts, Governor Allen of Kansas, or President Lowell of Harvard?

Would it not, also, be equally wise for the Democratic convention, if it thought that Hoover, Wilson, Bryan, Palmer, Baker, and McAdoo could not win, to forget, for instance, Speaker Clark, Vice-President Marshall, and Senator Owen, and hitch their wagon to such exceptionally gifted but politically unknown men as Ambassador Davis of London, Col. House, President Alderman of the University of Virginia, or Lieut. General Bullard?

What and Whom Do You Want to Vote For?

During the next few weeks the main issues of the campaign will be defined and the candidates nominated. The Independent will as formerly present both sides and all sides of the question at issue while at the same time its editors will express their own views.

But we want to give our readers an opportunity to express their views now while public opinion is in the formative stage and before the professional politicians have taken it into their hands to mold. We, therefore, ask our readers, any or all, to send us immediately a brief statement of their preferences for the coming election. Please answer these two questions:

What man would you like best to see nominated for President, and why?

What do you consider to be the most important issue before the American people, and what action on it do you favor?

We shall publish in an early issue as many of the replies as we can find room, rarely more than a hundred words from any one letter. So your chance of getting in the symposium depends upon your ability to put your ideas in compact and striking form.

Reactionary Liberals

By Thomas Steele

AS we all know crimes have been committed in the name of liberty. Many absurdities have also been covered by that name. In some minds there appears to be a subtle connection between liberalism and free verse or impressionist painting. Others define it as alcoholism. Some regard it as identical with Bolshevism, altho the Russians are at present on shorter rations of freedom than of any other commodity.

One of the strangest adventures of the noble concept of liberalism is its attempted monopoly by a small group of British and American journalists who opposed the participation of their countries in the Great War and now demand the destruction of the Great Treaty. In the days of Browning and Gladstone a liberal was a man who favored the unification of Poland and the dismemberment of the Habsburg Empire. In the era of Brailsford and Morel it seems to be defined as a man who objects to giving Poland anything and who refers to the overthrow of the Habsburgs as "the Balkanization of Central Europe." To Swinburne and Hugo it meant the French Republic against the Prussian monarchy. But during the war those who boasted most of their liberalism too often apologized for the crimes of Prussia and disparaged the republican institutions of France.

Liberals like President Wilson are now called reactionary because they gave their strength to the crusade against the autocracies of Prussia, Austria and Turkey. It is nothing to these critics that democratic republics such as

Poland, Finland and Czechoslovakia have replaced old tyrannies. It is nothing to them that France and Denmark have obtained their lost provinces amid the frantic enthusiasm of the majority who live there. It is nothing to them that the new European frontiers correspond to local desires more closely than at any previous time in history. It is nothing to them that special treaties have been negotiated to protect the rights of minorities in the new states, as they never were protected in the old. It is nothing to them that more plebiscites are to be taken to determine the will of the people than in all the centuries of the past. All this is "bourgeois imperialism," "reactionary nationalism" and the like. Republicanism is a delusion, universal suffrage a snare and self-determination the phrase of hypocrites.

This callousness to the claims of nationality when advanced by Italians, Serbs, Poles, Czechs, Rumanians or Finns is found in a strange alloy with extreme sensitiveness when the national rights of Germans, Magyars or Bulgarians are in question. It is an outrage that two or three million German Austrians should be ruled by the Czechs, but it was quite right that ten million Czechoslovaks should be ruled by the German Austrians. It is unpardonable that Italy should annex two hundred thousand German Tyrolese, but it was nothing to be excited about when Austria ruled three hundred thousand Italians in Tyrol alone, to make no mention of Trieste, Istria and other Austrian provinces. It is scandalous that Bulgaria

should lose Macedonia and Thrace, but a matter of course that Yugoslavs and Rumanians should have remained under Austrian and Magyar rule. It is unthinkable that Upper Silesia should be permitted to vote on the question of joining Poland, seeing that the Germans have almost a third of the population and one German ought to count for as much as two Poles.

Really the arguments of such British papers as *The Nation*, not to mention periodicals nearer home, seem to smack of Metternich rather than of Mazzini. This worship of the territorial *status quo* of 1914 is a strange innovation in liberalism. The revolutionists of 1848 would not have understood it; they had no qualms as to remapping Europe on a juster basis, and would have considered our present age of republics, plebiscites, resurrected nationalities and the League of Nations as a close approach to the millenium. They would not, we fear, have sympathized with the "liberal" indignation at the very idea of punishing a man who has been Kaiser, or with the demand that Germany pay little or nothing to ravaged France for the outrages committed on her soil.

The liberals are right in demanding a revision of the Treaty. It contains serious injustices, such as the denial of Austria's right to unite with Germany if she wishes. But let us not pour the baby out with the bath. With all their faults the Treaty with Germany and the other peace settlements at Paris have done more to extend the area of human liberty than any other acts in history.

Thirty-five, Thirty-six

IT is proving harder to obtain the thirty-sixth state for the equal suffrage amendment than any of the other thirty-five. But if there is either broad statesmanship or keen politics in the United States that thirty-sixth state will be discovered before next November.

The Shame of Albany

By Preston Slosson

THE New York Assembly has voted to exclude as unworthy of its membership the five Socialists chosen to that body by their constituents. It is indeed a grave charge to bring against anyone that he is unworthy of sitting in an Assembly with so little to its credit and so many black pages in its record. The frivolous inconsistency which the New York legislature has shown with respect to prohibition, the wild disorder of the hearings on rent legislation and on the activities of the Anti-Saloon League, the panic haste for passing revolutionary legislation restricting freedom of opinion contrasting with the reluctance to act when social welfare measures were in prospect, the avowed and shameless partizanship of every act and every word, place the lawmakers of New York on the lowest level of political honor possible to an American citizenship. If Socialists are truly unfit to partake of the foul atmosphere of Albany they must be worse than their most censorious foes contend.

Patriotic Americans had hoped that however our free institutions might be abused by greedy politicians they were at least safe from the *coup d'état*. We congratulated ourselves that we were not as Russia where classes could be disfranchised or parties wiped out of existence by the arbitrary decrees of a Czar or a Moscow Soviet. We knew that elections were sometimes bought; we did not believe that they could be openly stolen. The exclusion of the elected representatives of the people from office on the ground that they belonged to a radical political party breaks down the strongest bulwarks of political liberty and leaves no minority right secure. Some day the very men who in the arrogance of their power have denied civil liberty to Socialists may plead in vain for fair play before the bar of a Socialist Assembly and have the 1920 precedent quoted

against them. We who are not Socialists have as much at stake as anyone in the preservation of free elections.

Think what a chorus of mocking laughter will arise all over the world at the childish panic of the Albany politicians. The Assembly is alarmed at the presence of five Socialists, but the King of Italy keeps his nerve and temper when addressing a Parliament containing a Socialist group of more than 150. In France the Prime Minister is a former Socialist and the largest opposition party in the Chamber of Deputies is the Unified Socialist Party. M. Vandervelde, one of the most distinguished of European Socialists, was chosen as one of the three representatives of Belgium to the Paris Peace Conference. The President and the Prime Minister of Germany are both Socialists, and, even before the Great War, when Germany was the most reactionary of monarchies, the Socialists elected more than a hundred members of the Reichstag. Even the Kaiser would not have ventured to deny them seats. To make no mention of the Socialist Governments, such as Russia, Austria or the recent régime in Hungary, there are powerful Socialist parties in the legislative bodies of Denmark, Norway, Sweden, Finland, Poland, the Baltic States, Czechoslovakia, Switzerland, the Netherlands and nearly all other European countries great and small. Nowhere is conservative opinion frightened into denying the right of the Socialist Party to representation save in the country where the danger of revolution is least.

It is the foremost duty of the citizens of New York to elect a sane Legislature next November.

Glass Houses

PREMIER Lloyd George calls to the attention of his American friends that "Mr. De Valera is putting forth the same language as Mr. Jefferson Davis used." In return we would call to his attention that the Confederacy was financed by the sale of Confederate bonds in England and that Gladstone was the owner of some of them when he made his famous speech declaring that Jefferson Davis had created a nation. Those who live in glass houses should pull down the blinds.

Majorities by Bluff

By William Brand

THERE are three types of government: minority rule or oligarchy, majority rule or democracy, and rule by a minority which can convince the rest that it is the majority. Altho this third form of rule has no name and has not been recognized in the textbooks of political science, it is probably the most prevalent of all. It arises from two weaknesses of human nature, the indifference of most people to public questions and the desire to be on the winning side.

Every reform and every political boom is, of course started by the few. This minority, as it has a perfect right to do, immediately starts out to convert itself into a majority by carrying on what it calls a campaign of education and what its opponents call advertising or propaganda. If the minority can convince the majority by sheer argument we have pure democracy. But there is a tempting short cut. Why not convince the majority that it has already been convinced? It can be done.

The clever propagandist, instead of saying: "You should vote for Mr. Jones, who would make an ideal candidate," will frame his appeal thus: "Whatever we may think of the merits of Mr. Jones it cannot be denied that he is the popular candidate; there is an irresistible current of public opinion in his favor and we predict a landslide for him next November." If he is pushing a new book he will write a publisher's ad after this fashion: "Any one who has not read Jane Templeton's 'Her Zero Hour' is decidedly behind the times. How can you take an intelligent part in social

It just naturally grew without any cultivation! But perhaps "the flowers that bloom in the spring have nothing to do with the case"

Thomas in Detroit News

The spring try-out isn't all sunshine for the boys from the bush leagues

conversation if you are not familiar with the romance which is the rage of the season?" If he is launching a new hat from Paris he will not advertize it is something that ought to be worn but as something that is being worn. The indicative mood has often more commanding power than the imperative.

Bluff is not the same thing as falsehood because a bluff may come true. It is but a form of gambling in futures on the Fact Exchange. The propagandist who is booming Mr. Jones hopes that if there is not already a current of public opinion in his favor, the assertion that there is will create one. Few can resist the temptation to "get aboard the bandwagon," and most people assume that the bandwagon can be told by the noise it makes. Lord Northcliffe became a power in English politics by the discovery that the secret of journalistic power was to substitute "the people demand" for "we demand," even when advocating some measure of which not one man in a thousand had ever heard before. More than one American politician has made the same discovery with similar success.

Well, government by bluff is not the worst form of government. It is at least government by minorities of real convictions who cannot themselves be bluffed. The timid politician and the docile voter will to the end of time, and under any political forms, do the will of courageous minorities who can act like majorities. It is not until people become indifferent to "popularity" that popular government will be possible, for then men will vote their own convictions instead of what they guess (perhaps quite incorrectly) to be their neighbors' convictions. The citizen who wants whatever he is told that he wants, who wears "what the gentleman will wear," who refrains from doing what "isn't done," who wants to be part of every "landslide," "stampede," and "tidal wave," may think that he is surrendering to irresistible majorities, but the chances are that he is surrendering, and by his example inducing others to surrender, to minorities. Many a company on the battlefield has surrendered to a surrounding regiment, only to find out when it was too late that the "regiment" consisted of a dozen men with hand grenades, loud voices, a determined manner and ability to act a lie without blushing.

One Vacant Chair

NOW that Venezuela has adhered to the League of Nations there remains only one country in the whole world of those invited to join the League which has rejected the invitation. We give our readers three guesses as to which this is.

Protestantism in the New Age

By Shailer Mathews

CHRISTIANITY appropriates the creative efficiency of its day. An imperial church saved the best in the Roman Empire, national churches sprang up to give moral vigor to the new nations of Europe, denominations separating from state churches began the struggle for rights that inspired early democracy. In like manner today's fellowship of denominations reproduces the recent tendency of democracy. Democracy is learning that duties are superior to rights. Protestantism is responding to this new world-spirit.

Church life in the United States reflects political history. In their early days the colonies were rivals; later they were confederates refusing hearty coöperation; then, as they faced common danger and a common anarchy, they federated and became a nation. Denominations are passing thru a similar development. At first rivals, they are becoming confederates. The Federal Council of Churches of Christ in America, the Interchurch World Movement of North America, not to mention other organizations, express

this new spirit. Denominations are ceasing to be belligerently competitive and are becoming coöperatively competitive. Therein is new efficiency.

There are those who grow impatient with such progress. They want confederation to yield to federalism and overhead authority. But at this point a good many of us hesitate. The logic of experience is not always the logic of ideas. The analogy between the church and state in Protestantism weakens as it draws near delegated authority. An overhead authority in Protestantism sounds logical, but history is generally behind a logical schedule, if indeed it does sometimes make illogical detours. It is hard to make programs walk.

Yet whatever form coöperative denominationalism may take, we are learning daily one lesson of democracy: the way to get together is to work together. It is futile to try to standardize theologies in a democratic world. It is even more futile to try to find some theological minimum which will be unobjectionable to everybody. Minimums do not breed enthusiasm. What denominations can do and are doing with ever increased efficiency is to undertake common tasks coöperatively.

Christian bodies rejecting this solidarity in Christian endeavor, we believe, are more apparent than permanent exceptions. Strong churchmen still believe that they have a supreme duty to propagate their own beliefs and practises. The Southern Baptists hold to a doctrine of sovereign denominational rights, and the Episcopalians are working for the reunion of churches in a single Church. Yet these bodies coöperate when ecclesiastical prerogatives are not involved. The Episcopalians furthermore are deeply concerned in furthering a World Conference on Faith and Order which seeks the reunion of all Christendom.

Nor is political experience the only source of the new efficiency. A coöperating Protestantism is talking about contributions as well as concessions. It is raising fabulous sums of money by concentrating economic efficiency to the service of humanity. Into its ranks have entered the advertiser, the publicity man, the photographer, the moving picture expert, the promoter, and the salesman. All the technic of business is at its disposal.

But Protestantism is in the business of giving rather than making money. It is not raising endowments to make the church work of tomorrow less toilsome. It does not consecrate wealth to the support of religious orders and houses. It promises future generations no relief from duty. Every dollar it raises challenges and compels generosity in the future. Schools and colleges, hospitals and missions it will make efficient rather than self-supporting. It is building tasks for the future that are the hope of a better day to come.

The development of this new efficiency among Protestant bodies—to use a much over-used word—is epoch-making. Never before has it been in evidence. It is born of the new spirit that is making the new age. To speak of the Church as moribund is ludicrous. Christians have come to see that Jesus is more than doctrines, however precious they may be; that service is more than statistics, that human needs are more important than theological regularity. The modern churchman is discovering that his religion is more than a philosophy or a credulity. Our new Protestantism is giving efficiency to an attitude of mind like that of Jesus and practises a brotherliness born of faith in God's fatherliness.

In the light of the vast undertaking of this coöperative Protestantism words like tolerance and liberty, which marked the idealism of a generation ago, seem tame. Competition in sacrifice, coöperation in service, a World Saviour and a world brotherhood dominate the vocabulary of our new Protestantism. They summarize the Christians' challenge to class consciousness and class hatred. They are a Christian democracy's moral equivalent of war.

The Story of the Week

The Irish Crisis

WHEN the Home Rule bill passed Parliament before the war the Ulsterites covenanted together to resist its enforcement. Under the leadership of Sir Edward Carson they organized a provisional government and trained a force of Irish Volunteers. Germany provided them with munitions and offered aid in case of a conflict with the British army. On April 24, 1914, 40,000 Mauser rifles and 3,500,000 rounds of ammunition from Germany were landed at Larne, County Antrim, and at Bangor and Donaghadee, County Down. The British Government was not able to get hold of these arms even when they were most urgently needed during the war and they are said to be still hidden somewhere in Ulster ready for use any time. Only a few months ago Sir Edward Carson threatened to call out the Ulster Volunteers if any attempt were made to put into effect the Home Rule Act which has for six years been upon the statute books.

On the outbreak of the war the Home Rule Act was suspended until it should end and Sir Edward Carson was taken into the coalition cabinet. The Home Rulers, seeing the war prolonged indefinitely and their worst enemy becoming more powerful in the Government, gradually gave up all hope that the Act of 1914 would ever be put into effect, and so they turned from the political tactics of the Nationalist Party to the violent methods of the Sinn Fein. Four years ago at Easter time a republican rebellion broke out in Dublin but, failing to receive the expected aid from Germany, was promptly crushed. But the fires of revolution burned all the brighter for this suppression. The Sinn Feiners who were executed or imprisoned for treason were regarded as martyrs. The British Government found it impossible to extend conscription to Ireland in the darkest days of the war and on the contrary were obliged to keep a large garrison of troops there to prevent the island from seceding.

The British authorities feared that Easter would be the occasion of another outbreak like that of four years ago on the same date and they took all possible precautions. All of the large towns were patrolled by armored automobiles and surrounded by soldiers who narrowly inspected all persons and vehicles entering, in particular probing loads of hay for concealed weapons.

British warships skirted the coasts to prevent landing arms from America. The ringleaders were arrested and deported in advance and the Sinn Fein headquarters were raided.

But the disaffection suppressed in one direction found an outlet in others. Incendiarism took the place of assassination. There was no attempt at a republican rising and there were few murders at Easter. But systematic attacks were made upon the police barracks and huts and upon

the tax collectors' offices, and upon Protestant churches and schools. During the week end 157 police buildings, mostly empty, were burned down or blown up, involving a loss of \$250,000. Twenty-two income tax stations were raided by the republican guards and their records destroyed or taken away. At Milltown the Protestant schoolhouse was burned and at Glin St. Paul's Protestant Church was entered and the stained glass windows and organ smashed. The telephone and telegraph wires in many places were all cut so the police and firemen could not be called out. The value of the public property destroyed in the Easter disturbances is estimated at \$1,500,000; all of which loss will fall upon the Irish taxpayers. Demonstrations were not confined to Ireland, for in Washington on Good Friday a number of women picketed the British Embassy to protest against "the crucifixion of Ireland."

The New Home Rule Bill

WHEN Premier Lloyd George on December 22 first proposed his substitute bill for the Home Rule Act of 1914 it was violently attacked from all quarters. Ex-Premier Asquith, Liberal and Home Ruler, called it "a most fantastic and impracticable scheme and the greatest travesty of self-government ever offered a nation." The new Irish bill aims to conciliate both the Ulsterites who demand exclusion from the Irish Government in which they would be a minority and the Sinn Feiners and Nationalists who demand a united Ireland. It provides for setting up two separate Parliaments but with a view to their ultimate voluntary union. The North of Ireland Parliament will consist of 52 members and will control the Ulster counties of Antrim, Armagh, Down, Fermanagh,

Londonderry and Tyrone and the boroughs of Belfast and Londonderry. The South of Ireland Parliament will consist of 128 members and will control the rest of Ireland. The North will have twelve representatives in the Imperial Parliament and the South thirty.

As a bond of union between the two sections and a means of uniting later there is to be established a common Council for Ireland composed of twenty members from each section but the Council will have only such powers as are delegated to it by both Parliaments. The two Parliaments can unite at any time they like into a single Parliament, which will then, according to the bill, have almost unlimited powers of self-government.

Premier Lloyd George in introducing the bill admitted that it would not satisfy all parties or any party but said that no bill could. He said that the right of self-determination was not unlimited and he referred to America as an example:

I want to say this to our American friends: Mr. De Valera is putting forth the same claim in exactly the same language as Mr. Jefferson Davis used, and the ancestors of some of the men who voted for that motion in the Senate the other day fought to the death against conceding to the Southern States of America the very demand their descendants are supporting for Ireland. The acceptance of that demand we will never concede. It is a demand, which, if persisted in, will lead to exactly the same measures of repression as in the Southern States of America. We claim nothing more than the United States claimed for themselves, and we will stand no less.

Upon the vote depended not only the fate of Ireland but also the future career of Lloyd George. He is supposed to be planning to start a new party by drawing from the Liberal, Unionist and Labor parties those who have stood by his coalition Government. The Unionist party, which absorbed the Conservative, derives its very name from its opposition to Irish Home Rule and if this issue is eliminated it would lose its reason for existence. The Labor party, altho growing in strength, is hardly yet ready to assume the responsibility of the government of the empire since its attention has until recently been confined to industrial problems. The old Liberal party is quite broken up since its main principle, free trade, has been discarded and the war has turned the current of opinion in the opposite direction. Its former leader, Mr. Asquith, has succeeded at last in getting back into Parliament and led the opposition to Lloyd George on the Irish bill, but only twenty Liberals followed him into the lobby when it came to a vote. Of the Laborites, forty-four out of the sixty-four voted against the bill. Only twenty-three of the Unionists led by Lord Robert Cecil opposed the Premier. Sir Edward Carson, speaking for Ulster, accepted the bill, altho with reluctance, as an improvement on that of 1914. He laid the blame for the numerous murders upon "ill conditioned Americans" and said that six agents of the Clan-na-Gael had recently been sent over from New York to assassinate him.

On the second reading the new Home Rule bill was carried in the House of Commons by a vote of 348, a great personal triumph for Lloyd George and a proof that the English people are willing to make large concessions toward Irish self-government. It remains to be seen whether the Sinn Feiners and republicans will accept the bill and take office under it or pursue the tactics of passive resistance or violent opposition.

As an indication of his intention to pursue more moderate methods of administration Premier Lloyd George has removed Ian Macpherson from the post of Chief Secretary for Ireland and has put in his place Sir Hamar Greenwood, Under Secretary for Home Affairs. He is a Canadian and distinguished for his tactfulness.

French Occupy Frankfort

WITHOUT authorization from the League of Nations and in spite of the disapproval of her Allies, France has sent her troops over the Rhine and occupied Frankfort and Darmstadt as well as three other cities. In the early morning of April 6, the anniversary of the day America entered the war in 1917, the Moroccan rifles, preceded by tanks, marched out of Mayence in the rain and dark, and when the Germans in these cities awoke they found the French flag flying from the town hall and Senegalese soldiers posted on all the main streets. Proclamations on the walls signed by General Degoutte gave warning that no public meetings would be permitted. There was no opposition to the advance of the French. The German troops withdrew before their entrance, and the Security Police civilian guard, to the number of 600, were arrested by the French and imprisoned in barracks, with a machine gun pointing toward the door.

The French officers have orders to shoot the populace if any show resistance or delay in obeying their orders. On the day after the occupation a crowd collected in front of the French headquarters at the Imperial Hotel in Frankfort and jeered at the negro guards. Unable to stand these insults longer the troops opened fire on the crowd with machine guns and automatic rifles, killing seven—three men, three women and a boy.

The German Government has filed a formal complaint with the League of Nations, charging France with violence and aggression in seizing peaceable cities on her own initiative and contrary to the Covenant.

The reason given by the French for their action is that the Germans have violated the treaty by sending troops into the Ruhr region to put down the Communists. The treaty stipulates that the Germans shall not have more than 20,000 troops in the neutral zone fifty kilometers (31 miles) wide lying east of the Rhine, and that even these troops shall be withdrawn before April 10. The German Government tried to take advantage of the brief interval before that date to suppress the rebellion in the Ruhr by rushing in the Reichswehr (National Guard), but claims that this force consists of twenty-six battalions of infantry, thirteen squadrons of cavalry, and nineteen batteries of artillery, making a total of not more than 14,000 men and therefore within the limit allowed. The French, on the contrary, assert that the Germans have 40,000 troops on the Ruhr, and, having thus violated the treaty, have laid themselves liable to the penalties provided for its violation. The British, who hold Cologne and so are nearest to the disturbed district, are not certain whether the German forces exceed the specified numbers, and they are inclined to view the action of General Foch as a manifestation of that militarism which President Wilson has said is now dominant in France. The cities occupied by the French are about 250 miles south of the scene of the insurrection. The Americans who hold Coblenz, in between the British and French stations on the Rhine, have refused to take part in the movement, altho the United States is the only country still at war with Germany. Meantime the German troops are rapidly quelling the Ruhr insurrection and have driven the Communists out of Essen, which was their stronghold.

The new British Ambassador to the United States, Sir Auckland Geddes, includes among his many qualifications for the post an American wife, formerly Miss Isabella Ross, of Staten Island. Sir Auckland Geddes has recently been Minister of National Service and Reconstruction in England and president of the Local Government Board. Before that he was professor of anatomy and then president of McGill University in Montreal. In 1914 he went to France as a major in the British army and he came back in 1916 as a brigadier-general to take charge of the recruiting department at the British War Office.

International

THE KING WITH A SHAKY CROWN

King Christian of Denmark seemed in danger of deposition last week when 40,000 of his subjects appeared before his palace, waving the red flag and yelling for a republic. But by giving way to their wishes on the Schleswig question he saved his throne

Socialists Win in Denmark

BY the mere threat of a general strike and a republic the Socialists of Denmark have overthrown the Cabinet and virtually gained control of the Government. A procession of 40,000 escorted a deputation of town councillors to the palace and while they were conferring with the king the crowd outside sang revolutionary songs, waved red flags and shouted for the Danish republic. King Christian tried to temporize and offered to negotiate all questions but was bluntly told that it was too late, so he was obliged to concede the demands of the Socialists, which were the dismissal of the Liebe ministry, appointed a few days before, the democratization of the constitution, a one-chamber parliament, universal suffrage and the amnesty for all political offenders now in prison.

The trouble arose out of the old Schleswig-Holstein question. These provinces were taken by force from Denmark by Prussia in 1864 and the outside world has been led to believe that the inhabitants were longing to throw off German rule. The defeat of Germany afforded an opportunity to rectify the old wrong. Denmark was not one of the Allies and had no claims for indemnities, so the question could be left to the decision of the people according to a plan devised by the Peace Conference.

One of the stolen provinces, Holstein, was evidently so satisfied with its lot that there was no use in holding a plebiscite. The other, Schleswig, was divided into three zones, the one next to Denmark to vote first, the middle zone two weeks later and the third, nearest Germany, two weeks after that.

But Denmark herself objected to the referendum in the third zone on the alleged ground that the population would undoubtedly vote for annexation and Denmark did not want so many Germans!

When the vote was taken, the first zone, mostly inhabited by Danes, voted for annexation to Denmark, but the second zone of mixt population voted three to one in favor of remaining with Germany, and it seems evident that the third zone, if allowed to vote, would have chosen almost unanimously the German side. This shows that you cannot tell which way a cat will jump unless you let it jump.

The result of the plebiscite in the second zone was a great disappointment to the Danish King, so he dismissed Premier Zahle, who was determined to stand by the decision, and asked Liebe, an advocate of the High Court, to

form a new cabinet which would demand of the Peace Conference a reversal of the referendum and the annexation of the disputed territory. But the people revolted at this misuse of the royal prerogative and demanded the restoration of the radical Zahle ministry in place of the conservative Liebe ministry. There was much talk of the overthrow of the monarchy and the labor unions voted a general strike to tie up all business. Confronted with this danger the King gave way. Only a few weeks ago the same weapon, the general strike, caused the prompt overthrow of the reactionary Kapp régime which had been set up in Berlin and from which the German Government had fled.

Japanese Capture Vladivostok

ON the night of April 5 the Japanese landed at Vladivostok and after a hard fight lasting eight hours seized the city. Their first attack was directed at the Korean quarter, and, this vantage point gained, they used their machine guns and light artillery against the Russian soldiers and marines. When these were overcome the Japanese imperial ensign was raised over the public buildings in place of the republican flag. Korean and Russian prisoners, tied together with ropes, were marched thru the city streets. In Nikolsk and Khabarovsk the Russians held out longer against the Japanese.

In official statements given out by the Japanese it is stated that Japan has absolutely no territorial ambitions but would keep her troops in Siberia so long as lawlessness there threatens the Korean and Manchurian borders. This would indicate that Japan considers Manchuria, as well as Korea, her own territory. In his proclamation the Japanese commander claims that the disturbance was provoked by the threatening and aggressive acts of a portion of the Russian army and that his disarming of the Russians had no other motive than to "maintain peace and order."

The Americans, however, found these Russians easier to get along with than the Japanese or Kolchak troops, and so long as General Graves remained in Vladivostok he protected the new Government against the Japanese. But the American troops were withdrawn on April 1, and on the same day the Japanese posted a proclamation saying that they intended to remain and warning the Russian people against any manifestations of an unfriendly attitude. The Japanese have about 80,000 troops in Siberia.

The Russian Government which the Japanese have overthrown in Vladivostok was not a Soviet, but representative of the municipalities and zemstvos (provincial assemblies) and mostly composed of anti-Bolsheviks. Comrade Krakovetski, commander of the Russian garrison at Vladivostok, gave a banquet to the American officers and welfare workers in Siberia on the eve of their departure and thanked them for their friendly aid in this crisis. General Graves reported to Washington that the Russian revolutionists had governed Vladivostok in an orderly and non-partizan manner since they took control of the city after the collapse of Kolchak.

Peru and Bolivia Shake Hands

OWING in great part to the friendly mediation of the United States and to the refusal of Chile to take sides in the dispute, the quarrel between Peru and Bolivia seems to have blown over. The cause of the quarrel, the desire of Bolivia to obtain a port on the Pacific, remains unchanged, but the Peruvian and Bolivian governments have mutually apologized for disorders committed by their citizens and have given assurances that there would be no mobilization of their respective armies. Chile also has informed the United States that there would be no mobilization of Chilean forces.

The note of the United States to Chile asking that nation

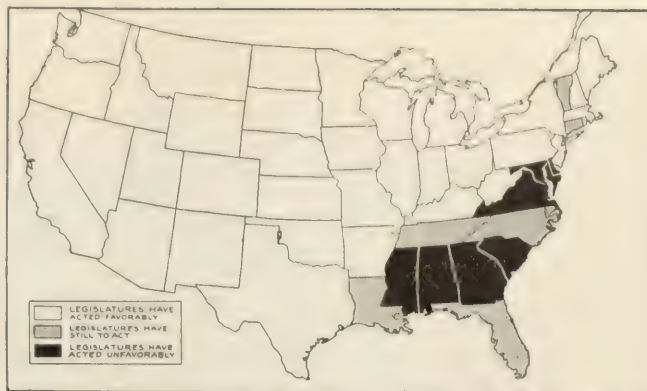

to do everything possible to prevent an outbreak of war in South America seems to have roused a certain resentment at first. Altho the Chilean Government gave the requested assurances that it would do what it could to keep the peace it replied also that Chile could not accept the mediation of the United States in the question of the disputed provinces of Tacna and Arica or in any other case unless the United States were requested by all the interested parties to take part in the negotiations. The American Chamber of Commerce in Valparaiso, dreading the commercial effect of a political dispute between the United States and Chile, sent a protest to Ambassador Shea against the tone of the American note.

The American Government assured the Chileans that there was no thought of intervention or "pressure" on Chile to modify her policy, and that our part was merely to offer "counsels of conciliation." These assurances soothed the ruffled dignity of the sensitive South Americans and put an end to the attacks on our interpretation of the Monroe Doctrine which had appeared in the press of Chile and Argentina.

Central American Politics

THE political earthquake zone of the New World is once more shaken by revolutions and rumors of revolution. Mexico has suffered a relapse from the fair promise of a peaceful election. An attempt was made on March 29 to kidnap Ygnacio Bonillas, candidate for President, and several of his political opponents have been arrested on suspicion of complicity in the plot. Mr. Bonillas is reported to have been wounded in a riot. But Mexican politics are quiet indeed compared with countries further south. From Mexican sources we hear that members of the Chamber of Deputies of the republic of Honduras engaged in a battle during February, in the course of which Dr. Duron, the president of the chamber, was killed and some twenty other deputies were killed or wounded.

Guatemala is in open revolution against President Cabrera. The revolution combines domestic and foreign politics, for the program of the rebels includes not only the overthrow of Cabrera's somewhat repressive government but negotiations with the other Central American states for a general federation. The so-called Unionist party in Guatemala, which has sympathizers in the other Central

American republics, advocates this federation, but President Cabrera is strongly opposed and has caused a number of Unionist politicians to be thrown into prison. The federation into one nation of the republics of Nicaragua, Honduras, Guatemala, Salvador and Costa Rica has been frequently advocated and more than once attempted, but all attempts have broken down in the face of local jealousies and factional tendencies.

Delaware Hesitates

ON March 22 Washington approved the equal suffrage amendment to the constitution. Washington was the thirty-fifth state to fall in line and the twenty-fifth to ratify in special session of the legislature. No previous amendment to the constitution had captured so many state legislatures in so short a period or induced so many states to assume the expense of extra sessions of the legislature. One more ratification would have made equal suffrage the law of the land and great hopes were placed on favorable action by Delaware, whose legislature had been specially convened to act on the proposed amendment.

The little state of Delaware thus became the center of one of the keenest struggles in the history of the nineteenth amendment. The national organizations of the Republican and Democratic parties brought the utmost pressure to bear on the legislators of their political faith not to damage party prospects in a Presidential year by an untimely opposition to woman suffrage which would be sure to affront the millions of women who already enjoy the franchise. The anti-suffragists, in whose eyes Delaware was literally the "last ditch," assembled at Dover to stiffen the opposition.

The Delaware vote was delayed from March 22 to April 1 while the campaign for and against ratification was hotly waged. On the latter date the House of Representatives rejected the amendment by 26 votes to 6. Believing that the State Senate was favorable and that the House could be persuaded to reverse its action, the suffragists have moved for reconsideration.

The Mississippi Senate startled the country by ratifying the suffrage amendment by a bare majority, in spite of the fact that the state was already on record as having rejected it. The House refused, however, to follow the example of the Senate and the thirty-sixth ratification was not obtained.

The Republican Governors of Connecticut and Vermont still refuse to summon special sessions of the legislatures of their states. This gives the Democrats a chance to steal a march on their rivals by securing ratification from Louisiana or North Carolina, which have not yet voted on the suffrage question, or by persuading some adverse legislature to reconsider.

The anti-suffragists hope to obtain a decision from the

Thomas in Detroit News.

"Do you want me to ruin my bathing suit?"

courts which will prevent ratification by Ohio and other states from being counted as valid until a popular referendum has been held in those states.

With the Third Parties

THE Committee of Forty-Eight has decided to raise a campaign fund of a million dollars to launch a third party in the United States during the present campaign. The aim is to federate into a powerful national organization the sporadic revolts against the two-party system in American politics. This would include the Labor Party, the Non-Partizan League, the independent voters who were left high and dry by the disappearance of the Progressive tidal wave of 1912 and such discontented Republican and Democratic radicals as may break away from the old parties. Mr. Basil Manly delivered the "keynote" speech of the meeting, declaring that "unless the liberal forces of America are soon mobilized into one effective political group, the next four years will see the realization of the dictatorship of the plutocracy toward which events in America for the last generation have been tending."

The platform of the Committee of Forty-Eight, adopted last December, lays chief stress on public ownership of natural resources and public utilities. Its candidates have not yet been selected.

The Socialist Party will hold its national convention in New York this May. The nomination of Eugene V. Debs for President appears certain in spite of the fact that he is still in prison for alleged violation of the Espionage Act. There is no rival candidate in the field.

One difficulty in the way of the Socialists this year is the action of the New York Assembly in excluding five Socialists from their body on the avowed ground of their political affiliation. This high-handed action indeed affords excellent campaign propaganda for Socialism, but there is danger lest the precedent be followed by legislation excluding the Socialist Party from printing the names of its candidates on the ballot or forbidding them to take office if elected. The legality of the exclusion of the Assemblymen will be tested in the New York courts and an appeal may even be carried to the Supreme Court of the United States before the party will acquiesce in its outlawry by the Assembly.

The U. S. S. "Tennessee," almost completed, takes its place now as o

California Day in Michigan

MICHIGAN is not one of the "favorite son" states. On the contrary, it gave its indorsement in the Presidential preference primary of April 5 to Californians, Senator Johnson for the Republicans and Mr. Hoover for the Democrats. Senator Johnson's sweeping victory in the Republican primary over six competitors has injected new vigor into the Johnson campaign and has more than retrieved the defeat in South Dakota. On the other hand, it is a serious blow to General Wood, hitherto the most successful of delegate hunters, that in Michigan, where the Roosevelt tradition is strong, the voters should decide Senator Johnson and not himself to be the inheritor of the mantle of Roosevelt.

General Lowden and Mr. Hoover made a creditable showing in the Republican vote, closely contesting with each other the third place, tho not endangering the lead of Johnson and Wood. A few complimentary votes were given the other candidates on the ballot, General Pershing, Mr. Simpson of Detroit and Senator Poindexter of Washington, but none of the three figured seriously in the contest.

Mr. Hoover not only ran well in the Republican primary but outdistanced all competitors in the Democratic vote, which is more remarkable in view of the fact that he had declared himself a Republican several days before the vote was taken. His nearest rival was Governor Edwards of New Jersey, who polled the anti-prohibitionist vote of Detroit and other big cities. Mr. Bryan and Mr. McAdoo, altho they have not avowed their candidacy, also received a fairly strong support. Attorney General Palmer, who is one of the few Democrats of national standing to come out openly as a candidate for the Presidency, polled the fewest votes of all. The overwhelming defeat of the most prominent Democratic candidate and the only one now directly connected with President Wilson's administration, was the greatest surprize of the election and may have a far-reaching effect on the campaign.

As a slight check to those who would draw too bold a deduction from the results in Michigan, the New York primaries of April 6 resulted in an uninstructed delegation for both parties. There is no Presidential preference ballot in the New York primary, but some independent candidates to the Republican National Convention were personally pledged to Johnson, or, in one district, to Hoover. All of these were unsuccessful and the "machine" triumphed without difficulty.

most powerful dreadnaught. It weighs 32,000 tons and is 624 feet long

President Butler of Columbia University, himself a candidate for President, is one of the New York district delegates, and Senators Wadsworth and Calder were elected from the state at large.

Costlier Coal?

IN accordance with the award of President Wilson's Coal Commission the operators and miners of the chief bituminous coal fields have entered into an agreement increasing wages by 27 per cent, or \$200,000,000 a year. Some 400,000 miners have assented to contracts on this basis for a period of two years. Now that the chief points at issue between capital and labor have been settled the question arises whether the consumer will pay for part of the increase, for the full increase or for more than the increase by higher prices for coal.

In a letter to Federal attorneys, Attorney General Palmer states that the increase in wages affords no grounds for an appreciable increase in price. If the entire cost of higher wages were added directly to the price of bituminous coal it would amount to only forty cents a ton. If the operators agree to absorb the 14 per cent increase of wages previously allowed, which Fuel Commissioner Garfield asserted they were easily able to do, the additional increase would justify a rise in price of only twenty cents a ton. Yet some dealers are said to have advanced prices from 65 cents to \$1.75 a ton on the pretext of higher wages to the miners.

Another alleged cause of higher prices is the prospect of increase in coal exports. Attorney General Palmer replies to this argument that port facilities permit the handling of only 30,000,000 tons a year, or only six per cent of the annual production. The export trade should therefore not be made an excuse for higher prices to the domestic consumer, who takes the lion's share of the output.

Governor Allen's Industrial Court law has encountered another test of its efficiency in preventing labor disputes. Not satisfied with the award of the National Coal Commission, two thousand Kansas miners quit work on April 5. In Illinois and eastern Ohio also a number of miners refused to follow the decision and example of the central labor union organizations and acquiesce in the Federal award. The Kansas authorities acted promptly to quell the incipient strike. Twenty-four miners were summoned the next day to appear before the Kansas Industrial Relations Court and explain their action.

Railway Difficulties

THE Railroad Labor Board, which is provided for under the terms of the Federal Railroad act of 1920, will have the duty of passing on the billion-dollar wage increase demanded by the railway men. The attempt to settle the question by direct negotiation between the operators and the labor representatives failed because the operators believed that so important an increase ought to be considered by the Labor Board, on which the general public is represented as well as capital and labor. Mr. Whiter made the following statement on behalf of the operators:

The representatives of the railroads take the position that they could not assume the responsibility of adding such a burden to the costs of transportation, which are necessarily borne by the public, without the full knowledge and consent of the public, thru its representatives. . . . While Section 301 of the Transportation Act does provide that representatives of the carriers and of their employees may reach agreements upon matters in controversy, it is not believed by the management conferees that Congress ever contemplated that a controversy involving so great an addition to transportation costs, and in which the public is therefore so vitally interested, should be disposed of by direct negotiation.

Mr. Jewell, the representative of the unions, replied that this decision of the railway managers "comes as a surprise to us, and will result in keen disappointment to our constituents as well as the general public," but agreed to appeal to the Labor Board. The President has not yet appointed the members of the board, which will contain three representatives each of the employers, the employed and the general public, all chosen by the President, "with the advice and consent of the Senate."

The Chicago freight yards have been tied up by a local labor strike of 9000 switchmen. The strike was called without the sanction of the Brotherhood of Railway Trainmen, with which the railroads have affected working agreements, and in fact represents a rebellion against trades union authority quite as much as against the employers. Local transportation strikes, unauthorized by the national unions, have likewise paralyzed the harbor traffic of New York.

Mr. Hines, former Railroad Administrator, has asked Congress for an appropriation of \$420,727,341 to wind up the business of the Federal Railroad Administration. He places the total deficit arising from the period of Government operation at \$900,478,756. In addition the Government has provided a sum of \$966,803,363 for expenses and improvements, which stands as a debt of the railroads to the Government and will eventually be paid. No allowance has been made for claims by the railroads against the Government because no estimate of these had yet been made. In all Congress will have appropriated \$1,870,727,341 for the costs of transportation under public control.

THE WAY TO USE THOSE GERMAN HELMETS

They are crushing down old German helmets to make roads at Croydon, England, where there is a great dump of discarded German armament

Kindness Makes the Mare Go

By William S. Bailey

Eighty-six years old, failing eyesight and nothing much to do, are conditions that would not give the ordinary man an especially cheerful outlook upon life. Most of us would scarcely feel, with these limitations, that we were called upon to add to the sum of human happiness.

But this is the story of the exception and the exception in this instance is a vigorous old bundle of sunlight who was born in England, lived in Canada, came to the States, and for years drove over the Chautauqua County hills of New York State as farmer and cattle buyer.

Walter J. Fairbank is his name and altho the fact probably has not occurred to him, yet last summer he created the Fairbank Foundation for the Comfort of God's Aged Servants. The endowment of the Foundation consists of a dependable old mare and an antiquated but equally dependable two seater and Walter J. Fairbank, the founder—a patriot, Methodist, and philanthropist.

The Fairbanks Foundation began one day when Uncle Walter hitched his old mare to his Sunday buggy and started out to see if there was not some one who needed his services. He soon found his answer in a load of three old friends less fortunate than himself and after a two hour drive away from the dusty main roads of the auto, Walter J. had found a new field of industry for the unemployed at eighty-six.

The good news of the enterprise spread and day after day the applications for its services continued, so that soon the old equipage with Uncle Walter holding the reins and with three cheerful faced passengers was a familiar sight upon the streets of Jamestown and the outlying country roads. Not a day of pleasant weather passed that the sedate and aged mare and her jovial old driver were not jogging along on their daily duty and when cold weather stopped the work of the Foundation for the season, the two had made their rounds with a total of 355 more or less merry old souls whose only outings the Fairbank Foundation provided.

It is doubtful if Walter J. Fairbank ever thinks of himself and his mare as entitled to credit for contributing to the world's happiness, but he does take pride in his Red Cross Hen Brigade. During the war he was still following his vocation of buying cattle from Chautauqua County farmers. One day he was inspired with the thought that the American hen should be given a chance to show her patriotism. The first farmer's wife he met agreed and gave him her promise to dedicate one setting hen by turning over to the Red Cross the proceeds from the sale of her output. From that time forward Uncle Walter presented his plan to every farmer's wife he met and in a short time the Red Cross Hen Brigade was a reality in Chautauqua County. Mr. Fairbank eventually had a thousand farmers' wives and their Red Cross hens enrolled, and when the armistice came had traveled more than 3000 miles in organizing his hen brigade, which spread eventually over twenty states. He arranged for the sale of the Red Cross broilers locally and the small part of the output he handled netted \$1,250.

Each Nation's Debts

The appalling burden of public debt under which the belligerent nations in the great war are staggering is taken for granted by most of us, while but few have any definite notion of the extent of this burden. Possibly the most dependable figures which have appeared upon this subject are those collected by Louis R. Gottlieb and published in the *Quarterly Journal of Economics*.

Before entering the war the public debt of eleven of the Allied Powers amounted to about \$22,500,000,000, while that of five of the Central Powers was \$6,200,000,000. Since then the Allied nations have increased their indebtedness about \$150,000,000,000, while that of the Central Powers has increased by about \$63,000,000,000. The public debt of the United States has increased twenty-one fold, that of Great Britain and Russia ten fold, that of France four fold. Germany has increased her public indebtedness during the war thirty-three fold, while Austria and Hungary have increased theirs about five fold.

Interesting as are these figures of the total indebtedness, they do not mean so much as the figures for per capita indebtedness. In the following table the per capita indebtedness of the various countries is reduced to dollars at the pre-war rate of exchange:

PER CAPITA INDEBTEDNESS		
Nations.	Before the War.	After the War.
Allied—		
United States	\$11.33	\$249.38
Great Britain	75.03	817.04
Canada	40.19	189.46
France	166.20	768.11
Italy	82.55	408.78
Japan	21.74	22.14
Russia	27.95	298.61
Belgium	94.28	246.67
Central—		
Germany	17.18	589.97
Austria	84.99	551.42
Hungary	74.82	416.11
Turkey	31.35	94.11

Before the United States entered the war the per capita interest charge upon our national debt amounted to the negligible figure of 22 cents, whereas it now stands at over \$8. Even at this figure we are extremely fortunate

when compared with France, where the per capita charge upon their debt is nearly \$50 and in Great Britain over \$30.

The extent to which the debt charges of a nation are embarrassing depends, of course, upon the ability of the nation to bear this burden, or upon the ratio which the debt charge bears to the national income. In the following table is shown the ratio which exists at present between the public debt and national wealth, and the ratio between the charges upon the public debt and the national income:

AT THE CLOSE OF THE WAR

Nations.	Debt as percentage of national wealth.	Debt charges as percentage of national income.
Allied—		
United States	\$13.01	\$2.53
Great Britain	54.10	12.92
France	52.13	32.17
Italy	65.83	14.43
Japan	10.97	3.05
Russia	90.67	11.78
Belgium	12.59	6.54
Central—		
Germany	49.70	20.96
Austria	72.64	25.92
Hungary	53.99	24.78
Turkey	60.05	17.60
Bulgaria	28.95	21.80

Before the war the wealth of the United States was estimated at about \$200,000,000,000, while our national income was about \$35,000,000,000. It is possible that our national income ex-

ceeded that of Great Britain, France, Italy, Japan, Russia and Belgium combined. We are having difficulty to become accustomed to our newly created national debt, but when we consider that the charges upon this debt are only about 2.5 per cent of our national income, while that of France is nearly a third and that of Germany about a fifth of their national income, we should be considerably reassured.

The Biggest Bascule Bridge

One of the world's engineering marvels, a single-leaf bascule bridge measuring 260 feet from its base to its end and weighing 3500 tons, was put into operation in Chicago last December. It spans the Chicago River at Sixteenth street and is used by a number of railroads having terminals in that vicinity.

While the new bridge is counterbalanced and operated in much the same manner as other bridges of this type, it is unique in that it has two counterweights instead of the single block ordinarily employed. These counterweights, which are composed of concrete, are five feet six inches thick, sixty feet high and thirty-seven feet wide, and weigh approximately 885 tons each. In the face of each counterweight are a number of apertures

This 3500 ton bridge across the Chicago River is the biggest of its kind in the world

which are for the purpose of adding adjustment blocks to obtain the exact weight required. As the bridge opens the counterweights move entirely outside the range of the railroad clearance, and when it is fully opened their lowest points are eight feet below the base of the rail.

Notwithstanding its tremendous weight the bridge can be opened or closed in one and a half minutes, being operated in the usual manner characteristic of this type. In addition to the usual oak bumping blocks ordinarily used, however, it is also equipped with an air buffer which comes into play when the bridge reaches a nearly open position and gradually arrests any further movement of the bridge after the power has been cut off and the motor brakes applied.

The bridge is also unique and remarkable in one other respect: it is so built that later, when the work of straightening the channel of the Chicago River at Sixteenth street is begun, it can be moved intact to another location 400 feet to the west, where it will span the new channel. It will be moved on a circular track with rollers, and to fit in the new location will have to be turned around completely.

How to Close an Interview

By Donald Wilhelm

Getting a caller into your office is easy enough; getting him out is the thing!

Admiral Macgowan, Chief Paymaster of the Navy, has only one chair in his office. If he gives that chair to a caller, the caller soon feels uncomfortable, and goes; and if he doesn't give that chair to a caller, the caller feels uncomfortable, and goes. Some men look at their watches. Some, like Postmaster General Burleson, look at the clock. Some, Raymond Fosdick, for one, keep the windows wide open and let the wintry winds, if there be any, welcome the departing, speed the coming guest.

The new Secretary of the Interior, John Barton Payne, irked of inquisitive questions by the writer. He explained, at last, that he had just struck on a carbon copy of the following letter. The writer remarked that the letter probably was a little allegory with a brick in it—and put the letter in his pocket, without reading it.

Here's the letter:

Dear Mr. Ryan:

I deeply regret that the shortness of the day and the constant pressure of waiting people who wish to be seen and have their matters disposed of, made me manifest impatience to you after the subject of your visit had been disposed of.

Indeed, the problem of how to end an interview when the subject matter is disposed of, has elicited the attention of very wise people. I was in Liverpool a few years ago and was in the offices of Sir Alfred Jones, who was an active partner in the control of a number of steamship lines operating between London and the West Indies, handling among a number of other things, bananas. Of course, Sir Alfred had to see a great many people and his constant practice was, when the interview properly had come to an end, to arise from his seat, take a banana conveniently supplied on his desk, and hand the banana to the visitor; and that was accepted universally as the end of the interview.

Unfortunately, I am not supplied with bananas; and having no very delightful method of interviewing, I am sometimes guilty of a manifestation of impatience of which I am as sorry as the person who for the moment suffers. He, however, has this advantage—he suffers but once, while I have to suffer many times!

Very truly yours,

(Signed) JOHN BARTON PAYNE.

Why Endowments?

The present campaign for permanent endowments in which nearly all the private colleges and universities, both large and small, are taking part is hard for many to understand. "Suppose the professors do need more pay and suppose that buildings do need improvements. Why can't the colleges meet their needs out of their regular income? Surely, tuition fees are increasing fast enough!"

But as a matter of fact no important college or university supports itself out of what it charges the students. State universities get the bulk of their funds from land grants or public taxation; private universities from private benevolence. Every student, whether he holds a scholarship or not, is to a great

extent a "charity student." Princeton University, for example, spent on the average \$641.60 annually for the education of each undergraduate during the five year period of 1912 to 1917. The average tuition during the same time was only \$174. In effect, the University made a free gift of \$467.60 worth of instruction to each student every year. Towards getting a degree in the regular four years' course the student would spend \$696 and the University over \$1,870. This sum covers only current expenses and makes no allowance for the interest on capital invested in buildings, equipment and land.

Princeton is not the only university thus generous; it is but typical of the better sort of endowed university. American higher education may be illustrated fairly enough by imagining that a loaf of bread which cost five cents to make and market sold for two cents, the other three cents being contributed by philanthropists who wished to put bread within the purchasing power of all, the idea of profit being abandoned altogether. Or suppose that an association of benevolent men of wealth established a street car line with two cent fares, altho even with a five cent fare they would barely make expenses. Fortunately bread and car rides are still relatively cheap, so that such charitable experiments are not necessary. But how many young men could afford to pay from five hundred to a thousand dollars a year in tuition fees, as would be necessary if the colleges were placed on a commercial basis?

Hitherto the necessities of higher education have been met by casual gifts. The idea of a permanent endowment is somewhat novel to many institutions. But munificent as has been the generosity of college alumni and wealthy philanthropists it cannot be budgeted in advance as a definite source

of income. A university cannot afford to wait for dead men's shoes or accidental windfalls. With an endowment a certain minimum of income-bearing property is secure and modest plans for future development are possible, even if gifts that year are small or few. Moreover, an endowment can be used by a university where it is most needed, whereas a special gift is usually destined for a particular purpose or is subject to stipulated conditions. The fact that a new stadium or library has been donated to an institution does not make it possible to raise the salary of the faculty, or pay off an old debt, or improve the quality of the graduate courses or do whatever else is of immediate importance. Only a generous endowment can make a private college or university a free agent for the advancement of education.

United States. From the results of a regional survey made in New York City it appears probable that four-fifths of the women wage-earners had dependents and entered their occupations from necessity rather than choice, and the 1910 census shows that one out of every four women wage earners was married.

In its third annual report the Federal Board states that there are more persons engaged in the profession of home keeping than in any other and that four-fifths of the women over twenty years of age were married. The report concludes that there is no reason to fear that the woman wage-earners as a class must look forward to spinsterhood.

Improving on King Solomon

By Robert H. Moulton

King Solomon acquired a reputation for wisdom by deciding in a rather hazardous way to which of two women an infant belonged. Reputations for wisdom were easy in those days. Today any doctor or nurse connected with the Chicago Lying-in Hospital can tell, by consulting an index, which babies belong to which mothers, and never make a mistake, even tho there may be 500 or more. A feat like that would baffle the wise old king.

At the Lying-in Hospital a system of taking footprints of babies has been adopted to prevent the children born there from going to wrong mothers. Its adoption was due to the fact that in another hospital a soldier's wife, who had given birth to a baby there, at first denied that the child was hers. The young mother, who had been reading stories of accidental substitution of children at hospitals and similar institutions, declined to nurse the baby.

The superintendent brought all the proofs he could muster, but the mother persisted in the hallucination. She became hysterical with grief and fright. Finally the superintendent brought the records of the hospital, which showed that only a little colored baby and her own had been born in the hospital that

day. That convinced her, but just think of what would have happened to that poor woman if other white babies had been born there on the same day.

In order to avoid a similar experience, the superintendent of the Lying-in Hospital engaged a fingerprint expert to instruct the head nurse in trying the system on babies. It was found impossible to get good prints of their fingers, because the lines on a new born baby's fingers are not distinct enough to reproduce. Their feet, however, come out beautifully, and every foot has as different lines as the fingers of an adult person, even tho the babies themselves may look just alike.

Under the present system, as soon as a baby is born some ink is put on the soles of its feet and slips of paper pressed against them. On these slips are noted the baby's name, his weight, and the hour and date of his birth. When the mother leaves the hospital she takes the slips with her. Thus, altho a baby may not resemble anyone in the family and tho no one can tell where he got his nose or his eyes or his mouth or the color of his hair, a comparison of the footprint at birth will tell whose child it is among the hundreds of infants in this Chicago institution.

Sport for Br'er Rabbit

By S. E. Tillman

The life of animals is full of a great variety of activities, most of which are so simple as not to incite consideration, but the most ordinary observer whose experience has brought him into frequent contact with such life seldom fails to observe animal activities which are difficult to explain and in which sometimes it seems impossible not to include intelligent as well as hereditary and instinctive factors.

Without here considering at all the difficult distinctions between *instinct* and *intelligence* it is proposed to describe accurately a very interesting performance of an animal which has often been observed by the writer.

The common cotton-tail rabbit when being trailed by a yelping pack of

hounds has on many occasions been seen to leave the protecting cover of thick underbrush, tall grass and briars, where his pursuers were at a great disadvantage, and go out into the open field, almost as unprotected as if upon a freshly mowed lawn.

When at a distance of from fifty to one hundred yards from the thicket he would squat closely to the ground with his ears turned flat to his back and there await the coming pack.

The hounds emerging from the thicket would dash off at high speed and under full cry along bunny's trail. Due to rivalry among the runners and the enthusiasm produced by an open field, the hounds would invariably overrun the squatting rabbit, some of the dogs often passing close to him. As soon as the hounds had passed him, sometimes before all the slower runners had gotten by, the rabbit would spring up and dart like an arrow back to the thicket, now pursued by the whole excited pack, chasing by sight in-

stead of by scent.

After this bold performance the rabbit almost invariably proceeded directly to his burrow or other safe refuge from the dogs. On many occasions and at many different places this performance of rabbits has been observed, so that it cannot be explained as the action of a rabbit simply confused nor as a mere accidental situation. Owing to the quickness with which a rabbit can get under full speed and the fact that the swiftest of the hounds had gone beyond him and had to turn about to resume the chase, it was a pretty safe run for him back to the briars.

The performance, described without exaggeration, assumes the appearance of a challenge or banter on the part of the rabbit and seems to indicate that he enjoyed the venture and was willing to take a sporting chance.

In the instances here given the hounds engaged in the chase were the large, swift fox hounds, not the beagle variety; the latter run so slowly and stick so close to the trail that they would not be likely to overrun their quarry.

The Chicago Lying-in Hospital
FOOTPRINTS

How Multimillionaires Are Made

By Roger W. Babson

Two years ago I made a study of the heads of the one hundred leading industries of America. Those men are all multimillionaires and the leaders in their industry. Five per cent of them are the sons of bankers, 10 per cent of them are sons of merchants and manufacturers; 25 per cent of them are the sons of teachers, doctors and country lawyers; and over 30 per cent of them are the sons of preachers whose salaries didn't average \$1,500 a year.

For Our Mutual Benefit

(Continued from page 81)

Milan. In the second place Italy is a country which has never defaulted in any way or failed to keep not only the letter but also the spirit of her engagements, public or private, and of all the European belligerents it is the one, I believe, where fresh taxation, patiently supported, has most closely followed fresh financial obligations.

From the Italian point of view, on the other hand, we do not hide the fact that we need outside help in order to get over the ravages of the war just as every other European country needs it and altho we might conceivably obtain such help from other sources we would much prefer to have it from the United States of America which can never be suspected of the slightest ulterior political motives. But one thing we require above all and that is that that help should be given as wholeheartedly as we have given our labor to the great republic and our manhood to the common cause of democracy.

It must not be thought, however, that we are destitute of all resources in raw materials or in food, or that it would be quite impossible to obtain them elsewhere, and that we are therefore ready to assume the position of humble suppliants. It is evident that if the prices at which the United States is ready to furnish us with raw material reach a certain level or if facilities are not accorded us with regard to the payment for such raw materials, or if their supply is hedged about with conditions which Italy would consider incompatible with her dignity, with her just rights or with the great sacrifices she has made for the common cause, we shall be driven to look for such supplies elsewhere. The final result of such a course may be the permanent loss to the United States of a valuable market for quite an appreciable percentage of the commodities for which they must find an outlet. We have grown and shall continue to grow, for example, wheat sufficient to feed our population for seven or eight months of the year. Nor would it be impossible to obtain large supplies of grain from Roumania which could also furnish us with petroleum. We have lately begun to develop iron deposits which may to a certain extent diminish our necessity of importing that important metal. We are in the position, therefore, of a young man, filled with energy and willingness to work, but who lacks sufficient capital to buy the raw materials which his industry and brains will turn into valuable manufactured commodities. I think I know the American people well enough to assert that that is just the type of nation they will delight to help. Give us the coal and tonnage that we lack, and I feel certain that very soon Italy's position will be comparable, if not superior, to her flourishing pre-war condition and that her contributions to civilization will continue as valuable as they have been for the past twenty centuries.

The Best Person in Our Town In Minneapolis They Say It Is the Mayor

IN these days of strenuous life, when almost everyone is busy with problems of his own, it is not easy to find those who are willing to give their time to matters of general interest, but Minneapolis is fortunate to have a citizen who has for more than fifteen years given a great portion of his time to public affairs.

The Hon. J. E. Meyers, who is the present Mayor of Minneapolis, was, during our last municipal campaign, drafted as a candidate for Mayor. Mr. Meyers has never sought public office and did not desire to assume the responsibilities of this office, but owing to the position in which our city was placed during the war period, the men and women of Minneapolis who are interested in public welfare, found it necessary to secure as a candidate for mayor a man who, above all others, would stand out prominently as a public servant and especially one who was thoroughly American. A committee of business and professional men, interested in public affairs, was appointed to select such a candidate and Mr. Meyers was thus drafted to run for this office.

There is probably no man in Minnesota who stood out more prominently during the war period as a thoro American than did Mr. Meyers. He preached loyalty early and late, and did not hesitate to use some sledgehammer blows which had a decided effect on some of the disloyal citizens which we had at that time. I do not hesitate to say that his influence in promoting true Americanism during the war period had a notable effect upon the enlistment of a very large number of Minnesota boys who volunteered to go to the front.

In my judgment, there is no public work, in a city the size of Minneapolis, of more importance than any service that might be rendered in connection with our public schools. The proper training of young men and young women is of the greatest importance, and in this connection Mr. Meyers has given much of his time during the last fifteen years. One of his principal interests seems to be centered on the boys and girls of this city. Some of the notable results of his interest in the progress of our schools are as follows:

1. He advocated and successfully put thru a plan for the use of an entire city block for school purposes, so that at the present time sixty-six schools in Minneapolis each occupy an entire city block for school building and playground.

2. He furthered the study of English by frequently offering prizes such as a gold watch, a United States flag, a book, or a picture for the best essay on eminent Americans.

3. He has constantly advocated a thoro education in the three R's, eliminating all useless studies.

4. He was the pioneer in the movement to establish junior high schools.

5. He was the leader in the "Pull for Playgrounds" campaign.

6. Chairman, Educational Committee, Parents and Teachers' Association.

7. Donor of toboggans, boxing gloves and games to boys at Glenlake Farm School, a County Detention Home.

8. Donor of prizes to boys voted as the "squares" by fellow students of grade schools and to golf club cad-dies.

9. Due largely to his efforts, thousands of Minneapolis residents enjoy free music at the public parks.

MR. Meyers has worked early and late in an effort to impress upon our citizens the value of true patriotism and loyalty to our government. While belonging to the Republican party, he has loyally given the present administration the most hearty support. He has earnestly backed President Wilson with the Government's war program, and since the signing of the armistice, he has been just as loyal in his support of the peace program.

The thing which is notably to his credit since the boys began to return from the front has been his earnest work in connection with giving them a royal welcome and providing positions for them as they returned.

"The Citizens' Readjustment Committee," which was created by the Mayor, has done notable work in connection with providing employment for returned soldiers and, particularly, in creating positions for them for which they are best fitted. Thru his efforts

The Minneapolis Journal

A believer in education, free music in the public parks and Americanism, perhaps the Hon. J. E. Meyers, Mayor of Minneapolis, is happiest when awarding suitable prizes to the "squares" boys. He is here shown opening a junior ball game

in this particular, he invited to Minneapolis the mayors from each county seat in the State for a conference to consider the best methods for providing employment for returned soldiers. As a result, much has been accomplished.

THE American committee was appointed by the Mayor for the purpose of creating an organization to promote a better understanding of citizenship than existed and still exists—an organization designed to meet, in an effective manner, the faults and doctrines advocated by the enemies of our Government and institutions.

A committee was appointed to formulate a declaration of principles and plan of operations. At a meeting on May 12, 1919, a "Declaration of Principles" was unanimously adopted. Essentially, this statement declared the belief that "upon the basis of the fundamental principles of the Constitution of the United States, every political, social or economic problem that might give rise to class antagonism and unrest may be solved by educational sources, amicable readjustment, and regulatory laws." This committee was organized for a campaign of education in support of its principles, and in public announcement, invited the coöperation of those citizens who were in sympathy with the change. So far as the application of the committee's ideas are concerned, large results have already been attained and more remains to be done.

Briefly, the general plan of operation is first to secure, and when necessary to train, a sufficient group of public speakers and thus to create a majority to effectively reach all groups and types of citizens. Such work has already been done in this direction with particular reference to meetings in public parks and other public places. In addition to the work to be done by these public speakers, the committee expects, at frequent intervals, to secure, thru the coöperation of the public press, the publication of timely and significant articles bearing upon citizenship; and to make a house to house distribution of pamphlets and leaflets, which shall set forth the facts and properly digest the conclusions.

It is the desire of this committee to bring all types of organizations into community groups which stand for better citizenship.

It is not easy to find men or women in these days who are willing to give two-thirds or all of their time to public interests and especially without thought of personal profit. This has always been particularly true of Mr. Meyers, as he has never sought public office, and altho at the head of a large business, is not a rich man. Thus, much of the time that he has given to various public interests has been at his personal loss from a financial standpoint.

From the standpoint of the greatest value to the largest number of people, he stands out most prominently as "the best man in Minneapolis."

*Always the
"Gift Acceptable"*

"Say it with Flowers"

YOU have been entertained by a gracious hostess—a little dinner party, perhaps, to which you have been invited by a business friend. A gift of flowers next day will express the appreciation you feel. The girl you danced with, who was good to you in finding other partners—a gift of flowers next day is the tribute you owe.

For every occasion and sentiment—give Flowers. Brighten the home with the cheery presence of fragrant blossoms. Let flowers add their charm to your table at every meal.

Your local florist, within a few hours, can deliver fresh flowers in any city or town in the United States and Canada through the Florists' Telegraph Delivery Service.

The florist displaying the sign "Say it with Flowers" is a member of the Society of American Florists, which enables him to serve you better when you buy flowers.

Good Pointers for Your Own Business

(Continued from page 84)

to form connection with the nearest railway station by attaching the device to any handy telephone wire. Frequent loss of time, and occasional loss of life, on a stalled train is thus prevented.

A new electrical device known as a telephone "selector" is gradually displacing the telegraph, and so conserving time and man power, in the dispatching of railway trains. By means of this device the dispatcher at headquarters may signal any towerman along the line. The selector calls only the towerman wanted.

A specially constructed transmitter of sound is made for mine rescue work. A gas helmet worn by the rescuer stands in the way of voice transmission by the mouth, so a telephone was invented to clamp on the rescuer's throat, whence it operates clearly.

Transcontinental telephony was made possible chiefly thru the "amplifier," a vacuum tube invention that strengthens the current waves when they begin to weaken from long travel, and thus records a message spoken 3000 miles away.

Between New York and Chicago the "telegraph printer" now makes it possible to send eight typewritten messages over a single wire simultaneously, at the marvelous rate of 400 words a minute. The messages are punched out on paper tape, similar to that of player-piano music rolls, then dispatched electrically, and typewritten automatically when received. Telegraphic letters going 900 miles are sent and answered, all in ten minutes.

Army experts believe that the next world war will be fought in the air. Such a possibility calls attention to the great importance of a new invention of Western Electric, the radio telephone, by which the commander of an air squadron may talk, from the ground or in the air, to his men three or four miles away, and thus directly control their movements, as readily as a leader of infantry takes command on the march. Prior to July, 1917, no commercial types of the radio telephone were in existence, but in less than a year after experiments were begun, thousands of complete sets were manufactured and delivered to the Army and Navy, and not one ship for overseas duty was held up by failure of the company to have the wireless telephone equipment installed on time. Every submarine chaser that went across was furnished with the radio apparatus.

The engineering experts on this radio telephone job had many difficulties to overcome.

The first problem was to invent a receiver whose signals could be heard by an aviator. The deafening noise of a 200-horsepower engine, plus the sweep of a gale of 100 miles an hour frequently surrounding the airplane, made it impossible to hear one's own voice. A peculiar aviator's helmet was devised, with telephone receivers fit-

ting the ears of the pilot or observer, and cushions and pads to prevent the transmission of superficial sound even thru the bony structure of the head. Also it was necessary to evolve a microphone with the remarkable quality of being insensitive to engine or wind noises, but acutely responsive to the tones of the voice.

Airplanes fly at speeds ranging from forty to 160 miles per hour. No dynamo had ever been made to deliver a constant voltage under speed variation like this, even on the ground. Furthermore, a heavy storage battery was forbidden by the limitations of aircraft space and travel. So the wind was finally harnessed as a propeller, to a small, new form of dynamo, with vacuum tubes transforming the dynamo current into a high frequency alternating current. This current flows out into space thru a copper wire antenna about 200 feet long, with a lead weight on the end, the wire trailing behind the airplane during flight, carrying the sound waves from the transmitter to other antennae on the ground masts or on other planes.

The engineers and shopmen had to work day and night for months, and the field testing crew had to make 690 air flights in a short time. The strain was terrific. Haggard faces, bloodshot eyes, wornout nerves and throbbing heads were part of the price that Western Electric men cheerfully paid for the development of this new art of airplane telephony. There are no impossible tasks to really capable men.

A tour of the Western Electric factory is a demonstration of the new science of business. The plant so bristles with new ideas that they stand out and impress you before you reach the place.

The factory and the office are nearly 1000 miles apart. Strange? No, merely unusual; and to the logical mind, the customary thing is often most queer. Chicago is the railroad center of the United States, having more trains than any other city. So the factory is located here, that raw materials may be brought and finished products shipped most rapidly and economically; but the executive offices are located in New York, the financial, commercial and professional city of superior advantage.

The employees live in the city and work in the country—the opposite of the old way. Young people want the mental stimulus and emotional diversion of city life, but they need for their best work the solitude, quiet and healthfulness of the country. So the factory was built on a broad space at Hawthorne, a suburb, in Chicago but not really of it.

Waiting in the manager's office for a guide, we noted this request by the head official: "I want you to get the atmosphere of the place first, so as to form the right mental picture." He did not speak of size or method or

capital or product—he put first the essentials of mind and spirit. A small, unsuccessful business man would ridicule atmospheres and mental pictures, thereby remaining small and unsuccessful.

The sales last year amounted to \$135,000,000. There are over 28,000 employees. The Hawthorne works, in manufacturing 80,000 separate parts, consumes 1,500,000 gallons of water and 3,000,000 cubic feet of gas per day. Over 100 blank forms are used for scientific records of products, men, machines, departments. The floor space of the factory buildings aggregates 2,750,000 square feet.

Now contrast these elements of size with equally remarkable examples of attention to fine detail. Our guide observed in passing: "Nothing here is left to chance, everything is completely figured out ahead, with all possible contingencies, accidents or emergencies provided for. We blueprint the future and build accordingly."

Tables in the shop departments are overlaid with metal to prevent decay, defacement, or depreciation by wear. Shelves are made in a peculiar form to guard against deposit of dust. Globes on electric lamps are double, so if one should break the other would still afford protection from fire. In the oil storehouse, the floors are set a few inches low, to prevent escape of oil outside the rooms in case of possible leak in containers. The system of fire prevention has three divisions—water tower, sprinkler apparatus and regular firemen's department; so if one should fail, the other two volumes of water supply could be focused on the blaze.

Every inch of floor space is used to advantage by means of a preliminary blueprint trial arrangement, drawn to scale. Passenger aisles are separated from truck and train routes, that vehicles and pedestrians may not conflict. Machines and benches, miles

The chairman of the Western Electric Company, Mr. Harry Bates Thayer, began as a shipping clerk in 1881 and served in the manufacturing, engineering, buying, selling, accounting and legal departments

Murphy Varnish
for over fifty years the invisible preserver of beautiful surfaces.

Murphy Da-cote
MOTOR CAR ENAMELS

Imagine Your Car Freshly Painted!

RATHER different from its present forlorn, down-at-the heel appearance? Yet the car is probably as good as it ever was. All it needs is a new dress. Don't stop at imagining! Paint it! Do the work yourself in a few hours at the cost of a coat or two of

Murphy Da-cote Motor Car Enamel

The old boat will look like a new car in a glass case! And not so far out of the way at that. This wonderful enamel protects and beautifies like a coating of tough, glass crystal.

Repeated washings will not dim its lustre. It will wear as well as the original factory finish. Dries overnight. Easy to put on. No sags or wrinkles or brush marks. Made by the makers of the famous Murphy Automobile Varnishes. Most fine cars are finished at the factory with Murphy materials.

Da-cote is furnished in black, white and ten beautiful colors. For sale by dealers everywhere.

Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT, 311 Sixth Avenue, New York

of them, stand in a perfectly straight line, back to back, with each worker allotted the scientific elbow room and no more. Spaces between desks and machines allow delivery of material and supplies to each employee without crossing the path or place of any other.

A fine illustration of habitual thoroughness and effectiveness was pointed out to us by the guide. Many thousands of trees and shrubs were transplanted not long since to the property for shade, comfort and beauty; thirty or forty huge trees fifteen years old were included in the order to the landscape gardener, and not one of these full-grown trees was lost in the process of removal and re-setting! Could not so great and rich a concern afford to lose a tree or two? Financially, yes. But mentally and morally, no. To let a slight bit of carelessness mar a common shrub would have been to suffer a sense of defeat and chagrin. Their purpose was to move all the greenery to their lawn safely—and their plan, method, process, had to be such as to guarantee the fulfilment of their purpose. Great men do not measure greatness by the size of a result, they measure it by the quality of an act.

The buildings of the company were made to order, after consultation and approval of department heads, with trial operations of blueprint designs. For example, the stock building opens directly on the tracks of a railroad that runs thru the buildings, most of the time and expense of trucking being thus eliminated. The hospital was erected and equipment arranged on the principles of scientific management, a method so new and manifestly superior that from all parts of the United States medical men come to see for themselves how doctors can learn from corporation heads.

Only the best machines and tools are allowed to enter the factory. A poor tool makes a poor worker. Such a tool, when found, goes to the scrap heap.

A technical description of the manufacture of a telephone would require as a first aid outfit for the general reader a dictionary, a textbook on mechanics, a manual of electricity, and a philosophical treatise on the nobility of patience. We therefore desist. But mention should be made of the care taken to ensure that our telephone works right and gives long service.

Quality output is guaranteed by triple inspection. First the raw material is analyzed by experts, then the factory process and last the finished product. Samples of all raw materials are tested for the proper physical, chemical and electrical characteristics. The iron must be of a certain permeability, the german silver of a certain temper, the brass, nickel and copper of a certain ductibility, even the paper of a certain grain; otherwise, the materials would go to pieces at some stage of manufacture, would fail to operate in the assembled apparatus, or would show defect or premature wear in the hands of the customer.

At frequent intervals parts of the telephone are inspected during manufacture. The purpose is fivefold: to guarantee that only parts which will function right will be produced; to assure that all parts when finished can be assembled easily and quickly with no special fitting, and hence will be interchangeable; to provide parts which may be transformed into other parts if the originals are unsuitable; to detect errors in advance of the production of large quantities of faulty parts; and to prevent the operating loss that would result from passing on defective parts to subsequent modes of treatment. Contact springs are gaged for character of material and formation. Platinum points are held under high centrifugal pressure, to reveal permanence of welding. Holes to match others are measured for exact location.

How would you find the amount of plating on a piece of metal? For a layman, this would be about as easy as to compute smoke. When certain telephone parts are given a coating of zinc, rust will form at spots where the coating is thin; samples are therefore immersed in distilled, aerated water, whereby thin spots appear; and the parts are weighed; then stripped of the plating, then weighed again, to determine the precise amount of zinc deposit, which must equal that known to be requisite for non-rusting, non-flecking, durability.

Every piece of finished apparatus receives a check-up on the work of the assemblers, and a final operating test similar to that entailed by actual service. The viewpoint of the customer is held on the last inspection, while that of the manufacturer decides the technical points of the previous inspections. The double aim of all these inspections is that the customer shall be served properly and satisfied fully, and that the manufacturer may conserve material and man power. In the modern administration of business, no phase or act is wholly selfish, or wholly unselfish. The customer, the employer and the employee all gain from every transaction or operation.

The company has originated scores of ingenious, economical devices. For example, we note the packing box nailing machine. When, a few years ago, the volume of output from the Hawthorne factory became so large it couldn't be handled, two ways appeared out of the difficulty. More space would have to be assigned to the packing operation, with more men to box and ship the goods, or else a mechanical means would have to be invented that could do the extra work without extra labor and floor space. The bulk of the output was composed of standard apparatus, and the slowest jobs were packing, nailing and trucking. A line of boxes was specially made into which the apparatus would exactly fit, by standard multiple sizes; and by the use of an original design of cleat-work all packing materials such as paper, hay and excelsior could be left out altogether. This reduced the packing time over half.

A roller gravity conveyor and chute

Price 35c—

The Cost of a 60-Dish Package of Quaker Oats

A 60-dish package of Quaker Oats will cost you 35 cents.

A small fish will cost you about the same amount—enough to serve four people.

Three chops will cost you the same—only enough for three. And seven eggs at this writing cost as much as that 60-dish package of Quaker.

Mark the Food You Get

The package of Quaker Oats yields 6221 calories—the energy measure of food value.

The fish, eggs or chops which that 35c buys will not average one-tenth as much.

As a food they cannot compare with oats. For the oat is the greatest food that grows. It is almost a complete food, nearly the ideal food.

About all the human body needs is in oats in right proportion.

This is how the calory cost compares with other necessary foods, based on prices at this writing:

Cost Per 1000 Calories

Quaker Oats	-	-	-	5½c	Average Fish	-	-	-	50c
Average Meats	-	-	-	45c	Hen's Eggs	-	-	-	70c
				Vegetables					11c to 78c

The wise housewife's conclusion must be this:

The proper breakfast is Quaker Oats. It means supreme nutrition—foods that everybody needs.

And the 90 per cent that it saves on breakfasts can buy costlier foods for dinner.

Quaker Oats

Only 10 Pounds in a Bushel

Quaker Oats are flaked from queen grains only—just the rich, plump, flavory oats. We get but ten pounds from a bushel. You get

the cream of the oats, the maximum flavor, without extra cost, when you ask for this premier brand.

35c and 15c per Package

Except in the Far West and South

Packed in Sealed Round Packages with Removable Cover

BUY DIAMONDS DIRECT

FROM JASON WEILER & SONS

of Boston, Mass., one of America's
leading diamond importers

For over 44 years the house of Jason Weiler & Sons of Boston has been one of the leading diamond importing concerns in America selling to jewelers. However, a large business is done direct by mail with customers at importing prices! Here are several diamond offers—direct to you by mail—which clearly demonstrate our position to name prices on diamonds that should interest any present or prospective diamond purchaser:

1 carat, \$145.00

This genuine one carat diamond is of fine brilliancy and perfectly cut. Mounted in Tiffany style. 14k. solid gold setting or men's belcher style ring. Money refunded if this elsewhere for less than \$200.00. Our price direct to you ... **\$145**

Men's Green Gold Diamond Ring \$330.00

Perfectly cut blue white diamond of exceptional brilliancy mounted in new Octagon Gypsy setting in antique green gold finish. Hand carved. Diamond embedded in solid platinum.

A few weights and prices of other diamond rings:

1/4 carat	\$31.00	1 1/2 carats	\$217.00
3/8 carat	50.00	2 carats	620.00
1/2 carat	73.00	3 carats	930.00

Money refunded if these diamonds can be purchased elsewhere for less than one third more.

We refer you as to our reliability to any bank or newspaper in Boston

If desired, rings will be sent to your bank or any Express Co. with privilege of examination. Our diamond guarantee for full value for all time goes with every purchase.

Write today for this valuable catalog on **How to Buy Diamonds**

This book is beautifully illustrated. Tells how to select and buy diamonds. Tells how they mine, cut and market diamonds. This book shows weights, sizes and prices of a Million Dollars Worth of Diamonds.

A copy will be mailed to you **FREE** on receipt of your name and address.

In All Leathers

eliminated the trucking problem. The conveyor brings empty boxes in carload lots to the mezzanine floor of the packing room, and leaves them in piles of assorted shapes and sizes. The packing chief, when a truck of apparatus arrives, telephones up to the box dispatcher, who releases down the gravity chute the required number of specified boxes. A roller conveyor in the packing room then moves the boxes to the location of the apparatus to be shipped, and speeds the boxes filled with apparatus to the nailing machine. The attendant merely picks out a cover, places the lid on the box, presses a foot trip—and the machine does the nailing. Then the completed box runs of itself, down a spiral chute, to the storage floor beneath. By harnessing together the laws of gravity and mechanics, the company developed a transporting and nailing system that does the work of six or eight packers or nailers, and a crew of hand truckers.

SAVING time and money and boosting production are not, however, the main objects here. The man who puts efficiency first gets it last. Efficiency's motive power is character. And the heart of a corporation, as of a man, is the real index of character. But great corporations, like great men, hide their hearts. The most nearly accessible view of a corporation's heart may be found in the hospital equipped and maintained by the company for the employees.

The Hawthorne hospital has been declared by medical and surgical authorities a model in the union of science and solicitude for the patient. There is plenty of science in most well-organized hospitals, but a depressing dearth of kindness and affection, toward helping the sufferer to recovery. The practical, hard-headed man who showed us thru the Western Electric hospital said, right off the bat, with no apology whatever, that a primary factor in the management and treatment was the psychological effect on the patient. Fear is overcome by sympathy and kindness. Faith is developed by the knowledge that the best appliances, remedies and professional services to be had are given the patient, even at an emergency factory hospital.

The chief consulting surgeon, retained for general supervision and major operations, is a famous leader in his profession thruout Chicago and the West. The company refuses to hire young, cheap doctors who never built a good private practice on merit; rather, different specialists of Chicago, too skilful to be lured away from their own practice, are engaged to visit the hospital when a hurry call is sent. And the method of handling a patient, before and after the doctor's visit, aims to move the mind as well as body toward a state of health. Accidents are few. The big purpose of the hospital staff is to ensure the health of the workers by a modern system of precautionary examinations and instructions more regular, perhaps more complete, than usually offered by a family physician.

If a piece of regular hospital equip-

ment doesn't satisfy the company's doctors and engineers, they proceed to invent a new kind. For example, the X-ray machine ordinarily gives but two dimensions, width and length; in certain cases the measurement of depth also was needed, whereupon the officials devised a stereoscope attachment that did the work.

The science of employment engineering, while of recent date and limited adoption, is of universal importance. A factory should be tested first not by its methods and machines but by its men. Quality products are made by quality men. The service of these men are cheapest in the long run, thru increase of output and decrease of waste time, spoilage, error and labor turnover.

A man seeking a job at Hawthorne must be physically, mentally and temperamentally fit. Only 263 applicants in every 1000 are finally employed. This careful selection, by department chiefs, employment experts and physicians, tends to produce an aristocracy of labor, which, by the way, is the only real aristocracy.

The new employee is not shoved into a hard, unfamiliar job and told to get busy. Rather, he is introduced to a kindly, patient, careful instructor, whose first duty is to be courteous and attentive to the new man, the second duty being to train him for his job.

Meetings and classes come next. "We do not believe," said an official, "that the way for a man to get his gait is by stubbing his toes." New employees are given a daily lecture on such topics as nature and extent of products, growth and size of plant, history and purpose of company, manufacture of standardized parts in relation to finished product, working conditions such as hours and wages, accident prevention, disability benefits, recreation, promotion and education therefor, industrial relations, mental attitude of employees toward supervisors and associates. This corporation college, which might serve as a model in some respects for the great universities, was attended last year by 1800 student workers. The only real worker is a student worker and the only real student is a worker student. Thought and action, properly geared, are one. When you separate hand and head, you cripple both.

Analysis of every job in the Western Electric Works reveals the natural qualifications and scientific training essential to its mastery. "Who has these qualifications most largely developed, and how shall we give the best man the best training?" This problem the company sets for itself and solves for itself. No one method of vocational guidance and selection is employed, but a composite, more or less original plan of fitting the job to the man is based on the recent army tests and a correlation of the most practical features of other systems. The man picked for a higher job is then trained for it by class room study, and rotation of work in different departments. He is not told what is being done to him—the qualifying process must be his alone.

A young employee rose in a very short time to be assistant foreman. His friends were delighted, but couldn't see how it happened. They couldn't naturally enough—it didn't "happen." The youth was first an operator in the drill press department. He showed executive ability, and was transferred to the planning division, where he learned to figure on apparatus, correlate modes of manufacture and set piece rates. Then he was stationed in the production branch, learning there to follow parts thru the shop. Then he was made instructor, to acquaint himself with supervision methods. Later he was put thru the foundry and other departments, and finally he went back to the drill press department as a capable, competent assistant foreman. The company had slated him for the position when he was a beginner as a machine operator!

Men stay with a concern that helps to promote them. In the shop clerk's course of study, a record of graduates for the past two years marks a 50 per cent. reduction of turnover in their department. All instruction is on company time, the workers are paid for learning how to earn more; yet the cost of idle time, necessary space and equipment, and salaries of teachers is largely made up thru increase of man power and lessening of labor turnover.

A company's finest products are never sold, advertised or displayed. These products are *men*. The new president of the American Telephone and Telegraph Company is a Western Electric product. H. B. Thayer was a shipping clerk here, in 1881, at a \$10 wage.

After he had made good in a variety of jobs, he was elected New York manager, then vice-president, lastly president in 1908. He is now chairman of the company he served in the shipping, manufacturing, engineering, buying, selling, accounting, legal and other departments for a period of 38 years. When the American Telephone and Telegraph Company chose him as the best man to succeed President Theodore N. Vail, a group of thirty-two Western Electric men seated at the farewell dinner to Mr. Thayer boasted 661 years as their total period of Western Electric service!

The supreme growth of the company, from a little shop started fifty years ago to the mammoth concern of today, is accounted for by the president, Charles G. DuBois, in these words: "No business can permanently endure unless it performs an economic service. The life and growth of our business is evidence that it meets that test. We earned our high position in the industry, not by any artificial means, not by any favoritism, but solely because we developed better designs and made a better product. We have succeeded because we selected the right products to handle, because our policy was one of fair dealing with our suppliers as well as with our customers, and because we have always tried to build our organization to keep ahead of the service needs of our customers."

Chicago

Pennsylvania AUTO TUBE "TON TESTED"

THE "Ton Tested" Tube conforms perfectly to the contour of a casing. Properly inflated, it fits *any* casing with absolutely no sign of buckle or wrinkle.

Its remarkable tensile strength, quality uniformity, and elasticity have been proved by actual moving picture tests:

1—It lifted a five-passenger touring car and scaffold—total weight 2990 pounds.

2—A year later, it lifted a load increased to 3755 pounds.

3—It expanded to sixty inches in circumference—*twelve times the expansion required under normal driving conditions.*

Following these tests, not the slightest evidence of injury to the tube could be found.

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today. Brooks Appliance Co., 490-G State St., Marshall, Mich.

A Number of Things

By Edwin E. Slosson

The arguments of certain Senators against the League of Nations are strikingly similar to those brought against the Constitution of the United States, altho of course the Covenant is by no means so radical an innovation as the Constitution, and the opposition to it is not nearly so violent. But we might imagine a member of the New York Legislature in 1787, say a Mr. Dodge, making a speech of this sort:

We have heard, gentlemen, a good deal of vague and sentimental rhetoric about the necessity of a league of American States to secure the common defense and promote the general welfare. I am sure we sympathize with these lofty, if somewhat Utopian, ideals. In fact, I should be the last to recommend an unconditional rejection of the new constitution. With certain reservations and amendments, designed to secure our unrestricted State sovereignty, I believe that the constitution can be made acceptable.

Our first amendment is that, since each New England State is to be separately represented in the Senate, New York should have at least ten or twelve Senators. I am sure no one could object to that.

In the second place we must make it absolutely clear that we can withdraw from the new federation at will and that no Federal law shall have validity within our boundaries without the consent of this legislature.

Thirdly, no vote of a New York Senator or Representative on any question is valid unless it is cast under instructions by this legislature and thereafter approved by a two-thirds vote of the same body.

Finally, no soldier from New York may be required to do service outside his native state, and no declaration of war by Congress shall in any way affect us unless our legislature has given previous consent thereto.

If these slight reservations are not agreed to, every patriotic New Yorker will rally against the noxious novel doctrine of inter-Statism which is really but one step from internationalism itself!

The miraculous escape of Viscount French, Lord Lieutenant of Ireland, whom the Sein Feiners after fortifying their courage at a public house fired upon along a Dublin street, reminds one of the Irish priest who ended his sermon against liquor with the following peroration:

'Tis the drink that makes you neglect your farms. 'Tis the drink that makes you beat your wives. 'Tis the drink that makes you shoot at your landlords. 'Tis the drink that makes you miss 'em.

The free coinage of paper as now practiced by various actual or anticipatory governments of Europe is leading to curious consequences. Some of this currency is "not worth a continental." A candy manufacturer in Reval, Esthonia, is wrapping his chocolates in ruble notes of the "North West Russian Government," which General Yudenitch tried to establish in Petrograd; for this money is cheaper than white paper.

One of the American financial experts in Europe was approached by a Bolshevik who asked his advice in regard to a question that was troubling the Soviet Government. The daily expenses of the Russian Government, he explained, were 70,000,000 rubles, but their presses could only print 50,000,000 rubles a day, so the Soviet was running behind. What advice the American financier gave to the perplexed Bolshevik I did not hear, but the obvious remedy would be to print 100,000 ruble notes.

I had supposed that Adelina Patti made her final farewell tour in America several years ago, but it seems not, for she is reported to have appeared in the office of the American Society for Psychical Research at New York in the person of a medium whom she has endowed with her voice. This beats Svengali and opens up unlimited possibilities. We may soon see on the billboards: "The S. P. R. presents Jenny Lind at the Hippodrome."

Lloyd George in addressing the House of Commons said that the British Government was giving liberal aid to Admiral Kolchak, General Denikin and General Kharkov in their efforts to overthrow the Russian Soviet. If you can see the joke in this you know more about Russian geography than the Prime Minister of Great Britain.

The World's Round Table

(Continued from page 85)

SCIENCE: The World is learning a few things about life that are essential. The truth about the universe is what we need in order to fulfil our destiny. The Laboratory, the Telescope, the Microscope, will in time lift the World above the fogs and mists of ignorance. Educate the people in the truth about the universe. Discover the laws of existence.

THE AVERAGE MAN: I'm too busy with the daily struggle for existence to try to reform the World. I am the "Ultimate Consumer" whatever that is. No matter what happens I am the man who pays the bills. The cost of wars, strikes, increase of wages, government appropriations, the carrying on of all necessary charities and philanthropies comes out of my pocket. Really, if it were not for my home and wife and the kiddies, I would be tempted to get in front of somebody's car on my way down town and go to heaven "on high." But do you know, in spite of the profiteers and the hens that always have a corner nest on sixty cent eggs, I find life pretty good because of Home Sweet Home. There are some thirty million of me in the good old U. S. alone who have never applied for a divorce yet. My remedy for the World's troubles is a wife and kiddies

to love and work for and cut out the diamonds and limousines.

ALL PEOPLES: The rack and sorrow of the World have fallen on us. We are the Peoples. Millions of us despised, used for war, exploitation, and the ambition of the High and Mighty of the earth. We have no remedy. We are those who need it. Our cry goes up to God, if He is. Our hands are weary and our hearts are broken on the wheels of the World's passion and greed.

THE WORLD: You have all spoken, and discussion is in order. We will—

THE SON OF MAN (*interrupting: and coming forward to the head of the Table: The World rises, together with all the figures at the Table*): Ye children of men, hearken unto me. Among all these jangling voices, some of which have spoken partial truths, hear my voice, for I am the Truth itself. There is a remedy for the World's hurt, and it will heal. It is as simple as childhood, as strong as fatherhood, and as beautiful as motherhood. This remedy for the World's wrong and wrongs is LOVE GOD AND YOUR NEIGHBOR. Have ye never heard of that before, Capital, Labor, Politics, Science, the Press and all the rest? I

know this is the one remedy and the only one. Because before the World was I was. The World was made thru me, and without me was not any thing made that has been made. Therefore I speak with absolute authority. Come! Ye children of men! Apply this remedy to your politics, your journalism, your education, your money making, your amusements, and see how quickly and wondrously heaven will begin on earth. Have I not said, "If I be lifted up from the earth I will draw all men unto me"? Thru all the travail of the ages the groans of the Peoples and the heartache of the bewildered, I have stood behind the World holding in my hand the Remedy for all sorrow and the Life for all Death. Take it, ye children of men, and taste the abundant Life in this World that ye may have a foretaste of its joy hereafter!

(*The World bows in reverence. At a signal from the Son of Man all the figures around the Table kneel. Even Society and Extravagance cover their faces. The Son of Man takes his seat at the head of the Table. And there is no discussion, only the silence that belongs to God.*)

This little allegory can be used as a tableau, the figure of the Son of Man not visible, but outlined behind a curtain in a glow of light. The other figures can be costumed.

Uncle Sam. Money Lender

(Continued from page 82)

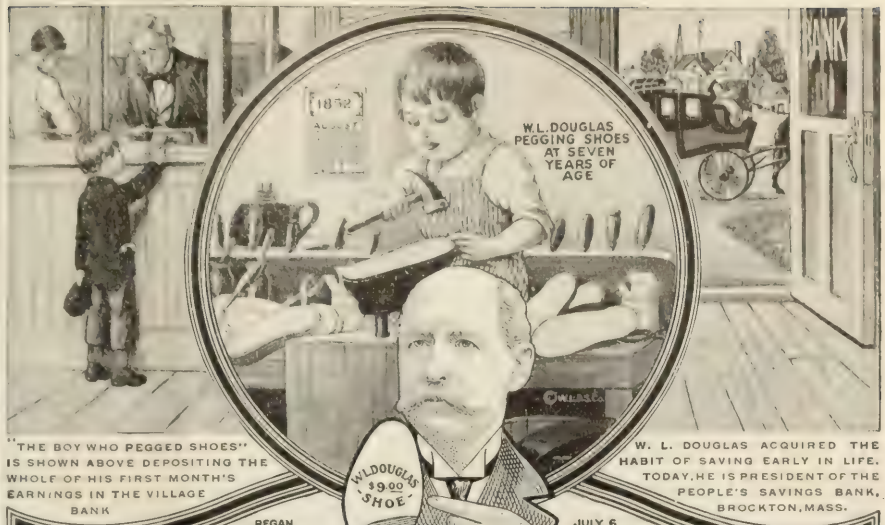

The War Finance Corporation now is making new loans only under Section 21 of the Act, which is the amendment, approved March 3, 1919, empowering it to promote commerce with foreign nations thru the extension of credits.

When the active prosecution of the war ended and the restoration of peace-time conditions began, it was evident that the serious drain of more than four years of warfare upon the resources of the European nations had left most of them without means for the purchase of food, raw materials and materials for reconstruction, which in large part would have to be obtained from the United States. It was also evident that it would take some time before the European nations could return to a peace footing and to exporting their own products in amounts sufficient to offset their imports.

THE export trade of the United States has a direct and important bearing upon our national prosperity, since the prosperity of the producers of materials which are exported in large quantities is reflected in the general buying power of the country and thereby reacts upon producers of many other materials which are not exported in appreciable quantities, if at all. The Managing Director of the Corporation appeared before the Sixty-fifth Congress and pointed out the urgency of the situation, recommending the extension of long-term credits to European buyers, by American banks or exporters, in conjunction with some form of governmental aid if need be, to enable such European buyers to purchase largely from the United States until their own production, and consequently their exports, could be restored to a normal level. It was felt by the Board of Directors of the Corporation that unless there was available potential governmental aid in the event of the inability of banking institutions to extend sufficient credit, there was danger of a collapse in our foreign trade, with a resultant injury to the internal business affairs of the United States.

The Congress accepted this view, and by the amendment to the original Act, empowered and authorized the Corporation, in order to promote commerce with foreign nations thru the extension of credits, to make advances of which there shall be outstanding at any one time an amount not exceeding \$1,000,000,000. These advances must be made under certain prescribed terms, to persons, firms, corporations or associations engaged in the business in the United States of exporting therefrom domestic products to foreign countries, or to banks, bankers or trust companies in the United States making advances to such persons, firms, corporations or associations for the purpose of assisting in the exportation of domestic products to foreign countries.

W. L. Douglas shoes are sold through 107 of our own stores direct to the wearer at one profit. All middlemen's and manufacturing profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W. L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. For twenty-six years it has been our practice to sell W. L. Douglas shoes in our own stores with only one profit. This has saved the wearers millions of dollars.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

Religion Among American Men

The material for this book was gathered under the direction of "the Committee on the War and the Religious Outlook"—consisting of such men as:

WILLIAM ADAMS BROWN
GEORGE W. COLEMAN
W. H. P. FAUNCE
HARRY EMERSON FOSDICK
HENRY CHURCHILL KING

FRANCIS J. McCONNELL
CHARLES S. MACFARLAND
SHAILER MATHEWS
ROBERT E. SPEER
WILLIAM DOUGLAS MACKENZIE

A questionnaire, which sought to obtain not only facts, but their meaning, was sent to chaplains, Y. M. C. A. secretaries, army officers and men. To the data secured were added the results of many interviews both in the A. E. F. and at home, and of an extensive correspondence. This mass of carefully analyzed evidence is presented as a challenge to the Church, and to the individual. Cloth, 1.50.

Missionary Outlook in the Light of the War

Also prepared by "the Committee on the War and the Religious Outlook."

The increased significance and urgency of the missionary enterprise; the changed outlook in every mission field; the new light thrown on missionary policies and principles—the discussion of these subjects by outstanding experts gives to this volume authority and inspiring power. Cloth, 2.00.

The Army and Religion

Edited by D. S. CAIRNS, D.D. Preface by the Bishop of Winchester.

"Perhaps, as never before, the British Army during the Great War represented a sort of cross-section of the nation's life. Here, then, was an exceptional opportunity for an enlightening analysis of an army that represented the life of the men of the nation itself. It would be difficult to represent the religious revelation and results of the war more skillfully and judiciously than they are presented in this report."—Robert E. Speer. Cloth, 2.00.

Are You Interested in Charting?

It is the new way of forming good judgment.

We have just completed the first revised edition of the Master Course in Business Charting, consisting of fifteen complete lessons and three lectures. Leading Business and University men have contributed in compiling the most approved Charting Principles in easy-to-understand style and instantly usable form. Thousands of dollars have been spent in gathering these valuable principles and in arranging them so that you can secure them for your own use at a very moderate cost. You can now instantly apply these principles to any problem or plan. They show you how to:

- 1—Understand quickly.
- 2—Think clearly.
- 3—Talk convincingly.
- 4—Do thoroughly.

Let us send you the first of these lessons absolutely free together with complete particulars; you will be under no obligation. Simply write us today and we will send you by return mail Lesson One in Charting Business Principles, FREE. Address Business Charting Institute, 700 Kestner Building, 717 North Wabash Ave., Chicago.

ing the passage of the above amendment, and until recent date, continuing loans from the Treasury of the United States to foreign governments, the sale on credit of supplies, particularly surplus stocks of the War Department, and the aid available from ordinary industrial and banking sources, covered the needs of the situation to such an extent that no direct advances from the Corporation were required, tho the potential powers of assistance which it possessed were exercising an influence in the development of future plans for export financing.

In recent months, particularly since the decision of the United States to make no more direct advances to foreign governments has been announced, requests from bankers and exporters for assistance from the War Finance Corporation have been received in increasing numbers, and applications for substantial advances have been granted.

It is evident that America's new position as a creditor rather than a debtor nation cannot be maintained without a large outlet for our products, and because of Europe's needs. It is at the moment our most important customer. Europe's buying power is now crippled by the demoralization of foreign exchange, resulting in part from a continuing excess of imports over exports.

Unless the gap can be bridged by providing credit until Europe can again produce and export, Europe's purchases from America must be reduced, with consequent injury to her recuperative powers. Not only because of the direct bearing of our exports on our domestic prosperity, but also because the world has been made so small by modern means of communication and the interconnections and ramifications of international finance, that no part of the world can enjoy peace and prosperity while another substantial part is in ruin, we must devote our best efforts to provide temporarily the necessary credit by which the gap may be bridged.

Substantial credits must be furnished by American investors and by American bankers and American exporters, and it must be realized the great bulk must come from these sources.

The War Finance Corporation is rendering assistance in proper cases to banks when necessary and to exporters, unable to carry the credit or to obtain funds from usual banking channels or from the general public, on reasonable terms. However, the Corporation's funds are in themselves inadequate to handle the entire situation, even were it desirable that it should do so. Its principal function is to serve as a reservoir of credit to be used only when necessary, in the interest of our foreign trade and of the resuscitation of Europe, to inject into the unprecedented situation that essential element of confidence which can be imparted best by an agency which is supported and controlled by the Government.

Washington, D. C.

"We Don't Want Nuthin' New"

(Continued from page 80)

place I object to such a bill because of my stand on states rights; secondly, because the people in my district don't want it; and thirdly, because I don't want it. I have never had one letter or telegram from my district asking me to vote for the bill. Not one. And we don't want any instructions from the outside as to how we should vote on any question."

"And what about Mr. Dupont's interest in this question?" I asked him.

"Well, I'd say that Mr. Dupont has a lot of influence," he said. "I guess he could swing the votes if he really wanted to."

But by the time I had reached the hall on my way to the Senate, I heard Sussex men already resenting the implication that Alfred I. Dupont or any other man could change their votes.

In the Senate I found Senator Price, the only Democrat in that house who has announced himself as a suffrage man. I tried to make him talk about the situation. He was far too modest. He has always been for suffrage and no one could make him change his vote. Beloved in his community at Smyrna, he has nevertheless been besieged with letters and even threats from politicians to boycott his business unless he change his vote. Still he remains in the suffrage ranks. He smiled rather hopelessly when I asked him about the other Democrats in the Senate, and very firmly repeated that he would always vote for suffrage himself.

The fight against the amendment in the Senate is supposed to lie largely in the hands of Senator Ghormley, a staunch Democrat. States rights has been rankling in his heart and brain ever since he realized that the colored people got the vote thru a Federal amendment.

"I tell you right now," he told me, "if the question of the colored vote were submitted by referendum to the people of this country there wouldn't be another colored man voting—not in the North or the South. Everyone knows what it is to have the colored people voting, and they'd just take the vote away from them. Any state that wants to be giving suffrage around can do it, but they haven't any business coming here to tell Delaware what to do. Why don't they stay at home and tend to their own business?"

"What would we do with a lot of women in Congress, that's what I'd like to know. Yes, that's what women want. They want to get the vote and then get into Congress. And then they'd be declaring a war. Now, just tell me, if you've got wits enough to do it, who'd do the fighting for them, hey? I wouldn't. You'll not get this amendment thru the Delaware legislature, I'll tell you that."

But in spite of Senator Ghormley's convictions, Delaware, the first state to sign the Federal constitution, may yet remain "true to her traditions" and be the last to ratify the amendment.

NAME

ADDRESS

STATEMENT OF THE OWNERSHIP, MANAGEMENT, etc., required by the Act of Congress of August 24, 1912, of The Independent, published weekly at New York, N. Y., for April 1, 1920.

State of New York, } ss.
County of New York, }

Before me, a notary public in and for the State and county aforesaid, personally appeared Frederic E. Dickinson, who having been duly sworn according to law, deposes and says that he is the Secretary of Independent Corporation, owner of The Independent, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business manager or publisher, Independent Corporation; Editor, Hamilton Holt; Managing Editor, Hannah H. White; Business Managers, none, all of 311 Sixth Avenue, New York, N. Y.

2. That the owner is Independent Corporation, 311 Sixth Avenue, New York, N. Y. Names and addresses of stockholders holding 1 per cent, or more of total amount of stock: Charles B. Alexander, 165 Broadway, New York, N. Y.; Wesley W. Ferrin, 311 Sixth Avenue, New York, N. Y.; Hamilton Holt, 311 Sixth Avenue, New York, N. Y. The Stadrons Company, 99 John Street, New York, N. Y., a corporation, the capital stock of which is all owned by the Estate of James Douglas.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent, or more of total amount of bonds, mortgages, or other securities are: none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

INDEPENDENT CORPORATION,

FREDERIC E. DICKINSON, Secretary.

Sworn to and subscribed before me this 30th day of March, 1920. JOSEPH J. KOELBEL, Notary Public, N. Y. County, No. 254. New York County Register's No. 2,143.
(My commission expires March 30, 1922.)

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government to the American People. Uncle Sam, Money Lender. By Eugene Myer, Jr.

1. Prepare a clear definition of "The War Finance Corporation."
2. Define every one of the following words: aggregating, termination, participation, ramification, unprecedented.
3. Explain the derivation of every one of the words just named. Explain how knowledge of the derivation of a word adds to one's understanding of the word.
4. Analyze the last sentence of the article. Give especial attention to the infinitives and to the phrases.

II. A Message from the Italian Government to the American People. For Our Mutual Benefit. By Guglielmo Marconi.

1. Explain the following sentence: "A small cloud has arisen on the horizon of our friendship." Name the figures of speech that occur in the sentence. Tell why the figures are appropriate.
2. Point out at least two antithetical sentences. Tell what thought is made emphatic in each sentence.
3. Write the brief for an argumentative composition on the following thesis: "An increase in the commercial relations between Italy and the United States would be of mutual benefit to the two countries."

III. The World's Round Table. An Allegory. By Rev. Charles M. Sheldon.

1. What is an allegory? What age of English literature is called "The Age of Allegory"? Name some of the famous English allegories.
2. Name at least three allegories that are usually read at some period in the school course. Explain the meaning of any one of these allegories.
3. Assign the parts of the present allegory to various members of your class. Ask the others to join with you in trying to read with proper emphasis and expression. You will find the allegory appropriate for your school assembly.
4. Prove that Dr. Sheldon's allegory rises to climax.
5. Condense into a single, expressive sentence the principal thought presented by every character.
6. In what respects is allegory an effective means of presenting serious thought?

IV. Master Workshops of America. Good Pointers for Your Own Business. By Edward Earle Purinton.

1. Imagine that you are the superintendent of a factory. Draw from the article a number of "good pointers" for your business. Arrange these "pointers" as numbered parts of a bulletin to be posted in your factory.
2. Draw from history or from literature examples that will support the proposition, "Success is likely to come to those who are anxious to do good rather than to those who are anxious to make money."
3. Invent an original "anecdote" to illustrate the following sentence, "The way for a man to get his gait is by stubbing his toes."
4. Draw from the article a series of epigrams. Tell what is effective in the writing of every epigram.

V. The Best Person in Our Town.

1. In a single paragraph write a character sketch of the Hon. E. J. Meyers.
2. Draw from the article a series of propositions that you believe are worthy of adoption in your school.

VI. "We Don't Want Nuthin' New." By Clara Wold.

1. Explain in what ways the title is effective.
2. What is the purpose of the first four paragraphs?
3. Write the proposition on which the article is based.
4. Write, in parallel columns, the arguments that are indicated for the affirmative, and the arguments that are indicated for the negative.
5. Show how the article makes effective use of direct quotation.

VII. The Story of the Week.

1. Prepare to give a short talk on any of the following subjects: The Candidates for the Presidency; Recent Events in Ireland; The Franco-German Crisis.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. American Political Problems—"Unconsidered Candidates," "With the Third Parties," "The Shame of Albany," "Majorities by Bluff."

1. Read the chapter in Bryce's American Commonwealth entitled, "Why Great Men Are Not Chosen Presidents." Does the present situation bear out Bryce's observations?
2. What is the basis of the organization known as "The Committee of Forty-Eight"? In your judgment, will this organization seriously affect results at the coming election?
3. What justification can be offered for the action of the New York Assembly in expelling the five Socialists? What will be the probable political result?
4. In view of the action of the New York Assembly, are we justified in saying that our institutions are the most democratic in the world?

II. The Nineteenth Amendment—"We Don't Want Nuthin' New," "Delaware Hesitates."

1. What general impression do you get about political conditions in Delaware? Compare these conditions with conditions in your own State.
2. Review briefly the history of the Woman Suffrage Movement for the past twenty or thirty years.

III. Uncle Sam, Money Lender.

1. What was the original purpose of the War Finance Corporation? What was the purpose of the amendment of March 3, 1919?
2. Show that "the export trade of the United States has a direct and important bearing on our national prosperity."
3. Why, under present conditions, is it necessary that "Uncle Sam" act as banker in financing foreign trade?

IV. For Our Mutual Benefit.

1. According to Marconi, what is the chief reason for the misunderstandings between the people of this country and of Italy?
2. Why does he believe that "Italy is a country which it will pay to help"?

V. Home Rule for Ireland—"The New Home Rule Bill," "The Irish Crisis," "Glass Houses."

1. Compare the present Home Rule Bill with those of 1886, 1893, and 1914.
2. What political changes have taken place in Ireland since the passage of the Act of 1914?
3. If the present Home Rule Bill passes will it settle the problem of the relation of Ireland to the Empire?

VI. Socialists Win in Denmark.

1. Compare the recent Socialist demonstration in Denmark with the revolutionary demonstrations in Germany and France in 1848. What differences do you note?
2. Review once more the history of the Schleswig-Holstein question. Why has the attitude of the Danish people toward these "lost provinces" been different from the attitude of the French toward Alsace-Lorraine?
3. What other parts of Europe present problems similar to that of Schleswig-Holstein? Why are these problems not being settled in the same way?

VII. The Best Person in Our Town.

1. On what grounds does the writer declare that the mayor is the best person in Minneapolis? Does the mayor of your city compare favorably with him?
2. What did Mr. Meyers do for the public schools of Minneapolis? What has your own mayor done for your schools?

VIII. Reactionary Liberals.

1. What, in your judgment, was the author's purpose in writing this editorial?
2. What are the facts which justify the assertions in the second paragraph?
3. Look up the programs of the revolutionists of 1848. Do these programs justify the author's assertions?

IX. Latin-American Affairs—"Central American Politics," "Peru and Bolivia Shake Hands."

1. What special interest has this country in the affairs of the Central American states?
2. In which of these states has the United States directly interfered?
3. Does the Monroe Doctrine justify our offering "friendly mediation" in the affairs of Bolivia, Peru and Chile?

New Plays

Three Showers. Super-musical comedy with really good music and really good comedy. Clean, wholesome and heart-warming. (Harris Theater.)

Ireland a Nation. A combination of "speakies" and movies to promote sentiment for the "Irish Republic." Propaganda naked and unashamed. (Lexington Theater.)

The Night Lodging. All the world is reflected in Gorki's picture of the underworld as the entire landscape is mirrored in a muddy pool. Perfectly staged, admirably acted and tremendously effective. (Plymouth Theater.)

Ed Wynn reaches the pinnacle of a comedian's ambition in *Ed Wynn's Carnival*, a musical show which gives the hero the center of the stage 80 per cent of the time and gives the audience at least one laugh a minute. (New Amsterdam Theater.)

Remarkable Remarks

QUEEN MARIE—Our pockets are empty now.

CHARLES M. SCHWAB—I believe in the bonus system.

JOHN BURROUGHS—I expect to live to be 100 years old.

W. J. BRYAN—No military man can be elected President.

GEORGE SYLVESTER VIERECK—France is trembling in her boots.

LOUISE POWELL—Seventy-five per cent of the women propose.

HERBERT C. HOOVER—I'm a common garden variety of citizen.

SUSANNA CROCKETT—I have reduced the weight of 40,000 women.

J. G. HUNEKER—A plumber isn't necessarily superior to a poet.

J. A. HOBSON—All taxation should be directly laid upon surplus.

GABRIELLE GUENTHER—I get along perfectly well without my legs.

JOHN J. MCGRAW—I do not predict that we will win the pennant this season.

ROBERT QUILLEN—The honeymoon is at an end when the kiss has lost its kick.

HAZEL R. CADES—The time has gone by when "jewelry" meant fourteen-karat gold.

REV. DR. STRATON—Our young people are in danger every time they turn around.

PAUL S. REINSCH—The Soviet Government has been very tolerant in religious matters.

ROY K. MOULTON—What has become of the old-fashioned man who used to own

two pairs of trousers, both with suspenders?

J. EDGAR PARK—LL.D., Ph.D. marries M.A., Litt.D. and their son is Fiddle D.D.

ALLEN DALE—Everything swishable has been removed by the insensate dictum of fashion.

MRS. HERBERT HOOVER—I do not approve of my husband's running for the Presidency.

DR. WILLIAM S. WELCH—Until a man is 100 years old he ought to take his birthdays very lightly.

SENATOR WADSWORTH—There are something like 35,000 typewriters stored around Washington not in use.

JOHN D. ROCKEFELLER, JR.—We must aid the girls in this land in getting an equal chance to go right.

THEDA BARA—I do not breakfast on nightingales' tongues and blue birds' eggs, but on sausages and potatoes.

REV. PRESERVED SMITH—"Seein' things at night" has become one of the favorite indoor sports of the British and American public.

JOHN J. GLEASON, Abbot of the Friars' Club—John McGraw, the leader of the New York Giants, is one of the country's greatest characters.

GEORGE W. NORRIS—As long as mechanics wear silk shirts and stenographers wade thru slush in satin slippers, the high cost of living will stay up.

RICHARD CROKER—As for Hoover, the machine won't back him and he can't do anything unless he breaks the machine and probably that couldn't be done.

Just a Word

We tried to be too intelligent when we wrote the caption under Captain Hanson's photograph published in *The Independent* of March 27! And we pay the penalty of an apology herewith!

Captain Hanson took part in only one major engagement overseas, the Meuse-Argonne. We made the statement that he had been in three on the strength of the three stars on his campaign ribbon—which proves incidentally that you mustn't believe all that your returned soldier friends tell you. One of Captain Hanson's stars stands for a citation received while he was in France for (as he modestly explains) "doing my work in a generally satisfactory way while at headquarters." In recognition of historical writings on the war Captain Hanson was decorated by the Italian Government with the Cross of a Chevalier of the Order of the Crown of Italy, and by the French Government with the citation and medal of an *Officier d'Academie*, Order of University Palms.

STEINWAY

The Instrument of the Immortals

IN those homes where the compositions of the Immortals are known and loved and kept living—where fine music is daily food for the soul—there you will find the Steinway. It is but natural that this, the piano of the Immortals—the choice of such men as Liszt and Wagner and Gounod—should be also the choice of those who know and love and cherish their music.

Those Desperate Days at Chateau-Thierry

The First Complete Story of Our
Combat Operations

By Captain Joseph Mills Hanson

The American
Distinguished
Service Cross

WHILE General Bullard's First Division, at the apex of the salient which the Germans had driven toward Amiens in their March offensive, were there bringing to a conclusion on May 30 the first victory of American troops in an offensive operation, on another part of the front nearly one hundred kilometers from Cantigny, the Second and Third Divisions were just about entering upon the defensive battle which will ever make memorable in American and in world history the names of Chateau-Thierry and Belleau Wood.

General von Ludendorff, the German commander-in-chief, continuing to use superior numbers in huge and violent offensives in the hope of crushing the Allies before the hosts of America, pouring across the seas, should change the balance, on May 27 had directed his armies of attack against the Chemin des Dames front with the expectation, by the one blow, of bringing about the fall of Reims, already closely invested on the north and east, and of further encircling Paris, cutting it off from Verdun and the armies of the east and multiplying the threat to the French capital which had been created by the formation of the Amiens salient in the early spring.

The massing of the German troops was so skilfully concealed that the French had no warning and hence failed to reinforce the four depleted divisions of their own Eleventh Corps and four divisions of the British Ninth Corps which, in the supposedly quiet sectors of the Chemin des Dames, were recuperating from their recent hard fighting in Picardy and Flanders. The First and Seventh German Armies, of the Army Group of the Crown Prince of Germany, with a potential strength of 200,000 men, fresh, re-equipped and reorganized for the

battle, broke thru this line, nearly fifty kilometers in length, as if it had been paper and rolled southward like an avalanche. For several days nothing could stop them. The French divisions hurried into the gap proved inadequate and were swept back. By the 30th the fruits of German success amounted to between 30,000 and 40,000 prisoners and 400 guns, and the German armies had achieved a southward penetration of more than fifty kilometers. Paris, innured thru centuries to danger and heroism, came as near to panic as it ever could come and thousands of people left the city.

But the supreme commander to whose hands was committed the salvation of the Allied cause remained master of the situation in that darkest of all hours. Marshal Foch could not use all of his slender accumulation of reserves to stop this attack, for the enemy, holding the initiative and operating, moreover, on the interior lines,

might begin another offensive elsewhere. But the Marshal made every division which he put in count. As the Germans approached the distance from their jump-off which previous drives had shown to be about the limit of their initial spring, he endeavored to have everywhere enough troops to stop them. The stout defenses of Reims, tho at-

This is the second of ten articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France—a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the line from Cantigny" was published in The Independent of March 27. The others will follow in the fourth issue of every month

tacked on the east as well as on the north and west, held firm and southwest of that city the enemy was halted in the hill country leading up to the Mountain of Reims. On the other side of the salient fierce opposition prevented him from widening his conquests in that direction beyond a line from Fontenoy, on the Aisne, southward along the edge of the Villers-Cotterets forest.

The crevasse was being gradually dammed in, but the Germans at the spear-head of the drive were still approaching the Marne at Chateau-Thierry and the

This sketch by Captain J. André Smith shows Chateau-Thierry from the hills south of the Marne—the course of the river marked by the line of high buildings. During June and the first half of July, 1918, the Americans held the part of the town south of the river, the Germans the part north of it and the hills in the distance, over which they were eventually driven in retreat by the American and French troops. The Church of St. Crepin, whose tower stands out in the middle distance, dates from the fifteenth century. The line of trees along the hillside at the far right marks the highway from Chateau-Thierry to Soissons. The cutting of this road was the first objective of the Allied attack of July 18 in which our First and Second Divisions held the place of honor

plateau between the Marne and the Ourcq, with almost unabated velocity. Their artillery had already stopped traffic on the great main railroad line from Paris to Verdun and eastern France, where it paralleled the Marne. If they could cross that river and continue to spread southwestward there was no telling where they might be stopped short of Paris, if at all.

Among the few last reserves in a situation to be used by Marshal Foch were the Second and Third United States Divisions, instantly placed at his disposal by General Pershing when the acute crisis developed, the 26th and 42nd Divisions being already in line on other parts of the front. The Second Division, Major General Omar Bundy commanding, was at the time northwest of Paris, on the march to relieve the First Division at Cantigny. But on May 31 it was ordered, instead, to hasten to Lizy-sur-Ourcq, the infantry by trucks and the artillery by marching. Next morning, passing thru that place, by roads encumbered with troops and convoys of fleeing refugees, the infantry debussed at Montreuil-aux-Lions, about fourteen kilometers west of

Chateau-Thierry on the main highway running thru that city between Paris and Metz.

This front was being defended by the 21st French Army Corps, General Degoutte, of the Sixth French Army. Hard fighting was in progress a few kilometers to the northeast, where the badly outnumbered French troops were retiring before the German advance. It was imperative that the enemy should be stopped and before evening the Second Division, ignoring intrenchments, had occupied a line curving round over the hills from a point on the Marne five kilometers below Chateau-Thierry, thru Le Thiolet and Lucy-le-Bocage to the woods of Veuilly, twelve kilometers to the northwest. Lack of troops made this very widely dispersed front temporarily necessary and three regiments were in line; the Ninth Infantry, Colonel Leroy Upton, on the right; the Sixth Marines, Colonel W. C. Neville, in the center, and the 23rd Infantry, Colonel Paul B. Malone, on the left, with only one regiment, Colonel A. Catlin's Fifth Marines, in reserve. To the left of the Second lay the 43rd French Division, parts of [Continued on page 149]

"Welcome, Stranger!" Said Little Old New York

A Man to Man Story of How the Big Town Struck a Texan

By Chester T. Crowell

Illustrations by W. C. Morris

IF the city of New York cared whether it pleased me or not it would have been extremely nervous early last December when I came romping in from western Texas, never having been north of the Red River between the ages of six years and thirty. For the information of those ignorant persons unacquainted with the greatest state I will explain that the Red River is a part of the northern boundary line of Texas.

Like most folks I had heard of New York—and most of what I had heard was uncomplimentary. Persons who have made a living in New York always tell terrible tales about it, when they go away, for the same reason that Cæsar always devoted a paragraph of tribute to the bravery of the people he conquered.

I came to New York for the same reason that the crowd gathers when a street car runs over a man. I wanted to see just how horrible it was. But I like it! Not all of it. But most of it. This is the best market for ability and the poorest place for mediocrity in the world. There are about two million people here who would be in luck if they were in jail in Texas instead of holding down not-quite-starvation jobs here. And I know a dozen or so men and women in Texas who ought to be here even if they came on freight trains and arrived hungry. Before I had found Fifth Avenue I was making \$5,000 a year. It's easy. It's a cold-blooded, efficient place where what you can do means more than anything else. That's why it has drawn upon all the world for brains. People complain of this ruthless spirit of efficiency. That's its greatest asset. That is why every young man or woman who asks nothing but opportunity should pronounce its name with reverence. I know. I've seen places where your grandpa's name was worth more than anything else. I thank the god of youth that such places are nearly all gone the way of the dodo.

But I don't like all of it. The worst thing I know about New York is that there are no lawns around the dwelling houses. I knew there were tenements in New York, but I didn't suppose any people on earth would pay more than ten dollars a month for living quarters without a front and back yard if they had children. I'm still a greenhorn, but it seems to me that if I can't have a house all to myself with some rose bushes in front of it I'd as soon live on lower Second Avenue as Riverside Drive. What difference does the neighborhood make when the people are not neighborly? I am not complaining because they are not neighborly. In fact, that's one of the things I like about New York.

I came to New York for the same reason that the crowd gathers when a street car runs over a man. I wanted to see just how horrible it was. But I like it!

Persons who have similar tastes can spend a nickel in the subway and find each other with amazing speed. The idea that the family next door must be intimate with you is all rot. They may love a phonograph; you may dabble with a wireless outfit. My soul writhes when I think of the tortured hours I have wasted trying to live up to the small town obligation of being a neighbor.

It seems to me that New Yorkers like to complain and appear blasé and "roast the service." I am certain that the elevated and subway will hold my admiration and appreciation as long as I live. And Fifth Avenue busses are pure bliss. I am never weary of fast trains. I marvel at them today just as I did when I was a child. And the cheapness of travel, not its high cost, is what challenges my attention. I have traveled overland in a wagon, on horseback and afoot. That makes quite a difference in point of view. The trains here are

remarkable and the roadbeds smooth as a table. Nor is the cost of living higher than I have found it elsewhere. I can get more and better food in a restaurant here for one dollar—or twenty dollars; whether one wishes to spend carefully or lavishly this is still the best market in which to buy.

I like the way traffic is handled. One can cross Fifth Avenue at half past five o'clock in the afternoon with more security than he could cross Elm Street in Dallas at the same hour.

In a previous paragraph I said the people are cold blooded. That is not quite true. They are as generous as any I know and as kind hearted and polite. But they are under no misapprehensions about which is charity and which is business.

The offices of New York City amuse me, especially the large ones. The office system announces its presence with a shriek. Every executive seems to have a ready-made system and to be admiring it enthusiastically while I study their faces to see if they are not deluding themselves and if they would not be more honest if they groaned under the load of it. My idea of an office system is something that grows and is intimately bound up with what I shall call the spirit of the institution. Office system is no stranger to me, but when I see so plainly that some outsider imposed the system on a group of innocent victims of the fetish of efficiency I wonder how they tolerate it so patiently.

I feel sure that I have several times had more efficient organizations than I have seen here without one-tenth the thought which is devoted to the subject

in New York City. Big organizations pay a fearful cost for their bigness. And so do big cities. New York impresses me as too big to be efficient, judged as a community. Think of the billions of hours spent in riding to and from work, the millions of tons of coal turned into power and electricity to be used while the sun is shining! I am appalled at the gigantic investment in provision for the swarming population to take rides that they do not enjoy. If people had to pay ten cents to ride in the subway on pleasure jaunts they would think it a marvel of cheapness. The row about the fare is really a protest about the conditions of life in a place that is overcrowded. They are angry about their wasted hours in the subway or on the elevated. When a suggestion is made about raising the five cent fare a storm breaks. That is my guess. Perhaps I had better add that my only connection with the transportation interests is that of steady customer.

I like the shows in New York. Most of them are pleasant piffle, to be sure, but that is what I like about four times out of five. And when the fifth time arrives I am not disappointed. It seems to me the proportions are well maintained to suit human requirements.

THE climate is superior to anything I have ever found in Texas or Old Mexico. This air makes a man feel alive all over. This winter has been an unalloyed joy, snow blockades and all. And the succession of cloudy days makes a book look so good I actually fondle it as I sit down to read. In the southwest, month after month passes without a cloudy day. Unless you have endured the glaring sunlight for the larger portion of a year you cannot understand how restful to the nerves an overcast sky can be. The heat of a Texas summer is not uncomfortable; it is the glare. The heat in the south is much exaggerated in the north. Many Texans have told me they have suffered more discomfort in Chicago or New York than they ever did in Texas.

Reverting for a moment to the subject of homes—I spent about a week wondering how the people would get out of these rows of houses in the event of fire. A row of houses all stuck together still looks to me like a penitentiary or state institution of some sort. No answer suggested itself and I card indexed the question for future reference. During February New York had a normal crop of winter fires and my question was answered. The people don't get out. They burn up—unless the firemen arrive in time to carry them out. In some ways New Yorkers are rather stupid. They exalt land above human life. After they have jammed themselves into such a small space they create the highest land values on earth, they complain about the rent.

I know New York is a good place for me, but I think my stenographer and the file clerks and the telephone girl and the elevator man and the mail carrier ought to leave. I know where they can make just as much money as they make here—same jobs—and buy nice little cottages for the rent they pay. And they could see the same movies two weeks after Broadway sees them. All around them would be opportunities to invest fifty or one hundred dollars in safe investments with themselves as sole owners and the profit anywhere from five to five hundred per cent a year. I am talking about land. Land is the surest investment I know of that also has gambling possibilities. It may prove a bonanza, but if you hold on you can't lose. Men and women ought to

own something, and land is the best thing in the world to own. Texas has it at all prices. But don't make any long range purchases. Buy where you live.

People in New York seem to divide themselves on the basis of wealth. Birds of the same income flock together. That is sensible and practical, but it is carried to the point of worshipping the upper rungs of the ladder with a frankness that astounds me. For instance, when a snowstorm left traffic paralyzed there seemed no doubt in anyone's mind that Fifth Avenue must be dug out first. Texans would have given first attention to streets around the hospitals, post offices, freight and passenger stations and those streets where the greatest number of people with the least means to stand the hardship resided. In New York apparently public opinion says diamonds and silks are necessities of life ranking above milk and mail. As I write these lines—weeks after the storm—Thirty-ninth Street, in front of one of the most important post offices, is still in fearful condition. Texas would have gone after that snow on the basis of the quickest relief for the greatest numbers. There would have been no possible question about procedure. New York digs out the wealthiest first. Some of the street car lines in the poorest section of the city were still covered with snow on March 3.

Division on the wealth basis here is inevitable. Every community does that—more or less. But the extremes of both wealth and squalor in New York call attention to this division sharply. The man who doesn't like the brutal frankness with which New York divides has a much better remedy than to turn Bolshevik. He ought to go farther inland. New York is not at all representative of the United States. Often I think it needs only a language all its own to be a foreign city to me. Certainly it is the least democratic place I have ever seen. The Americanization crusaders ought to begin by explaining that this city is—well, New York, with its own problems, virtues and vices, and not the nation. I am almost as much a stranger here as an Italian immigrant.

NEW York is frank about the division on the wealth line just as Texas is frank about the color line. We have certain very definite ideas about our relations with negroes and we put them on the statute books in the form of Jim Crow laws and anti-miscegenation laws. The result is peace and understanding. It is my observation during my few months of travel in the north that northern people have almost exactly the same ideas about their relations with negroes that Texans have, but no plain statement of them is made; hatreds, misunderstandings and clashes follow when the negro does what the north insists he has a right to do—in theory.

Having heard people from the north discuss the so-called race question I supposed there was no color line up here. When northern people discuss the status of the negro in the south they make the baldest and most naive misstatements of facts one would care to hear. Let me make clearer by specific statements what I mean about the treatment of the negro in the north.

In theory he is accepted without reference to a color line. But in practice he finds one white man who shakes hands with him, sits at the table with him, apparently knows no color line, and the next white man does nothing [*Continued on page 145*]

Think of the thousands of geniuses who have perished because they didn't get to New York!

Woman's Place Outside the Home

A Message
from the United States Government

By Mary Anderson

Director of the Women's Bureau,
United States Department of Labor

Welding is a supposedly man's job that a woman can do just as well. The war put many women into factory work of this sort, and they are staying in it

ANY estimate of the number of women who have entered into gainful occupations during the last ten years will be largely a matter of speculation until the census figures of 1920 are published, but if we take the increase as reported by the census between the years of 1900 and 1910 and add that amount for the last ten years, we get an estimate of over 12,000,000 women in gainful occupations. This is a very conservative estimate as without doubt the increase has been larger during the last ten years than it was previously, for it is a well known fact that women have recently entered into the industrial field at a more rapid rate than ever before. There is practically no industry in which women are not engaged in some processes at the present time.

Many problems of women's employment, therefore, come to the Women's Bureau for special attention. How to utilize this woman-power to the best advantage to the nation but still guard against exploitation which will eventually undermine the health and efficiency of the women workers, became such an important question that it led to the creation of the Women's Bureau in the Department of Labor, in July, 1918. This Bureau was created during the war by an appropriation from Congress upon special recommendation of the Secretary of Labor. Such a bureau had been asked for by the working women thru their conventions since 1909 and a bill for its establishment was introduced in Congress in 1916 but was not passed.

The Women's Bureau is charged with the responsibility of developing policies and standards which shall promote the welfare of wage earning women, improve their working conditions, increase their efficiency and advance their opportunities for profitable employment. The Bureau investigates and reports upon all matters pertaining to the welfare of women in industry and publishes the results of these investigations. It main-

These women employed as house painters wear a uniform suited to the job, except for the high heels

One improvement that has followed women in industry is adoption of devices to lessen accidents. Note the screen over the machine belt, and the trim uniform

tains close contact with other agencies such as other divisions in the Department of Labor and State Departments of Labor, which deal with special phases of the problems attending the employment of women in industry.

The first work undertaken by the Bureau came after a request to the Department of Labor from the Employ-

ers' Association of Niagara Falls. The very day the Bureau was being organized the employers in certain chemical industries in that city wanted permission from the Government to employ women at night, which was forbidden by the law in New York State. The chemical industries were very essential to the effective prosecution of the war and it was important that nothing should be decided which would handicap them unnecessarily. At the same time the labor laws of the State must be upheld and the health of the working women safeguarded. Therefore the first task was a very large one for the little Bureau which was just being organized. The report of this investigation was printed as Bulletin No. 1 and the findings included recommendations for a general improvement of certain conditions in the industries, so that the work would be made less hazardous and disagreeable for all workers. The employment of women at night was not recommended, and moreover, on some processes which were clearly detrimental to the health of women it was recommended that their employment should cease altogether. Many questions of the adjustment of work and working conditions to permit of the satisfactory employment of women were also referred to this branch of the War Labor Administration.

Realizing the need for a definite statement of standards which should be met in establishments where women were employed, one of the first tasks undertaken by the Women's Bureau was the formulation and publication of a statement of such standards. Some of the fundamentals which are [Continued on page 154]

A Message from the Imperial Japanese By T. Yamamoto, Minister

Paul Thompson

These tea-pickers don't look overawed by their importance in international relationships. But as Dr. Yamamoto points out, America's need of Japanese native products (tea especially) is significant of continued good will between the two nations

SO much has been written and said on the political side of the relations between Japan and the United States of America that I am tempted by the opportunity offered by The Independent to appeal to the more practical side for a judgment and attempt to give what seems to me a cogent reasoning against the continued attempt to create a breach between us.

At present and during the last decade at least, but I am inclined to think that thruout the whole period since Japan first opened her doors to international or foreign intercourse, the commerce of America has occupied the first and most important place in the foreign trade of Japan. In almost every sense this would seem to constitute a reply to the sower of seeds of ill will. Let us give both sides credit for being practical. In all the history of international intercourse, exchange of production has been the foundation—the reason for maintenance of good relations. From the Japanese point of view, therefore, good relations with America constitute a *sine qua non* in all considerations for the present and certainly, so far as all indications go, for the future. I appeal to the practical common sense of America for any good reason why when Japan sells more to America than she does to any other country in the world and more to America and China together than to all the rest of the world put together, Japanese business interest should alienate America or China. But I am discussing the American side.

In the year 1894, Japan's total trade with America amounted to about three hundred millions of yen. In the year 1918, the total of Japan's trade in buying and selling from and to America amounted to one thousand one hundred and fifty-six millions of yen. Of the total of Japan's exports in 1918, aggregating nearly two billions of yen, America took no less than 27 per cent and Japan bought 37 per cent of her total imports from America!

Surely these figures are eloquent in their reasoning and appeal to our practical friends on the other side of the Pacific Ocean—that common highway which an all-wise Providence gave us for use and not for abuse.

The remarkable record of development of trade intercourse between our two countries is but a beginning in the cycle of development unless indeed we are to permit an unreasoning and an insane policy to break the steady flow of commerce and of development of inter-commercial relations.

Within these last twenty-five years of peaceful exchange of commodities—in which we have paid and you have paid, and our differences have been settled without a breach, the social relations and the understanding have steadily improved. I say this advisedly, confident that the assertion cannot be successfully controverted. All of our differences of opinion in diplomatic intercourse or newspaper discussion fortunately and reasonably have been settled without any appeal except to the sense of justice and fair play of Americans and to the sense of honor, obligation and reason in Japan.

Figures talk. I therefore call to the aid of my argument to the business men of America the figures which tell of Japan's relations with America. Japan's foreign trade during the last twenty-five years amounted on an average to 957,000,000 yen per year, the average ex-

Business

Government to the American People for Agriculture and Commerce

ports being 490,000,000 yen and the average imports 467,000,000 yen. Trade with America during the same period totaled on an average to 249,000,000 yen a year or 26 per cent of Japan's foreign trade. Similarly Japan's exports to America per year were 147,000,000 yen and imports 102,000,000 yen, the former representing about 30 per cent of the country's average exports and the latter about 22 per cent of the average imports. It will thus be seen that the growth of Japan's trade with America in the past has followed exactly the same rate of increase as the growth of the country's external commerce in general, one invariably assisting the other.

Again the figures show a regular and steady increase not only in the amount of trade but also in the variety of goods exchanged between the two countries. The truth of the above remarks will be seen by the charts which show Japan's foreign trade in general during the last twenty-five years and also of her trade with America during the same period.

Another important fact is that with the advance of years the number of foreign countries with which Japan trades has gradually increased, and today she

is selling to and buying from more than thirty-five countries. Nevertheless, America still occupies the highest and most important place in our foreign trade, is, in short, our best customer.

The accompanying table, giving figures of our trade with twelve principal countries, demonstrates this statement.

These tiresome but necessary statistics show how pre-eminently America holds her place in our trade. Of the

causes, which have contributed to so important a situation in our external commercial relations, the following appear to be the most significant:

(1) That the Governments of both Japan and America have, since the opening of Japan for international intercourse, been unremitting in their efforts to promote amicable relations, and that leading men on both sides have ever endeavored to increase the friendship and solidify good will between the peoples of the two countries.

(2) That Japan and America are geographically so situated that the facilities for transportation and communication are better, so far as Japan is concerned, than with any other civilized country except China.

(3) That America first sought the native products of Japan and bought in quantity, selling in exchange their own goods to Japan, that is to say they first adopted a sound commercial policy *vis a vis* Japan.

Unrecorded & Unrecorded

About 30 per cent of Japan's imports during the past twenty-five years came from America, and our trade there keeps increasing. These Japanese employees in Tokyo, for instance, check in every morning on an American-made time clock

(4) That not merely as a matter of friendly sentiment, but from the point of view of utility, the native products of Japan, such as raw silk, habutaye, silk goods, tea, camphor, sulphur, earthen ware, lacquer ware, fine art goods, and so on, meet the requirements of American people, while Americans with their inexhaustible natural resources and gigantic manufacturing industries, are always ready to supply goods which best meet the needs of our people.

(5) That Japanese young men were educated in and favorably impressed by America in the years past and are now engaged in all fields of activity in Japan and are playing an important rôle directly and indirectly in promoting the commercial relations between the two countries.

(6) That the opening of the Panama Canal has brought the southern states and the manufacturing centres on the Atlantic coast of America into closer touch than ever with Japan.

The past and present causes of the growth of Japanese-American trade thus being stated above, the question is, what are commercial opportunities in Japan for Americans? In other words, what lines of American goods can best be introduced, and their market enlarged in Japan? I am persuaded that the lines of goods which will have ready sale in Japan, at least for some time to come, are as follows:

Machinery of all kinds, iron and steel manufactures, as well as other metals; chemicals, dye stuffs and paints; oils, vegetable and mineral; vehicles and motors; foodstuffs and agricultural raw materials; materials for paper manufacture; and special lines of manufactured paper; hides, leather and their manufacture.

Among the goods coming under these heads, I think the prospects are brightest for the following:

(1) Dynamos, electric motors, transformers, converters, sewing and tailoring machines, spinning and weaving machines, knitting machines, gas engines, petroleum engines, hot air engines, etc.

(2) Pig iron, bar iron, iron rods, plate iron, scrap iron, iron wire, iron pipes, iron tubes, nails of all kinds, rails, materials for building houses, bridges, ships, docks, etc., lead (lump and tablet), nickel (lump and tablet).

(3) Caustic soda, soda ashes, potassium chlorate, bichromate of potash, formalin, [Continued on page 143]

for Agriculture and Commerce

The Futility of Anti-Prohibition

By Edwin E. Slosson

THE frantic and furious indignation of those who find themselves unwillingly brought under prohibition is merely amusing to those of us who have witnessed similar scenes when other states went dry. All their objections have been raised before. All their schemes for circumventing the law have been tried before. Since there is nothing new in their tactics, there is nothing in them to alarm the prohibitionists. Before the war the United States was going dry anyway by popular vote, city by city, county by county, state by state, and the eighteenth amendment was merely a motion to make it unanimous by extending it at once to the backward sections of the nation.

In Kansas forty years ago when the prohibition amendment had first been voted and was laxly enforced, a New York newspaper telegraphed to a prominent Kansan to ask how it worked. He replied: "Splendidly. The prohibitionists have their law and the rest have their liquor. Everybody satisfied." This was considered then a telling jeer at the expense of prohibition, but it turned out in the course of time that the laugh was on the other side. For the harder the liquor men fought against the law the more public opinion turned against them until finally the habit of drinking was virtually eliminated from the state. It will be the same anywhere for reasons that are apparent when the meaning of the movement is understood.

Perhaps it will do no harm, now that the battle is virtually won, to reveal the secret aim of the prohibitionists. They are fighting—not alcohol, as is commonly assumed—but the saloon as an institution and social drinking as a custom. They are not working to save the drunkard but to save society from the drunkard. They are not so foolish as to suppose that they can prevent any man from making and drinking his own alcohol and, altho they may not admit it, they do not care much if he does. Of course they will keep up appearances by demanding the strictest enforcement of the law and denouncing lax officials, but they know in their hearts that their cause is not seriously endangered if a farmer fails to drink up his cider while it is sweet or a drummer carries whisky in his cane. Anybody who can afford to buy a yeast cake and a bag of sugar or a bushel of rotten fruit can brew his own beverage and if he has ingenuity enough to attach a glass, copper or tin tube to a tea kettle he can distill his own whisky. But what if he does? It will never be a popular pastime. Wood alcohol, too, is not dangerous—to the teetotaler. It makes a man not merely "blind drunk" or "dead drunk," but permanently blind and permanently dead. Of course the prohibitionist feels duly grieved when he sees scare-heads announcing the death of merry-makers who thought they were violating the law but got dosed with wood alcohol instead. Yet he can hardly help thinking that the more publicity that is given to such cases the less illicit drinking there will be.

Probably in such states as New York and New Jersey the liquor men will mob a few prohibition leaders and blow up a few churches and shoot a few officers of the law as they have done in other states, but such tactics will not gain the esteem of the community. London medical students did not stop the prohibition movement by punching out the eye of Mr. Johnson. They only gave their opponents a new war-cry:

Pussyfoot's eye
Will make England dry.

The saloon in America has been gradually becoming disreputable for many years. Self-respecting saloonkeepers have felt the opprobrium and have been getting out of the business for the sake of their children. The saloons thus

fell into less respectable hands and so become increasingly obnoxious to the community. Outlawing the saloon deprives it of the support of law-abiding men. So liquor selling automatically degenerates under prohibition, no matter how laxly the law is enforced, until finally it is suppressed by common consent as a public nuisance. The saloonkeeper loses his case whenever he takes it into court even if the judge decides in his favor. The legislatures may fuss as much as they like about the difference between 4 per cent and 2.75 per cent, for the longer they talk the more people are convinced that there is something wrong about the liquor business.

The argument of the liquor men that there will be more drinking when it is prohibited than before does not seem to have convinced the distillers and converted them to prohibition unless, indeed, we assume that it is they who are secretly financing the movement. We all admit that forbidden fruit has a fascinating flavor and that the best of us may experience a certain pleasure in evading any law, political, physiological or moral. But it is not true that a secret meeting with a bootlegger behind a barn to get a swig of moonshine from a dirty bottle at a dollar a swallow is as much of a temptation as a glass of wine placed at your plate by a host or hostess whom you want to please.

THE reason why men drink, and especially why they drink too much, is not in most cases because they find the taste of alcohol irresistible or are anxious to feel its effects, but because it is the custom and to refuse marks one down as a spoil-sport and a holier-than-thou. It is embarrassing to decline a treat and an insult to decline a toast. The student who does not join in the chorus, "Here's to Alma Mater, drink her down!" is viewed with some aversion by his classmates and he cannot excuse himself by saying that he thinks it disrespectful to imbibe the dear old lady as a beverage. When the Kaiser ruled that his health might be drunk in water without its being regarded as *lese majesté* he did about as much for temperance as did his cousin Nicholas when he imposed prohibition upon Russia.

If only those drank who wanted to and no more than they wanted to there would be fewer drunkards. Alcohol would then have to stand on its own merits—or demerits—like other narcotics, against which, indeed, society has to protect itself, but which are not entrenched by tradition and camouflaged by poetry. We occasionally hear of cocaine parties, but they are not so fashionable as champagne parties. Cocaine yet awaits its Omar Khayyam.

If a whole people could be kept from alcohol long enough to sober up completely and to forget it, say a generation or two, then it might be safe to abolish prohibitory laws for it would be a long time, if ever, before they would fall into the old drinking habits. But there would then be no demand for the repeal of the law, for people would have come to feel it no more an infringement of their freedom than prohibiting spitting on the street, driving to the left or carrying a gun. Already we find the advantages of prohibition becoming recognized and the popular opposition weakening. Employers like it because it increases speed and reduces mistakes. Labor men like it because it gives them more strength to strike. Formerly strikers spent their idle time and strike funds at the saloon and the disorderly acts of those who took too much liquor brought discredit upon their cause. Now it is found that men on a strike hold out longer and behave better. The restaurants, clubs and hotels, that thought they were ruined when their bar was taken away, are making more money than ever. While the liquor men are fighting in courts, legislatures and Congress, the

readjustment is being made and even if in the end they should win all round it would be too late for them to set up the business on the old stand. They would then find that the situation was reversed; they would have got the law on their side but the prohibitionists would have established their custom of not drinking.

The Workingman's Demands

THE workingman is no longer going to be satisfied with the old pre-war working conditions, and the sooner American employers realize this the better for all concerned.

The workingman is entitled to a minimum program of a living wage, safe working conditions, an eight-hour day, a tenure of employment beyond the caprice of the employer, access to the books of the company, and a fair share in excessive profits over and above his wages. If the employers will support those sane labor leaders who are now advocating these industrial rights, the prospect for an harmonious future for labor and capital is bright. If not, these leaders will be shoved aside and the whole labor movement turned toward Bolshevism. The "unauthorized" strike of the railroad men last week is an ominous straw showing the direction of the wind and giving warning of a coming hurricane.

From Bad to Worse in Mexico

By Chester T. Crowell

THE declaration of the independence of Sonora is not proclaimed by the people in convention assembled but by Governor Adolfo de la Huerta. It may appear to the United States as a step in the direction of the dissolution of the Republic of Mexico, but it is not. It is the first step in the direction of a revolution which will play an important part in determining who shall be President of Mexico.

General Alvaro Obregon, candidate for President, is a Sonoran. Along the west coast he has many friends both among the business people and the military and official classes. It has been known for a long time that he would be strongly supported there. President Venustiano Carranza does not intend that Obregon shall achieve the presidency. His choice is Ignacio Bonillas, who was called home from the Mexican embassy in Washington to make the race. Under the circumstances there is good reason to believe that Bonillas will be declared elected. This is no more pleasing to General Pablo Gonzales than it is to Obregon. Both of these generals have been important factors in placing Carranza in the presidency and keeping him there. It is reasonably certain that when General Obregon announced himself as a candidate he expected to be put into office by Carranza. Later it appeared that Pablo Gonzales was the crown prince. Obregon then became a bitter critic of the Carranza administration and rallied about himself all of the forces of discontent in the country which might be the raw material of a revolution. When it developed that Pablo Gonzales was not the crown prince his candidacy collapsed, but he also became a bitter critic of the administration. Whether these two generals can or would join forces is doubtful. The political situation was not without its humorous side, since each of these men believed he was entitled to Carranza's support while Carranza was forcing the presidency upon a man who probably does not greatly desire it and who certainly takes his life in his hands in making the race under the present conditions. The first Sunday in July is the date fixed for the presidential election. Elections are always held on Sunday in Mexico; and the election itself is a joke.

General Obregon has probably been under observation for several months. A short time ago he was summoned to the City of Mexico on a charge of being in communication with a rebel leader named Cejudo. Probably most of the Mexi-

can army officials have been in communication with the rebels. All of the rebels are not robbers. After four or five years some of these rebel forces still have plentiful supplies of arms, altho completely cut off from the border. It is generally known in Mexico that some of them have bought their arms from Carranza soldiers. But Obregon is held on the technical charge of having had communication with a rebel.

Over on the west coast Governor Adolfo de la Huerta is an independent sort of person who has several times been summoned to the capital and declined to go. The west coast has not suffered quite so much from the turmoil in Mexico during the last ten years as have some other parts of Mexico, and it looks with disgust upon the condition of the government in certain other states. It also has a row with the central government on the subject of Chinese colonization. Along the west coast states many Chinese have been killed or driven away by mobs. The west coast would like to have Asiatic exclusion and it has not been able to obtain the ear, much less the sympathy, of the Carranza Government. Also the west coast likes Obregon and does not like Carranza nor Bonillas nor the proposition to put Bonillas in the presidency by arbitrary action.

About a month ago President Carranza began sending considerable numbers of soldiers to Sonora under command of General Manuel M. Dieguez. The explanation was made that they were to fight the Yaquis. But there is no campaign under way against the Yaquis. Governor de la Huerta and other Sonorans declared the purpose of these troops was to depose the civil government of Sonora and place a military government in charge until after the election. That charge is probably correct. The concentration of troops in Sonora is directly associated with the renewed activity of Francisco Villa and his followers in the vicinity of Torreón, where they have created considerable disorder. The press of Mexico City has criticized the central government severely on this score.

The stage is set for a new revolution, but it will not be a separatist movement. It will probably spread to other parts of the country, where Obregon has great strength among impetuous classes ready for civil war and entirely too accustomed to civil war. There cannot really be an election in Mexico. Of its fifteen millions of people about twelve millions do not read or write. Mexico never has had an election. Under such circumstances there is little hope of presidential succession without violence. The only question now is how much violence will be necessary to affect the change.

Even if certain of the west coast states should for a time appear to set up a separate national government it would in no wise settle the Mexican problem, nor would there be the slightest possibility of the new republic assuming an attitude toward the United States any more friendly than that of President Carranza.

Canada as a Mandatory

IT was planned at Paris that the United States should become the temporary guardian of infant Armenia and perhaps also of the free city of Constantinople. This was admittedly the best possible choice of mandatory, for the American people had spent millions on Armenian education and relief and had received thousands of Armenian refugees, and the United States was best able to afford the capital necessary to develop the country. But the United States is showing a disposition to back out from all international responsibilities, and so the Sultan—the most unfit man in the world—is to remain in charge of Constantinople and another mandatory for Armenia must be sought.

There is, then, much to be said in favor of the suggestion made by H. F. Angus in the *Montreal University Magazine* that in the default of the United States the mandate for Armenia be given to Canada. This would keep the job in

the family—the American family—and we would have as much confidence in the Canadians as in ourselves that they would administer the country ably and impartially. They could draw upon us for such unofficial, philanthropic and financial aid as they needed to supplement their own resources. Canada as well as the United States would be above the suspicion of seeking territorial aggrandizement in that quarter. New Zealand has been awarded the mandate for Samoa, Australia for the rest of the Southern Pacific Islands, the Union of South Africa for German Southwest Africa. Canada is entitled to some recognition of her new status as a partner in the British Empire and a member of the League of Nations.

National Sovereignty

ONE objection raised to the League of Nations is that it sacrifices something of full-orbed national independence to a "Superstate." Isn't it strange that England, France, Italy, Belgium and Japan haven't found it out? Or is it that those peoples who entered the League have no patriotism and place no value on national independence?

Peace Without Victory

THE proposal to declare an end of the war with Germany without any participation in the Treaty by which alone American rights and influence can be secured is peace without victory in the most literal sense. President Wilson's too famous phrase now recoils upon his adversaries.

Unpleasant Products of Peace

By Preston Slosson

THE sun of peace which has warmed the nation since the armistice of November, 1918, has called forth into life the beautiful garden of creative activity so long dwarfed and chilled by the storms of war. But the sun makes weeds grow as well as flowers. If we venture to make a brief catalog of some of the more obnoxious weeds it is not that we forget the flowers or that we are ungrateful to the reviving warmth of the impartial sun. But the good gardener must learn to identify the weeds if he would help the flowers.

1. *Germanomania Ferox*. This variety of poison ivy was unpleasantly in evidence from 1914 till late in 1917, but was rarely found during the latter months of the Great War. It is not to be confused with the common or garden varieties of pacifism or socialism, as was so frequently done by careless gardeners during the régime of the Espionage Act, nor is it found in all plantings of German speech and tradition. Its distinguishing features are incessant hostility toward the Allies and the ascription of evil motives to their every act, attempts to defend the acts of the dead and damned Prussian despotism, subtle insinuations that our participation in the war was a mistake, and indifference to the struggle between rising democracy and the vestiges of militarism in Germany itself. Yellow journalism makes the best soil for this evil weed, and yellow politics is its best fertilizer.

2. *Anglophobia Erinensis*. A greenish plant of foreign origin but thriving even more on American than in Irish soil after decades from the time of transplanting. It resembles the *Germanomania*, but it is more specialized, since it attacks only the British oak and leaves the French lily unmolested.

3. *Americrankus Parvus*, or the "Little American" plant. A persistent weed which chokes every heavenward aspiration of native American trees and shrubs. It is hostile to every extension of American influence abroad, shivers like a sensitive plant at the mere mention of the words "Europe" and "foreign," opposes every form of international association, and thrives only in complete national isolation.

4. *Americrankus Jingo*, or "Two Hundred Per Cent Americanism" plant. Has choked useful legislation to death at Albany and elsewhere. Persecutes everything foreign as seditious and everything radical as foreign. Believes that mob law and the censorship are the bulwarks of American liberty.

5. *Pacifisticus Insapiens*. A well recognized variety, more annoying than harmful at present. Shows marked aversion to soldiers, even the volunteers of the Great War, and a curious inability to discriminate between self-defense and murder. The attention of gardeners is especially called to the type known as

6. *Liberalicus Acidulus*, or "Disillusioned Liberal." There is a certain type of man who writes letters to the radical weeklies, or indites histories of the peace conference, in the tone of a repentant drunkard. "Once I believed in the fair promises of President Wilson, but now my eyes are opened and I realize that the war was only a capitalist plot complicated with war hysteria. Never again, no more, will I be deceived by the sirens of bourgeois patriotism, etc., etc., etc."

7. *Preparednessia Insapiens*. A somewhat ossified plant, related perhaps to petrified wood, which demands universal conscription in 1920 on the ground that it came in handy in 1917 and might have been advisable in 1914, ignoring the fact that our chief enemy has since been overthrown and disarmed and that a League of Nations awaits our adhesion to form a more unshakable military combination to secure the peace than any single national army could be, however vast.

8. *Bolshevistica Communismus*. A Russian plant which as yet does not thrive well on American soil or that of any other free country, but which is an unquestionable nuisance wherever it crops up. Exportation or "hoeing up" does not seem to check it altogether. It seems to grow in the presence of two old-established weeds, too well known to require further description, (9) *Profliteria Boodlensis* and (10) *Extravagancia Thriftless*. Perhaps if these are uprooted *Bolshevistica* will not reappear.

Keep America's garden clean!

President Hadley

By Hamilton Holt

THE resignation of Arthur Twining Hadley as President of Yale University, at the age of sixty-five, brings to its conclusion by far the most successful administration from the standpoint of prestige, growth and material gain that Yale has enjoyed in all her honorable history of public service.

When Professor Hadley ascended from the chair of Political Economy to the Presidency twenty-one years ago, what was Yale's gain was scholarship's loss. It is therefore a fine precedent as well as a good thing for Yale and the country that Mr. Hadley will not retire to a life of ease and inactivity, but will return to teaching. Great teachers are scarce these days, and they are becoming scarcer.

While Mr. Hadley has stuck pretty close to his job as a University President and has not competed with those of his colleagues who have tried to run the universe as well as the university, yet whenever he has appeared before the public he has exerted a strong influence. It was he who first suggested that the best way to treat the law-breaking barons of industry was to refuse to invite them to dinner. This provoked much mirth thruout the land at the time, but events have since proved that social ostracism is more effective than fines or jail sentences.

It was Mr. Hadley perhaps more than any other university president who first prepared his undergraduates for the Great War. For a full year before the United States entered the war he had formed a regular artillery battery and as a result of this foresight practically all Yale under-

Rebuilding France

The restoration of the ten devastated departments of France is being accomplished thru the efforts of its own people aided by American generosity. Our school children are reconstructing the ruined French schoolhouses, our hotel men the French inns, our church people the French churches, and we are all helping on the homes

Above is the plan of one of the school houses which American pupils are erecting. It provides the light, air, comfort and sanitation demanded by American educators yet its architecture harmonizes with its surroundings. Fifteen hundred village schools have been destroyed in the war. They can be rebuilt at a cost of \$2000 each. A tablet on each building will show which American school restored it

The women and children have to do much of rebuilding, for men are missing. They sort over the old bricks, picking out and piling up those that are whole and can be used again while the fragments and the mortar go into the concrete. Nothing is wasted in France. There were half a million homes completely or practically destroyed and the cost of repairing the damage is estimated at \$6,000,000,000

"Be it ever so humble—." A family of six have come back home—to what little of it the Germans have left—and have set up housekeeping in the cellar until they can get help to rebuild. The oldest and the youngest daughters of the household are sitting just outside the "front door." The work of reconstructing French homes and public buildings is being carried out under the authority of the French and American Governments by the French Restoration Fund, 115 Broadway, New York. President Deschanel of the French Republic is on the French Committee and Secretary of State Colby is on the American Committee

Americans have often suggested that the devastated sites be left alone and new towns started, but the French peasant is attached to his home soil and insists upon returning to it. Above we see a father of ninety-six with his daughter of seventy-five coming back to their ruined village in order, as they say, "to die on our own land." Barbed wire is being cleared away and shell holes filled up. Many accidents have happened from the explosion of buried shells

graduates entered the service as officers at the beginning of the war.

In electing Professor Hadley to the Presidency the Yale Corporation broke the continuous precedent of two hundred years that the President of Yale must be a clergyman. In selecting President Hadley's successor it is to be hoped that the Corporation will not consider itself bound by the remaining unwritten law that the head of the University must be a Yale graduate, a Congregationalist, and a member of "Skull and Bones."

British Good Nature

WHEN the pickets paraded outside the British Embassy at Washington the staff took the annoyance in perfect good humor and laid no complaint before the President. One of the men even picked up a banner labeled "Down with British Militarism!" and hung it from the Embassy window. In similar circumstances a German Ambassador would have demanded firing squads to avenge the insult to his dignity. But the English have always the good nature which springs from laughter in the heart. A sense of humor has saved them from militarism, for no militarist can laugh at himself or take insults lightly. The hanging of the banner from the Embassy window disproved the legend on it.

Government by the Press

By William Brand

WHEN Thomas Jefferson said that government without newspapers would be worse than newspapers without a government many persons accused the Virginian sage of dealing in daring paradox. Today, of course, it is obvious that his remark was a truism. No part of our political machinery is more essential than the supplying of information and discussion to the voter thru the periodical press. To be sure the press is not mentioned as an organ of government in our written constitution, but neither is the cabinet, the party caucus, the nominating convention, the obligation of the Electoral College to vote according to instructions and many other characteristic features of American government.

Imagine the effect on our political life if all newspapers and magazines dealing with current events were suddenly swept from the earth. Public opinion could hardly exist on a national scale. Men would know something about their immediate neighbors and very small towns or country villages would be almost as well governed as at present, but the selection of national candidates would fall, as in all illiterate communities, to a small group of party managers in or around the capital and thus to some extent conversant with national and international affairs. The election would hardly be more democratic than the nomination. No doubt the candidate would tour the country and speak on every possible occasion, but even if he addressed a hundred audiences averaging five thousand individuals each only one American out of two hundred would have heard him speak and the rest would get their information by hearsay instead of from printed stenographic reports. Presidents and Congressmen, not having the fear of publicity before their eyes, would conduct their work as if the electorate did not exist, knowing well that not one voter in a hundred would know what the national policies were. All votes would be confidential votes; all government invisible government; all diplomacy secret diplomacy.

The little group of informed men at Washington could thus have steered us into war in 1914 or have kept us out in 1917 and in either case the people would have known no more about the merits of the struggle than any Siberian peasant. We would have entered the war unready in mind, and probably unready otherwise since the pre-war pre-

paredness campaign could not have been carried out. The Liberty Loan campaigns would hardly have raised half the sum they did, nor would enlistments have been so numerous had not the thousands of newspapers and periodicals coöperated with the Government. A nation which lacks channels of publicity is blind and deaf, and even in war time this is a handicap, tho few are the censors of the press who realize it!

Some would decry the influence of the press on the ground that no one ever changes his opinion on account of an editorial. But the political influence of the press in no way depends on direct persuasion. Opinions are only our individual reaction to facts and nine-tenths of what we know of public affairs comes only thru the printed word. You do not need to denounce a candidate to destroy him; all you need to do is to keep him out of the papers. You do not need to lash civic corruption on the editorial page if you will print in the news columns what the booblers are doing; you may even defend or praise them editorially and you will not the less be guilty of their political death. The bare recital of Germany's deeds during the war would have made the United States pro-Ally even if every paper in the country had been pro-German.

The power of the press is, then the power to shape opinion by the presentation, emphasis, suppression, explanation or distortion of facts. Do we therefore live under a dictatorship of the editorialist? Far from it. Competition rages so strenuously among the 23,000 odd newspapers and periodicals in the United States that no newspaper or chain of newspapers can effect more than a very partial suppression or distortion of any truth. Moreover the public itself has a veto on the press as it has on the other branches of government. Rousseau said that a representative government was not a democracy because once office holders were elected they were free to disregard the wishes of their constituents. This would be true if office holders were wholly indifferent to future votes. But they are not. Neither is a newspaper indifferent to its subscription list. The most capitalistic newspapers have been compelled, however reluctantly, to give acres of space to scandals of high finance because not to be "newsy" is not to sell.

Few newspapers fail to print news that any rival would be apt to get hold of; fewer still deliberately manufacture news and venture exposure and the loss of public confidence. There is thus little basis for the alarm of those radicals like Mr. Sinclair who fear a Newspaper Trust with a corner on facts. No doubt many newspapers give the facts in false perspective. A mass meeting attended by a hundred people may be described in one paper as "a large and enthusiastic assemblage" and in another as "a wretched showing plainly disappointing to the speaker"; just as during the war one General Headquarters would report a skirmish as "a victorious advance of the army capturing several important positions," while the other dismissed the incident as "a retirement to stronger entrenchments after inflicting heavy losses on the foe." But we corrected our war news by averaging both sides and by relying on the irreducible minimum of fact which all were forced to admit, and we can correct our civic perspective in the same manner. The newspaper is only misleading to the man of one newspaper.

Government by the press therefore approximates to pure democracy in the degree to which the press is free and varied. Censorship and suppression either of news or comment turns any government into an oligarchy. Laws which curtail the circulation of the press among the people, such as the old English paper tax or the modern American zone system of postal rates have much the same effect. It is just as important to maintain the democratic system in the informative branch of the American Government as in the legislative, executive or judicial.

The Story of the Week

The Strike Against the Brotherhoods

THE American railways are faced by a situation which is almost unique. The four great Brotherhoods, almost autocratic rulers in the world of railway labor, have taken a stand for industrial peace only to be confounded by the insurrection of their own radical members. There is thus a strike against the unions as well as against the employers.

The trouble began with a local switchmen's strike at Chicago arising from the discharge of a yard conductor. Within a few days railroads from New York to California were tied up, all branches of the transportation service were stripped of personnel, several great cities were running short of supplies, and men in hundreds of trades were thrown out of work by the indirect consequences of the strike. New York and Chicago, the two greatest population centers, were especially hard hit. The rapid spread of the strike caught suburbanites unawares and cut them off from home or from office or, worse still left them stranded half way between the two. Food prices rose as if a foreign enemy were besieging the great cities of America.

The big Brotherhoods not only disavowed the strike but exerted their strength to break it. Mr. Sheppard of the Order of Railway Conductors, Mr. Lee of the Brotherhood

of Railway Trainmen, Mr. Stone of the Brotherhood of Locomotive Engineers, and Mr. Carter of the Brotherhood of Locomotive Firemen published a joint signed statement warning the rebels that:

There can be no settlement of pending wage questions while this illegal action continues. We insist that every member of these Brotherhoods do everything within their power to preserve their existing contracts, which if abrogated may take years to rebuild. The laws of all of these organizations provide penalties for members engaging in illegal strikes, and these penalties will be enforced.

The new "outlaw" union took the name of the United Railroad Workers of America. It was composed of secessionists from all four of the Brotherhoods and represents perhaps a tendency toward "industrial unionism" such as that preached by the I. W. W. The United Workers published a long list of demands for higher wage scales than exist under present contracts. The whole origin of the strike is somewhat enveloped in mystery, as in most cases the men walked out without even waiting to state their demands. The chief factor, however, appears to be the question of wages, which have not risen as rapidly, it is alleged, in transportation as in other branches of industry.

The Navy in Troubled Waters

ADMIRAL Sims's incisive criticisms of American naval policy during the war have stirred up so much protest in Congress and in naval circles that one might believe himself back in the midst of the Sampson-Schley controversy. Testimony taken at the investigation by the Senate Naval Committee of the removal of Rear-Admiral Fletcher from the Brest command showed much divergence of opinion among naval authorities as to the conduct of the late war. Admiral Wilson asserted that the policy of making Queenstown the sole base for American destroyers in foreign waters had severely handicapped the conveying of transports from Brest on their return trips. Rear-Admiral Fletcher also gave personal testimony as to the difficulty he had experienced in affording adequate convoy to the "Antilles," the transport whose loss was made the basis of his removal from his post at Brest. Rear-Admiral Mayo, commander of the Atlantic fleet, admitted some of the criticisms of the naval service advanced by Admiral Sims, but laid the responsibility on the administrative organization of the Navy Department. He thought that on the whole the United States navy entered the war as well prepared in 1917 as were the navies of the Entente Allies in 1914.

Admiral Rodman of the Pacific fleet was perhaps the sharpest critic of Admiral Sims. He declared that the position of Admiral Sims was only a subordinate one, that he "arrogated to his office more importance than was actually the case," and that the Navy Department was in no way bound to follow all his recommendations. He accused Admiral Sims of belittling the part played by the American navy in the war, whereas in Admiral Rodman's opinion, "Never in my forty-odd years of service have I seen such preparedness and efficiency as obtained in our battleship fleet at the beginning of and during the war."

Peace Without a Treaty

THE House of Representatives has approved a resolution introduced by Representative Porter of Pennsylvania declaring the state of war between the United States and the German Government at an end. The House For-

The man who is said to have started the outlaw strike of railroad workers is John Grunau, president of Local Number 1 of the Chicago Yardmen's Association. His discharge as a yard conductor on the Chicago, Milwaukee and St. Paul touched off the strike that had been threatening for some time, a strike directed primarily against the comparatively conservative forces in the labor organization. Mr. Grunau was a member of the Illinois Legislature for four years

eign Affairs Committee reported it on April 1 by a party vote of twelve to six. Mr. Flood, speaking for the Democratic minority of the Committee, summed up the case against the resolution in the words, "It takes a treaty to end a war." The resolution was alleged to invade the treaty making prerogative of the President and thus to be unconstitutional.

On April 8 the House voted by a majority of 214 to 155 to limit debate on the resolution. On this test of strength party lines were closely followed, but a few Democrats broke away from the administration ranks and urged immediate peace. On the following day the resolution itself was carried by a still greater majority of 242 to 150. Two Republicans, Representatives Fuller of Massachusetts and Kelley of Michigan, opposed it on the ground that it was bad statesmanship to be driven into making a separate peace with Germany. On the other hand, twenty-two Democrats voted with the Republican majority. The leader of this secessionist movement was Representative Huddleston of Alabama, who asserted that "The Treaty of Versailles is dead," and that the League of Nations Covenant would not be accepted without reservations.

The victorious party in the House is not too much elated over its success in carrying the peace resolution since it fell far short of the necessary two-thirds vote to pass it over the President's veto; a veto which is anticipated by all parties, if the resolution succeeds also in the Senate. Of course if the President vetoes the resolution one purpose of its supporters will have been achieved, namely, placing the blame on the President for a continuation of the state of war. But should the President steal a march on Congress by reintroducing the Treaty before the Senate has approved the peace resolution, or should he be able to demonstrate to the satisfaction of the country that the course proposed by the Republicans in Congress was unconstitutional and thus necessarily futile, the resolution may prove to be a political boomerang.

Senate Rejects Compulsory Service

GENERAL Wood may get the nomination and carry the election, but his real difficulties will begin when he tries to convert Congress to his platform of universal military training. In present mood neither the House nor the Senate shows any tendency to approve the system.

The test in the Senate came on Senator Frelinghuysen's amendment to the Army Bill offering a four months' period of voluntary enlistment, in place of compulsory service to young men who desired a brief term of military training. Enlistment in the reserve for five years is offered to those who have undergone the period of training, but is not compulsory. On April 9 the Senate approved the amendment by forty-six votes to nine. This decision was not a final one,

Harding in Brooklyn Daily Eagle

Our lightless night

nor were all of the majority favorable to the details of the Frelinghuysen plan, but it served as a test vote on the issue of compulsory service.

Seven Republicans, Senators Brandegee, Keyes, McCumber, Moses, New, Poindexter and Wadsworth, stood out against the amendment and were joined by Senators Myers and Pittman for the Democrats. Some advocates of compulsory service, such as Senator Chamberlain, voted for the proposal as the nearest approach to universal training which was practicable in view of the evident impossibility of obtaining the assent of both branches of Congress to any military system involving the element of compulsion.

On April 12 the more extreme opponents of preparedness attempted to strike from the Army Bill even the provision for voluntary training of civilians contained in the Frelinghuysen compromise, leaving only the small profes-

Not to let the children get ahead of them these foreign mothers in New York asked for a class in which they might study English at night. It is the sort of Americanization work that we need to increase

sional army of the pre-war type. But Senator McKellar's proposal to this effect secured the support of only nine votes, Senators Dial, Harrison, Kirby, McKellar, Reed, Swanson and Trammell for the Democrats, and Senators Borah and Gronna for the Republicans. Thirty-seven Senators rallied to the support of the compromise measure. Senator Lenroot offered an amendment limiting the number of volunteers to 100,000 in any one year, but he withdrew it in favor of another amendment offered by Senator Wadsworth fixing the age limit from 18 to 21 instead of 18 to 28. As this change would act as a limit to the number trained under the special four months' plan, Senator Lenroot agreed to accept it and he voted with the majority.

Lowden Popular at Home

GOVERNOR Frank Lowden has carried the Republican presidential primary in his home state of Illinois by an ample majority over General Wood, his only competitor on the ballot. The supporters of General Wood are not discouraged, however, since the most they expected was to make a strong showing against the favorite son of Illinois, and in this they were successful. Wood obtained about two-thirds as many votes as his rival and succeeded in carrying the suffrages of Chicago by a plurality of nearly 20,000. The supporters of Senator Hiram Johnson are also happy because, in spite of the fact that his name did not appear on the printed ballots, more than forty thousand voters took the trouble to write it in. Mr. Hoover and Senator Harding obtained some scattering votes. Outside Cook County Governor Lowden obtained enormous majorities, but his hold on the city of Chicago seems to be shaken, possibly as the result of the hostility of Mayor Thompson. The Thompson following is said to have given support to Senator Johnson.

An interesting feature of the election was that women were permitted to vote, altho, since the legal status of woman

suffrage in the party primary is now questioned, their votes were recorded separately. This makes it possible to compare the vote of men and women. It appears that the women of Illinois cast three votes for Lowden to every two for Wood, which is exactly the proportion obtaining among the men. Even had the election been very much closer than it was the granting or denying of the franchise to either sex would have made no difference in the result.

The delegates elected outside Chicago are Lowden men; those chosen from the city are uninstructed. There is no legal obligation under the Illinois primary system for delegates to vote as the presidential preference ballot directs, and it is not certain whether the Chicago delegates will feel morally bound to follow the choice of the voters of the whole state or the choice of their home districts. Governor Lowden is certain in any case to make a good showing on the first ballot at the Republican convention with the bulk of the Illinois delegation behind him and considerable support from the southern states, which have been strongly favorable to his candidacy. But in the north central states other than Illinois, from which Governor Lowden expected much support, General Wood seems thus far to have proved the stronger, and the results in Michigan and in Chicago show that Senator Johnson is also a dangerous competitor. La Follette men have been chosen from Wisconsin, and it is rumored that if Wisconsin's favorite son is not himself a candidate the vote of the state may be given to Senator Johnson.

General Wood has given up his active campaign for the present owing to the railroad strike. He had obtained leave of absence from his military duties to carry on the campaign, but cut short his vacation in expectation that his services might be needed in case the strike became disorderly.

The Republic of Sonora?

MEXICO is by its constitution a federal republic like the United States. The several state administrations enjoy a high degree of self-determination except when a very vigorous despot in Mexico City is able to fill state offices with his personal followers. When the central power is weak, as it has been ever since the overthrow of Diaz, some of the more distant states act almost as independent republics. The news that the state of Sonora, which lies far north on the American border, has refused to permit the entry of federal troops across the state frontier is therefore not so surprising to the Mexican people as it is disconcerting to the Mexican Government.

Governor Adolfo de la Huerta and the State Congress at Hermosillo have severed relations with Mexico City and taken over the customs house at Agua Prieta on the United States boundary. They allege that President Carranza was attempting to overthrow the Sonoran Government and fill state offices with his own followers in order to check the movement for placing General Obregon in the Presidential chair. General Obregon is a Sonoran and his candidacy has not been favored by the Carranza administration. The American reader will be able to picture the rather complex situation if he can imagine President Wilson sending a few regiments into New Hampshire to overawe the supporters of General Wood, and New Hampshire thereupon declaring its independence of the Government at Washington and confiscating a customs house on the Canadian frontier.

If this should turn out to be just "another revolution" Mexico would be but little disturbed, but there are elements in it which point to something far more serious, a secessionist movement. Sinaloa, to the south of Sonora, is reported to be in sympathy with the action of Sonora and the two states together comprize the entire eastern coast of the Gulf of California. If the temporary secession of Sonora should become a permanent one a new Republic of

Dr. Arthur Twining Hadley has resigned the presidency of Yale after twenty-one years' successful administration of the university. His decision to return to teaching is, as Mr. Holt points out in an editorial on another page of this issue, an incalculable gain to scholarship in these days when great teachers are scarce, and are becoming scarcer

A SECOND TEXAS?

The shaded district threatens secession from Mexico

Northwest Mexico might be formed from these states which would be under strong temptation to repeat the history of the Republic of Texas and find refuge from Mexico City misrule by union with the United States.

In the meantime American property interests are directly involved owing to action of Governor de la Huerta in seizing the Southern Pacific of Mexico Railroad, which is an American-owned route. The Mexican federal authorities had threatened to take it over and operate it under control of the army in order to put an end to a strike which had tied up traffic. The Sonora Government acted before Carranza had carried out his threat and now the railroad is running under state control.

The Ruhr Rebellion Quelled

THE basin of the Ruhr river which runs into the Rhine north of Cologne contains the richest coal mines and the chief industrial cities of Germany, such as Essen, Duisburg, Düsseldorf and Witten, and here is the center of the Socialist strength. A few weeks ago when the Junkers of Prussia, under Dr. von Kapp, tried to overthrow the German Government the reactionary movement was checked, not so much by Müller, the premier, as by Legien, the leader of the labor unions, who called a general strike. As soon as the Government was reestablished in Berlin the strikers generally returned to work, but in industrial regions of the Rhineland the movement could not be stopped and took on a Bolshevik tinge. Soviets were set up and a Red army organized. There are rumors of large sums having been secretly sent in from Russia thru Switzerland to finance the revolt and it is evident that the leaders expected that the French Socialists would rise in sympathy or at least prevent their Government from intervening. But nothing of the sort occurred and the German Government sent sufficient troops into the disturbed district to suppress the Communists. But since this district lies in large part within the neutral zone where the Germans are forbidden by the Treaty to keep more than 20,000 troops, the action of the German Government gave excuse to the French to enter the neutral zone and occupy German cities.

According to British and American correspondents the Communists of the Ruhr tried to maintain order and prevent miscellaneous looting and reckless destruction of property, tho of course they "requisitioned" food and whatever else they needed. Their plans or threats to blow up all the mills and flood all the mines in case of defeat were not carried out. The Communists accuse the Government of calling them into conference at Münster and then attacking without warning. They have surrendered 20,000 rifles, but it is suspected that many of the arms have been withheld and secreted for use in some future revolt.

While the Ruhr insurrection was conducted with less violence than would be expected, other places were more un-

fortunate. The Saxon city of Plauen was mastered by Max Hölz, a former lecturer in a motion picture theater. His avowed object was, by violent language and acts, to provoke reprisals by the Government troops which would lead to a dictatorship of the proletariat like that of Russia. He set up headquarters at Falkenstein Castle and levied a contribution of half a million marks upon the business community. Failing to get this, his Red Guards rifled the residences of the rich and held up the patrons of the restaurants. But the workingmen of the district refused to support him and voted by nearly two to one against a general strike on the entrance of the Government troops. Hölz thereupon distributed

placards ordering the destruction of all public buildings and the fine residences, but he was forced to flee before his incendiary plans could be carried out in full. Five large villas, homes of wealthy manufacturers, were burned down before the Red marauders departed for Bohemia in fifteen commandeered automobiles, carrying with them several million marks of blackmail and loot.

The Reichswehr or Imperial Guard, which the German Government is using to put down the Communists of the Ruhr, is commanded by officers of the Kaiser's army, who are manifesting all their oldtime insolence and brutality. Captured Communists are shot on suspicion and even the wounded put to death. The correspondent of the *Manchester Guardian*, tho provided with the proper passes from both parties, was seized and brought before Lieutenant Leisenmeyer at Essen, who struck him in the face and had him mauled by the guards because while standing before the officer he put his hand in his pocket to produce his papers. The British Government has demanded an apology from the German Government for this insult.

Since the Government had to turn to the Reichswehr for aid against the Reds, the military party has gained power and there is danger lest the army be used to support a counter-revolution and perhaps a monarchical movement.

Keystone View.

THE REAL RULER OF THE GERMAN REPUBLIC

Karl Legien, the head of the German trade unions, supported the Government in its suppression of the reactionary rising in the east and the communist rising in the west

The leaders of the German republic are walking a tight-rope over an abyss and have to shift the balance pole alternately to the right and left.

The French in Frankfort

GENERAL DEGOUTTE has now 16,000 French troops in the fifty-kilometer zone beyond the Rhine and more are to follow. The cities of Frankfort, Darmstadt, Homburg, Hanau and others have been occupied and the French troops have penetrated twenty miles beyond the neutral zone.

In the opinion of the British the French were tactless if not intentionally provocative in sending colored soldiers to garrison the German cities, for the Germans have been fed up for five years on "the atrocities of the Africans" in the French army. Doubtless many of these tales were invented or exaggerated for propaganda purposes, but anyhow the German people have the same horror of the Black Army as our ancestors had of the wild Indians employed by the British in their efforts to reconquer America. The German Chancellor has complained bitterly that "Senegalese are quartered in Frankfort and are guarding Goethe's house."

Except for the first day when the Moroccan soldiers fired upon the crowd for laughing at them and killed some women and children, there has been no bloodshed in Frankfort since the French occupation. The inhabitants are apathetic for the most part and have submitted passively to the regulations and restrictions imposed by General de Metz, the French commandant, altho these are not easy to obey.

All civilians must carry identification cards bearing their photographs. They must salute the French flag and all French officers. They are not allowed to be out later than nine o'clock at night nor to use the telephone or telegraph. Newspapers are now permitted to appear but under strict military supervision. Strikes are prohibited and anyone leaving work is severely dealt with. On account of the good behavior of the Germans, General de Metz has consented to remit the fine of 10,000 marks that he imposed for the stealing of the bicycles of some of the French cycle *chasseurs*.

Altho the French promised to evacuate the neutral zone whenever the German troops were withdrawn from it, they appear to be preparing for more permanent occupation. They have requisitioned offices and villas which they have equipped with commandeered furniture.

The French Government has declared its policy in the following semi-official note:

It will be recalled that the decision taken August last by the Supreme Council, authorizing Germany to maintain provisionally several military units in the neutral zone, was only valid until the expiration of three months after the coming into force of the treaty—that is, until April 10. It will be recalled also that the German Government has asked recently for a prolongation of three months. If the Supreme Council is to settle this matter when it sits at San Remo, and if the German troops in the neutral zone are then reduced to the effectives permitted under the agreement which Germany now asks to have prolonged, it goes without saying that the French Government will not wish, in prolonging the measures of military occupation which it took last week, to give appearance of exercising any pressure on the decisions of the Supreme Council. Ascertainment if German effectives in the neutral zone have been reduced to the authorized limit is a question of fact for the interallied commission to decide. It should be emphasized that the German towns which were occupied by French troops last week were all occupied for the same reason, in order to make Germany respect Articles XLIII to XLIV of the treaty, which she had violated, and that, in consequence, the French Government has always been resolved to evacuate them all the moment the Allies had forced Germany to respect the treaty.

Clash of Opinion Over Germany

THE action of the French in suddenly and independently sending their troops from the Rhine further into Germany and occupying Frankfort and other German cities has seriously disturbed the solidarity of the Allies and impaired confidence in the League of Nations. The enforcement of the Treaty was made the duty of the signatory powers acting together and it was not expected that any one of them should, without the approval, or even the knowledge of the rest, take such strong action as the occupation of enemy territory. The British Government was not convinced that the Germans had violated the Treaty, but expressed to the French their willingness to coöperate in sending troops into the Ruhr valley in case this was necessary for the restoration of order and the stability of the German Government.

Consequently the English were much surprised when they learned that the French without further consultation despatched African troops, not into the region of the Ruhr, but to take possession of cities over 100 miles away from the disturbances. Some of the English papers raise the question of whether Parliament was not too hasty in confirming the special treaty of alliance by which Great Britain and the United States agreed to protect France against German aggression if France is to act in so precipitate and provocative a manner. But this treaty does not become operative until it is ratified by the United States as well and the Senate has not yet acted upon it, so Great Britain is not legally bound to help out France if she gets into trouble with Germany.

The Belgians had at first agreed with the British,

It is fitted with equipment similar to a Pullman car and carries

Italians and Americans that intervention in Germany was inadvisable, but when the French took such action the Belgians followed suit and shipped a detachment of infantry and artillery to Frankfort.

The Earl of Derby, the British Ambassador to Paris, ceased to attend the sessions of the Supreme Council and a lively interchange of notes took place between the British and French Governments, six notes in three days, it is said, not counting "conversations."

On this question, the first important case under the Versailles treaty, we find France and Belgium on one side and Great Britain, Italy and Germany on the other. The appeal of the German Government to the Council of the League of Nations against France for having used military force without the authorization of the League is a shrewd political move designed to sow dissension among the Allies.

But France refuses to allow the German appeal to be considered in the Council and since under the Covenant all acts of the Council have to be unanimous there seems no way of bringing it up. The British Government asked that the difference of opinion between France and Great Britain on the propriety of French intervention be brought up for discussion at the Interallied Conference to be held at San Remo on April 19, but France declines to consent to this and Premier Millerand will not go to San Remo if this question is to be considered.

The French Government refused to give the assurance asked by the British that they would refrain from intervention until after consultation with its Allies, but the French reply to Great Britain ended with:

The preceding considerations being stated, the French Govern-

ment does not hesitate to declare that in all inter-allied questions arising from the execution of the treaty it foresees no case in which it should not be glad before acting to make sure of the assent of its allies.

Premier Millerand in conversation with the British Ambassador added the verbal assurance that the French Government "will show itself disposed to withdraw its troops as soon as the situation becomes normal in the Ruhr district as regards the German effectives."

With these non-committal remarks on the situation the British Government had to profess satisfaction.

The Japanese in Siberia

ON April 5, Vladivostok, the eastern gate to Russia, was captured by the Japanese. While the Russians were engaged in celebrating Easter marines were landed from the Japanese battleships and machine guns placed so as to bear upon the headquarters and barracks of the Russian Provisional Government. One of the machine gun batteries, said to have been mounted on the Japanese Red Cross hospital, enforced the surrender of three hundred Russian soldiers.

The Zemstvo or parliamentary building was shelled by Japanese one-pounders, while the big guns of the fleet in the harbor shelled the hills. Two unarmed Czech soldiers were killed in the street.

The port of Nikolaievsk, at the northern and opposite end of the Maritime Province from Vladivostok, was also taken by the Japanese after a two-day fight in which seven hundred Russian soldiers were killed. According to a Tokio dispatch the Japanese have since extended their control over the whole length of the railroad running north from Vladivostok down the Usuri River to the Amur River. This means the extinction of the Provisional Government, which came into power after the fall of Kolchak, and possibly the ultimate annexation of eastern Siberia by the Japanese regardless of the wishes of the inhabitants.

According to General Graves, commanding the American forces in Siberia,

Ninety per cent of the people in Siberia are Bolsheviks. They are working for peace and the good of the country and in my opinion are trying to be fair and just to the people. The Anti-Bolsheviks do not want the Japanese to leave because of immense concessions granted to them by the crown before the Russian debacle and which they would lose but for the presence of the Japanese forces.

As the "Great Northern," carrying the staff of the American expeditionary force, left the dock at Vladivostok, General Graves was presented with a sword of honor by the Russian Provisional Government and was decorated with the Czechoslovak Military Cross. The transport "South Bend" carried away from Siberia to America 1600 American troops and 119 war brides.

The Y. W. C. A., in coöperation with the Red Cross, has established these rest huts at four large American cemeteries in France where families from the United States may come to visit the graves of their soldier dead. The huts also offer every service in helping to locate the graves, and in taking photographs of individual plots to send to the families in this country

Houses That Just Grow

By O. Henry Frederick

Goetheanum is the name of the building here shown, because it artistically expresses the way of looking at the world which Goethe gave to mankind. Goethe's knowledge of evolution is radically different from Darwin's. Darwin examined the various garments of nature, and from this examination made more or less shrewd guesses as to the character of her who wore or had worn them. Goethe refined his organs of observation to such a degree that he was able immediately to see and hear nature at work. Goethe "saw" the primal plant at work, trying to express itself in all the different plants, completely expressing itself in no one individual or species, but everywhere revealing some aspect of itself.

The difference between these two ways of looking at the world is strikingly revealed by the difference in appearance of this building, which embodies Goethe's view, from the other buildings erected today, which are sprung from more or less Darwinistic minds. The buildings of today do not receive their shape from the necessity of their own nature operating from within. The shape of a modern building is determined by such external circumstances as the money of the builder or the tensile strength of steel. Modern buildings are like inorganic matter, built according to the principle of accretion. The prototype, the "primal building," if I may use the term, of modern buildings, is a crystal.

The Goetheanum, on the other hand, receives its form, like a living organism, from within. It is impossible to add a wing to this building, or to extend it or alter it in any way. It stands as it stands by inner necessity. It can no more be altered than one can attach a fifth leg to a fox-hound. The shape of a fox-hound is determined by the laws of its being. If man desires an especially swift dog, he cannot attach additional legs to a fox-hound, he must by breeding manipulate the life-force so that it will produce a greyhound. The form of this Goetheanum is determined from inner necessity by its

purpose, which is, to serve as an auditorium for the Free High School for Spiritual Science. When the same artistic force that produced the auditorium has to produce a power plant for this auditorium, it shoots into stalk and brings forth the utility structure seen in the small picture.

Dr. Rudolf Steiner is the architect and designer of this Goetheanum, which is located in the northwest corner of Switzerland, near Basel. The building, which stands upon a concrete rampart, is built of massive wood and is roofed with silver-green Norwegian slate. The walls of the building, the architraves, capitals, and the bases of

This power house, built altogether for utility, expresses itself in simple lines that suggest an upthrust of strength

the pillars of the interior are all hewn and carved by hand out of the massive wood. Dr. Steiner, who was born in the late Austria-Hungary, has for forty years been laboring to have the German people adopt Goethe's way of looking at life. Only so, he believed, could the terrible catastrophe, that has been shaking the world, be avoided. Finding little response among the people who spoke his language, and clearly foreseeing the cataclysm of war, Dr. Steiner began the erection of this building in the fall of 1913, in order by this means to speak to the world.

The fact that this building was

erected during the war by men and women of the nations at war with one another, peacefully and voluntarily working side by side, lends decided support to Steiner's assertion that present day mankind imperatively needs this Goetheanistic way of looking at the world. Irrespective of whether or not one is sympathetically drawn to this building, it unquestionably reveals and embodies entirely new artistic canons, and is likely to inaugurate a new development in all the fine arts, which the serious artist and student of art is bound to consider.

Where Ignorance Is Bliss?

By Willard Wattles

When the American people learn to read more than one newspaper, they will discover that political parties are the medieval superstitions behind which stalk the "Men Without a Country," those who laugh and pull in the grapes. But the American people is hopelessly sentimental and it still believes itself a democracy.

Taking Gasoline from Gas

The United States Bureau of Mines reports an investigation carried on to determine whether the practice of extracting gasoline from natural gas impoverishes the gas supply furnished to the householder. The verdict was that no important injury was done by this process. The gallon of gasoline in the natural gas burned by the domestic consumer was worth to him only one and three-fourths cents in heating value, whereas the gallon is worth thirty cents to the automobile owner.

The investigators even reached the conclusion that the removal of the gasoline from natural gas was a positive benefit, because an excessive accumulation of gasoline in the pipe lines injured the rubber gaskets in the couplings and resulted in a considerable leakage of gas. The installation of gasoline plants eliminated most of the pipe line trouble and resulted in better service to the consumer.

From the point of view of the automobilist the extraction of the gasoline is of great importance. Gasoline obtained from natural gas vaporizes easily and is used to mix with other gasoline with a higher boiling point in

The Goetheanum, a building developed according to the laws of nature. As Mr. Frederick explains in the article above, it expresses an entirely new theory of structure

order to produce a mixture which automobiles can use without difficulty. Without this source of supply the ordinary gasoline would be of less value, as its high boiling point would create difficulties in starting the motor, especially in cold weather.

How Are These?

By Ed. Howe

A good many find fault with Maurice Maeterlinck because of his divorced wife and his recent hasty marriage. Those things don't worry me; I object to Maeterlinck because of his "Blue Bird."

I am tired of seeing Goethe's name in print.

I do not care much for actors.

I met a man of seventy-three recently who is actually good looking.

I don't take much interest in those men who drink hair tonic or wood alcohol in order to acquire a jag.

Before I finally decide on the man I will support for President, I shall find out about his women folks.

The first indication of a good automobile driver is that he does not continually blow his horn.

I often see the statement made that "Jesus was Democratic," whereas he was notoriously an autocrat.

It is as disagreeable for old people to live with the young as it is for the young to live with the old.

What has become of the old-fashioned bond issue of fifty thousand dollars? And of the old-fashioned movement to raise five thousand dollars?

I know a doctor who says he once knew a woman who had been operated on ninety-seven times. If you can truthfully beat it, write me; if not, be astonished.

Nothing does a man more good than to be in love with his wife.

It doesn't make much difference what Lincoln, or Washington, or Roosevelt, or Goethe thought; it is also your business to think.

When a fool movement is started, the managers of it always find some rich jay to start it off with a big donation.

Locusts Out of Luck

Sometimes bad weather is good fortune. The Department of Agriculture tells how the accident of two late winters thirteen years apart has greatly diminished the periodical cicada plague in the United States. The largest of the broods of thirteen-year locusts or cicadas had its home in central Tennessee. It had been studied by the Federal Bureau of Entomology ever since 1803, and a careful record kept of the times of its prevalence. In 1894 the brood appeared in enormous numbers, but freezing weather came in the middle of May and over large parts of the state the ground was covered with the dead cicadas.

Most of the cicadas were killed off by the frosts before they had begun laying. A much diminished brood appeared thirteen years later, but a good season would have enabled the cicadas to have laid successful plans for 1920. It so happened, however, that May, 1907, was another season of frost. The brood was once more frozen before it completed its life cycle. This coincidence was almost uncanny ill-luck for the insects, since frost had never occurred so late in the year in that part

British and Colonial Press

HOW AIR HARBORS ARE MARKED

The Canadian Government has put into effect in its "Book of Air Regulations" this scheme of marking landing places, or harbors, for aeroplanes. By means of these insignia in lights and distinctive markings an aviator flying over unknown country can choose the sort of landing place he wants and know exactly the conditions that it offers him. The official regulations specify that the outlines of the insignia must be at least three feet wide, must contrast sharply against the surface on which they appear, and must not form any obstruction

of Tennessee save in these two seasons of 1894 and 1907!

By these two successive freezes, thirteen years apart, the brood appears to have been practically exterminated. As this year the cicada plague is due once more, the Department of Agriculture has sent observers to the parts of Tennessee affected by the 1894 brood to study the effect of repeated "hard times" in diminishing their numbers. Entomological experts are hopeful, but watchful, because nature often has a surprise in store for those who too confidently predict what she will do.

Americanization in the Old Country

In the old city of Naples hundreds of women are arriving, almost daily, on their way to the United States. Soon they will be American citizens, many of them casting their vote in the government of the nation. But only in their aspirations have they anything in common with the ideas and ideals of the American people.

The background of many of these southern Italian women, soon to be American women, is the most sordid to be conceived of. They are the product of the intermingling of Norman, Arab, Negro, Moor, Spaniard and French, and their history is one of successive exploitations at the hands of the different conquerors with the stamp of the Oriental still predominating. Their position, even today, is practically that of the Mohammedan women. They may not go out on the streets unaccompanied, and as the men

of the family all too often have only a tolerant contempt for them, this means that they do not get outside their homes for weeks at a time. They are, of course, uneducated, eighty-five per cent of those in Calabria, from which the bulk of the emigrant population comes, are unable to even read and write.

In the offices of the steamship lines in Naples they huddle together dazed, terrified, driven here and there by the overseers much as cattle might be. To these bewildered, helpless women, waiting sometimes weeks before sailing, the Young Women's Christian Association is bringing "a little bit of America," attempting to instill in them something of the ideals and manner of living of their new country before they have left the land of their old. Coffee and biscuits are served to some four hundred women every day. Machines for making clothing for the children have been installed and lessons are given to the women in cutting and sewing.

The gratitude with which these women receive the help and kindness of the American workers is abundant evidence of the spirit with which they are coming to our country. One timid, little creature stole shyly into the Association building and listened without speaking while the secretaries told her about their plans for helping the women before sailing. Just as it seemed that her suspicion and fear were dispelled, she turned around and darted out of the place. In a few minutes she returned with a long line of her friends and indicated that she wished them,

too, to hear the story which had sounded to her too good to be true.

But most significant of all was the request, from the Italian women themselves, for classes in English, so that they might know something of the language and ways of America before landing on her shores; that they might become a "little American" in their manners so that they would not appear too much like foreigners.

These women are so pitifully eager to become "Americanized"; but they cannot do so without our help. It is for the American women in this country to keep up the good work started by the American women in Italy.

Measuring Depths by Echoes

By Robert H. Moulton

You would naturally think that putting so intangible a thing as an echo to work would be an impossibility. Yet an Oakland, California, inventor has found a new and practical use for echoes, and as a result the ancient practice of "heaving the lead" at sea may soon become obsolete. He has perfected a device, the marimeter, which sends a sound to the ocean's bottom whence it is reflected and returns as an echo, the machine meanwhile recording the precise time of the travel. From this the ocean depth is easily calculated according to the speed of a sound wave in salt water. Four soundings per minute may be taken with the marimeter, as against from ten to twenty minutes for each operation under the old methods. The device is declared to be the greatest safeguard to shipping ever invented, with the single exception of wireless telegraphy.

The principle of the marimeter is electricity controlled by sound vibration. A sound wave is sent out mechanically from the bottom of the vessel and the instant this sound is started it is picked up electrically and relayed to the recording instrument, and the dial of the latter begins to register. The sound wave travels to the bottom of the ocean and returns in the form of an echo, and the echo is picked up by the diaphragm in the bottom of the boat. It is also relayed by electricity to the recording instrument, causing the pointer to immediately stop. The depth will be shown in all fathoms, at the rate of four soundings per minute, all directly under the ship's keel.

It is known that sound travels at practically a uniform rate in salt water—about 4,000 feet per second. The depth is measured by accurately taking and recording mechanically the time for sound to travel down and back. This will show the actual depth under the keel of the boat.

$$8+9=15$$

It would have been money in our pocket if people were born with six fingers on each hand. For in that case we would count by twelves instead of tens. You can't divide ten by anything except five or two and have it come out even; so you can't express the common fractions of everyday life in the decimal system. But twelve divides easily by two, three, four and six and stands in a simple ratio to eight and nine. It would therefore make calculations much easier if we counted figures by dozens as we count eggs from the market and the hours of the day.

Then instead of numbering 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 and so on, we would add two new figures for the values ten and eleven and count something like this:

1, 2, 3, 4, 5, 6, 7, 8, 9, X, Y, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 1X, 1Y, 20.

A little figuring would show how convenient this would be. One-third would be written in decimals 0.4 instead of 0.3333333. . . . Five-sixths would be 0.X instead of 0.83333. . . . If you were asked for twenty-four gross of pencils it would come, in the new system of figuring, to 2000 and you would not need to touch pencil to paper to get the answer.

But because the Hindu merchants who invented our numerals counted first with the aid of their fingers and toes, we are condemned to follow their example whenever we calculate. To change to another system would, perhaps, be a greater effort than the gain would be worth. But we made an even greater change in abandoning the old Roman system of numbering, which still lingers on the cornerstones of buildings and on the faces of old-fashioned clocks. An Irish bricklayer once asked what the MDCCCLXXXVIII on the building he was erecting stood for. He was told "Eighteen hundred eighty-eight." "Mike," he replied, "don't you think they are overdoing this spelling-reform a bit?" No doubt the bricklayer of today is better educated, but he would still be puzzled if asked to multiply MCCLXIX by DXIV. Read it in ordinary figures and the problem at once is easy.

How Many Go to Church?

You will frequently be told by a well informed person that church membership in this country is not keeping pace with the increasing population; that the churches are losing their position of leadership, and do not begin to possess the influence they had fifty years ago. Another good observer will tell you that the gain in church membership is quite satisfactory, and that the churches have never exercised the

A comparison of church memberships in the various denominations. The complete circle represents the 100 per cent of total church membership

influence upon our community life which they do today. In view of these conflicting statements it is well to extract the meat from the volume on Religious Bodies just published by the Bureau of the Census.

There were in the United States in 1916 nearly 42,000,000 church members, of whom about 36,500,000 were thirteen years of age and over. Of the membership about 43.5 per cent were males and 56.5 per cent females. There were three denominations in which more than three-fourths of the membership were males; the Volunteers of America, with 90.1 per cent; the Greek Orthodox Church, 83.4 per cent; and the Serbian Orthodox Church, 76.9 per cent. The denominations with the lowest percentage of males were the Seventh Day Adventists, 32.9; Free Methodists, 34.2 per cent; Universalists, 35.2 per cent; Free Baptists, 35.5 per cent; and the Congregational churches, 35.7 per cent.

It is apparent from the chart that the three largest denominations are Roman Catholic, Baptist and Methodist, comprising together 71.4 per cent of the total church membership of the country. The church membership in 1916 was about one-fifth larger than in 1906.

All of the denominations own a little over 200,000 church edifices valued at about \$1,700,000,000. The mortgages on these edifices are equal to about one-tenth of the value of the property. The rapid increase in the value of church property is evident from the fact that in 1850 it was reported as a little less than \$90,000,000.

The total church expenditures of the different denominations in 1916 were about \$328,000,000. About one-half of this went for ordinary running expenses, about \$75,000,000 for repairs or improvements, and a little less than \$50,000,000 for benevolences. These aggregates mean that the approximate average spent per member for the support of the churches in this country was \$8.75. The per capita expenditure was the highest for the Protestant Episcopal Church, the Unitarian and the Presbyterian Church, where it amounted to about \$20 per capita.

Fallacies About the Moon

The many interesting but erroneous beliefs which still prevail regarding the moon, well illustrate both the unreliability of unscientific observations and the persistency among the mass of the people of erroneous conclusions which have once been fully accepted as established facts. Quite recently a most intelligent lady, cultured and unusually well informed upon the current topics of the day, was heard to inquire "if it were not a unique and extraordinary physical fact that the Harvest moon stood still for four nights every September." When told that the moon never stood still, she said that she had never before heard the supposed fact denied or doubted, and asserted positively that for at least two generations the belief had been held by her forbears.

Reference, since made, to this belief, shows it to be quite prevalent. Therefore a brief explanation of this phenomenon will be of interest to many, tho it requires a little mental effort for clear comprehension of the cause.

It is known by everybody that the rising of the sun, moon and other heavenly bodies and their apparent passage across the firmament from east to west is caused by the rotation of the earth on its axis and it is generally understood that this *apparent* motion of these bodies is due to the *actual* motion of the observer and his horizon, they being continually carried to the eastward by the rotation.

The horizon may be defined with sufficient exactness, for present purposes, as the circle along which the sky and earth seem to meet. As this circle (the horizon) moves eastward it continually brings additional heavenly bodies into the view of the observer, and shuts out some from view to the westward. When a body appears on the eastern horizon it is said to be "rising," when on the western horizon it is "setting."

If the moon were stationary and the earth had no motion other than that of rotation, the moon at a particular latitude would rise at the same time every day. The moon, however, moves in its orbit continuously eastward, between 12° and 13° in twenty-four hours, so that when the horizon line descends toward the east tomorrow it will not overtake the moon at the same time that it will today, for the moon will have moved eastward, and the horizon line must go farther to reach the moon's advanced position, the "rising" of the moon will accordingly be later tomorrow than today.

In this latitude the average daily retardation in the rising of the moon is about 52 minutes, but this interval is only the *average*; the least delay is about 23 minutes and the greatest about 77 minutes. The shorter intervals between risings occur near the autumnal equinox and the full moon nearest this equinox (September 22) is called the Harvest moon. The common belief that the Harvest moon rises at the same hour for several nights

"You Don't Have to Figure It Again"

A certain business executive decided he was ready to choose between two calculating machines — the Monroe and one other.

"We need five calculating machines in our office here," he said to the machine representatives. "I know the claims for your respective machines, but I can't decide which is the better. So I want to put you to a test. I will give you a problem to figure. Whoever gets the answer first and proves it dependably accurate, gets my order. Ready? Multiply 20.125 by .425."

"Finished!" said the Monroe man, a few seconds later.

"You're first on speed," said the executive to the Monroe man. "But," he continued, "how do you fellows know your answer is right? I suppose you have to figure it over again to be absolutely sure."

"Not on this machine," replied the Monroe man. "I know my answer is

right; here's the proof of it. There's my Multiplicand in the keyboard, 20.125; there's my Multiplier, .425, in the upper dial and there's my Answer, 8.553125, in the lower dial—all three factors prove my work is correct."

"You don't have to figure it over again if you have a Monroe."

The Monroe's speed, accuracy and simplicity of operation (no trained operators required), adapt it for use on every kind of figure-work—figuring costs, checking invoices, figuring interest, discount, pay-rolls, etc. The Monroe is the only machine on which you can multiply or add by a forward turn of the crank; divide or subtract by a backward turn of the crank. Mail coupon for more complete information contained in "Book of Facts."

Says the Hupp Motor Car Corporation:

"We find the Monroe Calculating Machine especially valuable in our pro-rating, statistical reports, pay-roll extension, cost analysis, etc. Its self-checking facilities are especially valuable to us. We consider it one of the most efficient office machines and would not consider ourselves properly equipped without one."

W. L. Douglas shoes are sold in 107 of our own stores direct from factory to the wearer. All middlemen's profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W. L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-seven years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

BROCKTON, MASS.

is due to the fact that accurate observations of the time of rising have not been made by those entertaining the belief, and they have overlooked the short intervals that occur at this time of the year between the risings, and concluded that the risings were at the same hour each day. Risings of the moon at the same hour for several nights may occur in Norway or Sweden, but not at this latitude.

ANOTHER very common belief is that the moon exerts considerable influence on the weather, that the changes in the moon bring about changes in the weather.

As the changes of the moon which are supposed to influence the weather occur every week, no change of the weather can occur more than three and one-half days from a change of the moon; so, many changes in the weather must occur along with or near to the changes of the moon. However, numerous investigations have been made and weather observations taken at established stations for many years have been studied, and there has been discovered no influence of the moon on the weather.

If the moon exerted any influence on the weather it could only do so thru its action upon our atmosphere, but the moon's action upon our atmosphere is entirely masked by the combined action of the sun and the existing terrestrial conditions. Accordingly investigation, observation and theory all refute the idea of the moon's influencing our weather.

Among certain classes a belief prevails that the moon exerts an influence on the sprouting and early growth of certain grains, vegetables, etc., and accordingly that the phases of the moon should be considered in planting certain crops: this belief is more crude and has less basis than that regarding the moon and the weather, but both beliefs are mere survivals of past credulity.

The generally prevailing belief as to the amount of light reaching the earth from the moon is very widely erroneous. On moonlight nights we often hear the exclamation, "it is almost as light as day," or the assertion that "if we had two or three full moons it would be as bright as day." Of course, such estimates are not made with deliberation, but they roughly indicate the popular estimate of the amount of light given us by the full moon.

How erroneous is such an estimate is shown by the fact that scientific measurements prove that it would require more than one-half million full moons to supply us the light of the sun. As Professor Young has stated "If the whole firmament were packed with full moons we should receive from it less than one-eighth the sun's light." These exact determinations are so remarkable when compared with the conclusions from only our subjective experiences that they are almost incredible, but they strikingly demonstrate how entirely erroneous may be such conclusions.

It may be hardly necessary to note in conclusion that the future may fairly be judged by the past. The future of the commercial relations of the two countries should continue to be bright as long as the causes for development up to the present are fostered with care, as long as the two countries continue to advance in civilization and to make progress in arts and industries.

Japan

The Strange Story of Gubbins

My name is Wilberforce Gubbins. Ten years ago I was a clerk in the house of Einstein & Newton, famous importers of Swiss Cheese Holes. On a miserable stipend of \$7.58 per week I supported my wife, a paralyzed mother, and six hungry children. Today—but enough of that.

One night I trudged wearily homeward to our humble tenement in the Commodore. My wife met me at the door, the tears streaming down her face.

"Oh, Wilby," she cried, "what shall we do? The quarter for supper fell into the knothole in grandpa's wooden leg." Convulsive sobs racked her frail frame.

I sank listlessly into a chair, dully wondering what was the use of going on with it. A page of an open magazine caught my eye, and the words leaped at me.

"Oh, yes, I know you. You are Mr. Added Simp of Seattle. I met you at a dog-fight at the Rotary Club three years ago. Has your wife still got the measles? And did that string-bean merger ever come thru?"

It was a message of hope from Davis Rot, the great memory expert.

With a cry of delight I ran to the nearest post-box and dropped in a check. In ten minutes the first lesson fell out of the box. I read it. I was a new man.

* * * * *

The next morning I knocked boldly on Mr. Einstein's door.

"Come in," he snarled.

I walked up to his desk and looked him calmly in the eye. I would impress him with my grasp of the fundamental facts of life.

"Mr. Einstein," I said, "do you know that the 1918 Rhubarb Crop in Bogota was the largest on record? Do you realize that the Koko Bird, which is indigenous to Java, flies backward to keep from getting dust in his eyes? Can you—"

But why go on? That moment was the turning point in my career. As I have said, I was once a humble clerk.

Now I am an office-boy.—Judge.

Kardex Your Business

Delays Waste Costly Time

If the teller had the depositor's signature on a Kardex, he could verify it in four to ten seconds instead of as many minutes. Don't allow your customers' time to be wasted by obsolete filing methods.

Your record cards—old or new—can be made to answer your questions as soon as they are asked if kept in Kardex.

Each record card is held in an individual transloid pocket, with index item exposed to view, yet fully protected from dust, dirt and constant handling.

Both sides of every card are available for instant use without removing from holders. Automatic "OUT" signal warns of cards removed. Transparent color signals, easily applied, permit any desired classification. No other system gives you as many advantages.

Any records in any business can be "Kardex-ed." Steel cabinets are available for any number of cards, from a hundred to a million.

Write for Kardex Catalog

An authority on cards-in-sight systems. It explains exclusive features of Kardex. Find out how easily you can convert your present system to Kardex and the big savings in time and clerk cost that result at once. Enclose samples of the cards you now use.

CARDS IN SIGHT

Training for Authorship

How to write, what to write,
and where to sell,

Cultivate your mind. Develop
your literary gifts. Master the
art of self-expression. Make
your spare time profitable.
Turn your ideas into dollars.

Courses in Short-Story Writing,
Versification, Journalism,
Play Writing, Photoplay
Writing, etc., taught person-

Dr. Esenwein ally by Dr. J. Berg Esenwein,
for many years editor of Lippincott's Magazine, and
a staff of literary experts. Constructive criticism.
Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and
articles written mostly in spare time—"play work," he
calls it. Another pupil received over \$1,000 before
completing her first course. Another, a busy wife
and mother, is averaging over \$75 a week from
photoplay writing alone.

There is no other institution or agency doing so much
for writers, young or old. The universities recognize
this, for over one hundred members of the English
faculties of higher institutions are studying in our
Literary Department. The editors recognize it, for
they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive
booklet free. We also publish *The Writer's Monthly*, the lead-
ing magazine for literary workers; sample copy 20 cents, annual
subscription \$2.00. Besides our teaching service, we offer a
manuscript criticism service.

150-Page illustrated catalogue free. Please Address

Stop the Leaks that Keep You Poor

Saving money is hard work until you get
the secret. No matter how large or how
small your income you will never save as
much as you should until you get the knack.

If the average business were operated on
the haphazard basis on which our household
finances are run, there would be fifty times
as many bankrupts. The truth, whether we
admit it or not, is that very few families
know where their money goes. At the end
of each year we find ourselves little better
off, if any, than at the beginning. We
have earned \$800 or \$1,500 or \$5,000, yet
practically all has been spent—and the pitiful
part of it is we have nothing to show
for it!

**New Method Makes Saving a Pleasure
Instead of a Hardship**

let called "How We Stopped the Leaks
That Kept Us Poor."

The INDEPENDENT

311 Sixth Avenue New York City

Independent Opinions

Generally when we print a letter we
have to supply the comment ourselves,
but the writer of the following com-
munication is kind enough to enclose
the answer to his own question. We are
careful to disclaim responsibility for
his statement of what the editor ought
to say in reply to Uncle Sam's com-
plaint because we fear that his lan-
guage, altho scriptural, might subject
us to the libel or sedition law.

To the Editor:

SIR—I am employing at a salary a num-
ber of persons to carry on my business in
the halls of Congress. Altho work of special
importance now needs to be done, several
of my employees are absenting themselves
for weeks at a time and are running about
the country urging people to recommend
them for the office of chief manager of all
my business. What ought I to do with
persons so neglectful of their duties?
Would you advise me to promote one of
them to the desired position and see if
this will not help him to be more faithful
to my interests?

Yours truly,

UNCLE SAM

Answer:—In most occupations it is con-
sidered dishonest to draw pay for work left
undone. No farmer would continue to em-
ploy men who at the busiest season left his
field to cultivate their own gardens. A
manufacturer would not promote to the
position of overseer a workman that neg-
lected the work he was hired to do. We ad-
vise you to find the answers to your ques-
tions by a study of Christ's parable of the
Talents. It teaches that the proper person
to be set over many and great things is one
who is faithful in those of comparatively
less importance. The result of your study
may be that instead of promoting any of
your neglectful servants you will cast them
out into the outer darkness where there
will be weeping and gnashing of teeth be-
cause self-seeking ambition has been right-
ly rebuked.

OTIS CARY

Ogden, Utah

The author of the prize-winning ar-
ticle in our contest on "The Best Man
or Woman in Your Town" writes us:

I assure you there was a great demon-
stration of happiness at our home when
your letter bringing word that my little
contribution on "The Best Man in Our
Town" had won first prize in The Inde-
pendent's contest. Several factors con-
tributed to the pleasure enjoyed. First, the
\$50 was needed. Second, your words of
praise as to merits of the article were
surely appreciated. Last, but by no means
least, was the fact that it was The Inde-
pendent that had judged the article worthy
of first place. For, be it known unto all
parties interested The Independent has been
authority on all matters of importance to
this ego, ever since over sixty years ago
she and little sister used to dangle their
legs from the top of a huge blue chest and
listen to big sister read aloud The Inde-
pendent's weekly story. Father was a
Home Missionary in Wisconsin. His nine
children inherited a taste for good litera-
ture which was fostered by the contents
of that periodical. We continue to swear by
its pages—that is those of us still living.
Father and mother long ago passed over
to the other side. Big sister, too, is watch-
ing us from "over there." Churches have
grown and multiplied on foundations laid
by my father. The Independent still flour-

ishes like the Green Bay Tree, and will
always find a place on our library table,
so long as we exist as mortals.

Possibly the reason why this contri-
bution found its niche in our pages so
easily was because the author had so
long been a member of our family
circle. Sixty years of reading The Inde-
pendent ought to give one The Inde-
pendent habit of mind.

Apropos to the deadlock between the
Senate and the President which has
paralyzed our Government just at the
time when America has most to gain
by an energetic foreign policy, a Cali-
fornia correspondent writes:

Had the issue arisen only between the
present Administration and Senate the
Senate claim might merit more support.
But since the vigorous Washington, Roose-
velt and Lincoln had to fight hard for
their constitutional control, while the
treaties of suave McKinley and Taft came
to grief on senatorial reefs, is not the
average citizen warranted in leaning to the
side of the President, or rather the Presi-
dents? What lends force to this question is
the fact that on looking back we can see,
as the historians allege, that in the long
series of disputes the President was al-
most invariably right, or substantially so.

In the dispute over the famous "Jay"
treaty, Washington was bitterly assailed
for not taking Congress into his confi-
dence, for yielding far too much to Great
Britain, and for asking far too little for
the United States—what a familiar sound!
History, however, notably from the pens
of Wilson, have vindicated our first Presi-
dent on every point at issue.

Who can deny that much dispute, great
bitterness, long delay, unsatisfactory re-
sults, have been the outgrowth of the
treaty-making system now in force? Or
that Congress, while claiming the Presi-
dent disregards its prerogative, has repeat-
edly sought to encroach on his?

Why not strike at the root of the trouble
by amending the constitution, and in future
require a majority instead of a two-third
vote to ratify a treaty? For as the law now
stands, and as long as it so stands, the
situation in the congressional world prom-
ises to be almost as unsatisfactory as it
is in the international world. And while so
many of us advocate the League of Nations
as a vital need in the one world why not—
to lessen future controversy and obstruc-
tion—advocate the constitutional amend-
ment as an equally vital need in the other?

JOHN CHETWOOD

San Francisco

In The Independent of March 7 you
say:

"The American troops never retreated.
From the time the Yanks went into battle
until the armistice was signed there was
an unfaltering forward march to victory."

Ever since the armistice the United
States Senate has been steadily retreating.
It has lost much that our soldiers gained.
Immediately after the Civil War the United
States Senate retreated and gave birth to
problems that have been trying and puz-
zling ever since.

Is the Senate a weak point in our Gov-
ernment and should we abolish it? Is there
something about the Senate that causes
a man to forget his loyalty to his country
and to place his own selfish interest above
everything else? It will not require many

more wars to make a lot of the American people feel that this is the case.

It makes little difference to us whether it is a Benedict Arnold, an organization of Bolsheviki or a poorly functioning government department, if it results in delivering the country over to an enemy of the body politic or civilized society should we not abolish it?

J. E. BULLARD

Eden Park, Rhode Island

It has often happened that what has been won in the war has been lost in the peace. The bitterness which the South still feels toward the North is not due so much to the cruelties of the campaign as to the blunders of reconstruction. It may, as our correspondent intimates, be necessary for the American people to follow the example of the English people and curtail the power of their obstructive upper house.

We have had so many compliments on our coal mine cover of March 20 that we can't forbear to publish one of them, and to say thank-you incidentally for all the others!

I do not profess to know much about art, but in my opinion the engraving on the outside of The Independent for March 20 is as fine as anything I have seen in the paper during the fifty-five years that I have been numbered among its subscribers.

E. P. BRANCH

Melbourne, Florida

"Welcome, Stranger!" Said Little Old New York

(Continued from page 122)

of the sort and would be insulted if it were expected of him. I can imagine nothing more uncomfortable than to stumble thru life with no fixed place at all. The negro does not seem to "own" any part of the larger cities of the middle west (which I visited last October) and east in the way that he "owns" his part of Dallas or Houston. In our Texas cities he may have his own society, his own customs, his own fun. He may carry his cane and strut if that pleases him, exhibiting a lavender suit with the coat coming to his knees and the trousers cut peg top. Or he may be a banker or business man of large responsibility. He bothers no one. There are many rich negroes in Houston and Dallas. Most of the residents of those cities do not even know that such is the case. The negro has his own part of the city.

But in Indianapolis, for instance, I saw young negroes strutting up and down the principal streets carrying canes and wearing extravagant clothes. I would not for worlds deny them the pleasure if they like it. But I feel sorry for them because they do not have a sympathetic and jealous group of spectators. On the contrary they draw unkind stares.

Because I am familiar with the Mexican border and other favorite locations for "Western Stuff" I am often invited to regale the assemblage with something thrilling.

It is true that about the time I was born quite a lot of ammunition was used in those parts. And Texans still settle a dispute with a six-

"A.B.A." CHEQUES GO ROUND THE WORLD

THERE are strange and out-of-the-way places in this world, but none of them is strange to "A.B.A." Cheques—The Best Funds for Travelers. Wherever civilization has penetrated, these cheques have become a familiar medium of exchange and brought comfort and aid to thousands of tourists.

HOTELS, stores and transportation companies everywhere know and accept them, and those who use them are independent of banking hours, free from the annoyance of money exchange and protected from loss or theft. Your counter-signature, written in the presence of the acceptor, automatically identifies you. Without it the cheques are valueless.

IN denominations of \$10, \$20, \$50 and \$100. Conveniently carried in a small, compact wallet. Issued by the American Bankers Association composed of 20,000 leading American Banks and Trust Companies.

VACATION AT CHAUTAUQUA

Fun for ALL the family

Here's a composite American family: Two youngsters under twelve; one or two between 12 and 18; Dad and Mother; and Auntie or Grandpa or Grandma. They all want a good time in the summer, but the boys and girls and the elders have different definitions of good times. Chautauqua suits them all! People who spend one vacation there "get the habit" and go back year after year.

The Kiddies

They have a playground, where they are tactfully directed and unobtrusively watched. There is an outdoor kindergarten for the very little ones; there they hear stories and learn to know Mother Nature. Or they can paddle in the lake, on a shallow, smooth, sandy beach. They get fat and brown, and have jolly times without consciousness of restraint, yet always in perfect safety.

The Older Boys and Girls

Perhaps Big Brother and Sister are of high school age, and demand a wider range of amusements. They can have tennis or golf; they can swim, paddle, row or sail; they can take part in the pageants and plays. If there is a little extra work to do in preparing for college, they can have tutoring. Perhaps Sister is a school teacher; she can select from one hundred and thirty-three courses in the Summer Schools. There is a club for the boys, and another for the girls. The School of Physical Education offers splendid facilities for athletic training for either sex. Athletic field days, boat races and baseball introduce the element of rivalry and competition.

The Grownups

Father can bring "the crowd" in his car if he likes, and be sure of having it safely housed and well cared for while here. There are many beautiful runs up and down the lake shore and out into the country. And Dad will surely enjoy the Chautauqua golf links!

Mother and Auntie will find plenty to do, what with the lectures in open air halls, the splendid music, vocal and instrumental; the trips to nearby places of interest, and the unlimited opportunities to meet women from all parts of the country.

So, you see, there is something at Chautauqua for everybody; social pleasures, physical or intellectual exercises; recreation that truly re-creates, philosophy or fishing, work and play, blended in healthiest proportions.

For full information about hotels, boarding houses or cottages, and all desired details, address

Colonnade, CHAUTAUQUA INSTITUTION, Chautauqua, N. Y.

shooter if they think the case merits it. I have "toted" one myself. They are an awful nuisance, especially in warm weather. But there have been more killings in western fiction and movies than there ever were on the open ranges. It is very interesting to me to observe the impression people up here have as to the number of homicides along the border—and of course all of Texas is supposed to be right along the border. I have tried a number of times to explain that there are a great many more killings in cities than in the country. There are more killings in Dallas and Houston and San Antonio than there are on all the cattle ranches in Texas. There are more killings in New York City than among that number of rural people either in Texas or elsewhere. The reason for this is obvious: people fight when they are crowded. In the cities they are crowded. It puts them in a bad humor. If they are poor they are in danger of being ground to death. In the country most of the people are poor.

When it comes to "bad men" the Texas product could wear wings compared to what a city produces. Here there are evidently scores of men who would cut a man's throat in order to take his purse just on the chance that it might contain money. Sometimes I think they shoot some of their victims for the pleasure of watching them kick. So often the person killed is a stranger to the person doing the killing and the motive is robbery. We have had some bloody pages in Texas history, but I think we have nothing to compare with what happens in great cities. Paris and London, I suppose, could easily match New York—but Texas never could. Recently I read the record of a criminal case in New York and got a new angle on what is meant by killing someone "with a calm, deliberate mind, fatally bent on mischief" or whatever the words of our Texas statutory charge on first degree murder are.

But the most wonderful thing about New York, the fact that stirs my imagination and ambition and energy, is that this is such a wonderful market. It will buy poetry, fiction, paintings, cauliflower, executive ability, wool and hides, engineering, cotton, embroidery, bricks—anything that nature or man has devised, including Texas oil stock.

You cannot imagine how that impresses a man accustomed to small communities unless you have also known places where an electrical engineer might starve to death while cotton pickers prospered. Think of the thousands of geniuses who have perished because they didn't get to New York! Think of the hundreds and hundreds of great minds that have soured because there appeared to be no market for them! And think of the thousands of boys in New York who do not appreciate the opportunity ahead of them. I suppose some of them think the trusts or some other mysterious force has restricted opportunity in this great control-center of the world's activities. If I owned such a boy I think I would ship him to the eastern line of New Mexico and let him walk back!

What Roosevelt Thought of Kings

One of the most interesting features of President Roosevelt's account of his European tour, as told in the letter to Sir George Trevelyan recently published in "Scribner's," is the frank, friendly, whimsical way in which he speaks of the various royalties who were his hosts. Almost alone of those who have written of kings, Roosevelt considered them not as demigods or demons, but simply as plain, everyday human beings with as many faults and virtues as the rest of us.

On Kings in General

I thoroly liked and respected almost all the various kings and queens I met; they struck me as serious people, with charming manners, devoted to their people and anxious to justify their own position by the way they did their duty—it is no disparagement to their good intentions and disinterestedness to add that each sovereign was obviously conscious that he was looking a possible republic in the face, which was naturally an incentive to good conduct. . . .

Apparently what is needed in a constitutional king is that he shall be a kind of sublimated American vice-president; plus being socially at the head of that part of his people which you have called "the free masons of fashion." . . . Politically he can never rise to, and socially he can never descend to, the level of the really able men of the nation. I cannot imagine a more appallingly dreary life for a man of ambition and power. . . . All these small kings had vague ambitions, which they knew would never be gratified, for military distinction, and hunting dangerous game, and they always had questions to put about the Spanish war and the African trip. They also all stood distinctly in awe of the German Kaiser, who evidently liked to drill them; and both the big and the small ones felt much jealousy of one another, and at the same time felt joined together and sundered from all other people by their social position. . . .

There was no use trying to talk of books with any of the royalties, excepting the Italians and the Queen of Belgium.

The Austrian Emperor

He did not strike me as a very able man, but he was a gentleman. . . . He said that he had been particularly interested in seeing me because he was the last representative of the old system, whereas I embodied the new movement, the movement of the present and the future.

The King of Italy

The King showed that he was deeply and intelligently interested in every movement for social reform, and was not only astonishingly liberal but even radical, sympathizing with many of the purposes and doctrines of the Socialists. He took me in to see his children, who were well behaved and simple. When I spoke of how well the Queen was bringing them up, he

laughed and said, yes, he wished his son to be so trained that if necessary he would be fit to be the First President of the Italian Republic. . . . I do not see how Italy could have a more intelligent, devoted, and sympathetic ruler.

The King and Queen of Belgium

The King was a huge fair young man, evidently a thoroly good fellow, with excellent manners and not a touch of pretension. . . . The Queen proved really delightful, really cultivated and intellectual, so much so that we made special inquiries about her.

The Norwegian Royal Family, and Especially the Prince

They were as simple and unpretentious as they were good and charming. Olaf was a dear little boy, and the people at large were immensely pleased with him. . . . He was not a bit spoiled; his delight was a romp with his father, and he speedily pressed Kermit and Ethel, whom he adored, into the games. In the end I too succumbed and romped with him as I used to romp with my own children when they were small. . . . Princess Beatrice told me that Olaf had announced to her: "I would like to marry Ethel; but I know I never shall!"

German Hatred of the United States

The Germans did not like me, and did not like my country; and under the circumstances they behaved entirely correctly, showing me every civility and making no pretense of an enthusiasm which was not present. It was evident that, next to England, America was very unpopular in Germany. The upper classes, stiff, domineering, formal, with the organized army, the organized bureaucracy, the organized industry of their great, highly-civilized and admirably-administered country behind them, regarded America with a dislike which was all the greater because they could not make it merely contempt.

The German Kaiser

He is entirely modest about the many things which he thoroly knows, such as the industrial and military conditions and needs of Germany. But he lacks all sense of humor when he comes to discuss the things that he does not know, and which he prides himself on knowing, such as matters artistic and scientific. . . .

As is inevitable with a man brought up in the school of Frederick the Great and Bismarck—in contrast to any one whose heroes are men like Timoleon, John Hampden, Washington and Lincoln—there were many points in international morality where he and I were completely asunder. . . .

In international affairs he at times acts as a bully, and moreover as a bully who bluffs and then backs down; I would not regard him—nor Germany—as a pleasant national neighbor.

Feels Good

Those Desperate Days at Chateau-Thierry

(Continued from page 120)

it still clinging to outpost positions in advance of the Americans, from which positions they were to retire as soon as the American line should be firmly established. On the right of the Second was the 164th French Division, whose further flank with the potent assistance of elements of the Third United States Division, held the southern part of Chateau-Thierry. On the front thus established the Second Division remained until July 4, doggedly breaking the violent German attempts to advance further toward Paris.

Without having undergone the hardening process of two months in a stabilized sector, which had been the lot of the Second Division, but drawn from a training area with its course only partly completed, the Third Division, Major General Joseph T. Dickman commanding, was sent with the utmost speed in the last days of May to help stop the German push for the crossings of the Marne. Nobly it performed its task, completing its training under the most severe battle conditions.

The Third was not at first put in as a complete organization for it still lacked its artillery brigade and its engineer regiment. But, reporting to the Sixth French Army, its infantry and machine gun organizations were assigned by the commander of the latter to reinforce the 38th Corps under General de Mondesir. Thus General Charles Crawford's Sixth Infantry Brigade was split, General Crawford himself taking the 38th Infantry, under Colonel Ulysses G. Alexander, and half of his machine gun battalion, and occupying the crossings of the Marne from Dormans to Demery, as a precautionary measure in case the French battle line further north should be driven back, which did not happen. General Fred W. Sladen's Fifth Infantry Brigade, consisting of the Fourth Regiment, Colonel Halstead Dorey, and the Seventh Regiment, Colonel T. M. Anderson, reinforced by Colonel Edmund L. Butts' 30th Infantry, of the Sixth Brigade, went to aid the French in holding the Marne crossings from Dormans to Chateau-Thierry.

Thus on May 31 the Third Division troops were scattered on a front of about thirty-five kilometers of which the twenty kilometers from Chateau-Thierry to Dormans were actually subject to enemy attack. The Germans, however, finding the Franco-American forces holding the south bank of the river vigorously, did not assail it in force except at Jaulgonne Bend and Chateau-Thierry. The attack at Jaulgonne Bend being repulsed, they decided to make the Marne a defensive flank and, turning their remaining driving power westward, concentrated it in an effort to push further toward Paris by crossing the river at Chateau-Thierry and, further north, by advancing down the Paris-Metz road and toward the valley of the Ourcq. Then it was that the

6,000 More People Every Day Start Saving Teeth in This Way

All Statements Approved by High Dental Authorities

There is a new, scientific tooth paste used on millions of teeth today. You see them everywhere—glistening teeth, conspicuous for their beauty.

Leading dentists all over America are urging its daily use. Over 6,000 people daily, on the average, write us for a trial tube.

Soon or late all careful people are bound to join these users. But this is to urge you to learn at once what this new method means.

To End the Film

The purpose is to end the film—that viscous film which coats the teeth and causes most tooth troubles.

You can feel this film. It clings to teeth, enters crevices and stays. The ordinary tooth paste does not dissolve it. The tooth brush does not end it. So month after month it remains

there, causing stain and tartar and decay.

Film is what discolours—not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. All these troubles are constantly increasing, despite the wide use of the tooth brush. And film is the major reason.

Dental science, after years of searching, has found a way to combat film. Able authorities have proved its efficiency by countless careful tests.

It is now embodied in a dentifrice called Pepsodent—a tooth paste which meets every dental requirement. And a 10-Day Tube is being offered to let everyone see what it does.

Watch Your Teeth Whiten

Get this free tube and let your mirror show you Pepsodent effects.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

A new discovery has made pepsin possible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. But science has now found a harmless activating method. And

now this efficient film combatant can be every day applied.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how the teeth whiten as fixed film disappears.

Compare this new-day method with the old. Then let the clear results decide what is best for you and yours. Cut out the coupon now.

What if your best friend were a Drug Addict?

It is perfectly possible that your nearest and dearest friend, one to whom you have attributed qualities of the highest order, one who has secured the deserved esteem of the community, is, through no fault of his own, addicted to morphine.

Would you spurn him as a "dope fiend," class him as a criminal, or would you not rather prefer to consider him the victim of a controllable and curable disease?—Read what Ernest S. Bishop, a pioneer authority on Drug Addiction, has to say in "The Narcotic Drug Problem," and note the comment of two prominent newspapers:

"Dr. Bishop's study of the situation is scientific, thorough and humane. It will authoritatively inform the public regarding a subject on which enlightenment is needed."—Springfield Republican.

"He has expressed the truth in terms so simple that addicts may learn what really is the matter with them; that their friends and relatives may realize that they are sick and not depraved, and he opens the way for sane and sensible means of treatment."—Boston Transcript.

The Narcotic Drug Problem

left elements of the Third Division and the whole of the Second came into desperate conflict with the most aggressive part of the German Crown Prince's front.

At 6 o'clock on the afternoon of May 31, the Seventh Machine Gun Battalion, the motorized divisional unit of the Third Division, running ahead of the rest of the command and covering 180 kilometers of road in thirty hours without rest or sleep, rolled into the quaint old city of Chateau-Thierry. French troops of the 38th Corps, under General Marchand, of Fashoda fame, were already engaged in a hot battle in the streets. The greater part of the American machine gun squads promptly took positions along the south bank of the river, whence their cross fire could sweep the old stone bridge, while a detachment under Lieutenant John T. Bissell went to the assistance of about 300 French soldiers who were still fighting in the main part of the city, north of the river.

During thirty hours of the most violent conflict, Lieutenant Bissell and the American and French troops remained where they were, holding the enemy back from the river crossings. Then they escaped across the bridge. The rest of the battalion, having dug themselves snugly into the ruined houses on the south bank, held their position for ninety-six hours, during which time the rest of the Third Division and the reorganized 164th French Division consolidated a line which the enemy found it vain to attack.

In "Ludendorff's Own Story," the German generalissimo informs the word that "early in June we stopped our advance." The world, however, has gained an ineradicable impression that at Chateau-Thierry and elsewhere the German advance did not stop of itself, but was, on the contrary, very forcibly stopped. As a matter of fact, when it was at last relieved on June 4, the Seventh Machine Gun Battalion had immortalized itself in the history of its own country and of France by making the Marne once more the stumbling block over which the invaders from the East could not pass, for, despite the grave results, on the whole, of the enemy's break thru at the Chemin des Dames, he was now firmly held on every side of his salient, but particularly along the Marne.

From this time forth the troops of the Third Division were at first scattered among the French, where they continued to show their aggressive spirit and eagerness for action. They were eventually drawn together on a division front of about ten kilometers along the Marne, from the eastern edge of Chateau-Thierry to the foot of the Jaulgonne Bend. This front they had organized very strongly with trench elements and strong points, having good artillery positions behind them, by the time that the enemy attacked it on July 15.

By reason of its situation in the hilly country northwest of Chateau-Thierry, the Second Division had, in the meantime, become involved in a much more

"More Necessary than the Church Bell"

"More inspiring than stained glass windows and more effective than unlimited advertising."

The above quotation is from a recent letter by Rev. Jesse W. Bunch of M. E. Church of Ft. Benton, Mont., in discussing the need of Motion Picture Machines for church use. He makes the following additional interesting remarks on the same subject after successfully using a Motion Picture Machine in his church for the past three years.

"The moving picture is the final word in church equipment. A really great moving picture will work wonders, it will cause the lame to walk to church and the near blind to see. It gets results.

"The moving picture is doing what unlimited calling did not do—it is packing the house. It is delivering us from the sin of a smug indifference to the great unchurched mass, and heartening us with the hope of reaching the remotest man.

"The day of apologizing for empty pews is past. An average church with an average preacher can vitalize its program and become a center of interest, dominating and directing the educational, recreational and religious life of the community.

"In the small town where the moving picture cannot thrive the church can become a magnificent center of interest and power. In many larger towns it is a clear case of 'compete or close.'

"It is a sane and sensible addition to the working equipment of any church. As an educational, socializing force it has no equal. We cannot longer ignore the moving picture as a force in American life."

The abolition of the saloon has increased the opportunity of the churches. The installation of motion picture machines in churches will enable them not only to take the place of the saloon as a meeting place but to help build character, morals and hope just as much as the saloon was creating degradation, immorality and despair.

Your Church Can Quickly Earn a \$392.00 Moving Picture Machine

We have made arrangements with the Graphoscope Company, a leading manufacturer of high grade motion picture machines, that will enable your church to obtain, without cost, a complete outfit in return for a little work on the part of some of your members.

By having a high-class Moving Picture Machine you can add greatly to your Sunday School and Sunday evening attendance, besides bringing out a big crowd at one of the midweek evening meetings. A collection can be taken at the week-day meeting which will more than pay the weekly rental on all the films you use.

If you love your church, do not fail to send for large illustrated circular giving particulars of our unparalleled offer of a \$392.00 Graphoscope free. This is the most sensational offer of its kind ever made. Write today.

protracted struggle. Favored by his possession of the valley of the Gobert creek, in which he could maneuver his troops for attack out of sight of the Americans, the enemy continued his vigorous efforts to advance down the Paris-Metz road. On the 3rd of June he made a general attack on the 18-kilometer front of the Second American and the 43rd French Divisions, from the Marne to Chezy-en Orxois. It was decisively repulsed, but the next day and the following night several other determined local attacks were made at various points on the Second Division front. All of them failed miserably and the Germans sullenly settled back into fixed positions.

Altho the fighting done by the Second Division thruout its stay in the Belleau Wood sector, from June 1 to July 10, is generally thought of as purely defensive, the truth is that from the time when the Germans gave over their attacks on June 4, the Americans assumed the tactical offensive and continued to maintain it. Their attacks, to be sure, were local, with limited objectives, but they were conducted with the utmost pugnacity. The purpose of his aggressive attitude was two-fold; to create in the minds of the enemy respect for and fear of the American fighting spirit and to gain for the Second Division itself some improvements of position which were urgently necessary.

The American front as it stood from June 1 to June 4 was highly insecure as a permanent position, for, owing to the haste with which it had necessarily been established, it extended haphazard across the fields and thru the woods, with no adequate command upon the ground in front and no good observatories over the enemy's territory. It was necessary, for the creation of a proper defensive line which would, at the same time, be adapted to the launching of a general attack should the time come for one, that the front be forced forward to the edge of the hills overlooking the valley of the Gobert creek and the villages of Bouresches, Belleau, Torcy and Bussiares, which nestle along the winding course of that sylvan little stream. The most important points of all to gain were the high, wooded crest of the Bois de Belleau, jutting out like a bastion into the main bend of the creek valley and quite dominating Belleau and Torcy villages and, to a less extent, Bouresches.

As a greater number of French troops were concentrated in the invaded region, relief was given to the tired divisions on the flanks of the Second and, at the same time, the latter was, on the night of the 4th, drawn in to a frontage of about nine kilometers. Even this was a very extended sector for one division, in view of the fact that it was estimated that on that day the enemy had thirty-three divisions, about 300,000 men, on the front of his offensive in the Marne salient. But the shortening from the former length of front gave, at least, some prospect for success in local counter-offensive operations and preparations were at once begun to reach the edge of the Gobert

creek valley. The 197th German Division had been identified as the holding division in front of the Second United States, which now lay with the Fifth and Sixth Marines on the left and the 23rd Infantry on the right. The three regiments of the divisional artillery brigade had been reinforced by two regiments of French 75s and one regiment of 155s.

On the morning of June 16, the two left battalions of the Fifth Marines attacked toward Torcy, in conjunction with an attack by the adjoining 167th French Division toward Bussiares. With splendid dash the hill slopes were swept clean for more than a kilometer and the crest overlooking the valley at this point was gained. That evening a general attack along the division front carried the 23rd Infantry nearly up to Bouresches on the right, while in a savage, all-night struggle the Marines won a foothold in the southern edge of the Bois de Belleau.

This bit of forest was far less well cared for than the average neat French woodland, its steep hillsides being covered with enormous boulders while the ground between its numerous large trees was matted with underbrush. The Germans had taken full advantage of the opportunities which it offered for the concealment of machine gun and snipers' nests and bomb-proof shelters beneath the rocks. Nevertheless, keeping up the attack with grim tenacity, the Americans by next morning were in possession of Bouresches on the right and had gained the highest eminence in the Bois, Hill 181.

The infantry and marine brigades between them had lost nearly 800 men in their attacks. No further ground was gained until June 10, when under the protection of a devastating artillery preparation and barrage in which 40,000 shells were fired, the marines took another large section of the woods, following up next morning by assaulting and carrying all the rest of it excepting the last northward spurs. In the two days of fighting they had captured about 500 prisoners and nearly forty machine guns. In spite of many savage counter-attacks on the part of the five German divisions which at different times opposed them, the Americans completed the conquest of the Bois de Belleau on June 26, at the same time clearing out the little valley between it and the hill next on the west, thus bringing the line up to the creek valley at all points. In a time when nearly all the rest of the Allied front was stabilized, the troops of the Second Division had conquered about eight square kilometers of ground in close, intense fighting with the very spear point of the German army.

Meanwhile, far to the right, the Allied front was being gradually pushed forward between Bouresches and Chateau-Thierry by the combined efforts of the Ninth and 23rd Infantry, the 10th French Division and the 30th Infantry of the Third Division, temporarily under French command. Hill 204, commanding the Paris-Metz road, was partly carried by the French and the

30th Infantry on June 7-8. Beyond it the village of Vaux was a German position of great strength. After painstaking preparation similar to that which had achieved the capture of Cantigny, the place was assaulted and carried on the morning of July 1 by troops of the two American and one French divisions. Five hundred prisoners and sixty machine guns were taken in Vaux and the regiment holding it was so badly demoralized that another had to be substituted to make the counter-attack. The latter was delayed until the next day and then it was so badly bungled that the German first waves were cut off by the American barrage and 150 of the attacking troops were captured. No further operations of importance occurred in the American sectors northwest of Chateau-Thierry until the great counter-attack of July 18.

In concluding this narrative of the initiatory conflicts of the first three American divisions to engage in major operations; conflicts, probably, of as great importance to civilization as were fought by a similar number of troops at any time or place during the great war, we may refer once more to the refreshing views concerning the Americans which have been set forth by General Ludendorff in his autobiographical account of the war. In summing up the results of the Marne offensive conducted under his directions, he says:

At Chateau-Thierry, Americans who had been a long time in France had bravely attacked our thinly held fronts, but they were unskillfully led, attacked in dense masses, and failed. Here, too, our men felt themselves superior.

Such lack of skill it was, then, as achieved the American victory at Bunker Hill; such failure was suffered as Andrew Jackson's men experienced at New Orleans. And that General Ludendorff's subordinates did not all share in his sentiments of "superiority" is evidenced by some phrases contained in a German official army bulletin which was captured at about this time. Says this document:

The Second American Division must be considered a very good one and may even perhaps be reckoned as a storm troop. The different attacks on Belleau Wood were carried out with bravery and dash. The moral effect of our gunfire cannot seriously impede the advance of the American infantry. The nerves of the Americans are not yet worn out.

The qualities of the men individually may be described as remarkable. They are physically well set up, their attitude is good and they range in age from eighteen to twenty-eight years. They lack at present only training and experience to make formidable adversaries. The men are in fine spirits and are filled with naive assurance; the words of a prisoner are characteristic—"We kill or we get killed."

No higher tribute than this could be asked from friend or foe. Imbued with precisely such spirit were the American troops as they lay along the front on the eve of the great counter-offensive, calmly ready to meet the best that their antagonists might offer.

Washington, D. C.

Supercargo—or Banks?

In olden days, ships left home ports laden with merchandise in charge of a supercargo, or agent, who traded in each port, selling his wares and buying return cargoes—all for cash of the realm.

Today, through the medium of international commercial banks, foreign trade is conducted by an orderly process, comparable to that of domestic commerce, and employing neither supercargo nor actual cash.

The National Bank of Commerce in New York is associated with leading banks throughout the world, and serves as the medium for direct relations between merchants and manufacturers of this country and those of foreign markets.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 37 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Woman's Place Outside the Home

(Continued from page 123)

recommended in the standards are equal pay for equal work for men and women, a living wage, and a wage rate which will cover the cost of living for dependents and not merely for the individual, the eight-hour day and Saturday half holiday, provisions for comfort and sanitation in the factory, the prohibition of the employment of women on processes which have been demonstrated to be more injurious to women than to men, intelligent systems of employment management with women in executive positions to handle problems affecting women, and provision for representatives of the workers to share in the control of conditions of their employment.

These standards have been accepted and indorsed by many organizations interested in industrial conditions as they affect women, and are in very wide use, 90,000 copies of them having been sent out on requests from individuals only, during the past year.

Altho the result to be obtained, as evidenced by the universal use of the standards, is the same in many communities, the conditions which need special attention vary in each locality, and many different appeals have been made to the Women's Bureau for the solution of some particular problem, or for help in accomplishing some definite purpose.

In Indiana, shortly after the armistice was signed, there was found to be a need for information about the conditions under which women were working in the industries of that State so that a legislative program for the improvement of conditions could be outlined. The Governor of Indiana, knowing that the State Department of Labor had neither the funds nor the time to get this information, asked the Women's Bureau to make an investigation. This investigation was made and a report was submitted to the Governor who then recommended to the legislature that certain measures be passed to improve conditions.

A year later, in December, 1919, a similar investigation was made in Virginia at the request of the Governor of that State. In these two investigations all of the conditions affecting a large group of women in industry were studied.

Other studies are also made by the Women's Bureau in which attention is focused on some special condition, or group of women. An investigation of the wages paid women in the candy industry in Philadelphia revealed an average wage rate much below the minimum cost of living. A study of conditions under which home work was being done for factories in Bridgeport, Conn., brought to light many problems in need of adjustment. Another group of women which has received special attention from the Women's Bureau is the very large group employed by the Federal Government. Women have long taken an important share in the conduct of the work of the

Federal Departments, but many positions were not open to them owing to the stipulations made in Civil Service examinations for these positions. To find out the extent and character of the positions from which women were excluded the Women's Bureau made a study of all examinations and appointments made during a period of several months by the Civil Service Commission. When the report was issued showing that 60 per cent of the examinations given during that period were open only to men, altho in many cases women were as well qualified to fill the positions, the Civil Service Commission immediately issued a ruling declaring that all positions should be open to both men and women, leaving it to the discretion of the appointing officer to specify the sex desired.

Negro women in industry have also been a subject of special interest to the Women's Bureau, as these women are working under many conditions which handicap not only themselves but also other groups who are employed with, or in competition with them. The increasing importance of the negro in industrial groups makes it important that a definite and satisfactory policy for their employment shall be established without delay, and a study of a large group of negro women employed in different industries has shown many possible adjustments which will be a valuable guide towards satisfactory conditions of employment for them.

The activities of the Women's Bureau are not confined, however, to actual investigations of working conditions for women. There is a very much larger field from which information must be drawn if the Bureau is to fulfil in a satisfactory way what it considers to be the most important branch of its work—the formulation of policies for the employment of women. Are women helped or hindered by the enactment of laws limiting the hours they may work in a day or a week? Are women really entitled to receive a wage based as a man's wage is, on the cost of supporting dependents? What adjustments should be made in laws regulating hours and conditions of work, to prevent discrimination against women while at the same time giving them adequate protection? What training should girls be given in the schools to fit them for a fair opportunity in the industrial world they are to enter? What conditions under which women are working are more harmful to them than to men?

These are a few of the questions which the Women's Bureau must help to answer. Already, work is being done which will provide material on which to base policies on some of these matters. A study of the number of dependents supported by men and women, which is now under way in one industrial community, will provide evidence of the extent of the responsibilities of the average wage earning woman.

The effect on the employment of women of the eight-hour law recently passed in Massachusetts will be shown upon the completion of an investigation of numbers of women employed in certain industries in that State before and after the passage of the law. Once decided upon, these policies must be explained to the country. The Women's Bureau is not content with the mere issuance of a pamphlet or bulletin, but stands ready to meet the growing demand for educational material in the form of charts and exhibits which will "point the moral" in graphic and popular form and bring home to the people thruout the country their responsibility and the need for their understanding and coöperation.

At present and for many years to come the problem of the women in industry will be one which needs separate and expert attention. The Women's Bureau has made a start during the less than two years of its existence towards the formulation of definite policies and standards which the Federal Government recommends for all those who employ women. The work that lies ahead is a continued examination of conditions, interpretation of their significance to the community and to the women themselves and the distribution of information on these and other related subjects.

Pebbles

"Do you think that the things you eat influence your dreams?"

"Undoubtedly! I ate a sirloin steak the other evening and dreamed about bankruptcy all night."—*Garment Worker.*

A small girl of three years suddenly burst out crying at the dinner table.

"Why, Ethel," said her mother, "what is the matter?"

"Oh," whined Ethel, "my teeth stepped on my tongue."—*Blitty.*

"You say you have good references?"

"Yes, ma'am. I have over a 'undred splendid references."

"And how long have you been in domestic service?"

"Two years, ma'am." — *Philadelphia Evening Bulletin.*

In the wild and woolly west a game of poker was in progress. A tenderfoot, looking on, saw one of the players deal himself four aces from the bottom of the pack. The tenderfoot whispered indignantly to another onlooker:

"Did you see that?"

"What?" asked the other.

"That swindler dealt himself four aces!" the tenderfoot hissed.

"Waal," was the astonished reply, "wasn't it his deal?"—*Blitty.*

Food Controller Hoover said at a Washington reception:

"We must economize our food, or we'll get as short as some of our allies across the water.

"In a restaurant over there a man said, when his coffee was brought:

"Hey, there, waiter, where's my portion of sugar?"

"Oh, la, la!" said the waiter. "It must be that accursed fly again, monsieur. Every time I serve a portion of sugar, up he sneaks and swipes it!"—*Detroit Free Press.*

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION HISTORY, CIVICS AND ECONOMICS

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT
HIGH SCHOOL, NEW YORK CITY

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,
NEW YORK CITY

I. Those Desperate Days at Chateau-Thierry. By Captain Joseph Mills Hanson.

1. What are the principal points presented in the opening of the article as a means of making the situation clear? What principle governed the selection of these points?
2. Point out at least three examples of figurative language used for the sake of clearness. Name the figures of speech that are used. Explain every figure.
3. Explain, by reference to the article, how prepositions and conjunctions are used to give coherence.
4. Read aloud the quotation given from the German official army bulletin. What does the quotation contribute to the article? What is the value of using quotations? Give some rules for the use of quotations in short articles.

II. Woman's Place Outside the Home. By Mary Anderson.

1. What does John Ruskin say in "Sesame and Lilies" concerning woman's place outside the home? Would Ruskin have agreed, or disagreed, with the writer of the article?
2. Write a paragraph in which you develop the following topic sentence: "There is practically no industry in which women are not engaged at the present time."
3. Give a clear, oral explanation of the activities of the Women's Bureau.

III. What Roosevelt Thought of Kings.

1. Write a paragraph concerning kings, using the following as a topic sentence: "I cannot imagine a more appallingly dreary life for a man of ambition and power."
2. Write contrasting paragraphs concerning the Austrian Emperor and Mr. Roosevelt, treating one as the last representative of the old system, and the other as the embodiment of the movement of the present and the future.
3. Write a paragraph in support of the following: "Italy could not have a more intelligent, devoted, and sympathetic ruler."
4. Contrast any one of the following with any one of the men notable in the history of Germany: Timoleon, John Hampden, Washington, Lincoln.
5. Draw from the article material for an original composition on, "Roosevelt's conception of an ideal ruler."
6. Compare or contrast any one of the rulers mentioned in the article with any one of the rulers mentioned in the English classics.

IV. Fallacies About the Moon.

1. Define the word "fallacy."
2. Explain some of the causes that lead to the existence of fallacies.
3. How can you avoid fallacies in your own speech and writing?
4. Make a list of the "fallacies about the moon." Give a clear, oral explanation of any one of these fallacies.

V. "Welcome, Stranger!" Said Little Old New York. By Chester T. Crowell.

1. What is the style of the article? What advantages does the writer gain by his use of this style?
2. Explain exactly what the writer means by saying, "New York is the poorest place in the world for mediocrity."
3. Write a paragraph in which you summarize Mr. Crowell's "worst things I know about New York."
4. Write a paragraph in which you summarize Mr. Crowell's "best things I know about New York."

VI. Where Ignorance Is Bliss. By Willard Wattles.

1. Give a short talk in which you explain the sentence: "Political parties are the medieval superstition behind which stalk the 'Men Without a Country,' those who laugh and pull in the grapes."
2. Read Addison's essay on "Party Spirit." Show in what respects that essay is related to the thought of the sentence just named.

VII. A Message from the Imperial Japanese Government to the American People. Good Business. By T. Yamamoto.

1. Write, in sentence form, a properly lettered and numbered outline of the article.
2. Write a short article in which you point out the conclusions that may be drawn from "Good Business."

VIII. Independent Opinions.

1. Write an original short story that will illustrate the following: "The proper person to be set over many and great things is one who is faithful in those of comparatively less importance."

I. Those Desperate Days at Chateau-Thierry.

1. Locate the Cantigny and the Chateau-Thierry region on a map. Indicate the relation of these regions to the general German battle plan.
2. Sketch the plan of General von Ludendorff which resulted in the series of engagements which culminated in the last Battle of the Marne.

II. Germany and the Allies—"The Ruhr Rebellion Quelled," "The French in Frankfurt," "Clash of Opinion Over Germany."

1. Locate on a map the region of the Ruhr basin and the region occupied by the French.
2. Was the movement of German troops into the Ruhr basin justified? The movement of French troops into the Frankfurt region?
3. "... they [the French] appear to be preparing for more permanent occupation." If the French do occupy this region permanently what will be the result upon Germany? Upon the future relations of France to England?
4. Does the Frankfurt incident strengthen or weaken the case of those who oppose the ratification of the Treaty of Versailles by the United States?

III. What Roosevelt Thought of Kings.

1. Comment on the following quotations: (a) "... each sovereign was obviously conscious that he was looking a possible republic in the face," etc.; (b) "Apparently what is needed in a constitutional King is that he shall be a kind of sublimated American vice-president;" (c) "Politically he can never rise to ... the level of the really able men of the nation."

IV. Good Business.

1. What political conditions lead to the veiled hostility between the United States and Japan?
2. In your judgment, do the economic considerations overbalance the political considerations?
3. Which of the American products mentioned toward the end of the article are manufactured in quantities in the locality in which you live? Find out, if you can, whether any local firm engages in business with Japan.

V. Conditions in Mexico—"From Bad to Worse in Mexico," "The Republic of Sonora."

1. Describe the political conditions in Mexico which have led to the rebellion in Sonora.
2. Mr. Crowell says, "The stage is set for a new revolution, but it will not be a separatist movement." The editorial writer says, "... but there are elements in it which point to ... a secessionist movement." Which of the two is right?
3. Review the history of the movement which led to the secession of Texas. Does the present trouble in Sonora resemble the Texas revolution in any respect?

VI. "Welcome, Stranger!" Said Little Old New York.

1. What, according to Mr. Crowell, are the social and economic advantages of residence in New York? The disadvantages?
2. "New York is not at all representative of the United States." Mention five facts which justify this statement.

VII. Woman's Place Outside the Home.

1. What are the functions of the Women's Bureau referred to in this article?
2. What are some of the standards of employment set up by the Bureau? How far does your state law conform to these standards?
3. Answer one or more of the questions raised by the author in the fourth paragraph from the end of her article.

VIII. The New Labor Movement—"The Strike Against the Brotherhoods," "The Workingman's Demands."

1. Show that the present railroad strike is merely symptomatic of the new labor movement in this country.
2. "It [the new 'outlaw' union] represents perhaps a tendency toward 'industrial unionism' such as that preached by the I. W. W." Explain this statement.
3. What remedies suggest themselves to you for present labor unrest?

IX. The Futility of Anti-Prohibition.

1. "Before the war the United States was going dry anyway by popular vote." Give the facts that justify this statement.
2. What conditions exist in your own community before the adoption of the Eighteenth Amendment?

New Plays

What's in a Name. Bizarre musical show of jazz, chromatic scenery and cubist costumes. A gorgeous and unique vaudeville. (Maxine Elliott's Theater.)

Flounders. The revival of this famous musical comedy explains its unprecedented popularity of twenty years ago, for it is more tuneful and beautiful than its present rivals. (Century Theater.)

The Passion Flower. translated from the Spanish of Jacinto Benavente. Parts of the tragedy are commonplace, but Nance O'Neil reaches the heights of emotional acting in two great scenes. (Belmont Theater.)

Remarkable Remarks

HENRY COLLINS—I suggest that every woman study her profile.

REPRESENTATIVE SCHALL—Internationalism savors of free love.

QUEEN MARIE—It is uncomfortable to go abroad and feel shabby.

CONGRESSMAN UPSHAW—A man in overalls has always been my hero.

J. RAMSAY MACDONALD—We have now the dictatorship of the capitalist.

REV. JOHN R. STRATON—Hell is for New Yorkers as much as for any one else.

DR. MURRAY, Skin Specialist—On no account trim the cuticle with scissors.

RICHARD CROKER—Bryan is the strongest man the Democrats have at present.

DR. FRANK CRANE—The most important thing to know about rules is when to break them.

SUSANNA COCROFT—I have helped 92,000 women to regain health and have good figures.

DR. WILLIAM S. WELCH—I do not believe that the older men should hang on too long.

JOHN D. ROCKEFELLER—What in the world do you think I know about the price of gasoline?

C. F. REMINGTON—You will notice a lot of Safety First signs on the way home from the hospital.

REV. BERNARD VAUGHAN—In days gone by ladies dressed for dinner, now they undress for it.

COL. FREDERICK PALMER—President Wilson is now without doubt the most unpopular man in Europe.

REPRESENTATIVE SMITH—International law has no particular appeal to the people of the United States.

FRANK B. GILBRETH—Work should be treated as the greatest of all sports, and

working shoes should be selected accordingly.

PROF. WILLIAM LYON PHELPS—If the Greek and Roman gods and goddesses were alive today every one of them would be in jail.

J. EDGAR PARK—I don't know which is the greater plague, the old-fashioned nuisance called a soul, or the new-fangled bore called mankind.

JAMES M. BECK—I wish heartily that Senator Lodge were a younger man, for in my judgment he would be the ideal candidate to succeed President Wilson.

PROF. E. A. ROSS—If newspapers were not allowed to derive more than a modest proportion of their total income from advertising, they would cost us more but they would tell more truth.

ROBERT QUILLEN—I yet remember the thrill that shook me when first I kissed my first sweetheart. She was red-headed and I had just put on long pants. I aimed at her mouth and kissed her under the left ear. In later years my batting eye improved, but repetition seldom has the zest of a first performance.

Just a Word

The National Efficiency Society at the meeting of its board of governors held on December 23, appointed Mr. H. F. J. Porter its executive secretary in place of Mr. Charles Dexter Allen, who had resigned on account of other duties which prevented his serving longer in that position. It then moved its headquarters from 119 West Fortieth Street to the Fifth Avenue Building, Twenty-third Street and Fifth Avenue.

Mr. Porter was the founder and executive secretary of the Efficiency Society in 1912 and resigned in 1914 to return to his industrial engineering practice. In 1918 the Efficiency Society and the National Institute of Efficiency united under the name of the National Efficiency Society.

The society, feeling that the recent movement toward closer cooperation between employer and employee in industry, thru shop committees on which the employee is represented in management, is the logical step toward higher productive efficiency in industry, naturally turned to the pioneer in this movement, Mr. Porter, who first introduced a shop committee in this country in 1903 and has been identified with the movement ever since. It is now endeavoring to promote this movement and to be the center of information on this very important development in the industrial field.

At its spring meeting next month the subject will be fully discussed together with the bearing upon it of the plan for arbitration boards and industrial tribunals recommended by the President's second Industrial Conference at Washington.

The Only Cure for the H. C. of L.

A Message from the United States Government

By Dr. Royal Meeker

United States Commissioner of Labor Statistics

CONGRESS in dealing with the problems of reconstruction in the United States has pursued a policy of scuttle. Responding to a carefully planned and heavily financed propaganda, it has returned the railroads and the communication systems to private management, and is permitting the sale of Government ships and shipyards at bargain prices as fast as buyers can be found.

The dominant idea has been to "get the Government out of business" as quickly as possible regardless of the results. At the same time all effective control over prices and the distribution of the necessities of life has been relinquished. It was found necessary for the Government to take charge of the program for transforming industry from peace production to war production. The re-transfer of industry from a war to a peace footing is quite as big an undertaking as the first transfer to war production, but we are leaving the job to the American business man, unaided by the power of the Federal Government.

It is nearly twenty months since the armistice, but no one will contend, I think, that we are back upon a sound or satisfactory basis, or have made any real progress in that direction. Prices instead of coming down, as they should if conditions were healthy, are going up. Industrial unrest instead of diminishing is increasing. Defeated in the first skirmishes of the threatened industrial war, labor is reforming its lines for a new impact with organized capital.

American business invited the task of managing reconstruction in the United States and in that task, willingly given over by Congress, it has not succeeded. It could not succeed. The need was for a constructive and progressive national policy, not the speediest possible return to the old order. Tens of thousands of business men scattered thruout the country, each working for his own advantage, with no continuing coöperation with the others, were in no position to formulate such a policy, much less to carry it out.

The duty was with Congress. For all its self-confidence, American industry, after a year and a half of interference and rigid governmental control, was in no

condition to shift for itself without bringing distress to the people. The mistakes that have been made must be corrected. The duty of correcting them before it is too late, and adopting a national policy that will in fact restore normal conditions still lies with Congress.

The best proof that conditions are abnormal is the still increasing cost of living. It is not merely because prices are high that the cost of living is high. A whole ox could have been bought in the middle ages for what is asked for a beefsteak today, yet the cost of living probably is no higher now than it was then. The cost of living is high when money wages of the masses of the people are insufficient to allow them to buy an adequate supply of the necessities of life.

No doubt as to the highness of the present high cost of living can remain when the studies made by the Bureau of Labor Statistics are analyzed. Dieticians agree that the average man performing a moderate amount of labor needs food of the right kind and in sufficient quantity to produce about 3200 calories when burned in the body. The food budgets of the thousands of families included in the Bureau's

studies average only about 2700 calories for each adult man. Such a restriction in diet must inevitably lower the efficiency of the workers and certainly will retard the proper growth and development of their children.

Since food is man's primary need, it is apparent that when on an average families are getting an insufficient supply of food, the restriction in other items must be still more

severe. No consumption standards for clothing, housing, furnishings, fuel, light and miscellaneous items have yet been worked out, but from what has been done by the Bureau of Labor Statistics upon clothing standards it is evident that the average worker's family falls far short of what would be considered a very modest clothing standard for maintaining health and decency.

Contrary to the accepted notion of the extravagance of women in dress, it is interesting to note that the wife usually spends less for clothing than the husband. Her clothing budget is the first to be cut when an unusual expense arises. Every [Continued on page 186

Dr. Meeker Says:

Could we awake tomorrow to find the currency reduced by one-half and the world flooded with goods, we should awake to disaster. We are like a man on the roof of a tall building and wanting to get down. To jump is the quickest way. It takes time and energy to come down the stairs . . . but it is very much safer.

Henry Ford, Miracle Maker

Second article in The Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

By Professor John R. Commons, of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcolm Sharp, Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

"THE industrial miracle of the age," John D. Rockefeller is reported to have said of the Ford Motor Company. He might have added, the psychological miracle of the age. The industrial end is amazing enough. Three completed cars moving off every minute on their own gasoline. The bread-winners of a city of two hundred and fifty thousand at work in one factory.

But the psychological miracle is equally miraculous. Ford reversed the ordinary psychology of industry. Instead of sharing profits with employees at the end of the year he shared them before they were earned. Instead of carefully selecting employees at the gates he takes them as they come—gets a cross-section of the community—has a theory that he must carry his share of the maimed, blind, and criminal, because somebody has to do it anyhow—believes in ordinary plain people as they come along.

This is not scientific and is not business. According to the usual ideas Ford ought to break. They tried to prove in court that he was a very ignorant man and could scarcely even read and write. He needs somebody to protect him against himself. And that is what his employees are doing.

Ford says, in effect, to anybody who gets into his works, "How much do you think you are worth?" Well the man thinks he is worth a little more than he has been getting elsewhere. "Why," says Ford, "that's nothing. Here is the biggest thing in the world. We are going to sell a million cars a year and give every family in America a 'Lizzie.' If you get into the game you are worth twice as much, ten times as much, as you have been getting. We will pay you that in advance. Now go to it."

And just the ordinary, everyday man rises up out of himself and sees himself twice as big, ten times as big, as he had ever thought possible. He goes to it.

That is why even men with a prison record have done big things at Ford's. There are 400 of them and the majority making good.

Two thousand men go around with labels, "For light work only." A blind man does the work of three men. The fact is, everybody turns in and protects Ford against himself. He is positively too democratic for this world. One man is just as good as another, he thinks. That certainly is not business. But behold, you see or-

Henry Ford is really a plunger—a plunger in social psychology. Instead of sharing profits with employees at the end of the year, he shares them before they are earned. Instead of carefully selecting his men at the gates, he has a theory that he must carry his share of the maimed, the criminal and the blind. And his employees protect him by reducing the labor turn-over in his plant to such an extent that real team work is possible

dinary, common men doing big things at Ford's.

Of course, they make mistakes. Ford took his sociologists out of the ranks, and they certainly did raw work for a while. Ford somewhere had gotten an idea that what he wanted as workers in his factory were men who were living clean and wholesome and constructive lives. So he did not care to have employees examined as to their efficiency—efficiency was to be a by-product of the clean and wholesome life. He was going to share his profits, not with those who got out the work, but with those who led a clean and wholesome life. So he picked out his sociologists from the ranks to investigate and find out. And they went into the homes, investigating and re-investigating everybody. They had an idea that that was the clean, wholesome and constructive life.

Well, after about three years, Ford called in Dr. Marquis, Dean of the Episcopal Cathedral, and spoke in this wise: "There is too much of this snooping around in private affairs. We'll change this from a Sociology department to an Education department—you take charge. You know what I want—clean and constructive life—but cut out all except those that really need further assistance and advice."

And that is what Dr. Marquis has been doing. He has about fifty men on that job.

Then about the 400 with prison records, Ford had an idea that if he could save men from the penitentiary they would make good. All they needed was a chance. But the idea did not work. They had a different idea. This was just another chance to get off, and so they took advantage of it and went on with their criminality. Now this has been changed. The Education department takes on no convicted delinquent until after he has served his term, or at least an appreciable part of it. He must take his medicine. Then he may have his chance to make good. These four hundred are assigned to a confidential adviser—a kind of unofficial parole officer attached to the Education department of the factory. So Ford tried out his theory of faith in human nature, and his Education department learned how to protect Ford against himself.

People say, "Oh yes, Ford can do these things because he has such an enormous business. There is nothing at Ford's that can teach other employers anything in any ordinary business subject to competition."

Wrong again. Ford got his enormous business because he did these other things first. Ford is really a plunger—a plunger in social psychology. When he started his profit-sharing scheme in 1914, he had 14,000 employees. He doubled their wages with a bang—that is, he doubled the wages of those who could pass his sociology examination on the clean and wholesome life. In August, 1919, his 14,000 men had become 53,000, and were growing at the rate of 1200, on an average, a month. The first year after he doubled their wages he made more net profit than he did the year before.

HOW was it? The labor turnover. In order to keep his force of 14,000 men he had to fill the places of those who quit at the rate of 50,000 a year. The next year after he put in his new plan he had to hire only 6508. If the old rate of labor turnover were to keep going now he would be hiring 196,000 men a year to keep up a force of 53,000. But he only hires at the rate of 23,000 to replace those who quit. We were told by another employer in Detroit that the turnover in other foundries last summer had been 20 per cent a month. In Ford's foundry of 7000 workers it was running at 6 per cent to 8 per cent a month. The average turnover for all departments ranged from 3 per cent to 6 per cent a month.

Now, the cost of labor turnover is something huge. There is the hiring and examination of applicants, the files of records, the breakage and accidents of new employees, the teaching and training and fitting them into the job, most of all, the slowing up of production. It is a big overhead cost, added to the wages. You might credit almost the entire increase in efficiency to that item. If you have 1000 men in a single gang then the speed of the 1000 is limited by the speed of the slowest. And if 3700 new men, the former proportion at Ford's, are coming into that gang every year and 3700 are leaving, there certainly must be a lot of slow men

Next month—"The Labor Court," a story of how the Hart, Schaffner and Marx factory has solved one big labor problem.

Ford employees are encouraged to own their own homes. This cottage is typical of the homes they can buy

holding them up. But, if only five hundred or less are coming and going for a year then you begin to get team work and can reduce the size of the gang, and move the stuff along.

That is what you see at Ford's. That is the industrial miracle. It follows the psychological miracle. Innumerable trolleys, conveyor belts, tractors and trailers, carrying multitudes of castings to appointed foregatherings with other castings and parts. Waist-high assembly carriers do away with lifting and bending. In the foundry, usually the bugbear of employment managers, endless chains, overhead trolleys, sustain the weight of ladles; sand-hoppers in the ceiling do away with back-breaking shoveling; electric and magnetic hoists "hustle the pigs." In the cylinder-casting department three men pour what scarce yesterday required a hundred.

Thruout the entire factory seven hundred men are detailed to the exclusive task of keeping the place "policed up," to use the military phrase. A squad of painters, window-washers, accident-prevent-

ers, keep things fresh and safe. The machine shop floor is as clean as a kitchen. Rough stock, tho easily accessible to the operator, is piled clear of the aisles. True, many of the workers are close together where detail jobs are contemporaneous. Yet the entire air-content is changed every twelve minutes. In the foundry powerful down-drafts and sucking blowers carry off the smoke and gas.

Some people say that the men are "driven" at Ford's. A scientific manager who had come up thru machine shops elsewhere had told us he never saw such speeding up. So we looked for it. We had had some experience ourselves. The only place where we found it was in some parts of the foundry. There one might say they were speeding up. But those 7000 foundry workers are nearly all new men. In October, 1918, the foundry had only 700 men. Six thousand farmhands from Europe learning a foundry job might look very active, while 6000 who have got their pace would look easy. And there were so many of them who were easily at work that the driven ones caught your eye as exceptions.

Anyhow, why shouldn't strong men work hard for eight hours at 75 cents an hour? The Steel Corporation pays the same class of labor 40 cents an hour for twelve hours. One does not like to see them work that hard in the steel mills. And the enormous turnover shows that the steel workers do not keep it up. The foundry is a hard job anyhow—the hardest of all. The turnover there, at Ford's is 8 per cent a month, when the average for other shops in the works is 4, 5 or 6 per cent. If a foundry turnover, for men who have been employed on the average only six [Continued on page 189]

The industrial miracle followed the psychological miracle at Ford's. With the men liking their jobs and staying in them, team work developed to a remarkable degree thruout the plant, and it was strengthened by every possible improvement in mechanical equipment

If I Were a Senator

In Which the First Woman Candidate Speaks Her Mind

By Anne Martin

Former Chairman of the National Women's Party,
Independent Candidate for United States Senator from Nevada

WOMEN have always been quicker than men to see that the interests of life transcend and should control the interests of property. In the development of our great world society under the leadership of men, the interests of property, concentrated in the hands of a comparative few, have dominated the interests of humanity. And we have a sick world.

If I were a United States Senator I would use all the powers the office gives to humanize our Government and make it a genuine servant of the people's interests. It would be my purpose as their trustee to become an expert in government. A chief test of expertness, as I see it, is to anticipate and prevent the development of bad conditions by an understanding of cause and effect in the people's affairs. Our Government today cannot meet this test. It lacks the necessary leadership, social knowledge and vision, and firm purpose, in every one of its departments.

I have often wondered if Congress realizes the figure it cuts when it is suddenly informed by the newspapers that food riots are taking place in New York City, and introduces resolutions in both houses to find out their cause? This happened in the winter of 1917. Dozens of similar investigations of past mistakes are being conducted today in Congress, while practically nothing socially constructive is offered for the future.

A most noteworthy example of the inexpertness of our elected experts in government is found in the recent disclosure by the newspapers to Congress of the fact that twenty-nine valuable German ships, taken by us during the war, were about to be sold to the Inter-

national Mercantile Marine Company by the United States shipping Board at an altogether inadequate price.

Miss Martin, like President Wilson, started her career by being a professor. She taught history in the University of Nevada from 1897 to 1901. But she also won the state tennis championship!

Were all our committees of the Senate and House sleeping, that they had to be informed by New York newspapers of these facts developing here in Washington, within a mile of the Capitol? If the attention of Congress had been fixed on the development of an efficient merchant marine policy, which is so evidently needed, that body itself would have been the leader in protecting public rights.

THE obvious incompetence of Congress and its neglect of the people's affairs are of course largely due to our system of representation. We have read many imprecations of Bolshevism and the Russian Soviet in the *Congressional Record* during the last two years. The Soviet is regarded by the average member of Congress as a thing of horror; it is after all, nothing more than the principle of occupational representation worked out in practical politics. We have a splendid example of the Soviet in Congress, which is almost entirely a Soviet of lawyers and bankers. Of the 435 members of the House of Representatives, 269, or more than 60 per cent are lawyers. Bankers comprise the next largest group. There are only seven farmers, three railroad engineers, one railroad conductor, two iron workers, two molders, and one miner! In the Senate, out of a membership of ninety-six, sixty-eight, or more than two-thirds, are lawyers. If our Senators by any chance are not lawyers, they are chiefly bankers and capitalists. When the farmers, the railway workers, labor in general displaces by its votes this preponderance of lawyers and bankers in both houses of Congress, and secures its fair share of representatives including both men and women, we shall have no longer a Soviet representing the financial interests of the country, but a Congress representing the various occupations and needs of the people. The Cummins-Esch railroad bill, dictated largely by the railroad executives, would never have passed such a Congress, farmer and labor organizations would never have had to appeal, and appeal in vain, for the President's veto, and the economic and legislative crime of returning the railroads to private management could not have been perpetrated, without giving government management at least a fair trial.

As regards representation in Congress, forward looking Britain is once more pointing the way to the conservative United States, having achieved the election of a woman member of the House of Commons by means of the national enfranchisement of women. Lady Astor is rapidly becoming a leader of political thought in that country of masculine conservatism. We American women, all of whom (at the time this

Miss Martin's Platform

1. Opposition to the treaty with Germany and the League of Nations as a breeder of wars. Support of a league of peace of all nations.
2. Payment of soldiers in war an amount at least equal to civilian pay.
3. Restoration of the rights of free speech, press and assembly.
4. Release of political prisoners and conscientious objectors, following the humane example of our associates in the war.
5. Recognition of the right of labor to bargain collectively and to strike.
6. Reduction of the high cost of living and the increase of production and trade thru public ownership and operation of the railroads, strict Government control of the meat packing industry, Government retention and development of all natural resources still publicly owned, Government ownership and operation of a merchant marine, taxation of the 16,000 war millionaires and of war profits to pay the money cost of the war, taxation of wealth, taxation of land values and of other natural resources held for speculation.
7. Public protection of maternity and infancy, removal of children from industry and the public feeding of undernourished children.
8. A blanket enactment to eliminate all remaining discriminations against women in industry, civil service, education and public office.

article is written) are still disfranchised so far as our national constitution is concerned, must glean what satisfaction we can from the knowledge that the election of a woman to the United States Senate from a suffrage state is considered by magazine editors as at least a political possibility, or this article would not be published.

IF I were a member of the United States Senate I would use every opportunity, both as legislator and propagandist, to make our government do things the people need, to make it the instrument of social desire and accomplishment, which means humanizing it. As a step in this direction I advocate the limitation of the power of the president in appointments and in foreign affairs, and the abolition of the presidential veto. The makers of our Constitution thought they were following the model of the reformed English monarchy in giving the President his enormous executive powers, the greatest of any ruler in the world; but they were endowing him instead with the powers of the Stuart monarchs, which had been partially revived by George III.

The patient American people do not require a ruler, they need an executive to carry out promptly the business done by their representatives in Congress. Having given the executive and legislative departments great powers, the makers of the Constitution sought to limit them by a system of checks and balances which divided responsibility between the President, the two houses of Congress, the Supreme Court, and the states, a system which enables these different agencies to block each other. To change this system of checks and balances into a smoothly working government of the people which will get things done, I believe that our Constitution should be so amended as to abolish fixed terms of office and to permit the President and his cabinet to become leaders of the majority party in Congress and directly responsible to that body. The President would then be the executive arm of the legislative department, and we would have a government more responsive to public opinion, instead of our present system, which allows and even at times forces the executive and legislative departments to oppose each other, paralyzes public business, and jeopardizes the vital interests of the people.

I would work for the limitation of the powers of the Supreme Court (which, as shown by its recent steel corporation and stock income decisions, favors special interests), and for the popular election and recall of its judges.

I would work for the reorganization of governmental departments into natural agencies springing from the living needs of the people. Instead of the Departments of the Interior, of Commerce, of Agriculture, etc., with their heterogeneous collections of divisions and bureaus, Departments of Production, of Distribution, Marketing and Consumption should be established, managed by expert industrial engineers with social vision. The first department should be charged with stimulating the production of all raw materials and manufactured products, the second should deal with all problems of distribution, marketing and consumption. Labor relations would naturally fall under the

joint jurisdiction of these two departments. We should also have a Department of National Finance which would promote a system of banking and credits that would give farmers and small producers of all kinds equal opportunities as compared with big business, and thus stimulate production. Another department should be responsible for promoting the most efficient means of communication between the people, by means of railroads, postoffices, public roads, and telegraph and telephone. We should also have a Department of News, charged with furnishing the people prompt news from unpolluted and incorruptible sources.

If elected to the Senate I would use all the powers of the office to prevent the ratification of the treaty with Germany (including the imperialistic League of Nations), which will continue to breed instead of end war. This treaty violates the promises America made to the world, and pledges us to the virtual enslavement of Ireland, Egypt, India, China, and Persia. I favor a league of peace composed of all nations, which should pledge themselves to abolish universal military service and to accomplish disarmament.

I not only stand but will work for the restoration of free speech, free press, and free assembly, as guaranteed in the first amendment to the Constitution, and for the release of political prisoners and conscientious objectors, following the more enlightened example of our associates in the war in releasing these prisoners.

I will support the right of labor to bargain collectively and to strike, after all other lawful means to reach a fair settlement have failed. These fundamental rights of labor have been recognized for many years, but have been recently denied by use of the injunction, while the right of capital to strike by closing its mines and its factories goes unimpeached.

As a means of lowering the high cost of living, ending profiteering, and stimulating production and business, I will work for the following measures:

1. The public ownership and democratic control of the railroads under the Plumb plan, or any other plan embodying its principles. This plan provides a dividend on economical and ef-

ficient management by the classified employees and their chosen officials; it will protect the public from the continued plunder and exploitation which has always accompanied private ownership, and will help reduce the high cost of living by reducing rates. The net surplus earned every year after all other charges are paid is to be divided between the employees and the Government. The Government is to use its share of surplus profit to reduce rates, thus stimulating business and reducing the cost of living.

2. Government control of the meat packing industry thru a Food Stuffs Commission and by a system of licensing, and by requiring [Continued on page 185]

The "Indignation Special"

A commuter's story of how the folks in one town got together and broke the railroad strike

By Margaret L. Farrand

THE one train that pulled out of our station on April 13 was a cross between a football special and the history-book wood cuts of the first steam engine. Everyone inside was talking and laughing and having a good time generally; everyone along the route hung from their windows and stood still in the streets open-mouthed to see us pass; for this was the second day of the railroad strike and our town's first self-help train.

We are a typical suburban community. We spend at least half our waking hours in New York and at least an eighth of them on the way. The strike on our railroad began slowly. The first day we were late at our offices in the morning and late to our dinners at night, but we were not greatly disturbed. Our bosses and our cooks have been well trained by the snow, the sleet and the railroad administration. Monday morning, however, found us trainless. Some of us motored to New York; it is not an expeditious method of commuting. Some of us had been forehanded enough to go into town Sunday afternoon. Some of us made our way by devious routes to other railroads in other communities where a train or two was running thru. Most of us stayed at home.

Then our local government got to work. They pressed the invaluable Boy Scouts into service and by dinner time everyone in town had a leaflet announcing a meeting in the High School at eight o'clock that evening. That meeting began on time, with the room, and it's a big one, full. By eight-ten there was standing room only and very little of that. Every commuter in town was there; so were a goodly number of their wives and daughters, some of them commuters too. That meeting was something of a phenomenon. It was called to discuss an acute situation, a situation we had reason to be pretty excited about—and no one got excited. No one lost his head or talked for the sake of talking. It was a meeting about the strike, but the words "Bolshevik," "Red," and "I. W. W." were never mentioned.

The mayor, a lawyer whose name carries weight in cities many times bigger than ours, took the platform and gave the tone to the meeting. He told us what we were there for and what we were not there for. He said a few well chosen words on what the community would think of any local dealer who tried to take advantage of the situation to profiteer. If any dealer had vague thoughts in his head of gain to be derived from the strike they died a sudden death. Then somebody offered a resolution. It stated that we, the citizens of this community, did not pretend to pass judgment on the demands of the striking railway employees, on the justice of their cause, that was their affair and the affair of the railway officials; *but* we did not intend to let any minority body whatsoever interfere with our food supply, our mails and our transportation. They could not dictate about our goings out and our comings in. The resolution was passed unanimously and without discussion. Everyone listened and everyone applauded, but we didn't shout. This was not just talk. We were very much in earnest.

The mayor announced that one train had run in that morning from a station a little way down the line with a loyal engineer and conductor, both residents of our community, and a crew of volunteer firemen and brakemen. If trains were to go in and out from our station tomorrow and the next day and the next day and as

long as the strike lasted we must have volunteers to run them. Firemen were most urgently needed, but men could be used in other capacities. He called for volunteers. There was a stampede, headed by the ex-service men. The secretary tried to take down the names, but he had to call for help. Every man under forty was on his feet. There were one hundred and eighty-two volunteers.

After things had quieted down a bit the engineer who ran the train in that morning was asked to come up on the platform. He is a lean, kindly old man with white hair and very blue eyes. He has run trains on our road from the beginning of time and there isn't one of us for whom he hasn't held the eight-three some morning as we dashed breathlessly down the hill after a bolted breakfast. The mayor shook him by the hand and he got a [Continued on page 187

The One Big Union Idea

By Franklin H. Giddings

WHEN radical elements in the labor organizations talk about "one big union" to supersede existing unions and brotherhoods, they are talking revolution. Possibly some of them do not fully realize that revolution is their program, but the I. W. W. folk and the Socialist factions make no concealment of their purpose to expropriate capital and "take over" the industries and thereby make an end of the existing social order.

The plan is revolutionary because in the same aggregation of human beings, by whatever name it may be called, whether empire, kingdom, republic, democracy, or federation of soviets, there cannot be more than one inclusive "big union." The existing social order, whether monarchial or republican, is one big union of all the citizens constituting a political state. A democracy is one big union of citizens who are equal in respect of their political and legal rights. Each has a vote, and to the extent that the democratic idea is fairly carried out, the law bears equally upon each by way of obligation and affords to all equal protection. There is no privileged class. Any other sort of big union would of necessity create a privileged class, as monarchy and aristocracy do. The one big union contemplated by Socialists, Bolsheviks, I. W. W.'s and "outlaw strikers" would set up the proletariat as a privileged class. None of these radical groups believes in democracy or wants it. It wants a proletarian dictatorship.

Any discussion of present tendencies in the industrial world which ignores these elementary facts misses the point and goes astray. Dissatisfied elements in the American Federation of Labor, and rival organizations like the I. W. W., assert that the A. F. of L. under the leadership of Mr. Gompers is an aristocracy of labor and that it is in alliance with capitalistic interests to maintain the existing social system. It is satisfied to obtain various reforms and "improve conditions." Essentially the charge is true. That is to say, the A. F. of L. has not hitherto been and it is not now a revolutionary organization.

When this fact is admitted a further fact of significance is admitted by implication. The dissatisfied and outlaw elements of the wage earning population, in describing the A. F. of L. as an aristocracy of labor, are acknowledging that the brotherhoods and unions are composed of the relatively skilled and competent men who like order, steady work, regular wages, family life, citizenship and good reputations, and who have no desire to see the world turned topsy turvy. They are acknowledging that the "outlaws," the "casuals," the "migratories," are the relatively incompetent, the restless, the radical by temperament, the men that like to relieve their feelings in violent action and who more or less enjoy ructions and chaos.

The actual lineup in the wage-earning population in America today and throughout the world follows this entirely natural assorting. On the one side are superior ambition, character, intelligence, thrift and conservatism. On the other side are inferior stability, inferior intelligence, small dependableness and small earning power, greater uneasiness, greater recklessness and temperamental radicalism.

The struggle between these forces is a fight for power. If the more conservative force wins, social evolution along historical and existing lines will continue, production will increase, prosperity will return, the world will be better fed, better clothed and better housed, and education will once more make headway. If the radical force wins, we shall have increasing disorder, diminishing production, increasing hardships among people that now enjoy comfort, and an appalling increase of misery among the impover-

ished and helpless. Social revolution will begin, and the end of it none will be able to foresee.

This is an abhorrent prediction to the motley cohorts of social sentimentalism, to whom any kind of superiority—above all, any kind of aristocracy—is anathema. "But are the unfortunates of the world never to have their chance?" they ask. Are we never to have a world in which economic equality and an equalization of power will make everybody good and wise, so that we shall no longer have restless, incompetent and destructive elements in society to make us trouble?

The probable answer to this question is that superiority will continue to hold its own in human affairs, and that the sentimentalists and their pets, the inferiors, will have to accommodate themselves to the fact as best they can. It is highly probable that the next stage in social evolution and in the distribution of political power will be one in which we shall witness a consolidation and amalgamation of the less wealthy two-thirds of the so-called middle class with the upper two-thirds of the so-called working class. This vast social body will be on the whole prudent, trustworthy, intelligent, enlightened and thrifty, neither reactionary nor radical, but liberal minded and progressive. We predict that it will conserve and develop civilization, that it will make a rather decent world for sensible and law-abiding people to live in, and that, incidentally, it will greatly ameliorate the lives of the restless and relatively inefficient. Whether it will ever inject common sense into the minds of the sentimentalists we are less confident.

Let the People Starve

IS the right to strike to take precedence over the right to eat? This question is commended to the attention of the strikers in the freight transportation service.

The Latest in Strikes

THERE is such an overproduction of Republican Presidential candidates that the market is glutted and many politicians are sure to be forced into the ranks of the unemployed after the Chicago convention. On the other hand, the Democrats are finding difficulty in getting anyone to enter the campaign. Is it a Presidential candidates strike? If so, why do not the Democrats import strike-breakers from the other party?

Denim and Gingham

By Edwin E. Slosson

EVEN a worm will turn if trodden upon. Even the American people will not stand everything. Long ago when England tried to keep them in permanent dependence upon her woolen mills the Americans raised the rattlesnake flag with the strange device, "Don't tread on me." The first fight for American freedom was won when the colonists boycotted British cloth and pledged themselves to wear nothing but homespun till the mother country abandoned her stepmotherly attitude. In our Civil war again economy became fashionable and if you think that the southern man did not fight well in butternut or that the northern woman did not look sweet in calico ask dad, he knows.

And now to look at our streets, courts and camps one would think that the white collar men, finding that the overall men had got ahead of them in salary, had suddenly

The Cheese Club, members of which have dramatic or artistic qualifications, started the overall drive in the stronghold of the garment trade, New York City, and put thru a big parade on Saturday, April 24, in which every marcher wore overalls or his very oldest clothes

shifted to the better paid professions. But no, it is merely a consumers' strike on a large scale; direct action directed against the High Cost of Living by a new branch of the I. W. W., which means in this case, I Won't Wear any suit costing more than \$10. Like other strikes this will inflict some unintentional injury upon undeserving persons. It may reach an innocent retailer or tailor rather than the undiscoverable profiteer higher up. But it probably will not go far enough or last long enough to do much harm to anybody, while it will do good to everybody by making them realize their real independence. The food profiteers have us more or less at their mercy for we have to eat—something—and at frequent intervals. We cannot make yesterday's dinner last over till tomorrow. But we can make last year's suit last over next year and often with little or no sacrifice of presentability. Some of us even like to wear our old clothes. It is only fashion that makes us so ready to change. If now fashion takes another tack then we can indulge our fondness for the clothes that have grown to fit us.

It is indeed time for public sentiment to shift its course for it has been heading straight toward world-wide bankruptcy. The reason why the present generation has had money to burn—on gasoline and gun cotton for instance—is because former generations were taught to be thrifty. Their hard earned and harder saved wealth we have been blowing in on big dinners and blowing out of big guns. Our forefathers went to school to Benjamin Franklin and Samuel Smiles, but these economists—to use the word in its old sense—are unread by the new generation. Thrift became a forgotten virtue; worse, it was condemned as a vice. Extravagance and pretentiousness were energetically encouraged not only by the advertisements of interested parties, but by the admonitions of our social mentors. Short story writers who mold the morals of the million have for years been holding up as a model not the frugal youth who works hard and saves his nickels, but he who spends his last dollar on a shine, a shave and a brush with liberal tips to all and so fortified by the consciousness of presentability walks into the onyx office and bluffs the boss into giving him a job with a salary so high that he can indulge his taste for luxury and live happily ever after. The intended inference is that if the young man had shaved himself, blacked his own shoes, brushed his own clothes and tipped himself he would have felt so mean about it that he could never have impressed the millionaire with the belief that he belonged in his class and was a suitable husband for his daughter, the million heiress.

Such lessons are easily learned and it is no wonder that the younger generation came to regard a patch as a badge of disgrace and took to buying diamonds on the installment plan. Even their ostensible economies were camouflaged extravagances. The society farmerette paid more for her fascinating trouserettes than the farmer's wife paid for her go-to-meeting dress. The Bohemian—I should say the Czechoslovak—restaurant charges 75 cents extra for sitting on a wooden bench instead of a gilded chair and drinking out of a rough red flower-pot instead of a china teacup. If you saw a suit made of imitation homespun of particularly poor workmanship, full of knots, uneven threads and miscolored fibers—such a job as one of our great grandmothers would have made her twelve year old daughter unravel from the loom and do over before she could eat supper—you could safely assume that it was frightfully expensive. The French people bore the burden of grandeur of the court of Versailles with resignation, but when Marie Antoinette took to the simple life and made them pay for her dairy at the Little Trianon they rose in revolt.

It is quite possible that the present movement may take the same turn and that blue overalls and bungalow aprons may become in the end another form of extravagance. Any

unnecessary purchase is an extravagance however cheap. The motive power of the movement seems to be a desire to cook the tailor's goose and get the shoemaker's goat. It seems to us robbery that the money that a few years ago would suffice to clothe the entire man will now scarcely buy a one-piece bathing suit. But we cannot expect prices to go down much until the nations of the world stop printing fiat money and extending fiat credit. It is only thru hard work and genuine economy that the world can recover from the unprecedented losses of the last six years. If putting on overalls and aprons means that men and women are going to work harder and save more then it is the most encouraging sign we have yet seen for the future. It is at least a gain when ostentatious economy takes the place of ostentatious expenditure.

Is America Myopic?

KIPLING has often been called a Jingo poet and yet he reminded his countrymen that they could know little of England "who only England know." In the United States there are those who seem to believe that knowledge of or interest in anything on the other side of the Atlantic is a sign of lack of patriotism. But nobody can really appreciate the full value of American life and institutions who cannot compare them with something else. Those who believe that Christianity is the best religion ought to encourage the study of comparative religion. Those who believe that the United States is the best country ought to encourage foreign travel and the study of foreign institutions.

Don't Refuse Till You're Asked

THE Bolshevik leaders declare that the League of Nations is a capitalist alliance and that they will never, never join it.

The Carpenter's Son

By Shailer Mathews

THE Interchurch World Movement in North America faces grave responsibilities, none greater than that of representing the attitude of Protestantism toward social questions. On this subject denominations and the Federal Council of the Churches of Christ in America have spoken out bravely, if perforce somewhat generally. But the Interchurch World Movement is in a position which is unique. With vast sums collected for purposes of publicity its attitude can never escape notice. Whether it will or not, its announcement will be regarded as those of Protestantism. That fact makes it a trustee of Protestantism's future.

Thus far it has administered this trust sanely. The statement of the Survey Department of its Home Missions Division is a worthy listing of social tasks facing the churches. In it will be found a careful study of great cities like New York, rural communities, migrant groups, negroes, orientals in America, immigrants, and the needs of the West Indies. The leaders of the Interchurch World Movement are certainly aware that social problems confront the churches, and they formulate them with a gratifying absence of sentimentalism and vibrant rhetoric. Hereafter no Protestant body has any excuse for ignorance as to the multiplicity and magnitude of the tasks which Christian people must face if our present social order is to embody the ideals of Jesus.

But the Interchurch Movement cannot stop at social amelioration. It must also voice an estimate of the Christian attitude toward our present economic system itself. The determination to raise hundreds of millions has already aroused anxiety on the part of those who fear the power of the rich reactionary. Insistence upon Christian Americanization has aroused suspicions that it is endeavoring to make the working man passive under bad conditions of

labor. It has already been charged that some of those interested in the Interchurch World Movement are also supporters of organizations which under the guise of patriotism are endeavoring to wrest from the laboring man advantages which have been on his side during the period of the war.

Unjustifiable as are these suspicions and accusations they none the less are being used by radicals as means to discredit religion and to segregate Protestantism as a phase of middle class interest. The very injustice of the charges demands a clear statement of the Interchurch World Movement upon moral questions which are involved in the economic struggle. It cannot, even if it would, be content with insisting upon teachings which do little more than enforce respectability and abstract virtues. The production of wealth and the ownership of profits involve morality as truly as do institutions mentioned in the Ten Commandments. The churches face issues in the economic order today as truly as they faced slavery in the economic and political order in the middle of the last century. What leadership has the Interchurch World Movement to offer them?

The Interchurch World Movement certainly ought not to adopt a political or economic program. That would be as foolish as the charge of men who should have known better, that its program of social advance is Bolshevik. Nor, should the Interchurch World Movement commit the churches to any policy of direct action in dealing with social questions. Economic policies are the affair of Christian individuals. They must bring their Christian sentiments, ambitions, and attitude into the world of affairs. But silence on this supreme moral issue of civilization will work injury. The world cannot be uplifted by those who separate between morality and business, the gospel and the factory. What the churches need along with the incentives to social advance proposed by the Interchurch World Movement is a perception that the struggle between the wage-earner and the capitalist is their concern. The Christian of today must be inspired to carry intelligently his Christian principles of brotherliness into every field that concerns human welfare. He must learn and make the world see that he has learned that it is more blessed to give justice than it is to fight to retain privilege. Whatever is injurious to human welfare is wrong and cannot be made right by silence or by the claim of antiquity. The Interchurch World Movement can commit Protestantism to the supreme endeavor to make the economic order Christian.

There is no doubt as to the sympathies of at least many of its leaders. There should be no question as to the position of the Movement itself. It should not commit itself to either party in the industrial struggle. The churches need guidance, not special pleading. It can and should commit itself to an explicit expression of ideals of justice and Christian obligation. It must take care that its need of great sums of money does not commit it to the policies of those opposed to the workingman. Just as truly must it avoid radical proposals which would confuse the churches with Communist, Socialist, or any revolutionary group. But recognition of the moral issues involved in the workingman's participation in determining policies of industry, collective bargaining, the length of the working day, conditions of labor, and the employment of women and children, is imperative. Equally imperative is it that the churches should educate their members to see that the spirit of Jesus will make men brothers, not merely Good Samaritans. For a body representing Protestantism to be silent in this day of economic unrest is to neglect a supreme opportunity. Pronouncement is a delicate and difficult duty. But it is imperative.

As the Interchurch World Movement speaks, so will Protestantism be judged.

Speak it must, but wisely.

Repudiating a Defense

IT is strange that the New York Assemblymen should resent the charge that they were intoxicated the night they expelled the Socialists. Do they not understand that so far from being an accusation it is their only possible excuse?

A Real Referendum

THERE have been no more implacable foes of the League of Nations in the Senate of the United States than Messrs. Gore, Brandegee, Sherman, Moses and Wadsworth.

The terms of all these gentlemen expire in 1921. Why should not the good people, respectively of Oklahoma, Connecticut, Illinois, New Hampshire and New York make their defeat the chief aim of the forthcoming campaign?

This would be a referendum on the League of Nations that would mean something.

Propaganda

PROPAGANDA, which originally meant no more than missionary work, seems recently to have taken on a sinister coloring. No one will admit that what he urges is propaganda; it is always a name for the activities of the opposition. We recall, with no little amusement, a little paper printed with the avowed purpose of bringing about intervention in Mexico that solemnly warned the American people to "beware of propaganda."

This is like the patent medicine which "contains no drugs," or even "no chemicals," altho any material substance which did not come within the scope of chemistry would be a novelty to science. Many an emancipated thinker boasts that he has no "dogmas" and has "discarded all creeds," but he will retail his *opinions* by the hour, as if dogma and creed meant something other than just a statement of what one believed. Like "drug," "chemical," "dogma," "creed," "politician" and many another erstwhile innocent word, "propaganda" has fallen into bad ways.

Is a Corner a Crime?

By John Bates Clark

THIS would be a safe world to live in if it were ensured against all the crimes and blunders that are committed in the name of liberty. In a position midway between license and tyranny are to be found all self-governing states, and their people have learned by experience that law is not the enemy of freedom but the guarantor of it.

At present it is entering new spheres—still in the name of general freedom—and there is a strong disposition to question its right to be there. Shall a man not do what he will with his own? Shall he not buy and sell what he pleases? Shall he not hire whomsoever he can and will to do his work? Shall he not contract with other men to buy, sell, hire or produce collectively? It appears that law is restricting such actions on the ground that they mean license for a few men and economic fetters for many. It has taken a vigorous hand in controlling business dealings and needs to go farther in that direction rather than to recede; and yet the old regard for personal liberty is and should ever be as strong as it was when it expressed itself in the American Constitution. This raises the question of the legitimacy of certain types of business transactions which have the sanction of long practise, though, as a rule, they are under a ban of public disapproval.

Speculation, as such, has had its arraignment and been justified. Its most powerful advocate historically was Adam Smith, the greatest apostle of economic freedom. Speculators in "corn" were ill thought of in his day and not without reason; but he showed that if, when a short crop was

in prospect, speculative buying of grain was wholly forbidden, the effect would be to cause the price to rise, at first very slowly and later suddenly, until it approached or reached a famine level. People would have little warning of the coming scarcity and would eat bread and feed live stock almost as liberally as ever. The inroad on the small supply would be serious and the scarcity in the end would be severer than it would have been if the speculators had at the outset had free play. Their action would have checked the early consumption and saved a larger part of the supply for the time of scarcity. It is the consumer himself who is most interested in the steadying action on prices which such legitimate speculation exercises.

What if the speculators should corner the entire supply and deal it out to the public on their own terms? Is that covered by Adam Smith's argument? Assuredly not. He never said anything in favor of "corners" nor of "forestalling" in the true sense of that term. He never justified making a famine instead of averting it, and he would have been the last man to say that if a coterie of dealers owned the whole wheat supply of England, they should be allowed to make what they could from their monopoly. Such monopoly is an outlawed thing. The spirit and, for the most part, the letter of the law are against it, and public interest is emphatically so. Corners mean a temporary monopoly and would be under the ban of moral law even tho there were no other law against them; but they exist and thrive. A volume could be written about modern engrossing of food and its effect on the cost of living, and some volumes are very likely to be written when investigations now begun shall be carried forward toward completion. Law that shall prevent the adding of any monopolistic profit to the cost of food will encounter no effective protest except from the profiteers whose freedom to tax the public it will restrain.

Does that apply to stocks as well as wheat? Clearly not, in the most essential respect. Stocks are not consumed in one season and renewed at the end for another season. They are not anything that is universally needed, and yet a certain steadying of their value is sound. Only a very free speculation can prevent sudden and very harmful changes of their value, and only that can make it easy for holders of stock to sell it on fair terms in any time of need. Constant trading in a stock is better for the holders of it than it is for those who make such trading their habitual occupation. The latter, on the average, lose more than they gain, but the investor has the benefit of owning something of comparatively steady value which he can sell in fair terms whenever he needs to do it.

Food and stocks, however, stand on different grounds. In the case of food the evil thing is the starving or half starving of poor consumers. In the case of stocks there is no privation of that sort. Everybody must have bread to eat, but only men on the short side of the market must have the securities that they have promised to deliver. This need is of their own making, and yet a corner made for no purpose but to catch the "shorts" does not look to the outside public materially different in principle from other kinds of engrossing. By contracting for a season's supply of building materials, a coterie might conceivably put a stop to erecting houses until a scarcity price could be extorted for what were needed. That a large public should continually buy and sell the things that have changing values is a sound feature of a business system, and there are even some who claim that a good supply of lambs ready for shearing is a necessary part of it. One may draw the line between the ordinary struggle between bulls and bears, on the one hand, and the manipulations that fleece the unwary public, on the other. A calculating policy that fleeces any class is immoral and blunting the public conscience to a toleration of such things means disaster. People are just now interested in the ethics of the Stutz automobile stock corner which grew out of an unusual action by the Stock

Exchange. It will have a good effect if views are clarified by it and if a clear standard of financial ethics is established. Practises that are not as black as some others may be dark enough to call for the restraint of spoilers for the protection of future victims. As to cornering, in general the verdict is already clear, and at this time the actual practise is widespread in a sphere where it does a maximum of harm. When the entire supply of any kind of food is contracted for in advance and held for gain there is a devil loose, and it is time that he were taken in hand. These practises are essentially crimes, and to tolerate them under any specious claim in behalf of the personal liberty of the spoilers would be the worst of blunders.

Why England Is Hard Up

THE British cannot afford to pay the interest on the \$4,277,000,000 that we loaned them so we have to pay it ourselves. But last year they paid \$1,930,000,000 for intoxicating liquors, which is 132 per cent more than they expended on such luxuries in 1913. Lord Leverhulme suggests that Great Britain might well go dry for five years and pay her debt to us.

Why a World Court Is Inadequate

PRESIDENTIAL candidate Lowden comes out for a World Court instead of a League of Nations to preserve the peace of the world. A world court, of course, is an essential part of any international system. But a court, whether national or international, always decides law as it is. It does not make law as it ought to be. An International Court would in the main decide its cases in accordance with the rules of international law, which is no farther advanced than was private law of the twelfth century.

What the world needs more than a court to interpret the traditional system of international custom is a parliament or assembly to civilize international law and bring it up to date, and an executive council to investigate and report on all important international questions. This can only be done by the machinery of the League of Nations.

The Cause of Our Conceit

THE English and French papers are blaming us for boasting that we won the war, but an Australian comes to our defense in the *Sydney Bulletin* and explains how we came to believe that our aid was essential and decisive:

For the exalted ideas which the U. S. A. has about its share in the war we are partly to blame; and I write as one who helped to pull the great loose leg of America. Things were desperate in France and Belgium in 1917 and early 1918, and two things had to be done outside the actual line: (1) polyglot America, which wasn't nearly as much pro-Ally as we had to make it believe, had to be "enthused," for the sake of the material as well as the men it might supply; (2) the German civil as well as military population had to be "rattled." Hence the States were overrun by British, French and other military and civil emissaries who laid the butter on Uncle Sam thick—told him how everything depended upon him and, later on, how magnificently he was doing his part to "make the world safe for democracy," and so on. It is all very well to talk of American skite; but British and French—yes, and Australians, carefully instructed beforehand—joined in the chorus, and often actually led it, with the knowledge that the hallelujahs would be wafted across to Germany. And it is certain that they were, and that Germany was badly rattled in consequence, while the Allies were correspondingly heartened. We have had to pay for it since; but it seemed the only policy at the time, and there is still no reason to believe that it wasn't what it seemed.

So if like Joshua we were able to bring down the walls of the modern Jericho by blowing our own horns why should anybody blame us?

Hallelujahs are cheaper than dynamite and no more noisy.

The Story of the Week

The Outlaw Strike Collapses

THE odds against the railway strike were too great to be overcome. It is not often that the employers, the government, the general public and the regular labor unions are united in opposing a strike, but the rash and sudden action of the railwaymen ranged against them all these forces.

The leaders of the regular labor unions, the great railway Brotherhoods, were strongly sympathetic with the demand of the men for better salaries and, under slightly different circumstances, might have been the organizers of the walkout. But they feared that a strike without warning at the present juncture would be interpreted by the employers as a breach of contract destroying faith in the validity of collective bargaining and thus undoing the work of many years of trades union development, and that the government would be alienated by the refusal of discussion and arbitration. Moreover, the new "outlaw" union was from the beginning hostile to the old leadership in the Brotherhoods as unduly conservative and indifferent to the interests of the rank and file. Hence the strike soon developed into a struggle for existence on the part of the Brotherhoods.

The strikers were unable, with their rudimentary organization, to maintain discipline in the ranks. Local groups of switchmen would suddenly drop work and then, a day or two later, vote to go back. The transportation situation of the country soon became an irregular patchwork. Some railways were running almost at maximum capacity; some cities were almost deprived of rail communication with the rest of the world; sometimes the yardmen remained on strike while the trainmen returned to work, or *vice versa*. Every day there were reports of new strikes and reports also of restored service in other parts of the country.

For several days the railway executives took no action, beyond the temporary employment of strike-breakers, but on April 16 the General Managers' Association of New York notified the Brotherhoods that unless the men returned to work within forty-eight hours their places would be permanently filled, and that in any case strikers guilty of violent conduct would not be reinstated. This announcement, which did not appear until the strike was already on the wane in most parts of the country, brought back many railwaymen to their work. Some of the outlaw locals, however, defied the threat of discharge and remained out.

Attorney-General Palmer believed that the strike was a proper case for investigation and perhaps for criminal prosecution. He considered that the strike might be treated as a conspiracy to interfere with the food supply of the nation. John Grunau, president of the Chicago Yardmen's Association, and several of his associates were arrested by federal authorities. They protested that their only offence was to go on strike and that no law made it a crime to refuse to work. Some sympathizers even denied that there had been any strike; there was simply an epidemic of "collective resignations" from service due to the inadequate pay!

The Blockade of New York

AS the railroad strike waned in the western states it grew more and more stringent in the east. Suburban trains in the neighborhood of New York City, especially in New Jersey, were tied up for several days. Instead of taking

advantage of the strike to enjoy their enforced vacations or fruitlessly railing at the authorities for not "doing something," the commuters resolved to run the trains themselves. A skeleton force of engineers and other expert railroad employees remained loyal to the Brotherhoods and thus supplied the necessary skilled labor to run a few passenger trains a day. As for the unskilled or semi-skilled labor, it was supplied in large measure by volunteers. A new type of strike-breaker was in evidence, the "white collar man," banker, clerk, lawyer or college student. Princeton University volunteered almost as a unit.

The "indignation specials," as they were nicknamed, ran under their amateur management in somewhat irregular fashion but without serious misadventure. In a few instances strikers attacked volunteers or regular railwaymen who refused to join the strike, but on the whole there was very little disorder. This, at least, must be said for the leaders of the "outlaw" strike, that they disclaimed any intention to promote disorder or to injure the interests of the general public or of the national government. Their position was that the right to strike was unquestionable and that if incidental hardship fell on innocent parties it was unfortunate but couldn't be helped. They disclaimed affiliation with the Communist Party and with the I. W. W., altho both of these organizations took advantage of the situation to spread their incendiary propaganda.

A strike on passenger trains is only an inconvenience; but a freight strike is a calamity. New York was not so much worried over the difficulty commuters found in reaching their offices at an early hour as over the possibility of a food shortage. Prices rose in the markets, more perhaps on account of the fear of retailers that the strike would last a long time than on account of any existing shortage. Fortunately, milk trains were kept running on many railroads during the entire strike and the scarcity of vegetables, butter, eggs and meat did not reach such a point as to cause serious suffering. New York can only speculate, however, what would have been the result if all of the Brotherhoods had supported the outlaw strike and thus

Seven of the nine members of the railroad labor board authorized by Congress to settle railroad wage disputes held their first session in Washington, April 16. Seated, from left to right, they are William L. Park, Chicago; J. H. Elliot, Dallas, Texas; Henry T. Hunt, Horace Baker and James J. Forrester, all of Cincinnati. Standing: G. Wallace W. Hanger, Washington, and Albert Phillips, Sacramento, California. Mr. Hanger, who is chairman of the group representing the public, has been assistant Commissioner of the United States Board of Mediation and Conciliation and chief statistician of the bureau of labor statistics

tied up freight traffic altogether. Municipal authorities stated that even under conditions of complete blockade it would be some time before the city could be completely "starved out," owing to the large stocks of food on hand. It is perhaps as well that this assertion was not brought to the test of experience.

What Labor Wants

THE American Federation of Labor has officially set forth its demands in reply to the questionnaire submitted by the advisory committee on platform of the Republican National Committee. The reply is signed by Samuel Gompers and by Matthew Woll and Frank Morrison of the non-partizan campaign committee of the Federation. The principal demands of the Federation include:

Acceptance, without qualification or exception, of the eight hour day, the six day week and the Saturday half-holiday.

Recognition of the right to organize, to choose representatives outside a particular plant and to strike. Continued exemption of labor unions from the anti-trust laws. Abandonment of the use of judicial injunctions in labor disputes.

Preference for high wage scales instead of pensions, bonus, share in profits or "welfare work." Equal pay for equal work.

Minimum age of sixteen for employment of children.

Establishment of free federal employment agencies in the management of which labor would have a voice.

Extension of Federal Workmen's Compensation Act to wage earners not protected by state legislation.

Opposition to the Kansas plan and all other plans of compulsory arbitration or legal limitations of the right to strike.

Organized labor, in so far as it follows the advice of American Federation leaders, will support candidates adhering to this program and oppose all who are hostile to it. This labor platform is certain to play an important part, therefore, in the coming conventions and will be anxiously studied by the platform committees.

Railroad Labor Board Chosen

PRESIDENT WILSON has appointed the nine members of the Railroad Labor Board which will undertake to settle outstanding disputes between the railroads and the unions as soon as the "outlaw" strike is out of the way. There was some complaint in Congress and the press that

the appointments were not made sooner, so that it might have been possible to forestall the strike by an immediate appeal to the legally constituted authorities.

The three members of the Board representing the interests of the general public are G. Wallace W. Hanger, assistant commissioner of the United States Board of Mediation and Conciliation; Henry Hunt, former mayor of Cincinnati, and R. M. Barton, formerly judge of the Tennessee Court of Appeals. Representing the railway companies are Horace Baker, former general manager of the Cincinnati, New Orleans and Pacific Railroad; J. H. Elliot, former general manager of the Texas and Pacific Railroad, and William L. Park, vice-president of the Chicago Great Western Railroad. Representing the workers are Albert Phillips, vice-president of the Brotherhood of Locomotive Firemen; A. O. Wharton, an official of the Railway Employees' Department of the American Federation of Labor, and J. J. Forrester, president of the Brotherhood of Railway Steamship Clerks.

Weird Doings at Albany

AFTER expelling the Socialist members of the New York Assembly, the legislature has proceeded to outlaw the Socialist party. On April 20 the Assembly approved, by a vote of 83 to 56, two bills designed to bar the Socialist party from taking part in elections. One of these measures gives the attorney general the power to bring before the Third Appellate Division of the State Supreme Court a petition to investigate any political organization alleged to favor a violation of the Constitution, and if the political organization in question is found to have unconstitutional policies it must be denied the right to place its candidates on the ballot. The other measure disqualifies for election to public office persons advocating policies hostile to the Constitution and those who have given the advance resignations which the Socialist party requires of its nominees in order to keep them from violating party discipline while in office. Only two members of the Judiciary Committee which voted to expel the Socialists supported the anti-Socialist bills, which were far more drastic than the recommendations of the committee.

Both branches of the legislature have approved the measures for a censorship of the schools. One measure requires a certificate of loyalty for public school teachers; the other, aimed at the Rand School of Social Science, requires a state license for private schools except those maintained by an existing religious denomination. Heavy appropriations have

also been voted for the investigation of "criminal anarchy." The Independent has discussed the significance of these measures in its issue of April 10. The constitutionality of the whole body of anti-Socialist legislation has been questioned by the Bar Association and is certain to be tested in the courts.

Senate Passes Army Bill

THE Senate has passed its own Army Reorganization bill and will enter into conference with the House of Representatives to reconcile differences between it and the measure passed by the House. The chief difference is that by the Senate plan the National Guard is considered as part of the army instead of as "militia." The Senate bill also establishes a volunteer reserve, offering four months of military training to men from eighteen to twenty-one years of age who apply for service. Neither measure establishes the principle of compulsory military training. The size of the permanent standing army is fixed by both the House and Senate bills in the neighborhood of 300,000. Altho there are other differences of detail, debate in conference will center about the status of the National Guard and the creation of the volunteer civilian reserves.

A majority of both parties in the Senate supported the Army Reorganization bill and only ten votes were cast in opposition. Senator Gronna, of North Dakota, was the only Republican to oppose its passage. Senators Dial, Harrison, McKellar, Overman, Reed, Sheppard, Simmons, Smith and Trammell were the Democratic opposition. All of these votes came from the Solid South; the northern Democrats joining with the Republicans to support an increased military establishment.

Tornadoes Again Strike South

ON April 20 a series of violent whirlwinds swept thru the southern states, doing as much destruction as the storms of March. It is rare that in a single season these states are visited by two such disastrous cyclones. The storm of March 28 killed fifty-five persons in Georgia and Alabama; the storm of April 20 killed 140 in Mississippi, Alabama and Tennessee. In both cases the destruction of property was extensive.

Mississippi suffered most severely. The tornado was first reported in Lauderdale County, Mississippi, whence it swept across the state. The town of Rosehill was completely destroyed. In Meridian twenty-one persons were killed and many small villages and country plantations reported their dead. On a single plantation, near Aberdeen, twenty-one were killed, and in a lumber camp near Philadelphia, Neshoba County, twelve workmen were killed and thirty injured. In Alabama about twenty persons were killed in the rural district around Sheffield, Gurley, Little Cove and Waco. Only three deaths were reported from Tennessee.

The School Teachers' Walkout

THERE are 18,279 schools closed for lack of teachers in the United States, according to statistics gathered by Mr. Claxton, Commissioner of Education; 41,900 teachers are being employed as substitutes without meeting the required standards of the various states for the regular teaching force. The number of teachers being trained to fill the place of those who leave the profession is also decreasing. Figures received from 60 per cent of the Normal Schools of the country show a decrease in attendance of 11,503 as compared with the year before the war. The percentage of men in the teaching profession is falling rapidly. In 1890 more than a third of the teachers in the United States were men; in 1910, 22 per cent; in 1918, only 17 per cent. In other words, during the last thirty years the proportion of men in the schools has been cut in half.

In nearly every state there is now an active campaign to increase salaries sufficiently to enable the teachers to stay on their job. But it is to be feared that few legislatures realize how vast has become the discrepancy between the teacher's pay and the present cost of living. Commissioner Claxton's figures show that in 1918, the latest year for which there are complete reports, the average salary for elementary teachers was \$606 a year and for high school teachers \$1,031, or an average for the whole profession of \$635. In any other occupation, save perhaps the ministry, such pay would mean a general strike. Even in the unorganized profession of teaching it has come to mean wholesale resignations and a nation-wide drift to better paid professions.

Premier Charged with Murder

THE coroner's jury which sat upon the case of the assassination of the Lord Mayor of Cork brought in the following amazing verdict:

We find that the late Alderman Thomas MacCurtain, Lord Mayor of Cork, died from shock and hemorrhage caused by bullet wounds; that he was wilfully murdered under circumstances of the most callous brutality; that the murder was organized and carried out by the Royal Irish Constabulary, officially directed by the British Government, and we return a verdict of wilful murder against David Lloyd George, Prime Minister of England; Lord French, Lord Lieutenant of Ireland; Ian Macpherson, late Chief Secretary for Ireland; Acting Inspector General Smith, of the Royal Irish Constabulary; Divisional Inspector Clayton, of the Royal Irish Constabulary; District Inspector Swanzy, and some unknown members of the Royal Irish Constabulary.

In this the Irish have followed the example of the English juries which during the war charged the Kaiser with murder when the German Zeppelins dropped bombs causing deaths. Doubtless the action of the Cork coroner will prove equally ineffective for it is hard to imagine a constable from Scotland Yard invading No. 10 Downing Street with a warrant for the arrest of the Prime Minister, who is trying his best to find some sort of government that will be satisfactory to Ireland as a whole. Furthermore such a warrant would have to be transmitted thru the Royal Irish Constabulary, who are themselves accused of the crime. At the inquest Major General Strickland, commander-in-chief of the forces in the south of Ireland, testified that a Government order had been issued for the arrest of the Sinn Fein Lord Mayor of Cork, but when the military went to his

Thomas in Detroit News.

One solution of the teacher's problem of how to make both ends meet

house to serve it they found that he had been assassinated an hour before.

A hundred prisoners, who had been gathered in by the raids on Sinn Fein headquarters and were confined in the Mountjoy jail awaiting trial, began a hunger strike on Sunday, April 4, as a protest against the refusal of the authorities to grant them the privileges of political prisoners, instead of treating them as common criminals. At the end of a week they were still holding out and all Dublin was seething with excitement. As several were in a state of complete collapse and expected to die at any moment a crowd of 20,000 collected outside the prison and remained upon their knees reciting the prayers for the dying.

Thereupon the Irish Labor executive issued notice for a general strike in their behalf. All shops and public houses were closed. No trains or trolleys ran. No mail was distributed. The light and power plants were shut down. The British Government, fearing the effect if any of the prisoners carried starvation to the point of suicide, suddenly gave way and released seventy-three of the prisoners and made concessions to the others.

Their release caused wild rejoicings thruout the south of Ireland and brought the demonstrators into conflict with the police.

The extent of the political disorders is shown in an official White Paper, which reports that during the first three months of the present year 1089 outrages were committed in Ireland. This includes thirty-one policemen and officials and five civilians killed, eighty-one fired upon and thirty-two assaulted. Since then murders, thefts and other crimes have greatly increased.

The San Remo Conference

THE ruling power of the world until the League of Nations gets into operation is the Inter-Allied Supreme Council, which is essentially a triumvirate composed of Premier Lloyd George of Great Britain, Premier Millerand of France and Premier Nitti of Italy. These three men, together with their foreign ministers and advisers, met on April 19 in the quiet little winter resort of San Remo on the Italian Riviera. The United States has been officially invited to send an observer if not a participant, but probably will not be represented at all. On account of the opposition of the President to the annexation of Fiume by Italy the City Council of San Remo has changed the name of the Corso Wilson to Corso Fiume. This beautiful drive by the sea used to be called the Corso William II in the days before the war when Germany was the ally of Italy, but was

Keystone View.

Mustapha Kemal Pasha, defender of the Dardanelles and leader of the Turkish Nationalists, has set up an independent Turkish Government at Erzerum and Angora in Asia. The Sultan of Turkey, at the behest of the Allies, has issued a proclamation declaring Mustapha Kemal and his followers rebels. Mustapha Kemal, however, claims that the Allies violated the armistice when they took possession of Turkish territory before the Treaty had been signed

renamed the Corso Wilson when the President's visit to Italy led the people to assume that he would support all of the Italian claims for foreign territory.

But altho President Wilson is not now sitting in the conference and his name is removed from the street signs, yet his influence is felt perhaps as much as ever. For the first thing the Council had to do was to frame a reply to his note protesting against the proposed settlement of the Turkish question. It will not be easy for the Allied Premiers to answer the President's arguments for the principles to which he appeals are those to which the Allies pledged themselves at the time of the armistice. England and France are now resolved to leave Constantinople in the hands of the Sultan, but the reason for their sudden change of policy, namely their fear of the revolt of their Mohammedan subjects, is not one that need influence American opinion. The President not unnaturally reminds the Allies that when they in their hour of peril came begging America to raise four million men and loan them ten billion dollars, they neglected to disclose to the President the secret treaties which disposed in advance of the spoils of victory without regard to American ideals and interests.

The Turkish treaty which is to be settled at San Remo and delivered to the Turks about May 10 will follow in the main the plan for the partition of the Ottoman Empire prescribed in the secret Sykes-Picot treaty, with this important exception, that the elimination of Russia has left more to be divided among the other Allies. To Russia had been promised Constantinople, northern Persia and northern Armenia. At present the British are in control of Constantinople and all Persia as well as of the former Russian territory of Azerbaijan, including the rich oil fields of Baku. The Persian and Mesopotamian oil fields are now in British hands, so also are two-thirds of the developed fields of South and Central America. Sir E. Mackay Edgar boasts that Great Britain has acquired dominant control of the world's oil supply and that in ten years at the present rate of consumption the United States will have to buy from the British 500,000,000 barrels of oil every year, which will pay into British pockets not less than a billion dollars annually. Sir John Cadman, the British oil expert, will be an influential personage at San Remo for both Italy and France are dependent upon British favor for their fuel supply. Italy also must have English coal and this is another reason why Signor Nitti would rather offend M. Millerand than Mr. Lloyd George if it comes to a clash.

The Turk Triumphant

WHILE the Allied Ambassadors at San Remo are discussing whether the ruler of Turkey shall be allowed to reign at Constantinople and whether the Sultan shall retain the Caliphate the question seems likely to be settled in the negative by the Turks themselves. The puppet Sultan is under the thumb of the British at Constantinople, but the real power has passed over into Asia where Mustapha Kemal Pasha, defender of the Dardanelles and leader of the Turkish Nationalists, has set up an independent government at Erzerum and Angora. He has none of the scruples shown by the British against depriving the Sultan of his spiritual sovereignty for he has appointed the Chief of the Dervishes as Sheik-ul-Islam, the head of the Moslem faith, altho the authorized incumbent of that office remains in Constantinople.

The Young Turks—those who, thru the organization known as the Committee of Union and Progress, overthrew the old Sultan—have rallied to his banner and the Nationalists won in the recent elections, even in Constantinople under the guns of the Allied fleet. The Allies at the time of the armistice required the demobilizing of the Turkish troops, but did not insist upon their disarmament. This is now acknowledged as a mistake, tho it would have been

difficult if not impossible to take away the arms of the Turks and it was not expected that peace would be so long delayed as to give them a chance to recover their courage.

Mustapha Kemal claims that the Allies themselves violated the armistice when they took possession of Turkish territory before the treaty had been signed or even presented. The occupation of Smyrna by the Greeks, of Adalia by the Italians, of Cilicia and the Syrian coast by the French, of Mesopotamia by the British and the setting up of independent states of Armenia-Georgia, Kurdistan, Arabia, Azerbaijan, Syria and Palestine convinced the Turks that they were to be deprived of 85 per cent of their territory, even in districts where the greater part of the population is Turkish. So they determined to make a stand in Anatolia, their homeland, and extend their influence in all directions thru the call of common faith or common blood. Pan-Islamism, whose unity is religious, would extend from Morocco to India. Pan-Turanianism, whose unity is race, would extend from Turkey to Mongolia.

Kemal's active army is thought to be only 40,000 men, but he has distributed arms and ammunition to all male Mohammedans on the understanding that they rally to his call at a minute's warning. In this way he can keep them at work and without expense until he needs them. This has given him control of a force sufficient to drive the French south to the Mediterranean Sea and the British west to the Sea of Marmora. The British burned their bridges behind them and now hold only the shore of the Bosphorus, where they are protected by their fleet. This cuts off Constantinople from Anatolia, the source of its food supply.

The Sultan at the behest of the Allies issued a proclamation declaring that Mustapha Kemal and his followers were rebels and demanding that they lay down their arms within twelve days under threat of drastic measures. But this proclamation does not circulate on the eastern side of the straits and it is hard to tell what measures the Sultan can take to enforce it.

The Rise of Azerbaijan

FIVE new republics have arisen in Caucasian borderlands of Russia and Turkey. North of the great divide the mountain tribes of Darghestan are struggling to establish a North Caucasian Republic. South of the Caucasus there are two, Georgia on the west with the port of Batum on the Black Sea and Azerbaijan on the east with the port of Baku on the Caspian. These two ports are connected by a railroad and a pipeline which conveys the petroleum of the Baku district to the outlet at Batum since the Caspian is a closed sea. Below these are the newborn republics of Armenia and Kurdistan. The formation of such little independencies on the southern frontier of Russia like the Baltic states on the western frontier has been encouraged by the Allies with the idea that they would serve as buffers to Russia, whether imperialistic or Bolshevistic, from spreading over other lands. But it is not at all certain that this sanitary cordon will prove as impervious as is hoped.

The name Azerbaijan means "land of eternal fires" and refers to flames which arose where gas and oil seeped from the rocks and which were the object of adoration of Zoroastrian pilgrims from the earliest times. But in recent times came strangers to this region to labor rather than to pray and they pumped up and shipped away this natural fuel instead of allowing it to arise as a perpetual burnt offering to the sun god. For some years a district ten miles square about Baku provided half the world's supply of petroleum. This brought wealth into the region and the untutored Tatars found themselves as rich as the oil kings of Pennsylvania. With wealth came the consciousness of power and the desire for culture. A Tatar literature sprang up and a new art. Newspapers became numerous. As millionaires multiplied a Socialist movement arose. A feminist movement followed and the young Mohammedan women shocked their elders by speaking in public meetings with unveiled faces.

The new map of Turkey looks like a Western mining camp in boom times because the claims staked out by the various powers overlap one another. The San Remo Conference is trying to solve this dissected map problem

On the basis of a common race, religion, language and sufferings a sentiment of nationality developed. The Azerbaijanians claim that their country, like Poland, has been parted in three by predatory powers, one part having been seized by Persia, one by Russia, and one by Turkey. Their aim is to unite these three, which would comprize a population of three to five millions, most of them Turco-Tatar stock, but including many Armenians, Persians, Russians, Kurds, Greeks, Jews, Chinese and the miscellaneous floating population that is always attracted to a port where quick money is to be made. The religion is mostly Moham-medan, more of the Sunni than of Shia sect.

The Supreme Council of the Allies on January 20 recognized the twin Trans-Caucasian republics of Georgia and Azerbaijan as *de facto* governments and will furnish them with arms to defend themselves against the Bolsheviks who are coming down from the north. So long as General Denikin was in control in southern Russia he refused to make any concessions to the spirit of independence of the Caucasian nationalities. This was one cause of his downfall for he lost support in the rear. But now that he is eliminated the Allies are free to back up the Caucasians in their fight for independence against the Bolsheviks. Probably the terminal ports of Baku and Batum will be made free cities under the control of the League of Nations. The mineral and agricultural resources of the Caucasus are immense and mostly undeveloped. Besides the petroleum deposits which produce some 70,000,000 barrels a year, an output second only to the American, there is the untouched water power of the streams running down both sides of the Caucasian range which rises to a height of 18,000 feet. It is no wonder that this rich region is now the object of strife and intrigue.

The Downfall of a Despot

MANUEL Estrada Cabrera, for twenty-two years President of the Republic of Guatemala, has been thrust out of public life by a successful revolution. President Carlos Herrera rules in his stead. Altho the rebellion was a sudden stroke, well-planned, the revolutionists did not attain power without a fight. They seized Guatemala City after a brief struggle, but Cabrera's forces bombarded the capital from suburban strongholds and killed many of the inhabitants. American marines were landed to guard the United States legation. Twelve foreigners are said to have been killed during the bombardment, and shells struck several of the legations.

After the capture of Fort San José President Cabrera surrendered. He agreed to turn the government over to Herrera and the Unionist party if his personal safety were guaranteed, and an armistice was arranged on this basis. The Unionist administration, now in power, will probably open negotiations with other Central American republics for a general federation.

The overthrow of President Cabrera was no ordinary incident of Central American politics. He was not one of the fugitive stop-gap "Presidents" whose precarious hold on power makes the annals of Central America so kaleidoscopic. From the time when he assumed office in 1898 until the present revolution he has governed Guatemala as absolutely, as ruthlessly, as efficiently and as selfishly as Diaz governed Mexico. It is said that Porfirio Diaz and Dr. Francia of Paraguay were the only other Latin American Presidents with a longer continuous term of office to their credit. It is hardly necessary to add that Latin American Presidents who remain in power for so many years usually control the machinery of election so that the recurrent election days are but an empty formality. A change of administration usually necessitates a violent revolution unless the despot "President" himself wearies of power and resigns his office to one of his associates.

President Cabrera showed no little courage in clinging

to office for so many years as he had to face not only constant attempts at revolution but numerous plots of assassination. His luck has been extraordinary, for well-planned attempts to slay him with bombs, bullets and bayonets are on record. Every such attempt was followed by a series of indiscriminate executions of suspects. Like all despots he ruled by fear and his reign has been a reign of terror. While repressing revolution with an iron hand, President Cabrera did something to extend education and public works thruout Guatemala and doubtless consoled his conscience with the usual excuse that dictatorship kept the country "quiet" and made peaceful development possible. But all the time he was aware that his throne was erected on a volcano and now the long-awaited eruption has taken place.

Armenians in Peril

THE Armenians hoped that the defeat of Turkey would mean personal safety and the reestablishment of their national independence with a country extending from the Black Sea to the Mediterranean. But after the armistice the secret was disclosed that the Allies in the midst of the war had made an agreement as to the partition of Turkey and according to this Cilicia, the Mediterranean littoral which the Armenians expected to use as their outlet to the south, was assigned to the French. Ex-Premier Briand in a recent speech declared that France must have Cilicia in order to supply her necessary cotton.

Acting apparently on the rule that possession is nine points of the law the French insisted that the territory in question be turned over to them without waiting for the Turkish treaty to be signed. Accordingly the British troops who had occupied the region on both sides of the Gulf of Alexandretta ever since the armistice were withdrawn last November and their place was taken by French forces, chiefly Algerians and Senegalese, such as France is now using in Frankfort. But the African soldiers, it seems, did not make as good guardians as the Indians whom the British employed or else the French officers were less experienced administrators. For shortly after the British withdrew trouble began to break out between the Moslems and Christians. The French commandant, General Gouraud, ordered both parties to surrender their arms and trust to him for protection. The Armenians generally obeyed, but the Turks concealed most of theirs and before long were using them again on the Christians. The French raised and armed a small force of Armenians as a home guard, but this proved ineffective.

As the Turks rose the French retired, leaving the Armenians defenseless against their hereditary enemies. The Armenian population tried to follow the French in their retreat to the sea, but thousands perished by the way from cold and privation, for a terrible blizzard came on as the refugees were trying to make their way thru the mountains from Marash to Adana. The number of lives lost in this march to the sea is variously estimated from ten to twenty thousand and doubtless will be never known exactly. Two American missionaries were among the victims.

What occurred in the Armenian villages after the retirement of the French may be sufficiently inferred from a single incident related by a survivor of the massacre:

The Turks drove about 140 Armenians, mostly boys and girls, into a farm house and fired at them thru the windows. They then came in and finished their work with axes. A Turk took a baby of four months old and handed it to his son, a boy of ten, and said, "Now, my son, cut this infidel's throat and drink the blood and you will become a brave man." The boy obeyed. I had been wounded and lay under some corpses and so escaped death.

Altho the French had over 20,000 troops in Cilicia and Syria and have heavily reinforced them since, they have not yet succeeded in penetrating into the interior and today Aintab and Marash are besieged by the Turks with little hope of rescue.

The convenience and spick and span cleanliness of the Evanston Community Kitchen make a special appeal to housewives. And the efficiency and promptness of its delivery service are in its favor with "paterfamilias"

Let Bridget Leave

By Robert H. Moulton

The Evanston Community Kitchen came into existence as the result of efforts on the part of members of the Evanston Woman's Club to furnish meals to families in which all adult members were ill during the epidemic of influenza a year ago, and for which no domestic help was available. This emergency kitchen operated for several weeks, furnishing on an average of two hundred meals daily, catering not only to the ill and convalescent, but to the robust members of the household as well.

The success of this venture led to plans for continuation of the work on an even larger scale when it became known last summer that many families, unable to obtain help, were taking their main meal of the day in hotels and public dining rooms instead of at their own fireside, much as they preferred the privacy of their own homes. Today the kitchen has all the customers it can take care of, with the probability that one or more branches will be opened soon.

Under the new plan it is possible to order dinners for the entire family early in the day and have them delivered steaming hot at the desired meal time. When the food has been cooked it is placed in especially built containers, made of aluminum and copper alloy with heavy glass lining and of high thermal efficiency. Four different dishes, each with a separate cover, are placed one on top of the other. Then all four dishes, with their hot meals ready, go inside of the large insulated container. Separate containers are used for ice cream and foods which are to be kept cold. The delivery wagons leave the Evanston Community Kitchen about 5:30 p. m. each evening to call upon the various customers. Each family receiving these daily dinners owns its own containers, and these are picked up each morning and returned to the Community Kitchen.

A typical meal from the Community Kitchen consists of chicken pie, mashed potatoes, string beans, fresh fruit cup, and cake. In the winter a soup is added. It is taken for granted that coffee,

bread, butter and milk can be furnished easily in each home, and these items are, therefore, not a part of the regular meal from the Kitchen. Diners are served at 85 cents per person and Sunday dinners at \$1.00. The menu is changed from night to night, but no family knows what it will receive until the container is opened and the meal served. In this respect it differs but little from a meal prepared in the home, where the wife is usually the only one who knows what dinner is to be.

In addition to the serving of 600 hot dinners a week, the Community Kitchen has many customers who come regularly for special dishes such as chicken pies, creamed sweetbreads, baked beans, or blueberry muffins. Only experts in cooking are engaged, one spe-

cializing in salads, another in pastries and so on. Eight cooks are employed.

The organization of a community kitchen may be a very simple or a very elaborate affair. Some guarantee will be needed in any case. In Evanston a capital of \$1,000 was thought sufficient to launch the experimental kitchen. That sum remains intact. The kitchen has paid for itself from the first and has accumulated a fund for new equipment. Local conditions will largely govern costs of food materials and prices will need constant readjustment. The Evanston prices, at the outset, were computed under the advice of keen and successful business men, counting cost of material, labor, rent, ice, fuel, light, deterioration overhead of all kinds, with a percentage added to this sum total as a margin of safety.

Introducing Kudzu

Evidence accumulates daily of the unreckoned value in this country which it required a great war to bring to light. Take the case of kudzu, a leguminous plant, which is declared by many to be the best forage plant yet discovered.

Before the war this plant was prac-

tically unknown to the farmers of the United States, altho in a few isolated instances it had been grown as a shade vine. The fact that livestock would thrive upon it, actually preferring it to any other kind of forage plant, and that it possessed almost miraculous powers of building up worn out soil,

A field of kudzu just harvested. It grows three or four crops a year

seems not to have been recognized by anyone until Mr. C. E. Pleas of Chipley, Florida, made the accidental discovery. A few years ago Mr. Pleas planted some kudzu vines to cover a summer house. Within two years the vine Mr. Pleas had planted had trailed all over the lawn. Finally he grubbed it up as being something of a nuisance and threw the roots on a trash pile.

Altho utterly neglected, the roots soon gained a foothold in their new location, and in a few months had not only covered the trash pile but had reached out and enveloped the adjoining fences, finally reaching the barn lot, where the family horse was kept. As long as a single leaf was within reach, the horse seemed to care for no other kind of feed, and the neighbors' cattle and hogs continually broke thru the fence to get it.

This prompted Mr. Pleas to send specimens of the vine to the Department of Agriculture to learn whether or not it possessed any poisonous qualities. He was informed that it did not, and as this was at a time when the high cost of feed forced many farmers to reduce the daily allowance of their animals, he hastened to plant a number of acres to kudzu. He also had a large number of analyses with the result that the plant was shown to be even richer in protein than alfalfa.

During the second season Mr. Pleas cut, on a measured space thirty feet square, at the rate of eleven tons of cured hay per acre at four cuttings. This, however, was an exceptionally favorable season, there being no late frosts. The first cutting was ready May 1, the second cutting was made

June 11, the third the last of July, and the fourth early in September.

Of course it is not claimed that kudzu will make four cuttings every season, nor yield eleven tons per acre at a cutting. Mr. Pleas believes, however, that a safe estimate is from three to four cuttings with a yield of from four to six tons per acre, anywhere that the plant may be grown under favorable circumstances. Experiments have proved that it is perfectly hardy all over the United States, enduring the winters as far north as Nova Scotia.

Kudzu is singularly free from the disadvantages of most kinds of forage. One planting lasts for many years; it may be cut or pastured at any time during the season; the vines do not bloom or bear seed and their roots penetrate the soil deeply, so that they remain green and full of life during the entire growing season; and the hay can be cut at any time when weather conditions are suitable for curing hay, as kudzu is not injured by waiting for good weather.

Kudzu should be propagated by means of the rooted plants, for when these plants are removed to new fields they carry with them on the tubercles of their roots the bacteria which are necessary to inoculate the new soil in order to secure the best results. As an illustration of the power of the plant to rejuvenate soil, it may be stated that last season Mr. Pleas got the best corn he ever grew in Florida, averaging fifty bushels to the acre, on land that the season before had been planted to kudzu, but which, previously, had been practically worthless.

Helping People Help Themselves

By Joy Elmer Morgan

Sound reconstruction policy demands the education of adults as well as of children. Hundreds of thousands of men and women left high school or college during the war who will not be able to begin again their formal education, but who, as the activities of progressive libraries show, can be induced to undertake helpful reading courses. Each year boys and girls only partly trained leave school in large numbers to earn money. They are potential students especially during their first few years out of school when they miss most the education that the necessity for making a living has denied them. Changing world conditions have made men and women everywhere eager for more information on history, sociology and economics. Millions of women recently enfranchised want to study government and politics and to keep themselves informed on public questions. Citizens of foreign birth are enthusiastic in their desire to master the language of America by reading books that breathe the American spirit and set forth clearly the real aims and the old ideals that have made this country the mecca of oppressed peoples everywhere.

A serious teacher shortage has called into the nation's schoolrooms

thousands of teachers of inadequate professional and general preparation. Most of these teachers are ambitious to improve their qualifications. For example, a California teacher recently wrote that she would rather have the excellent county library service that California counties enjoy and \$20 a month less salary than to have the extra salary and do without the service. To help these and other groups help themselves and to conserve the vast benefits that must accrue to the nation when a vitalized professional library service is freely available to every man, woman and child in America, the American Library Association has launched the "Books for Everybody" movement, a three-year program of library development to finance which it is making an appeal for a fund of \$2,000,000.

The need is great. Altho there is spent annually in the United States approximately \$1,000,000,000 for schools and colleges, only about \$16,500,000 is being spent for free public libraries which are the chief agencies of after-school education. Educational leaders are asking if it is wise economy to spend \$10 per capita annually for formal education and then to spend only 16½ cents per capita, or less than

one-sixtieth as much, to follow up that education and to make it a vital, living force in the lives of the great majority of the people—those who cannot be in school.

The program of the American Library Association is therefore well conceived and timely. It represents months of careful study of library needs by prominent librarians in all sections of the country. In coöperation with all existing agencies and institutions, the Association plans to carry on a sustained program of education that will result in increased recognition of the value of library service in adult and juvenile education and make the library a more potent factor in the life of every community.

Decision

AND GET ON WITH IT."

A Definition of Golf

That delightful essayist, J. Edgar Park, in his recent discussion of *The Bad Results of Good Habits*, thus describes the ancient and honorable game of golf:

Golf is a game indulged in by Presbyterian ministers. It is played with short poles similar to those formerly used to take church offerings. A man and a boy generally play together. The boy carries a bag with the various poles. The man selects *seriatim* the poles from the bag. The game, the interest of which it is said cannot be appreciated by an outsider, includes walking over certain fields called links with the boy. The poles are frequently used to remove portions of the turf, so that the succeeding party can follow the tracks of the one going before.

The attentive reader will note that the presence of the ball is passed over as non-essential, altho the author later admits that it forms an important part of the game of more experienced players and is wholly neglected only by the beginner.

The Great American Smoke

The Department of Agriculture is responsible for some rather startling estimates of the tobacco consumption of the American public. In 1790 some 29,000,000 pounds of tobacco were used in the United States and year after year the amount increased until for the last two years it averaged 914,000,000 pounds. Our consumption just before the Great War was eight times what it had been in the decade following the Civil War and it has increased enormously under the influence of war prosperity.

In the 'thirties and 'forties of last century, when English men of letters were so scandalized at our addiction to the weed, the average American used about 3.3 pounds of tobacco in the course of a year. Supposing that his wife and children did without their per capita share, we can perhaps

Co-Operation Based on Long Practical Experience

Crane Service places within your reach, through fifty-seven branches and showrooms, the most advanced ideas on heating and plumbing systems for buildings of all sizes and descriptions—ideas which are easily applied with Crane equipment obtained through the plumbing and heating trade.

Crane Showrooms enable you to choose discriminatingly, with precise regard for individual requirements and tastes, and to benefit by the sixty-five years of progressive effort which the Crane Co. has devoted to the furnishing of heating, plumbing and kindred equipment.

Another product significant of Crane resources. A 66" x 60" Cast Iron Reducing Base Elbow, weighing 17,500 pounds

WHAT CURRENCY HAS COME TO

These inflated and shrunken coins show the financial situation of the various European countries and of the United States. The early combatants in the war—England, France and Belgium—are hardest hit by adverse exchanges. The United States dollar is shown on the left as suffering from swelled head. Spain and Holland are in the same fortunate position. In this diagram the relative values of the money standards of England, Spain, Belgium, France and Holland are shown in relation to the money standard of the U. S. A. The missing portions of the English pound and the French and Belgian franc show to what extent these countries are adversely affected by the exchange

allow him some sixteen pounds for his personal use. Immediately after the Civil War he was more abstemious for some reason, and had but two pounds to his credit, or, if he did the smoking for the whole of an average family of five, we may say ten pounds. But after 1874 the cloud of smoke grew denser once more as the years brought an increase of spendable national wealth. For the pre-war decade of 1905-1914 we must assign 6.4 pounds to every individual or thirty-two pounds to a family. Today the smoker has eight pounds in his own right and forty in the right of his family. But perhaps he can no longer have the whole family's share to himself. Maybe he only smokes twenty pounds a year and lets Mrs. Smoker and the children smoke the other twenty. Even so, he uses twice as much as his father did in 1870.

Gas Bombs for the Police

Dr. Wood of Johns Hopkins University suggests that the police borrow a weapon from the army and subdue defiant lawbreakers with gas grenades. Of course only those kinds of gases should be used which render the criminal unable to resist capture; "poison gas" in the stricter sense of the word should not be used.

Suppose a burglar has barricaded himself in a dark room. To attempt to capture him by direct attack might cost the lives of several policemen. To wear him out by prolonged siege is a policy both uncertain and undignified. But fill the room with "tear gas" and the criminal will be unable to aim his pistol and can be captured with ease and safety, especially if his captors have thoughtfully provided themselves with gas masks. In a few hours the captured man will be none the worse for his experience, save that he will be under lock and key.

An alternative suggestion offered by Dr. Wood is a mixture of "sneezing gas" and chloroform. The sneezing gas, squirted into a dark room or cellar, would force the burglar to reveal his presence and the chloroform would make him unconscious long enough to facilitate his capture. One drawback to this interesting suggestion is that

the criminal world itself may take to gas masks and gas bombs and succeed in overpowering a victim or escaping from the police by the very means which the law had devised to entrap him.

Hints for Time Wasters

In the current issue of *System* a writer suggests that if this sign is put up where time-wasters can see it their unwelcome visits will be reduced 50 per cent. Try it and see:

Sugar and Spice

Since 1889 there have been 3,308 lynchings in the United States.

Last year Maine built more ships than in any of the past fifty years.

About 40,000 inventions are patented in the United States every year.

The United States exported 50,000 miles of motion picture films in 1919.

England made forty different types of airplane engines during the war.

The Canadian Government has placed 110,000 returned soldiers in jobs.

Harvard University has just increased the salary of its teaching staff by fifty per cent.

Life insurance companies have 10 per cent of their assets invested in Government securities.

Sugar manufacturers estimate that a million American families are experiment-

ing with home made wines and beer. Some have produced vinegar and some explosions.

Paris exported more than \$10,000,000 worth of antiquities to the United States in 1919.

An estimate made in 1918 places the number of millionaires in the United States at 22,490.

With the downfall of Germany's trade. Japan has now become the principal exporter of toys.

A further gift of \$6,000,000 has been made by J. Ogden Armour to the Armour Institute of Chicago.

To keep pace with the growth of population in the United States it is necessary to add to existing farmlands 17,000 acres a day.

The Department of Agriculture mentions the following trees as those suitable for planting along streets: acacia, ailanthus, ash, camphor, chinaberry, elm, eucalyptus, ginkgo, hackberries, honey locust, horse-chestnut, linden, locust, magnolia, maple, oak, palm, palmetto, washingtonia palm, date palm, coconut palm, pepper, poplar, rubber, silk oak, sweet gum, sycamore, and tulip.

Dresden China Money

The news comes from Dresden that the Meissen porcelain factories are experimenting with the manufacture of porcelain small change to replace metal. Two and five mark pieces have been made, but have not yet been placed in general circulation. The new coins are light and compact and are said to be so made that it would be difficult to counterfeit them. The special advantage claimed over ordinary metallic coinage is sanitary. Porcelain coins can be washed from time to time like ordinary cups and saucers and thus will not convey germs when passed from hand to hand. It is to be hoped that the new coins are less fragile than Dresden china in general. When you tell a merchant, "Can you break a five dollar gold piece for me?" he knows that you are speaking in metaphors, but "Can you break a porcelain dollar for me?" might be misunderstood.

Letters to the Great and the Near Great

By John Citizen

Hon. Thomas D. Schall,
House of Representatives,
Washington, D. C.

Dear Sir:

Allow a heart full of gratitude and a mouth still brimming with laughter to thank you for your speech against the League of Nations on April 9 as duly reported in the ever-amusing *Congressional Record*. Beware lest your constituents take your remarks seriously for in that case they will have harsh things to say about your handling of facts.

Your reference to that hitherto unknown district "the Hejaz of Armenia" is perhaps the most obvious triumph of the speech, but it is really no funnier than your assertion that Jugoslavia had not been invited to join the League, or your quaint surmise that under Article X we would be called on to protect England against the "external aggression" of Ireland. For choice, however, I like best that bit where after scoring the pro-Germans and pacifists you proceed to denounce the Allies like Kaiser Bill himself. The expression of your thought is as felicitous as the thought itself; who has ever before ventured to speak of a "good deal of halo draped around our noble allies"? A halo, as you have doubtless learned from your profound studies in art, is a sort of raincoat or mackintosh which is draped in very graceful folds around the shoulders of the inhabitants of the Hejaz of Armenia.

Chucklingly yours,

JOHN CITIZEN.

Mr. Charles Dana Gibson,
Care Life Publishing Company,

Dear Sir:

Congratulations and best wishes for a long and merry Life! For many years Mary and I have perused with pleasure the lively periodical which you have now taken over and nothing in it has caused us more joy than your own drawings. Of course all patriotic American men believe that every American woman is a queen by divine right, but it took your inspired pencil to prove this to the eyes of all the world. Anyone even in darkest Russia who is fortunate enough to obtain a Gibson drawing may know that every American woman is seven feet tall, an accomplished athlete, and a radiant beauty with a countenance at once proud and stern in feature and sweetly gentle in expression. If there are girls in the United States not yet of the Gibson type at least they aspire to be, and not failure but low aim is crime.

By the way, in taking over *Life* I hope that you will induce that otherwise flawless periodical to abandon its old vendetta against equal suffrage and the doctors.

Enthusiastically yours,

JOHN CITIZEN.

A Number of Things

By Edwin E. Slosson

Someone has said "Republics are ungrateful."

Someone else has said:

"O wad some power the giftie gie us,
To see oursel's as ithers see us."

I am reminded of both these quotations when I read an article by Georges Batault in the March number of the *Mercure de France*, one of the most famous of French literary reviews. In discussing the American invasion he says:

When years added into years have laid before the eyes of man an extent of time so long that one is removed far enough to embrace all the circumstances at a glance, the philanthropist of Washington, the merchant-prophet, will appear as the most cruel enemy of civilization and the malfactor of the human race.

When President Wilson decided to intervene in the Great War it was with the design of saving at once Protestant Germany and the American loans to the Allies. While the merchant assured himself of the guarantees of payment and the control of the principal markets of the world the prophet dreamed of a renovation of the world by a sort of puritan imperialism. Nursing and finally fortifying Reformed Prussia, but demanding the crushing of Catholic Austria, humiliating Italy of which the capital is Rome, the center of gravity of the ancient and the Catholic world, treating martyred Belgium as a beggar and poor relation, coquetting with iconoclastic Bolshevism, destroyer of Holy Russia, the President smiled while cherishing the dreams of a fanatical pastor. Exploiting the follies of their chief, the rapacious financiers and avid merchants filled their pockets and their coffers, scheming in the shade of the cemetery, coining money out of bereavement, nakedness and famine.

The hour has not yet come to treat thoroly and from this standpoint the question of America. It is sufficient to say that the tyrant of Washington, this mystic Attila, astride of his hobby-horse, under whose hoofs the grass will nevermore grow, galloped at the head of a ferocious horde of Huns, bearers of barbarity.

They say that the peace of Versailles of 1919 was an Anglo-Saxon peace. Perhaps one might speak of it more justly as a Protestant peace for which certain bleeding nations were sacrificed. Protestant, biblical and messianic in principle this new peace bears the brand of the Quaker stamped upon its forehead as with a hot iron. But this principle has suffered many an attenuation on the part of mercantilism, Yankee or Manchestrian.

Now the American people and their representatives in Congress are reducing to nothing the precious Society of Nations, but on the other hand voting immense credits to become the future mistress of the seas.

I wonder what language he will use when the hour comes in which he can speak his mind freely about us. He might then say something rude. Perhaps he will think his hour has come when he reads the President's letter on the Treaty in which the French are called "militaristic."

It is doubtless salutary to hear how we are regarded by late associates in the war. Still it is rather upsetting to learn that we want to rob the French

instead of to rescue them and that we, not the Germans, were the Huns.

Why should one spend money on comic papers when he can read the advertisements in the shop windows as he goes by? For instance, I see as I ride up Broadway:

"Pancake Flour.
Demonstration Inside."

Where else? The proof of the pudding . . .

"Short Vamp Shoes."

I knew that baby vamps were fashionable, but I did not know that they had special shoes.

"Retiring Fur Sale."

Glad to see the change in fashion. Some of the new furs have seemed a little forward.

"Buoy Wanted."

Doubtless some shipwrecked concern.

"Hellgate Brewery."

Closed, thank Heaven.

"Eagle Poultry Shop."

Rather tough, I should say.

"Madame Butterfly, Double-faced."

Was she? I thought it was the tenor.

The notice board in front of a church reads:

"The Greatest Fool in the World,
Rev. John Doe."

Either too modest or too egotistic.

A bookseller displays in one window,

"Famous Books,"

and in the other,

"Readable Books,"

A pity 'tis 'tis true.

The vocations of some people seem predestined at their christening, e. g.:

"Samson Armstrong
Surgeon Dentist."

The bill of fare displayed on the window of a semi-naturalized restaurant offers us in phonetic spelling:

"Lamb Shops

Mints Pie

O'kra Soup."

The last item sounds like Irish stew. It is matched by this apartment house name:

"The O' Roosevelt."

They say that we are at war with Germany, but to read the *Congressional Record* and other yellow dailies one would think that we were at war with England, Japan, Russia and Mexico instead.

The President wrote to Mexico:

For a few years past the condition of Mexico has been so unsettled as to raise the question on both sides of the Atlantic whether the time has not come when some foreign power ought, in the general interest of society, to intervene, to establish a protectorate or some other form of government in that country, and guarantee its continuance there. . . . The President neither has, nor can ever have, any sympathy with such designs, in whatever quarter they may arise or whatever character they may take on. . . .

I find the archives here full of complaints against the Mexican Government for violations of contracts, and spoliation and cruelties practised against American citizens. It is not the President's intention to send forward such claims at the present

moment. He willingly defers the performance of a duty, which at any time would seem ungracious, until the incoming administration in Mexico shall have had time, if possible, to cement its authority.

It was President Lincoln who so wrote to Mexico.

A London weekly, *The Near East*, in a cordial editorial on the tercentary of the "Mayflower," says:

Many thousands of Americans, most of whom no doubt claim more or less legitimate descent from the Mayflower, are coming to England this summer to visit the tombs of their ancestors.

This is a worse insult to our Puritan ancestors than anything said by the Rev. Percy Stickney Grant.

Here is an apolog from the Oxford student periodical, *The Isis*:

Once upon a time the Devil visited the room of a very young man.

"Ah," said the young man, looking up from his book, "You must be the Devil. I have been waiting for you to come."

"Indeed," said the Devil.

"Yes," said the young man, "for I hear you give excellent prices for men's souls. Now I want wealth, and fine clothes, and love, and the worship of the world. And you must give me my neighbor's wife, and kill my neighbor and his friends. Only today they were laughing at me."

"And you would sell me your soul for that?" asked the Devil.

"Yes, indeed," said the young man.

"But your soul is already mine," said the Devil.

The moral of it seems to be: When dealing with the devil get your pay in advance—if you can.

Political economy is hard to define. One schoolboy gave the following definition:

"Political economy is not paying any more for votes than you have to."

Another gifted youth gave it an economic interpretation:

"Political economy is the science which teaches us to get the greatest amount of benefit with the least possible amount of honest labor."

It is fascinating to follow the post mortem adventures of Maxim Gorky as recorded in our newspapers. On August 4, 1918, we learned that he had died of dysentery. Four days later, as tho nothing had happened, he announced his intention of fighting Bolshevism till death. A year later he was killed by the Bosheviki. And lastly we hear that he has been elected to the central Soviet of Moscow. Gorky seems to have as many lives as—Kitchener or Kolchak.

A western friend writes me "the folks hereabouts are all opposed to the Covenant of the League of Nations chiefly because of the daylight saving clause." This is a better reason for opposing it than some easterners give.

One of the incidental advantages of prohibition is that we can dispense with the itinerant lecturer who used to exhibit that colored lantern slide of the crater of Mt. Etna and call it "The drunkard's stomach."

*There is
Comfort*

*In Every
Jar*

Ingram's

Therapeutic

Shaving Cream

For a clean, close, comfortable shave, get a 50c jar of Ingram's Therapeutic Shaving Cream and use it in this way: Place a small portion of the antiseptic cream on the chin. Moisten your shaving brush and work the cream into a rich, dense, long-lasting lather. Applying plenty of water, spread the lather to soften the entire beard. Slip the razor swiftly over your face just once and it will leave you clean shaven, cool and comfortable. Your face will feel fresh and free from irritation. Ingram's shaving cream possesses medical qualities that keep the skin healthful, preventing irritation and healing small abrasions or scrapes.

To receive free a 25c package of Ingram's Zodenta for the teeth, mail us the name of the druggist who sells you Ingram's Therapeutic Shaving Cream, together with the carton it comes in. If your druggist is not supplied, mail 50c to us, with his name and address, and receive the jar of Ingram's Therapeutic Shaving Cream with the Zodenta. We will then remit to the druggist his profit on the sale.

Boys and Girls at Chautauqua

"The most American thing in America."—*Theodore Roosevelt.*

Last year we had 472 in the Boys' Club, and 535 in the Girls' Club. Each Club has a house of its own. The boys are divided into two sec-

Mr. Charles W. Nethaway, of Pittsburgh, has been appointed director of the newly organized Department of Boys' and Girls' activities. Under his skilled direction, Chautauqua will this year give its boy and girl visitors more than ever before.

There will be a playground for the smaller children and a paddling beach for the very little ones.

Besides the outdoor fun of a Chautauqua summer, members of the Boys' and Girls' Clubs will present a patriotic outdoor pageant, Liberty's Child Garden, by Miss Blanche McCann.

There will be camping stations in the country roundabout, to which hiking parties will go.

Mr. Nethaway was Director of Physical Training for the Eighth Italian Army, and from the Armistice till June, 1919, was Director of Athletics for the Italian Armies of Occupation.

tions--fellows 8 to 15, and 15 to 18. The girls are in a single group, 8 to 16.

The club houses are attractive and well planned, with large hall, special rooms for different departments, spacious verandas, lockers and baths.

The effort of the Boys' Club is to correlate every department of boys' activity with the general opportunities at Chautauqua and the great advantages of the location for outdoor life and sport.

The girls have gymnastics, water sports, basketball, tennis and other games, and can study domestic science, nature and handicrafts, if desired.

Without imposing unpleasant restraints, the clubs give the youngsters helpful and healthful direction in their play and work.

For full information and details as to amusements, studies, accommodations, etc., write to the address given below:

CHAUTAUQUA INSTITUTION, Box 87A, Chautauqua, N. Y.

If I Were a Senator

(Continued from page 163)

the common carriers to acquire all necessary stockyards and refrigerator cars now owned by the packers, and to provide as many other such cars as are necessary for moving food stuffs promptly, and upon fair terms to all users. Laws promoting farmer and labor organizations, and direct dealing thru coöperative marketing, in order to assure the producer fair returns and the consumer just prices, thus protecting both from the business profiteers, and lowering the cost of living.

3. The retention by the Government of all natural resources of the country still in public ownership, land, coal, iron, copper, oil, gas, phosphate, sodium, water power, forests, etc., and development of these resources for the benefit of all the people and not for private gain, giving farmers and labor an adequate representation in their development; government ownership of all ships it has constructed and their operation as a merchant marine either directly by the government or thru lease or charter, for the benefit of the people as a whole, with due regard to conditions of employment.

4. Taxation of the 16,000 millionaires produced by war profits (about one for every three American soldiers killed in the war), and of other financial beneficiaries of the war, in amounts sufficient to pay its total money cost. Taxation of wealth in proportion to ability to pay by methods that will prevent the continued shifting of taxes to the backs of the people in higher prices and increased cost of living. Legislation imposing a tax on the value of land and other natural resources held for speculation.

I will work to obtain by constructive, legislative methods relief for the farmer, the miner, all wage earners, the salaried classes, and the people generally from intolerable economic conditions.

I will work also for national legislation to secure the public protection of maternity and infancy, the removal of children from industry, and the feeding of America's millions of undernourished children. I will try to secure the application of the standard of ability instead of sex to determine opportunity and compensation in industry, education, and the Civil Service. Since the national woman suffrage amendment is almost accomplished I advocate next the elimination, by a blanket enactment, of all legal discriminations which perpetuate inequality between women and men, and prevent their equal participation in government.

The issue was never as clear as it is today. Privilege is taking its final stand against the right of all who labor by hand or by brain to a voice in management, to just returns, and to equal opportunity for every one to a socially good life. Each of us must take our stand for labor or for privilege; there is no middle ground; no one can honestly support both. I am against privilege, and for a genuinely humanized government by and for the people.

Washington, D. C.

This Wonderful Range With Two Ovens

"Makes Cooking Easy"

Bakes Bread, Cake, Pies, Biscuits—Broils Steak and Cooks Nine Different Vegetables and Cereals All At One Time.

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

The Coal section and the Gas section are just as separate as though you had two ranges in your kitchen.

When in a hurry both coal and gas ovens can be operated at the same time, using one for baking bread or roasting meats and the other for pastry baking—It "Makes Cooking Easy"

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

The large oven below has the Indicator and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

HOW TO SELL YOUR REAL ESTATE

This FREE Book
tells how you can get cash for your property by using the Simplex Plans for Selling Real Estate, which have already sold more than 5,000 properties of all kinds in the U. S. and Canada. No matter where your property is located, these successful plans will show you how to sell it yourself, without employing agents or paying commissions to anyone. Don't spend a minute's time, an ounce of effort or a cent of money trying to sell without first reading this important book, and learning how to sell your property quickly, economically and at the highest possible price. The reading of this book has saved property owners hundreds and thousands of dollars in commissions, and it can do the same for you. As the book is sent absolutely free, you have everything to gain and nothing to lose. Send your name and address at once—a postal will do—and you will receive by return mail, postpaid, a copy of this important book, without cost or obligation. The Simplex Co., Dept. 272, 1133 Broadway, New York

The Only Cure for the H. C. of L.

(Continued from page 159)

new baby cuts the mother's clothing allowance, until she sometimes becomes practically confined to the home, because she cannot dress up even to the modest standards prevailing in her circle.

Usually the profiteer is blamed for the high cost of living and by "the profiteer" in most cases is meant the retail dealer. Certainly profiteering exists (and not only among the retailers), but it is the result rather than the cause of high prices. The ever increasing price levels give the profiteer the opportunity to keep one jump ahead. If every profiteer could be apprehended and shot, it would have no appreciable effect upon prices. His influence in hoisting prices is negligible.

We have been told that the present high prices are psychological in origin and that if the people will only begin to think falling prices, prices will fall! Undoubtedly psychology is involved in every price, but the inflation of the currency and the shortage of goods are physical facts that no amount of psychic legerdemain can change.

Without any possible question the principal cause of high prices and the enormous increase in the volume of the currency—gold, bank note and bank credit currency.

The second great cause is the scarcity of goods, arising from the unparalleled destruction of the war, the diversion of commodities to war uses and the slowing down of industrial production from various causes, not the least important of which is the denial to the workers of a proper share in the direction of industry.

To secure a return to normal conditions it will be necessary to deflate the currency and inflate the quantities of goods produced. These things cannot be done over night. They can be done wisely only under a well thought out program operating thru a period of years.

Could we awake tomorrow to find the currency reduced by one-half and the world flooded with goods, we should awake to disaster. Luckily we know no magic to accomplish the things that would send prices tumbling down over night. In times past falling prices always have gone hand in hand with industrial and commercial depressions, failures, panics and widespread unemployment. The prices we complained of in 1913 we have now come to regard as ideal, but to put prices back to the 1913 level tomorrow, next month or next year, would be to drag us back thru the inferno thru which we have just passed. It would be far better to adjust wages and salaries up to the present price levels than to bring prices down precipitately.

We are like a man on the roof of a tall building and wanting to get down. To jump is the quickest way. It takes time and energy to come down the stairs . . . but it is very much safer. In our case, however, we must

wait for the stairs to be built. While waiting for Congress to begin to think about formulating some constructive policies to encourage production, to reduce the enormous expense of transporting and marketing goods and to control and equalize the distribution and prices of commodities, large numbers of our people are turning to coöperation as a means of relieving them of their distress. Coöperation will not entirely solve the problem (Congress must give some assistance), but coöperation promises larger results than anything that has yet come into sight. To build up a coöperative movement in this country on a scale to give relief to the masses of the people will require years of work and struggle.

There is no royal road to lower prices. Coöperation is, however, a safe road and a good road so far as it goes. If prices can be brought down by cutting out unnecessary production costs, waste, spoilage and deterioration, reducing the number of profit-taking middlemen between producers and consumers, eliminating wildly extravagant advertising costs, preventing uneconomical hauling and substituting a degree of order and system for the present competitive profit taking chaos, prices will be safely lowered and the cost of living thereby reduced. If, on the other hand, deflation of the currency should be too suddenly brought about we will experience falling prices, but the cost of living will go up rather than down because wages and earnings will be decreased even more than prices.

To assist in meeting present conditions and to prevent their recurrence in the future, the United States Government should create a commission to confer with representatives of the other great industrial nations on methods of setting up a true and relatively constant standard of value to displace the present monetary units, which are merely units of weight and consequently variable in value or purchasing power.

The establishment of a stable standard of value, so that all the people, the rich and the poor alike, may be spared for all time to come the agonies that we have suffered from changing price levels, is, it seems to me, the most important constructive work that can be done in any field today.

Washington, D. C.

I love to soak my cookies in my tea.

I love to dip my cigarettes in rum.

I slumber well upon fromage de Brie.

I love to elongate my chewing gum:

I love to lap my sundaes when they're soft.

Ripe olives with raw onions I adore.

I love to toss my caviar aloft

And snap it ere it tumbles to the floor;

Loud music spoils my appetite for soup.

I have a flair for drinking tepid beer.

I love to make an oyster loop the loop—

And yet some people think my tastes are queer.

—Yale Record.

The "Indignation Special"

(Continued from page 164)

tremendous ovation, cheers and thundering applause from all over the hall. Then we shouted: "Speech! Speech!" and were silent. He looked down at us calmly and made what, I think, might be offered as a model speech for any hero:

"I don't know that I've got anything to say. The B. of L. E. ain't strikin'. I was ordered to run that train and I run it. That's all." Wild applause.

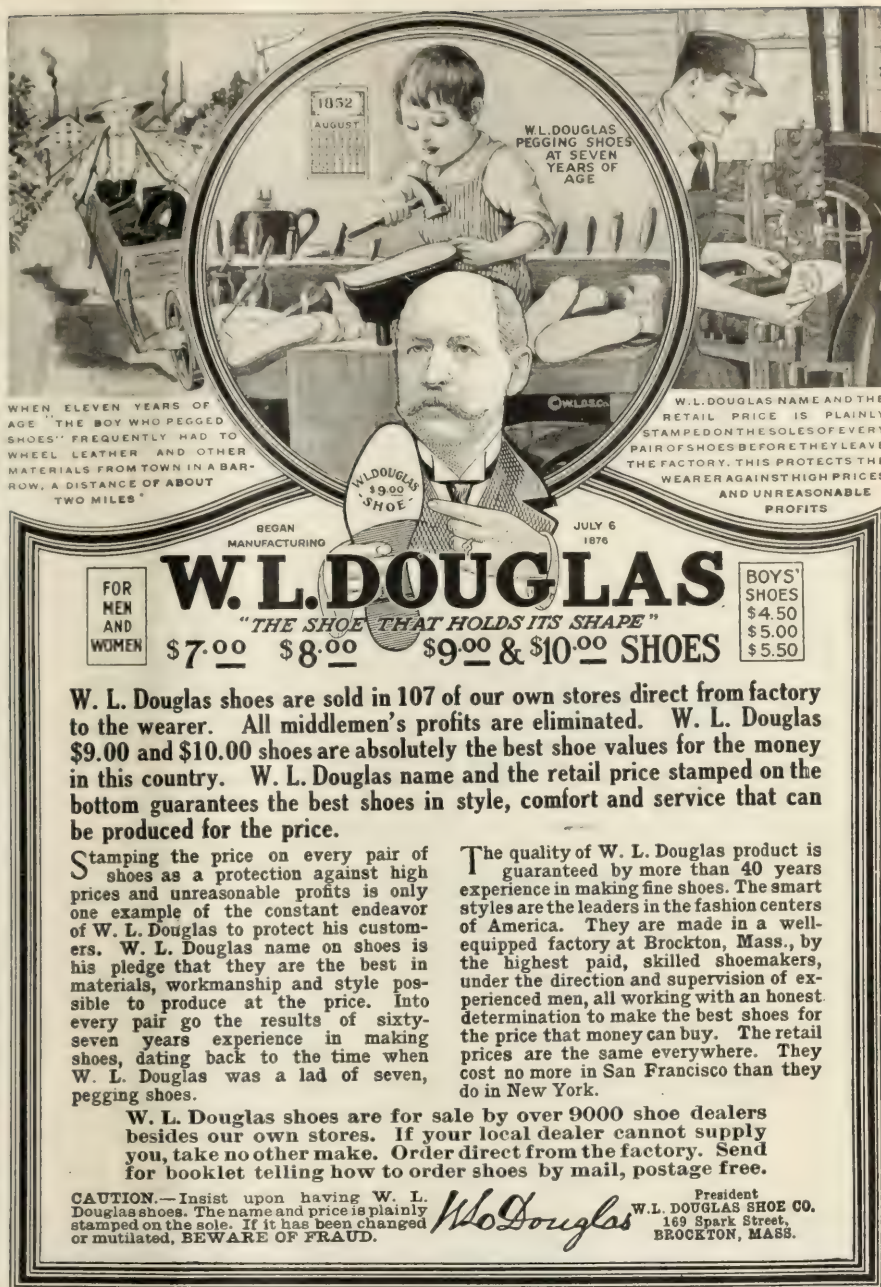

A representative of the conductors was asked to speak next. He is a gray-haired man with a long nose and a heavy jaw. He has punched the commutation tickets of generations of us. He spoke with a slow drawl and occasional flights of oratory.

"To make a long story very short," he began, "if Teddy Roosevelt or Grover Cleveland had been in Washington this never would have happened." It would have gladdened the heart of any Republican campaign manager to see how that meeting rocked with laughter. Then the conductor went on to explain how the trainmen had felt the need of higher wages if they were to keep up their standard of living, how they had asked Washington for them and had been told to wait three months until the high cost of living went down.

"Well," he said, "we didn't wait three months; we waited six." He went on with the story of demands and delays and the burden of it all was that, tho their action wasn't right, you couldn't blame the young men much for getting impatient. Then he showed us something to which we hadn't given much thought before; what it means to stay loyal to your brotherhood and your principles in the face of bitter opposition. He told us very simply that he had worked thirty-four years on this road and this had been the worst day of his life. He told us how lifelong friends had turned away from him when he came in on that volunteer train. He told us how his wife, "after what she'd been listening to all day," had begged him to quit and get another job. And he told us why he preferred to stick to his principles, to stand by the brotherhood and keep on working. The strike to us meant inconvenience and discomfort; to him it meant friendships and work endangered, a blow at the biggest things in his life. We had cheered those loyal trainmen heartily before, we cheered them now with a deeper understanding.

We adjourned to the strains of "The Star Spangled Banner" and the announcement that the self-help train would leave tomorrow at about half past eight.

A town crier walked our streets next morning. He was a member of the local police force and he shouted not "All's well," but its modern suburban equivalent, "The train will leave in ten minutes." Eager commuters ran from every direction and long before the first puff of smoke was sighted the station was black with people. The train as it steamed up, quite professionally,

WHEN ELEVEN YEARS OF AGE "THE BOY WHO PEGGED SHOES" FREQUENTLY HAD TO WHEEL LEATHER AND OTHER MATERIALS FROM TOWN IN A BARROW, A DISTANCE OF ABOUT TWO MILES.

W.L. DOUGLAS PEGGING SHOES AT SEVEN YEARS OF AGE

W.L. DOUGLAS NAME AND THE RETAIL PRICE IS PLAINLY STAMPED ON THE SOLES OF EVERY PAIR OF SHOES BEFORE THEY LEAVE THE FACTORY. THIS PROTECTS THE WEARER AGAINST HIGH PRICES AND UNREASONABLE PROFITS.

BEGAN MANUFACTURING JULY 6 1876

W. L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

FOR MEN AND WOMEN \$7.00 \$8.00 \$9.00 & \$10.00 SHOES

BOYS' SHOES \$4.50 \$5.00 \$5.50

W. L. Douglas shoes are sold in 107 of our own stores direct from factory to the wearer. All middlemen's profits are eliminated. W. L. Douglas \$9.00 and \$10.00 shoes are absolutely the best shoe values for the money in this country. W. L. Douglas name and the retail price stamped on the bottom guarantees the best shoes in style, comfort and service that can be produced for the price.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoes is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-seven years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centers of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

W. L. Douglas shoes are for sale by over 9000 shoe dealers besides our own stores. If your local dealer cannot supply you, take no other make. Order direct from the factory. Send for booklet telling how to order shoes by mail, postage free.

CAUTION.—Insist upon having W. L. Douglas shoes. The name and price is plainly stamped on the sole. If it has been changed or mutilated, BEWARE OF FRAUD.

TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Address inquiries by mail to INFORMATION, The Independent, New York.

When You Come to Boston

IT is rarely one finds a truly homelike atmosphere in an up-to-date hotel. But *The Brunswick* is fortunate in having just that quality. Recently renovated throughout.

The Brunswick

Boylston Street, at Copley Square

L. C. PRIOR, Managing Director

THE *Lenox* reflects the tone of its neighborhood—Boston's Back Bay. And it is the bright spot of that neighborhood—a smart hotel, ideally appointed.

The Lenox

Boylston Street, at Exeter

Both houses convenient to Back Bay stations

was greeted with shouts. A "real" engineer was at the throttle, but there were three volunteer firemen, one in a khaki shirt and overseas cap, the other two in blue overalls. The brakemen were portly commuters in derby hats. It was the fullest train that ever drew out of our station, and the friendliest. Everybody talked to everybody else, about the meeting the night before, about what a fine town we were anyway, about the strike and the price of sugar and the next president. And all along the way we had an enthusiastic and admiring audience. The King of the Belgians at the throttle of his special locomotive didn't begin to attract as much attention as our first self-help train.

With much difficulty a "real" conductor wedged his way thru the crowded aisles, looked at our commutation tickets, joked and nodded. He knew he couldn't possibly punch them all before we reached our destination and he wisely didn't try. After him came the amateur brakeman announcing in stentorian tones that the train would run back that evening at six-ten. Groans from the plutocrats accustomed to leaving their offices in time for the four-fifteen, but the groans were in the minority and the self-help train was run for the greatest good of the greatest number.

As we neared our destination we grew more and more jubilant and when we drew triumphantly into the station we piled out and gathered round the cab with uproarious and grateful cheers for the engineer and for the grimy and grinning firemen who were peeling off their overalls preparatory to appearing in their offices just as if they hadn't already put in a good day's work in the firing of the self-help train.

Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New method makes saving a pleasure instead of a hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT

311 Sixth Avenue

New York City

Henry Ford, Miracle Maker

(Continued from page 161)

months can be kept down to that figure, at a time when labor was in such demand as it was in the summer of 1919, it would seem that the appearance of over-speeding was not to be taken too seriously.

The output certainly has been increased. Hours were reduced and profit-sharing began in 1914. Here are typical results from four departments, figured on the comparative performance of the same number of men:

Motor—100 in nine hours, 120 in eight hours.

Radiator—100 in nine hours, 169 in eight hours.

Fender—100 in nine hours, 155 in eight hours.

Gasoline tank—100 in nine hours, 150 in eight hours.

That profit-sharing scheme is a curious one. Really that is a wrong name for it. The Ford people now call it "prosperity sharing." That is hardly correct either. It does not depend on the work a man does. It depends on the way he lives outside working hours. It ought to be called a citizenship fund, a community-developing fund, a home-maker's fund. It is 15 cents an hour devoted to faith in human nature.

It is the payment of a fixed amount to each worker, not a percentage of his wages, nor a pro-rated distribution of the profits of the concern. It has strings to it, but these strings are different from any ever tied to profit-sharing. It does not depend on output, nor upon skill, nor upon length of service. It is based upon the value of the individual in citizenship and in society. It is not based on how much a man brings up the average production of the factory, but upon how much he brings up the average standards of the community, in living, in thrift, in good American citizenship. If he is good in these he may receive today of the profits the company believes he will bring in tomorrow. The idea is that every man wants to be a sober, capable, industrious citizen, and that such a man is the best investment the company can make.

Married men, living with and taking good care of their families, receive this bonus for frugality. Lads under eighteen may also receive it if they are the support of some next of kin. Single men of eighteen years who are known to be living wholesomely and constructively are eligible. Women share as well as men. All that is required is to meet the company's specifications of good citizenship. The standards are not petty. When the plan took effect, sixty

per cent of the workers immediately shared profits. At the end of six months seventy-five per cent. were sharing; after one year, eighty-seven per cent, and at the present time all but a fraction of one per cent are receiving profits.

In October, 1913, the men were first really classified according to their skill. Previously there had been sixty different wage rates. November, 1912, saw a labor turnover of forty-two per cent for the month. The month following the change it was but eight. The men had been freed from the favoritism and partiality of the foremen. At the time that the sharing system was introduced, the lowest wage in the shop was thirty-four cents an hour, and the scale ran up to eighty cents an hour. The division of the "profits" being primarily to raise the standards of living of each to a good level, twenty-eight and one-half cents an hour was given to the lowest skilled, and seven and one-half to the highest skilled. It was presumed that the totally unskilled needed more elevation than the man who was getting a higher rate. On January 1, 1919, the minimum hourly rate was raised to fifty cents. Sharing was changed to a fixed and equal amount to every man regardless of skill, and determined by dividing the total hourly division of profits on the old basis by the number receiving them. Thus the average share was given each man. The schedule adopted in May, 1919, and given in the table below, was a minimum hourly rate of sixty cents, a profit payment of fifteen cents an hour, and a classification of but nine different grades of skill.

In order to find whether a man was entitled to receive profits or not, a probationary period of six months in the employ of the company was at first required. At the end of that time, if there was promise of worth, or intention and desire to "get ahead," the newcomer began to get profits. This period was changed in July, 1919, to thirty days. It was found that accurate measurement of the character of the man could be made in that time, and the delay of six months was thought to discourage some of the probationers. For the administration of the scheme a Sociological Department was organized with two hundred "investigators" drawn directly from the working force. Subsequently the name of the department was changed to Educational, and the investigators became "Advisors" because of the hint of prying and delving into the intimate relations of the

Let's Go

to the

Wonder-Summer-land of Michigan

All the great Auto Highways lead to Michigan.

Reached by train and boat; crossed and recrossed by wonderful roadways; cool forests of nature pine; innumerable picturesque lakes; hospitable inns; countless popular resorts; delightful

panorama of yachts and shipping upon Lake Huron; ever in the midst of nature—constantly in touch with civilization.

There's no healthier spot in the world than this northern lake region. The pure, dry air is perfumed by the pines and balsam, and cooled by the crystal clear waters of its many lakes and streams.

Excellent roads and picturesque Indian trails wind for miles through the deep woods and emerge on rocky head-lands or drop down to skirt the hundreds of miles of sandy beaches. There is, also, hunting, fishing, sailing, canoeing, yachting and golfing.

Free Camping Sites

Arrangements have been made with the various communities for free camping sites to all who desire this enjoyment.

There is unlimited opportunity for "roughing it" or to find restful diversion—all the healthful joys of this wonder summer land await you.

A tour, a transient visit, or a summer's sojourn will make you live longer to enjoy its memory.

So we say—LET'S GO—decide now—take the family—enjoy yourselves. Make everybody happy. Health and summer comforts are due you.

Many Illustrated Booklets Free

home, and their number was reduced.

These advisors have been trained thru actual work and reduced to a permanent force thru examination for originality, personality, tact, clear understanding of their duties and the ideals of the plan. They interview the new employee after he has already been hired by the employment department. After being hired, this new-comer is questioned by the advisor as to his financial, domestic, and legal status, an estimate is made of his character, and he is told to report for work the following morning. The next day the advisor goes to his home, getting further information of household conditions, life of the children, habits of the bread winner, in fact all about the family as members of society. The employee and his wife are then shown how to improve their conditions and their mode of living, and the benefits to be derived are set forth to them. Photographs are shown them of clean, well ordered Ford homes. If, at the end of thirty days, they show evidence of desire to lay up for the future, sharing of the profits ensues. At first, investigations to check up followed on the average of once a month, but at the present time, unless special complaint from one source or another indicates that there is something wrong, only three in all are given. These are the examination at hiring, or within thirty days thereafter, the one five months later, and one eighteen months after hiring.

In case a man slips below the specifications, using destructively rather than constructively the money he receives, he is penalized thru refused profits. If he "comes back" at the end of thirty days he loses nothing. If it takes two months, he loses 25 per cent of the profits for the period, three months fifty per cent, and so on. If at the end of six months he shows no indication of reforming to methods of thrift and sobriety, his discharge is automatic. The money exacted in these penalties goes into a charity fund for the alleviation of cases of especial misfortune.

The activities of the advisors and the educational department are extensive. A chart of their investigations for the period from March 31st to June 30, 1919, gives the analysis of 14,988 cases. These come under 108 different subjects and were provoked from twenty-two different sources in public institutions, in the company, and among the friends and families of the workers. Thirty-one cases entailed the rendering of advice and various sorts of aid; twenty were cases of domestic difficulties, nineteen were violations of law and of company rules, while 7700 cases were new and rehired men and 1558 were reinvestigations. The many other cases ranged from legal advice all the way to financial relief. One employee came to the company saddled with a \$900 debt. The company was helping him with that when the first of four expensive and quickly successive surgical operations took him from work. He finally became practically paralyzed and was indebted

This booklet also contains "Psychology by Letter"—telling how to reach and influence people at a distance.

Mr. R. E. Sumner writes the author: "I have just collected by mail a distance of 200 miles a debt that has been standing for years."

to the concern over \$2,000. About the middle of last September, this was being wiped off the books, the man was being sent to expert medical attention for his serious condition, and efforts were being made to help the wife and mother to help herself, a suitable position being given her in the factory.

The Ford scheme of industrial government has nothing of unionism, or shop committees, or collective bargaining, or "industrial democracy." It is just old-fashioned industrial autocracy tempered by faith in human nature. It is plain that no scientific systematizer laid out that labor department. The labor department is not a department, it is a lot of independent activities that were started wherever something was not going just right, and so somebody was picked out of the factory to specialize on that point. There is, for example, a little department of about thirty men that does not know what to call itself, whether a grievance committee, or a supervisor of foremen, or a training school or a transfer department, or a branch of an educational department, or a trouble department. It just grew up as a specialty in dealing with troubles between foremen and employees. An employee cannot be discharged from the Ford works without great formality and final action by a committee representing the education department and the general management. During the year 1919 only 118 men were discharged. Hence, if a foreman wants to get rid of a man it is liable to involve the whole factory clear up to the top. Somebody must look into the matter and fix it up with the foreman, or find another foreman to take the man, or talk with the man. So this trouble-man becomes a labor adjuster, a personal-relation expert, and he has a staff and an office and clerks with files, and the files give a line on each one of the 2000 foremen, and the foreman who has trouble looms up, and the general management begins to inquire whether he is fit to be a foreman. Thus the grievance department evolves into an investigating bureau, an advisory board to the general superintendent on the qualifications of foremen, and advisory to the education department on whether the workman is living the clean and wholesome life.

Why should there be any industrial democracy or workmen's grievance committee, or labor organizations, when nobody can be fired anyhow, and when this advisory committee of thirty is always on the job investigating trouble long before it ripens, and when the management always has a line on the foremen who have too much trouble? It all goes back to faith in people and ends in a trouble department to make repairs where something goes wrong in the exercise of faith.

"In what direction does the village lie," my friend?"

"Well, sir, it's liable to lie in any old direction that comes handy, but at this time of the year it's mostly about fish."—*Blighly.*

Don't pass by And let that corn keep hurting

Don't pass a drugstore that sells Blue-jay if you ever suffer corns.

Blue-jay stops the corn pain. A simple touch applies it. And soon the toughest corn will loosen and come out.

The Blue-jay way is gentle, easy, sure. It comes in plaster or in liquid form.

It is scientific—a product of this world-famed laboratory.

Millions now employ it. Most of the corns that develop are being ended by it.

Compare it with old methods, harsh and uncertain. Learn what folly it is to merely pare and pad corns.

Use Blue-jay on one corn tonight. Watch that corn go. Then remember that every corn can thus be ended the moment it appears. A week-old corn should be unknown in these days.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION HISTORY, CIVICS AND ECONOMICS

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. A Message From the United States Government. The Only Cure for the H. C. of L. By Dr. Royal Meeker.

1. Give a clear explanation of the following sentence: "A whole ox could have been bought in the middle ages for what is asked for a beefsteak today, yet the cost of living probably is no higher now than it was then."
2. Prove the truth, or the falsity, of the following statement: "If every profiteer could be apprehended and shot, it would have no appreciable effect upon prices."
3. Explain to what causes Dr. Meeker attributes the present high cost of living.
4. Imagine that you are Dr. Meeker. Write a short letter suggesting remedies for present conditions.
5. Explain every part of the following figurative sentence: "Defeated in the first skirmishes of the threatened industrial war, labor is reforming its lines for a new impact with organized capital."
6. Name the figures of speech that occur in the sentence just quoted. Tell why those figures are employed.
7. What principle of rhetoric is employed in the quotation from Dr. Meeker, printed so emphatically in the middle of the first page? Explain how you can apply the principle to your own writing.
8. What figure of speech occurs in the following sentence: "There is no royal road to lower prices"? Express the thought without using any figure of speech. What advantage is gained by using figurative language?

II. Henry Ford, Miracle Maker. By Professor John R. Commons.

1. Give a clear explanation of the distinction between the terms, "An industrial miracle" and "A psychological miracle," as applied to the work of the Ford Motor Company.
2. Write an original short story relating the experience of a man with a prison record, who found employment with the Ford Motor Company. If you are familiar with O. Henry's method of writing short stories try to imitate that method. Make your story interesting.
3. The writer says of Mr. Ford: "He is positively too democratic for this world." Imagine that one of Mr. Ford's workmen reads that sentence, and wishes to defend Mr. Ford. Write what the workman says, giving his remarks in the form of an interview that you imagine you hold with him.
4. If you were an employer which of Mr. Ford's principles would you think it wise to put into effect? Explain the value of every principle.
5. Write a descriptive account of a visit to the Ford plant, emphasizing Mr. Ford's treatment of workmen as contrasted with other employers' treatment of workmen. Try to make your writing approach the vividness of Dickens' writing.
6. Explain clearly what is meant by basing payment upon "The value of the individual in citizenship." Tell how the principle involved could be applied to the marking of students in school.
7. Imagine that you gain employment with the Ford Motor Company. Write a somewhat humorous account of your experiences, but make your account lead to the development of a serious thought.
8. "In case a man uses money destructively rather than constructively, he is penalized thru refused profits." Imagine that you dream you were able to apply the principle to all the people in your neighborhood. Give a humorous account of your dream-experiences.

III. If I Were Senator. By Anne Martin.

1. "Women have always been quicker than men to see that the interests of life transcend and should control the interests of property." Write an original anecdote that will illustrate the thought of the sentence.
2. Draw from the article a series of propositions suitable for debate.

IV. The One Big Union Idea. By Franklin H. Giddings.

1. Write, in the form of a brief, the arguments Professor Giddings makes against "The one big union idea."

V. The Rise of Azerbaijan.

1. Explain the relation of the article to Matthew Arnold's "Sohrab and Rustum."

VI. The School Teachers' Walkout.

1. Read the article aloud to your father and mother.

I. Utility, Value and Price—"The Only Cure for the H. C. of L.," "Denim and Gingham."

1. What, according to the author of your text book in Economics, is the relation between utility, value and price? Do his conclusions offer any solution of our present economic problem?
2. "It is not merely because prices are high that the cost of living is high," says Dr. Meeker. Explain this statement.
3. "To secure a return to normal conditions it will be necessary to deflate the currency and inflate the quantities of goods produced." Do you see any evidences of a beginning of either of these two movements?
4. Do you believe that the "denim and gingham" movement offers a real solution of the problem of the H. C. of L.?
5. Quote that sentence in Dr. Slosson's editorial which proves that his solution of the problem is exactly the same as Dr. Meeker's.

II. The Labor Problem—"The 'Indignation Special,'" "The Outlaw Strike Collapses," "The Blockade of New York," "The One Big Union Idea," "What Labor Wants."

1. What justification, if any, can you find for the "outlaw" railroad strike? Why did the strike collapse?
2. What justification, if any, can you find for the commuters who assisted the railroad companies to break the "outlaw" strike?
3. What is Professor Giddings' attitude toward the radical elements in the labor group? Do you sympathize with his attitude?
4. Which of the demands of organized labor as set forth in the last article do you approve? Which of the demands do you reject?

III. If I Were a Senator.

1. Which of the eight planks of Miss Martin's platform do you endorse? Which ones do you reject?
2. "The obvious incompetence of Congress . . . is of course largely due to our system of representation." What remedies for the defects indicated does Miss Martin suggest?
3. What changes in our executive and judicial departments are advocated? Do these changes meet with your approval?
4. To what political party does Miss Martin probably belong?

IV. Henry Ford, Miracle Maker.

1. Describe briefly the ordinary method of profit sharing and indicate the modification of the method in use in the Ford plant.
2. What is meant by "labor turnover"? How is the problem handled in the Ford plant?
3. "Some people say that the men are 'driven' at Ford's." How much truth is there in this statement?
4. "The Ford scheme . . . has nothing of unionism, or shop committees," etc. What, then, is the secret of its success?

V. The Turks and the Allies—"The San Remo Conference," "The Turk Triumphant," "Armenians in Peril," "The Rise of Azerbaijan."

1. What, in general, will be the probable terms of the Turkish treaty to be drawn up at San Remo?
2. If the United States had been represented at the conference what modifications might have been made?
3. What facts justify the title of the second article?
4. Summarize present day conditions in the regions to the south and east of the Black Sea.

VI. Revolution in Central America—"The Downfall of a Despot."

1. Why is it possible for the conditions described to exist in Central America, whereas they cannot exist in the United States?
2. In view of conditions in Mexico since the overthrow of Porfirio Diaz, do you think that Guatemala will be benefited by the overthrow of Cabrera?

VII. Curbing the Radicals—"Weird Doings at Albany."

1. What justification, if any, can you find for the extreme legislation passed by the New York State legislature?
2. Give some examples of extreme legislation which has been enacted in this country in the past. In general, what was the result of such legislation?

The Laughter and Tears of America's Greatest Army

The One Priceless Souvenir of the Great War That You Will Enjoy and Treasure Above All Others—A Complete File of 71 Overseas Issues of the Famous Stars and Stripes Bound Into One De-Luxe Volume.

HERE is the most remarkable human document that has come out of the great world war. Here is a living, breathing record of the lives of two million men in war—written by the men themselves as they fought on the bleeding soil of France. It is our soldiers' own wonderful story of those days over there—a story that will live forever as the most unique historical document ever written.

Here is their own true story—the sort that grips the heart and stirs the emotions for it rings with the sincerity of men who suffered the Hell of war and came back smiling. From cover to cover this wonderful volume breathes of the romance, the pathos and humor of the struggles and adventures of America's greatest army.

Nothing can give you so vivid, realistic and gripping a picture of what our soldiers experienced in France as their own remarkable newspaper, the Stars and Stripes, written by the soldiers, for the soldiers, over there on the battlefields in the thick of the fight. It is an amazing story this famous newspaper tells—a day-by-day, intimate, heart-stirring story of war and of the irrepressible spirit of fun that made the American doughboy the wonder of the world.

Behind The Scenes With The American Doughboys

To read the Overseas issues of the Stars and Stripes is to live over, in startling reality, those days with our soldiers in France. It will bring you face to face with actual conditions as they knew them—their novel life in the French villages, their droll experiences with foreign customs, their marches over the long white dusty roads, their nerve-torturing baptism of fire, their glorious gallantry at Chateau Thierry, Saint Mihiel, and their magnificent drive through the Argonne.

The Stars and Stripes is the only publication of its kind in the History of the United States. It was originally intended only for distribution among the men of the A. E. F. in France but its fame grew and spread and many copies found their way back to the States. These are highly treasured and jealously held by their fortunate owners. Fabulous prices have been

paid for single issues. Articles from the columns of this remarkable newspaper were reprinted everywhere and finally there sprang up an insistent demand from parents of soldiers, Universities, Statesmen and patriots throughout the country for complete files of this unique, historical publication.

To satisfy this demand all the overseas issues have now been bound into one De Luxe Vol-

All the Overseas Issues of The Stars and Stripes in One Complete Bound Volume

ume—with sturdy khaki-colored covers—richly embossed—a beautiful lasting edition that you will treasure now and hand down to your children. The first issue of the Stars and Stripes was published February 8, 1918—the last June 13, 1919. There were 71 issues, each paper consisting of 8 pages, 18½ x 24½ inches in size and every number appears in this beautiful bound volume. Each issue of the original newspaper has been reproduced, line for line, exactly as it was printed in France.

Limited Edition—Reserve Your Copy Now

Think of having a complete file of this historic newspaper—the most unique souvenir of the war! You will find endless fascination in the many great features that an army eagerly read—Walgren's famous cartoons, Balbridge's drawings, the Poet's Column, the Letters of Henry's Pal to Henry, the Liars' Column, Captain Hansen's official accounts of the battles, skirmishes and marches, the histories of the Divisions and Divisional insignia.

This edition of the complete file of the overseas Stars and Stripes—this unique, intimate and human record of the great war—is limited. Hundreds of reservation orders have already been placed and more are pouring in each day. It is not at all unlikely that the entire edition will be quickly subscribed. Place your order to-day to avoid disappointment.

Send No Money

Clip and mail the coupon quick! We will reserve a copy of this limited edition for you and ship it to you by express as soon as it comes from the binders. When it reaches your express office you can examine it thoroughly. If you decide to keep it, pay your express agent, the Special Low Price of \$12. If you are not satisfied that you want to keep this great souvenir of the war, return it and you will not be out one penny. This may be your only opportunity to secure a complete file of this historic newspaper. Certainly it will never again be offered at this low price. Therefore we urge you to act quickly. Mailing the coupon puts you under no obligation. It merely signifies your desire to see this great volume—you send not a penny of money—just the coupon. Address:

WANTED

10,000 Members to Promote International Friendship Through the Churches

PURPOSE:

To organize the religious forces throughout the world so that the weight of all men and women of good will can be brought to bear upon the relations of governments and peoples to the end that the spirit of peace and good will may prevail and that there may be substituted arbitration for war; friendship for suspicion and hate; co-operation in place of ruinous competition, and a universal spirit of service and sacrifice rather than greed and gain in the transactions between nations.

SCOPE:

As its name signifies it is a world organization engaged in the enterprise of establishing national councils in every country. Its ultimate object is to mobilize good will for the effective working out of international relationships.

ORGANIZATION:

Fourteen great Nations have national councils; eight others are being organized. The delegates from twenty-six nations will be present at the August Conference in Geneva.

INTERNATIONAL ORGANIZER:

Supports as organizer Dr. George Nasmyth, well and favorably known for his work with the Cosmopolitan Clubs. His knowledge of world affairs and intimate acquaintance with many of the great leaders especially fit him for his delicate task.

THE ORIENT:

Through Dr. Sidney L. Gulick the Alliance is making a real contribution toward a better understanding of the Oriental in his relationship to America.

SPECIFIC OBJECTS FOR AMERICA:

To stimulate discussion with a view to intelligent judgment on problems of world justice, world friendship, world organization, and a League of Nations.

To foster just and friendly relations between our country and all other nations, especially China and Japan, also Mexico and the other nations in the Western Hemisphere, and to defeat the attempt now being made to stir up enmity and discord between the white and yellow races.

To foster right relations between the foreign born and native groups of America.

To co-ordinate the work of the religious and social service organizations of America for concerted action in matters of international righteousness and good will through the medium of Local Committees on Co-operation with the World Alliance.

WE WANT TEN THOUSAND MEMBERS IN AMERICA TO JOIN WITH THE MEN AND WOMEN WHO LOVE PEACE IN THE OTHER NATIONS OF THE WORLD.

Membership in the American Council will bring to you the magazine "World Friendship," and all the other publications of the organization, and also gives membership in the world organization. The cost is small, the cause is great.

Independent Opinions

We are glad to print, tho without commendation, the following letter from a valued reader who is apparently no friend to the eighteenth amendment:

Editor, New York Independent:

May I not submit to your consideration an appropriate slate for an Administration which will occupy first place in the hearts and palates of thousands of our thirsty citizens who are now threatening to have the United States annexed by Cuba or some other republic with a damp political climate?

President—Albert J. Beveridge.

Vice-President—Maggie Tight.

Secretary of State—Congressman A. T. Fuller.

Secretary of the Treasury—Senator Brandegee.

Secretary of War—Louis Sherry.

Secretary of the Navy—Prof. H. Beers.

Attorney-General—Judge G. L. Bunn.

Postmaster-General—Harris Weinstock.

Secretary of the Interior—Dr. George E. Brewer.

Secretary of Agriculture—Henry R. Drinker.

Secretary of Commerce—Frank H. Ginn.

Secretary of Labor—Prof. H. C. G. Jagaman.

Very respectfully,

AL K. HALL.

We cannot support such a ticket as our correspondent offers us, but we are inspired to suggest a Prohibition slate which lays proper emphasis on the element which seldom cheers and never inebriates. How sad it would be if the Prohibitionists were again driven to nominate a Swallow, as in 1904, or a Fish, as in 1888, for lack of suitable candidates!

President—William Jennings Brine.

Vice-President—Henry T. Rainey.

Secretary of State—Governor T. E. Campbell.

Secretary of the Treasury—Henry D. Flood.

Secretary of War—Major General W. J. Snow.

Secretary of the Navy—H. B. Seaman.

Attorney-General—E. C. Brooks.

Postmaster-General—Col. Henry Water-
son.

Secretary of the Interior—Charles R.
Dryer.

Secretary of Agriculture—Henry J.
Waters.

Secretary of Commerce—Judge Samuel
Seabury.

Secretary of Labor—Carolyn Wells.

We may add that if such a dry tick-
et were elected by the American people
undoubtedly His Majesty George Wet-
tin, King of Great Britain and possibly
Ireland, would send as his ambassador
to the United States, Mr. John Drink-
water.

Remarkable Remarks

CHAUNCEY M. DEPEW—The Republicans
are going to win.

LADY ASTOR—The sea, one may say, be-
longs to England.

CLEMENCEAU—What am I going to do?
Why just live until I die.

PREMIER LLOYD GEORGE—There is so
much to be said on both sides.

"PUSSYFOOT" JOHNSON—Probably in
another ten years England will be dry.

J. B. CRANFILL—I resolved to be kinder
to everybody than anybody could be to me,
and do it first.

JUSTICE DARLING—A great many people
now regard marriage as a mere trifle and
bigamy as only a little more serious.

GOVERNOR COX—The campaign the Re-
publicans are waging is the most disgrace-
ful in the history of the country.

EX-SENATOR BEVERIDGE—In less than
two years there will be from 10,000,000 to
15,000,000 of people in this country out of
employment.

SENATOR LENROOT—Attorney-General
Palmer is setting a few mouse traps around
the country for profiteers when he ought
to be setting bear traps.

GENERAL WOOD—I stand for a small
army, much smaller than that recommend-
ed by the present Administration and
smaller than that recommended by the
Senate.

Just a Word

The white paper shortage, made worse by the recent "outlaw" railroad strike and the consequent freight embargo, has forced us to combine two issues of The Independent in one this week and publish the May 8 number along with the May 15. This double number is considerably larger than our usual issue and it contains the full record of news for two weeks instead of one.

Zing—to a thousand targets! The typewriter and the salesman are single shots, while the Mimeograph is a swift, business weapon, hitting bull's-eyes in thousands of places simultaneously. An important announcement, an urgent sales letter, maps, bulletins, diagrams, etc., sent at maximum speed and minimum cost. Five thousand reproductions an hour—and fine, clean-cut reproductions they are. A thin sheet of dark-blue paper has revolutionized duplicating methods. See the dermatype stencil in operation. You do not know the Mimeograph if you have not seen the new Mimeograph. Spread your story. Get it directly to the people you want to reach. The Mimeograph is a swift deliverer of timely messages for unnumbered thousands of forereaching institutions throughout the civilized world. Why not find out what it can do for you—today? Get booklet "E-5" from A. B. Dick Company, Chicago—and New York.

May 8 and 15, 1920

Let the Chamber of Commerce Do It!

By Chester T. Crowell

THIS is an article about the Chamber of Commerce of today. But I cannot tell you the story unless you know something about the Chamber of Commerce of twelve years ago. So we will have to begin by moving back the hands of the clock for a decade or more.

Perhaps the Chamber of Commerce was then known as the Business Men's League. The name now used was not in such general use then. We will meet the obliging secretary. He is a pompous old gentleman, a retired business man. That is the polite way to put it because the truth of the matter is that he failed. He was a charming gentleman of high character but not a success in business, so the business men fixed up a

soft berth for him as secretary. He is not exactly certain about his duties, but he has had a booklet prepared showing the palatial homes, office buildings, public buildings, and principal streets of the city. He is also in touch with some promoters who wish a bonus for the establishment of a new industry. He is taking a keen interest in this matter because two other Chambers of Commerce are in touch with the same promoters. The secretary of one is a former minister and quite a prolific letter writer. The other is a former newspaper reporter. The latter is considered a tremendous success as secretary because there is something in the newspapers every day about his activities.

But we began with the [Continued on page 222]

Thanks to the Chamber of Commerce, before the last war orders were filled, foreign orders—notice the American goods in this store in Bogota—poured in

Nowadays, the Chamber of Commerce regards within its province co-operative trucking, honest advertising, Americanization and anti-profit-eering work, and the betterment of electric light plants, laundries, ice plants and hospitals

Keystone View

If it were not for the Chamber of Commerce, rural schools such as this one at Old Point Pleasant, Iowa, might still house the rising generation of Americans

When the first Liberty Loan quotas were announced—they are here shown being posted in front of the Guaranty Trust Company in New York City—there was scarcely a community in this country that did not gasp and then express fear that there was not that much money "in the whole town." . . . The mention of a million dollars no longer shocks even towns of 20,000 souls. The committee who apportioned individual quotas of Liberty Bonds are still members of the Chamber of Commerce and they have become expert money raisers

"The loneliest place in America"—the White House

The White House Spook

By Gerald Stanley Lee

From his eyrie on Mount Tom, Gerald Stanley Lee can see the whole United States. "Crowds," "Inspired Millionaires," "The Voice of the Machines," "The Lonely Nation" and many other books testify to the breadth of his vision and to the depth of his philosophy. The following article introduces one of the main themes in Mr. Lee's new book in which he presents—"leaving the name blank to be filled in by the people"—the kind of President the people want, giving his vision and his program for the next four years in the White House, and outlining practical ways in which during the Presidential campaign and afterwards the American people can back him up

TEXT

I HOPE it won't make people feel it's a sermon, but I might as well out with it at the start and say that the quickest way to introduce what I have in mind is with a text which is taken from the third verse of the twenty-fourth chapter of *The Ghost in the White House*, a book which I and a hundred million other people have been at work on—a handbook or manual for the study of presidential candidates and delegates to the coming political convention—as follows:

The White House is haunted by a vague helpless abstraction, a kind of ghost of the nation, called the People.

THE PRESIDENT AND THE GHOST

THERE are a number of things about going into the White House the next four years and being the Head Employee of a hundred million people, that are going to make it, unless people do something about it, the loneliest job on earth.

The new President on entering the mansion and taking up his position as the Head Employee of the hundred million people is going to find he is expected to put up, and put up every day, with marked and embarrassing idiosyncrasies or personal traits in his Employer, that no man would ever put up with, from any other employer in the world:

- Absentmindedness;
- Non-committalness;
- Halfness, or double personality;
- Bodilessness;
- Big, impressive-looking Fool Moments;
- Cumulus clouds of Slow, Sure Conceit with Sudden Flops of Humility;
- General Irresponsibleness.

But while this little trait in the President's Employer, of general irresponsibleness, may be the hardest to bear, there are more dangerous ones for the country.

The bodilessness of his Employer is what is most dangerous. The man to whom the hundred million people are giving for the next four years the job of being their Head Employee is not only never going to see his Employer, but he has an Employer so large, so various, so amorphous, so mixed together and so scattered apart he could never hope in a thousand years to get in touch with It.

Serving It is necessarily one long monstrous strain of guess-work, a trying daily, nightly, for four years to get into grip with a mist, with a fog of human nature, an Abstraction, a ghost of a nation called the People. The only thing the Ghost ever says to him directly is (once in four years) that he wants him or that he does not want him and even then he confides to him that he only half wants him. He says this deliberately and out loud before everybody, so that everybody knows and the people of other nations, "Here is the man I would a little rather have than not." That is all. Then he coops him up in the White House, drops away absently, softly, into ten thousand cities, forgets him, and sets him to work.

Any man can see for himself, that having a crowd for an Employer like this, a crowd of a hundred million people you cannot go to and that cannot come to you, puts one in the loneliest job on earth.

It may be true that it has not always looked like the loneliest job on earth and, of course, when Theodore Roosevelt had it, the job of being President considerably chirked up, but in the new never-can-tell world America is trying to be a great nation in now, the

next four years of our next President, between not making mistakes with a hundred unhappy, senile, tubercular railroads and two hundred thousand sick and unhappy factories at home, and not making mistakes with forty desperate nations abroad, the man we put in the White House next is going to have what will be the loneliest job this old earth has had on it for four thousand years—except the one that began in Nazareth—the one the new President is going to have a chance to help and to move along in a way which little, old, queer, bent, eager St. Paul with his prayers in Rome and his sermons in Athens, never dreamed of.

The reason that the Public in dealing in its daily business with powerful persons of any kind—whether good or bad, whether a President or anybody, is taken advantage of and does not get what it wants, is that the Public is a Ghost. Theoretically all powerful persons, predatory Trusts, profiteering labor unions and the wrong kind of politicians always speak respectfully to the Public, but when they want something that belongs to the Public they find the Public is an Abstraction and help themselves. They act when with the Public, as if the Public was not there.

The only way this is ever going to be stopped is for us to make a spontaneous voluntary popular start in this country toward having a body for people in general, toward giving a hundred million people in dealing with their politicians, their trusts and labor unions, less bodilessness. We propose to give a hundred million people a face, a voice, a presence, a backbone, a grip.

Then all the people we ask things of who think we can be whoofed away, will pay attention to us.

The object of this article is to represent—to expose to everybody as unfair and untrue and destroy forever the title written across the front of it, "The White House Spook."

There must be things—broad simple things about Capital and Labor people can do and do every day in this country, that will make a President stop timidly guessing what they want.

REAL FOLKS AND THE GHOST

WHEN a man speaks of The City National Bank he speaks of it as if he meant something and knew what he meant.

When the same man in the same breath speaks of The People, watch him bewhiffle it.

When a good hearty sensible fellow human being we all know speaks of Business he speaks of it in a substantial tone, with some burr in it, and when in the same half minute he speaks of the Country, he drops in some mysterious way into a holy tone of unreality, into a kind of whine of The Invisible.

Business talks bass. Patriotism is an Aeolian harp.

During the war this was changed. We found ourselves every day treating America, treating The Country, treating The People as a bodily fact.

I would like to see what can be done now in the next President's next four years, to give America this magnificent sense of a body in peace.

Why is it that we have in America a body for Germans, and then wilt down in a minute after Chateau Thierry into bodilessness for ourselves, into treating

and expecting everybody else to treat the People, the will, the vision, the glory, the destiny of the People as a Ghost,—unholy, cowardly, voiceless, helpless—just a light in its eyes—just a vast national shimmer at a world, without hands and without feet.

Millions of people every day in this country are very particular to salute the flag, sing the Star Spangled Banner and ship Bolsheviks, but let them speak to you in conversation of an industrial body like The Steel Trust or The Pennsylvania Railroad and they act as if something were there. Bring up the Body-Politic and it's a whiff.

It ought to be considered treason to think or to speak of The Country in this vague breathy way.

The next immediate, imperative need of America is to see what can be done and done in the next President's next four years to make the Body-Politic people take the body-politic and what happens to the body-politic as if it were as substantial as a coal strike—as what happened at Ypres, Cambrai and Chateau Thierry.

Otherwise we are a nation of whiners and yearners and are not what we pretend to be at all, and the only logical thing the Germans and the rest of the world can do is to protect themselves from democracy.

I believe that the best things the Old World has said about us and hoped for us, that we are a disinterested nation, and a nation of idealists, are true and real with regard to American character.

But they are not actual. We are the world's colossal tragic Adolescent. Forty nations are depending on us and are waiting for us, waiting for America to grow up.

This nation has just as much spirituality, just as much patriotism and religion as it expresses bodily in its business, in the conduct of its daily producing, buying and selling, and no more. Any big beautiful evaporated body-politic we have or try to think we can have aside from this body—this actual working thru of our patriotism, our democracy and our patriotism into our business, is weak, unholy, unclean and threatens in its one desperate and critical moment the fate of a world.

All really religious men and all real patriots know this.

In a democracy like ours a religion which is not occupied all day every day in this year of our Lord 1920 in making democracy work, a religion that loafs into a pillar of cloud by day, and of fire by night, a religion that cannot be used to run steel mills so that men won't go to hell in them and to run coal mines so that men won't be in hell already, is

not a religion at all. And a nation that sheds tears over three hundred thousand disabled and crippled soldiers, who gave up their jobs and sailed six thousand miles to die for them, and that has finally managed to get new jobs for just two hundred and seventeen of the three hundred thousand and taken nineteen months to do it, illustrates what it means—in just one simple item—for a hundred million people to try to be good without a body.

I am trying to put forward ways of forming body-tissues for a people so that we the people in America, at last, in the days that lie [Continued on page 228

"The public," says Gerald Stanley Lee, "should be organized into three great clans, the 'Look It Up,' the 'Try It Out,' and the 'Put It Thru'"

Spring Days in the Valley

By Corra Harris

One May day in 1899 the editor received a letter from the wife of a circuit rider of the Southern Methodist Church criticizing *The Independent* for its position on the negro question. The letter was so vividly personal and pointed that the editor—the late William Hayes Ward—promptly printed it and asked the writer for more. This was the first appearance in print of Mrs. Corra Harris and since then *The Independent* has never been long without something from her pen, at least never any longer than we could help. Her talent for portraiture soon carried her away to the fiction periodicals and her novels, “*The Circuit Rider’s Wife*,” “*Eve’s Second Husband*,” “*The Recording Angel*,” and others have had a wide sale. But she has always retained her early affection for *The Independent* and recently contributed to our columns a fascinating series of country life studies on her home in “*The Valley*” at Rydal, Georgia. Here is another of these sketches full of the spring weather and spring spirit.

SPRING came a month late this year. We were getting the tail end of your cold winds when we should have been enjoying our own dogwood blossoms and a closer walk with God in the furrows of our field.

If we could keep northern weather, and certain foreign doctrines, out of the South, we should be a happier and better people. We should get on cheerfully then with our labor, our religion and our poverty. As it is we have had some seismic disturbances in our moral natures, what with strikers trying to strike, and candidates trying to run for something they ought not to have, over roads nobody can even walk where they should be going.

And every time the ground was dry enough to work one of your snow storms dissolved into a flood here that washed away the bridges and soaked the land. Our men took up with Job and the sadder prophets, our women, who have the hen scratching instincts toward their garden soil, have been beside themselves with suppressed energy, and our pastors who have been trying to save time by holding their revivals during the bad weather could not revive us. And we have been in a bad way generally.

But now everything is all right. Spring arrived last Thursday morning. The birds, who are the only professional poets in this Valley, announced it at daybreak. We had a perfect sunburst of song. Wood ducks stopped over on their way somewhere and quacked it from the willows along the creek. Little green leaves were showing very young and tender on the trees, and all the seeds our Congressmen had sent us were up, so that our gardens look like catechisms written in a green script. And the old man who has been going around among us saying that the world is coming to an end and proving it by the scriptures is a prophet without honor.

We had a long winter, and a hard one, as you had in the North and East. However scientists may account for it, I have observed this, that the Lord does temper the wind to the shorn lamb. And we are all shorn lambs down here. This is our impecunious grace and salvation. We depend upon the good will of the weather while you depend upon the markets. The great majority of us get our bread directly from the land, while you get it with the money in your pockets. I reckon it is a fair exchange. You get our profits, but it is everlastingly fixed in the order of things that you cannot buy or sell or keep our weather. It belongs exclusively to us. It not only believes but it still practices secession.

Sometimes I have wondered what would happen if Nature should suddenly forgive you and let down a

Aspiration

By Edwina Pope Larimer

*Perhaps, if I live valiantly
And make my way serene,
Perhaps, if I live tenderly
And keep my spirit clean,*

*God will see all the urgency
I cannot satisfy,
And let me make one little thing
Of beauty ere I die.*

perfect Georgia spring day in New York, with the March peach blossoms in her hair and ten thousand wood violet blooms on her breast and the fragrance of trailing arbutus shaking from the folds of her winds like paradise perfume.

I doubt if such a day would last long up there. Your climate would not know how to treat it and your people would not know how to receive it. Still, it might do some good. I saw more people gathered on that open place at Fourteenth street one day early this spring

than we have in this whole militia district. They were seething there like a swarm of black bees. An icy wind was blowing a fine sleet into their scowling faces. They were tramping round and round in the snow, their shoulders hunched up in this bitter cold and they were all quarreling about something. They were strikers of some kind who thought they had a grievance. But if the sun had suddenly shone out warm and kind, if the snow had melted and grass had sprung beneath their restless feet, if flowers had bloomed before their faces, if the temperature of their bodies had gone up, would not the temperature of their minds have fallen? One thing is certain, they could not have gone on striking and fussing on their feet. They would have been obliged to relax and sleep it off.

Down here we are born to good weather, and we know what to do with a spring day. First we cock our eye at it. We wet a finger and stick it up thru the windy softness of it to make sure of the nature of the wind. If it blows from your direction we do not trust that day. But if it comes from the south then my bees know there is honey in it.

We spring into a state of terrific activity. We plough this day into the land as if it were the very gift of God. We let the light and warmth of it unite with the soil. We sow it with seed and cover it with the earth, and we come home from the fields in the evening with the sky of it sticking to our shoes. And we sleep knowing that the prayer of our heart has been answered.

This is what all the spring days mean to us in the Valley. We believe in every hour of them, not just eight hours out of each one. Nature, my masters, belongs to no labor union. When you work and live under her conditions, you work and live twelve hours in the sun. If the men and women like these in this Valley who produce the raw materials from which you get your food and clothes had no more sense and no more conscience about what to do with spring days and summer days and even winter days than some of your wage profiteers, this nation would soon starve to death with its pockets full of money.

The Valley, Georgia

Spare That Tree!

A Message from the United States Government to the American People

By W. B. Greeley

Chief Forester of the United States

THE citizen of Pittsburg who wishes to put a floor in his house these days has the choice of Douglas fir at about \$150 per thousand feet, yellow pine at about \$200, or oak or maple at considerably higher prices—provided, of course, that he wants a wooden floor. Douglas fir is brought all the way from the other side of the continent. At Portland, Oregon, in the region of its production, its retail price is \$85. A substantial part of the difference between this figure and what it costs the would-be builder in Pittsburg is for freight.

And yet it was only a comparatively few years ago that Pennsylvania was one of the principal lumber producing States of the Union. Vast areas of her rough mountainous sections were covered with splendid white pine, hemlock, and hardwood forests. Today these forests are almost gone. They have been cut and burned with little thought of anything except how to turn timber into cash. And now, when lumber is being brought all the way from the Pacific coast to supply Pennsylvania's needs, the hills on which her splendid forests once stood are producing little timber of utility to the sawmill or paper factory.

The same thing can be said of many of our eastern and northern states and of many parts of the South. Few other states, indeed, have made equal progress with Pennsylvania in remedial measures. Pennsylvania woke up a number of years ago to what was happening and set out to repair the damage that had been done. State forests with about 1,040,000 acres have been established and a state forest service created, which is making progress in reclaiming part of the fire-ravaged and cut-over lands of the state. Yet the great bulk of these lands are in private ownership and little enough is being done to restock them with the valuable timber which they are capable of producing. To the loss of timber growth is added the loss from recurrent

Lumber is now being brought to the East from the Pacific Coast. Unless remedial measures are taken quickly, these Washington firs, as were the giant redwoods, will be annihilated

floods which pour down from the denuded hills into the rivers, halting industry, destroying property, and inflicting losses that mount to a huge total.

In each of the old timber regions the story is pretty much the same. Abundant forests, a period of rapid cutting, uncontrolled fires, gradual diminution of timber supplies, and finally exhaustion and high prices for imported lumber. Located first in New England, the center of lumber production moved west to the Alleghanies, then to the Lake States, then to the great forests of pine in the South; and now that the end of the southern pinery is in sight, the movement to the forests of the Pacific coast is under full headway.

And after that, what? For the forests of the Pacific coast form our last supply of virgin timber; and without vigorous measures for their protection they will go largely just as those in the rest of the country have gone before them. Moreover, they are so far from most of the principal consuming regions that the expense of transporting their products runs the final cost up to a highly burdensome point. If we cannot have lumber and paper at moderate prices we can neither continue to be a nation of home builders and home owners nor expect our industrial development to keep its past pace.

What, then, is the answer? Forest devastation, whether by fire or indiscriminate cutting, must be stopped. That, it may be said, is the first and great commandment. And the second is like unto it. A new forest growth must be established on lands already devastated and now idle. Upon our success in carrying out these two commandments will depend whether or not we shall be able to escape the severe handicap of a shortage of wood.

The protection of our remaining forests against fire and indiscriminate cutting is largely a matter of legislation, money, and education. On the national forests, which comprize 155 million acres of [Continued on page 231

Master Workshops of America

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprizes That Have Given the United States the Name of the Foremost Industrial Nation of the World

The Largest Hotel in the World

WHAT is your idea of a good hotel? How do you select the one you are going to patronize? When you visit New York or any other large city, you have a choice of several hundred hostleries with open doors; by what standards of excellence do you prefer one to all the rest, and make your advance reservations accordingly?

A woman's idea of a superior hotel may be condensed in a few words: *The comforts of home without the cares.* A man's idea would be expressed somewhat differently: *The freedom of a club, with a businesslike organization and operation.*

The woman is right in expecting the arrangement, the equipment, the refinement, ease, atmosphere and service of a modern hotel to rival the appointments of her own home. And the man is right in expecting the organization, policy, administration of the house to equal the system he applies to his own business. The majority of hotels are a double disappointment—they are neither homelike nor businesslike. A gilt palace run by guesswork is no place even for a millionaire.

The twin test for a superior hotel is that the heart of a home animates it, but the head of a business operates it. The man who owns or directs it must have the right sort and extent of human feeling; then he must adapt the new science of industrial management to every department and phase of the enterprise.

A brief introduction to the man who founded the "homelike and businesslike hotel" may show how he raised the profession of hotel keeper to the accuracy of a science and the dignity of an art, and how he came to manage the world's largest inn.

A good reputation is the best introduction to a great opportunity. The Pennsylvania Railroad Company, building the world's largest single terminal station, wanted the best available man to serve as proprietor and manager of the hotel to bear the Pennsylvania name. The man who had won the finest reputation in the hotel world as a pioneer of new ideas and methods in other cities was E. M. Statler; he had for years been looking to New York with an ambition to erect there the largest and finest hotel in the Statler chain; upon learning that he would consider the project favorably, the Pennsylvania Company broached the matter to him.

Besides the Hotel Pennsylvania in New York City, which has accommodated 3282 guests in a single night, Mr. Statler operates Statler hotels in Buffalo, Cleveland, Detroit and St. Louis

And some reasons
for E. M. Statler's
spectacular
success

By Edward Earle Purinton

A first class man wants outlook more than income. So the mere financial offer did not appeal to Mr. Statler. He imposed a condition: "Make Hotel Pennsylvania the largest in the world, and I will consider the project." A bold stipulation—it would mean doubling the original scope and outlay for the building and operating plans.

However, it is easier to find money than the man to spend it right; and the Statler type of man is so rare that a shrewd corporation would meet almost any condition to obtain the exclusive right to his services in New York. So the world's most spacious and convenient guest house was built just opposite the Pennsylvania station in New York City.

It took Ellsworth Milton Statler about forty-five years to get ready for his life work. At twelve, he was a bellboy in a West Virginia hotel, earning six dollars a month and board. But he was hardly settled in the job when he formed two resolutions—(1) he would give each guest a little more and better service than usually given, or expected by the guests; and (2) he would graduate from a bellboy into a hotel clerk at the earliest possible moment.

His first ambition brought many tips from delighted guests, and the boy saved \$150 the first year, handing the money over to his mother. The second ambition put him in a night clerk's position by the time he was seventeen. That didn't satisfy him—he resolved to be a day clerk, and was, two years later. Then he began to dream of building and owning a great, new kind of hotel, where everything that a guest needed or wanted should be instantly ready, at a fair price, with unfailing courtesy, and everybody pleased. Twenty-five years later his dream came to pass.

Now he operates, in addition to Hotel Pennsylvania, a Statler Hotel in Buffalo, in Cleveland, in Detroit, in St. Louis; and he looks forward, with a man's experience but a boy's enthusiasm, to the time when a Statler Hotel shall offer its exceptional service to the travelers in every large city of America.

The ups and downs of the hotel business are proverbial. Mr. Statler's first big venture, the founding of a restaurant in a building containing a thousand offices, left him \$17,000 in debt before he opened up,

the rent alone being \$8,500 a year, and the furnishings and equipment costing \$26,000. He had saved a little money from a pie-stand he had kept in a 16 by 18 foot space, where he gained his first experience in serving coffee, sandwiches, and home-made pies that his sister baked; all the capital from this tiny lunchroom enterprise he sunk in the big restaurant plan, with a friend guaranteeing him so he could hold the lease in the Buffalo office building.

Then arrived the first crash. The big restaurant, just opened, was doing finely when a grouchy creditor sued for a small bill, other creditors got in a panic and wanted their cash instantly, the financial bottom fell out, and ruin loomed ahead. Young Statler never lost his nerve. He let the high-priced chef and steward go, took charge himself, acting as bookkeeper, manager, office boy, and a variety of other staff helpers.

The chance of success looked too slim—the creditors would have taken a few thousand dollars for their claims and withdrawn the suits. But no—Statler isn't that kind. He said he would pay every dollar he owed. In two years he did.

The second project was the Pan-American house at Buffalo. This met with actual financial loss, but Mr. Statler, when questioned about the loss, declared there was no loss, it was "a big net profit—in experience." You can't down a man who smiles when his money goes.

Shortly after, he took even a bigger chance. With \$200,000 he had made from the restaurant that looked like failure at the start, and \$300,000 more of borrowed money, he built the famous "Inside Inn" at the St. Louis World's Fair, a colossal hotel with over 2000 rooms. On the very day he opened the Inside Inn a large tank of boiling water near him sprung a leak and drenched him, parboiled him, and sent him to the hospital, where he lay four months in acute pain.

Lying there helpless, he went on with his work. Every day Mrs. Statler brought him detailed reports, and took his orders and ideas back to the Inn. By the time the Fair closed, he was able to move around in a wheel chair—and to carry home, in that same wheel chair, a profit of \$200,000 from a single summer's business! Talk about making fortune out of misfortune!

The first real Hotel Statler was at last built, after twenty-five years of hard work and harder waiting, and

Ellsworth Milton Statler, founder and head of the world's greatest system of colossal hotels

in Buffalo, where Statler in his youth had "failed." A cardinal principal with a real man is to go back always to the point where he failed, and in the end make good right there. Whoever thinks or acts ahead of the crowd may expect failure while the crowd is catching up; then a big success if he holds his base long enough. Buffalo prophesied horrible doom for Hotel Statler—the location was poor, the management impractical. Why, there was a bath for every room—whoever heard of such wild extravagance!

The Statler ideal inn paid over \$30,000 clear profit the first year. This was doubled the second year; and increased another 50 per cent the third

year. Whereupon the doubters and scoffers fell victims to a strange impediment of speech, that grew into paralysis when this genius of hospitality built an addition of 150 rooms to his 300 room hotel within four months after breaking ground.

Houses in Cleveland, Detroit and St. Louis followed quickly and more than repeated the Buffalo success. Why? Because E. M. Statler knows, probably better than any other man living, just what the traveling public wants, and then supplies the demand in ways that no innkeeper ever thought of before. He doesn't wait for criticisms, complaints or requests in the form of words—he is so adept in the study of facial expression that when a guest even *looks* displeased or unsatisfied, the fact is noted, and the reason found and removed.

Hotel Pennsylvania should be judged not by the magnitude, the splendor, that greets the eye, but by the inconspicuous detail of service, the small but essential device, that meets the guest at every turn. The abundance of little things for comfort and pleasure that guests find here, but nowhere else, accounts for the popularity of the Statler house. Most of these developments grew out of Mr. Statler's personal study of patrons.

A thing so small as a keyhole may become a symbol of great importance. The keyhole in every Statler guest room door is placed above the knob, so the guest won't have to fumble and grumble, trying to fit the key under the shadow of the knob. In the Pennsylvania, the locks turn the opposite way from that of the ordinary Yale lock, in the direction that a person would naturally expect, and all these locks had to be made to order.

A rate card in every room [Continued on page 237]

Hotel Pennsylvania has a guest library containing 3000 volumes, with "a book for every mood." The complete catalog awaits you in your room, and a book is sent up, on request, by phone, without charge. Or, if you wish, you can read in the library

In Memory of the Marne

A Message from the
French Government
to the American People
By the Hon. René Viviani

Prime Minister of France During the Battle of the Marne in 1914, Foreign Minister, Chief of the Extraordinary Mission of the French Republic to the United States in May, 1917, Member of the Chamber of Deputies

THE gratitude of France greets the generous soul of our American friends when we hear of the undertaking to which they have consecrated themselves in commemorating the battle of the Marne by a monument of eternal granite to perpetuate that unforgettable sacrifice. The meaning of their act is enlarged in beauty by the fact that it has the double quality of being dictated by the heart and by the mind.

Our American friends in offering this gift thought of the dead and of the glorification of their heroism; but the monument, which will stand as an eternal Sentinel of Right in the heart of the formerly invaded districts, has another meaning.

It has the lofty meaning of an example which shall inspire future generations.

It will not, indeed, inspire them, on the eve of a war, if we think, as our American friends do, that this war was the last, and that the shudders which now are shaking the world are altogether the spasms of the dying wrong, and the awakening of a new day.

But the monument of the Marne will inspire the generations to come in all great peaceful undertakings. The example of manhood and of courage, given by those soldiers who are no more and by those who still live, must be enduring.

How could we fail to accomplish our immediate task, the work of tomorrow, however difficult or frightful its circumstances may be, when we remember that thru the lightning of the great tempest, when all the world was trembling with fury, the men who gave their lives did not despair of the future!

This monument, then, will teach both gratitude and confidence.

It will also recall the deeds of France at that supreme hour when she was alone facing the savage monster, and remind man everywhere of how she saved the honor of the world, as well as the interests of civilization.

It will remind the world that because France played the part of the Soldier of Right, she lost the economic value of ten of her departments during those years.

It will, lastly, stand as a memorial to the fact that France cannot remain alone to defend human liberty, that all free nations must have solidarity in that task, and that if such solidarity were to be broken, the dead would have the right to curse the living.

Paris.

Brown Brothers

This statue of the Marne is not the one which the American people are to give to France. But in the portrayal of France above, designed by Jo Davidson, is another American tribute to the spirit of the men "who stopped them at the Marne"

Armenia and America

By Hamilton Holt

LAST week the Allied nations invited the United States to assume control of Armenia. Not being yet a member of the League of Nations, we were not asked to take a "mandate." But the offer amounts to the same thing.

Shall we accept the responsibility? It is one of the most important questions ever presented to the American people. Upon our answer may depend peace of the world.

What then is Armenia? Who are the Armenians? What call has this remote region and this long-suffering people upon America?

The region claimed as Armenia, comprises an oval expanse about the size of California or Montana in the Eastern portion of the Turkish Empire. It is divided into three sections—Cilicia on the South West, Russian Armenia or Trans-Caucasian Armenia on the North East, and Turkish Armenia, comprising six Turkish villayets, between. Cilicia has two Mediterranean ports, Alexandretta and Mersina, and a number of populous cities. It was turned over to France last November and France now claims it as her sphere of influence. Trans-Caucasian Armenia is the only portion of "Greater Armenia" now controlled by the Armenians. It is these Trans-Caucasian Armenians who have set up the "Armenian Republic" which has already been recognized by the Powers and, last week, by the United States. Turkish Armenia is the most devastated part of "Greater Armenia." It is here that the famine and suffering are the greatest.

Armenia is the oldest Christian state extant. King Tirdates of Armenia was the first monarch in the world to embrace Christianity and impose it upon his people. His conversion took place at the beginning of the fourth

century and antedates that of Constantine I of Rome by twelve years. For the past sixteen centuries this little band of Christians, ever persecuted by the barbarous and hostile hordes surrounding them, have held aloft the torch of Christianity. Tho successively overrun by Persians, Saracens, Tartars, Mamelukes and Turks, they have somehow managed to survive. Their heroic struggle makes one of the most tragic and glorious pages in the annals of history.

Naturally no people have appealed more to the heart of America than these martyred Christians. For more than one hundred years we have sent them our missionaries and our money continuously and without stint. We have established schools and colleges to educate them. We have befriended them on all occasions.

At the beginning of the Great War the combined Armenian population of Cilicia, Turkish Armenia and Russian Armenia was supposed to be about 3,200,000 souls. The Moslem population—mostly Turks and Kurds—which occupied the same territory was about 4,000,000. These figures have been disputed, but they are probably substantially correct. How many Christians have been killed since the war began is a matter of conjecture, but it is generally believed that the Turks have starved to death or butchered in cold blood fully 1,000,000 of them—not only men, but women and little children.

The surviving Christian population is in a pitiable condition. There are estimated to be 250,000 girls—many of them as refined and cultivated as any woman who reads this page—imprisoned in Turkish harems, their faces usually branded so as to make it impossible for them to escape. There are at least 60,000 orphans still held in captivity by the Moslems. Practically no infants have sur-

Armenia, which is only about the size of California or Montana, is divided into Cilicia on the southwest, Russian or trans-Caucasian Armenia on the northeast and Turkish Armenia, comprising six Turkish villayets, in the middle

vived the last four years. Hundreds of thousands of families have been separated. Industry and agriculture have almost completely stopped. There is so little food that in some regions the people dig worms and beetles out of the ground and eat them. Were it not for the splendid generosity of America acting thru that superb philanthropy, the Near East Relief, the Armenian people would have long since perished. Indeed if American aid were withdrawn they could hardly survive a week.

Altho the Near East Relief has not been able to do a tithe of what needs to be done, its record is a proud one. It has raised a sum of over \$40,000,000. It has equipped and staffed 54 relief stations, 196 orphanages, 44 hospitals, and 16 houses for women rescued from Moslem harems. It has sent 15 shiploads of supplies from America, including food, clothing, hospital equipment, farm implements and seeds. It has provided industrial equipment for nearly 100,000 workers and has distributed free, in coöperation with the American Relief Administration, 7,000 tons of flour each month. It has sent to the field a devoted corps of workers consisting of 86 physicians and surgeons, 76 nurses, 7 mechanics, 15 industrial experts, 14 bacteriologists, 16 agriculturists, 19 teachers, 20 administrators, 34 secretaries, 34 engineers, 50 supply and transport workers, 46 army officers, and 172 orphanage and general relief workers.

These are some of the things the Near East Relief has done for the suffering Armenians, Greeks and Syrians in the stricken regions. But the massacres are still going on. Every day the cable reports fresh atrocities. Our people are beginning to ask, "What good will it do to keep on sending relief if the Armenians are only to be exterminated?"

These questionings are legitimate. Relief, vital as it is, is not alone sufficient to save Armenia. Armenia must be freed from the tyranny of the Turk. Who can do it? Not the League of Nations—at least not yet. The League has no army or navy or treasury. What can the individual powers do? France is prostrate—bled white. Britain, facing civil war at home, and almost bankrupt, is staggering under the burden of her vast new territorial acquisitions. If France and Britain are unavailable, Italy and Japan are still less capable of helping.

OF the five great Allied Powers who won the war—the "preferred" nations in the League of Nations—the United States alone is equal to the task. We emerged from the war the richest and most powerful nation on earth. Our people have suffered less than any other. We are the only ones whose motives would not be misunderstood if we assumed the obligation. In America all men and classes are equal. In other nations—even in the best of them—the taint of class rule still prevails. Despite the many liberal forces unloosed by the Great War, Europe is still living in the shadow of the old medieval caste system where the weak have few rights the strong are bound to respect, and the golden rule has only a nominal standing in international ethics. No wonder that Armenia and other weak and struggling peoples look askance upon all the great nations save America. Ours is clearly the duty and the privilege.

If then the United States should heed the call of Armenia, what could we do, and what sacrifices would we be called upon to make?

In the first place we are invited to fix the boundaries for Armenia. This is a great tribute to our impartiality. France, moreover, would probably renounce all claims in Cilicia if we accept the mandate. We have assurances of this. The anti-Bolshevik Russians now in exile thruout Europe have stated that if sovietism is overthrown and they return to power they will not oppose the cession of Russian-Armenia to the Armenian Republic provided America is in control. Thus America by assuming responsibility over Armenia will be able to get both Cilicia and

Russian-Armenia for the new Armenian nation, without resistance from either France or non-Bolshevik Russia.

Having fixed the boundaries, there are three ways that America might work out the problem. 1st. We might take a single mandate for Turkey and Armenia without differentiating between them. This would leave the Turks undisturbed in eventual control of Armenia. It is of course utterly out of the question. 2nd. We might divide Turkey into three parts, (a) Constantinople, (b) Anatolia or Turkey proper, and (c) Armenia, and take a separate mandate over each. The advantage of this would be that the United States could keep its strong arm on Turkey while helping to put Armenia on her feet. 3rd. We might take Armenia alone, leaving the rest of Turkey to be disposed of otherwise. The Armenians would be satisfied with either the second or third proposal. Europe would probably prefer the second as it relieves them of the job of solving the Turkish problem. The American people could doubtless more easily be persuaded to adopt the third proposal as it would entail upon us less responsibilities.

But whichever course we decide upon we shall have to send American troops to the Near East. General Harbord, in his illuminating and sympathetic report, based on his observations on the field says the number required will be 50,000. If this be correct, it is obvious that they would not all have to be American troops. There are now said to be in the United States 10,000 Armenians who are ready to return at once to Armenia and serve in the Armenian Army. There are also in Russian Armenia from 30,000 to 40,000 well-trained Armenian troops and in Cilicia several thousand more who have fought under the French and English flags, most of whom would be glad to be drafted in the service of their country during the few years required for its pacification. On the other hand, Rev. Dr. James L. Barton, the President of the Near East Relief and perhaps the best informed American on things Armenian, thinks that no more than 1,000 American army officers would be needed to organize a native army or constabulary which ought to be ample to police the country. Once the Turk is convinced that America means business half the battle is won. Nevertheless it should not be forgotten that if the Turk sees the Armenians being armed he might think they were preparing solely for revenge and then the whole of Turkey would be aflame and the very rivers would run with blood.

It is apparent therefore that somewhere between 1,000 American officers and 50,000 American troops will be required in the first stages of the American occupation. But this is certain. No matter what the size of the initial army, it can be reduced each year until in a comparatively short time the Armenians will be able to preserve order without any outside aid.

But whatever the cost may be in troops and money, the Armenians declare that they will eventually be able to repay the full amount we advance. There are no more thrifty people on the face of the earth than the Armenians. Their recuperating power is wonderful. Even in Cilicia when the French deserted them and they were thrown completely on their own resources, they were able to manufacture arms, defend themselves and "carry on."

In short, if America undertakes to save Armenia we can go on our own terms. We shall be given a free hand to carry out our own policies in our own way. Whenever we consider our task is accomplished and Armenia can stand alone we shall be able to withdraw without any complications from other powers. But if we fail to act upon the dictation of duty at this time, there will be no possibility of organizing an Armenian state with enough territory, and outside support to maintain itself with any reasonable hope of stability and progress.

Indeed our refusal to come to the rescue will involve the crushing of the present Armenian Republic, the partition of

HUNGER

KNOWS NO
ARMISTICE

M. LEON
BRACKER
1912

A poster of the Near East Relief, which is keeping alive the desolate survivors of Turkish cruelty in Armenia

Armenia, the permanent oppression if not extinction of the Armenian race, and the annihilation of the only Christian commonwealth between Constantinople and Calcutta.

When I was in Paris a year ago last winter attending the Peace Conference the Armenian question was just looming up over the political horizon. I recall now two conversations I had on the subject—one with Mr. Oscar S. Straus, our former Minister to Turkey, and the other with Lieut.-General Robert Lee Bullard, the hero of Cantigny.

Said Mr. Straus: Turkey is the sore spot of the world. It has polluted every nation that has touched it. How can the United States hope to succeed where all Europe has failed? We are sure to make a mess of it and please nobody. America has everything to lose and nothing to gain by tackling the Turkish problem. We had better keep out.

Said General Bullard: This war has produced a large number of extraordinarily able American executives—both in military and civil life—big men who can do big things in a big way. Let us join the League of Nations and then volunteer for the hardest job the League has to offer. We have the men, the money, the ability and the will to succeed. Let the United States solve the Turkish problem.

Which will the American people follow, the eminent diplomat or the great General? If our people believe, as I do, that General Bullard has given the best advice, now is their opportunity to speak out for persecuted Armenia.

The President is with us heart and soul. There is indisputable evidence of this. Senator Lodge, too, says he is a good friend of Armenia. Perhaps the President and the Senate can now be prevailed upon to sink their differences and join forces in this great cause.

If so, Armenia will be saved, the United States will enter the League of Nations, the moral prestige of America in the eyes of mankind will be restored, and the peace of the world will be assured.

The Republican Primaries

By Talcott Williams

FOR the Republican party, the preferential Presidential primaries trumpet warning. For the candidates, they predict little, save as the California primary affects Mr. Hoover's future in the Republican convention.

Few expected, none predicted, the 51,377 votes cast for Hiram Johnson in New Jersey. The unrest, protest and progressive demand of the Republican party proves stronger than any believed possible in an Eastern state. Corporate power is strong in the "State of Camden and Amboy," as Wendell Phillips seventy years called New Jersey.

The vote Hiram Johnson polled in New Jersey is only 38,000 less than the total vote polled for the regular candidate of the Republican party in the Presidential election of 1912. Taken altogether, the total Republican vote polled for all the candidates presented runs over 100,000 and is 40 per cent of the total Republican vote polled at any

Presidential election in New Jersey. The population of New Jersey has grown 60 per cent in the last twenty years; the Republican vote only a quarter. Two-fifths of it came out to this primary.

The rotten old caucus did not bring out in New Jersey one in twenty of the party vote. This Presidential preference primary called out one voter in five and half of those who voted are for a radical platform. Wherever Hiram Johnson has gone he has outdone expectation. In Michigan he had 150,000 votes to Woods' 100,000. The entire Republican vote was cast in the primary. In Illinois 54,000 voters wrote his name, an unprecedented record for any candidate. He led the list in Nebraska. He has captured California.

The Republican party has in New Jersey, in all the states, a radical vote, demanding a progressive policy. This vote is strong enough to defeat the party if its managers refuse to advance. The organization men belittle Johnson's vote. Eight years ago they were certain that Roosevelt could poll no vote strong enough to defeat the Republican party; four years ago they went to Chicago to nominate a conservative candidate and had Hughes forced on them. They were wrong both times. They are busy now instructing the delegates, "uninstructed" of the people.

The progressive vote is now for Johnson, but it is not a Johnson vote. It stands for discontent with the "regular" Republican policy, disappointment over the barren record of the Republican majority in the Senate and House, anger at the soldier's "bonus" extravagance and the failure to provide for the disabled, over the foolish fruitless conduct of state affairs and the disgraceful outcome of a Republican majority at Albany. Where has the Republican party given reason for a vote for its present managers?

The "German" vote, the Sinn Fein, the "anti-war" factions, these Johnson had. His vote is noble and ignoble, national, extra-national, anti-national, but its strength is the deep tide of desire and demand, swelling over all the land, for a solution of the real problems of the hour.

Adequate housing; the reduction of corporate profits and power; a halt to rising profits by reducing taxation for extravagant appropriations by Congress; social reforms of great social evils, material, moral and physical; protection to woman and to youth; stability in wages; democracy in industry, a fairer distribution of the fruits of labor, better education open to wider number; free education above the high school.

If the Republican party refuses these at Chicago it will repeat the defeats of 1912 and 1916. If it takes Hiram Johnson's position on the League of Nations, it will lose on one side. If the party adopts Lodge's "reservations," it will lose on the other. Johnson himself is an impossible candidate. Any prospect of a Republican majority in the Eastern states would end with his nomination.

The leaders who are intriguing and colloquing to choose some "dark horse" will end as they did with Taft in 1912 and Hughes in 1916. They have no power over voters, only over a machine. They

Name Your Candidate

Not for many years have both great parties had a really open convention. In 1900, 1904, 1908 and 1916 the candidates of both the Republicans and the Democrats were known almost to a certainty several weeks before the conventions assembled. In 1912 there were contests, but they were contests between pledged delegates. You could not get a Roosevelt vote for Taft, or a Taft vote for Roosevelt, and no third choice was seriously considered. The situation in the Democratic party was similar save that a group of favorite son states held the balance of power between Governor Wilson and Speaker Clark.

But this year both parties are at sea and on the outlook for a pilot. No man will enter either convention with a sure majority of the delegates. It is not improbable that the majority of delegates will have no instructions at all. Instead of obstinately sticking to one candidate "rule or ruin" the delegates will be studying the field with a fair degree of open mindedness to discover the popular issue and the popular standard-bearer. Public opinion will tell not only in the votes of the direct primary states but up to the very moment of nomination.

But public opinion must go on record if it is to prevail, for the politicians are not always perfect clairvoyants. It is for this reason that we have urged our readers to send us their views as to who should be nominated and what issues should be emphasized in the party platforms. We shall publish in advance of the conventions as many of the replies as we have space to print. Now is your chance to instruct the uninstructed delegates. But—make it short, and if possible snappy.

have organization, acquaintance, a network of knowledge of the men who manage. They can win only with a strong candidate, versed in affairs, familiar with the foreign issues which environ us, giving proof of personal ability and capacity to act. Such men as Nicholas Murray Butler and Calvin Coolidge meet these qualifications, in whole or in part. Even men like these, will need a progressive platform to win.

The Republican party won sixty years ago by attacking the issue of the hour. It can only win now by doing this again or lose by the new radical vote as the Whigs lost by the anti-slavery vote. Today, with the possible exception of Johnson, every candidate is weaker than when he began. Johnson has proved he can divide the party; unite it he cannot.

The California primary apparently weakened Hoover's position; but outstanding over all is the crowning fact that for the first time in history, at the end of a great war, the heart of a great democracy turns not to the victor or to the soldier; not to men whose task is to destroy life; but to the one man who even in war has saved life as none ever has before.

Procrastination

BECAUSE the inevitable revolutions in the despotic countries of Europe were postponed the Great War was rendered inevitable. By postponing unity of command and other necessary but disagreeable measures the Allies came near losing the war. By putting off the revision of the secret treaties the victorious Allies found themselves unready to declare their peace terms at the end of the war. By failing to settle the Adriatic question a year ago the diplomats in Paris gave d'Annunzio his chance to intervene and make the question more insoluble than ever. Because they could not agree on a partition of Turkey in 1854, 1878, 1912 and 1919 the Powers find it harder than ever to agree in 1920. Because England refused Home Rule to Ireland a generation ago the Irish are demanding complete independence today. Because the Senate delayed the peace Treaty to tag the League of Nations Covenant with needless reservations the United States remains at war with Germany and in rather strained relations with the Allies.

De Quincey once warned the youth of his generation that murder led to theft, theft to drunkenness, drunkenness to Sabbath breaking and profanity, and these vices in the end led to habits of idleness and procrastination. Professor Clark of Columbia has suggested that in view of the mischief which procrastination has wrought in the world, De Quincey's moralizing should have been taken seriously.

No settlement is a right settlement unless it is made at the right time.

Semi-Detached Marriage

By Edwin E. Slosson

THE announcement by Fannie Hurst that she has been secretly married for five years excites popular interest for two reasons: it gratifies the desire that readers have to know the personal life of their favorite authors, living or dead, and, second, the peculiar arrangements of the marital life will arouse discussion. To quote the lady's own statement of the case:

First of all, I am anxious to emphasize that my marriage was neither the result of a fad or an ism, but simply the working out of a problem according to the highly specialized needs of two professional people.

We decided to live separately, maintaining our individual studio-apartments and meeting as per inclination and not duty. We decided that seven breakfasts a week opposite one another might prove irksome. Our average is two.

We decided that the antediluvian custom of a woman casting aside the name that had become as much a part of her personality as the color of her eyes had neither rhyme nor reason. I was

born Fannie Hurst and expect to die Fannie Hurst.

We decided that in the event of offspring the child should take the paternal name until reaching the age of discretion, when the final decision would lie with him.

My husband telephones me for a dinner appointment exactly the same as scores of other friends. I have the same regard for his plans.

With the exception of my parents, who have shared our secret from the very beginning and approved, there are exactly six other persons who have known of our marriage during the period of these five years.

Miss Hurst is mistaken in thinking that only six persons knew of her marriage. A lady friend of mine—if I may without impropriety refer to my wife in such cordial terms—said as soon as she had read the opening chapters of her current serial: "Fannie Hurst is married." Doubtless many other readers had made the same discovery.

Nor is her scheme of keeping marriage secret at first so novel and modern as she seems to think. It was the rule in ancient Sparta and other primitive communities but has been mostly abandoned in civilized communities.

As to how much a married couple should be together, that may best be left to be worked out according to their mutual inclinations. Breakfast is a trying time, especially if the wife neither gets it nor gets up to it. But there are wives—and I know one of them—who can stand being looked at for seven breakfasts a week without disillusionment or satiety.

Every young couple regards their marriage as a unique adventure in the world's history. But they fail to realize that marriage is not a ceremony, not a contract, but a process. It is a gradual growing together and this can only be effected by constantly living together. Exactly how many hours of the 24 or days of the 365 must be passed in each other's company or what degree of continuous contiguity is essential to accomplish this end cannot be rigidly determined. Times change and the more frequent and protracted "separation from bed and board" than was formerly customary does not necessarily mean divorce as the old legal phraseology would imply. We have seen the conjugal four-poster give way to twin beds and these to separate bedrooms, and the next step would naturally be separate domiciles, and common meals only by previous appointment.

But however well satisfied the couple in question may be with a marriage divorced from domesticity it would be very unfortunate if their example were generally followed, for it would mean the abolition of one of the ancient and valuable institutions of society, the family. Even a childless couple will miss something in not having a common home, and if there are children it is indispensable. Every child has a natural right to the continuous care and companionship of both a father and a mother, and it is a great misfortune if death or incompatibility of temper or diverse professional interests deprive the child of such training. Marriage has in all ages been the most strictly regulated of all human relationships because it involves the future of the race, and we cannot expect this social control to be relaxed in the future. On the contrary, it is likely to become much more stringent than it ever has been as the importance of eugenics becomes generally recognized.

But the entrance of women into independent professional life will involve changes of many old customs inherited from the days when women were property instead of owning property. It is indeed a hardship for a woman who has gained a reputation for herself in literature, music or art, on the stage or on the screen, in business or in public life, to lapse into anonymity on marriage. The name "Fannie Hurst" is worth more than Mrs. Jacques S. Danielson at the head of a short story, and it is no wonder that she does not want to surrender so valuable an asset. But the question of "Miss" and "Mrs." is an embarrassing one. It is indeed absurd that a woman in giving her business address should be compelled to explain her marital state, while a

Is your philosophy expressed in "beauty is its own excuse for being" or in "A primrose by the river's brim, A yellow primrose was to him—And nothing more"? The two viewpoints are coming to a clash over the proposed changes in Yellowstone Park which would turn such scenic beauty as this Lower Fall of the Grand Canyon into an irrigation project to improve the crops

man is under no such obligation. The best way would be to drop all titles as the Quakers would prefer. But in any case there should be something about the person of both men and women to show whether they are married or not. Probably a ring on the left third finger would be the simplest. As it is now the married woman is generally labeled but the married man wears no tag. This is unfair to the opposite sex and often a cause of confusion. The restaurant manager knows how much annoyance is caused if he fails to scratch off from the menu the dishes that are out. In an art gallery the pictures that are not eligible for prizes on account of having previously taken them are marked *hors concours* to avoid misunderstanding. If Fannie Hurst is as handsome as the papers make her, many a man during the last five years must have wasted his affection if not his flowers upon her because she did not wear the gold band that would mark her *hors concours*. And who knows how many maiden hearts lie broken in the path of her pianist husband. Possibly the friend who recently introduced Mr. Danielson to Miss Hurst when they happened to meet at the theater hoped to make a match, not knowing that the match had been made five years before. The situation is like that startling maneuver known in chess as "discovered mate." For a fiction writer in search of plots—and fame—this romantic arrangement has obvious advantages, but it would prove more embarrassing than profitable to ordinary couples.

America Over All

IN order to take advantage of the overall vote no doubt the two leading political parties will rename themselves the Denimocratic and the Rebugingham.

A Letter from the President

THE constitution that is submitted is not free from imperfections; but there are as few radical defects in it as could well be expected, considering the heterogeneous mass of which the convention was composed and the diversity of interests which were to be reconciled. A constitutional door being open for future alterations and amendments, I think it would be wise for the people to adopt what is offered for them. . . . Should the States reject the excellent constitution, the probability is that an opportunity will never again offer to create another peace. The next will be drawn in blood."

No, good reader, this letter is not one just written by President Wilson in regard to the Covenant, but one written in 1787 by President Washington in regard to the federation of the hostile and independent colonies of America.

A Primrose by the River's Brim

By J. Horace McFarland

President of the American Civic Association

TWENTY-SEVEN per cent of the Falls of Niagara have been turned into electric power, and any visitor who saw the great cataract thirty years ago can now note the material reduction of its glory. Likewise that part of the Yosemite which John Muir deemed equal in majestic beauty to the main valley is now being flooded into a municipal reservoir, and no more can the solemn glory of the Hetch Hetchy Valley be seen by men. The groves of the big sequoias, the trees of ten thousand years, are, with the exception of a few remnants to remind us of our neglect, reduced to redwood lumber. Now comes the turn of that greatest assemblage of Nature's wonders, the Yellowstone National Park.

The Yellowstone, as described by John Muir, "is a big, wholesome wilderness on the broad summit of the Rocky Mountains . . . a place of fountains where the greatest of the American rivers take their rise. . . . Unnumbered

lakes shine in it, united by a famous band of streams that rush up out of hot lava beds. . . . Beside the treasures common to most mountain regions that are wild . . . the park is full of exciting wonders . . . the wildest geysers in the world . . . thousands of boiling springs . . . their basins arrayed in gorgeous colors . . . hot paint-pots, mud springs, cauldrons whose contents are of every color and consistency. . . . Petrified forests . . . hills of sparkling crystals, hills of sulphur, hills of glass . . . mountains covered with honey-bloom sweet as Hymettus."

It was set aside in 1872 by Congress "as a public park and pleasuring ground for the benefit and enjoyment of the people," and is yearly attracting greater and greater multitudes. In a single year more than five thousand farmers have driven there to camp with their families.

But because the Yellowstone has water, most of it a mile and a half high, that will flow easily to irrigable farm lands, the entering wedge of commercialism is being driven into its majesty. A few weeks ago, a seemingly innocent proposal to flood eight thousand acres of the haunts of the vanishing moose in the southwestern portion of Yellowstone Park was approved by the Department of the Interior and slipped thru the Senate. A similar bill pushed by Congressman Addison T. Smith of Idaho was only prevented from passage by the vigilance of certain officials who had heard of the passage of the Senate measure. It seems that engineers had surveyed the water resources of the whole park and were calmly planning to proceed with its exploitation.

Early in April the Livingston, Montana, *Enterprise* announced that a school for speakers would be held on April 17 "to present the advantages of the Yellowstone Irrigation Association plan for a dam at the outlet of Lake Yellowstone." The waters of the lake now flow north thru the Yellowstone river, eventually reaching the Missouri. A dam would reverse the flow and send these waters south.

In support of this proposition it appears that the farmers in the valley to be benefited have lost one crop out of six, and must in consequence be helped by endangering the world's greatest gallery of natural wonders. Those who oppose this private interest scheme are called by Mr. Smith "overly aesthetic people . . . who are living in luxury in Boston, New York, Philadelphia and other eastern cities."

The new Secretary of the Interior, the Hon. John Barton Payne, has stated: ". . . In my view it is not safe to encroach upon the National Parks for any commercial purpose, and I beg leave to suggest that the bill ought not to pass."

But unless other friends of the Yellowstone act promptly and effectively thru their congressmen, the bill will pass and the nose of the camel will be under the tent. Protests by telegram or letter should definitely oppose commercialization of the Yellowstone National Park, at least until there has been a complete and competent impartial governmental survey of the possibilities and effects. Inasmuch as the glory of the Yellowstone is in its water, and it is probable that all its sources of water are mutually related, such disturbance as is proposed may easily be effective to quench some of the geysers, as it certainly will be effective to reduce the glory of the great falls.

Missouri "Shows" the Country

THE Missouri Democrats have honored themselves and their State by refusing to send Senator Reed as a delegate to the Democratic convention. In the senator's favor were the tradition and precedent that a prominent senator should represent his state at a national convention, the strength of the Reed machine, the support of all the pro-German and anti-Ally elements in the State, and all the opposition to the League of Nations which a year of yellow journal propaganda has been able to stir up. But Missouri places no reliance on a broken reed!

The Story of the Week

The Democrats and the Covenant

THE sphinx of the White House has not yet indicated his preference for the Democratic nomination, but he has laid down the platform on which the nominee must stand in a letter to Jouett Shouse, one of the delegates from Kansas to the San Francisco convention:

I cannot help thinking that the party is to be congratulated on the fact that it has come to a year of exceptional opportunity and duty. The issue, which it is our duty to raise with the voters of the country, involves nothing less than the honor of the United States and the redemption of its most solemn obligations; its obligations to its associates in the Great War, and to mankind to whom it gave the most explicit pledge that it went to war, not merely to win a victory in arms, but also to follow up that victory with the establishment of such a concert of nations as would guarantee the permanence of a peace based on justice.

Ex-Senator Lewis of Illinois commented that since the League of Nations was to be the issue of the campaign, President Wilson himself would be the logical candidate.

The League of Nations Covenant has figured in a number of recent primary and convention contests in the Democratic party. The state conventions of Kansas and Missouri emphatically approved the Wilson administration. By a vote of 1070 to 490 the Missouri convention refused to approve the selection of Senator Reed as delegate to the San Francisco convention in spite of the endorsement which the Senator had from his home district. The opposition to Senator Reed was based partly on his fight against the Treaty with Germany and partly on his unsatisfactory record during the war.

In Nebraska rival slates of delegates were placed before the voters by William Jennings Bryan and Senator Hitchcock. Senator Hitchcock favored ratification of the Treaty without reservations, whereas Bryan was willing to accept strong reservations in order to secure the passage of the Treaty in the Senate. Mr. Bryan was chosen as one of the delegates from Nebraska, but some Hitchcock delegates were also elected. The principal reason why Bryan desired to attend the convention was to block any attempt on the part of the supporters of Governor Edwards of New Jersey to insert an anti-prohibition plank in the Democratic platform.

Georgia, like Nebraska, gave an ambiguous verdict. Attorney General Palmer, who contested the state on behalf of the Wilson administration, secured a plurality of the delegates to the state convention, but the combined delegations for the two "favorite son" candidates, Thomas

Watson and Senator Hoke Smith, outnumber the Palmer delegates. In the popular vote the three candidates ran very close to each others; Watson obtaining 51,974; Palmer, 48,460; Smith, 45,568. Both Watson and Smith are hostile to the unamended Covenant of the League of Nations.

The Rising Star of Johnson

THE most notable development in the Republican campaign is the steadily growing strength shown by Senator Johnson. California has once more given emphatic expression of her favor for the Senator. In the primary contest on May 4 Johnson led Hoover by a wide margin. Mr. Hoover polled a heavy vote, particularly in Los Angeles and other places in southern California, but San Francisco and the northern counties went overwhelmingly for Johnson. In New Jersey, which is a typical eastern state with no particular predilection for the California brand of radical politics, he polled over 50,000 votes in the primary and came within nearly a thousand votes of beating General Wood. Johnson's defeat by so narrow a margin in New Jersey is of greater avail to his canvass than his recent victories in Montana and Nebraska since it proves that his following is not merely sectional and that he can hope to find support even on the Atlantic coast.

General Wood has added Maryland and Indiana to his string of victories and has obtained some delegates from Ohio. Only two candidates, Senator Harding and General Wood, actively contested Ohio, tho some voters took the trouble to write in the names of Johnson or Hoover. Senator Harding obtained a plurality of over 16,000 in his home state, but failed to obtain a united delegation. Mr. Daugherty, campaign manager for the Senator, was one of several Harding candidates who failed to be chosen as delegate. Most political observers regard Senator Harding's victory in Ohio like General Wood's victory in New Jersey as a moral defeat, because in both cases the contest was much closer than had been expected.

Massachusetts has chosen an "old guard" delegation headed by Senator Lodge. Most of the Massachusetts delegates will support Governor Coolidge in the convention as the favorite son, but their second choice is uncertain. Washington also endorsed a favorite son, Senator Poin Dexter. The Idaho delegation will apparently be divided between Johnson and Wood, with Senator Borah, the most conspicuous delegate, apparently favorable to Johnson.

The two most conspicuous Republican candidates for the nomination at the present time are General Wood and Senator Johnson, who are so far ahead of their competitors in the matter of pledged delegates that the nomination of any third candidate can only come about as the result of a possible deadlock between the two leaders in the convention itself. In such a case the dark horse would have the opportunity of a generation.

The Bonus Tangle

CONGRESS is willing, even eager, to grant a bonus to veterans of the Great War, but unfortunately to do so it will be necessary to raise more than a billion dollars by increased taxation or otherwise. This will absorb all the saving which Congress has been able to effect in other departments of Government expenditure by paring down the estimates of cabinet members and will thus make it impossible for Congress to "point with pride" to its record of economy at the coming elections. Moreover there is no

Stinson in Dayton Daily News

Christmas of what year?

agreement as to the proper method for raising the needed sum. The excess profits tax is intensely unpopular with business men and is condemned by many economists as unsound in theory and apt to raise prices. The proposed tax on sales, however, seems equally calculated to increase the cost of living and to work out as a direct tax on the consumer. The income tax is already fixed at as high a percentage as seems safe for peace times. To float a new loan would endanger the value of Government securities already on the market. Minor taxes on luxuries would hardly raise the requisite amount.

As reported from the Ways and Means Committee of the House of Representatives, the bonus measure authorizes the appropriation of \$1,600,000,000 during the years 1921 and 1922. The service man receives the option of a cash bonus, a homestead, vocational training or endowment insurance. The cash bonus is \$1.25 for each day of service and the equivalent value under the other options is \$1.75 a day.

To raise the necessary sum a special supertax is levied on incomes above \$5000 a year, graduated at one, two or three per cent, according to the size of the income. A tax is levied on sales and transfers of stocks and bonds, transactions on the produce exchange and on sales of real estate. Increased taxes are levied on tobacco and its manufactured products. Finally, a special tax is imposed on sales of "tangible personal property or electrical energy" in excess of \$1000 a month, including hotel and restaurant businesses.

Reading Combine Dissolved

SUPREME Court decisions by a closely divided vote have become unpleasantly conspicuous of late. The decision by four votes to three to dissolve the combine between the Reading Company and its subsidiary companies recalls the recent decision by five votes to four that stock dividends were not subject to the income tax and the decision by four to three that the United States Steel Corporation did not violate the Anti-Trust Law. It is evident that the application of Federal law to industrial questions is by no means an obvious matter and that men of the highest judicial training may hold divergent views.

The majority opinion in the Reading case, delivered by Justice Clarke, ran as follows:

For flagrant violation of the first and second sections of the Anti-Trust Act, the relations between the Reading Company, the Reading Railway Company and the Reading Coal Company and between these companies and the Central Railroad Company of New Jersey must be so dissolved as to give to each of them a position in all respects independent and free from stock or other control of either of the other corporations. . . . The question which we have presented by this branch of the case is not the technical one of whether ownership by a railroad company of stock in a coal company renders it unlawful for the former to carry the product of the latter, for here the railroad company did not own any of the stock of the coal company. The real question is whether combining in a single corporation the ownership of all of the stock of a carrier and of all of the stock of a coal company results in such a community of interest or title in the product of the latter as to bring the case within the scope of the provisions of the act. All three of the Reading companies had the same officers and directors, and it was under their authority that the mines were worked and the railway operated, and they exercised that authority in the one case in precisely the same character as in the other, as officials of the holding company.

Justices McKenna, Day and Pitney supported the opinion of Justice Clarke. Chief Justice White and Justices Holmes and Van Devanter dissented, and Justices McReynolds and Brandeis took no part in the decision. As formerly in the Standard Oil case, the news of dissolution reacted favorably on the stock exchange. Reading stock rose several points after the decision of the Supreme Court was made public.

The most neutral person in the world

The Revolution That Was Not

WHETHER owing to the careful precautions taken by the Department of Justice or to the absence of any such intention on the part of the Reds, the disorders expected on May Day failed to materialize. Attorney General Palmer announced that evidence had been received of a plot to assassinate a number of prominent citizens who have been active in repressing revolutionary agitation. These men were personally warned to take precautions on May 1. Mr. Palmer said:

The information that comes to us concerning the proposed assassinations is reported from a considerable portion of the country, indicating that the plot is nation-wide. Both as to this and to the proposed general strike, we rely in great measure on wide publicity to frustrate the plans of the plotters, just as such publicity blocked the plans for the general strike called by the agitators for July 4, 1919.

On May Day there were a number of radical mass meetings, a good deal of pamphleteering propaganda and a little red flag waving here and there. But not a single instance of serious disorder was reported from any part of the country. On the contrary, the most notable feature of the day was the "loyalty demonstrations" held in various places, where the local authorities acted on the hint of Governor Allen of Kansas that the day chosen for international Socialist demonstrations should be made an "Americanization day" and so celebrated by patriotic citizens.

The Immigration Committee of the House of Representatives is undertaking an investigation of the activities of Mr. Louis F. Post, Assistant Secretary of Labor, whom the committeemen accuse of cancelling warrants for deportation issued by the Department of Justice. Mr. Post has acted on about 5000 cases and has cancelled some 1600 warrants since November 1, 1919. Mr. Ralston, counsel for Mr. Post, defended the policy of the Department of Labor on the ground that the agents of the Department of Justice had made wholesale arrests in arbitrary fashion and had ordered deportation in cases when it would have been most unjust.

Are Hard Times Coming?

THE effects of over-extended credit are already beginning to be felt in the United States, and while financial experts are not agreed as to the extent which this country

will experience "hard times" they seem unanimous in looking for some reaction from the industrial boom of war times. Coincident with the panic on the Japanese stock exchange, tho not directly caused by it, there was a slump in the values of speculative industrial stocks on Wall Street. Nearly all values declined, but the sharpest break occurred in the steel industry.

A more serious indication of the financial stringency than the Wall Street flurry is the steady decline in the value of Liberty Loan bonds. To some extent this was inevitable with the resumption of normal industrial life after the war, since private corporations are able to offer higher rates of interest to the investor than the Government. But the effect of the decline has had a very unfortunate effect on the purchasers of the bonds, especially those who are forced to sell at the present time and accept less than 90 cents for every dollar they paid. Senator Frelinghuysen of New Jersey proposes to refund all the Liberty Loans into a single issue to prevent depreciation. Secretary Houston of the Treasury opposes this plan and points out that prevailing low prices for Government securities should encourage their purchase since their value as permanent investments is not diminished by the fact that some buyers see fit to sell their bonds now for less than they are worth. The recent issues of United States Treasury certificates at five per cent for three months' loans and at five and one-fourth per cent for six months' loans has had an unfavorable effect on the value of Liberty bonds, and the fear that the proposed bonus for veterans of the Great War will make necessary a further Government loan has caused no little alarm in financial circles.

In addition to the decline in the values of industrial stocks and of Government securities a third indication of depression is evident in the recent shrinkage of bank deposits, which decreased by over \$900,000,000 during the first two months of 1920. The present amount of deposits in the national banks, however, is still nearly \$17,000,000,000 and is well above any previous record with the exception of the latter part of 1919. The recent turning of the tide is ascribed in part to a decrease in the deposits of the United States Government and in part to the withdrawal of funds by private depositors who have been hard hit by recent industrial disturbances such as the outlaw strike on the railroads.

Mexico Simmers Still

THE Sonora revolution is spreading to other parts of the Mexican Republic and President Carranza's position is endangered unless he can arrange a compromise with the rebel chiefs. The initial blunder of the President in threatening to send federal troops into Sonora is having serious consequences and it is not impossible that instead of the peaceful, constitutional election scheduled for this summer there may be substituted the more usual Mexican method of armed revolt against the existing government. Troops from Sonora have occupied the capital of Sinaloa, defeating the Carranza garrison. The state of Sinaloa appears to have adhered generally to the rebel cause. Villa is reported to have offered his coöperation in Chihuahua. Governor Rubio of the state of Michoacan, a strong supporter of General Obregon, has joined the rebellion, and the state of Nayarit is reported to have broken with Carranza. The whole Pacific coast is in full revolt and the rebels claim to have a formidable following in all other parts of the Republic. Instead of remaining a contest between Sonora and the rest of Mexico the situation is developing into a war between the capital and the provinces with Carranza's government endangered even in Mexico City itself. General Calles has taken command of the rebel armies in place of Governor Huerta.

Both parties are turning their eyes to the United States.

Another new post is opened to women by the appointment of Mrs. Estelle V. Collier as Collector of Customs in Salt Lake City. Mrs. Collier is bringing up her four children, as well as playing a prominent part in the political life of the Utah capital. She served on the State Council of Defense and is chairman of the Democratic Women's State Committee.

Sonora wishes to be recognized as a "belligerent." The Mexican Government desires permission to send troops thru the United States to invade Sonora from the north. It is not at all likely that the United States would ever agree to the transportation of Mexican soldiers across American territory in the course of a civil conflict between Mexican factions, but the mere rumor has roused anger and apprehension in Texas, Arizona and New Mexico.

Bolsheviki Take Baku

THE republic of Azerbaijan, whose rise was recorded in The Independent of May 1, has now fallen into the power of the Bolsheviki. The Red troops entered Baku on April 28 without opposition and the Azerbaijan Government, which had made this city its capital, acknowledged the authority of the Soviet. This is a momentous and portentous event for several reasons. It means for one thing that the sanitary cordon or quarantine belt of border nationalities by which the Allies hoped to prevent the spread of Bolshevism has been broken thru.

When General Denikin was driven out of the Ukraine by the Bolsheviki their way was open to the Caucasus for the Kuban Cossacks went over to their side. So Great Britain and France decided to give official recognition and military aid to the two Trans-Caucasian republics of Georgia and Azerbaijan, which connect the Black Sea with the Caspian, in the expectation that they would at least for a time hold back the Red wave from extending to Turkey. But the Bolsheviki have been carrying on for many months a very active propaganda among the Moslems and the acceptance or at least the tame acquiescence of the Tatar republic indicates that their campaign has made converts of this faith. The Azerbaijanians sent representatives to the congress of Turkish Nationalists at Angora so there is a possibility that the Russian Bolsheviki and the insurgent Turks may make common cause against the Allies.

To prevent such a serious conjunction of forces a new barrier of border peoples is being erected farther to the south. This is composed of the Armenians on the Black

Sea side and the Kurds on the Caspian side. The San Remo conference provided for the establishment of an Armenian republic with Trebizond as a seaport and the British have been stimulating the formation of an independent Kurdistan, altho the Kurds, being a barbarous, predatory, ignorant and nomadic people, have hardly acquired the modern conception of nationality. The Armenians, who form a large part of the population of Azerbaijan and Kurdistan, will be likely to suffer from this combination of Bolshevik and Mohammedan fanaticism, as they did when the Bolsheviks held Baku before.

But such prospective political gains of the Bolsheviks thru the capture of Baku are of less importance than their immediate economic advantage. The Baku region is one of the richest oil fields of the world and petroleum means power in the modern world. The chief difficulty that the Soviet Government has encountered is the breakdown of the transportation system thruout the country. This has impeded military operations, prevented the establishment of internal commerce and caused famine in a land which used to overflow with food. Most of the locomotives and river steamers of Russia were run by petroleum. The engines were not adapted for burning wood and not enough wood could be procured. But if now the Bolsheviks can hold and work the oil wells of Baku their transportation troubles will be largely relieved.

Poles Invade Ukraine

AT the same time that the Bolsheviks have gained Baku, the key to the Caucasus, they have suffered a serious setback in the Polish advance upon Kiev, the capital of the Ukraine. This city has changed hands half a dozen times in the last three years and was retaken by the Reds in their recent sweep of southern Russia. The Ukrainians, or Little Russians, who if not a distinct race are certainly of quite a different type from the Great Russians, have never taken to the doctrines of Bolshevism and have been continuously at war with Soviet Russia since its establishment. But they could never secure recognition for their nationalistic

aspirations, for the Allies were supporting Denikin and Kolchak, who were fighting for the restoration of integral Russia. A large part of the Ukrainian race, the Ruthenians, lived in Austrian Galicia and they were the most intensely nationalistic of all, but they were prevented from uniting with their brethren of the Russian Ukraine by the Allies, who placed all Galicia in the hands of the Poles. General Petliura, the Ukrainian leader, was at one time engaged in warfare on four fronts, against the Bolsheviks on the north, against the Poles on the west, against Denikin's Cossacks on the east and against the Rumanians and French on the south.

He was completely crushed out between the opposing forces a few months ago when first the Cossacks ran over the Ukraine with fire and sword, followed by the even more ruthless Bolsheviks. In this extremity he fled to Warsaw and came to terms with his former foe, Poland.

The Poles had long been waging a desultory and indecisive warfare with the Bolsheviks in the Pripet swamps and along the Lithuanian frontier, while at the same time negotiating with the Bolsheviks for a peace conference. But with the support that Petliura and his followers gave them the Polish cavalry made a brilliant dash on the southern sector, which brought them within a few miles of Kiev. The Polish Government has formally recognized the independence of Ukraine under the directorate of Petliura.

How the Poles and Ukrainians have settled their disputed boundaries is not known. This new advance brings the Poles about three hundred miles east of their eastern boundary as proposed at Paris and puts under their control a vast territory where the Poles form a small minority. It will be a hard question to determine how much of this they should keep. The French have always favored the Polish imperialists and held that the more Russian territory they took the better. The British and Americans have opposed such expansion, holding that it would be disastrous for Poland as well as dangerous to the peace of the world for the Poles to incorporate a large alien population when they have had no experience even in self-government as yet. President Wilson in the thirteenth of his fourteen points declared that "an independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations." Secretary of War Baker took the same view and stated plainly to the Congressional committee that the United States would aid Poland only in defensive warfare to preserve the frontiers assigned to her by treaty. But the Polish Government has secured a private loan of \$50,000,000 in the United States and many young Americans have volunteered for service in the Polish army.

The Russian Reign of Terror

THE overthrow of the Czar was accomplished almost without bloodshed, and the second revolution of November, 1917, by which the Bolsheviks came into power was likewise effected with little loss of life. But in the following year when attempts were made by the Social Revolutionists to assassinate Lenin and Trotsky and other leaders and when it seemed likely that the Soviet Government would be overthrown by internal conspiracies in co-operation with the external attacks of Russian armies aided by the Allies, a policy of terrorism was deliberately adopted and ruthlessly carried out. An extraordinary commission for combating the counter-revolution was appointed similar to the Committee of Public Safety in the French Revolution. The official report of this commission for 1918 and 1919 has just been published in the Moscow *Izvestia* and according to this it appears that the commission arrested 128,000 persons, of whom 21,032 were accused of counter-revolutionary crimes, 19,673 of offenses committed as officials, 8,367 of speculation and 9,514 for expressing anti-

Helena Commercial Club

Montana uses convict labor to build state roads and at the same time teach the self-respect of honest work to the men from prison. The convicts have as much liberty for recreation as the average laborer in a road gang; they do not wear distinctive prison garb, nor is there any evident guard set over them

governmental opinions. The persons shot aggregated 9,641. This is about half the number that were executed during the fifteen months of the reign of terror in the French Revolution. But the Russian report refers only to the activities of the Petrograd and Moscow commissions and does not include the arrests and executions carried out by the provincial commissions under soviet control. Both the Russian and the French figures should probably be more than doubled to cover the unrecorded cases of official or unofficial executions. Under such circumstances hatred, fear, suspicion, private revenge and inborn bloodthirstiness find free scope, and since the object of the commission was to frighten the opponents of the government into submission, it did not matter whether the victims were innocent or not. In a large proportion of cases the persons punished were not upholders of the old régime but Bolshevik officials who had abused their power or indulged in speculation.

In recent months the policy of terrorism has been practically abandoned, partly because the collapse of the external pressure has relieved the danger of internal risings and partly because the chief antagonists of the Soviet have either been killed off, starved out or driven away. The Bolshevik leaders have found it necessary to conciliate their opponents by taking them into the government or industrial plants and by abandoning the most objectionable features of the communistic scheme. Atrocities are now chiefly confined to the newly conquered territory.

The Turkish Problem

ONE of the most serious of the tasks of the San Remo conference was the preparation of the treaty which is soon to be presented to the representatives of Turkey. Whether they will accept it or, if they sign it, whether it will prove acceptable to the Turkish people and their co-religionists remains in doubt. Premier Nitti of Italy is very skeptical as he says:

You have taken from the Turks their sacred city of Adrianople. You have placed their capital city under foreign control; you have taken from them every port and the larger part of their territory; and the five Turkish delegates whom you will select will sign a treaty which will not have the sanction of the Turkish people or the Turkish Parliament. You will have war in Asia Minor, and Italy will not send a single soldier nor pay a single lira.

The president of the Turkish delegation at San Remo, Halib Kemal Bey, is openly defiant. He declares that Turkey "will never submit to so disgraceful a termination of her national ideals." And he adds the threat:

We might sign the treaty but there is a great difference between signing it and obeying it.

But if the world wants the spectacle of years of slaughter, let the Allies try to enforce its terms.

The eyes of all the Moslem world now are on Constantinople, waiting for the first sign of effort by the Entente Allies to interfere with our religion. That first sign will be the signal for a holy war.

Have the Allies considered the danger in making Greece a strong nation? It would be easy for the Greeks to sweep right across Turkey and build a realm less civilized than Turkey. Venizelos is Turkey's arch enemy, and his policy, which, unfortunately, sways Lloyd George, has as its sole aim the creation of a powerful Greece to the exclusion of the rights of all other countries.

There is only one treaty which Turkey will accept and obey. That would provide for a confederation of states which would not materially change the existing frontiers.

The proposed treaty with Turkey violates in many particulars the principles laid down by President Wilson as essential to a permanent peace. The peoples are to be parceled out among the various powers without consulting their preferences as to rulers and compatriots. Bulgaria, Armenia, Anatolia and Arabia are to be cut off from the Mediterranean. Constantinople is to be left to the Sultan. Adrianople is to be given to Greece.

Smyrna is to be placed under Greek administration, the remaining nominally under the suzerainty of the Sultan. The Ottoman debt is to be divided proportionately among the various parts of the old empire. It will be a prior charge upon Turkish resources and paid in pounds sterling.

The straits of the Dardanelles and Bosphorus are to be declared forever free to the shipping of all the world during peace and war. An international commission will regulate the traffic and fix the tolls. The protection of the straits will be in charge of a military commission in command of forces stationed on Gallipoli and on the opposite shore of the Dardanelles. The United States will not be represented on either commission.

Armenia is to constitute an independent republic, but with much narrower bounds than the Armenians claim, for the Allies hold that it would not be conducive to stability and peace to put the Armenians in control of territory where they constitute only a small minority of the population. Trebizond on the Black Sea will be given to Armenia as a port in accordance with President Wilson's wishes, altho the Greeks demanded it. As compensation for this disappointment the Greeks get the whole of Thrace, that is, all the Turkish territory in Europe outside of Constantinople.

Possible mandatories for Armenia that have been mentioned are Canada, Sweden, Norway and Spain.

The council place of international affairs is the little winter resort of San Remo on the Italian Riviera, where the Allied Premiers met in April to settle some of the problems left over by the peace conference

Germany Rebuked

IN reply to the request from the German Minister of War asking that the German Government be authorized to retain an army of 200,000 to preserve order instead of the 100,000 allowed by the Versailles treaty, the San Remo conference returned the following reprimand:

The Allies must declare immediately that a proposition of this nature cannot even be examined as long as Germany is failing to meet the most important obligations imposed by the peace treaty and does not proceed with disarmament, on which depends the peace of the world. Germany has not fulfilled its engagements, neither concerning the destruction of war material nor the decrease of its effectives, nor for the supplying of coal, nor for reparations or the costs of the armies of occupation. It has given neither satisfaction nor made excuses for criminal attacks of which several times members of the allied missions in Germany have been the victims.

It has taken no steps to determine, as was provided for in the protocol of the treaty, its obligations concerning reparations in order to make propositions with the view of fixing the total amount which it must pay, despite the urgent character that a settlement of this sort presents in the interests of all the parties concerned. It seems to have not even considered how it can meet its obligations when they become due.

The Allies realize the difficulties met by the German Government and do not seek to impose too narrow an interpretation of the treaty, but they are unanimous in declaring that they cannot tolerate a continuation of these infractions of the treaty of Versailles; that the treaty must be executed and remain as the basis of relations between Germany and the Allies, and that they are resolved to take all measures, even, if necessary, the occupation of an additional part of German territory, in order to insure execution of the treaty. They affirm, however, that they have no intention of annexing any part of the German territory.

At the same time the Allies deem that questions arising from violations of the peace treaty, as well as from the measures necessary to insure its execution, would be more easily solved by exchanges of views between the chiefs of the Governments than by note. Thus they decide to invite the chiefs of the German Government to a direct conference with the chiefs of the allied governments and request that at the proposed meeting the German Government present to them explanations and precise propositions upon all the subjects mentioned in the foregoing.

If a satisfactory settlement is arrived at on these points the allied governments will be willing to discuss with the German representatives any questions which affect the internal order and economic well being of Germany. But Germany must understand that the unity of the Allies for execution of the treaty is as solid as it was for war, and that the only method of taking her place in the world is loyally to execute the engagements to which she has subscribed.

But notwithstanding the sharp language in which it is couched the note is a considerable concession to German wishes, for Premier Lloyd George has secured the consent of the French to meet the Germans for the first time to discuss conditions and measures. The conference will be held at Spa, Belgium, on May 25.

Strife Over Siberian Railroads

IT is authoritatively announced that "the Japanese Government has decided to enlarge its plans for dealing with the Siberian situation because of the embarrassments attending the attempt to repatriate the Czecho-Slovak troops who remain in Siberia." The significance of this is that the Czechs have sided with the Russians and Chinese at various points where the Japanese have taken control of the railroads in Siberia and Manchuria. According to the peace of Portsmouth which closed the Russo-Japanese war the Chinese Eastern railroad, which takes a short cut across Manchuria to Vladivostok, was put under the control of the Russians who thereafter treated it as virtually their own property. But the fall of the Czar's Government has given the Chinese a chance to recover this territory, for the Bolshevik Commissioner for Foreign Affairs has formally notified China that the Soviet Republic renounces and returns to China without compensation all the railroad, mining, forestry and other concessions obtained by the old Russian Government. The Soviet further relinquishes all claims on the indemnity being paid by China for the Boxer

From The Pearl of the Orient, Shanghai

This Chinese cartoon shows Mother China freed from the strong bonds of ignorance, superstitions, traditions, and old national customs and advancing toward the goal of equal educational opportunities. The gateway represents specifically the Government University of Peking

outrages and annuls all special privileges held by Russian merchants in Chinese territories.

But General Horvat, the Russian Managing Director of the Chinese Eastern Railway, declared himself "Supreme Ruler" as the successor of Admiral Kolchak, who was killed by the revolutionists at Irkutsk. Horvat's headquarters were at Harbin, the junction of the lines running east to Vladivostok and south to Port Arthur. But the Chinese naturally protested against his action in setting up a Russian Government on their territory and demanded that he turn over the control of the railroad to them. This he refused to do and was suspected of selling off the Russian rights to various financial syndicates.

This was the occasion for the Russian workmen to take a hand. They organized a soviet and notified Horvat to surrender the railroad to them. He declined to comply, so they ordered a general strike and took possession of the line. The Russian police and troops took the side of the Bolsheviks and Horvat was ousted.

Then the Japanese came and took possession of the railroad with their own guards and men. They arrested the leaders of the Russian workmen at Kharbin and put them on board the train for deportation. The Russians tried to rescue their comrades by throwing bombs among the Japanese soldiers. The Japanese replied with rifles. Then the Czechs opened fire on the Japanese with machine guns from their armored car. Next the Chinese guards intervened to stop the conflict and disarm the belligerents. The fight lasted half a day and all four parties suffered casualties. In the end the Japanese were forced to withdraw.

But the possession of Harbin is necessary to the Japanese if they are to retain control of eastern Siberia, so reinforcements are being despatched to Vladivostok to suppress the Bolshevistic risings at various points. At Nikolaevsk, 875 miles north of Vladivostok and near the mouth of the Amur River, the Russians attacked the Japanese garrison and are thought to have annihilated all the Japanese troops and residents. There is no railroad running so far north and the Japanese warships cannot until the ice breaks up reach the mouth of the Amur to rescue or revenge the victims.

Vladivostok was taken by the Japanese April 5 as soon as the American troops had withdrawn, and the Provisional Government was compelled to submit to the terms laid down by the Japanese. Among these was the stipulation that no Russian armed forces of any faction shall be permitted to approach within 17 miles of any point occupied by the Japanese. Since the Japanese hold most of the railroad this measure will insure them complete control, provided they can enforce the rule.

Own Your Own Theater

By Robert H. Moulton

FRIENDS of "little theaters" everywhere will be interested to know that the smallest of the species is located at Yipsilanti, Michigan. It measures only 18 by 36 feet on the outside, with an auditorium half that size, but it is already a big thing in Yipsilanti, and its reputation for producing worthwhile plays in a truly professional manner is beginning to spread to other parts of the country.

The littlest theater grew out of the plans of a group of men and women whose days are filled with the most prosaic of things and who discovered that the balancing ration of dreams could be obtained by adopting, or rather re-adopting, the days of make-believe. Its functions are identical with all other little theaters, be they a product of Washington Square or village street; to portray the best in modern and past drama, to arouse a new sympathy for plays worth while, and to entertain, amuse and give mental growth to the players themselves.

Daniel L. Quirk is the moving spirit in the littlest theater. By day he is president of a bank and not long ago he was a major in the American Red Cross on active duty in France. Associated with him are men and women of Yipsilanti whose occupations are as drab as that of banking, but whose

dream hours are as colorful as the wand-waving minds of the world's greatest dramatic writers can make them.

Yipsilanti players have not arrived where they are without much evolution. From the beginning they had purposes and visions. At first they met as a little club in rented quarters and their programs were chatty, informal affairs and not much else. Then, suddenly, they realized they were not living up to their ability or opportunity, and forthwith they proceeded to acquire a home of their own, an old barn which was remade into a unique playhouse. The exterior was painted, decorated and lantern-hung after the manner of an Elizabethan theater. The interior was transformed. The auditorium and balcony combined seat fifty people. For the edification of that fifty, a stage was built whose electrical equipment, borders, floods, spots, dimmers, and so forth duplicate the finest in the theater world. With its various properties and stage settings many decidedly artistic effects have been produced. The players themselves have long since passed the amateurish point where most private theatrical clubs stick forever, and now they put their plays across with real professional skill.

The dressing rooms of the theater are located in the basement of the building, and there, also, is found a green room. The latter is unique in that it is provided with facilities for quickly transforming it into a kitchenette, where, after every program, a supper is served to members of the company and specially invited guests.

Give Dobbin Some Seaweed

French chemists have discovered that certain seaweeds common on the coast of Brittany are composed of the same basic materials as oats, and in almost equal proportions. They therefore tried feeding the dried seaweed to horses, for the first eight days as a substitute for half the usual quantity of oats, and then for sixteen days as a complete substitute for the oat ration.

The experiment was tried first on three horses suffering from lymphangitis. At the end of twenty-four days

the horses had gained six per cent in weight and were apparently well, whereas three other sick horses that were fed on oats, hay and straw were still suffering from lymphangitis. The experiment was next conducted with two lots of twenty cavalry horses. Ten of them received two pounds of ordinary diet, while the rest received two pounds of seaweed in place of two pounds of oats. At the end of two months it was found that those that had been fed on seaweed had each gained about twenty-five pounds. As a result of the experiment French veterinarians believe that it may be possible to utilize great quantities of seaweed in place of the two hundred million pounds of oats that are imported in ordinary times. It is possible, too, that ways may be found to use seaweed as food for human beings.

Six Rules for Success

By Charles M. Schwab

"Boys, you can have a good time in life, or you can have a success in life, but you cannot have both," said Mr. Schwab to the undergraduates of Princeton University in an informal talk there this spring. "And let me tell you," he added, "that never before in history has there been such an opportunity for the successful man as there is today. The thing you want to do is to make up your minds as to what you are going to drive for and to let nothing stand in the way of its ultimate accomplishment."

Mr. Schwab gave the Princeton men the benefit of his own experience in the following six rules for success:

First, unimpeachable integrity. This is the very foundation. With this as a starting point the rest will be relatively easy.

Second, loyalty. As a rule I find that the university men are loyal. Be loyal to the people with whom you are associated. Give credit always where credit is due, and remember always that it will attract credit to you to give credit to some one else. Make your employer believe that you are with him always, that you are proud to be with his department in his company.

Third, a liberal education in the finer things of life, of art, of literature, will contribute toward a success in life. Man needs imagination, and these are the sources for it.

Fourth, make friends. Enemies don't pay. You will be surprised at the pleasantness that will surround you when you have made friends instead of enemies.

What the littlest theater lacks in floor space is made up for in gallery

Whatever your misfortunes in life, boys, just laugh.

Fifth, concentrate. Learn to concentrate and think upon the problem in your mind until you have reached a conclusion. Don't be afraid of mistakes. Don't blame a man if he makes them, but it is the fool that makes the same one twice.

Sixth, go at your work. You may not find yourself the first year. Don't hesitate to change from distasteful work, but don't change because difficulties come up or troubles arise. Give the best that is in you. Let nothing stand in the way of your going on.

Our Little Universe

Unless we accept Einstein's accusation that space is crooked, it is evident that there is no limit to distance in any direction, or, in other words, the universe is infinite. But we are not much interested in mere emptiness; what we really think of when we say the "universe" is that part of space which contains matter, and to this there may be a limit. Perhaps on an outward journey thru space we may come to the last star beyond which there is nothing but eternal night.

So thinks Dr. Curtis of the Lick Observatory, who says, indeed, that the universe is "relatively small." He estimates the zone of space which contains all the stars as less than 30,000 light years in length and not more than 3000 light years in thickness. A "light year" is the distance a ray of light travels in one year at the rate of 186,000 miles a second. So to find out how big the universe is simply multiply 186,000 miles by the number of seconds in a year and again by the

number of estimated light years in stellar space. This will carry you into large figures, but to the astronomer they seem "relatively small," and Dr. Curtis's estimate has been criticized as insufficient. Dr. Shapley of the Mount Wilson Observatory suggests that many starry universes may exist beyond our own so distant that they appear to us as small star clusters barely visible thru the telescope. If that is so we can picture the universe as an infinite ocean dotted here and there with little archipelagos of worlds.

How Is This for An Egg?

Imagine an egg equivalent in size to 150 hen's eggs and with a volume of two gallons—enough to make omelets for fifty men with healthy appetites, and worth, as a food, something like \$7.50—with hen's eggs selling at approximately five cents each.

Such an egg is now on exhibition at the American Museum of Natural History, New York. Unfortunately, however, its edible qualities cannot be tested since the egg was laid centuries ago by a now extinct fowl, the aepyornis, and is designated as a fossil by archeologists. The enormous size of this egg will be better understood when it is stated that the shell is about one-eighth of an inch thick, the

lengthwise circumference 2 feet 8 inches, and its circumference thru the middle 2 feet 2 inches. It is six times larger than an ostrich egg, which is the largest egg laid by any living bird.

The aepyornis according to the results of expert research, was a huge wingless creature, the largest and most formidable bird of prey that ever trod the earth. In life it has been variously estimated to have stood from seven to twelve feet in height, possessing massive and powerful limbs. This great bird surpassed the ostrich, the king of modern birds, both in size, herculean strength and build. It formerly lived in considerable numbers on the island of Madagascar.

The Ideal Store

By Edward Filene

Head of Filene's Department Store in Boston

The elements needed to make an ideal store may be summarized under these general headings:

1. Selling in such large quantities as to take the entire output of factories
2. Concentration of all possible commodities in a single large building, affording (a) economy in rent, (b) economy in the percentage cost of advertising, (c) convenience and comfort to shoppers
3. Concentration and economy in overhead, including managerial direction and special services
4. Personal and individual responsibility for results in each "selling unit"
5. "Personal" service and attention to customers
6. Collective buying and control of sources of supply
7. Convenient location

A New Use for the Redwood Tree

Charles Kellogg, of Santa Clara county, California, has what is probably the most unique house to be found anywhere in the world and it possesses an additional advantage in that it can be moved from place to place whenever its owner chooses. Mr. Kellogg and his wife live in the hollow section of a huge redwood tree mounted on an automobile chassis—a home which he calls the "Travel Log."

The section of redwood tree from which Mr. Kellogg fashioned the body of his automobile was taken from a fallen monarch that had been lying on the ground for perhaps a hundred years without any sign of decay. The twenty-two foot section, eleven feet in diameter, which he used to build his home, when first cut weighed approximately forty tons.

To hollow out the section to the requisite thinness was a tremendous undertaking. Axes hardly made an impression upon it; an oxacetylene flame was equally useless as the wood proved impervious to the flame, the wood carbonizing in a wall. Finally, by using an automobile truck as a battering ram, a gas pipe was driven thru the heart of the log. This small aperture was then enlarged by a pepper wood chisel fastened to the front of the truck with chains. Then the hollowing out process was completed with a huge chisel mounted on a twenty-two foot handle and operated in the same manner. This left a shell one foot thick.

As the shell in its unfinished state weighed in the neighborhood of 6000 pounds, the problem of mounting it on the truck was a difficult one. This was finally solved by cribbing the corners with slabs and digging a passageway in the soft forest floor beneath. The truck was then driven under the great log and the latter lowered into place.

Next came the task of drying out the

There once lived a bird which laid an egg big enough for fifty omelets

Mr. Kellogg and his redwood car are a familiar sight in the Sierra Nevadas and the Coast Range in California

body without "checking," to get rid of surplus weight. This was accomplished by sealing all apertures and turning on a sprinkler for two weeks. This washed out the sap and hastened the seasoning process. At the end of two weeks the log had lost 1200 pounds in weight.

Mr. Kellogg himself cut the windows and planned the interior. He found places for two beds, a kitchenette, a yacht lavatory, closets, electric light fixtures and wiring. Then came some exquisite cabinet work, clever little drawers, folding arrangements and plate glass windows. The body of the

car is nineteen feet long and contains three rooms, each six feet square: a living room, a bedroom and a chauffeur's room.

A feature of the living room is a small fireplace.

Mr. Kellogg has driven his remarkable car more than six thousand miles over the famous mountain roads of California and has found little difficulty in negotiating the steepest grades in spite of the fact that the truck, which was designed to have a capacity of two tons, carries an overload of more than 2000 pounds.

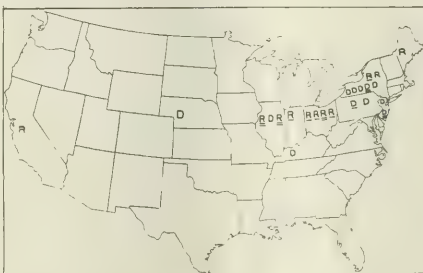

The Candidate Belt

As is shown by the accompanying map, covering the period since the organization of the Republican party, only a small part of the Union has produced candidates for the Presidency.

The only nominees from west of the Mississippi were Fremont of California and Bryan of Nebraska; both of whom met defeat. Breckenridge of Kentucky was the only southern nominee. President Wilson was born in Virginia, but at the time of his election he lived in New Jersey. New England produced no candidate but Blaine and he was not successful.

The "candidate belt" appears to coincide with a tier of contiguous states south of the Great Lakes; that is, Illinois, Indiana, Ohio, Pennsylvania, New York and New Jersey.

New York is the favorite state with the Democrats, who nominated from that state Seymour, Greeley, Tilden, Cleveland and Parker; whereas the Republicans put forth only two New Yorkers, Roosevelt and Hughes. Four times the Republicans elected an Ohio man: Hayes, Garfield, McKinley and Taft. Illinois gave the Republicans Lincoln and Grant, and the Democrats Douglas. Benjamin Harrison was the only Presidential nominee from Indiana; but to make up for that Indiana has been the favorite state for Vice-Presidents.

From the valleys of the Ohio and the Hudson come the candidates who win Presidential prizes

The Democratic party has selected for the Vice-Presidency, Hendricks, English, Kern and Marshall, and the Republicans Colfax and Fairbanks from that state. The rock-ribbed Republican state of Pennsylvania has never produced a Republican candidate, but two Democratic nominees, Buchanan and Hancock, hailed from that state. Finally, New Jersey is credited with McClellan and Wilson.

In the earlier days of the republic the Presidency vacillated between Virginia and Massachusetts and it was not until the days of Jackson of Tennessee that political preferment crossed the Appalachian mountains. Thenceforward, with such candidates as William Harrison of Ohio, Polk of Tennessee and Clay of Kentucky, the Ohio valley came into its own as the "candidate belt," a position which it has held

ever since, in conjunction with the valley of the Hudson.

Hello and Farewell!

If the plans of the New York Telephone Company work out well the one million phone users of the greater city will say a long good-bye to the telephone girl. It will require a year to install the automatic system generally, but it will in the meantime be tried out in various districts. Several American cities have already installed the system and pronounce it practicable and reliable.

By the new system every man is his own central. Each telephone is fitted up with a row of push buttons, marked with numerals and letters of the alphabet. To make a call the user pushes in turn three letters representing an abbreviation of the central office called, and then the digits of the number wanted. Thus to call up Bryant 6550, he will take down the receiver and then punch in succession the buttons marked B, R, Y, and 6, 5, 5, 0. This is supposed to make the connection without further difficulty. The force of telephone employees will not, however, be cut down at once with the introduction of the new system. There will still be need for many operators in toll, long distance and private branch exchanges and for handling special classes of calls.

(Continued from page 197)

pompous old gentleman. He wishes to take up the matter of repairs to the paving on Main street. Going from one place of business to another on Main street he eventually gathers a committee of seven. They go to the city hall and after some delay enter the office of the mayor.

With due apology for interrupting such a high official they state their case. The mayor looks at them over his spectacles, clears his throat, assumes his most dignified manner and says:

"That matter has been under consideration, gentlemen. It will be taken up in due time, in its relative importance. However, I am always glad to hear from you and hope you will call again." He nods, condescendingly, and the committee backs out, feeling very much relieved and grateful for the kind words. Perhaps Main street will be repaired. Perhaps not. Whatever the mayor originally intended to do about the matter he proceeds to do without consulting the committee.

Now let us move forward the hands of the clock until we arrive at the year 1920. The Committee on Streets and Bridges of the Chamber of Commerce is in session, in the Chamber of Commerce Building.

"We must settle the matter of the paving of Avenue B from Tenth street to the Boulevard," says the chairman. "Mr. Secretary, did you send for the mayor?"

"Yes, sir."

The door opens and the mayor is ushered in.

"Ready to give us an answer on that Avenue B paving?" asks the chairman. "We haven't got the money," the mayor confesses.

"That's all right," the chairman assures him. "You fellows go right ahead and order the paving. You can issue deficiency warrants. This committee will take it up with the bankers' committee and see that they handle the warrants for you."

"I don't like to do that," the mayor protests. "There is always criticism of deficiency warrants."

"We'll stand behind you on that matter and take the responsibility," says the chairman. "The secretary will explain it to the Rotary Club at the next meeting. We will also send a communication to the City Federation of Women's Clubs and the Women's Tenth Ward Improvement Association. Labor is in favor of this improvement, too. We discussed it with their committee last night. I think you will find it is all right."

"I'll tell the Council, then, and we'll go ahead," says the mayor. "Is that all?"

"That's all. Thank you for your courtesy."

The mayor backs out feeling very much pleased to have had a share in the important deliberations of this influential body.

In other words, the modern Chamber

CHANDLER SIX

Famous For Its Marvelous Motor

We Let You Know What The Chandler Price Is

THE Chandler Motor Car Company, ever since the first Chandler Car was built seven years ago, has, in every advertisement issued to newspapers and magazines and all other forms of publications, *stated the list price of the Chandler Car.*

It states it now and will continue to do so. There is good reason for this and many thousands of motor car owners know it. This is the reason—The Chandler Six is the most closely priced fine car in the whole medium priced field.

Look through the pages of this magazine or any publication that may be lying on your table. There are probably from ten to twenty automobile advertisements. How many name the price of the car?

True, the cost of automobile production

has increased in the past year, and it is still increasing. But the Chandler Company, throughout 1919, with all its production greatly oversold, held to its price.

The Chandler Six of today is a highly perfected development of the Chandler Six of seven years ago, which started the trend toward lightweight sixes. All the engineering skill and production efficiency at the command of the Chandler Company has been devoted to *this one chassis* and that fact is one of the reasons for the Chandler's leadership in its field today.

All Chandler bodies are mounted on the one standard Chandler chassis. Simple, sturdy and dependable throughout, its features embrace, as for years past, the really marvelous Chandler motor, solid cast aluminum motor base, annular ball bearings, silent chain drive for the auxiliary motor shafts, and Bosch magneto ignition.

BUILDING
WITH
FORESIGHT

THE recent addition to the factory of the New York Belting & Packing Company, of Passaic, N. J., meets an immediate need, while looking to the future as far as good judgment warrants.

For many years Lockwood, Greene & Co. have designed and supervised construction for the United States Rubber Company and its subsidiaries. This continuous service insures engineering that is guided by full knowledge gained in extended contact with the business.

This building illustrates it. In

place of columns to support the roof, steel trusses containing sash are used. The fifth floor has a clear span, with light from top and sides. Each floor has special features which fit it to the class of manufacturing conducted there.

The building terminates in the rear in a re-inforced concrete coal pocket. A conveyor carries coal from a nearby railway siding to the pocket, connecting with a second conveyor leading to the boiler room. Coal is conveyed to the pocket or direct to the boiler room, as circumstances dictate.

COMPAGNIE LOCKWOOD, GREENE, 47 AVE. DE L'OPERA, PARIS, FRANCE

of Commerce in a city of about one hundred thousand population is the medium for crystallization of the public opinion of a certain element of the population which has a very potent influence.

About twelve years ago there were many cities of twenty to fifty thousand population which had no chamber of commerce. Today it is unusual to find a town of five thousand population without a chamber of commerce. Moreover there are scores of these institutions serving villages of one thousand population. There are county and state chambers of commerce and regional chambers of commerce and there is even the United States Chamber of Commerce.

The fact is that chambers of commerce are now doing more than they ever did before and entering fields they never before dreamed of.

One cause of the tremendous broadening of their activities is that problems innumerable, immediate and unprecedented, have threatened communities and demanded solution in less time than cumbersome governmental machinery could be set in action. Men have turned to the Chamber of Commerce not because it was the best organization imaginable but because it was an available organization ready for immediate action.

But why should the Chamber of Commerce be doing so many things it never did before?

Well, there was a demand for Americanization work, for instance, and it was not exactly clear whose job that was. In some places it appeared to be nobody's job, so the Chamber of Commerce took it up because it affected the plants of the members. In other places half a dozen to two dozen organizations were more than ready to undertake the work and there was danger of bungling and expensive overlapping, so the Chamber of Commerce found itself co-ordinating the work of a large group of organizations it had never met before—and ten years ago never expected to meet.

After the armistice was declared a swarm of stock salesmen buzzed over the land trading fancy lithographing for Liberty Bonds. Washington warned; the Federal Reserve Bank warned; governors gave interviews; legislators said they would introduce new blue sky laws at the next session. But someone had to act at once, so Chambers of Commerce appointed committees which passed upon the value of these stocks and either gave the salesmen credentials or urged them to leave town.

Labor became scarce and co-operative delivery and trucking services were established.

In a few places the organized business men have presented a solid rank and fought for the "open shop" in the community's industries. This is not the place to argue the merits of such contests; I merely call attention to the fact that if anyone had proposed such a thing six years ago those who didn't laugh would have fainted. It would have been regarded as either absurd

BON-OPTO SHARPENS VISION

It's a system of treating the eyes at home; is practiced daily by hundreds of thousands of people with great satisfaction. The Bon-Opto system quickly relieves inflammation of the eyes and lids. It cleanses, soothes, and rests tired, dusty, work-strained eyes and is a help to better eyesight. Ask your druggist. He knows. He will refund your money without question, if you are dissatisfied. There is no other home eye treatment like Bon-Opto.

or horrible. And it would certainly have wrecked the organization.

The condition of public schools is a problem in nearly every American community. Ten years ago an effort by a Chamber of Commerce to better the public schools would probably have been regarded as "getting into politics." But not today. Moreover it is interesting to observe that the business men now realize how direct is the connection between schools and sales. The towns as well as nations which have the best schools buy the most goods. The reason is that the people who get the most schooling earn the most money. This is particularly true of the rural districts where the school problem is most severe.

The St. Louis Chamber of Commerce spends many thousands of dollars annually on a campaign for better rural schools, going into several states. All it asks is an invitation from its trade territory. It cannot build all the schools needed nor pay the teachers but it can translate hours in school into money in the pay envelope or crop returns in such a convincing manner that any man who will give attention will see that money spent for schools is an investment and not a donation. The big task which must be accomplished before the rural population of this country will be generous with school funds is to convince those people that schools are an asset and not a liability. The St. Louis Chamber of Commerce pitches its whole campaign on the proposition that schools pay dividends in dollars. Ten years ago this would not have been regarded as a legitimate field for Chamber of Commerce work but today it is crystal clear to the business men of St. Louis that they cannot afford to let their best trade territory degenerate in buying power.

Within fairly recent times the organized business men of some cities have attacked the profiteer. What they have accomplished and how they have tackled the problem is too long a story but the interesting fact is that they tackled it at all.

They have, in some places, struggled for honest advertising and maintained committees to prevent damage to all advertisers by the exaggerations or falsehoods of a few. Also in numerous cities today it is useless for an advertising solicitor to enter a business house until the local Chamber of Commerce has investigated the publication he represents or the proposition he submits.

Since the war there has been a startling upset in the field of organized charity. Some organizations need more money than ever before. Others ought to close up shop. Others need less than ever before. Nearly all of them are asking more than they ever asked before. There was a time when a problem like this would have sent a Chamber of Commerce committee scrambling down the fire escape. A few years ago the Chamber of Commerce would no more have entered this incipient riot than it would have invited a debate between the local ministers as a prelude to adopting an official church. But

today these charitable organizations
in scores of cities are being told kindly
but firmly:

"Tell the committee what you need
and why you need that much and what
you did with what you got last year.
Then we'll make a budget for the whole
crowd of you and raise what we think
you ought to have and give it to you."

Before passing from developments
more or less closely associated with the
war, mention should be made of what
the Pittsburgh Chamber of Commerce
is doing with the vast organization it
constructed to aid the War Industries
Board. In the Pittsburgh district, as
elsewhere, a survey was made of all
plants to learn not only what they were
making but what they could make if
it became necessary. The resultant dis-
closures are nothing less than astound-
ing. The war ended with Pittsburgh
knowing more about itself than it had
ever known before. Also there was a
sudden and terrifying end of war or-
ders. The Chamber of Commerce
stepped into the breach with a foreign
trade bureau which found out what the
whole world needed and gave the infor-
mation to Pittsburgh manufacturers.
The result was that before the last
war orders were filled foreign orders
were pouring in. The world was looking
for factories to accept orders—and
there sat Pittsburgh, knowing as no
foreign city on earth knew, just ex-
actly what it could deliver. In a short
time domestic orders fairly smothered
the foreign orders but it is none the
less true that those foreign orders were
more than welcome when they came.
No such scientific effort to get foreign
trade has ever before been made any-
where on earth. As a result of the
definite, specific facts which Pittsburgh
could furnish by return cable more than
seven hundred foreigners visited the
Pittsburgh Chamber of Commerce in the
past twelve months.

A business man recently remarked to
the writer: "Talk about soviet govern-
ment! We've got it now. The Chamber
of Commerce, the labor unions, the City
Federation of Women's Clubs, and the
public utility corporations run this
town. The officials merely rubber-stamp
the verdict. They are a small fry
crowd, too narrow-minded for present
day problems. They've been brushed
aside by unanimous consent of the peo-
ple who are doing things. When any
two of the component parts of the
soviet get into a row among themselves
they use their own weapons. To drag
the officials in on one side or the other
isn't considered fair sport."

Some of the most interesting exam-
ples of the broadening activities of
Chambers of Commerce take the form
of the organization of the members into
corporations which own and operate
properties. This form of activity has
been more prevalent in sections of the
country where there has been enor-
mous and rapid development, altho quite
a number own office buildings and con-
vention halls.

In the southwest today it is quite a
common thing for a small town Cham-
ber of Commerce to have a regular day
for making up a carload of hogs for

market. The farmers know this and come in on that day. The car probably contains hogs owned by ten different men. The whole transaction is handled by the secretary. It is also coming to be common practice for a small town Chamber of Commerce to buy a carload of pure blood swine and sell them to farm boys on credit, taking notes which are payable when the pigs are sold. In many small towns cars of perishable products are assembled by the Chamber of Commerce and shipped by the secretary who apportions the returns among the numerous farmers who contributed to fill the car. Small town Chambers of Commerce are also aiding in buying seed and other things in car lots.

A remarkable work has been done by the organized business men of New Orleans. It is what might be called a psychological triumph. So far as I know it stands unique. The only approach to it is the work of the Californians in making their state a beauty spot and a garden. New Orleans had sold herself to the world for decades as the home of Mardi Gras, historic places, gin fizzes, horse races, and a good time. Business men saw the possibilities of their port and the unrivaled trade territory back of it. They were impressed by the fact that their employees thought nothing of coming in at ten o'clock and blandly explaining that they had been to a dance the night before. The Chamber of Commerce began pounding on public opinion. Today New Orleans is not greatly altered so far as picturesque-ness is concerned, but it also has five miles of steel covered wharves, a grain elevator that handles 96,000 bushels of wheat in an hour, modern drainage and sewerage. More than 200,000 open cisterns have been destroyed and there is a modern water system. Its warehouse and terminal facilities for cotton have no equal in the world. Trade is greater than ever before. And the young men feel that they have an entirely different duty than to aid the city in being quaint.

At the annual meeting of the State Chamber of Commerce of Kansas in Hutchinson last February Colvin B. Brown, chief of the organization service bureau of the Chamber of Commerce of the United States, uttered the following sentences:

"Industry, commerce and civics should all have a place on the organization program. Careful consideration should be given to the subject of industrial relations, to improved merchandising methods, the betterment of living conditions, and to parks, playgrounds and schools. We want a contented working class, stores so excellent that they will draw all the trade in our tributary territory, and ample school facilities. And we want a city plan. Every city, no matter how small it is, should have a city plan."

There is nothing very notable about that statement today. Ten years ago such a declaration would probably have convicted its author of being "some kind of a socialist."

And yet, in those days when the Chamber of Commerce demanded iron-

McCutcheon's Fancy Linens for Summer Homes

Reg. Trade Mark

Never have we shown a more interesting collection of Fancy Linens. And in spite of the generally prevailing high prices we are able to present them at prices which represent a distinct saving, as the greater part of this assortment was purchased many months ago.

Luncheon Sets in an endless variety of styles in round, square, oval and oblong shapes. \$6.75 to 395.00 set.

Tea Cloths with Napkins to match in Italian embroidery of unusual design and workmanship. Size 36x36 and 45x45 inches.

Dinner and Luncheon Cloths, round, square and oblong in Lace, Lace and Embroidery, Mosaic and Filet Tire work.

Scarfs and Table Runners in all the required sizes. Also many odd sizes.

Tray Cloths, Tea Napkins, Centerpieces, Hem-stitched and Scalloped Damask Cloths and Napkins, Breakfast Sets, etc.

Embroidered Wedding Gifts

Beautifully monogrammed linens are dear to the heart of every bride. Orders for June delivery should be placed at once.

clad assurance that all the money was being spent where the returns would be immediate and direct, Chambers of Commerce were not so well thought of by their own members as they are today. It was not uncommon in those days to hear a member say: "Well, the Chamber of Commerce boosts the town. I guess it does some good. The secretary is a good hot air artist."

Today very little time is spent "boosting the town." The new idea is to do something definite and let the facts speak for themselves. In the pre-war days most business men had very definite ideas as to what a Chamber of Commerce should and should not do—principally the latter. Today more than ninety per cent. of the members of a Chamber of Commerce will subscribe to the statement that it should do "whatever needs to be done."

A great many business men wonder how it happens that the work of these organizations continues to increase so steadily. The careful observer will find the answer at any meeting of a strong and useful Chamber of Commerce, especially at a committee meeting. The men are assembled to do the job as quickly, as cheaply and as efficiently as possible. They shoulder the task as a burden; they have no disposition to waste words nor preen themselves because they are members of the august assemblage. They are as different from public officials as bricklayers are different from those present at a king's coronation. In this year of trouble, anxiety, turbulence, readjustment, prosperity, growth, and tremendous industrial activity, the country simply tumbles against the coat lapel of the man who can do the job and hoarsely whispers:

"Help!"

New York City

The White House Spook

(Continued from page 199)

ahead, instead of being a Ghost in our own House, shall have things that we can do, material, business things that we can do, so that we shall be able to prove to a President what we are like and what we want—so that each man of us shall feel he has something tangible he can make an impression on a President with—something more than a vague, faint, little ballot to hurl (like an Autumn leaf) at him, once in four years.

THE GHOST GETS DOWN TO BUSINESS

The main question the new President and the Ghost in the White House—the people have to face in the next four years, is the question of increased production.

The main thing that body of the people—when it gets one is going to be for is to compel the physical attention of employers and workingmen in all industries and make them work. They are only doing half work now because they do not like to bother to understand each other and work together.

The idea I have in mind in proposing that we should now nationally organize into a body of the spirit of the

NATIONAL BLANK BOOK CO., 14 Riverside, Holyoke, Mass.

people, is foreshadowed in the city of Cleveland.

The spirit of the people of Cleveland has already rebelled against being treated as a ghost—against being whoofed at by labor unions and trusts.

Always before this, when incompetent manufacturers and incompetent labor unions, for the mere reason that they had not the patience to try very hard and were incompetent to understand one another and do their job, held up the whole city—five hundred thousand people—and calmly made them pay for it, the city of Cleveland like any other city would venture to step in sweetly and look spiritual and intangible a minute, suggest wistfully that they did feel capital and labor were not being quite fair to Cleveland and would they not please stop interrupting Cleveland several million dollars a day. All that ever would come of it would be the yowls of Labor at the Ghost of Cleveland, the noble whines of manufacturers at the Ghost of Cleveland.

Cleveland was treated as if it was not there.

Cleveland now swears off from being a ghost and proposes to deal bodily and in behalf of all with its own lock-outs and its own strikes in much the same way I am hoping the nation will, according to the news in my paper this morning.

With Mr. Paul Pfeiss, an eminently competent manufacturer, recognizing the incompetence of his own group as partly responsible for the holdups practiced on the city, and with Mr. Warren S. Stone, an eminently competent labor union leader, recognizing the incompetence of his own group as being also partly responsible—with these two men, one the official representative of the Capital group, and the other the official representative of the Labor group, both championing the Public group and standing out for Cleveland against themselves taking the initiative and acting respectively as President and as Secretary of the Public Group, the Ghost of the city of Cleveland publicly swears off from being a ghost and begins precipitating a body for itself.

I do not wish to hamper my own statement of my idea of a body for the people of the United States by linking it up prematurely with a definite undertaking in Cleveland which may or may not prove to be as good as an illustration of it as I hope, but the spirit and the understanding of what has got to happen, seems to be in Cleveland—and I stop in the middle of my chapter with greetings to Paul Pfeiss and to Warren Stone. The Ghost of the People of Cleveland salutes the Ghost of the People of the United States!

WHAT A BODY FOR THE GHOST WOULD BE LIKE

I do not like—especially in speaking of a new idea—an idea I want to see embodied—to make generalized disembodied remarks.

Perhaps I might as well end this article by putting down, half as inquiry and half as suggestion, my idea of

How much does it cost to care for your lawn?

During the past two years labor conditions have reached a state where many have found it almost impossible to keep their fine lawn in the desired condition.

Not only have labor costs increased to a large extent but in many cases it has been impossible to get good help at any price.

Hence up-keep costs have doubled and trebled. Because help could not be obtained many fine lawns have had to suffer.

This year you can give your lawn the attention it requires and have the work done better and at less cost than was ever possible with hand mowers. The Ideal Power Lawn Mower will solve your grass cutting problems the same as it has for hundreds of others.

Advantages of the Ideal

The Ideal is a power mower and roller in one and the sod is rolled every time the grass is cut. This keeps it smooth, firm and free from bumps. The Ideal is scientifically designed to keep lawns in fine condition. The weight is just right for steady year around work.

The Mower has a thirty-inch cut and one man can easily mow four or five acres of grass per day at an operating expense of about fifty cents for fuel and oil.

Cuts Close to Walks, Trees and Shrubbery

Machine turns easily and will cut close up to walks, trees, flower beds and shrubbery.

When running over walks, driveways, pavements, etc., the operator simply lifts the cutting mower from the ground by means of a conveniently placed lever. This feature is also important in the early spring when it is desired to use the machine for rolling only. Simply lift up the cutting mower, add more weight if required and you have the most convenient power roller imaginable.

The success of the Ideal is due to its sturdy and powerful, yet simple, construction. No clutches or complicated parts to wear and get out of order. The Motor is built in our own shop and designed especially for the work.

Owners of large estates, public parks, golf clubs, country clubs, cemeteries, etc., are all using the Ideal Power Lawn Mower with great success.

Special Cutting Mower for Putting Greens

For work on golf courses we furnish, at slight additional cost, a special set of cutting blades for use on the putting greens. In less than five minutes the regular 30" blade can be substituted for cutting the fairway.

When desired, we also furnish, as an extra, a riding trailer which fastens to the frame and permits the operator to ride and at the same time have the same easy control as when walking.

You can secure the Ideal through your dealer direct or from our factory. Write today for catalogue and further details.

what a body for the people would be like.

The idea I have in mind is to organize the public group, the people or consumers in America, as capital and labor are organized into a body for direct action, a body for the direct self-expression of the people, to be called by some such name as The Air Line League, and setting the League to work on the scale of the Red Cross with twenty or thirty million members, to divide the members into three groups, these to follow three grand divisions or natural groups of human nature, into one or the other of which most people seem to belong.

In a democracy as full of initiative as ours, our body-economic for the people ought to be more constructively organized than our body-politic. The three subsidiary clubs or organizations of the Air Line League working as one, ought to be more forward-looking and flexible than our three-in-one American Government.

The American Government has the Executive, Legislative and Judicial divisions.

The Air Line League instead of having a legislature to plan laws and rules under which people will have to act will have an Invention or Research Council to originate constructive ideas for common action. Instead of having courts it will have a Planning and Experiment Board or a body of engineers to try ideas, to act as clearing house of ideas originated, determine which of them and in what order they shall be advertised and carried out.

The third body in both national and local matters will be the operating body which will carry the ideas out.

These three subsidiary organizations in the national body—(1) the seers or men of vision who see things to do, who offer plans of things to do (The Look Up Club), (2) the artists, engineers or executives, who try them out, pool them and tell people how to do them (The Try-Out Club), and (3) the people who put their hands to them and put them thru (The Put-Thru Clan), will correspond in their functions to the brain, the will and the hand in the human body.

The three clubs will work as one, and in each club we will deal especially with one problem—the first, Where We Are Going; the second, How to Get There, and in the third, or Put Thru Clan Getting There.

THE ISSUE THE GHOST MUST MEET

When the soldiers of the American Army we were all helping thru the Red Cross to fight the Germans, stop fighting the Germans, come home, divide off into classes and begin fighting one another, when they need us more all day every day fighting one another than they ever dreamed of needing us when they were merely fighting Germans—why should we stop helping them?

Let twenty million people—former Red Cross people, get up and say across this land in every village, town and city, that democracy shall now be made to work in all places for all of

us. And let them take steps—all of them every morning, every afternoon, getting together as they did in the Red Cross, to see to it that the whole town and everybody in it does something about it.

The people formerly active in the Red Cross have been having in the last three years the vision of backing up an army of four million men fighting for the liberties of the world. The vision that is before us now—before the same people—that we must meet and meet desperately and quickly is the vision of backing up an army of a hundred million men, women and children fighting for their own liberties in their own dooryards, fighting for the liberty to eat at their own tables, to sleep in their own beds, and to wear clothes on their backs, in the country which we have told the Germans is the greatest machinery of freedom, the greatest engine of democracy in the world.

Mount Tom, Massachusetts

Spare That Tree!

(Continued from page 201)

land and contain about one-fifth of the standing timber of the country, systems of fire protection are in practice by means of which forest fires are largely controlled. Here also timber operators are required to conform to certain logging restrictions which protect and perpetuate the forest without unduly increasing the cost of producing lumber.

A number of the states have likewise made provision for preventing and fighting forest fires, and the Federal Government is cooperating with them to the extent of paying part of the cost from a special fund provided for the purpose. The trouble is that the area which can be covered efficiently with the available funds is only a fraction of the area where protection is needed. Largely increased appropriations, both federal and state, are required to put this work on the proper basis.

We have waited too long, however, to save the situation by merely preventing further devastation. New forests have got to be established, by planting or by natural reproduction, to take the place of those which have been destroyed. Rough mountainous lands and poor lands not suited for agricultural crops must be put to growing timber under national, state or private ownership.

Some state forests have been established and the Government is committed to the policy of purchasing lands on the headwaters of navigable rivers in the White Mountains and southern Appalachians for inclusion in national forests. What has been done, however, is only a beginning. Not only is an extension of Government purchases to other regions than the eastern mountains essential to secure lands which should be restored to timber production by federal effort, but a broad policy of acquisition of land by states, for the purpose of growing timber, should be put into effect.

The One Dear Spot

EACH home has one dear spot to which it seems attuned. Sometimes it is the fireplace in the living room. Often with us Americans it is the piano corner.

What is more full of the home spirit than a group of boys and girls singing around the piano? What picture lingers longer in the memory than that of a dim-lit room with mother playing softly?

Our affections gather and grow around the piano not only because of the music it gives us, but because it is sturdily built and perfectly finished and retains its strength and beauty from one generation to the next. Automobiles grow shabby. Furniture is banished to the garret. The good piano seems never to grow old, or rather it grows old gracefully like a beautiful woman.

The makers of the finest pianos, many of them, have been building pianos for generations. They have used the same materials sometimes for generations. It is thus that Murphy Varnish has been the chosen varnish with the makers of the finest pianos in the world.

So we make fine varnishes for every use where the best is desired and will help to make a perfect whole.

When you build your new home, ask the architect to specify Murphy Varnish. Why not have the finish as perfect as that of your piano? All the little details count, all the little touches of elegance and beauty and cheeriness, in making the real home.

To Soften Your Beard

To Shave Easier, Quicker, Better

Shavaid, a new scientific preparation, will make your daily shave a pleasure. Use Shavaid before lathering. It softens the beard instantly. No rubbing in. No hot water

Home shaving is being revolutionized by this new way of softening the beard. It means an easier, quicker, more comfortable shave.

Shavaid, applied to the dry beard, softens it instantly. It makes the razor "take hold." It does away with all "pull." And it soothes the tender skin.

Simply apply a thin coating of Shavaid to the dry beard. Then apply your favorite lather. The lather stays moist and creamy.

Shave as close as you like. The old drawn, burning sensation is gone.

Shavaid makes your face feel cool and comfortable.

The daily use of Shavaid will keep your skin smooth and firm, free from the tenderness and excessive dryness which are caused by hot water and rubbing in.

Minor skin eruptions and abrasions yield quickly to Shavaid's soothing, healing influence.

TOWNSEND'S TRIPLEX

*The Greatest Grass
Cutter on Earth.
Cuts a Swath 86
inches wide.*

*Floats Over the
Uneven Ground as
a Ship Rides the
Waves.*

Drawn by one horse and operated by one man, the TRIPLEX MOWER will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost. Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horsedrawn mow-

ers with three horses and three men. One mower may be climbing a knoll, the second skimming a level and the third paring a hollow. Does not smash the grass to earth and plaster it in the mud in springtime nor crush out its life between hot rollers and hard hot ground in summer as does the motor mower.

Send for Catalogue illustrating all types of TOWNSEND MOWERS

S. P. TOWNSEND & CO.

14 Central Ave., Orange, N. J.

Nor will it suffice merely for the Federal and State Governments to extend their forests. At the present time about four-fifths of the remaining standing timber in the country is owned by private individuals. It is not to be expected that any program for federal and state acquisition, no matter how broad, will suffice to cover all of the lands which should be kept producing timber. Responsibility must be recognized by the private timber land owner, both as to the handling of the present stand of timber and as to the treatment of his land in the future.

A large part of our timber lands will always remain in private ownership. The crux of the problem of providing for the future timber needs of the country lies in the question, What is going to happen on these private timber lands? The denudation of these areas will be stopped in part by the increasing value of forest products; in part by a vigorous campaign of educating forest owners. But it cannot be remedied adequately without establishing the principle that forest owners are responsible to the public for keeping their lands productive.

In other words the task must be borne jointly by the public and the forest owner. Upon the public rests the responsibility for removing certain important causes of forest devastation. It must, for one thing, reduce and control the general fire hazard, which largely determines the risk incurred in growing young forests. It must enact and enforce laws which will largely eliminate the thousands of destructive forest fires set by the careless hunter, the automobile driver, by the railroad locomotive, and by the land owner indifferent to the property of his neighbors. For another thing, the public must readjust the burdens of forest taxation in regions where the actual effect of the property tax is to discourage greatly the growing of young forests. If the public meets its responsibilities in such respects as these, it can rightfully ask the forest owner to do his share in carrying out practicable and equitable measures in the handling of his land which will keep it at work growing timber.

In its essence the problem is a national one. It cannot be solved along the lines of purely local action. The requirements of the eastern part of the country for lumber, news print, and other manufactured products of the forest make the East of necessity dependent to a large extent on the forests of the West. This dependence is greater than it should be on account of the failure of the country to recognize sooner the importance of well distributed timber supplies and to keep land unfitted for other use at work growing timber. But that is no reason why, because of the large supplies of virgin timber still left in the far West, past history should repeat itself until the process of depletion has been extended to those forests also. The problem is just as much a national problem as that of our transportation system or our merchant marine.

In working out this national economic problem, however, there should be a joining of forces on the part of the states and the Federal Government. The function of the Federal Government should be primarily that of leadership and coordination. The most important immediate need is for fire protection on all lands either now supporting merchantable forests or already cut over but not converted to some other form of use. With fire protection alone a reasonable degree of restocking will follow, as a rule. The cost of such protection should be shared by the nation, the several states, and the private owners.

As a starting point, federal legislation should be enacted that will authorize cooperation with the individual states as they in turn pass laws and create effective organizations for fire protection on forest lands. State protective systems have been organized in the twenty-four states which are now cooperating with the Federal Government in fire protection under the Weeks law; but they should be much more extensive and provided with much more ample funds, both federal and state. Allotments of federal funds to the states should be with the stipulation that the protective system must be maintained on a level of efficiency satisfactory to the Federal Government. The requirements imposed on private owners would rest on the police power of the states and would be based on the principle that the conversion of productive lands into waste lands is injurious to the public welfare. Such further requirements, beyond that of fire protection, as may be necessary to apply this principle should be based on local conditions and on fairness and justice to the private owner. Where artificial reforestation is necessary the public should be prepared to assist. Comprehensive investigations should also be conducted by the public for adding to our present knowledge of forestry practice, to the end that forest management and utilization may be as productive and profitable as possible.

The essential thing is to recognize that there is still time to save what forests we have left and to make provision for our future needs, if we put our hands to the task vigorously and at once. Everything that can be done within the next fifty years will not result in growing more timber than the country will need. If we are not to suffer grievous consequences there must be a united effort, backed by an intelligent and general public sentiment—and an effort in which all agencies take part. This is one of the greatest questions before the American people; and it is a business question pure and simple—adequate production of an essential raw material. Production from land is just as essential as production by human labor. The idleness of 100,000,000 acres of land capable of growing timber is more serious in its ultimate consequences than strikes involving thousands of workers. Let us have no loafing acres.

Washington, D. C.

Heavens! What did I forget?

A picture much like this has hung for years in the office of many an electrical contractor. Its title is "The Successful Bidder."

There is an almost pathetic moral in this graphic representation of the biggest delusion the contractor has had to allay, namely—

That low bidding does anybody any good.

In fact, it is a question whether the speculative end of the contractor's business hasn't cost the man who accepts the bid more than he ever saved by it.

You can pay less—yes; but you will get less.

The contractor has three things to sell: skill, superintendence and materials, each with a market value that competition has pretty well standardized.

If then he is offered less than his standard of quality will meet, it is not his purse that suffers, but your job. You may not know till later that all electric wire isn't just wire, and it is the same with all electrical devices.

When you pay what the job is worth you get reliable materials, you place yourself in the preferred customer class, with first claim on your contractor's services. You fix it so he can approach the work with true artisan's enthusiasm, with ready suggestion and unselfish advice.

This may seem to run counter to the old axiom for buyers—"get the most for the least." But does it?

It is being proved pretty fast that a little extra money allowed on a contract bid buys good-will, which in turn works for you to drive a longer bargain. For you must live with or work with an electrical installation long after the estimate sheet is brown at the edges.

If you pick the right contractor, fair price will never cost you any money, but you will not always find the right contractor down at the bottom with the low bid.

Dutch Bulbs

Order your Supply Now!

Advices from big growers in Holland indicate great scarcity of bulbs this coming season and enough cannot be grown to meet the demand. To insure getting your supply send us your order at once. Until July 1st, not later, our present low prices for the choicest varieties of bulbs grown by specialists in Holland will hold good.

By ordering from us now instead of waiting until Fall, you make a large saving, get a superior quality of Bulbs not usually to be obtained at any price in this country, and have a much larger list of varieties to select from.

Hyacinths, Tulips, Narcissi, Crocus, give, for a small outlay of time and money, an abundance of flowers in the house from December until Easter, and in the garden from earliest spring until the middle of May.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

They need not be paid for until after delivery, nor taken if not satisfactory.

Write for Free Booklet

Our booklet contains descriptions and prices of almost a thousand of the choicest imported Dutch Bulbs, suitable for growing in the house or garden and the directions given make failure practically impossible.

Books for Different Moods

Mutual Introductions

We have spent much time in the last five years and we shall probably spend much more in the years to come—it is a good way to spend time—in explaining ourselves to the French and English and explaining the French and English to ourselves. It is quite a fascinating game and can be played in an endless variety of ways. It is an interesting fact that the two people who have had perhaps the best success in explaining the French to the Americans are both women: Dorothy Canfield Fisher and Edith Wharton. They both knew France well before the war, they both lived and worked there during the war and they were both eager to have their compatriots understand and love her as they did. Their methods are quite different; Mrs. Fisher succeeds better in making you love the French, Mrs. Wharton in making you admire them. Her *French Ways and Their Meaning* is a little volume of essays worth reading for pure delight in the skill with which they are written even if you have no interest in the subject matter, and worth reading for the subject matter even if you have no interest in literary skill. It is so full of paragraphs that clamor to be quoted that it is hard to pick and choose, but here is a typical one: "The world since 1914 has been like a house on fire. All the lodgers are on the stairs, in dis- habille. Their doors are swinging wide, and one gets glimpses of their furniture, revelations of their habits, and whiffs of their cooking, that a lifetime

of ordinary intercourse would not offer."

Mrs. Wharton singles out, "as typically 'French' in the best sense of that many-sided term, the qualities of *taste, reverence, continuity and intellectual honesty*," and devotes a chapter to each with a very illuminating essay on "The New Frenchwoman" thrown in. She concludes that "the best answer to every criticism of French weakness or French shortcomings is the conclusive one: *Look at the results!* Read her history, study her art, follow up the current of her ideas; then look about you, and you will see that the whole world is full of her spilt glory."

French Ways and Their Meaning, by Edith Wharton. D. Appleton & Co.

What Is a "Liberal?"

The two most violent attacks on the liberals who followed the banner of President Wilson in supporting the American cause in the great war which have yet appeared are *Liberalism in America*, by Harold Stearns, and *Untimely Papers*, by the late Randolph Bourne. Both books assume, without attempting to prove, that no consistent liberal could support the war and insist that those who did forever lost caste among progressives; having forfeited their birthright by succumbing to "war hysteria." Mr. Stearns even permits himself the unjust and ungenerous remark (p. 112) that the pro-war Socialists—he mentions particularly Messrs. Walling, Russell and Spargo—were conscious hypocrites and took the stand they did in the interest of "press

WHAT A FOG WOULD BRING TO THE BRITISH LINES

An illustration from Frederic Villiers' "Days of Glory," the sketch book of the Great War made by an artist who belongs to the "Old Guard" of war artists, those who went out to Egypt and South Africa, the Balkans and Russia as well as to the war we know. As Philip Gibbs says in a foreword to the book, "Before the camera came to the war zone Frederic Villiers was on the British and then on the French fronts, catching details of the methods of attack and defense and depicting many historic places and scenes which were changed afterwards when new weapons were introduced and when intensity of gun fire had altered the look of many landscapes. His pictures are of scenes which are reminders of days when victory was but a mirage, tempting the weakness of one's soul." Published by George H. Doran

clippings" and greed for popularity. He is not satisfied with calling his opponents fools and traitors for being unable to stomach German or Bolshevik tyranny; he must also call them cowards and knaves. This does not seem to us the true spirit of liberalism!

Mr. Bourne's book, with an identical thesis, is written in a more philosophic mood. He, too, attacks individual liberals who were not neutralist during the war, notably Professor Dewey of Columbia; but his attack is made in sorrow rather than in anger. It is the book of a too sensitive spirit, dying brokenhearted in a world that seemed hopelessly insane and misdirected. Whatever we may think of the substance of these essays there can be no question of the delicate beauty of their expression or the evidence they give of the patrician dignity and courage which marked the author's personality.

Liberalism in America, by Harold Stearns. Boni and Liveright. *Untimely Papers*, by Randolph Bourne. Huebsch.

Waters of Bitterness

Darkwater, by W. E. B. Du Bois, is a collection of essays, verse and prose sketches on the theme of race prejudice as viewed by the leader of radical negro thought in America. Whether in prose or verse, Du Bois is always master of the instrument of expression. At times, as in the "Litany at Atlanta," reprinted from *The Independent*, he rises to supreme eloquence. But his thought is not always on the same high level as his style. He appears to vacillate between two inconsistent views of the racial problem; one that the question of color is a thing indifferent, that men should be valued as individuals irrespective of race, the other, as in certain parts of his essay on "The Souls of White Folk," that the white race is exceptionally cruel and tyrannical and the negro should pride himself in not belonging to it. A poet, however, is entitled to moods; and when calm, Mr. Du Bois can think as a statesman, as witness his interesting suggestion that all tropical Africa be administered internationally as a ward of civilization until it is ready to become an independent negro state.

Darkwater, by W. E. B. Du Bois. Harcourt, Brace and Howe.

R. L. S.

At first sight George E. Brown's method of writing about Stevenson is repellent. It looks like an encyclopedia and there is something about unvarnished truth which causes the human mind instinctively to turn away. Yet, once you have braced yourself and plunged in, an encyclopedia is delightful reading and so is this *Book of R. L. S.* It contains facts about Stevenson's life, about the lives of people with whom he came into intimate contact, critical comment of his work, facts about when, where and how his various books were published, quotations from his letters and conversations which show what he himself thought of his own work; in short it contains the material of which criticism and biography

Little, Brown & Company's
NEW FICTION

A new novel by the author of "TESS OF THE STORM COUNTRY"

STORM COUNTRY POLLY

By GRACE MILLER WHITE

The opening scenes in this new novel by the author of "Tess of the Storm Country," are laid in a squatter settlement on the shore of Lake Cayuga. The situations are tensely emotional and adroitly handled, and Polly herself, crude and untaught, but beautiful in face and fine in spirit, is an adorable heroine. \$1.75 net

BOOKS To Live With

IT is no simple problem—the choice of the books that are to be our friends. Day after day we must see them upon our shelves; must make them the intimates of our lives. Of course there are books—casual acquaintances—that will meet the mood of the moment. They are the books that, once read, are cast aside. But for the

tried and true friend there must be something more. Substance, thought, style—these qualities we must find ere a volume is placed on the shelf, just within reach, to be read and re-read. The following books, chosen from an extensive list, meet these requirements. They are preeminently books to live with.

My Neighbor, The Working Man

By James Roscoe Day

Chancellor of Syracuse University

A strong and trenchant discussion of present-day social and industrial unrest.

12 mo. Cloth. Net, \$2.50, postpaid.

The Balkans. A Laboratory of History

By William M. Sloane

New Edition. Revised and Enlarged

The author has enlarged his text by something more than a quarter. The pages of the earlier editions have been revised, corrected and changed to correspond in the form of expression with the additional pages. The volume is a careful, lucid, and scholarly review of the whole Balkan question. A very valuable book for both students and general readers.

8 vo. Three maps. Cloth. In press.

Pantheistic Dilemmas

And Other Essays in Philosophy and Religion

By Henry C. Sheldon

Essays dealing with important issues in the intellectual and religious world to-day. An invaluable volume for the student of current philosophical and religious trends. Professor Sheldon's sanity of thought and clarity of statement were never more evident than in these essays.

12 mo. Cloth. Net, \$2.50, postpaid.

Public Opinion and Theology

Earl Lectures of the Pacific School of Religion

By Bishop Francis J. McConnell

All thoughtful readers will want to follow the Bishop through these illuminating and informative pages.

12 mo. Cloth. Net, \$1.50, postpaid.

The Eyes of Faith

By Lynn Harold Hough

President of Northwestern University

A keen and critical putting of the relation of experience to present-day problems of philosophy and religion.

12 mo. Cloth. Net, \$1.50, postpaid.

Some Aspects of International Christianity

The Mendenhall Lectures, Fifth Series
Delivered at De Pauw University

By John Kelman

"There are questions of the most vital importance on which every man must form an opinion. The bearings of these questions are not confined to the regions of expert knowledge; and there is a place for the impressions of the man on the street—his general sense of moral values, his common-sense view of relative importances, and the free play of his conscience upon the questions of the hour as he understands them. It is in his name and from his point of view that I have prepared these lectures."—From Author's Preface.

12 mo. Cloth. Net, \$1.00, postpaid.

Thousands of Years of Experience

In ADVERTISING will be at your disposal at the

16th Annual Convention, Associated Advertising Clubs of the World,
Indianapolis, June 6-10

Leading, successful advertisers, whose methods have won fame and prosperity for them, will assemble at this meeting, for the exchange of ideas.

Come. Bring your problems. Trade your ideas for theirs. Enrich your experience. You have had years of experience. So has each of the others who will attend. In combination, the convention will represent thousands of years of experience. Advertising. How and Now is the question which must be answered, says the program committee. Bring your ideas and advertising plans. The big Advertiser, who can afford to experiment in his search for time-, money- and labor-saving devices, will be glad to exchange his ideas for those of the local Advertiser who gets new glimpses of human nature by coming in closer contact with customers. All may benefit.

You cannot afford to be unrepresented, particularly when the bars are down again this year and membership in the Association is not essential to attending.

For further information and hotel reservations, please write or wire,

ASSOCIATED ADVERTISING CLUBS

110 West 40th Street

New York City

INDIANAPOLIS

are compounded, but the arrangement, as is much of the material, is altogether new. Instead of the usual narrative arrangement in chronological or other order, we have a book like a dictionary with heads like this for instance:

A COLLEGE MAGAZINE

The much-quoted paper which tells of Stevenson's self-training to be a writer, and of the brief career of the *Edinburgh University Magazine*, in which his maiden efforts obtained semi-private publication, was first published in *Memories and Portraits*, and may therefore be thought to be work of his thirty-seventh year. At any rate the sketch of the life and character of Robert Glasgow Brown could not very well have been written until after the latter's death in 1878. The newspaper, launched by Brown, and, "in which young gentlemen from the universities are encouraged, at so much a line, to garble facts, insult foreign nations, and calumniate private individuals" was *London*, edited by Henley on its founder's decline in health. For it Stevenson wrote many miscellaneous contributions, most of which have not been reprinted; and "New Arabian Nights" first appeared in its pages. The reminiscences of his early friends in this paper contain also the only hint in Stevenson's essays of any youthful passion. Even so it was tepid enough—the sending of a copy of the *University Magazine* to "the lady with whom my heart was at that time somewhat engaged, and who did all that in her lay to break it."

A Book of R. L. S., by George E. Brown.
Charles Scribner's Sons.

Decanterbury Pilgrims

Great battles have always roused artists to expression and the Eighteenth Amendment is no exception to the rule, but being a people naturally given to the concealment of our deepest feelings we have made a joke of prohibition. We have set forth anguish in picture, epigram and song, but so far, I believe, only one novel on the theme has been produced. It took two men to do it, Christopher Morley and Bart Haley. Perhaps it is not entirely correct to call *In the Sweet Dry and Dry* a novel, but it has two heroes, a heroine, a villain and a plot, which are the usual earmarks. It is briefer than the average novel, but its aim is higher. It is the tale of the war made by the Associate Director of the Corporation for the Perpetuation of Happiness on Bishop Chuff, "the fanatical leader of the Anti-Everything League—jocosely known as the Pan-Antis," and it is a delicious blend of perfect nonsense and gentle satire.

She turned her bright beer-brown eyes upon him gravely. "Yes," she said. "I am an alcoholic medium. It is the latest and most superior form of spiritualism. By gazing upon crystal—particularly upon an empty tumbler—I am able to throw myself into a trance in which I can communicate with departed spirits. A good drink does not die, you know; its soul hovers radiantly on the twentieth plane, and thru the occult power of a medium those who loved it in life can get in touch with it once more. Thru these trances of mine I have been privileged to put many bereaved ones in communication with their dear departed spirits."

In the Sweet Dry and Dry, by Christopher Morley and Bart Haley. Boni & Liveright.

The Largest Hotel in the World

(Continued from page 203)

contains the price, and assures the guest that the price quoted by the clerk is neither more nor less than anyone else pays for that room. A private bath, tub or shower, is furnished with every room.

Ice water, circulating in every room, is always on tap; extra-filtered, and kept at an even temperature of about 45 degrees, which is cool enough for thirst but not too cold for health. The filtering capacity, about 3000 gallons a minute, runs far in excess of the possible demand. Purity of the ice is guaranteed by its manufacture on the premises, from distilled water. Two considerations prompted the resolve to pipe drinking water to each room—the average guest hates to feel obliged to tip a bellboy for bringing a commodity as free as water; and also, when thirsty he wants a drink right away.

A full-length mirror makes it possible for one to see just how he looks, before emerging on a day of business or pleasure. Appearance counts for so much that a well-groomed person is not willing to dress in front of a hand-glass. Women guests in particular want to see in a large mirror that the bottom of their skirt hangs properly.

A dainty writing desk is always stocked with pens, ink, blotters, calendar and attractive hotel stationery—and a plentiful supply thereof. There is no bellboy to tip for stationery sent from the office after the guest arrives.

A shaded, scientific headlight beams on every pillow, so that one may relax or luxuriate by reading in bed.

The pincushion found on the dresser is also a first aid to a bachelor's wardrobe, including trousers' buttons and needles of proper size threaded with black and white thread. A man caught in the predicament of needing such things promptly and surely blesses Mr. Statler.

The closet space is ample, providing for the needs of women guests. Here, as elsewhere, the planning, building, furnishing and equipping of a Statler house must have been approved by the matron or head housekeeper, who of course has in view the requirements and preferences of women patrons.

The chamber walls rest the eye, being of a soft, neutral tint; framed pictures are few and in the best taste. A tired woman traveler or sightseer longs for three things in particular—cleanliness, silence and warmth. By reason of its great height, Hotel Pennsylvania lifts the guests from the range of street dirt and noises; and by a service method as nearly soundless as possible relieves the ears of the din than pervades most large resorts. A hot water capacity of 90,000 gallons an hour equals a per capita ration of about thirty gallons an hour for each guest—enough for a hot bath several times a day. The bathroom is kept warm, even when heat is turned off in the unoccupied bedroom.

The high cost of water

This is one reason why Quaker Oats will often cut breakfast cost ninety per cent.

Quaker Oats is only 7 per cent water. It yields 1810 calories of food per pound. Many costly foods are largely water. Note this table.

Percentage of water

In Quaker Oats	- - - -	7%	In hen's eggs	- - - -	65%
In round steak	- - - -	60%	In oysters	- - - -	88%
In veal cutlets	- - - -	68%	In tomatoes	- - - -	94%
In fish	- - - -	60%	In potatoes	- - - -	62%

The cost of your breakfasts

Here is what a breakfast serving costs in some necessary foods at this writing:

In cost per serving these other good foods run from 8 to 12 times Quaker Oats.

In cost per 1,000 calories—the energy measure of food value—they will average ten times Quaker Oats.

* * * *

Cost per serving

Dish of Quaker Oats	- - -	1c
Serving of meat	- - -	8c
Serving of fish	- - -	8c
Lamb chop	- - -	12c
Two eggs	- - -	10c

Quaker Oats is the greatest food that you can serve at breakfast. It is nearly the ideal food—almost a complete food.

Young folks need it as food for growth—older folks for vim-food.

Yet it costs only one cent per dish.

Serve the costlier foods at other meals. Start the day on this one-cent dish of the greatest food that grows.

Quaker Oats

World-famed for its flavor

Quaker Oats dominate because of the flavor. They are flaked from queen grains only—just the rich, plump, flavory oats.

We get but ten pounds from a bushel. You get this extra flavor without extra price when you ask for Quaker Oats.

SCHOOLS AND COLLEGES

Training for Authorship

Dr. Esenwein

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play, Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 10 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

The Home Correspondence School
Dept. 304 Springfield, Mass.

ESTABLISHED 1897

INCORPORATED 1904

The Summer Quarter

Courses are equivalent in educational and credit value to those offered in other quarters of the year.

The undergraduate colleges, the graduate schools and the professional schools provide courses in Arts, Literature, Science, Commerce and Administration, Education, Law, Divinity and Medicine.

Ideal place for recreation as well as study. Golf, tennis, rowing, etc. Two great parks and Lake Michigan within walking distance. Students may register for either term or both.

1st Term—June 21—July 28
2nd Term—July 29—Sept. 3

Write for complete announcement.

The University of Chicago

CHICAGO, ILLINOIS

DEAN ACADEMY

FRANKLIN, MASS. 54th YEAR

Young men and young women find here a home-like atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$350-\$450 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt. D., Principal

HOME STUDY

(28th Year)

Courses in more than 40 subjects are given by correspondence.

Address

The University of Chicago
(Div. VI) Chicago, Ill.

UNIVERSITY OF COLORADO

Boulder, Colorado, Summer Quarter, 1920

First Term, June 14 to June 21. Second Term, July 22 to August 28

In the foothills of the Rockies. Ideal conditions for summer study and recreation. Courses in Liberal Arts, Law, Medicine, Ophthalmology, Engineering and Vocational subjects. All the faculty. Eminent lecturers. Attractive courses for teachers. Living expenses reasonable. Address Registrar for catalogue.

NEW-CHURCH THEOLOGICAL SCHOOL

48 Quincy St., Cambridge, Mass.

Established 1866. Three years' course. College preparation desired. The curriculum includes systematic study of the theological writings of Emanuel Swedenborg and spiritual interpretation of the Scriptures. Courses by correspondence when desired. For catalogue and information, address

WILLIAM L. WORCESTER, President.

Mass in B Minor

LEHIGH UNIVERSITY
Bethlehem, Pa.

Each guest, on rising, finds a morning newspaper under his door, with the compliments of the house, and a cheery "Good morning" greeting on a printed slip attached. When the first Sunday paper was delivered thus, it appeared too thick to go under the door without making a slight noise, which might have disturbed the occupant sleeping late. Thereupon Mr. Statler gave orders that the doors be lifted from their hinges and the bottoms neatly planed off, to prevent the intrusion of this momentary and perhaps inaudible rustle on the Sabbath morning sleep of a tired guest.

The most original convenience is the automatic messenger called a "servidor." The sides of each guest room door, made slightly convex, bulge out like a small upright section of a huge barrel. Under these polished surfaces, with nothing but extra keyholes to look different from an ordinary door, a mechanical bellboy in the shape of a concealed cabinet receives clothing for the laundry, suits to be pressed or repaired, and other items of travel necessity. These articles, returned by the same device, await the guest before night. No bellboy intrudes on privacy, and the servitor does the rest. Laundry thus collected before 11 a. m. is back the same evening. Men's suits are taken, pressed and returned in a few minutes.

The patent ventilator, also built in the door, and operated by pressure of a button, allows a gentle current of air to flow in, and out again. Thus a window draft is avoided, yet pure air supplied in all kinds of weather and temperature.

Before a vacant room is announced ready for a new occupant, the housekeeper must put her O. K. on the standard room equipment of *unusual* articles, in proper order and amount as follows: Telephone memorandum pad, room and meal rate card, doctor card, servitor book, city maps, post cards, pen points, both stub and fine, calendar, library catalog, service codes, bachelor buttons, pin cushion with safety pins and threaded needles, candlestick, shoe cloth, valet list, medicine cabinet outfit; and other items, the total number for each guest room being sixty or more.

Hotel Pennsylvania has 2200 rooms and 2200 baths, occupying an area of about two acres, with a cubical contents of 18,000,000 feet, and a height of twenty-seven stories, three of them below the street. Among its record-breaking figures are these: A dining room 142 by 58, and five other great dining rooms for guests besides; a plumbing pipe system of 111 miles; twenty-six elevators; ice and refrigeration plant of 125 tons daily capacity; daily use in cooking of more than 50,000 cubic feet of gas; laundry washing and ironing daily more than twenty tons of table and bed linen alone; the world's largest private telephone exchange, with about 3000 stations in the house and seventy operators to handle the twenty-four hour volume of calls, which totals in a month, besides

NEW YORK Homoeopathic Medical College and Flower Hospital. Sixty-second session begins Sept. 1, 1920. Thorough instruction in Homoeopathy will be given in connection with each department. Broad Didactic Courses are supplemented by ample clinical facilities with systematic and careful bedside instruction. Address Milton J. Raisbeck, M.D., Registrar, 450 East 64th Street, New York, N. Y.

SALESMEN—City or Traveling

Experience unnecessary.

Send for list of lines and full particulars. Prepare in spare time to earn the big salary—\$2,500 to \$10,000 a year. Employment services rendered members. National Salesmen's Training Association. Dept. 190-E, Chicago, Ill.

THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York
FIFTY-FOURTH YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

the incoming, interphone and long distance calls, more than 100,000 outgoing city calls.

At the date of writing, Hotel Pennsylvania has been open to the public a little over a year. During the first year of operation it used 140,000 gallons of milk and cream, and 200,000 dozens of eggs. The weekly consumption of meat and poultry averaged sixteen tons. The daily consumption of ice cream was more than 300 gallons, with a daily bread ration of 700 loaves (150 of them weighing six pounds each) and 16,000 rolls. During the year

A "servidor" in the shape of a concealed cabinet receives clothing for the laundry, suits to be cleaned or garments to be pressed and repaired. You first phone the office—the servidor does the rest

4,000,000 meals were ordered in the main dining room, café, roof garden, lunch room, grill room, women's grill room, private banquet halls, and employees' restaurant.

The number of guests averages 2800 to 3000 a day, with over 2000 employees to serve them. In one night 3282 guests have been accommodated—nearly a thousand more than the previous world's record, which was beaten six times in the first year by Hotel Pennsylvania. So popular has the place become that 99.4 per cent of the guest capacity is required daily, with many people turned away, and some holding reservations as long as four months in advance, to be sure of the rooms desired.

In the history of the world no such phenomenal patronage ever was accorded a hotel in its first year by the traveling public. Nor has the first year's record of any other business, to our knowledge, begun to equal this. And of the five great hotels now managed by Statler, the Pennsylvania does 40 per cent of the total volume of trade. Why this overwhelming popularity? We mention five main causes: home atmosphere, personal touch, business management, open mind, and a square deal.

"It's quite a secret," said Maureen. "but I was married last week to Pat Sullivan." Jane—"Indeed, I should have thought you'd be the last person in the world to marry him."

"Well, I hope I am."—*New York Globe.*

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

- I. Aspiration. By Edwina Pope Larimer.
 1. Invent a short story that will illustrate the thought of the poem.
 2. Read the poem aloud in such a way that you will emphasize its thought.
- II. Spring Days in the Valley. By Corra Harris.
 1. Point out, name, and explain at least five figures of speech in the article.
 2. Tell, in simple language, exactly what spring days mean to people in the "Valley."
- III. A Message from the United States Government to the American People. Spare That Tree! By W. B. Greeley.
 1. Write a paragraph of contrast on the forest condition of the past and the forest condition of the present.
 2. Write a series of short, numbered sentences that give directions for remedying present forest conditions.

IV. Master Workshops of America. The Largest Hotel in the World. By Edward Earle Purinton.

1. After you have read the article write an answer to the question that opens the first paragraph.
 2. Tell the story of the life of Mr. Statler, telling it in such a way that you will emphasize, at every step, the reasons for his success.
 3. Explain how the proprietor of a small store could apply Mr. Statler's principles as a means of gaining success.
 4. Give clear, logical reasons for believing the following sentence true or not true: "A first class man wants outlook more than income."
 5. Invent an anecdote that will illustrate the following sentence: "It is easier to find money than the man to spend it right."
- V. A Message from the French Government to the American People. In Memory of the Marne. By the Hon. Rene Viviani.

1. Explain why it is peculiarly appropriate to erect a statue on the Marne.
2. What is the full meaning of the last paragraph?
3. Read aloud the entire article, reading it with a spirit that would please its author.

VI. The White House Spook. By Gerald Stanley Lee.

1. Explain the figure of speech upon which the entire article is based.
2. Use the seven "idiosyncrasies" of the "employer" as titles for an equal number of short items. Write detailed instances, real or imaginary, that will illustrate the "idiosyncrasies."
3. What is the purpose of the article?
4. Explain clearly the constructive suggestions the author gives.
5. What criticism is conveyed in the following sentences: "Business talks bass. Patriotism is an Aeolian harp."
6. Explain the value of the words, "colossal," "tragic," and "Adolescent" as used in the following sentence: "We are the world's colossal tragic Adolescent."

VII. Let the Chamber of Commerce Do It. By Chester T. Crowell.

1. Draw from the article a series of statements concerning the functions of a Chamber of Commerce.
2. Tell, orally, any anecdote that will illustrate the growing importance of the Chamber of Commerce.
3. Write an original account of the work of the Chamber of Commerce in your own city.

VIII. The Ideal Store. By Edward Filene.

1. Give a talk in which you explain clearly every one of the seven elements needed to make an ideal store.

IX. Six Rules for Success. By Charles M. Schwab.

1. Write, for your school paper, an editorial article founded on Mr. Schwab's rules, but concerning school life alone.

X. The Story of the Week.

1. Point out, and explain, the different methods of writing titles.

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Presidential Issues and the Candidates — "The White House Spook," "The Republican Presidential Primaries," "The Rising Star of Johnson," "The Democrats and the Covenant," "The Candidate Belt."

1. What does Mr. Lee mean by calling "the Public" a "Ghost"? Does his article help you to explain why the issues in the coming Presidential election are not more clearly defined?
2. Explain what Mr. Lee means by saying that the public should be organized into three great clans.
3. What significance do you attach to the strength developed by Senator Johnson in the primaries? Why has Johnson practically no chance of receiving the nomination?
4. Why has no Democrat thus far developed decided strength as a possible Presidential nominee?

II. Master Workshops of America.

1. In what sense is it justifiable to classify a hotel as a workshop?
2. "It took . . . Statler about forty-five years to get ready for his life work." Recount the steps in his career. Mention some other Americans whose careers have been similar to his.
3. What are some of the devices which make Mr. Statler's hotels a success?
4. Apply the principles indicated in this article to some other industry or commercial institution.

III. Let the Chamber of Commerce Do It.

1. How do you account for the development of effective Chambers of Commerce in so many American cities?
2. ". . . the modern Chamber of Commerce . . . is the medium for crystallization of public opinion," etc. Are there any limitations on this statement?
3. Make a list of the various activities of the Chambers of Commerce as described by Mr. Crowell.
4. "Industry, commerce and civics should all have a place on the organization program." Mention some of the problems under these headings with which a Chamber of Commerce might properly deal.

IV. Conservation of National Resources—"Spare That Tree!"

1. Look up the history of the conservation movement during the ten or twelve years before the outbreak of the war. Who were the men chiefly responsible for this movement?
2. Give a brief sketch of the progress of deforestation in this country. What has been the economic result?
3. What measures for forest protection have been taken in your state? What further measures are necessary?

V. Russia and Her Enemies—"The Russian Reign of Terror," "Bolsheviki Take Baku," "Poles Invade Ukraine," "Strife Over Siberian Railroads."

1. Will future historians find excuses for the Russian Reign of Terror as we now find excuses for the Reign of Terror in the French Revolution?
2. "The Red troops entered Baku on April 28 . . ." "This is a momentous and portentous event for several reasons." What are these reasons?
3. Why are the Poles making their present drive on Kiev?
4. Are the Japanese justified in attempting to capture the railroad of Eastern Siberia?

VI. The Near Eastern Problem—"The Turkish Problem," "Armenia and America."

1. How many times in the last 125 years have the European nations attempted to settle the Turkish problem?
2. How do the Allies propose to settle the problem now? What are the chances that this proposed settlement will be satisfactory?
3. Is there any reason why the United States should accept a "mandate" in Armenia?
4. Read the statement of Mr. Straus and of General Bullard. With which one do you agree?

New Plays

Honey Girl revives the famous melodrama of "Checkers" in a musical comedy notable chiefly for the "pep" of its songs and dancing. Just the thing for the lonely T. B. M. in summer. (Cohan & Harris Theater.)

The Hottentot, by Victor Mapes and William Collier. A horse-racing farce which serves as this year's vehicle for proving that "Willie" Collier is America's greatest comedian. Side-splitting and button bursting. (George M. Cohan's Theater.)

Marlowe and Sothern's revival of *Twelfth Night*, *The Taming of the Shrew* and *Hamlet*. Best staged and played Shakespearean production to be seen in the United States. As this may be the last American tour of these prominent Shakespearean players, don't miss the opportunity of seeing them. (Shubert Theater.)

The Girl from Home—a Richard Harding Davis plot, a dozen songs destined to considerable popularity, extravagant R. H. Burnside setting, several dances of unusual charm, and, most important, Frank Craven's unexcelled ability to get genuine fun out of any situation. The result is one of the six best musical comedies of the season. (Globe Theater.)

Remarkable Remarks

CLEMENCEAU—All I want is to be left alone.

THE PRINCE OF WALES—I am one of the people.

BISHOP RUINELANDER—There is evident a definitely anti-Christian drift.

ED. HOWE—I wish to God we were back to our good old days of "gross materialism."

HOWARD BRUBAKER—What is Poland going to have for a government now? A pianola?

GEORGE W. TRUETT—No man and no nation can play Robinson Crusoe and get by with it.

THEATRICAL MANAGER CHARLES B. COCHRAN—The British theater is a hotbed of snobbery.

RABBI STEPHEN H. WISE—Write to your Representatives in Congress, if you think you have any.

MRS. G. CICCOLINI—Why don't you marry an Italian tenor. They make wonderful husbands.

CORRA HARRIS—This is a very dangerous time of year for all humans stirred by the courting instinct.

GENERAL WOOD—There is no one living in America today who is more opposed to militarism than I am.

REV. DR. STRATON—New York is a feverish, unbrotherly, overwrought, sab-bath-desecrating, God-defying, woman-de-

Independent Opinions

Dear Editor:

I read with great appreciation your list of "dry" candidates in reply to the "wet" list submitted by Al K. Hall, whose name sounds rather *nom de plumage* as it were.

But these are both weak tickets. To obtain a strong administration after the next election we should have the services of men of rank (not rank men); men whose very names are a guarantee of their divine right to rule.

I venture therefore to present a ticket whose personnel will command respect in the most aristocratic courts of Europe:

President, Don Marquis.

Vice-President, Thomas R. Marshall.

Secretary of State, E. S. Keyser.

Secretary of the Treasury, Royal Cor-
tissoz.

Secretary of War, Governor E. W. Major

Secretary of the Navy—Admiral A. M.
Knight.

Attorney-General, Henry Churchill King.

Postmaster-General, Chester S. Lord.

Secretary of the Interior, Joseph Bucklin
Bishop.

Secretary of Agriculture, Thomas Nelson
Page.

Secretary of Commerce, James B. Duke.

Secretary of Labor, Lyman Abbott.

Very truly yours,

H. I. S. KNIBBS.

Much impressed as we are by the imposing array of names suggested by our correspondent we must express a preference for a ticket more consonant with the simple, democratic institutions of the country; on which, as says the poet, we shall have never a noble nor lineage counted great, but fishers and choppers and plowmen shall constitute a state:

President, Dr. Frederick A. Cook.

Vice-President, Nicholas Murray Butler.

Secretary of State, Governor Alfred
Smith.

Secretary of the Treasury, Prof. Howard
James Banker.

Secretary of War, Newton D. Baker.

Secretary of the Navy, Henry Bowman
Seaman.

Attorney-General, Thomas W. Butcher.

Postmaster-General, Congressman John
F. Miller.

Secretary of the Interior, Edward G.
Miner.

Secretary of Agriculture, Judge William
M. Farmer.

Secretary of Commerce, Prof. Irving
Fisher.

Secretary of Labor, Robert Hunter.

spising, law-breaking, gluttonous monster without ideals or restraint.

REPRESENTATIVE SLANTS—Senator Knox is perhaps the leading outstanding character in the United States.

Gorham Silverware

The Part It Plays in Family Life

INTO the texture of a woman's thoughts of treasured things, is woven an imperishable strain of love for her *silverware*. To her, it stands as a reflection of all that is best in home and hospitality—steadfastness, utility, refinement. What table is ever so inviting as when laid with *silver*! What buffet so admirable as when the lustrous glisten of *silverware* adds the final touch to its sturdy beauty! *Silver* today, as in generations past, is a symbol of family pride, honor, tradition—an incomparable essential in the dining room of any well-appointed home.

Three Strikes—And Out

A Message from the United States Government to the American People

By Mitchell Palmer

Attorney General of the United States

WHEN men contend for higher wages and better working conditions because these things are necessary to a higher standard of living, and, after exhausting all other means, resort to a peaceful strike as a medium of enforcing their just demands, public opinion and public sympathy can almost surely be relied upon to aid them in carrying their fight to a successful issue.

The public is even willing to suffer discomfort and loss in order that the right may triumph in an issue where the public believes capital is oppressing labor or failing to give to labor a fair share of the wealth it produces.

It is the history of all strikes won that they were backed by public opinion and supported by public sympathy, and it is an axiom among honest and clear-visioned labor leaders that no strike can be successful unless the public is first won over to the side of the strikers, and their unfailing advice to men with grievances is first to be sure of the public attitude, and if that is right, then go ahead.

Recently in our country three great strikes have been promoted which have utterly failed to carry on in the sense of aiding the strikers or their fellow workers in enforcing any demands that could not have been better gained by other means, and which not only failed to arouse public sympathy and support, but on the contrary were met by bitter hostility on the part of the people, and aggressive volunteer activity directed against the strikers and their cause.

In each of these strikes the Government was forced to intervene on behalf of the people because the people were the chief sufferers of ill-ordered and ill-advised moves which created artificial conditions in industry as the cloak to ultra-radical and revolutionary manifestations to promote unrest and discontent.

The Government was in no position to dictate the unfriendly attitude on the part of the people toward the strikes, nor did it blindly follow popular opinion in instituting inquiries into the underlying causes of the strikes, and exposing the true motives behind these radical movements. Public opinion was formed before the Government's activities became known, and it was simply another apt illustration of the impossibility of fooling all the people at any time.

While the trend of public opinion killed in advance any possible chance of success of the strikes as true mediums of advancing the cause of the workers in the steel industry, the bituminous coal mines or on the railways, they might still have served the selfish purposes of the chief promoters of such industrial disorder—the fomenting of revolution against the established government by disjoining industry and bringing suffering and want in the wake of unemployment—if the Department of Justice had not quickly penetrated the thin guise under which the red radicals and revolutionists were operating, and brought the truth home to the workers themselves, that they were being exploited thru ulterior motives and with no chance of ultimate benefit to themselves.

These strikes might have dragged their weary lengths thru days, weeks and months of suffering and untold loss to the people if the Government had held back thru cowardice or favor, willing that its hands should be tied for fear that some action on its part might offend labor, when in fact organized labor itself was the chief sufferer and likely to be dragged down from its high estate and torn asunder by the anarchists and revolutionists whose only hope of their “one big union” of revolution lies in the destruction of organized labor as it is known to this country today.

All three of these radical movements were launched along lines directly related to the common industry of the country in the hope of so crippling all its related branches that the “one big union” would appeal to the workers as the only practical solution of the difficulties in which they would have eventually been sure to find themselves had the Government and the people permitted them to be carried to their ultimate and avowed ends.

The steel strike was the first of these manifestations, and outwardly appeared to have the merit of a movement to organize the steel workers and gain for them the advantage of collective bargaining and agreements affecting wages [Continued on page 266

Time to put his foot down

The Man With the Best Story Wins

Which Explains Why Pitiless Publicity Looms So Large in the Presidential Campaign

By Richard Boeckel

Illustrations by W. C. Morris

TUESDAY November 2, the voters, men and women, will go to the polls and elect a President of the United States. Very few will be personally acquainted with the man for whom they vote. Comparatively few will ever have laid eyes on him. And yet they will know him . . . better perhaps than their next door neighbor.

They will know where he was born and when and what he looked like in his earliest pictures. They will know what he looks like today and what he has been doing all these years. They will know his wife and his family. They will know to what church he goes and how often. They will know what he thinks . . . of prohibition, of the Bolsheviki, foreign and domestic, of the League of Nations and of Mr. Wilson. All these and many more things they will know.

The number of citizens who will vote for this candidate because he is a Republican or that candidate because he is a Democrat this year will be smaller than ever. The overwhelming majority are going to cast their ballots on the basis of what they know about the candidate . . . about his principles and his personality, his record and his promises.

This year the man with the best story wins.

It must be a good story and it must be a true story, for no falsehood will long survive in the 1920 model campaign. The job of telling it—telling it and re-telling it to every voter in the language he best understands—falls to the publicity agent.

The publicity man is this year's president maker.

Not one in ten thousand of those who go to the polls will have any notion of the organization that has been necessary and the time, effort and money expended to

unique in political history. Secret plans as to the methods to be pursued in educating the voters have been in preparation for many months at the headquarters of the two great parties. Some steps have already been taken. The publicity organizations are not waiting for the formal opening of the campaign to begin their efforts to convince the public that a Republican is more desirable than a Democratic administration for the next four years and vice versa.

The ground work is being laid now.

As to candidates the national publicity bureaus are strictly neutral, and must remain so until after the nominating conventions. Each aspirant for the nomination in either party has his own publicity agent and these men are getting in their licks now to influence the voters in the preferential primaries. After the conventions the publicity organizations of the successful candidates will be taken over bodily to augment the standing forces of the parties and the real work of electing the next president will begin.

Country editors will find their "boiler plate" matter unusually heavy now

Of all available mediums for educating the voters uncontestedly the best is the newspaper. Therefore, the weightiest of the secret designs have to do with getting the maximum of newspaper space and using it to the best possible advantage.

In this endeavor the political press agent has an advantage over his fellows, for the mortality rate of political publicity is lower than that of any other sort. The impulse of the editor is to print it, if he can find anything that looks like news in the "handouts" of the party his paper supports. His impulse toward non-political publicity is to consign it to the waste basket unread.

To all of the larger newspapers there will go every day during the campaign a news letter from each of the party publicity organizations. If a favorable story originates in Washington it will be wired to New York, thence to Chicago, St. Louis, Denver, San Francisco

The sower

and in each of these cities it will be mimeographed and distributed to the newspaper offices by local committees. Newspapers willing to pay the tolls may have a telegraphic service from the nearest distributing point. The organization of this part of the work is very similar to that of the great news distributing agencies.

For the newspapers in smaller cities there will be tri-weekly and weekly news letters and clip sheets carrying paragraphs and editorials favorable to the party and its candidate. Often a point can be better brought out in a picture than in any number of words, and so there is in addition a cartoon service. The cartoons are drawn to order and sent thru the mails in mat form. The mats need only to be fixed in the casting box and have hot metal poured upon them to reproduce the original cut.

For the country weeklies there is the free boiler plate or "canned news" service. The advantage of having a story cast in plates is that it cannot be changed. The editor, if he uses it at all, must use it as it is written. Usually it is welcomed as space filler for the inside pages. The plates are mounted on the standard bases, with which every small newspaper office is equipped, and set in the forms with the local news.

Boiler plate is a tested and proved publicity device. Skillfully used by Mark Hanna, it is reputed to have given McKinley his start toward the presidency. By having special writers attack McKinley's tariff views in one set of plates and defend them in the next, Hanna made the tariff the "vital issue" and McKinley the logical candidate.

These are the methods of the sowers of political publicity . . .

the men who scatter news-letters, cartoons and boiler-plate broadcast across the country, using enough stamps in the process to paper the Waldorf and enough expressage to move it to San Francisco. In addition there are the publicity planters, who use a very different method. The planter very carefully develops his story before he sets it out. When satisfied that it is a perfect piece of work, he plants it in one metropolitan newspaper office and fertilizes it with a guarantee that it is "exclusive." It may go also to one newspaper in each of the larger cities, but usually it doesn't.

One of these publicity strategists walked away with two and a half pages in the New York Sun the other day, with a carefully detailed story of the senatorial

It all goes into the public ear

situation in each state. He had worked upon it two weeks and was rewarded after it had been published by seeing it reprinted thruout the country.

Spoken publicity comes next in importance to newspaper publicity as a medium for educating the voters. It is more convincing, but less important because it cannot reach all of the voters. Hundreds of speakers volunteer their services and hundreds of others are employed. The task of managing the whole of them—picking the right speaker for the right place, arranging the meeting, getting him there on time and away and to the next place on time—is so difficult that it is given by each of the parties to a separate bureau.

The candidate on his swings of the circle and the nationally known orators are routed by the national committee, itself, but the Speakers' Bureau handles all the rest and in making them work to best advantage it has the cooperation of the Press Bureau.

The important speakers—cabinet members, senators and the like—know what to tell their audiences and what is best left unsaid, but those less intimately in touch with national headquarters usually do not. It is for their guidance, and also that of editors, that the Press Bureau publishes the party text book, or "campaign bible."

These books have long been in preparation in Washington by both parties, under the direction of skilled newspaper men. Thousands of pages on the records of the parties and their claims to consideration have already been written and undergone the boiling process. The text books are held until after the national conventions so that they may carry the party platform, the keynote speech, the nominee's speech of acceptance and his biography. The publicity bureaus have only four months to do their work, and four years to regret it if the work is not well done.

The first requisite to being elected President, in this new age of publicity, is to have a story of the kind that will appeal to the people, the second is to have the kind of a press organization that will get the story to them. The publicity bureaus of the two great parties are about evenly matched. As a result of their efforts the people will be more intimately acquainted with the next man to enter the White House than with any previous President at the beginning of his term of office.

If He Were President

The Independent Series of Articles on Some Likely Candidates for 1920, Presenting the Views of Leading Republicans and Democrats on the Vital Issues of Today

Nicholas Murray Butler

Including an Interview with the President of Columbia University

By Donald Wilhelm

ONLY a short time ago, politically, every college president had great honor in his own country. But now the fashion has changed. Dr. Nicholas Murray Butler, whose opinion bears more weight in Republican councils than is generally supposed, has done no small part—consistently, too, when one strives a little to interpret his point of view—to lessen the popularity of the present war President, behind whom the Republic massed and moved all its forces, with great accumulations to his popularity, while the war was on. But strange as it may seem, tho the doctor is a Republican, the recoil jars him. Why? For the very simple reason that he *is* a college president, and Mr. Wilson *was* a college president. The country wants no more college presidents in the White House. Democrats will so tell you. And so far has the pendulum swung, that, without question, much of the current popularity of General Wood, for instance, rests on the presumption that he is like Colonel Roosevelt, who was the antithesis of the college president.

And now comes Dr. Butler, president of a university vastly larger than the one over which Dr. Wilson presided, and, viewed politically, an alarmingly successful president, one who has got all the honors the world has

to bestow. He has waited all his life for the propitious political moment. His hopes grew, despite the woful results that accrued, when he ran as Vice-President with Mr. Taft, while Dr. Wilson thrived. But now the wraith of Dr. Wilson ill pursues him—howsoever logical Judge John R. Davies, executive head of the Nicholas Murray Butler Campaign Committee, presumes the American people to be. Says he:

"The one adverse comment that has reached us is that Dr. Butler is a college president and that the people have had enough of college presidents since their experience with Dr. Wilson. This inference is interesting but irrelevant. It represents the widespread resentment of the American people at Dr. Wilson's personal attitude and personal policies, especially as these have developed during the past two years."

"It is," I suggested, "an objection made not against Dr. Butler but against Dr. Wilson?"

"Of course. And we are not proposing to nominate Dr. Wilson."

"Of course not, but——"

"—but the analogy doesn't hold."

"Of course not, but Dr. Butler *is* a college president!"

"But Dr. Wilson is also a member of the bar. And are all competent lawyers to be disqualified for the Presidency on that account? Of course not! Dr. Wilson was also a Governor. Is that fact to dispose of Governor Coolidge, Governor Lowden, Governor Burnquist? Dr. Wilson is also Commander-in-Chief of the Army of the United States; but is that fact to put a damper on the efforts of friends of General Pershing and General Wood?"

The Judge then proceeded, with despatch, to conclusions:

"Any argument based on a man's occupation," he said, "is ridiculous and silly. No sharper contrast can well be imagined either personally or politically than that between Dr. Wilson and Dr. Butler. Dr. Wilson was a notable failure at the head of even a relatively small institution like Princeton; Dr. Butler has been a notable success at the head of a huge institution, Columbia. Dr. Wilson has always been afraid of strong men as counsellors and associates and has played a lone hand in his professional and political work. Dr. Butler, on the contrary, has always surrounded himself with strong men, is the friend of some of the strongest men of this country and Europe, is exceptionally coöperative in his methods of work, and has drawn about him at Columbia the strongest group of educational administrators to be found in any university in the world. Dr. Wilson is naturally a doctrinaire, with no executive capacity; Dr. Butler is naturally a man of affairs, of large business and long executive experience, and whereas Dr. Wilson approaches every question from the standpoint of theory, like a school teacher, Dr. Butler approaches every question from the standpoint of prac-

Paul Thompson

During the first term of President McKinley, Dr. Butler, then a young man, was urged to embark upon a political career, but he chose to go to Europe instead, after having received three degrees at Columbia, and eventually was accorded an Oxford gown, an honorary degree from Breslau University and various other distinctions

tical facts, as a business man must. To attempt to transfer to Dr. Butler the animosities which Dr. Wilson justly has attracted is comic rather than serious."

Whereupon you go and cite this argument to eight or nine voters of both parties, and then, distilling the essence of their ebullience you find about this: "Yessir, it's all comic rather than serious, but the joke is on Dr. Butler."

"But," you remonstrate, "somewhere in these United States there is a poor, lone man who is going to be the next Vice-President, and if you are going to rule out all college presidents from the White House because Dr. Wilson was a college president, it would probably seem in order to rule out all college presidents from the Vice Presidency."

"You're right!" exclaims Mr. Businessman. "It's the era of the business man we're facing. No more professors for us!"

Now, it may as well be pointed out that one of Dr. Butler's ablest promoters solemnly averred that the president of Columbia would be chosen as the Republican nominee by the first ballot (or was it the second? One gets a little confounded by so many promoters who have it all worked out). He says, thus, that another college president is thus to be chosen, and, being chosen, since this of course, all Republicans agree, is a Republican year, will be elected. It seems that the three major groups without whose support a candidate will have trouble getting elected—women (even if the suffrage amendment is not ratified in time, enough states have of themselves accorded women at least presidential suffrage to make them probably the most powerful balance-of-power group in the campaign), labor and the farmers—all will support Dr. Butler. Yet Dr. Butler is not on the honor roll of the suffrage organizations, nor has labor any reason to support him, tho some local labor leaders aver they will, except such reason as liberal statements concerning labor that he has made; nor have farmers. Nor does the supposition tacitly accepted everywhere, that the next President no doubt will be one who during the war performed great achievements, distinctive achievements of tangible, demonstrable worth, quite apply. However, one man writes this, there are 110,000,000 persons in America, and Dr. Butler is not a novitiate in American politics.

Dr. Butler has been raised in the tradition of Republican politics, having been born, in 1863, in New Jersey, as a member of a political family, his father having been chairman, first of his County Committee, then of his State Committee. In due time the young Mr. Butler was urged to embark upon a political career by no less a person than his neighbor, Garrett A. Hobart, then one of the most powerful Republican leaders in New Jersey, later, during the first term of President McKinley, Vice-President of the United States. It was Mr. Hobart's suggestion that "Murray," as he was called, should become a candidate for the New Jersey Assembly. But Mr. Butler went to Europe instead, after having got three degrees and various other honors at Columbia, for further work, and eventually not only was accorded an Oxford gown but an honorary degree from Breslau University, along with more distinctions than there is space for here. Running on down thru the years, he was made president of Columbia in 1902 and is to be accorded the central credit for having made Columbia the tremendous educational force that it is. Which fact is not to be made light of, for the slightest study of Columbia makes clear that it is what it is—a business organization of corporations representing \$70,000,000 capital—in large part because of the extremely successful conduct of its business as well as its educational affairs. In the passing years not only was

Paul Thompson

Altho Dr. Butler has been president of Columbia University since 1902, he has also found time to attend the Republican National Conventions of 1904, 1912 and 1916, and to run, as candidate for the Vice Presidency, with Mr. Taft, in 1912

telephone than any other man in New York City—but in actuality, has he, in many ways, exercised a large influence in national Republican politics, something of the nature of the influence that Elihu Root exerts, and an even larger influence in the political procedure of New York State. That is why many of the relative few who recognize the extent of that influence and realize how conclusively he has refused to let that influence encroach ruinously on his interests in Columbia, point out that, if he is not likely to receive the Republican nomination, on the first ballot, or any ballot, he could be used advantageously to hold in line New York State, without which success is virtually impossible, and might therefore profitably be considered as a running mate to a choice from the West—Governor Lowden, for instance, or Mr. Hoover, or Mr. Johnson. Moreover, it is pointed out, while the Democrats are adducing two New Yorkers, Mr. McAdoo and Mr. Gerard, it is in line to keep New York Republicans headed-up to some individual.

Assuming, now, that he is chosen to be the Republican nominee on the first ballot, or, to be Vice-President, what sort of President would Dr. Butler be?

It seems to the writer that his great contribution would be temperamental stiffness and force plus his interpretation of democracy. It may be granted that he could not possibly dramatize himself as well as Colonel Roosevelt did, as Mr. Wilson [Continued on page 269

he chairman of the Administrative Board of the International Congress of Arts and Sciences in 1904, chairman of the Lake Mohonk Conference of International Arbitration for five years and president of the American branch of Conciliation Internationale, trustee of the Carnegie Foundation for the Advancement of Teaching, of the Carnegie Endowment for International Peace, Officier, then Commandeur de Legion d'Honneur; Commander of the Order of Red Eagle (with star) of Prussia; author, but, more to the point here, a delegate to the Republican National Conventions of 1888, 1904, 1912, 1916, and chairman of the New York Republican convention in 1912. He ran as candidate for the Vice Presidency with Mr. Taft in 1912, in which campaign he and Mr. Taft received—that year when the Progressives split off from the G. O. P. on the score of their resentment against "steam rolling" by the Old Guard—exactly eight electoral votes—fewer than have been given any pair of major candidates in generations.

Now, reading between the lines, you may safely imagine that Dr. Butler is no novitiate in politics for reason of the facts set forth above. Indeed, not only, via telephone—he is said to accomplish more by

Lest We Forget!

A Message from the Italian Government to the American People

By Colonel V. di Bernezzo

NOW that the world conflict has closed with the victory of those peoples who fought for the triumph of liberty and justice, we often notice, in the turmoil of questions and discussions which the war has brought in its wake, views and opinions which are in contrast with the facts.

It is grievous for us to realize that the great contribution of Italy and her armies has not always been justly appreciated. We find that to political factors are attributed results which were the fruit of long and hard years of tenacious military efforts on the part of the Italian army, and were the direct consequence of a great victory won in the open field.

A short time ago a United States Bulletin, in an article on the Adriatic question, contained the following statements: "... The real truth is that the President believes the Yugo-Slavs to have been a great factor in the winning of the war. ...

"... It was the rising of the Yugo-Slavs and others in Austria, and the Socialists in Germany, which created internal revolutions in the Central Powers which really brought the war to an end. ...

"... He (the President) feels that the greatest debt of all is owed to those small, new nations which put Austria, and later Germany, out of the running."

I do not want to discuss what is said concerning the influence the German Socialists may have exerted in the internal upheavals of the country, and upon the fighting power of the German army. I will also not discuss what influence the upheavals of the peoples of various nationalities may have exerted upon the Austro-Hungarian monarchy. The point that needs to be emphasized is that, as to the influence these upheavals may or may not have had upon the Austro-Hungarian army fighting on the Italian front, nothing is more inexact than the assertion made above.

It has been ascertained that, from the beginning of the last offensive, October 24, 1918, and up to the end of the great battle which destroyed both the Austro-Hungarian army and its empire, all prisoners taken, even those of high rank, knew nothing of the internal upheavals which, as a consequence of our vigorous offensive, were troubling the peoples and the government of the monarchy. Up to the very last days of the war, Austria had succeeded in placing an insurmountable barrier between the army and the in-

terior. One can therefore affirm in the most positive way that internal dissolution did not have, and could not have had, any influence upon the fighting spirit of the Austrian army. A perusal of the Austrian bulletins from October 24 on will show the stubbornness and the ferocity of the fight. Even in the bulletin of October 29 the Supreme Austro-Hungarian Command places great stress on the strong, stubborn resistance which their troops have opposed to our furious attacks.

To avoid defeat, to save the nation, to tide and break our irresistible impetus, Austro-Hungarian chiefs and soldiers gave, up to the last minute, their souls, minds and hearts—all of their energies. During battle, the reserves were lavishly employed so as to retard, as much as possible, our advance. But the enemy was outmatched also in the tactical field. Being prematurely preoccupied with our progress towards Sacile and upon the Asiago Plateau, they could not withstand the attacks in the principal sectors: Vittorio Veneto, Val Sugana, Val Lagarine.

No doubt our moral superiority, which had become greater after the magnificent resistance on the Piave in the month of June, had its influence upon the cohesion of the enemy troops. But the desperate defense of the first line troops and the stubborn resistance encountered all thru the battle proved that the enemy was defeated only by the generous impetus and the sacrifice of our soldiers, and that the ruin of its army has been determined by the irresistible advance which destroyed all its plans.

Another opinion which is necessary to disprove, since it is absolutely contrary to the truth, is that the subject nationalities of Austria, yearning towards freedom from the yoke of the Hapsburgs, either deserted from the Austrian army, or refused to fight. This is true, as regards the soldiers of some nationalities, such as those belonging to the unredeemed Italian lands, the Czechoslovaks, the Rumanians and the Pol-

ish. With all the means at their disposal, these tried to free themselves from the necessity of fighting for Austria. Toward the close of the war these men, by uniting together prisoners and deserters, formed special groups, such as the Czechoslovak division, and fought bravely against the Austrians. But the same cannot be said in favor of those belonging to other nationalities [Continued on page 265]

The Sabotage of Capitalism

By Norman Hapgood

IT was in 1888 that Sir William Vernon Harcourt said, "We are all Socialists now." Socialism is one of those words that easily mean anything, from Harcourt's liberalism to Bill Haywood's dictatorship of the proletariat. When I was a boy, the very word was spoken in hushed tones. It was sure to startle and alarm. It is still in bad standing with us, but in Europe there is likely to be more enlightenment in the Socialist parties than in the others. Those parties that call themselves by some other name take positions that nearly all prosperous Americans would call socialistic. Lord Robert Cecil is the essence of Toryism at its best, but when he comes out for a partnership between labor and capital he means a real partnership; he is too honest a man to mean a trick. England leads the world in studying the problem of industrial relations. She has long led in political evolution, and we may find her aristocrats taking as enlightened a part in this new emancipation as they have taken in the political changes.

The war has shown to the working people of the European belligerents something they cannot forget. In their strivings against the sabotage of capital they have been met with certain words, decade after decade, in which they knew there was no meaning, but they had not the power to expose the emptiness of the argument. The war has made the exposure. How sacred was the talk about the impossibility of doing business without a profit, and how little the words were understood! Since the war the expression has a meaning still, but a meaning profoundly different. Fully as clearly as before we know that a factory which does not produce with efficiency things that men and women need is destructive; but we likewise understand, much more clearly, that a capitalist who can make what he calls a profit only by keeping his men unemployed a third of the time is flagrantly destructive.

How much it is his fault, and how much it is the fault of capitalist society, is not relevant to the Socialist argument. The point is that all the sabotage ever charged against labor is little compared to the habitual sabotage of capitalistic society; that is to say, the loss of product due to conducting the world's business from other motives than these:

1. To produce primarily things that are needed.
2. To produce them uninterruptedly.
3. To distribute them equitably.

How was it possible to carry on the war so much longer than our economic experts told us it could be carried on? Precisely by conducting business on these principles. We produced what for war-time we needed: *there is no reason why in peace time we should not produce what is needed. We kept production going less exclusively than formerly in accordance with its effect on John Smith's shares of stock, more according to our need of the product.* Many luxuries and the advertising that sells them were diminished. Distribution tended also to be regulated according to the need. The whole idea of the equal necessity of the capitalist with the laborer received a blow. We had state socialism in all the warring countries, and in those countries that brought the heaviest force to bear—Germany, England, France—the importance of labor was seen, whereas the control of business by the capitalist was largely pushed aside. "You may stay where you are," the Governments said, "in so far as you are expert managers, and will work under our orders, but in so far as you claim arbitrary command because of something you call stock, you interfere with efficiency and will kindly step to the rear. After the war you may begin to rule again, and use your words 'can' and 'cannot,' and 'profit' and 'loss,' because we

do not take peace seriously; but in war we have no time to be bothered with your dialect."

The capitalists try to meet this demonstration by talking about the burden of debt and our having lived on capital during the war, but after legitimate concession is made to this answer the Socialist position remains difficult to meet. What values were destroyed? Human lives, human limbs, roads, bridges, villages, soils, factories: all of these are tangible, though on the material side there is to be off-set the saving of five years in lessened luxury and in increased effort, serious attention, and resourcefulness.

We may leave out for the present the loss through disorganization, as whether that fluidity is to give us gain or loss rests on decisions still to be made. We come then to the loss represented by debt. What can this represent in addition to the tangible losses already mentioned? From the point of view of society as a whole, nothing. We have certain very interesting implications and promises, regarding the distribution of our future production, and regarding the continuity of our promises to repay those whose earnings were used in the war; but it is wholly impossible, by any subtlety, to increase the loss to society as a whole by metaphysical financial conceptions. Stocks and bonds and notes represent objects. When we know how many objects and persons have been destroyed, we know the gross loss; and whether the net loss almost equals the gross, or whether it is much smaller, or does not exist, is to be decided by the political and social occurrences of the next few years.

IF the Socialist position, in so far as it criticizes the capitalist system, has been strengthened by the war, its extremist boasts about what it can do itself have received blows. Its Marxian formulas have been made ridiculous. In all countries, along with the necessity of government control of key industries, of distribution and consumption, have been shown the inconveniences and limitations of all those things. The human soul has revolted against such centralized control. Life has looked like slavery. Masses of bureaucrats have annoyed us and reminded us of Prussia. The gain in production brought about by State Control has been partly offset by various inefficiencies of State execution. That orthodox Marxism has lost by the war is almost as clear as that the Socialist idea in its less schematized and more vital forms has gained. Not only has the idea of an all-interfering bureaucracy become more vivid in its unpleasantness, but there has been brought into relief a fundamental false assumption of Marx, that men would tend to become clearly divided into proletarians and capitalists. Obviously from four-fifths to nine-tenths of the people in the United States are capitalists, a condition Marx never looked forward to. It is not only every man who owns a house, a farm, a bond, or a bank deposit, who is a capitalist. In the sense of having an interest against a theoretical and sudden leveling, every man is a capitalist who is able to do more in his present position than he would be confident of doing after a revolution. An energetic young American carpenter starting out in life is in opportunity and spirit a capitalist. If we accept the favorite Socialist test, therefore, and leave out every standard except the economic—leave out the glory of whim and the dull weight of standardization—even so while a large percentage of Americans stand to win from radical reforms, a large four-fifths also stand to lose by an experiment that endangers every established individual stake. For revolution, therefore, in the sense of violence and theoretical completeness, there can be in our country but a

high places

small minority and these Reds will be powerless unless the Blacks are so powerful and so stupid that the moderates between are helpless. In a relentless fight between the Reds alone and the Blacks alone the Reds in the end will win.

For Socialism as a direction, rather than for Socialism as a dogma, the war did two things. It oriented the western labor forces and it affected the moral sense of the world. These two things will remain true long after the present reactionary wave in America has spent its force.

The first point, then, at which the Socialist spirit, as contrasted with any dogma, has gained is in clearer knowledge of the ruthlessness of existing governments, in clearer knowledge of their methods, and in awakened realization of the points at which Communism is likely to fail. The second point, possibly even more important, is in the *change that has taken place in the center of gravity, in political, social, and ethical thought.* This battle may be won or lost; we may pass into better periods or worse; but *inevitably and forever now the combat must rage around the economic rights of the majority.* The industrial conflict is as clearly unstoppable now as the political conflict was after 1688, 1775, and 1789. It is the inevitable consequence of harnessing steam and teaching men to read; of large-scale production, intricate communication and universal thought. Why need we be alarmed over words on the one hand, or wedded to them on the other? In spite of its orthodox Socialist planks, there have joined the British Labor Party many men to whom the ideas of Karl Marx are nothing more than useful suggestions. They joined because the party's immediate program was in the right direction, and they would let the future take care of the later steps. It is in intellectual expertness, in insistence on those rights of labor that are demonstrated not only by reason but by experience that Socialism has won most in the war. The purely orthodox, Marx-bible Bolshevik brand has been discredited, except as a temporary violent remedy for a malignant disease.

The L Vote

SENATOR Johnson's great strength at the primaries seems in considerable measure to be attributable to the Lodges, the Lippmans, the Learys, the Ludendorffs and the Lenins.

The Deadlock

By Hamilton Holt

PRESIDENT Wilson strikes his old ringing note of righteousness in his latest statement in which he definitely defines his position as one of implacable hostility to the Lodge reservations. The Lodge reservations are certainly harmful where they are not unnecessary.

And yet the President is wrong. The time has come for him to compromise. He was justified in holding his ground for a reasonable time. But when a majority of the Senate twice voted against ratification, he should have yielded, for a minority, however right, cannot coerce a majority under a democratic form of government.

Thus the worst happens. The League of Nations descends into the political arena and becomes the football of party politics.

What will the outcome be? No man can foretell. But it would seem as tho the quarrel would split both parties in two. Moreover it is likely to settle nothing. For how can the American people in voting for party candidates clearly decide such quibbles as whether the word "until" should be substituted for "unless" in Article X, or whether the Monroe Doctrine is beyond the jurisdiction of the League as is reiterated three times in the Republican reservation or only twice as in the Democratic reservation.

A pretty mess our uncompromizing President and obdurate Senate have got us into. And while the politicians fiddle, Europe burns and the United States smokes.

Battle Flags and Moth Balls

THERE seem to be two rival conceptions of Americanism which are battling for the mind of the nation. Some think of it as a conquering spirit which should be carried to the remotest corners of the earth, as Christianity has been carried; a torch of liberty which should enlighten the whole world, a battle flag around which all the free-born peoples may rally. Others regard it as a very precious but very delicate treasure to be hidden not only from foreigners but even from the alien immigrant and the radical, something to be conserved, safeguarded and put away in moth balls. According to this sort of patriot the torch of liberty should be hidden beneath a bushel lest some careless or hostile breath put it out. But it is lack of air which stifles the flame of freedom and it is captivity which breaks the heart of the American eagle.

A Prophecy

THE American people will not elect to the Presidency either a Borah or Brandegee Republican, or a Bryan or Ryan Democrat.

Not His Brother's Keeper

By Arthur Judson Brown

GOD won the war, but the devil is winning the peace. I do not vouch for either the originality or the accuracy of that remark; but surely the devil must be satisfied with the condition of the world a year and a half after the armistice—sixteen wars now being waged; more belligerent talk and demands for military preparation than there were before the war; the former harmony of the allied and associated Powers broken by mutual jealousies and suspicions; orderly government broken down over a great part of Europe; and economic ruin widespread. In Paris, Brussels, Berlin, The Hague, Amsterdam and London, I asked: "Are the moral conditions better or worse than before the war?" "Worse," was the common reply.

Undoubtedly this condition is partly due to the psychology of a post-war period. The reaction from the intolerable strain has left the world's nerves on edge. Everybody is complaining about everybody else. We see painful manifestations of this spirit in America. What must it be in the war-ravaged countries of Europe, where the strain of the war was a thousandfold greater?

But no small part of the lamentable condition of continental Europe is due to hunger—plain hunger, with all the frightful consequences that it brings in its train. Many of the peoples of Europe have not had enough to eat in five years. It is heartrending to see so many evidences of undernourishment; to know that women and children are dying of starvation; that tens of thousands of children in Hungary are without shoes or clothing; that 60 per cent of the children of Austria have died; that the death rate of the population last year was nearly three times the birth rate (50,000 to 18,000); that every child under the age of three in Poland and Serbia is said to be dead or dying; that of 1000 babies born in Budapest in a given month, 966 were either born dead or died within a few weeks, their little bodies being wrapped in old newspapers for burial, as the scanty supplies of cloth and wood were needed for the shivering survivors; that many of the mothers perished for want of the strength to sustain them thru the pains of childbirth; that there are myriads of children under five years of age, in these and neighboring countries, that have never tasted milk; that 75 per cent of the older children

have rickets; that tuberculosis rages unchecked among all classes of the population; that mothers are crazed with grief as they hear their little ones piteously cry for food; that husbands and fathers are goaded to desperation by hunger and want; that children's diseases are taking heavy toll of death in France; that 100,000 returned soldiers in that stricken country are dying of tuberculosis; that in 2300 towns and villages once comfortable homes are in ruins and their families huddled in cellars or temporary huts, homeless and wretched; that fuel is so scarce that houses cannot be heated and the whole population is shivering with cold; that two and a half millions of people in France have been swept away by war and the conditions that attended and followed it; and that epidemics of typhus are raging almost unchecked among populations in central, eastern and southern Europe that have been weakened by famine or malnutrition.

Some of our alleged statesmen in Washington have said that the remedy for these conditions is for Europe to go to work. As a matter of fact, France, Holland, Belgium and Great Britain have gone vigorously to work, as far as their circumstances permitted. But how can the peoples of central and southeastern Europe go to work? Who is going to employ them, and who will foot the bills? Their soil, prior to the war, had been brought to a high state of cultivation by the liberal use of imported fertilizers; their manufacturing depended upon imported raw materials. They could not import fertilizers or raw materials during the war and they cannot import them now, for they have no money to pay for them and no ships to transport them. How can they buy in other lands when their currencies are practically worthless in the world's markets? What foreign business house would sell goods to be paid for in German marks, worth only a cent or two, or Austrian Hungarian or Transylvanian kronen, worth only a half cent today and perhaps not worth that tomorrow. Factories, too, require coal, and railways to carry it. Coal is impossibly high in Europe now, \$80 a ton in Italy, and transportation systems have regained only about 20 per cent of their pre-war efficiency.

THESE conditions mean closed factories; closed factories mean unemployment of the working classes; unemployment means hunger; and hunger means desperation which finds expression in Bolshevism. Every German with whom I talked dreaded the coming winter, fearing that it would bring a revolution with a reign of terror comparable to the Russian and French revolutions, or worse. Bolshevism (led by Jews who are taking vengeance to the full for centuries of persecution) is spreading like a forest fire. The Russian Bolsheviks, under the guidance of Lenine and Trotzky, are conducting an aggressive propaganda in Germany, Hungary and Austria, literally flooding them with agitators and literature. Wherein are we bettered if we have overthrown a militaristic autocracy, only to have an anarchistic Bolshevism take its place?

America must bear a heavy share of the responsibility for the continuance of these appalling conditions. Our coöperation is needed to give stability and power to the Treaty of Peace and the League of Nations; and by withholding it we are perpetuating chaos and ruin. We like to say that we are a democracy in which public opinion rules; but we have seen an overwhelming public opinion thwarted by the personal hatreds and political prejudices and reactionary spirit of a handful of men in Washington.

But there is one thing that the American people can do without being hampered by narrow politicians, and that is, give immediate physical relief. Is it said that some of these peoples are our enemies? What if they are? Decent men do not wave the bloody shirt over helpless and starving women and children. "If thine enemy hunger, feed him," said Christ. Several organizations are trying to give the needed

help, but they ought to have a far larger measure of support, and the Christian churches ought to do something on a scale commensurate with what they are doing thru the Near East Relief Committee. We must not, can not, pass by on the other side while our fellowmen are dying. This is a question of humanity, a question of statesmanship, and a question of self-interest as well. There will be no peace in the world as long as Europe remains a seething cauldron of hunger-crazed people. To the objection that Europe is not our affair, and that we in America should look after ourselves, I reply that it was Cain the murderer who said that he was not his brother's keeper.

Cheer Up!

AT latest reports Germany, Turkey, Mexico, Soviet Russia and D'Annunzio had not joined the League of Nations. So we can stay out in good company, as the lost soul said when Saint Peter slammed the gate.

Personal Politics

SENATOR Calder says that if it had not been for the "obstinacy" of the President, the Senate would have ratified the Treaty long ago.

No doubt true. But what has the President's psychology got to do with the case? The Senate has no constitutional authority to pass upon his mental traits. The President under the Constitution submitted to them a treaty consisting of 440 articles—that and nothing else. The Senate was called upon to judge whether these 440 articles were good or bad for the American Republic—that and nothing else. But, by the confession of Senator Calder (corroborated by many of his confreres) that is exactly what the Senate did not do. To its everlasting disgrace the Senate decided the greatest issue before the people since the adoption of the Constitution on the President's personality. Senator Calder's explanation convicts himself.

The Shadow of a Great American

NO direct eulogy can be so convincing as to the place which Roosevelt now occupies in the hearts of his countrymen as the fact that many Republican candidates base their claims to consideration so largely on their association with Roosevelt's work or their agreement with his ideas. It is said that in some isolated mountain hamlets of the South votes are still cast for Jefferson and Jackson. Whether this be so or not, it is unquestionable that the mass of Republican votes are cast in memory of Lincoln and Roosevelt, and not so much for a candidate's own sake as in recognition of the fact that he is mastered and molded by a great tradition.

Unveiling Russia's Red Terror

By John Spargo

SO many contradictory stories have been published concerning the Red Terror in Russia that most unusual interest attaches to the very important report of the All-Russian Extraordinary Commission, published as an official document of the Soviet Government in February of this year. From this report it is quite evident that Bolshevik rule has not been at all the gentle and benign thing we have been asked to believe by some of its defenders.

It is perhaps not altogether astonishing that in all the numerous collections of Bolshevik decrees, proclamations, and other documents, with which the country has been flooded, there is not to be found any sort of description of the "Chresvychaikas"—the All-Russian Extraordinary Commission for Combatting Counter-Revolution, Profiteering and Sabotage, and the District Extraordinary Commissions. To publish an account of the organization and functions of these would not help the Bolsheviks.

At the right are the men who brought the Yale plane across the line first in the twenty-five mile cross-country race—Ensign J. T. Trippe and Lieutenant G. W. Thorne, pilot. The finish of the race was an exciting one, the Yale and Pennsylvania planes almost abreast, maneuvering only ten feet above the ground for the final advantage. Yale's time was 19 minutes

© Paul Thompson

The First College Air Race

Yale made a clear sweep of all three trophies offered in the first intercollegiate contest in aviation ever held in this country. Williams came in a close second, with 6 points to Yale's 9. Princeton and Columbia tied for third place. Ten colleges sent their contestants to these air races, which were held at Mineola, Long Island, on May 7. Most of the men entered were veterans of the Great War, several of them aces, but they had done no flying for six months or more and they used planes with which they were unfamiliar. Under the circumstances it was surprising that there were only two minor accidents

Clarence Coombs (left), a former sergeant in the United States Army Air Service, broke the world's altitude record for pilot and three passengers. In an Orenco-Hourister biplane he reached a height of 16,200 feet, 2000 feet over the previous record

The event of most interest to the 5000 spectators at the intercollegiate air races was the "alerte" won for Williams by Lieutenant Robert K. Perry (below). In this event the contestants were lying on cots, their flying clothes strewn about the field. A German plane dropped a bomb, and as it exploded the men jumped up, got into their clothes and flew off. The winner's time was 60 seconds

Immediately after the Bolshevik seizure of governmental power there was set up, in the former headquarters of the Czar's secret police system, the first Chresvychaika. Its full personnel has never been made known, but it is widely known that many of the old secret police agents entered its service. To this body was given the most extraordinary power ever given to a judicial tribunal. It possessed absolutely unlimited powers of arrest as applied to all the population except members of the Soviet Government. It could impose any penalty it saw fit, including flogging, torture and the death penalty. It could order mass arrests and impose mass sentences. It was not confined to dealing with actual crime, violations of definite statutes, but could punish at will, in any manner it saw fit, any conduct which it might decide to be "counter-revolutionary." It was not bound to give the accused a formal hearing or to permit him, or them, to be represented by counsel, and as a rule did not do so. Its hearings were held in secret, and, for more than a year, it was not even required to publish the names of its victims! There was no appeal from any of its sentences, in any circumstances, but there was a provision that *after a sentence had been executed* it might be "investigated."

At first, there was only the one Commission—in Petrograd. Then another was set up in Moscow, the two being regarded as branches of one body, the All-Russian Extraordinary Commission. Subsequently, many similar bodies were set up in all parts of Russia, the "Local" and "District" Chresvychaikas. While these were given similar powers, they were not in any manner made responsible to the "All-Russian" commission and the report of the latter therefore deals only with the two cities, Petrograd and Moscow.

ACCORDING to the report no less than 6185 persons were put to death by orders of this body in the year 1918 and 3456 in 1919, making a total of 9641 persons executed in two years, in two cities only. Unfortunately, these figures do not tell the whole story by a long measure, tho how far the figures are below the real total of actual executions cannot even be estimated. It must be remembered, however, that the report of the All-Russian Extraordinary Commission does not include the number of those sentenced to death by the Revolutionary Tribunal, which was responsible for many death sentences, including some of the most atrocious, like that in the case of Admiral Shastny, for example. Nor does the report include the numerous victims of the Military Tribunal, which was responsible for a great many more executions.

An examination of the digest of the report which we have received from the most reliable sources enables us to give an authoritative and categorical denial to the statement so often made, that in the great majority of cases the executions ordered by the Extraordinary Commissions were for crimes against life and property, and that rarely was any person put to death for counter-revolutionary propaganda. We have other indisputable evidence that this statement is wholly untrue so far as the "Local" and "District" Chresvychaikas are concerned. The present report proves conclusively that it is not true so far as Petrograd and Moscow are concerned. Of the total number condemned to death and executed 631 were judged guilty of gross crimes, including crimes of violence, robbery, embezzlement, corruption in office, and so on; 217 were condemned for speculation and profiteering, and 1204 for "all other classes of crimes," while 7068 were condemned for counter-revolutionary activities!

What is covered by that phrase, "counter-revolutionary activities," is not disclosed by the report, but we are not without information upon the point. The All-Russian Extraordinary Commission publishes a *Weekly Journal* of its own, popularly called "The Hangmen's Journal." From its

files we learn of the shooting of "500 hostages" in Petrograd in October, 1918, tho there was no suggestion that they themselves were guilty of any wrongdoing. We learn of a priest being shot for "an anti-Soviet sermon," and of another being shot "for saying masses for the late Nicholas Romanov"—the Czar.

Perusing the report still further, we find that the accounts we had from various writers of the remarkable freedom of Petrograd and Moscow from crime, especially during 1919, are not borne out by the figures. Mr. Ransome, for example, assured us that crime had declined to a remarkable degree—in Moscow by 80 per cent. The report shows 80,662 arrests made by the Extraordinary Commission in 1919 as against 47,348 in 1918. Taking arrests for "ordinary crimes," and excluding counter-revolutionary offenses and offenses against special Soviet regulations, there were 39,957 such arrests in Moscow and Petrograd in 1919 as against a total of 47,348 for all causes in the preceding year.

When we think of the acknowledged number of persons shot by this one tribunal, and remember the other tribunals active in the same area, and the numerous other tribunals throught Russia that have been indulging in executions upon their own account, we are inclined to regard czarism with some leniency. By comparison, it was a benign and benevolent régime.

Paris and San Remo

ONE of the few recent events in world politics which can be recorded with unalloyed pleasure is the return of Italy to her legitimate position as one of the Great Powers. The obstinacy of Premier Orlando and Foreign Minister Sonnino in adhering to extreme imperialistic claims at Paris placed Italy outside the real center of gravity of the Peace Conference. The Treaty with Germany was mainly the work of Wilson, Lloyd George and Clemenceau, with their respective advisers, and even in the later dealings with Austria, Hungary, Bulgaria and Turkey, Italian statesmen appeared as advocates rather than as judges. But at the San Remo Conference Italy regained the diplomatic prestige she had lost in earlier months. Under the wise and liberal guidance of the present Government, Italy has not only advanced her own immediate interests but has played a decisive part in questions of general European concern. A "Big Three" still dominate Europe, but the vacant fourth chair is no longer that of Italy, but that which ought to be occupied by Uncle Sam.

A or The

WITHOUT exception the most exasperating sort of man on earth is he who says: "Oh, yes! I am strongly in favor of a League of Nations, it has always been my dream for the nations to come together into *some* sort of an association which would prevent wars and promote internal coöperation; it is only *the* particular League of Nations devised at Paris which I oppose." Anyone would think to hear him that there were an infinitude of equally available Leagues of Nations to choose from and that all one had to do was to ask the shopkeeper to reach down another one of different cut from his shelves since the Paris style didn't suit. But the League is not a paper project; it is a going concern in which some four-fifths of the population of the world is already included and whatever amendments may be made in its constitution there is no possibility that the nations will consent to scrap it altogether and build up a new League merely as a sop to factious Senators or captious radical journalists. To oppose the existing League of Nations is to oppose the whole idea of international association so far, at least, as the present generation is concerned.

The Story of the Week

Wilson Defines the Issue

ONCE more President Wilson has raised the banner of the Covenant above the embattled hosts of the Democratic party. In response to a telegram from a party leader in Oregon inquiring whether the Democratic candidate to be nominated at the San Francisco Convention must be pledged to ratify the Treaty of Versailles without the Lodge reservations, the President returned an emphatic affirmative. These reservations he stigmatized as "utterly inconsistent with the nation's honor and destructive of the world leadership which it had established."

The uncompromising stand taken by President Wilson on the League of Nations Covenant will certainly be an issue in the campaign, but with almost equal certainty it will be an issue in the Democratic Convention. In Texas, Missouri, Georgia and other southern states the administration has been victorious, but not without a contest. In a few northern states the anti-administration forces have captured delegations. The Bryan faction in Nebraska, the Walsh group in Massachusetts and the Tammany majority of the New York delegation are not, indeed, openly hostile to the President, but they are known to favor a compromise on the Treaty so that it may be passed with such reservations as will satisfy two-thirds of the Senate. The effort of the anti-Tammany delegates from New York, led by Judge Seabury and George Lunn, Mayor of Schenectady and former Socialist leader, to overthrow the unit

rule was defeated and the solid block of votes of the New York delegation will be cast for the choice of Tammany Hall.

Only in one state is there open cleavage between the national administration and the state delegation. The Democratic convention in Rhode Island adopted resolutions commending the general foreign and domestic policy of President Wilson, but directly attacking Article X of the Covenant and urging its elimination from the Treaty. The convention also commended Senator Gerry's reservation to the Covenant, favoring self-determination for Ireland, and demanded the immediate recognition of "the Irish Republic" by the United States.

Democratic managers are striving to maintain party harmony. The primary contests have not been so numerous or sharply contested as in the Republican campaign and the majority of the delegates will go to San Francisco at least outwardly loyal to the national administration and pledged to no particular candidate. Homer Cummings, chairman of the Democratic National Committee, has been selected as temporary chairman of the convention and is scheduled to make the "keynote address." Senator Underwood of Alabama has been unanimously chosen as leader of the party in the Senate in succession to the late Senator Martin of Virginia. Senator Hitchcock of Nebraska has acted as temporary leader since the death of Senator Martin, but he withdrew his claims to the permanent leadership in the interests of Democratic harmony.

Uncompromising Champion of the Nation's Honor President Wilson's Charge to the Democratic Party

White House, Washington, May 9, 1920.

*Hon. G. E. Hamaker, Chairman, Multnomah County
Democratic Central Committee, Portland, Oregon:*

I think it imperative that the party should at once proclaim itself the uncompromising champion of the nation's honor and the advocate of everything that the United States can do in the service of humanity; that it should therefore indorse and support the Versailles Treaty and condemn the Lodge reservations as utterly inconsistent with the nation's honor and destructive of the world leadership which it had established, and which all the free peoples of the world, including the great powers themselves, had shown themselves ready to welcome.

It is time that the party should proudly avow that it means to try, without flinching or turning at any time away from the path for reasons of expediency, to apply moral and Christian principles to the problems of the world. It is trying to accomplish social, political and international reforms and is not daunted by any of the difficulties it has to contend with. Let us prove to our late associates in the war that at any rate the great majority party of the nation, the party which expresses the true hopes and purposes of the people of the country, intends to keep faith with them in peace as well as in war. They gave their treasure, their best blood and everything that they valued in order not merely to beat Germany, but to effect a settlement and bring about arrangements of peace which they have now tried to formulate in the Treaty of Versailles. They are entitled to our support in this settlement and in the arrangements for which they have striven.

The League of Nations is the hope of the world. As a basis for the armistice I was authorized by all the great fighting

nations to say to the enemy that it was our object in proposing peace to establish a general association of nations under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike, and the covenant of the League of Nations is the deliberate embodiment of that purpose in the Treaty of Peace.

The chief motives which led us to enter the war will be defeated unless that covenant is ratified and acted upon with vigor. We cannot in honor whittle it down or weaken it as the Republican leaders of the Senate have proposed to do. If we are to exercise the kind of leadership to which the founders of the Republic looked forward and which they depended upon their successors to establish, we must do this thing with courage and unalterable determination. They expected the United States to be always the leaders in the defense of liberty and ordered peace thruout the world, and we are unworthy to call ourselves their successors unless we fulfill the great purpose they entertained and proclaimed.

The true Americanism, the only true Americanism, is that which puts America at the front of free nations and redeems the great promises which we made the world when we entered the war, which was fought, not for the advantage of any single nation or group of nations, but for the salvation of all. It is in this way we shall redeem the sacred blood that was shed and make America the force she should be in the counsels of mankind. She cannot afford to sink into the place that nations have usually occupied and become merely one of those who scramble and look about for selfish advantage. The Democratic party has now a great opportunity, to which it must measure up. The honor of the nation is in its hands.

WOODROW WILSON.

The death of Bishop John H. Vincent, founder of Chautauqua Institution, ended on May 9, 1920, a remarkable career of eighty-eight years of service to mankind. Beginning as a Methodist preacher when he was only eighteen, Bishop Vincent became especially interested in the improvement of Sunday school teaching and in 1866 organized the first Sunday School Institute. From this entering wedge to widening opportunities for self-education grew "The Chautauqua idea," now a national institution at Chautauqua, New York, "for the self improvement of all people." As preacher, teacher, pioneer, and prophet Bishop Vincent sowed the seed of knowledge over a wide field.

The League and the G. O. P.

ALTHO the Chicago Convention is almost at hand and President Wilson has flung his defiance to the Republican party on the issue of the unamended Covenant the Republican party faces the challenge with divided mind. Senator Lodge has been chosen to act as temporary chairman of the Convention, which means that the "keynote" speech will be attuned to the reservations adopted by the Senate. The "bitter enders" urged that Senator Borah be made chairman, but the committee on arrangements refused to consider this. The way is open, however, for the irreconcilable opponents of the Treaty to capture the permanent chairmanship if they can control the Convention.

The most interesting recent development in the pre-convention campaign is the action of Senator Penrose in urging the nomination of his colleague, Senator Knox. The fact that Senator Knox is leading the fight for an immediate peace without ratification of the Treaty of Versailles brings him into the limelight at the psychological moment. He makes a very formidable "dark horse" because he is perhaps the only eastern conservative who would be acceptable to the Johnson faction. Not only is the Senator from Pennsylvania a personal friend of the Senator from California, but the two men agree in their acute hostility to the Treaty and the Covenant. If the League of Nations becomes the one overshadowing issue in the Convention it is possible that radical and conservative irreconcilables may sink their differences of opinion on domestic questions and unite on the nomination of Senator Knox; tho certainly the western men will carry their fight for Johnson thru several ballots before they will abandon him for any other candidate. The candidate most favored by the extreme conservatives of the party is Senator Harding of Ohio, but the weakness he has shown at the primaries has probably eliminated him from serious consideration. Pennsylvania has a "favorite son" already in the person of Governor Sproul, but Governor Sproul himself has spoken approvingly of

the Knox candidacy. The nomination of any irreconcilable, however, whether Knox or Johnson, would cost the Republican party the support of all favorable to the Treaty.

The Senate and the Peace

SENATOR Knox's resolution for a declaration of peace with Germany and Austria is now before the Senate. The Committee on Foreign Relations approved the resolution by nine votes to six. This was a strict party majority, but Senator Shields, Democrat, and Senator McCumber, Republican, did not take part in the vote. Senator McCumber has proposed a substitute resolution which without declaring peace would make possible a resumption of commercial relations with Germany. He declared that to follow the Knox policy of making a separate Treaty with Germany while attempting to obtain indirectly the benefits of the Treaty of Versailles was in effect a desertion of the Allies and a menace to the peace of the world. "You cannot make the League of Nations the real issue in the campaign," he told his colleagues.

Senator Knox advanced the strange argument that the United States was already at peace with Germany and that his resolution simply took advantage of a state of fact. He supported this point of view on three technical grounds. He cited numerous historical instances of peace made by cessation of hostilities without any formal treaty. He also emphasized the fact that the United States had declared war on the "Imperial German Government" which had ceased to exist after the German revolution. Finally, he pointed out that the Treaty of Versailles had already been brought into effect, thus terminating the state of war, since it had been ratified by three of the Allied Powers, and the fact that the United States had failed to ratify did not prolong the war. He condemned the Treaty of Versailles as discredited even in Europe and expressed the opinion that the reservations which the Senate had approved were inadequate to Americanize it.

No Beer for Massachusetts

GOVERNOR Coolidge has vetoed a state prohibition enforcement measure which "interpreted" the eighteenth amendment in such fashion as to permit the sale of beer and other liquor containing less than 2.75 per cent of alcohol. The Massachusetts House passed the bill by 145 votes to 83 and the Senate by 26 votes to 6. Similar measures have been passed by the state legislatures of New York and New Jersey, in the belief that since the amendment gives the states "concurrent power" to enforce prohibition a legislature can adopt a different definition of what constitutes an intoxicant from that contained in federal law.

But the Governor of Massachusetts points out that until the Supreme Court has allowed the right of the states to interpret the meaning of prohibition contrary to the opinion of Congress no legislature can safely defy the provisions of the Volstead Act. In his veto message he remarked:

There is little satisfaction in attempting to deceive ourselves. There is grave danger in attempting to deceive the people. If this act were placed on the statute books of this commonwealth today it would provide no beer for the people. No one would dare act upon it, or if any one did he would certainly be charged with crime. Similar laws in other states are to date ineffective. I am opposed to the practice of a legislative deception. It is better to proceed with candor. Wait until the Supreme Court of the United States talks.

Wilson and the U-Boats

PERHAPS the most interesting incident in the long investigation conducted by the Senate Naval Investigating Committee was the disclosure of President Wilson's speech to officers of the Atlantic fleet in August, 1917. In

this address the President urged that the hunting down of submarines one at a time be supplemented by a bold, direct attack on the submarine bases. He declared that if he could thereby destroy the German naval bases and put a stop to submarine warfare he would willingly sacrifice half the British navy and half the American navy. Secretary Daniels of the Navy gives the President credit for suggesting the adoption of the convoy system "even before we entered the war" and of advocating the idea of shutting up the German submarines in port "long before any naval authority abroad had approved the idea of the barrage which was placed across the North Sea."

Secretary Daniels instanced the President's attitude for the purpose of rebutting the accusations of Admiral Sims against the naval policy of the United States during the Great War. He said:

In justice to the United States Navy, which has been charged with failure to act with more expedition in the first few months of the war, it will be necessary to contrast the bold and audacious policies we presented and urged, with the delay in some of these great projects caused by Admiral Sims's opposition and lack of faith in the practicability of some of them by the British Admiralty.

Mexico's Latest Revolution

THE revolutionary movement initiated in Sonora on behalf of General Obregon, aspirant for the Mexican Presidency, has apparently swept the whole country. Mexico City itself has fallen into the hands of the rebels and only a few isolated localities still hold out in favor of the Government which a few weeks ago ruled unchallenged thruout nearly the whole extent of the country. Even Villa, who never laid down his arms under the Carranza régime, is now said to have abandoned his profession of permanent insurrectionist and to have retired to civil life. In American politics the movement for General Obregon would be described as a "landslide"; tho in the present instance the ballots were bullets. The late government is accused of having put to death rebel leaders who were its prisoners before the evacuation of the capital.

In order to protect American interests at Vera Cruz and Tampico Secretary Daniels ordered a concentration

Wide World

Miss Fannie Hurst made an exception to her rule of individualism in allowing the photographer to take this picture of her with her husband, Mr. Jacques Danielson, in his studio. For Miss Hurst doesn't believe that husbands and wives should be together very much. Her own marriage she kept secret for five years, maintaining her own studio-apartment separately, keeping her own name and developing her own career as an author. "For us the dew is still on the rose," says Miss Hurst. Which inspired a more conventionally married New Yorker to exclaim, "For us the dew is still on the rent bill!"

of American warships at Key West whence they could be sent at short notice to the Mexican coast. The battleship *Oklahoma* and three destroyers left New York to strengthen the forces in the Gulf of Mexico. The rapid course of the revolution, however, and the fact that many important cities went over to the rebels without a fight, have secured foreign properties from the devastation that usually accompanies a revolution in Mexico.

Whether the Obregon Government can retain power as easily as it was won is doubtful. Carranza's power seems to have collapsed beyond redemption, Villa has abandoned the warpath, and the long guerrilla campaign waged by General Felix Diaz has dwindled to nothing. But any government founded on insurrection in a country so unstable as Mexico can never enjoy any real security, as a new leader of ambition and military skill may at any time arise in some remote province and gather a formidable following around him before the reliable regiments (if any) of the regular army can reach the disaffected region. The new Government will probably attempt to gain a legal sanction for its existence by holding at an early date the Presidential elections which were scheduled for this July.

The Matter with Mexico

THE overthrow of the Carranza Government ends, or begins a new phase of, a revolutionary period which has lasted for nearly ten years from the beginning of the Madero insurrection against the dictatorship of Porfirio Diaz. During this decade Mexico has enjoyed a few months of relative quiet, but there has not been a moment when the whole nation has recognized a single central authority.

Carranza first attained national prominence as Governor of Coahuila when he refused to recognize the usurped authority of General Huerta and organized in opposition to him the army and party of the so-called Constitutionalists. In 1913 he held practically the authority of a dictator over the northern third of the Republic and enjoyed the support of many of the ablest Mexican military leaders as well as the friendly neutrality of the United States. The Constitutionalists professed as their aims the restoration of orderly civil government, the introduction of democratic re-

forms and the break-up of the great landed estates on which the masses of Mexican peasants lived under conditions of virtual serfdom. Under the combined pressure of the victorious Constitutionalist armies and the diplomatic attitude of the United States, General Huerta was forced to resign and in August, 1914, General Carranza entered Mexico City as "First Chief" of the Constitutionals.

General Villa, however, finding his ambitions slighted, broke with his leader and commenced to levy war on his own account in the north. Numerous other outbreaks disturbed the new Government, varying from the attempt of Felix Diaz to restore the old régime as it existed under Porfirio Diaz to the activities of such bandits as Zapata whose simple policy was to kill the landlords and distribute their lands. The Constitutionalist leaders quarreled among themselves and it was not until the autumn of 1915 that the United States and other foreign countries were able to recognize Carranza as President *de facto* of the Republic. Many of Carranza's rivals were conciliated or killed but Villa remained defiant and by his raid across the American border in March, 1916, nearly brought on war between the United States and Mexico.

President Carranza secured the adoption of a new constitution in January, 1917, and in March he was elected President under its provisions, thus obtaining a legal title for his power which up to that time had been revolutionary and provisional. The new constitution contained many desirable political reforms and included, at least on paper, a very radical program of social legislation comprising such measures as the minimum wage and the eight-hour day. On the other hand it aroused just criticism for its hostile attitude to the Church and to the foreign resident. Numerous restrictions were placed on the civil liberties of the Catholic clergy and the Government was empowered to expel undesirable aliens. Foreign holders of oil and mining concessions complained of hostile legislation and excessive taxation and of the general disorder arising from the inability of the Mexican Government to put down banditry. The United States also had reason to complain of the pro-German tendencies of President Carranza, who refused to unite with other Latin American countries in breaking off diplomatic relations with the German Empire, and who at one time threatened to cut off the supply of Mexican oil from the Allies. It was perhaps for this reason that Mexico, unlike most neutral nations, received no invitation to join the League of Nations.

Birmingham Age-Herald

He'll be leaving as soon as that fuse burns

In spite of the activities of Villa in the north and of lesser bandits in other parts of the country, and in spite of his own numerous blunders of foreign and domestic policy, President Carranza managed to maintain his position and to keep a fair degree of stability in the political life of Mexico City and of most of the states. It was even hoped that the elections of this July would break all Mexican precedents by being at once free and peaceful. But Carranza's unwise attempt to interfere by force with the aspirations of two candidates for the Presidency, General Obregon and General Gonzales, plunged Mexico once more in civil war. Mexico is caught in a vicious circle. It cannot attain to free and orderly government so long as the great masses of the people remain poor, ignorant, dependent and ready to follow any standard of revolt; and the condition of the people cannot improve so long as the land is harried by insurrection.

The Turkish Treaty

ON May 11 the Ottoman delegation, headed by the Tewfik Pasha, was called to the famous Clock Room of the French Foreign Office on the Quai d'Orsay to receive from the hands of Premier Millerand the terms of peace as prepared by the Supreme Council of the Allies. The Turks have thirty days in which to reply.

This treaty, like the preceding four, is based upon the League of Nations and Part I consists of the Covenant. The future control of the separated nationalities and of what is left of the Turkish Empire is placed in the hands of commissions or mandatories appointed by the League. All of the Turkish courts are made free to all members of the League of Nations on equal terms, but nothing is said about the rights of those nations remaining outside the League in this regard. Constantinople, as far as the Chataldja line, is to remain under Turkish sovereignty so long as Turkey complies with the terms of the Treaty, especially as to the protection of minorities.

The navigation of the straits, including the Dardanelles, the Sea of Marmora, and the Bosphorus, shall be open in time of peace, as in time of war, to all vessels of commerce or of war without distinction of flag. These waters are not subject to blockade, and no act of war may be committed there except in enforcing the decisions of the League of Nations. A Straits Commission is established, composed of representatives of England, France, Italy, Japan, Greece, Rumania, Russia (if she joins the League of Nations), Bulgaria (also if she joins the League), and of the United States if she wishes to be represented.

Each power will have one member, but the members for England, France, the United States, Italy and Japan will have two votes each.

Cyprus, Egypt and the Suez Canal are given over to Great Britain, Morocco and Tunis to France, and the islands of the Dodecanese to Italy. Armenia is recognized as a free and independent state and the President of the United States is authorized to determine its boundaries in the provinces of Erzerum, Trebizond, Van and Bitlis and for the access of Armenia to the sea. The frontiers between the republics of Georgia and Azerbaijan are to be fixed by direct agreements with those states.

Syria and Mesopotamia are to be made independent states under Article XXII of the Covenant of the League of Nations. France will be the mandatory for Syria and Great Britain for Mesopotamia. Palestine is to be made a national home for the Jews. The Kingdom of Hedjaz will be an independent Arab state. Kurdistan is to be granted autonomy under a commission of English, French and Italians, and may eventually be set up by the League of Nations as an independent state. The city of Smyrna and the hinterland to a depth of one hundred kilometers and a breadth of two hundred kilometers will be administered by

Greece under the supervision of the League of Nations. At the end of two years the population shall decide by vote whether this arrangement should be continued or the territory annexed to Greece. The Turkish flag will fly from an outer fort of Smyrna as evidence of Turkish sovereignty. The whole of Thrace and the Turkish islands in the Aegean Sea are given to Greece.

Special provisions are made for the protection of minorities by the League of Nations. Turkey agrees to assure life and liberty to all inhabitants without distinction of birth, nationality, language or religion. The finances of Turkey are placed under a commission composed of English, French and Italian. Turkey is forbidden to own a fleet or military airplanes and is limited to a military force of 35,000 men for police purposes, which may in case of emergency be increased by 15,000. Turks charged with war crime are to be tried by Allied military tribunals and persons responsible for the massacres since the war began are to be tried by a League of Nations court.

D'Annunzio's Anti-League

GABRIELE d'Annunzio, the Italian decadent poet, finding that he is losing the confidence of Fiume, is trying to extend his sphere of influence thruout the world. This is his pronunciamento of defiance:

The league of Fiume, a coalition of peoples oppressed and wronged by Anglo-Saxon hegemony, by the pseudo League of Nations and by the Peace Conference, has been constituted.

Gabriele d'Annunzio, defender of Italy's eastern frontier, is its chief. He has already obtained the adherence of Ireland, Egypt, India, Persia, Afghanistan, the whole of Islam and the oppressed peoples of the imperialistic Belgrade Government, including the Croats, Montenegrins, Albanians, Bulgars and Macedonians.

The league will combat the Government of Hungary, defiled by crimes which are the shame of Europe, and of Turkey, coveted by rapacious merchants. In contrast to the pseudo League of Nations, it will cause the rights of nationalities to prevail.

The peoples enslaved by the British Empire and by the United States must be delivered. The Germans, made subject by hateful governments thirsty for vengeance, must be restored to their country. The monstrous edifice built by the International Bank over the bodies of 10,000,000 dead must be destroyed.

D'Annunzio has used the good points of Bolshevism in his constitution and rejected the bad ones. We have chosen for the league a flag with a red field and gold serpent, signifying revolution and eternity.

There are four conflicting plans for the disposal of Fiume. The Yugo-Slavs claim it on the ground that it was promised them by England and France in the Pact of London of 1915. The Italians demand it on the ground that a majority of the population are Italian. The Hungarians insist that it must be restored to them as it is their sole outlet to the sea. President Wilson has proposed a compromise by which Fiume is to become a free port under the League of Nations. Signor Nitti, the Italian premier, is said to be coming around to the plan of the President and he has notified d'Annunzio that he must comply with it. That is why Nitti was so anxious to have the United States represented at the recent peace conference. The Yugo-Slavs on their side are showing a disposition to come to a friendly understanding with Italy on the question.

Meantime d'Annunzio, installed in the old ducal palace, rules the city with an iron hand and lives in luxury. He has imprisoned more than a thousand of the townspeople for opposing him. He has fired upon Italian warships. He has captured Italian steamers loaded with grain as they passed down the Adriatic. For seven months the merchants of Fiume have been prevented from doing business on account of d'Annunzio's occupation and now the port is completely closed by the Italian blockade. They have now reached the point of rebellion and the city council of Fiume has opened negotiation with the Nitti Government in defiance of d'Annunzio. The workmen of Fiume started a general strike to get rid of d'Annunzio and even

his own soldiers have mutinied. But the flying poet declares:

Sooner than hand over Fiume, I will blow up the bridges, I will blow up the railroad station, I will blow up the city. I will blow up myself.

I have not the right to give way. For Fiume counts upon me, for Italy counts upon me, for all the oppressed nations count upon me. I am the symbol of protest against the iniquity of the Treaty of Versailles.

Here at Fiume we are stronger than the Allies. Look you, a little band of men because they are in the right, can hold in suspense the whole world. You think it droll. Well, it is not.

French Political Strike

STARTING with Labor Day, the first of May, a strike of the French railroad men has extended to other industries and assumed revolutionary character. The aim of the strikers is now admittedly the substitution of some sort of a soviet system for the present political method of administration. May Day passed off in comparative peace, that is, the usual riots resulted only in three persons shot and 182 wounded. The police arrested over a hundred persons, some of whom were sentenced to long terms of imprisonment.

The railroad men, however, started a general strike, not for higher wages or shorter hours, but to compel the Government to adopt their plan for the nationalization of all public services in preference to its own. The General Labor Federation, the central body of all the trade unions, took up their cause and assumed the management of the movement, which the Federation declared to be "a struggle for reorganization of economic methods to benefit all classes except capitalists and profiteers." Its professed aim is to reduce the high cost of living by increasing production and eliminating waste and profit in distribution. The first step in carrying out the program would be the establishment of a national economic council, under labor control, for the organization of French production and internal commerce. International commerce would be managed by the League of Nations, which would have at its disposal a fleet to collect food and raw materials from all parts of the world and to distribute them among the members of the League in accordance with their several needs. An international financial commission would regulate exchange and apportion the cost of the war in such a manner as to secure the economic independence of all nations.

The project of the French Government, which the men rejected as too moderate, goes, nevertheless, a great deal

The People, London

THE EVER OPEN DOOR

A British cartoon on the recent Irish riots and the hunger strike in Mountjoy Prison

farther in the direction of Socialism than any other country outside Russia has so far undertaken. The plan provides for a controlling council composed of delegates representing the technical and administrative personnel of the railroads, the workmen, Chambers of Commerce, Parliament and the Government. Under the plan this council would have authority to order improvements and if necessary have the work done at the expense of the companies. The council's control would cover operation of the roads and unification of operating methods, such as time tables and standardization of rolling stock and signals, and in general its authority would be absolute. Theoretically, the companies would retain and operate their properties, but they merely would be managers. The employees would be paid in proportion to the ton-mileage of cars of freight so that they would feel it to be to their interest to promote efficiency and economy instead of the opposite.

The General Federation of Labor first called out the dockers and railroad men. The former obeyed so fully as to tie up the chief seaports of France for ten days. The railroads were also crippled, but the Federation allowed sufficient food trains to run to keep the cities from starving. The next orders of the Federation were that no busses, trolley cars, subway trains or taxicabs should run. This emergency was met by the Government thru the organization of the "Paris Civic League" composed of students from the technical schools and men and women from all walks of life who volunteered to keep the public services going. Fashionable women took places as ticket sellers on the subway and conductors on the busses. One of the engineering students, Henri Colson, who was killed in an accident while volunteering on the Paris, Lyons and Mediterranean railroad, was given the honor of a state funeral and the Minister of Public Works, representing President Deschanel, placed the cross of the Legion of Honor on his coffin.

The Federation next called out in turn the coal miners, the metal workers, building trades and finally the telegraph, telephone and postal employees.

Poles Capture Kiev

KIEV, which for a thousand years has been revered as "the mother of Russian cities," the center of early Russian civilization and the first seat of its Church, has

THE POLISH INVASION OF RUSSIA

The Poles and Ukrainians have combined forces to drive the Bolsheviks out of the region west of the Dnieper River. They have captured Kiev and are well on their way to Odessa

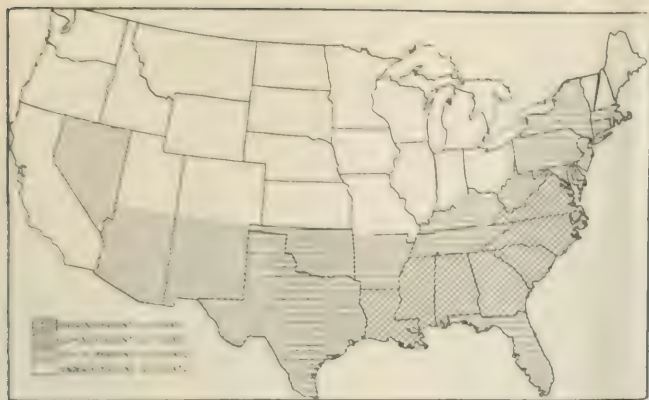

fallen into the hands of the Poles. General Pilsudski, the Socialist ruler of Poland, who five years ago as head of the Polish Legion was fighting on the side of Austria against the Allies, rode into Kiev at the head of his victorious troops on Sunday, May 2. With him was General Petliura, the Ukrainian leader, who last year was fighting against the Poles in defense of the territory which now he is conquering with their aid.

It is strange to see that the Bolsheviks, who recently defeated Yudevitch in the Baltic provinces, drove the British and Americans from Archangel, conquered Siberia against Kolchak, drove Denikin out of the Ukraine and suppressed Georgia and Azerbaijan, should now have suffered a serious defeat from an infant republic, which at the time of the armistice had no army of its own. But as soon as Pilsudski was released from his German prison and came into power at Warsaw he issued a call for volunteers. The Polish officers and soldiers who had been fighting on opposite sides in the German, Russian, Austrian and French armies flocked to the standard of the White Eagle. Now raised again after 147 years of suppression. In April following the draft was ordered and all young men between the ages of 20 and 25 years were called to the colors. France supplied munitions and provided officers of instruction for the new army. Many Americans, chiefly of Polish descent, volunteered for Polish service. The movement was largely financed from America, partly by contributions from Polish immigrants and recently by a loan of \$50,000,000 negotiated in this country. On this basis the Polish Government has authorized the issuance of 11,000,000,000 paper marks. The Versailles Treaty endowed the new nation with the port of Danzig and the rich coal fields of Silesia taken from Germany, while on the eastern side the Poles set out to fix their own boundary by annexing Russian territory. In April, 1919, they took Vilna, which the Lithuanians claim as their capital. In July they pushed back the Bolsheviks beyond Minsk.

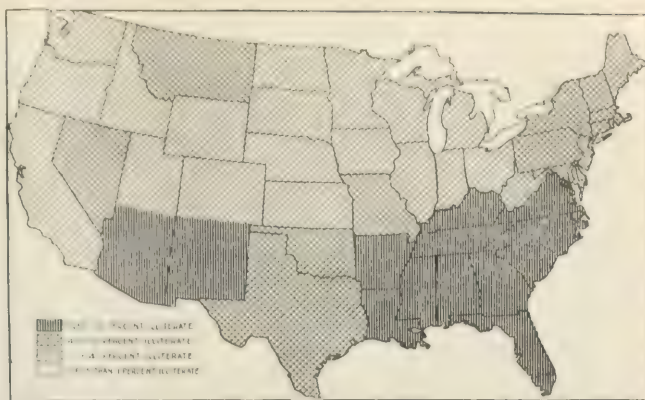

Up to the middle of April the Poles were engaged in negotiations with the Bolsheviks and it seemed likely that they would soon come to an agreement to conclude a separate peace as did Esthonia. But the Poles demanded an indemnity of 31,500,000,000 marks in gold from the Soviet and insisted upon the boundary being drawn where their armies stood, altho a large part of the territory they had conquered contained only a small proportion of Poles. The Bolsheviks wanted the peace conference to be held on neutral territory, but the Poles insisted upon its being held at the front.

It is now apparent that these peace negotiations were being carried on by one side, if not both, as a blind to conceal preparations for a spring offensive. Our papers were filled with alarmist prophecies of a Soviet drive on Warsaw and with the appeals of the Poles for support. But whatever may have been the plans of the Bolsheviks the Poles got their blow in first and swept forward to the Dnieper River within a week.

The Polish troops, aided by the Ukrainian irregulars, attacked the Bolshevik front from the northwest, west and southwest, all three movements centering on Kiev. The Bolsheviks, having their backs against the Dnieper and fearing to be cut off and captured, drew in toward Kiev where there was a railroad bridge across the river. The Poles pursued with the cavalry for which they have always been famous, supplemented now with armored trains. The retreating army broke down bridges and tore up tracks, but could not stop the Polish advance. Finally the Bolsheviks tried to hold the semi-circle of hills surrounding Kiev, but the Poles brought up their artillery and after two days of bombardment shelled the Soviet troops out of these positions, whereupon they evacuated Kiev and retired to the eastern side of the river. Odessa, the chief port on the Black Sea, has also been regained by the Ukrainians.

LITERATE AMERICA

ILLITERATE AMERICA

These two maps show the same thing, the percentage of illiteracy by states according to the census of 1910. Do they give your eye the same impression?

These Maps Tell Lies

An absolutely accurate and truthful map can be used in skillful hands to mislead the unwary. Only the crudest of propagandists will distort his facts; it is far better to take the facts as nature gives them and present them in such a way as to convey a false impression. A few examples will suffice to show how this may be done, but we hope the reader will not be tempted to "go and do likewise."

Suppose, for example, that a Bolshevik propagandist wanted to show as impressively as possible the extent to which his doctrines are spread abroad. He would take an ordinary map of the world on Mercator's projection and color the greater part of Russia and Siberia, preferably with Bolshevik red. To the frightened eye it would seem that the Soviet now ruled about half of the planet. Just what has the propagandist done that is amiss? He has told no lie, for it is quite true that most of Russia and Siberia is at least nominally Bolshevized.

But while such a map could be safely used by the trained geographer it would certainly require a word of comment if it were to tell the truth to the average layman. In the first place, Mercator's projection in representing the globe as a plane surface distorts areas in high latitudes and makes Greenland about as large as all South America. The chance that placed Bolshevism near the Arctic Circle was a godsend to the propagandist, who could have done nothing with a Mercator map if Bolshevism prevailed in India. But even if an equal area projection had been used in place of Mercator's, the vast unpeopled spaces of northern Siberia would show up more impressively than they deserve.

The third hidden trick in the Bolshevik map was the use of a vivid color against a blank or dull-tinted background. This is a common device on maps of nationality. Compare a German and a Polish map of central Europe. Even if they are based on the same statistics they will not look the same. Suppose the German map is in colors. All districts with a German majority will be colored a deep and solid red, all districts with more than ten

per cent of Germans will be a slightly lighter shade of red, all districts containing any Germans at all will be streaked as with flashes of red lightning. The area of Polish population will be tinted a shy, inconspicuous green or grey like the uniform of a modern soldier. Suppose that the Polish propagandist is restricted to black and white presentation. The resources of his German opponent will not be open to him, but he will do the best he can with shading.

Another good way to make a truthful map deceive is by shading in arbitrary intervals. Suppose that most of a country were level plain varying from two to three thousand feet above sea-level. If you colored green as "lowland" everything below three thousand feet your map would look like Florida; if you colored brown as "highland" everything above two thousand feet

your map would look like Nevada. Suppose, again, that a state had eleven per cent of illiteracy. If you favored the state you would shade very lightly such a group as "from five to fifteen per cent illiterate"; if you wished to make out a case against the local school system you would show in black "states with more than ten per cent illiterate."

It is not our intention to shake the reader's faith in the cartographic presentation of statistics. Usually the facts are themselves correct, and a study of the map itself will reveal the method which has been chosen to present them. No one will be deceived if he will ask himself a few questions, such as: (1) Is this an equal area map or must I make allowance for the projection? (2) Is this writer thinking in terms of areas or of people? (3) Is this writer dealing with absolute figures or percentages? (4) What system of shading or coloring is here used and with what purpose?

This model arrangement of farm buildings for a 160 acre farm in the prairie states makes it necessary for the farmer to walk only 750 feet in doing his morning chores

Save Your Steps!

Students of the Nebraska College of Agriculture are aided in their work to master the problem of scientific and modern methods of farming by means of a model farmstead in miniature which is part of the equipment of the Agricultural Engineering Department of the College. The buildings comprising the model were also designed and

constructed by students of the Department, and include a comfortable, attractive farmhouse, set on a concrete foundation and equipped with modern conveniences; an up-to-date dairy barn with a solid-wall concrete silo; a hay shed for alfalfa; a horse barn; a hog house, a tool shed and shop and a poultry house,

This model represents a nearly ideal arrangement for a 160-acre farm in the prairie states. The plan was worked out for one particular farm, and has been tried out on farms in several counties of Nebraska. Many points were given consideration in planning the farmstead to make it practical and at the same time comfortable and pleasant.

The barns and yards are located west of the house so that unpleasant odors are carried away by the wind, which, in the states for which it was designed, usually is south and southwest in summer, and north and northwest in winter. The house is located on high, well-drained land which insures a good view and prevents barnyard drainage from reaching it.

All of the buildings are so located as to act as windbreaks to adjoining yards, nearly all the fences serving two yards. The yards are adjacent to the pastures and the garden close to the house. The farm scales are so situated as to be handy for weighing grain and stock, and it is possible to drive to nearly all of the buildings without opening gates.

Each building in this arrangement is planned so as to house sufficient feed for stock in adjoining lots. Thus unnecessary walking is eliminated, and the man who does the chores has only to follow a general path around the group of buildings.

When a man starts doing chores in the morning he goes from the house to the barn, where he tends the horses, colts and cows, separates the milk and

feeds the calves. He then takes the remaining skim milk to the pigs at the farrowing pens, and goes to the combined crib and granary to feed the fattening hogs and fat cattle. In returning, he passes to the hay shed and feeds the stock cattle and then the poultry. He steps into the milk-room at the barn, gets his cream, returns to the house, and the chores are done. He has walked only 750 feet. The proper arrangement of farm buildings in many instances saves one mile of walking every day, or three hundred and sixty-five miles per year. In thirty years this would mean over ten thousand miles.

ditions in which life as we know it would be impossible. If air at the surface of the earth showed the same characteristics as it does only six or seven miles above it, we would live in a climate as cold as a Siberian winter and be buffeted by constant storms and hurricanes. In order to breathe the thin air we would have to evolve a different lung system or else wear oxygen masks outdoors. Indoors perhaps the problem could be solved by making the houses air-tight and pumping air into them under high pressure. Bold aviators with careful precautions can venture for a few hours into the upper air,

but it is no more fitted for a permanent traffic route than the bottom of the deepest oceans.

Insuring Society

Individuals insure themselves and their families; corporations insure themselves against loss by the death, resignation or dishonesty of important employees. Why should not the whole people be insured against the loss caused by the death of the individuals on whom social progress depends?

In the *Electrical World* it is estimated that at the time when Edison was a telegraph operator the total investment in electricity in America was only \$100,000,000, whereas today the annual cost of electric service, current, traction, messages and goods, is in excess of \$3,250,000,000, representing an investment of probably \$35,000,000,000. There is no estimating how much of this expansion of the electrical industry was due to the work of Edison, but it seems safe to say that the United States might be losing more than a thousand million dollars every year if this great career had been cut short four or five decades ago. Of one of Edison's myriad inventions Professor Milliken says: "One little new

advance like the discovery of ductile tungsten, which makes electric light one-third as expensive as it was before, is a larger contribution to human well-being than all kinds of changes in the social order."

The case of the inventor is the most obvious for insurance. It might be harder to estimate the economic loss to the nation when a statesman dies; and to do so in the case of a President is hardly courteous to the Vice-President. As for poetry and art, contemporary valuations differ so enormously from those of posterity that one hesitates to make any suggestion of social insurance. It does seem a pity, however, that so many poets, such as Keats, Shelley and Byron, died while they were still little more than boys

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
SPECIAL FORECASTS FOR OFFICE OF DIRECTOR, MILITARY AERONAUTICS.
(To be telephoned at 9:40 a. m. and 5:30 p. m. Telephone No. 2270, March 21.)
Planned 9:40 a. m. Washington, D. C., August 1, 1919.

Forecast for following 24 hours for--

Zone No. 1 (North Atlantic States): Good flying weather.

Zone No. 2 (Middle Atlantic States): Good flying weather, except for considerable cloudiness.

Zone No. 3 (South Atlantic States): Good flying weather.

Zone No. 4 (Lake Region): Bad flying weather; showers and thunderstorms and fresh and strong east and northwest winds aloft.

Zone No. 5 (Ohio Valley and Tennessee): Bad flying weather; showers and thunderstorms.

Zone No. 6 (East Gulf States): Good flying weather, except for local showers and thunderstorms.

Zone No. 7 (Upper Mississippi and Missouri Valleys): Good flying weather, except for strong northwest winds aloft.

Zone No. 8 (Central Plains States and Middle Mississippi Valley): Good flying weather except for local showers and thunderstorms in Arkansas.

Zone No. 9 (West Gulf States): Good flying weather except for local showers and thunderstorms.

Zone No. 10 (Northern Rocky Mountain States): Good flying weather.

Zone No. 11 (Southern Rocky Mountain States): Good flying weather.

Zone No. 12 (Southern Plateau States): Good flying weather.

Zone No. 13 (Pacific Coast States): Good flying weather in California, except for clouds along the Coast; bad flying weather in Washington and Oregon where there will be low clouds, fog and local showers.

© Underwood & Underwood

Can it be that but seventeen years have elapsed since the Wright Brothers made their historic twelve-second flight at Kittyhawk? Today the United States Weather Bureau prepares charts to help the air pilot pick a safe course between storms, fogs and air pockets in the sky

The Highest Leap

The United States once more holds the world's altitude record for an airplane flight. Major Schroeder in a recent flight at Dayton, Ohio, set out to reach the 40,000 foot level and succeeded in reaching a height of 36,020 feet before his oxygen supply gave out and he was forced to descend. This was nearly a mile above any previous official record and seven thousand feet higher than the crest of the Himalaya mountains.

That it was possible to fly at an altitude of nearly seven miles was due in great measure to the precautions taken. Major Schroeder knew that "highest up" is much the same thing

climatically as "farthest north." His flying suit was lined with fur and between the fur and the outer lining flexible electric heating units, connected by silk wrapt wires with the dynamo of the engine, warmed the entire suit, including his gloves and mocassins. To overcome the difficulty of breathing at altitudes where the air pressure was barely a fifth as much as at sea level, he wore an oxygen helmet of his own design. In spite of all these precautions he was nearly frozen and fainted dead away during the descent.

The exploration of the upper air shows by how narrow a margin we are separated from atmospheric con-

and should have had sixty good years of productiveness ahead of them. But that raises the further question of whether society should be insured against the poet's losing the divine fire when he approaches middle age, or whether the insurance on his life should simply be discontinued after any five-year period of inferior productivity.

American Time

At a recent Washington conference on business training for engineers differences were pointed out between American ideas of timeliness and those prevailing in the backward nations whose resources require for their development the energy and initiative of the American business man and technician. Professor Jeremiah Jenks gave an illustration from his experience in China. One of the railroads had a definite schedule of the hour and minute when each train should start from the station, *but* whenever a high official desired to take the train it would be held until he got ready. Finally the custom arose for the engineer to blow the whistle twenty minutes before starting to warn all within hearing to make the most of those twenty minutes to get ready for the train. But an additional five minutes of grace was still allowed for any person of real importance who telephoned that he wished the train to wait a bit longer.

A new American manager was appointed and determined to start all trains on time. This aroused great indignation among the people, especially among dignified and slow-moving Chinese officials. On one occasion the station master held the train five minutes for the new manager, and he thereupon fined the station master for his disobedient courtesy! This impartial act convinced the Chinese that he was "on the square" and since then they have grown reconciled to American promptness.

Mr. Harrison gave a similar illustration of the notion of time prevailing in the Orient from his experience in the Philippines. It was the custom for guests to an official reception to come "politely late." With this custom in mind the American governor put at the bottom of his invitations "American time," implying that the guests were requested to come promptly at the scheduled hour. But the invited Philippine dignitaries refused to come at all, because they considered themselves insulted by the little phrase on their cards. As Kipling put it, a sad fate awaits him who tries to "hustle the East."

Is Reindeer Meat Tender?

By Robert H. Moulton

Due to the scarcity of beef, mutton and pork a movement has been started to put elk, deer, game birds—including wild duck—on the dinner tables of the country.

Just now a new source of meat supply is occupying the attention of the Government. This is the reindeer of

Turn forward for addition and multiplication; backward for subtraction and division. Nothing could be simpler.

Alaska, enormous herds of which will be raised within the next few years. Reindeer meat has already been sent to the markets of Seattle, Portland and San Francisco, where the best cuts brought from \$1.00 to \$1.25 a pound. Most of this meat came by way of Nome, from various points in northern Alaska, the carcasses being shipped whole and consigned to cold storage firms in the cities mentioned.

Since the United States Bureau of Education undertook the management of the Alaskan reindeer enterprise about twenty-five years ago the animals have increased rapidly in number, there being about 200,000 reindeer in northern Alaska today, and the prediction is made that twenty years from now there will be 2,000,000 in that territory. In western Alaska there are 400,000 square miles of treeless country admirably adapted for reindeer, affording plenty of pasturage in the shape of moss and other vegetables suited to the animals' needs. Twenty-five years from now millions of reindeer undoubtedly will be browsing over that region in vast herds.

The natural habitat of the reindeer extends thru northern Asia, Europe and America, clear around the Arctic Circle; but the two native Alaskan species, which are called "caribou," have never been domesticated. For this reason Siberian reindeer were first imported into Alaska in 1892. This was continued for ten years, a total of 1280 animals in all being brought over. From this nucleus grew the present herds numbering approximately 200,000.

The reindeer were introduced into Alaska by the Government in order to insure a food supply and economic independence for all the natives of Alaska living in sections where deer

"If you can't be the bell cow, fall in behind" now applies equally to the reindeer

could be propagated. The industry is now well established, the widespread distribution of the deer being the result of a system of apprenticeship whereby the most likely natives are taken on as apprentices by the herders for four years, receiving during that time six, eight, ten and twelve deer for the first, second, third and fourth years, respectively. If at the end of the fourth year the apprentice has served satisfactorily he becomes a herder, assuming charge of his deer. He in turn is required by the rules and regulations to take on apprentices in the same manner that he served as apprentice. The perpetual distribution among the natives is thereby assured. Up until the present time the industry has been supervised by local representatives of the Bureau of Education, but it has now grown to such proportions that scientific management is imperative.

Arizona has 500,000 sheep.

Literacy in Japan is higher than any state in the United States.

There are 1218 registered airplane landing stations in the United States.

The Polish National Bank has been formed with a capital of \$20,000,000.

Berlin plans to build at once 5500 new residences to relieve the housing shortage.

The membership in the American Bankers' Association has reached 21,214, the largest in its history.

The number of blind persons in the United States would fill a city the size of Jacksonville, Florida.

The national parks of the United States cover a greater area than the combined states of Massachusetts and Delaware.

One hundred and twenty-nine persons were killed and 1734 wounded in forty race riots in the United States during 1919.

In the first eight months of 1919, nearly 40,000 Americans emigrated to Canada, an increase of 7000 over the same period in 1918.

During the Great War 5000 American soldiers married while abroad; 2295 married French women, 1101 British, and others Belgian, Polish, Swiss, German, Russian, Greek, Dutch, Rumanian, Serbian, Czech or other nationalities—seven teen in all.

Just a Small Slice, Please

Whenever times are dull the Department of Agriculture thinks up something entertaining for us to talk about. Recently the Department made a survey of what 2000 persons ate for one week. In order to make this survey as useful as possible the individuals chosen were selected from 1425 families and 575 public institutions in forty-six different states. Sixteen different nationalities and all grades of income were represented. From a summary of the records it appeared that the average cost of food for each person each day was 46 cents, which sum purchased a food value of 3225 calories, 96 grams of protein, 118 grams of fat, and 405 grams of carbohydrates.

Then the Department dug out of its files the records of a similar survey made about twenty years ago. A comparison showed that on the average the amount of meat eaten daily by each person has decreased about 8 per cent and the amount of grain products about 11 per cent. But the losses of the butcher and the baker were made good by the gains of the grocer and the dairyman, for the consumption of milk, butter and cheese increased 6 per cent, the consumption of vegetables 4 per cent and of fruit 8 per cent. If the sample dietaries in the records of the Department of Agriculture are typical it looks as tho there had been revolutionary changes in the Great American Menu. Who did it; Hoover or the meat trust?

London Sphere

WHERE THE INFLUENZA CAME FROM

The influenza pandemic of 1918-19, which spread from person to person and from continent to continent, will be regarded by our descendants as even more ghastly than the Great Plague of London. Altho the parasites which spread the disease are not yet understood, or the reasons for its virulence known, physicians have predicted that preventive medicine will have asserted itself towards influenza, as previously towards malaria, yellow fever and the plague, before another pandemic is likely to occur. There were influenza epidemics, however, in 1847-8 and again in 1889-90

Lest We Forget!

(Continued from page 248)

which, after the collapse of Austria caused by the Italian arms, have been able to obtain their freedom and, either to constitute themselves into independent states, or to combine with similar ethnical groups into nations.

It is well known that the nationalities which Austria considered faithful to her have always been the Hungarian, the German, the Sloveno-Croatian and the Boemo-German. The soldiers of the Austrian army belonging to these nationalities were on the Italian front and, up to the last days of the war, fought with all the tenacity and stubbornness of which they were capable. Out of these nationalities Austria gathered her shock troops, which represented the very flower of her army. Some of these nationalities, especially the Sloveno-Croatian, had also been used in the past by Austria to keep under subjection the occupied Italian provinces.

The remembrances of the populations of Lombardy and Venetia give a vivid picture of what the Croatian garrisons were like in the Italian cities and of the manner in which they fulfilled the task which Austria had appointed to them. Italy has always found them in the first line against herself; they have also been Austria's champions in the bitter fight for Italianity which the unhappy populations of Istria and Dalmatia had to sustain. As a result of this struggle, the cities of Dalmatia and Istria succeeded in preserving their nationality, while the Italian population of the interior, less numerous and more scattered, failed in this and disappeared.

The Croato-Slovene and Serbian troops were among those who fulfilled their duty as devoted soldiers of the Austro-Hungarian monarchy, and were rightly considered the best soldiers of the enemy army. This is not a mere assertion: it is a fact which is documented in the war bulletins of the Supreme Austro-Hungarian Command.

In the bulletins referring to the famous days of the battle of Vittorio Veneto appears in an indisputable way the gravity of the fight, since there often recur there such expression as "stubborn fights," "furious counter attacks," "land fought for inch by inch," Italian attacks which "broke down everywhere with serious losses," and the "unequalled heroism and faithfulness of the soldiers" during the fight. Moreover, concerning the regiments which especially distinguished themselves, we read, Bulletin of October 26, "... So in the region of Asolone especially the Croatian regiment Landsturm 27th was distinguished for its spontaneous coöperation in the fights ..."; and again, Bulletins of October 29, the 7th Infantry Regiment, Slovene; the 42nd Croatian Battalion; and the Croatian Regiment, 28th Landwehr, are especially praised.

I have quoted from documents which now belong to history, but not because I have wanted to devalue the work of populations with which Italy wants

McCutcheon's

TABLE CLOTHS AND NAPKINS

of Practical Beauty

FOR THE SUMMER HOME OR YACHT

Today the linen market is probably at its most critical phase—the future is most dubious—prices are steadily increasing. But despite these conditions we have just received from Scotland and Ireland fresh shipments of beautiful, durable Table Cloths and Napkins, at really moderate prices. The fact that we placed these orders nearly a year ago, accounts for the most unusual values.

The collection will be of the most timely interest to those seeking to furnish their country residences.

to live in cordial friendship. Being a soldier, no one admires the enemy who performs his duty up to the last more than I do. But I believe it is necessary to destroy all legends which tend to take form in this after-the-war period, and to place all facts in their just and true light.

Most people now recognize that the military victory of Italy, resulting in the final destruction of the Austro-Hungarian empire, has been one of the most powerful factors towards the constitution into independent nations of those nationalities who have always fought against us. Just lately, one of the most important newspapers of Washington, in an editorial article, confirmed my assertion: "The Yugo-Slavs are indebted to Italy more than to any other power for their freedom."

Three Strikes—And Out

(Continued from page 243)

and working conditions enjoyed by the wealth producers in other more highly organized lines of industry. The public mind was not prejudiced in favor of the Steel Corporation, or was it in sympathy with Chairman Gary's attitude on the labor question, but no sooner had the strike been called than its lack of public support was apparent. The people had not been fooled.

Here public opinion went along with reports of agents of the Department of Justice, who were able to show that the real attempt on the part of some of the leaders was not to organize these workers, but to disorganize all industry in this country by breaking down one of its great key foundations; that their object was revolt and revolution rather than a peaceful strike to enforce just demands.

Some of the principal leaders of the strike movement were not steel workers or interested particularly in the workers in this industry. They were red radicals and revolutionists who could not hide their identity or their purpose. They had selected the laborers of this line of industry because they had no effective union of their own and could more easily be exploited in behalf of the "one big union" than any other great body of men engaged in work so important to the welfare of the country as the steel industry.

Bitter denunciation of the activities of the Department of Justice and the Government attitude toward the steel strike could not win public sympathy for the radicals, who had hoped to carry thru their first big forward movement for the "one big union" at the expense of the steel workers, and it is doubtful if any movement so ambitiously launched and with such possibilities of appeal to the public sympathy, ever met such quick and utter collapse.

The reason is not far to seek. The strike was not on the level and the people refused to be fooled into approval of red radicalism parading as a labor movement.

The Government dealt fairly with this strike and with the men involved. If the cause had been just and the

leaders honest in their purpose, the Government would have had no further concern than to preserve order, where its interests were affected, and let the truth be known. The cause would have won on its own merits. The truth denied the strike sympathy and without the support of public opinion it was foredoomed to the failure it achieved.

Revolutionary agitators and the forces of unrest, which find their expression thru the Communists, the Communist-Labor Party, the I. W. W. and the "one big union" advocates, had been at work in the bituminous coal fields coincident with their attempt to promote revolt thru the medium of a strike of the steel workers, and thru the tempestuous demonstrations and insistence upon calling a strike of the miners at a moment when it would hit hardest at every industry of the country, and not only bring suffering and death to the homes of the land thru denial of fuel, but starvation as well by the tying up of transportation facilities that move the food supplies.

Here again the public held no brief for the mine owners and operators, and in the ordinary and orderly course of affairs, their sympathies would have been with the miners in any just demands for a higher standard of working and living conditions. But the people were affronted by the manner of calling the strike, and were quick to realize that the strike was directed not against the employers, but against the interests, the comfort and even the life itself of every man, woman and child in the United States who would be made victims of lack of food and fuel. It was clearly a strike against the public.

Without prejudice to any cause at issue between the mine owners or operators and the miners, the Department of Justice found it expedient to intervene thru the courts on behalf of the people. It moved to protect every vital interest of the country against a grave and immediate peril. The only "one big union" with which it was concerned was the Federal Union of States, and that it should not suffer thru radical and revolutionary tendencies of a small group which had bored its way into the councils of one branch of labor of one of our vital industries.

The coal strike was averted thru prompt action by the Government, and without loss of appeal on the part of the workers involved to a fair tribunal to adjust all differences between employers and employees. The course of the Government was clear in this case, and the fact that it ran true with public opinion did not influence the Government action except that it was in line with law and order.

The third and most recent manifestation of the radical activities of the group that is promoting the "one big union" form of agitation was the so-called "outlaw railroad strike," which was designed as much to destroy the integrity and good standing of the four powerful brotherhoods which represent the railway workers as it was to win the workers over to social and

Wherever You Travel This Summer Carry American Express Travelers Cheques

In Europe carry the new Sterling and French Franc Travelers Cheques. For the protection of travelers in Europe against unscrupulous money changers and fluctuating exchange rates, the American Express Company has devised and issued Sterling and French Franc Travelers Cheques which can be cashed in Great Britain and France at face value less a nominal stamp tax.

Sterling Cheques are issued in five and ten-Pound amounts. French Franc Cheques are issued in denominations of 200 and 400 Francs.

You May Purchase These Cheques

At banks and express offices, paying for them in Dollars at the current rate of exchange plus the usual commission, and thus insure the value of your American money in foreign lands before you start overseas. Like the old Dollar Travelers Cheques, the new Sterling and French Franc Cheques are self-identifying.

In the United States, Canada, Alaska, Central and South America, the West Indies, and the Orient Carry American Express Dollar Travelers Cheques

This sky-blue international currency, which has withstood the severe test of thirty years, is readily accepted in every country in the world. For convenience and absolute safety against loss, these Cheques are superior to any other form of travel funds. You sign these Cheques when you buy them and again when you cash them. Identification such as is required to cash personal checks is not essential—your signature identifies you. They cost fifty cents for each one hundred dollars.

For Large Amounts Carry

American Express Letters of Credit, not as a substitute for Travelers Cheques, but rather to supplement them. American Express Travelers Letters of Credit are issued to travelers who wish to carry larger sums than they care to have in the form of Travelers Cheques.

The American Express Travel Department

With branch offices and connections around the world, can take care of all your travel requirements to any part of the world. Tours and Cruises in season.

industrial revolt. Again the blow was directed at a key industry. The crippling of transportation was a plan within a plan in the bituminous coal strike, and the next move was in the nature of a direct attack which threatened to hamper all business and industry of the country, and again to cut off the source of food and fuel to the cities and communities which are helpless in themselves, and wholly dependent upon rail transportation for their daily bread.

Against the protest and over the heads of the officers of the railway brotherhoods, this strike, by what can justly be termed an outlaw union, was called and it spread rapidly because the agitators had been at work and had carefully laid their plans, and thousands of railway employees soon found that a small minority of workers, thru their control of one of the least important functions of railway men, threatened to disjoint the entire transportation system of the country and throw all men dependent upon that and allied industries out of work.

Here the Government again took a firm stand and was backed almost to an individual by public opinion, with the exception of this same small but aggressive group of red radicals and revolutionists which are constantly boring in wherever opportunity offers for disturbance and trouble. This time the Government and public opinion were aligned with organized labor in its highest expression in this country, and were fighting organized labor's battle as well as that of the masses of the people whose will must prevail if democracy is to endure.

There is no doubt that the hand of the Government and the majesty of public opinion as the ruling element in our republic has been strengthened by the three signal failures to promote economic and social revolution thru the medium of general strikes of an outlaw nature, and which were directed against the people and had little or no concern with the grievances of employees against employers.

Many things of an appalling nature might have happened if these strikes had been allowed to run their unbridled course. Labor, both organized and unorganized, as representing the masses of the people, would have been the chief sufferer, and organized labor would have lost much of the prestige it has gained thru years of progress and honest dealing in an honest endeavor to gain a higher living standard for its members, and a more liberal participation by labor in the wealth it produces.

There has been loss—enormous loss—to the whole people and to the wage earners involved in these misguided movements. But the lesson is clear and the position of the Government fully justified by results. The lesson is that the people cannot be fooled by the attempt of radical agitators to foment economic and social revolution under the cloak of labor movements.

There is another and more important lesson that is plain to all. It is that the majority still rules in this

country, and that any attack launched against our democratic institutions, or any attempt to set up class despotism, no matter how cunningly cloaked, is foredoomed to quick failure, for the spirit of the people is still running strong for the rights of the people, and all of the people.

Washington, D. C.

If He Were President

(Continued from page 247)

in his better days did, or as Mr. Hoover might do. Nor, of course, has he, or any other candidate, Mr. Hoover's grasp on foreign affairs as they project themselves forward into our national life today. On the other hand, it is part of his character to make an effort to discipline hysteria and extricate our governmental machine from a tragedy in knockabout farce.

For he is, in himself, a kind of hand-book for conservatives. Just as liberals have hypotheses of their own for the advancement of liberty, he has his. Theirs change, have an experimental phase, are ever in the process of growth. His, which is in consonance with the spirit of the man, is an array for the future from the premises of the past. He would lessen, instead of enlarge, the activities of government in order to widen and deepen the opportunities of individual liberty. He insists that individual liberty, in America is, or ought to be, king. The fathers of the country, he insists, so intended, whereas the trend of the times, of recent events, of Dr. Wilson and the Democrats, is toward the continued extension of the activities of government, until the czar called bureaucracy interferes with individual liberty at too many points, on one hand, and on the other hand, government itself is all but overwhelmed.

He insists that experience has marked off with some precision and definiteness the field in which Government action is expedient or wise. He argues effectively—for he is an effective speaker—for a return to the good old simplicity of things in which the Government minded its own business and let private affairs alone. He wants an international court to adjudicate war and peace, but not a League of Nations. He wants an end of governmental interference with business—Government supervision, instead, and no more governmental talk about "back to the good old days of competition." He wants a budget plan, is active in encouraging one, in our national Government, and other means to integrate and simplify its multifarious functions. He wants the branches of Government to work more effectively toward mutual aims, to that end would have executive officers able to address the Congress, as is done in Parliament. In spirit, withal, he probably would be proud to be called a disciple of Elihu Root; and in fact he is much the same type of Republican; a great educator, indisputably; and, as Judge Davies called him, "a wheel-horse in traditional Republican politics."

Washington, D. C.

June Mornings

Bubble grains on berries

Mix these airy, flimsy bubbles in every dish of berries. Use Puffed Rice or Corn Puffs. The blend is delightful. It adds what crust adds to a shortcake.

At breakfast, also, serve with cream and sugar—any of these fragile, fascinating grains.

June Evenings

Whole wheat steam exploded

For suppers, float Puffed Wheat in milk. That means whole wheat with every food cell blasted. The grains are puffed to eight times normal size.

They seem like tidbits but every flaky globule is a grain of wheat made easy to digest.

June Afternoons

Airy, nut-like confections

For hungry children, crisp and douse with melted butter. Then Puffed Grains become nut-like confections, to be eaten like peanuts or popcorn.

Use also like nut-meats as a garnish on ice cream. Use as wafers in your soups.

**Puffed
Wheat**

**Puffed
Rice**

**Corn
Puffs**

Also Puffed Rice Pancake Flour

Prof. Anderson's creations

In Puffed Grains every food cell is blasted by a steam explosion. A hundred million steam explosions occur in every kernel. Thus digestion is made easy and complete. Every atom feeds.

The grains are toasted, crisp and flimsy. They taste like nut-meats puffed. Never were grain foods made so inviting.

But remember the great fact. Every element is fitted to digest. They are ideal grain foods which never tax the stomach.

In summer serve at all hours, and in plenty. Keep all three kinds on hand.

ESTABLISHED 1897 INCORPORATED 1904

New Invention

IMPROVES YOUR ENGLISH

In 15 Minutes a Day

Sherwin Cody, the well-known teacher of practical English, has perfected a new patented invention which, in 15 minutes of your daily spare time, will quickly give you unusual command of language. Students of this "100% Self-Correcting Method" secured more improvement in five weeks than had previously been obtained by other pupils in two years. 15 minutes each day of YOUR spare time can now, thru Sherwin Cody, make you speak or write clearly, forcefully, correctly, and convincingly.

"100% Self-Correcting Course"

The average person in business is only 61% efficient in the vital points of English grammar. That is because the methods of teaching English in school left the student only a hazy idea of the subject—the "rules" did not stick in his mind. But Sherwin Cody's new invention upsets all old standards of teaching English. And it overcomes the only weak point in instruction-by-mail. It actually takes the place of an instructor at your elbow. It assigns you lessons in Letter Writing, Spelling, Punctuation, Grammar, Reading and Conversation, corrects them for you, and anticipates your questions. It even guides your paper and assigns you your percentage till you reach the 100% mark.

Interesting Free Booklet

Mr. Cody has written an interesting booklet explaining his new course in detail. If you feel your lack of Language Power, if you are ever embarrassed by mistakes in grammar, spelling or punctuation, if you cannot command the exact, correct words to express your ideas, this booklet will be a revelation to you. Send for it now. Learn how Sherwin Cody's new invention makes command of language easy to gain in 15 minutes of your daily spare time. Mail a letter or postcard for this booklet, at once.

Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government to the American People. *Three Strikes—and Out.* By Mitchell Palmer.

1. Prepare an outline of the article that will show the plan the writer had in mind while he was writing.
2. What advantages does a writer gain by preparing a plan before writing?
3. Tell, in simple language, what the article says concerning the influence of public opinion.
4. Read the last paragraph aloud. Tell exactly what the paragraph means. How much emphasis should be placed upon the word "all"?
5. Make a grammatical analysis of the first sentence of the article.
6. Give the syntax of all the infinitives in the first column of the article.
7. Give the syntax of the infinitive in the following sentence: "The reason is not far to seek."
8. Make a grammatical analysis of the first sentence in the second column of the article.
9. Write a very short, simple letter, written apparently by Mr. Palmer, summarizing and emphasizing the message that he presents in the article.

II. A Message from the Italian Government to the American People. *Lest We Forget!* By Colonel V. di Bernezzo.

1. Prove that the article presents good examples of refutation.
2. Write, in sentence form, the points that the author refutes.
3. Point out, and explain, the various methods of refutation employed in the article.
4. Explain how you can employ in a school debate the principles of refutation employed in the article.

III. If He Were President. *Nicholas Murray Butler.* By Donald Wilhelm.

1. Summarize the reasons given for believing that Dr. Butler would make an exceptionally able President of the United States.
2. Write, in the form of comparatively short, numbered sentences, a list of the principles that Dr. Butler believes would improve our national life.
3. Define the following words: consistently, antithesis, accumulations, accrued, inference, doctrinaire, remonstrate, tangible, eventually, novitiate, encroach, temperamental, extricate, hysteria, consonance, array, trend, multifarious, integrate, traditional.
4. Make a grammatical analysis of the third sentence of the article.

IV. The Man with the Best Story Wins. By Richard Boeckel.

1. Give a clear explanation of the work of "a publicity man."
2. Explain how it is possible, in school life, in connection with the work of school organizations, to take advantage of the methods of "a publicity man."
3. Write, for your school paper, an article that will have "publicity" for its object.
4. Give a talk in which you explain the importance of writing in connection with a political campaign.

V. Unveiling Russia's Red Terror. By John Spargo.

1. What points does the article present that may be used, for the sake of comparison, in studying Dickens' "A Tale of Two Cities"?
2. Write a paragraph based on the following topic sentence: "Czarism was, in many respects, more admirable than Bolshevism."
3. Write a tale on the life of a counter-revolutionist under the Soviet Government. After reading the article, would you say that his life was a tragedy and, if so, in what way?
4. Define "Chresvychaikas." Give a description of them at work. Would you call their activities unduly cruel, in view of the number of persons whom they put to death?

VI. Not His Brother's Keeper. By Arthur Judson Brown.

1. Draw from the article material for a short composition on "The Effect of the World War on Children."
2. Write, in a single complex sentence, exactly what the writer wishes the United States to do.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,
NEW YORK CITY

- I. The Presidential Campaign—"If He Were President," "The Man with the Best Story Wins," "The League and the G. O. P.," "Wilson Defines the Issue."
 1. What facts in Dr. Butler's career justify his campaign managers in presenting him as a candidate for President?
 2. If Dr. Butler is nominated to what kind of voters will he make his chief appeal?
 3. Compare the present day methods of conducting a presidential campaign with those in vogue about the middle of the nineteenth century.
 4. Define the following political terms: (a) "Keynote" speech, (b) "bitter enders," (c) "permanent chairman," (d) "dark horse," (e) "favorite son."
 5. Why are conditions in the Democratic party less clearly defined at present than those in the Republican party?
- II. Labor Organizations and the Public—"Three Strikes—and Out," "French Political Strike."
 1. Show that the strikes referred to by Mr. Palmer and the one now going on in France were actuated by the same motives.
 2. What do you understand by the "one big union" idea? How does it differ from the idea underlying the organization of the A. F. of L.?
 3. "It is the history of all strikes won that they were backed by public opinion," etc. Does this explain the failure of the three strikes?
 4. Compare the way the French Government is handling its strike with the way the recent strikes were handled in this country.
- III. The Sabotage of Capitalism.
 1. Do you find evidence in Mr. Hapgood's article which justifies us in saying that the world is passing thru a second Industrial Revolution?
 2. Is Mr. Hapgood justified in accusing capitalism of sabotage?
 3. "That orthodox Marxism has lost by the war is almost as clear as that the Socialist idea... has gained." Explain this sentence.
- IV. Poland and the Ukraine: "Poles Capture Kiev."
 1. "The standard of the White Eagle, now raised again after 147 years of suppression." Trace the steps by which the Poles lost their national independence.
 2. Compare the attitude of the French toward the Poles at present with the attitude in the eighteenth century.
 3. Explain why the Poles and the Ukrainians formerly opposed each other and why they are now fighting together.
 4. Compare the British and the French policy toward Poland.
- V. A Plea for Italy—"Lest We Forget!" "D'Annunzio's Anti-League."
 1. Does Italy's conduct of the war justify her extreme claims for territorial compensation?
 2. "The Yugo-Slavs are indebted to Italy more than to any other power for their freedom." In what sense is this true?
 3. Show that the conditions which exist along the borders of the Adriatic make it practically impossible to apply the principle of nationality in the settlement of boundary disputes.
- VI. The Turkish Treaty.
 1. "Special provisions are made for the protection of minorities." (a) Which are the peoples who have been minorities under Turkish rule but are now independent? Explain when and how they became independent. (b) Show from the history of the Turk why the present minority groups need protection.
 2. What former action by France, Great Britain and Italy accounts for their receiving the territory given them by the Turkish treaty.
 3. Compare the career of Venizelos with that of Cavour in respect to the services rendered their respective countries. In what way is the Greek share under the Turkish treaty a tribute to Venizelos?
- VII. The Revolution in Mexico:
 1. Why do you think the revolution came now?
 2. "Any government founded on insurrection in a country so unstable as Mexico can never enjoy any real security." (a) What are the grounds for saying that the government of Mexico is founded on insurrection? (b) What are the fundamental conditions in Mexico that account for this situation?

Why Swift & Company has to be "big"

Every day last year, according to Government figures, Americans ate an average of:

Over 19,000,000 pounds of dressed beef.
Over 1,750,000 pounds of mutton and lamb.
Nearly 28,000,000 pounds of pork products.
Over 5,500,000 pounds of chickens, ducks, etc.
Over 63,000,000 eggs.
Over 4,000,000 pounds of butter.

To provide this food is a stupendous job.

These quantities must be gathered, dressed, prepared, packed, and brought to you at your dealer's, often many hundreds of miles from where they are produced.

They must be forthcoming without fail, every day, year in and year out. They must be clean and wholesome, pure and uncontaminated. They must be handled with the greatest skill, care, and speed, for they are perishable.

And all this must be done at the lowest possible expense for the good of all, as every penny that can be saved benefits both the producer and the consumer.

These are the needs which Swift & Company helps to meet. Only a business national in scope, adequately equipped, in charge of specialists, and free to act along true business lines, could hope to cope with them.

Last year Swift & Company did its work so well that you, as an average American citizen, continued to take your supply of meat and produce for granted; and yet Swift & Company's profit was only a fraction of a cent per pound from all sources.

Send for the 1920 Swift Year Book.

Just a Word

Our readers will be good enough to notice that in this number we have articles by spokesmen of the three main political groups of this country: Dr. Talcott Williams, dean of the Columbia School of Journalism, for Republicanism; Mr. Norman Hapgood for Democracy, and Mr. John Spargo for Socialism. It is true that none of the three is a thick and thin party man, but this fits them all the better to speak for the abiding principles rather than for the temporary maneuvers of the parties. A party politician, as Chesterton said, is a man who might have belonged to any party. A Penrose born in Georgia would have been a Democrat and a Champ Clark born in Vermont a Republican, and there is many a Socialist whom wealth would have made a typical bourgeois; but Messrs. Williams, Hapgood and Spargo have reasons for the faith which is within them and that is why they are worth a hearing.

Remarkable Remarks

GABRIELLE GUENTHER—A woman really does not need legs.

ED. HOWE—No husband could get along with Mary Pickford.

HERBERT HOOVER—We are stolidly watching Rome burn.

MARGARET WALTER—The place to see Paris frocks is in London.

COL. HENRY WATTERSON—I am a prohibitionist—with modifications.

REV. PERCY STICKNEY GRANT—If Christ went to the movies—He would approve.

HOLBROOK JACKSON—We all overestimate the importance of the literary man.

LORD COLERIDGE—The increase in the applications for divorce is due to a raised moral standard.

QUEEN MARIE OF RUMANIA—Anyone who invests money here will get a return with a handsome profit.

CHARLES M. SCHWAB—Never before in history has there been such an opportunity for the successful man.

REV. DR. WILLIAM MANNING—Our present system of easy divorce is, in some respects, less moral than polygamy.

CHARLES M. SCHWAB—Boys, you can have a good time in life or you can have a success in life, but you cannot have both.

MORRIS HILLQUIT—The Democratic and Republican parties are revolutionary organizations trying to overthrow constituted

American Government by force and violence.

THEDA BARA—It is very hard to live up to one's reputation.

J. RAMSAY MACDONALD—Revolution is the result of resistance offered to movements that cannot be resisted.

SENATOR GORE—There are some who regard the President's views as infallible excepting when they disagree with him.

ELSIE FERGUSON—The average woman is more interested in the fashions displayed in the moving pictures than in the plots.

EDWIN WHITE GAILLARD—I do not believe that it will ever be possible to stop book stealing from large public libraries.

M. L. BLUMENTHAL—When a man attends an amateur dramatic performance, that is an indication he has a daughter in the cast.

REV. P. NOVATUS, St. Mary's Church, Phoenix, Arizona—Entrance into this church is forbidden to women wearing low-necked dresses.

ROBERT QUILLEN—The endurance-test movie kiss, popularly known as a clinch, is not properly a kiss but a form of adhesion closely resembling vulcanizing.

NATIONAL DEMOCRATIC CHAIRMAN HOMER CUMMINGS—I have come to the conclusion that the Republicans have no real experience in legislating for anything but special interests.

New Plays

Betty, Be Good. A bedroom farce set to music and varied with all the popular styles of dancing; Hawaiian, Egyptian, clog and eccentric. (Casino Theater.)

The Dance of Death. All of Strindberg's characters are more or less crazy, but the Theater Guild are able to make them sufficiently real to grip the audience as intensely as in "John Ferguson" and "Jane Clegg." (Garrick Theater.)

His Chinese Wife. Whatever injustice we may do to the Chinese in real life we make up for it in the theater. This is the fourth popular play dealing with racial inter-marriage and in all of them the East shows up better than the West. Very well acted. (Belmont Theater.)

Mrs. W. K. Clifford, the English novelist, so well known here, is now engaged in writing a dramatized version of her story, "Miss Fingal," which proved such a popular success in America when it first appeared. Mrs. Clifford hopes that the play will be ready for production in the autumn, and it is quite possible that it may appear in New York even before it is staged in London.

STEINWAY

The Instrument of the Immortals

THREE score years ago a new genius burst upon the musical world. He was a composer, not of musical scores, but of musical instruments. His master-work was a piano. Liszt wrote to him: "Even to my piano-weary fingers the Steinway affords a new delight."

From that day to this the Steinway has been the piano which the world has chosen to interpret the compositions of the great. The music of the Immortals and the instrument of the Immortals live on together. They are inseparable. In homes where you find the one there also is the other.

Hoover—And the Rest

A Summing-Up of Personal Interviews with the
Eleven Most Probable Candidates for President

By Bruce Bliven

Managing Editor of the New York Globe

IN the past few weeks I have traveled some 5000 miles to interview the eleven leading Presidential candidates, including four Democrats and seven Republicans, and I have spent many weary hours in reading their collected addresses, and things written about them by their admiring friends and publicity agents. I have asked each candidate the same list of questions, thinking to get his point of view on the ten outstanding questions of the day, and I have published the results in a series of interviews syndicated in a number of newspapers thruout the country. It is impossible to go thru such an experience without drawing some deductions regarding the personalities of these men, not as party hitching posts, but as human beings. What sort of men are they?

What is the best and what is the worst that the country may hope and fear from the election of next November?

Let me say at once that I found only two men of eleven who struck me as being completely and grotesquely inadequate for the office for which they have offered themselves. Of any of the other nine it could safely be said that he would make a "perfectly good" President—as good, for instance, as William McKinley. Any one of them could have filled the chair well enough in those far-off happy times before the world woke up and found itself lunatic.

But there is no blinking the fact that these are not ordinary times. They call not merely for a good citizen in the White House, but for the best citizen that can be

Wide World

Herbert C. Hoover

found. The shop-worn phrase beloved of high school orators has really come true: Civilization stands at the parting of the ways, and the man who lives at the "other" end of Pennsylvania avenue for the next four years will have more to do with keeping the destiny of all mankind than any other living soul during the same period.

It is a desperate, a sacred and an awful responsibility which rests upon the man who dares offer himself to be the leader of his country in such an hour of trial. Does such a spirit animate the candidates?

It is difficult to discuss this question without seeming presumptuous. Nothing is easier, and nothing is more contemptible than for a little man to disparage a big one, seeking thereby to

magnify his own importance. Yet I must run the risk of this charge and record the plain fact that only one man of the eleven candidates seemed to regard the Presidency as a position which it would tax all his powers to fill. If any of the others, alone in his chamber in the dead of night, is assailed with doubt or catches his breath in terror at the magnitude of the enterprise upon which he has launched himself, they concealed it admirably when I called upon them. The one diffident exception was Hoover.

There is a set of psychological stigmata, to use a highbrow term, which seems to be shared by all politicians. This is not, of course, due to the fact that politics gives men those characteristics. On the contrary, men possessing those characteristics go into politics. They are not unlike the traits which are shared by

Underwood & Underwood

Underwood & Underwood
Leonard Wood

Paul Thompson
Nicholas Murray Butler

Paul Thompson
Calvin Coolidge

most actors, most clergymen, and many male school teachers. There is no reason to assume that possessing this type of mind unfits a man in any way for fulfilling the office of chief executive.

These eleven candidates are strikingly similar in another way, and that is in regard to their views. There are many people who would have us believe that nowadays public opinion in America is dividing into two armed camps; that the warfare between the classes, between reactionary and radical, is growing as fanatical and bitter as was the trouble between North and South in 1861. If this be true, at least ten of the eleven candidates are on the same side. I could not discover that the Democratic candidates were any more liberal in their point of view than the Republicans, or vice versa. There were, of course, individual differences, but in the main these were surprisingly slight. Perhaps I can indicate clumsily what I mean by saying that if you were to put the most reactionary conservative whom you know at the right end of a twelve-inch ruler, and the most violent radical you know at the left end, the eleven Presidential candidates, I should say, would be found between the fourth and the sixth inch from the right! The three men who struck me as being most liberal were Johnson, Republican; Hoover, Republican, and McAdoo, Democrat. The three men who struck me as being most conservative were Wood, Republican; Palmer, Democrat, and Butler, Republican. Yet I have no doubt that the last three gentlemen named would all protest indignantly against any such classification, believing that they are thoroly loyal to liberal principles. I can indicate the striking similarity of views among all eleven candidates by quoting from a recent newspaper article on this subject in which I said:

"All the candidates of both parties say practically the same thing regarding Bolshevism. Not one of them—not even Attorney General Palmer—professes to have any real fear of a Bolshevik uprising in the United States.

"All of them have the same idea, generally speaking, about industrial unrest. They all want labor to get 'a little more' than before the war. But they don't seem to want labor to get so much more that other elements in the community will be distrest.

"They all demand a business administration, and with one breath they declare that increased production is the solution of the high cost of living problem. Only one or two seem to realize the part which currency inflation plays.

"They all demand a reduction of taxes, and several of the Republicans seem to wish the burden of our war debt to be postponed for some other generation to pay.

"They all profess friendliness to labor to the extent of approving collective bargaining, but not one of them was very eager or hearty in his endorsement of this principle.

"Practically all the candidates of both parties are in favor of unrestricted immigration.

"There are two issues, of course, in regard to which there is a split along party lines: The League of Nations, and the tariff. All the Republicans except Hoover seem to believe that party loyalty requires them to be unfriendly or hostile to the League, tho only Johnson seemed to me sincere in this belief. All the Democrats seemed to feel that support of the League is demanded of them, tho I should say that this was not much more than lip service, except in the case of McAdoo. In spite of the fact that every economic condition which existed when the tariff was first made a Republican principle has been turned on its head, every Republican candidate feels that he must beat the big bass drum in favor of high tariff. One candidate, who shall be nameless here, came out firmly in favor of a tariff which should aid in building up Europe's war-shattered industries!"

From the point of view of the neutral observer no candidacy is more interesting than that of Herbert Hoover; and certainly no candidacy has been [Continued on page 297]

A Memorial Day Promise

By Elizabeth Hamm

BRIGHT and warm and sunny dawned the thirtieth of May one year ago in France. My first Memorial Day! I looked from my window in the little shell-torn house where I had found work, a home, and a measure of contentment, and the blue sky shining thru a shell-hole in the opposite roof swam before my eyes, and my heart contracted. I could not go to crown my own white cross with roses, for it stood too far away on a battlefield of Lorraine, one of a snowy field of crosses where five thousand of our dear boys lie sleeping within the shadow of Mont de Sec.

In all of the American cemeteries there were to be beautiful ceremonies, and we had planned to attend the one nearest our headquarters, leaving the doors of the busy office of the American Committee closed for one day, while we paused to do honor to our dead. Until the very last moment I thought to go, and then my courage failed. I feared to hear taps. Cowardly! He would not have liked me to be cowardly, and just as soon as the camions bearing away our blue-uniformed group had turned the corner beyond the old chateau gates, I felt ashamed, and tried to think of something I might do for him. Just then one of my best and smallest friends came toddling down the road toward where I stood forlornly in the doorway, and held out both hands full of flowers "for Madame 'Amm." It gave me an idea. I knew of no American graves in the vicinity, altho some American boys must certainly have fallen there, but on the height above Blerancourt seven crosses marked the resting place of unknown poilus, the town's heroic defenders.

"Eglantine," I said, "run and tell the children in Blerancourt to be here in an hour and to bring all the flowers they can carry. Run quick! Tell Berangere to help you."

Promptly on the hour named the children gathered about me, in clean aprons, and each carefully holding a big bouquet—all the lovely flowers of France—fragrant syringa, gay marguerites, roses and pansies, iris purple and gold, the very essence of the Spring. We were fifty in all, and we formed in line, two by two, the littlest in front with excited, happy eyes—for this was to be their very own "Fete of Flowers," and they were to deck the graves of brave men where they lay lonely and uncared-for on the hill.

As we filed up the winding street the people of Blerancourt came to their doorways and smiled in sympathy, and some followed us at a little distance. We went past the church, still beautiful in its destruction, up a narrow footpath to the pine-clad hill-top. I looked back over the flower-laden ranks of my small army, and met a smile on every face, yet the young voices were hushed,

for there was awe mingled with the children's happiness.

By the seven graves on the hill we paused and formed a close circle. Upon each cross hung a pathetic helmet with its bullet-hole telling the last tragic story, and scattered all about the ground were grim reminders of war, bits of torn clothing, gas masks, cartridge shells. But below us rolling clear away to the fallen giant of Coucy le Chateau the country was outspread in fairness and peace, covered so tenderly by Nature that the scars and wounds of battle were invisible. Blue hills and green valleys were bathed in soft noontide haze, and here and there the rich brown earth lay ploughed and full of promise. From the village came a faint echo of laughter and singing, where three months before had been silent discouragement. From the woods over the way a cuckoo called the hour.

I talked to the children a little, and then they decked the graves, all so sweet and earnest that it was charming to watch. They themselves with fragrant names—Rose, Eglantine, and Marguerite—held the fairest promise of this first springtime in a France restored to peace. The graves looked lovely, and loved, when the last flower was laid in place. As they worked the children chattered to me, and one of them, my favorite Fernand, whose father was killed in the battle of the Marne, asked me if he

could choose a grave "for my own, to bring fresh flowers to every week." "He will be my god-son, this poor unknown," he added, "and I will love him."

Finally we chanted in unison a prayer for the dead. And I breathed my own thankfulness for all the love and hope and innocence that rose from that sunny hill-top to Him whom the children call the "Good God."

But the best was yet to come. Late in the afternoon, working in my office, I raised my eyes to see Fernand in the doorway. Very shyly he held out a note. "Pour vous, Madame 'Amm," he whispered, and slipped away. I opened it and read:

DEAR MADAME:

I walked again in the woods this afternoon, and I found an abandoned grave. The wooden cross had upon it nothing but "American, Unknown." I have asked Marcel Guilbert to be godfather to the soldier that I chose this morning, and I will be godfather to this American. I promise you to care for this grave faithfully, and to love this soldier as a comrade who has died for me.

And so, American mother, whose boy fell so far away, and who lies you know not where, be sure that he is loved and cared for "faithfully, as a comrade" who gave his life that these flowers of France may grow to inherit a new and better world.

Blerancourt, France

Western Newspaper Union

"I will be godfather to this American. I promise you to care for this grave faithfully and to love this soldier as a comrade who has died for me," said Fernand Prieur, a little French boy who had found the grave of an unknown American in a wood. His spirit is also the spirit of the French who decorated these American graves along the Aisne

Zero Hour Along the Marne

The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

THE situation leading directly to the Aisne-Marne counter-offensive was created by the Germans themselves. They offered to their opponents an opportunity which was seized by Marshal Foch so skilfully that his conduct of this one battle, had he never commanded in another, would have assured him a high place among the world's great captains. Believing themselves to be still

U. S. Official

Previously occupied by German machine guns, these partially wrecked buildings in the vicinity of Nesles, north of Ourcq, were made habitable for billets by men of the 308th Engineers, 42nd Division

possessed of the superiority of numbers, in mid-July the Germans determined to utilize their mass of reserves in an attempt to enlarge the Marne salient on its southeastern side by driving down to the Marne at Epernay, at the same time enveloping and capturing Reims by a simultaneous advance in the Champagne east of that city, which advance should penetrate southward to Chalons, the whole front of attack thus overrunning the line of the Marne, separating Paris from Verdun and seriously threatening the line of the French eastern frontier fortresses from Verdun to Belfort.

From the partial information which we at present possess we know that at the time of making this attack, which was launched on July 15, the Germans had a mass of reserve troops amounting to about sixty-three divisions. We know, also, that two days after commencing the attack they had reinforced the eighteen divisions already in line between Chateau-Thierry and the region of Suippes, in the Champagne, to a total strength of about thirty-eight divisions with eleven more in close support. Their general reserve was thus reduced very greatly, most of it being in the neighborhood of the British front.

In acting as it had done, the German High Command had assumed that Marshal Foch had no reserve force of sufficient strength to venture a counter-attack. But he had, in fact, thanks chiefly to the rapid coming of the Americans, a mass of maneuver of seventy-two divisions. Having learned accurately beforehand, thru his excellent Service of Intelligence, the time and place of the German offensive, he disposed twenty-seven divisions to meet it with nineteen more in close support. These were ample to stop the attack in its tracks from Chateau-Thierry to Suippes and to force the close engagement of all the opposed German divisions. Shrewdly judging that the Germans would not dare remove many more of their reduced number of reserves from the front of the now reinforced and refreshed British armies, on July 18 Marshal Foch, with twelve strong

American and French divisions in front line and ten in support, attacked the eleven German divisions holding the western side of the salient between Chateau-Thierry and the heights south of Soissons. The result was not for a moment in doubt. Unable greatly to reinforce the line attacked and with their own attacking troops between Reims and Chateau-Thierry imminently threatened in rear, the Ger-

mans had no choice but to retreat from the Marne salient as rapidly as possible. The initiative was lost to them and they never regained it.

In this far-flung battle, so curiously divided, from the Allied standpoint, into a defensive phase east of Chateau-Thierry and an offensive phase north of it, which, never overlapping, yet reacted vitally the one upon the other, American troops bore a part far more conspicuous than ever before. In the defensive phase their part was, to say the least, very important; in the offensive phase it was the absolutely determining factor for victory. In the subsequent pursuit to the Vesle our divisions again had work of great, tho perhaps not of supreme, importance.

First and last during the operations nine American divisions were engaged. Of these, the 3rd, the 28th and the 42nd took part in the defensive battle and, subsequently, in the pursuit to the Vesle; the 1st, 2nd, 4th and 26th participated in the counter-offensive and of these the 4th later on entered into the pursuit. One division, the 32nd, was engaged in the pursuit only and one, the 77th, entered the battle as a relieving division after the line had become stabilized on the Vesle. Thus approximately 75,000 American troops were engaged in the defensive battle, 100,000 in the counter-offensive and, counting the divisions which entered the fight a second time as well as those which first made their appearance then 125,000 in the pursuit. In themselves these numbers are formidable. But it is to be borne in mind, in measuring the magnitude of this epoch-marking battle, that, altho the American divisions all occupied sectors of capital importance, they constituted but a minor percentage of the whole vast Franco-American battle array and that they fought not on a front exclusively American but by divisions scattered along the line of conflict. The day of the united American army was yet to come.

The defensive phase of this mighty drama, this beginning of the end, opened at 3:20 o'clock on the morn-

ing of July 15, the "zero hour" at which the infantry masses of the armies of General von Buelow and General von Mudra, of the Army Group of the Crown Prince of Germany, moved to the attack along the front, about one hundred kilometers in length, extending from the eastern edge of Chateau-Thierry nearly to the edge of the Argonne Forest, on the further side of the plains of Champagne. At both extremities of the Allied front opposing them it happened that American troops were in line. General Joseph T. Dickman's 3rd Division, with the 28th Division under General Charles H. Muir in support, was defending the south side of the Marne from Chateau-Thierry eastward to the Jaulgonne Bend. These two divisions formed part of the French 38th Corps, of General Dagoutte's 6th Army. The 42nd United States Division, under General Charles T. Menoher, held the third line of defense in the Suippes sector of the Champagne, about thirty kilometers east of Reims. It was operating as part of the French 21st Corps, of General Gouraud's 4th Army.

General Gouraud, one of the ablest and most successful of the French army commanders, had arranged for meeting the anticipated German attack by a system of so-called "elastic defense" which embodied some decided improvements over the defensive distribution in depth which had already been practiced on various fields. In the sector in which the 42nd Division lay, the front line was held lightly by delaying detachments of the French 13th and 170th Divisions, the mass of the troops of these divisions being concentrated for the real resistance on the

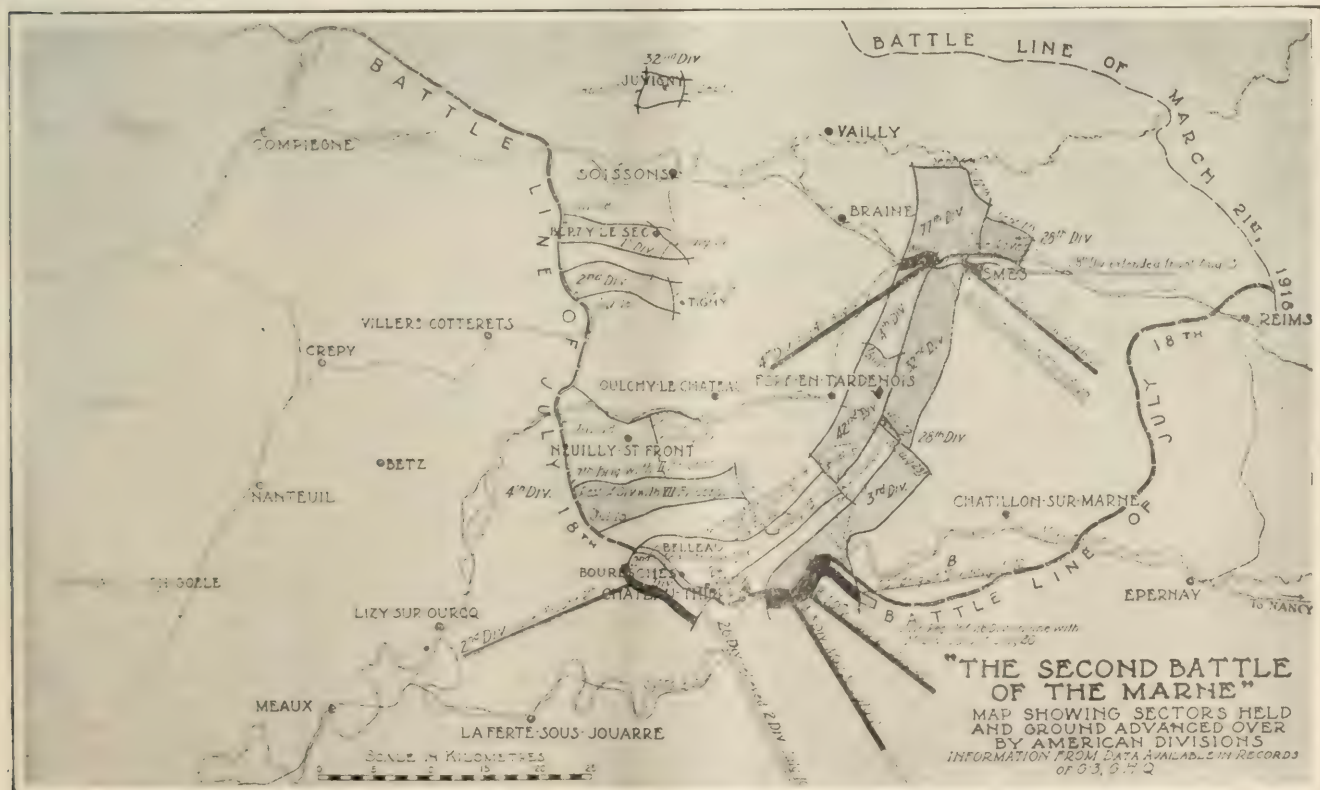

intermediate position. In case the latter should be broken thru, General Menoher's division stood in support in the third position, with General M. J. Lenihan's 83rd Brigade on the right, behind the French 170th Division, and General R. A. Brown's 84th Brigade on the left, behind the French 13th Division. There were still other systems of trenches further to the rear which could be occupied in case of need. Three advance battalions of the 42nd Division were disposed between French battalions in the intermediate position.

When the German troops swept forward upon the Allied front line they found themselves caught there under the French and American counter-barrage, while the gallant resistance of the delaying detachments caused them to become somewhat disorganized and to lose their impetus so that they came before the intermediate position only about 7:00 a. m. Checked here, they fought furiously, but to no purpose, to continue their progress. The advanced American battalions bore their share of this conflict with fine courage, one battalion of Colonel Benson C. Hough's 166th Regiment, of Ohio infantry, repulsing seven distinct attacks before noon. Two companies of Alabamians of the 167th

Infantry, Colonel William P. Screws' regiment, acting with two companies of French infantry, brilliantly recovered the only two strong points of the intermediate position into which the Germans had succeeded in penetrating. By noon the enemy, having suffered terrific losses, had already been thrown back everywhere in to the old Allied front line, where they sustained

Six Stories of Far-Sighted Research

A Message from the United States Government to the American People

By S. W. Stratton

Director of the United States Bureau of Standards

IN these days when the thoughts of most of us are turned again to the country's peace-time activities, it is interesting to reflect that out of the great war much real good has resulted, entirely aside from and perhaps more definite in character than some of the so-called benefits of a political nature.

In the fields of science and engineering, the development of certain devices and processes was undoubtedly greatly hastened by the war, and altho many of the inventions which were developed thru military necessity now appear to have an almost equal value in the arts of peace, it is to be doubted if these improvements would have been put into actual commercial use in the normal course of events for many years.

In the development of these new devices and methods of production, the Bureau of Standards has taken a prominent part. It was recognized early in the war that close coöperation between the Bureau and the Army and Navy would be necessary, in order to give to the military and naval establishments the benefits of the latest scientific developments. Modern warfare is so largely dependent upon science that the work which the Bureau carried out may be regarded as of the first importance and this fact was very clearly recognized by the military authorities and they, at all times, were very generous in the credit which they gave to the Bureau for its undertakings.

It was likewise fortunate that the Bureau's organization is such that it was able to change from a peace-time to a war basis with the least possible interruption in its service, and at the close of hostilities, to again turn, without confusion or delay, to its regular investigational work.

It would be interesting to nearly everyone, whether a scientist or not, to catalog the list of achievements toward the successful accomplishment of which the Bureau lent its aid, but such a list would be entirely too long to be covered in the scope of a short article. Besides, much of the assistance which the Bureau was able to render was of such a character that it never became a matter of official record. Consultations were continually held between representatives of the military and naval services and members of the Bureau's staff, in which the latter gave their advice and assistance on an almost endless variety of subjects, such assistance necessarily being of a more or less informal character.

It may be of interest, however, to cite a few

of the outstanding accomplishments brought about in part thru the efforts of the Bureau of Standards, which were carried out as a result of the war, but now have an important peace-time value

The determination of the direction of a source of radio waves was a matter of great-war-time importance, since to discover the location of an enemy radio station, and, if possible, suppress it, is almost as essential as it is to successfully establish one of our own and to safely transmit messages. It was with the object of aiding the army and navy in this detection work that the radio direction finder developed for fog signalling was turned over for military use.

Briefly, this is a device for receiving radio waves and indicating thru a very simple mechanism the direction from which they come. It consists of a coil of wire carried by a suitable light framework which may be turned in any direction about a vertical axis. This framework is rigidly attached to what amounts to an indicating arm while a dial over which this travels forms a part of the stationary base of the instrument. Current is induced in this movable coil by the radio waves and may be detected thru ordinary receivers. This current is loudest when the plane of the coil is perpendicular to the direction from which the waves come. Therefore, by slowly turning the coil, the direction of a radio sending station may be established with considerable accuracy. This device has been properly spoken of as a radio compass and it is as a compass that it promises to find its greatest commercial application. One has only to consider the value of such an instrument on shipboard.

Imagine the vessel surrounded by a dense fog at night and approaching a dangerous coast. Under such weather conditions, even the powerful beams from a lighthouse are often lost in the general obscurity; sound signals might perhaps be heard, but only for a

limited distance, and the determination of the direction from which they come is always a matter of doubt. The whistle and bell buoys of our coast, together with the fog signalling apparatus, have been valuable aids to navigation, but any one who has spent much time on shipboard knows the difficulty of determining the direction of the sound from such appliances and the difficulty of distinguishing it at all at comparatively short distances above the roar of the wind and the noises on the vessel itself.

Chinese Gold

By Charles McMorris Purdy

*In a curio shop full of musty odors and dusted cobwebs
There sits in calm repose an old copper candlestick—
And in it is a candle the color of Chinese gold . . .
Black night folds itself about a junk
Creaking with yellowed sails and heavy cargo.
The slip of Chinamen's bare feet across the decks,
The slap of waves against the sides,
A single light glimmering from the pinnacle.
In the cargo there is gold—Chinese gold—
Yellow, rich, mellowing—too much for one junk.
A dark serpent glides along the side, noiseless, black.
Over the rail something slides—only a rat, perhaps—
Another rat;—but only one serpent, dark, invisible.
Slip, slip go the Chinamen's feet.
Another rat—
The Chinamen's feet no longer slip, slip.
And the Chinese gold is red.*

Because We Both Love Liberty

By Baron Emil de Cartier

Ambassador from Belgium to the United States

COMMUNITY of thought and sentiment between Belgians and Americans is no new thing. The Great War has served to make the two countries know and understand each other better than ever—that is one of the good things that has come out of evil—but there has always existed between the two peoples a certain similarity of thought, especially in their aspirations for personal liberty and political independence.

The American Revolution was a great inspiration to the Belgians. At that time the Provinces which now constitute the Belgian Kingdom were, like the American Colonies, under the dominion of a foreign monarch. The American colonists, who had braved the perils of the sea and the unknown dangers of an unexplored continent to secure greater liberty, had begun to free themselves from the yoke of a German king seated on the English throne. The Belgians, who had fought for liberty against the Germanic tribes and against the armies of Caesar, and who had zealously maintained their municipal and provincial privileges against the encroachments of medieval princes and foreign rulers, were beginning to feel the heavy hand of Joseph II, Emperor of Austria and Sovereign of the Belgian Provinces.

The discontent of the Belgian Provinces came to a climax when, from 1786 to 1789, Joseph II endeavored to suppress the provincial privileges and ancient rights which the Belgians had obtained from Charles V in the sixteenth century. The fires glowing upon the Altar of Liberty in the New World had illuminated western Europe. In 1789 the Belgian patriots, under the leadership of Vonck and Van der Noot, rose against their Austrian rulers, and set up a "Federal Republic" under the name of "The Republic of the United Belgian Provinces."

It is interesting to note that, in drafting a Constitution for their new republic, the Belgians were inspired by the Constitution of the United States of America.

This Belgian Constitution, which was adopted in 1790, bears a close resemblance to the "Articles of Confederation" adopted at Annapolis in 1777 and to the Constitution finally adopted at Philadelphia in 1787.

The Belgian Republic was constituted as a "Confederation" of the Belgian Provinces. Each Province maintained its complete internal autonomy, with its ancient privileges and cherished institutions, in much the same

*© Cluendest
Photograph from Press Illustrating*

Baron Emil de Cartier, the first Belgian Ambassador to the United States, was a member of the Supreme Economic Council of the Peace Conference

way as the new American states guarded their rights.

Sovereignty was vested in the whole, in the "body" of the Provinces, and this "body" was represented by a Federal "Congress" possessing legislative powers.

Each Province was represented in the Federal Congress by delegates, the number of votes being in proportion to the importance of the Province. In this respect the Belgian Federal Congress resembled the American Congress before the adoption of the "Connecticut Compromise" of 1790, which provided for equal representation of each state in the Senate.

The executive power of the Belgian Republic was vested in a "President," who was elected by the "Congress." The President was assisted by a Secretary of State; in the Congress there were three committees: for Political Affairs, for Legislative Affairs, and for Financial Affairs.

It seems, perhaps, somewhat remarkable that, in adopting a Constitution, the Belgians should have been inspired by distant America rather than by their neighbor, the new French Republic.

During the early days of American independence, there had been much intercourse between the United States and the Belgian Provinces. The Belgians not only sympathized with the American aspirations for independence, but had started up a very important trade with the new republic of the west. As early as 1783 a Belgian Consul General, Baron de Beelen, had been sent to America to negotiate a treaty of commerce. Quite an important business between the two countries was carried on in Belgian glass, cloth, linen, laces, *et cetera*, and American furs, tobacco, sugar and other products.

While this intercourse had its effect in introducing American ideas into Belgium, it seems probable that the adoption of the Constitution of the United States as a model for the Constitution of the Belgian Republic was due, more directly, to the influence of Lafayette.

The "Republic of the United Belgian Provinces," on account of internal dissensions, disappeared after one year of existence, and with it disappeared its Constitution. But, in this episode, the remarkable similarity of the form of government adopted by the Americans and the Belgians, a century and a half ago, at the moment when each nation had just liberated itself from foreign domination, is symbolized that love of liberty and independence which is the ideal of the people of Belgium and the people of the United States.

Washington, D. C.

The Free for All at Chicago

By Talcott Williams

THE associated leaders of the Republican party have been successful in their organized effort, begun a full year ago, to prevent any one candidate from entering the Republican Convention with a majority or an overmastering strength which would lead to a majority. No one candidate has this strength. With the delegates all chosen, about half the convention is "uninstructed."

When Tilden began forty-four years ago the plan of having "uninstructed" delegates and since, this has meant a screen for some one candidate. This is not true now. Instead, "uninstructed" means that nearly half the delegates, perhaps on second ballot a majority, are men friendly to the organized machinery of the party. They believe in this machinery. They are not controlled by it, save a few, but are "responsive" to it and to its leaders. They know them. They have acted with them in the past. They "can do business" with them, business for just and high public interests, for party interests, for personal interest, but still "business." This "uninstructed" vote has a sincere belief and conviction that the tempestuous ocean of 9,000,000 Republican voters needs wise experienced pilots for the Republican Convention, with a motto overhead for the other passengers, "Don't talk to the man at the wheel."

The "uninstructed" are particularly certain that this is necessary now that Hiram Johnson has started such a storm by ripping open the bags of his eloquence and rocked the Republican party and its pilots with such a tidal wave of radicalism as was never seen before. They want, therefore, that the Republican Convention should be a "deliberative body" at Chicago. Of the 450 to 500 "uninstructed delegates, a strong majority, probably 300 to 400, honestly want to select the best candidate that can (a) carry the country (else why nominate?), (b) will be liberal rather than radical or "stand-pat" and (c) give us peace and restore the quiet prosperous days from 1905 to 1912, of "sane" measures.

But "deliberation" is various. Inside of this sober, respectable body are also men busy deliberating what they can get for a vote, principally from the South, or at what political price they can sell their souls or possibly even their party and country.

This pretty plan for a hand-picked candidate selected by hand-picked delegates started with a common understanding between Republican leaders in New York, Connecticut, Massachusetts, Pennsylvania and Ohio, with rich California friends who were expected to get a "diamond cinch" on Hiram Johnson by making a national campaign otherwise impossible to a poor man with no means. The pivot of this easy way with dissenting radicals was the eighty votes from New York, with the two New England states, Pennsylvania and Ohio. Alas, Ohio went to pieces under Harding, Pennsylvania has grown weak behind Penrose, and New York has split wide open, to unite later or not as the case may be.

From the Republican Convention in 1860 which nominated Lincoln, an undying feud has existed, on one side, between the solid Republican vote and its leaders from St. Lawrence County in Northeast New York, New England dyed-thru Republican counties to where Republican Southwest New York is close to the Republican Western Reserve of Ohio and, on the other, in counties heavily Democratic, the organized Republican machine from Albany to New York and often Brooklyn.

These last leaders have no Republican majorities and no scruples. In 1860, the predecessors of these men were for Seward. He was beaten and Lincoln was nominated. Can the Republican Convention in 1920 at Chicago find and

nominate a Lincoln? Not if these machine leaders can help it. They are much weakened by the New York split. Hiram Johnson may dominate by sheer personal force. The votes divided between Wood, Lowden and the rest have no leaders apparently equal to organizing a new majority. Lowden comes nearest to it. The leaders can "do business" with him. Still, as before, the two leading, to whom the "uninstructed" can turn, are Governor Coolidge and Nicholas Murray Butler. The last has put forth a strong personal platform, the best yet. A third unknown may appear. Hoover may come forward in a deadlock.

But the Republican Convention will begin, half divided between Wood, Johnson, Lowden and others, but ready to hear the call of a possible majority for someone else; half "uninstructed" and ready to crystallize on a new "sane" man, led by a score of "leaders" who alone know how each of the delegates came to be elected, where they are lodged at Chicago, who are their friends and how they can be "approached" for good and for evil, for fair or for foul. These be great odds in getting a majority to select a candidate, when a thousand men are herded in strange hotels.

Out of this smoke screen will come the Republican candidate selected by the manipulation of the few or the sudden desire of the many for some one candidate. The platform will compromise on the Treaty and the League, leaving the actual policy to be settled by the Republican Administration, if there is one. This is a grave risk. If the Democratic party is for the Treaty and the League, with a good candidate, many Republicans will vote for the League.

The Fall in Prices

IT has been noted that the recent slump in prices affected nearly everything in some degree—except food. There is a reason for that exception. High prices of manufactured goods can be met by economy in expenditure, but high prices of food can only be met by increased production.

You can live without pictures
You can live without books
But civilized man
Cannot live without cooks.

McAdoo

By Norman Hapgood

THE Democrats have one advantage over the Republicans. There is at least a definite trend toward a standard-bearer who is the ablest available man in the party. The Republicans have been squabbling about Wood, Johnson, Lowden, Harding, Knox, and various dark horses, showing little disposition to get behind Hoover, the only one of their candidates who measures up to the emergency. The Democrats, however, seem to realize that McAdoo is the man fit for the staggering job. If he is elected, he will make a president capable of succeeding in a time of gigantic problems; and he has a much better chance to be elected than seemed conceivable six months ago.

The qualities that have brought McAdoo where he is, with no accidental advantages, are a most rapid intelligence, brilliant imagination, high executive ability, and unflinching courage. Also he knows the United States, east and west, south and north, and he understands politics, which is important in getting on with Congress, in making appointments, in formulating issues before the public.

Donahy in Cleveland Plain Dealer

Ha den in Brooklyn Daily Eagle

With his back to the wall

He is right on all the issues and he knows his way around the world.

Among the most intelligent political students of my acquaintance the opinion prevails that McAdoo was the most resourceful Secretary of the Treasury since the days of Hamilton and Gallatin. It fell to him to take a leading part in securing in the Federal Reserve Act a new system of credit and currency, without which we should have fared badly when the war broke, to defend and explain the new system, and to take the lead in putting it into operation. Some of the opposition that was made by leading bankers I shall talk about when I can spare more space, and how their opposition was met by Mr. Wilson and Mr. McAdoo. When the European war started all Wall Street feared a panic. The energetic assistance of the treasury, and the sound conditions on which it lent its assistance, also make a big story, which will play a stirring part when it is made clear in the campaign. As the war progressed, and as we came into it, there was put on the treasury the burden of providing in three years over \$43,000,000,000, or more than we had spent altogether in the preceding 127 years since the formation of the nation. The huge financial machine worked with perfect smoothness. The Treasury department was enlarged with the ablest men available in the country. It included innumerable activities, among them the greatest insurance enterprises in the history of the world, and there was no break-down anywhere.

In wartime, railroads are an important weapon. The Government took them over. As if McAdoo did not have enough to do already, he was selected as the man who must guide this new enterprise. I venture to say that the speed with which the railroads were used to get supplies and men where they were needed was one of the most powerful and one of the least costly branches of our war activity. Let nobody imagine that if McAdoo is nominated the Government's management of the railroads will be on the defensive. It will be shown how every car, every locomotive, every employee was treated as a soldier, and how impossible it would have been for Pershing and his boys to have accomplished their triumph without the smooth and rapid railroad work at home, and how England, France and Italy might have staggered and slipped for lack of sustenance if the vast supplies of the United States had not in the emergencies found their way with uninterrupted speed to the place they were needed at the moment they were needed.

In our foreign relations also, if McAdoo is nominated, there will be no fear, no pussy-footing. The voters will know immediately, and without any trimming, precisely what Mr. McAdoo believes this country owes to itself and to the world, and the Republicans will be hard pressed to avoid stating a positive, constructive plan of their own, instead of merely barking away at the agreement reached by most of the other nations and our own executive.

Such is the mere outline of the direction in which McAdoo will run a campaign. There are dozens of other attributes of the man, all combining into a fighter of the first class, and a fighter for the right.

A Choice of Evils

MANY newspapers have pointed out, with no little justice, the defects of the direct primary. It fails to bring out the voters, it arbitrarily limits the choice of candidates by the early dates fixed for "getting on the ballot," it hampers the freedom of the delegates to the National Convention, it is enormously expensive and puts a premium on self-advertisement, and in many states it is open to members of hostile parties. There is just one argument in its favor: the old system was worse. Is it beyond the power of American political intelligence to devise a method of nomination which will really make the

nominee the popular choice of the rank and file of the party?

Uncle Sam and the League

They are all out of step but me.

Rhode Island

THE United States is now in the position that Rhode Island was in after all the other states had adopted the Constitution. It is awkward, uncomfortable and undignified to be shivering on the brink of a league of states or a League of Nations when everybody else is already enjoying the swim. And you have to dive in the end, after all. Ask Rhode Island.

Sane Socialism

By John Spargo

THE outcome of the struggle in the recent convention of the Socialist party adds to the evidence that throughout the international Socialist movement a reaction against Bolshevism has set in. Socialists everywhere are recognizing that so-called proletarian communism—which is neither proletarian nor communistic—is the world's most dangerous menace to Socialism and are aligning against it.

Recently an American gentleman was shown, in the office of the Socialist party of Italy, which has defended and supported the Russian régime, a significant document. It was a report to the party directorate by one of its members, Morgari, upon the spread of Bolshevism. The report, based upon extensive investigation, said that the party must be roused to fight Bolshevism as its most deadly enemy. Political reasons prevented the publication of the report, but the party directorate decided to be governed by its recommendations.

The victory of the forces of sane Socialism led by Messrs. Hillquit and Berger over the pro-Communist and pro-Bolshevist forces led by Messrs. Engdahl and Tucker indicates that a similar decision has been reached by the responsible leaders of Socialism here. Henceforth we shall see American Socialists fighting Bolshevism as uncompromizingly as Marx fought Bakunin.

In the convention the extremists of the Left Wing wanted a platform and resolutions which would uphold the "dictatorship of the proletariat" and most of the other vicious and reactionary nonsense which Russian Communism has revived. The orthodox Socialists wanted a platform and resolutions committing the party to orderly legal processes, to constructive social reforms to help the transition to Socialism, and to the strictest reliance upon the conviction and will of the majority. That this element should win by decisive majorities in a convention meeting under conditions of irritation and exasperation calculated to provoke a violent and vengeful spirit, is as important as it is encouraging. It shows that the Socialist party is regaining its balance, and that in the future the revolutionary Communists will have to meet the opposition of the Socialists—a force superior to all the repressive and coercive measures that have been tried, or even proposed. The speech in which Victor L. Berger riddled its philosophy and aims will do more to weaken Bolshevism in America than a thousand prison sentences or deportations.

This is the central fact of importance to the American public. Of course, there are some contradictions and inconsistencies, some of them very sinister and others simply stupid. The standard bearer selected by the party has declared himself to be a Bolshevik. The party itself, thru the adoption of the report presented by Mr. Hillquit, becomes affiliated with the Third International, that creature of Lenin and his cohorts, which exists to spread over the world the very principles which the convention rejected.

By that same vote the party severs its connection with the Second International, and that just when the latter body is fighting Bolshevism. Finally, the convention demanded recognition of the Bolshevik Government of Russia, which Mr. Hillquit imaginatively described as "a responsible government," but Mr. Berger accurately described as a "dictatorship by the Communist party." These and other inconsistencies and contradictions reflect the confusion and chaos which has entered the Socialist parties everywhere.

There could be no stronger support of the view of the convention here set forth than the bitter attack made upon the Socialist party by the Communist party in a letter to Mr. Debs immediately after the convention. The Socialist party is described as "the most dangerous enemy of the working class," a "stinking carcass," and so on. The presidential candidate—who, be it said, has been catering to the revolutionary Communists—is bluntly told that there can be no compromise between the two parties; that "not even your name can hide their counter-revolutionary tendency." He is told that by aligning himself with the Socialist party he sets himself "against the Communist movement of America—against the Communist International—against the world-proletarian revolution toward which our heroic comrades in Russia are looking for their salvation." The issue is drawn. By accepting the nomination, Mr. Debs becomes the leader of an active war against Bolshevism by Socialists. Is it less than folly to keep him in prison?

Overdoing It

MARRIAGES and revolutions are excellent things if indulged in *once*. The trouble with Mexico is not that it has had a revolution but that revolution has become as much a habit as marriage with King Solomon.

Well Done, Smith!

Governor Smith has vetoed the vicious Lusk bills passed by the New York legislature which would disfranchise any citizen or group of citizens who held political, religious, social or economic views different from those entertained by three judges at Albany. Governor Smith evidently realizes that if you deny a minority party political action you inevitably drive it to direct action.

The Sheepishness of Americans

By Edwin E. Slosson

THE jump into overalls jumped overalls up. The movement against profiteers simply added another class of profiteers. The aim of those who promoted the movement was to break away from fashion, but all they did was to start a new fashion. The only way to accomplish their laudable purpose of bringing down the price of clothing would be to start the fashion of being out of fashion and that would be the hardest kind of a lesson to teach the American people. They have learned to act as one—which is a good thing sometimes. They have yet to learn how to act as ones—which is a good thing most of the time.

We are mob-minded and that is the cause of many of our troubles, including the high cost of living. The lunch rooms have to charge high prices because their business is practically confined to two hours a day and they have to provide seats and service for all their patrons at one time. If people would distribute their lunches along at 10, 11, 12, 1, 2, 3, or 4, as they might easily do these long days, they would get better and cheaper accommodation. The reason why the subway and elevated cars are jammed with people until they become hexagonal from mutual compression is because they insist upon coming and going at about the same hour. This puts a peak load on the dynamos and the

company unloads the peak on the passengers by increased fares and decreased standing room. A daylight saving law does not remedy the evil because it moves up everybody at once. Better to let the clock hands alone and persuade one third of the people to get up an hour earlier and one third an hour later. Let each factory, office and theater adopt its own time schedule at such hours as will best avoid the rush and everybody will be more comfortable. It is a great bother to find everything closed at one time and everything open at another when you can only go to one place.

To distribute the load, to level the peak, that is the true aim of the engineer, the economist, and the statesmen. Everybody wants to read the same novel the same week. Consequently the library cannot supply its readers, while equally good novels, a few months old, are stacked up unread on the shelves. There is a world-wide shortage of wheat. "Use other grains," says Hoover. Everybody does for a while, then after a while everybody goes back to wheat and the supply again runs short. All the housewives order the best cuts of meat, but cattle can't be grown that are all best cuts. The Department of Agriculture advises some other cut and then every housewife orders that and will accept no substitute. Someone suggests that a few young men and women might learn Spanish to their advantage and immediately 10,000 in a single city start Spanish and there are not teachers and textbooks enough to go around. If an excursion boat tips and the captain calls out "Too many on one side," the crowd unanimously rushes to the opposite side and the boat lists more than ever. A millionaire asked for his recipe for riches said: "Go where everybody is doing the same thing and do something different." He had got his money out of the Klondike by selling groceries.

We declared our independence as a nation, but we have not yet declared our independence as individuals. We profess to dislike militarism, but we militarize ourselves and no man dares break step. We do everything in mass movements, by campaigns, drives, booms, crazes, fads and revivals. We cannot even fulfil the simplest civic or family duties without calling on all our fellow citizens to aid. It is only by the proclamation of a "Go-to-Church-Sunday" that we are enabled to make a batting average in religion of one hit out of a possible fifty-two. The rest of the calendar is filled up with "Write-to-Mother Day," "Clean-Up Day," "Plant-a-Tree Day," "Be-Patriotic Day," "Be-Thankful Day," and the like. "All together now" cries our gubernatorial or presidential cheer-leader, "one-two-three, let 'er go!" And we all go thru the motions of the designated emotions with the precision of a metronome.

"The strongest man in the world," says Ibsen in "The Enemy of the People," "is he who stands most alone." That is, I suppose, his way of saying that nobody but a strong man could stand alone in a democracy like ours.

The American people is as easy to stampede as a herd of Texas steers and anyone who tries to stand against the rush gets trampled into the ground.

The Ideal College President

By Hamilton Holt

HE first decides how many students his kind of institution ought reasonably to have.

Having made this decision he gets it approved by the trustees.

He then calculates how many dormitories, dining halls, stadiums, libraries, laboratories, etc., would be required to house, feed, exercise and educate the student body.

He thereupon goes out and gets this necessary physical equipment, or as much of it as he did not already possess.

Having got it, he inexorably stops all further physical expansion.

International

While the British House of Commons was passing the Irish Home Rule bill on its second reading the Sinn Feiners in Ireland were arousing further rebellion against the authorities and making civil government almost impossible. Crowds of sympathizers gathered outside Mountjoy Prison, where Sinn Feiners under arrest were carrying out their threats of a hunger strike, and held frequent demonstrations for the cause of free Ireland. In the photograph above Irish republicans are waving the Sinn Fein flag. British policemen are on guard

Home Rule and Hunger Strikes

The Progress of Events in Ireland

© Kadel & Herbert

Forty thousand Irishmen, it is said, assembled outside the Mountjoy Prison when the hunger strikers were released. One of the prisoners, Haire, of Derry County, is shown in this photograph being carried to an ambulance. The hunger strike has made a farce of imprisonment as a punishment

Curbing Sinn Fein Sentiment

The barricade of barbed wire, at the left, is backed by English soldiers with fixed bayonets to keep the "friends of Irish freedom" from stampeding Mountjoy Prison. Below, the eloquence of Lord Mayor O'Neill takes the place of barbed wire, but the soldiers are still in attentive support

He goes right on, however, raising all the money he can, putting every dollar of it into professors' salaries.

When he has enough to pay his teaching force at least twice as much as they could get in any rival institution he discharges or pensions his dead-wood professors, inviting the most eminent savants in the world to fill their places. Having the most attractive price to pay, he gets nine out of every ten he approaches.

He is now in a position to turn his full attention to the students. As his "star" faculty attracts many more than can possibly be accommodated, he naturally picks and chooses those he wants, refusing admittance to all undesirables of whatever kidney.

He can now, if he wants to, either expand again or merely roll along, or—if the Trustees so hint—retire with a contented mind on his Carnegie pension, conscious that he has eschewed the scandalous scramble for students so rife among other educational institutions, glad that he has not yielded to the prevalent temptation of putting all his money in brick and mortar, and proud that he leaves to his successor an institution with an unequalled grade of professors, an unequalled grade of students, a plant adequate for the needs of both.

The People Rule

THE people by stopping the purchasing of clothes have started the prices tumbling all over the country. There is a lesson here for other trades. If prices are not voluntarily reduced the people have the remedy in their hands by taking up in turn each profiteering product and ceasing to buy it until the prices come down.

A Great and Solemn Referendum

PRESIDENT Wilson's wish that the fate of the Treaty might be decided by a "great and solemn referendum" was unfortunately impossible in this country which has no such constitutional provision. But Switzerland has a referendum. The opponents of the League of Nations appealed to the people and by the people they have been judged. Our greater democracy left the decision to a hand-picked Foreign Relations Committee composed mainly of the President's political enemies.

The Churches and World Peace

By Shailer Mathews

THE churches are taking themselves seriously. Not only are they raising hundreds of millions for their own special tasks; they are also again undertaking to make war unlikely. It is a worthy aim. But is it mere sentimentalism?

Not if they can tread the strait path that leads between pacifism and belligerent nationalism. National affairs as well as industrial demand that good people show good sense. For the churches are social bodies enrolling millions of men and women who are voters. In their keeping is a vast influence which if wisely directed is an asset upon which statesmen may realize.

Nothing is plainer than that the world must be re-taught its ideals of international peace. That means it must be taught to hope for peace, for ideals without hope are as powerless as plaster-of-paris images. But upon what shall such hopes be based? Certainly not on machine guns and policemen's clubs. You cannot shoot hope into men's souls. Baptize an ideal with its owner's blood, and hope turns to revenge.

Six years ago we really thought that international commerce would make men love each other; that nations would be too wise to risk bankruptcy by going to war. Nobody believes this now. Peace must ultimately rest upon human nature taught self-sacrifice for the sake of justice.

And human nature is just now our big problem. The old arguments for war are crawling out from their caves. The horrors, the abasements, the obscenities, the bankruptcy, the distortion of morality, the turning of science into a ministry of destruction, the culture of a national spirit upon a common hatred, all these are still possible for men maddened by six years of violence. The world is trying not to think about them. It wants to forget them. But forgetfulness that seeks no remedy will lead us only to overspend, over-dress, over-eat. It is idle to expect spontaneous ideals from a world that is either starving or dancing to jazz music.

We need heralds of the spirit. Fortunately we still have the institutions of religion. In our churches are many times five thousand who have never bowed their knee to the Baal of militarism. Patriots who dared defend their nation, they still believe that they fought a war to end war. They still believe in the ideals which nerved their souls in moments of sacrifice. They dare work for peace because they dare believe in God. They take baffled statesmen and men of affairs seriously when they say that the one hope of the future is religion. They will not be laughed down or sneered down. If religion is the one hope of the world they propose to bring religion into international affairs.

That purpose gives meaning to the World Alliance of International Friendship thru the Churches. It proposes nothing less than to "organize the religious forces of the world so that the weight of all churches and Christians can be brought to bear upon the relations of governments and peoples to the end that the spirit of peace and good will may prevail." It was organized on August 1, 1914,—a day of awful memories! Then it adjourned in flight. Since the close of the war it has not been idle. Fourteen great nations already have national councils, and in eight others councils are being organized. Thousands of sensible, un-fanatical Christians are becoming its supporters. Next August it will hold another meeting in Geneva, in which at least twenty-six nations will be represented.

It goes without saying that the World Alliance believes in the League of Nations, but it also believes that the Golden Rule and personal friendships are the best solvent of national misunderstandings. To this end it plans to assemble the representatives of the world's churches. They will pray together, plan together, and get acquainted with each other. That is the first step toward mutual confidence.

Such a body cherishes no illusions. It knows that it will bring about no sudden conversion of the nations to the Prince of Peace, but that it can help them to moral sanity. It can begin again to internationalize the ideals of Christ. If religion is the one basis of our hope for a world at peace with itself, religion must accustom Christian leaders to friendship, rather than to the perpetuation of international enmities.

We can leave to the historian the estimate of the relative share of each nation in the Great Tragedy of history. Reconstruction is forward-looking. We never can build the future by exhuming the past. We must begin reassembling the good-will of the world.

The World Alliance merits the support of every well-wisher of his fellowman whatever may be his citizenship. It is none too soon to begin a crusade for mutual understanding. Christianity is certainly the one agency devoted to the task of making men more ready to give justice than to fight for their rights. The peace conference that in 1914 fled into the Great War should be the first of a series of conferences that shall teach nations to live together by consolidating the good-will that still persists in Christian hearts. The churches are the repository of power that make possible international good-will. Without armaments, without authority, without power, this Geneva meeting can reestablish the foundations of a spiritual League of Nations.

The Story of the Week

The Socialist Convention

THE first national political convention of the year took place in New York City from May 8 to May 15. The Socialist Party nominated Eugene V. Debs for President and Seymour Stedman for Vice-President. There was no opposition to Mr. Debs but a few votes were cast for Mrs. Kate O'Hare for second place.

Eugene Debs was the nominee of the Socialists during the Presidential campaigns of 1900, 1904, 1908 and 1912. He first attained national prominence as a labor agitator during the railroad strikes of 1893. In 1896 he was still counted as a Populist and supported Mr. Bryan and in 1916 he did not seek the Socialist nomination, preferring that Mr. Benson should head the ticket. Save for those two campaigns he has always been the standard-bearer of the party and the honor which has now come to him of a fifth nomination has never been granted before by any party to any candidate. His remarkable talents as an open air speaker and his very pleasant personality made him the ideal head of a party which desired the moral victory of a large popular vote but could not cherish any hope of taking office immediately. Mr. Debs was convicted under the Espionage Act for pacifist speeches made after our entrance into the Great War and is still under sentence, but a delegation of party managers have petitioned President Wilson for his pardon in order that he may be free to make his campaign.

Mr. Stedman is a Chicago lawyer who has been one of the chief legal advisers to the Socialist Party since its organization. One of the arguments which brought about his selection was the advantage of having one member of the national ticket free to conduct a campaign, as Mrs. O'Hare, like Mr. Debs, is a prisoner.

The real debate came over the platform rather than over

the ticket. Mr. Hillquit of New York and Mr. Berger of Wisconsin were successful in keeping the Convention from any indorsement of the "dictatorship of the proletariat" or the "soviet form of Government" and from adopting provocative phrases hostile to American patriotism or religious or moral sentiment. To carry a moderate platform necessitated a very intense struggle with a group of radical Bolsheviks, headed by J. Louis Engdahl of Illinois, who openly declared that "what we want is the dictatorship of the working class." The defeat of this faction means that the Communist and Communist Labor Parties will not unite with the Socialist Party for purposes of the campaign, in spite of Mr. Debs' appeal for reunion. It is worthy of note that some of the Socialist Assemblymen expelled at Albany as traitors to the country voted with the moderate group as delegates to the Socialist Convention.

There was a division also on the declaration of foreign policy. Finally a compromise was reached by which the party agreed to enter into negotiations with the Socialist parties of other countries for union with the Third International, the international Socialist organization formed at Moscow, but on the condition that no "special formula for the attainment of the Socialist Commonwealth be imposed or exacted as condition of affiliation." This means that the Socialist Party in the United States is willing to federate with the Bolsheviki but will not submit to any dictation from them; American Socialism will be master in its own house. Mr. Berger even went so far as to say that Russian Bolshevism in its present form was unjust and could not last and that Lenine was as much of a dictator as President Wilson.

What the Socialists Want

THE platform as adopted is mainly the work of Mr. Hillquit, with certain amendments of minor importance. After the usual arraignment of the capitalist system and of the two great political parties comes a list of immediate demands. With respect to foreign policy a general cancellation of war debts owed to the United States by foreign nations is recommended and a liberal extension of credits for rebuilding Europe "upon the understanding that all war debts, including indemnities, among such countries shall likewise be cancelled." "The mischievous organization called the League of Nations" is to be dissolved and a more democratic international structure created. The independence of Ireland is to be promptly recognized and normal relations restored with Germany, Russia and Austria.

The platform urges the restoration of civil liberties lost during the war, the election of Federal judges, the direct election and recall of the President and Vice-President, the selection of the cabinet by Congress, equal suffrage, amendment of the Constitution by popular referendum; nationalization of banks, railroads, shipping, mines, oil wells, grain elevators, packing houses and insurance; the establishment of a minimum wage and a shorter week day, and the payment of our internal war debt by a capital levy.

Halting the Deportations

SECRETARY of Labor Wilson has decided that the mere fact of membership in the Communist Labor Party is not sufficient ground for the deportation of an alien resident in the United States. This decision released from cus-

Stimson in Dayton Daily News

Next!

The last few buttons are always the hardest

today about 160 members of the party held for deportation. Mr. Wilson based his ruling on the fact that the Communist Labor Party, while committed to Bolshevik principles, did not renounce political methods of attaining its ends. He pointed out that whereas the Communist Party in its constitution declares that "Communism does not propose to capture the bourgeois parliamentary state but to conquer and destroy it" the Communist Labor Party declares that "the working class must organize and train itself for the capture of state power." Both parties are small groups of radical Socialists who left the Socialist Party because it would not unreservedly commit itself to Bolshevik principles. The general principle laid down by the Department of Labor will have an important effect on the future deportation policy of the Government:

The belief in, teaching and advocacy of the class struggle, mass action, the conquest of political power, the dictatorship of the proletariat, Socialism, Communism, the "One big union," shop committees, shop stewards and other social, industrial, economic and political changes mentioned in the Communist Labor Party platform and program—however reprehensible these things may be to the minds of any or all of our people—do not bring the organization within the purview of the act as long as it does not propose to use force or violence to accomplish the purpose.

Palmer Wins and Loses

ATTORNEY General Mitchell Palmer, of Pennsylvania, has carried the primaries of his state. His was the only name printed on the ballot, but some of his opponents wrote in the name of Mr. McAdoo. Practically the entire Pennsylvania delegation is expected to support Mr. Palmer on the first ballot at San Francisco. The regular Republican slate was also victorious. This delegation is unpledged, but will support Governor Sproul as "favorite son" on the first ballot at Chicago. Governor Sproul is, however, less likely to retain his hold on the Pennsylvania delegation than Mr. Palmer, because Senator Penrose and other prominent Republicans of the state are already considering the possibility of running Senator Knox as a "dark horse" from Pennsylvania in case the election of Governor Sproul proves impossible. Some of the Pennsylvanians favor General Wood.

Georgia seems to have turned against the Administration. It was expected that Attorney General Palmer would be indorsed by the Democratic State Convention in view of the ruling of the state executive committee that the candidate who had won a plurality of the county votes in the primary should be indorsed by the state. But the convention repudiated the ruling of the executive committee. Mr. Palmer's plurality did him no good, for his two rivals, Sen-

ator Hoke Smith and Thomas Watson, the former Populist leader, joined forces in the convention to defeat him. The Smith-Watson combine, controlling a majority of the convention, declared against the unamended Covenant of the League of Nations, denounced the idea of a third term for President Wilson, instructed the Georgia delegation to act as a unit at San Francisco, and refused to indorse the candidacy of Mr. Palmer. The Palmer supporters will probably carry a contest into the national convention.

Wilson Unseats a Rider

ON May 13 President Wilson returned without his approval the appropriation bill for the legislative, executive and judicial services of the Government. His veto message was based on a "rider" provision which gave Congress control over all publications issued by the executive departments. This, he insisted, was an encroachment of Congress on the powers rightfully belonging to the executive branch of the Government:

I think that this section which would give the Congressional Joint Committee on Printing power to exercise censorship over the executive departments is an encroachment on the function of the Executive and incompatible with good government.

If we are to have efficient and economical business administration of Government affairs, the Congress I believe should direct its efforts to the control of public moneys along broadest lines, fixing the amounts to be expended and then holding the executive departments strictly responsible for their use. This can be accomplished by the enactment of legislation establishing an effective budget system which I have heretofore urged. The Congress and the Executive should function within their respective spheres. Otherwise efficient and responsible management will be impossible and progress impeded by wasteful forces of disorganization and obstruction.

The House of Representatives voted in favor of overriding the veto by a majority of 170 to 127, which fell short of the necessary two-thirds. The vote followed party lines with great closeness; only four Democrats deserting the Administration and the Republicans voting as a solid block. After the failure of the House majority to override the veto, the objectionable section was redrafted and the appropriation measure passed without dissent.

Knox Resolution Carried

THE Senate has approved by a party vote the resolution fathered by Senator Knox for an immediate peace with Germany. The resolution reserves all rights and claims against Germany "until such time as the German

© Underwood & Underwood

The Senate's adoption of the Knox resolution for peace came at the psychological moment in the Presidential boom for the Senator from Pennsylvania. Senator Knox's claims to the nomination include a long career in the ranks of the Republicans, with two terms as Attorney-General and one as Secretary of State

Government has, by treaty with the United States, ratification whereof is to be made by and with the advice and consent of the Senate, made suitable provisions for the satisfaction of all claims against the German Government of all persons, wheresoever domiciled, who owe permanent allegiance to the United States," and that "the United States, altho it has not ratified the Treaty of Versailles, does not waive any of the rights, privileges, indemnities, reparations, or advantages to which it and its nationals have become entitled under the terms of the armistice signed November 11, 1918, or any extensions or modifications thereof or which under the Treaty of Versailles have been stipulated for its benefit as one of the principal allied and associated powers and to which it is entitled." Provision is also made for peace with the Governments of Austria and of Hungary.

The supporters of the Knox resolution were disappointed in their hope of splitting the Democrats and thus making it possible to obtain the necessary two-thirds vote to override a Presidential veto. Only three Democrats deserted the President on the final test—Reed of Missouri, Walsh of Massachusetts and Shields of Tennessee. One Republican, Senator Nelson of Minnesota, voted against the resolution and Senator McCumber of North Dakota was paired against it. The final vote of 43 to 38 was, in view of the known attitude of President Wilson, a virtual defeat for the Knox resolution. A transfer of eleven votes in the Senate would be necessary to make peace without consent of the President, even granting that such a course would be constitutional.

A Minister from Canada

THE British Embassy at Washington has made formal announcement of the intention of the British Government to place Canadian interests in the United States under the care of a Canadian Minister. Except for the separate representation of the British Dominions at the Paris Peace Conference and on the League of Nations Assembly, this is the first time in history that a colonial government has been accorded the same freedom in conducting its foreign affairs as an independent nation. It is one more evidence of what The Independent has so frequently emphasized; that the British Dominions, and Canada in particular, are not dependencies of Great Britain, but independent nations united with Great Britain in a permanent alliance.

The British statement lays stress on the close relationship existing between the United States and Canada:

The need for this important step has been fully realized by both governments for some time. For a good many years there has been direct communication between Ottawa and Washington, but the constantly increasing importance of Canadian interests in the United States has made it apparent that in addition Canada should be represented there in some distinctive manner, for this would doubtless tend to expedite negotiations and, naturally, first hand acquaintance with Canadian conditions would promote good understanding.

Immovable Freight

THE sequence of sporadic strikes on the railways, combined with the still acute shortage of rolling stock, has forced the Interstate Commerce Commission to resume emergency powers exercised during the war in order to permit the movement of traffic. Priority of shipment will be granted to foodstuffs and fuel. The Commission has suggested that coal and ore mines using ports on the Great Lakes enter into an agreement for transportation of their output without discrimination. Cars may be refused to any shipper who declines to cooperate.

The port of New York has suffered most severely from the strikes and "wholesale resignations" which have tied up freight traffic. Shipping men estimated that 80 per cent of the export trade of New York had been temporarily diverted to Boston, Philadelphia, Baltimore and other At-

Crutts Aerial Photograph

Results of the "outlaw" railroad strike are still piling up in New York a month or more. This photograph of the Erie and Lackawanna yards shows an enormous problem that confronts the Interstate Commerce Commission for the whole United States but is

lantic ports. Some cars with merchandise intended for New York remained stalled on the New Jersey side for thirty or forty days. Thousands of trucks have been used to supplement the inadequate railway service.

Reports from all over the country collected by the committee on car service of the American Railroad Association show 235,000 cars tied up or delayed in transit about the middle of May. A month earlier the number was 288,000. The outlaw strikes have failed and a majority of the strikers are already back at work but while the railroads are operating more nearly at normal capacity they have not yet overtaken the cumulative congestion which resulted from the strike. The economic results of a strike like those of a war, are felt more keenly some time after peace has been restored. The railroads, barely able to handle current traffic, must at the same time move the freight which has accumulated ever since the beginning of the strike. Railroad executives are demanding increased freight rates of about 28 per cent which would give an additional operating income of a billion dollars a year. The shortage of rolling stock to meet effectively the transportation needs of the nation is estimated at 288,000 freight cars, 6000 passenger cars and over 3,000 locomotives.

Obregon Avows Friendship

THE new régime in Mexico professes a policy of greater friendship for the United States than President Carranza ever showed. Whether these professions are sincere or are simply designed to win favor from a powerful neighbor at the critical moment of the revolution time alone will tell, but at least it is well that the promises of good behavior of the revolutionary leaders are on record.

Increased freight congestion which has been growing steadily worse for the Hudson, taken from an aeroplane a thousand feet above, suggests the need to smooth out the freight jam, which affects commerce thruout the port of New York

General Obregon declares that "My ideal for the relations between Mexico and the United States is to make the international boundary like the Canadian boundary, withdrawing troops, except customs officials." He added that Carranza's interpretation of the Monroe Doctrine as hostile to Latin America had been a mistaken one. Governor Adolfo de la Huerta of Sonora assures the United States that "we have given complete guarantees to natives and foreigners."

Mindful of the prejudice created against the Huerta Government by the murder of President Madero, General Obregon claims to have offered strict orders to his followers that when Carranza is captured he shall suffer no injury to his person. The Carranzista forces still hold out only in the eastern part of Mexico, including the state of Puebla and part of the state of Vera Cruz. Several sharp battles have taken place in the mountains between the adherents of Carranza and of Obregon.

General Obregon, altho he has thus far kept somewhat in the background with regard to the civil administration of the new Government, is easily the "boss" of the revolutionary movement. He has a clear track to the Presidential chair if he should wish to contest the coming elections, as one of his rivals, ex-Ambassador Bonillas, was a follower of Carranza and has lost power with the overthrow of his chief, while the third candidate in the field, General Gonzales, is reported to have retired in favor of Obregon. De la Huerta is nominal chief of the revolutionary Government, but the Mexican Congress will formally act to select a provisional President who will hold office until after the next election. General Obregon will probably await the election before assuming the Presidency. Obregon's qualifications for civil administration are a matter of con-

jecture, but he has shown very great vigor and capacity as a military leader and some Mexicans are already beginning to prophesy in him a future Porfirio Diaz. He was one of the mainstays of the Carranza Government thruout all the vicissitudes of the Mexican revolution until President Carranza antagonized his ambition to be the next President

Swiss Vote for League

OF all the forty states that have so far joined the League of Nations Switzerland is the only one that has submitted the question to popular vote. The referendum was held on Sunday, May 16, and every man and woman able to go or be carried went to the polls. The electioneering campaign had been hot, for the country was divided on racial lines. The French-speaking population favored entrance of Switzerland into the League but the pro-Germans and Socialists fought it hard. The chief argument of the opposition was that the League must be a bad thing since the United States had refused to enter it. The contest was close in most of the cantons and the result was that 11½ cantons voted for it and 10½ against. The total popular vote for joining the League was 414,600 and 320,880 against. If the vote had been adverse it would have somewhat embarrassed the Swiss Government as well as the League of Nations for the capital of the League had been located at Geneva and plans have already been made for the erection of an international palace on a site overlooking the lake.

Fixing Germany's Indemnity

ONE of the chief criticisms of the Versailles treaty was that it left indefinite the indemnity to be paid by Germany and did not specify how it should be distributed among the claimants. So long as the Germans did not know how much they would have to pay or when and the Allied nations did not know how much they would get neither party could start up its industries, settle its exchange or balance its budgets. As Germany remained in a state of complete collapse and on the verge of starvation the prospect of getting anything out of Germany in the near future became more dubious. Meantime the bill is mounting up rapidly, for all the expenses of the armies of occupation, \$750,000,000 a year, are charged to Germany.

French finances were particularly hard hit by the delay, for the French Government had paid the expenses of the war by foreign loans relying upon victory for their liquidation instead of adopting the policy of the British Government to raise as much money as possible as the war went on by heavy internal taxation. Last September, Finance Minister Klotz assured the French Chamber that Germany would pay \$75,000,000,000 in annual installments of \$5,000,000,000 of which France would receive \$2,750,000,000 every year. Even this would not be sufficient to balance the French budget for the estimates of the year show a deficit of about \$3,600,000,000. That is to say, France is still, eighteen months after the war, running in debt at the rate of over three billion dollars a year.

But now it is commonly conceded that Germany cannot be expected to pay more than \$30,000,000,000 at the most and this only if the Allies or America lend it to her in advance. The German budget for the current fiscal year shows a deficit of 27,950,000,000 marks which would be nearly \$7,000,000,000 at the normal rate of exchange. All the gold in the country would not suffice to pay the first installment of \$750,000,000 of the proposed reduced indemnity.

Faced with this serious situation, the French Premier, M. Millerand, was at the recent San Remo conference induced by Premier Lloyd George and Premier Nitti to consent to meeting the German representatives for an oral discussion of the problem. The conference was set for May 25 at the Belgian town of Spa but has since been postponed to June 21 so as to allow the financial experts:

to prepare their data and also because the German elections take place in June. In anticipation of the Spa conference the British and French premiers met at the country house of Sir Philip Sassoon at Hythe, England, on May 15. Premier Nitti, having resigned from the Government on account of an adverse vote of the Italian Chamber, could not be present.

At the Hythe conference Lloyd George and Millerand agreed to a reduction of the German indemnity to a fixed sum which is variously rumored to be somewhere between \$22,000,000,000 and \$30,000,000,000. France and Belgium are to have the first claim on the larger part of the first installments. As a method of payment it is proposed that Germany be allowed to seek a foreign loan. The success of this plan obviously depends upon the coöperation of America for if American investors should regard the German bonds as unprofitable or unsafe or if the United States Government declines to approve the proposition, in the case of its failure Great Britain and France would stand little chance of getting the money from Germany and the United States little chance of getting the \$10,000,000,000 loaned to Great Britain and France.

French Withdraw from Frankfort

ON April 7 the French troops advanced from the Rhine further into Germany and occupied Frankfort, Darmstadt, and several other cities on the ground that the German Government had sent forces greater than permitted by the treaty into the Ruhr valley to put down the insurrection. The British Government protested to France for taking military measures independently of her Allies, but the French Government gave assurance that the occupation was merely temporary and that the French troops would be withdrawn from Frankfort as soon as the German troops were withdrawn from the neutral zone east of the Rhine.

Paul Thompson

The canonization of Joan of Arc, proclaimed by the Pope in Rome on May 17, was celebrated in this country by exercises at the statues of Joan of Arc in various cities and by an impressive pageant in New York, retelling the story of the shepherd maid's life and martyrdom. The incident above shows her journey to the court of the King of France

The Germans complied with this condition as soon as order was restored on the Ruhr, and accordingly, on the morning of May 18, posters appeared on the billboards of Frankfort signed by General Degoutte, the French commandant, and declaring *Die Franzosen halten ihr Wort* (The French keep their word.) The French and Belgian soldiers were already marching away to the Rhine. The French took with them hostages to prevent disturbances during the evacuation, and they demanded a guarantee of a million marks from the municipality. But, as there was no trouble, the hostages were released on the following day.

At first the employment of African troops for the occupation of the German cities aroused much resentment in Germany and also in England. In deference to these protests the Senegalese were withdrawn and only the Algerians were left in the occupied zone. The anticipated disorders did not occur.

French Strike Fails

THE French Government seems to have got the upper hand of the General Federation of Labor, which has been conducting a strike to secure the control of the railroads and other public services of the country. The railroad employees who started the strike have in large part returned to work, and the attempt of the Federation to strengthen the strike by calling out the electrical and gas workers failed. The Government has been able to keep the essential services going by drawing upon three classes of strike breakers: first, volunteers, including technological students and many women; second, the military, for France has now a larger standing army than before the war; third, the Chinese laborers who were brought to France in large numbers during the war to mend roads and make munitions. The seamen and dockers, however, are holding out and the Atlantic ports are still tied up. Freight is piled up on the piers and transoceanic shipping is generally suspended. The repair shops of the four leading railroad systems, the State, the Orleans, the Paris, Lyon and Mediterranean, and the Midi, have been closed because they had become centers of radicalism. Sabotage had reduced their output below the paying point, but the companies were prevented by law from discharging incompetent or disturbing employees. The repair work for the railroads will hereafter be done in private establishments, which, not being so restricted, are more efficient. Ten thousand men will be thrown out by the shutting down of the railroad repair shops, but skilled labor will easily find employment.

The Government has instituted legal proceedings for the dissolution of the General Federation of Labor on the ground that it has become a political and revolutionary organization and therefore has violated the law of 1884, which restricts trade unions to "the study and defense of their economic interests." It is the contention of Premier Millerand that the Federation has come under the control of communists who are using it for the overthrow of the Government. The headquarters of the Reds have been raided and literature discovered there is said to prove that the movement was engineered by the Third International, the world communist organization established by the Bolsheviks. Funds are said to have been sent from Moscow thru Copenhagen, and deposits of Russian jewels have been found in the hands of the French radicals.

Riots and Repression in Ireland

THE Home Rule bill of the British Government, altho it was criticized from all quarters when first presented, passed the House of Commons on its second reading and seems sure of a substantial majority on its third. Ex-Premier Asquith, who since his return to the House represents the Liberal opposition to the coalition cabinet,

proposed an amendment to give Ireland a single parliament instead of two, but this was voted down by 259 to 55. The Irish members of the Nationalist party will henceforth refuse to attend Parliament when the bill is discussed. The Sinn Fein members decline even to take the seats to which they have been elected. The Ulster members will vote for the bill altho they disapprove of it.

Considerable attention has been given in press and parliament to the support which the Irish Republic is receiving in America. The action of the Senate in passing a resolution expressing "sympathy with the aspiration of the Irish people for a government of their own choice," and its admission as a member of the League of Nations, the protest of the eighty-eight Congressmen to Premier Lloyd George against the detention of Irish prisoners without trial, the official recognition by mayors and governors of Eamon de Valera as President of the Irish Republic and the sale of \$2,000,000 of Irish bonds have aroused resentment and suggested retaliation. It was proposed in the House of Commons to pass a resolution favoring the independence of the 10,500,000 Filipinos and protest against the deportation without trial of aliens suspected of sedition.

The new tactics of terrorism adopted by the Sinn Fein have made civil government almost impossible. The town hall of Maynooth, fifteen miles northwest of Dublin, was blown up. In an all night fight between Sinn Feiners and Unionists in the streets of Londonderry a police sergeant was shot and several persons wounded. In one night seventeen vacant police barracks and huts were destroyed, five post offices robbed and five revenue offices raided. At Cloyne a band of 200 Sinn Feiners attacked the police barracks and after a two-hour siege broke into the building by blowing out one end and setting it on fire, when the six constables were compelled to surrender. Four policemen were ambushed and assassinated on May 10.

Imprisonment has become a farce, for when the prisoners go on a hunger strike the Government feels compelled to release them. On April 23 more than a hundred Irish political prisoners confined in Wormwood Scrubbs, London, went on a hunger strike. Within two or three weeks they had nearly all been transferred to hospitals for treatment, but they did not stay there long, for being dissatisfied with their rations they all walked out one day.

The British Government, while on the one hand striving to devise a system of government that will be acceptable to all parties in Ireland, is on the other endeavoring to restore order. Sir Nevil Macready, chief military commander in Ireland, is planning to use troops to take the place of the constabulary. Several thousand more British troops have been shipped to Ireland. They will occupy the barracks from which the police have been driven and stationed in blockhouses thruout the country.

The Campaign in Ukraina

THE Little Russians or Ukrainians, who for the last two years have been carrying on a single-handed combat to maintain their independence against the Bolsheviks, are now, after they have lost their country, receiving from the Allies the encouragement and support for which they have hitherto pled in vain. The French, who formerly opposed their claims to nationality, have become their champions. The Rumanians with whom they disputed the possession of Bessarabia are supplying them with munitions and men. Their ancient enemies, the Poles, have recaptured for them their capital, Kiev. The announcement last week of the capture of Odessa by the Ukrainians proves to have been false.

One would think that the Poles would be the last people with whom the Ukrainians could ally, for the Poles have by authority of the Interallied Supreme Council acquired the sovereignty of the eastern half of Austrian Galicia

Knott in Dallas News

But the Pole fell on him

which is chiefly inhabited by Ukrainians (Ruthenians) and formed the focus of Ukrainian nationalism. But in April the Ukrainian delegates at Warsaw came to an agreement with the Polish Government on most of the points in dispute and concluded an offensive alliance which has already resulted in the deliverance of the western part of Ukraina from the Bolsheviks.

According to the Warsaw convention Poland recognizes the Ukraine as "an independent and autonomous state" and "accepts the duty of restoring to the Ukraine the territory between the Dniester, the Dnieper, the Styr and the Pripet rivers, which will be claimed by Poland from Russia as part of the former Polish Kingdom." Poland will endeavor to "free the right bank of the Dnieper from the Bolsheviks but does not commit herself to any operations on the left bank." "Poland undertakes to withdraw her troops at the request of the Ukrainian Government from Ukrainian territory when the Ukrainians are able to occupy it with their own troops." On the other hand the Ukrainians relinquish their claims to East Galicia and to guarantee Poland free transportation facilities to the Black Sea port of Odessa. Two Polish ministers are to be included in the Ukrainian Government.

This agreement still leaves unsettled the ownership of a strip of territory between the defined boundaries including the three important towns of Rovno, Dubno and Lutsk. By the capture of Kiev the left bank of the Dnieper at this point has been, according to contract, freed from the Bolsheviks. Probably the Polish-Ukrainian drive will next be directed southward toward Odessa. In this drive the Rumanians may join. All that remains of Denikin's forces which last summer overran the Ukraine is the remnant of the army under General Wrangel which took refuge in the Crimea when the Bolsheviks swept down from the north. The British Government is trying to save Wrangel's army from destruction by shelling the Black Sea coast at the isthmus from the British warships. This bombardment has the further effect of preventing the Bolsheviks from reaping any advantage of their possession of these ports in shipping out the products of southern Russia.

The Polish army is said to number 700,000 men, trained under French officers. It will be continuously augmented as it advances by Ukrainian peasants eager to expel the Bolsheviks. The Kosciusko aerial squadron composed of Americans under the command of Major Fauntleroy of Chicago, contributed to the defeat of the Bolsheviks before Kiev by dropping bombs along the railroad and using machine guns on the Soviet infantry. General Petliura accounts for the collapse of the Soviet defense as due to the desertion of the army by the peasantry who when spring came wanted to go home and get in their crops.

Put Your Plants to Bed Earlier

By Robert H. Moulton

For generations scientists have known that sunlight was necessary for normal growth of most kinds of plants, and, altho the summer sun might occasionally become too hot, they have understood that it could not cause any injury except perhaps the injury due to burning. Recently, however, Government agricultural experts have made the astonishing and important discovery that, entirely apart from any effect of burning, it is possible for plants to have too much daylight, or rather too many hours of daylight in comparison with the number of hours of darkness. Too long a day as well as too short a day will prevent many kinds of plants from ever reaching their stage of flowering and fruiting.

Altho the new principle is revolutionary, it is based on numerous experiments conducted during the last two years. These experiments also demonstrated that light intensity, within the range from full normal sun-

It is possible for plants to have too many hours of daylight, as is shown by the aster plants at the right. These plants bore no signs of flower heads when photographed, altho the asters at the left, which had been exposed to light only seven hours a day, were then in full bloom

light to a third or a fourth of the normal, and even less, is not a factor of importance in the growth of plants, while in connection with the experimental tests themselves, temperature exerted no influence whatever. It was also found that plants would not reproduce except when exposed to a favorable length of day, altho too much daylight for flowering and fruiting might stimulate profuse vegetative growth. A length of day both favorable to reproduction and growth results in the "ever-bearing" type of fruits.

By employing dark chambers in which plants were placed for certain periods, the experimenters shortened or lengthened the life cycle of certain plants, made some of them complete two cycles in a single season, brought others into flower and fruit months in advance of their regular time and, with still others, greatly delayed and even completely prevented fruiting. Violets, which naturally bloom only during the comparatively short days of spring, when covered with light-proof boxes for a time were made to bloom again during the summer. Soy beans exposed to the light for only five hours a day flowered nearly three months earlier

than plants left in the light all day, but attained only about one-eighth of the height.

While the test with soy beans proved conclusively that this plant requires a short day and a long night for flowering and fruiting, tests with other plants showed just the opposite to be true. The latter, including a number of flowers and vegetables, when left in the light all day did not grow luxuriantly, but produced flowers and seed, while those that were kept in the dark a part of the time made abundant growth, but produced no seed or else were greatly retarded in producing them.

John D. Rockefeller, Jr. Says

Everyone is extravagant.

Everyone, or nearly everyone, is selfish. There is too little service in the world today.

What would my father want with more money?

The daughters of today are the mothers of tomorrow.

Everybody is trying to get as much as possible for as little as possible.

The people do too much thinking about how much pay they are going to get.

My father has not had anything to do with the management of the Standard Oil for twenty years.

My father and I spend practically all our time trying to use wisely and well the money which we have.

I should say it was supply and demand and increased cost of labor and materials that caused gasoline prices.

At least 80 per cent of girls in the land who have gone wrong would have gone right had they an equally good chance.

The laboring man who tries to sell 65 per cent of his work for 100 per cent pay is as much to blame as the salesman who charges twice as much as a product is worth.

Standard Oil decreased the cost of gasoline until it was so cheap that it was in demand for constantly increasing uses and when the demand increased, naturally, the price went up.

Votes for Children

A bill has been introduced into the French Chamber of Deputies to give one vote to each person in France, regardless of sex or age. The votes of the children will be cast by their legal guardians. Thus in a family of five M. Jean Bart will have one vote in his own right, Madame Marie Bart will have one vote to cast as she likes, and the votes of little Pierre, Lucille and Louise will be cast by papa Jean. But if the father dies or moves away so that Madame Bart is the legal head of the household she will not only have her own vote as before but cast also the three votes of her children. When one of the children reaches the age of twenty-one, of course, he or she will gain the right to vote directly instead of by proxy.

The chief aim of the bill is to give representation to families which lost their place in political life owing to

the fact that the father—the only voter—was killed in the war. Perhaps no other country in the world, except Serbia, lost so large a proportion of its adult male population on the battlefields as France. A minor argument for the innovation is the desire to give every encouragement to marriage and large families by adding increased political power to tax exemption and other privileges.

The Sea Serpent Had Toothache

Recent attempts to control and even eradicate disease of certain types, such as yellow fever, typhoid and malaria leads one to wonder how old disease is.

The oldest evidence of man or man's ancestor, found in the gravels of Java, was a diseased femur; and disease was more or less prevalent among ancient man, and his associates, the cave animals.

As ancient man was evidently afflicted with numerous diseases, the next step backwards is to seek evidences of disease among the fossil mammals, the saber-tooth of early time, the ancient horses and camels, the early dogs, rhinoceri and their ilk. A single example will suffice to show that early mammals suffered from disease, and suffered severely. The lower jaw of an early, three-toed horse shows tumefaction, such as is seen in "lump-jaw" of cattle, known as actinomycoses, and possibly due to a similar cause. The roots of the teeth are exposed by the absorptive action of "pyorrhea." A French scientist has written of evidences of tuberculosis among the associates of the early horses, tho this remains unproven. Certainly there is decay of the bone indicating some form of disease.

The early mammals, however, did not witness the beginnings of disease, so let us look among their predecessors, the gigantic dinosaurs and other reptiles, for further evidences of disease. Here are found the oldest bone tumors, bone decay, union of the vertebrae, resulting in a stiff back. The swimming reptiles were not exempt from disease. Many of them suffered from pyorrhea, as did many of their predecessors.

Evidence shows that altho disease was first manifest in the great Coal Period, certain tendencies were present for millions of years prior to that time. The age of disease is a respectable one of 100,000,000 years, with a reputation for tenacity.

Snaps

Java produces 90 per cent of the world's quinine.

The United States produces nearly 400,000 miles of motion picture film annually.

Only 2 per cent of the roads of the United States are suited to heavy automobile traffic.

Two-thirds of the world's precious stones are now owned by citizens of the United States.

A vote of the Princeton Senior class showed that 121 had kissed a girl and 27 had never done so.

The police department of La Paz, Bolivia, has established a primary school for illiterate policemen.

The California redwood trees are the oldest living thing in the world. Some of them antedate the Christian era.

There are more languages spoken by the natives of British India than there are states in the United States.

One hundred and thirty-five women students are earning their way thru the University of Wisconsin this year.

Seven times as many readers used the New York public library in 1919 as used the library of the British Museum.

It has been proposed to grant an honorary armband to every man who wears a suit of clothes for twelve months without buying another.

French war brides are said to abhor American pointed shoes and American hats are not up to their taste, but they like American silk stockings.

In 1917 there were 21,845,722,335 telephone "talks" or messages in the United States—i. e., 211 messages per annum to every man, woman and child.

Girls in Detroit, Michigan, who have been unable to find rooms to live in at reasonable rates, are offering to help housewives evenings and Saturday afternoons in exchange for rooms.

How to Choose a Husband

"A woman without talent is virtuous," said the ancient Chinese law, which laid down the duties of womanhood as obedience to parents and submission to husbands. But along with the modern Chinese woman's struggle for an education has gone a change in her social status. A Chinese feminist, writing in *The Chinese Ladies' Journal*, counsels her sisters to consider the following rules in choosing a husband:

1. Appearance and knowledge—A beauty should match a husband of good education and appearance, and a stout woman should marry a giant husband. Such couples will live together peacefully; but if an unusually beautiful and well educated woman marries a stupid husband, or an ugly and uneducated woman, a well educated and well appearing man, they will never live together happily. It is necessary to judge the man intellectually as well as morally, in order that couple be well balanced.

2. Age—The best time for marriage is between the ages of twenty and twenty-eight. Look for a husband who is neither too old nor too young. Generally husbands should be older by two or three years.

3. Occupation—Has your prospective husband an independent occupation? What kind of work is he doing? Is his income sufficient for his living without depending on his father's property?

4. Property—How big is your fiancé's house? Is it rented or is it his own property? Has he saved any money? Has he any other property? His wealth should be well balanced with that of your own family. If your husband is poor, you can never hope to live with him peacefully.

5. Relations—Are his parents still living? Has he any brothers or sisters? How many servants? Do his parents love him? Do they interfere in everything he does? How about his affection for his brothers and sisters or other members of his family?

6. Health—Is he in good health? Has he any hereditary disease?

7. Living—Does he live extravagantly or economically? Does he smoke, drink or gamble? What is his income and how does

he spend it? Is there any balance left after he has paid his expenses?

8. Temper—How does he treat his friends or servants? This will enable you to learn how his temper is.

9. Character—What is his opinion towards public affairs? Has he done anything to cause him to lose public respect?

10. Purpose—What is his aim regarding marriage? Does he believe in the rule of one wife or does he expect to have more than one?

11. Other investigations—Is he clean in living and eating? How about his friends, etc.?

The above points may be learned by interview or by correspondence, or by getting information from his neighbors. If his morals are satisfactory an engagement may be entered into. In this way you will never regret your action. If you marry a husband with whom you are not acquainted, how can you love one another? This is a very important matter, which every young woman should consider. Don't be too shy to investigate. This is a matter of great importance for your lifelong happiness.

No More Sea Sickness!

With the announcement of a contemplated weekly airship service from London to America and an hourly mail service between London and Paris, it might be well to review the development effected in air transportation within the last few years. Before the war, the most important passenger-carrying airship service was between Berlin and Friedrichshafen, a route which has now been extended north to reach Stockholm, Sweden, as a terminal. Passengers crossing from Denmark to Germany by water are met on the dock at Warnemünde by airship, which takes them to Berlin in one hour—just one-fifth of the time required to reach the same destination by rail. This route is rivalled by the Aircro service between London and Paris and similar lines between Brussels, Paris and London.

As much as 779½ pounds of freight and twenty passengers have been carried between London and Paris in an "off" week of fog, wind, rain and snow, which necessitated the airplanes' turning back from the Channel several times after having started from Hounslow fully loaded. On the London-Brussels line during the same period, ten passengers and 2969 pounds of freight were carried, the latter includ-

ing, among other things, ladies' dress forms, crepe de chine tea gowns, bou-doir caps, feathers and furs. An aerial passenger and postal service has been established between Geneva, Lausanne, Berne and Zurich, Switzerland, according to a commerce report; and English lines are to be opened shortly between London and the Hague, with still others contemplated between London and India, London and Australia, and Cairo and Cape Town. The last three routes, when completed, will bring London within four or five—instead of twenty-one—days from India and 120 flying hours from Australia; while Cape Town, formerly seven weeks' distant from Cairo, can be reached in one week.

In the United States, there are the "Atlantic City aerial limousine"; the Florida-West Indies Airways, Inc., which operates between Key West and Havana; an aerial delivery service at Mobile, Ala.; the Fort Worth Transportation Company, which has been organized to keep up with rapid developments in the oil fields; forest fire and coast patrols; the air mails which are rapidly maturing into a trans-continental air service; and an aerial jitney line, so called, between Richmond, California, and San Francisco.

THE LONGCHAMP HORSE RACES

Pleasure seekers on the Continent can now get a birdseye view of the races

The Boom and the Book

Wood as Soldier and Statesman

General Wood is an attractive man to write about and several campaign biographies have already appeared. The fullest of these is *Leonard Wood, Conservator of Americanism*, by Eric Fisher Wood. Mention may also be made of *Leonard Wood*, by William H. Hobbs, and *That Human Being, Leonard Wood*, by Hermann Hagedorn. No other Presidential aspirant of the 1920 vintage has had so much attention from the biographers. General Wood's supporters have a double purpose in laying emphasis on the history of their hero: to revive in popular memory the incidents of a singularly romantic, successful and useful career, and to combat the argument that General Wood is "only a military man." Thus Mr. Hagedorn shows by way of picturesque anecdotes the kindly good nature that lies behind the mask of military rigor of General Wood, while Mr. Eric Wood lays particular stress upon General Wood's achievements in the civil government of Cuba.

Leonard Wood, Conservator of Americanism, by Eric Fisher Wood. Doran. *Leonard Wood*, by William H. Hobbs. Putnam. *That Human Being, Leonard Wood*, by Hermann Hagedorn. Harcourt, Brace & Howe.

The Perfect Yankee

Governor Calvin Coolidge's speeches and public documents, collected together under the title, *Have Faith in Massachusetts*, are decidedly worth reading because of the personality so evident in the words. This is Puritan New England undiluted. The old faith in labor and democracy, the old satisfaction in the truth of a truism, the old curt simplicity of speech and forthrightness of thought are here. A sample will serve to give the quality of the book better than any description:

Do the day's work. If it be to protect the rights of the weak, whoever objects, do it. If it be to help a powerful corporation better to serve the people, whatever the opposition, do that. Expect to be called a standpatter, but don't be a standpatter. Expect to be called a demagog, but don't be a demagog. Don't hesitate to be as revolutionary as science. Don't hesitate to be as reactionary as the multiplication table.

Have Faith in Massachusetts, by Calvin Coolidge. Houghton Mifflin.

Our Modern Jefferson

Woodrow Wilson and His Work, by Professor Dodd, is the best of the already fairly numerous biographies and personal sketches of the President which have appeared. The author, a professor of American History at Chicago University, is not only an understanding admirer of President Wilson but he also is able to trace the political and economic background of his career, from his first struggle for democracy in Princeton to his latest struggle for the League of Nations in Paris and Washington. The author interprets much of the opposition which President Wilson has had to encounter at various

stages of his career to sectional hostility. "Articulate America," he says, "was industrial; it was Eastern and Northern, sectional and in absolute control of the economic life of the country." This sentence, tho taken from a description of the campaign of 1896, runs like a refrain thru the whole narrative and is ingeniously illustrated in a thousand ways.

Wilson as the liberal agrarian, the disciple of Jeffersonian democracy, is one of the men in whom Professor Dodd is interested. Another is Wilson the international idealist who defied German militarism and curbed Allied imperialism. We feel again the pressure of criticism that weighed down the President during the war; the outburst of enthusiasm which greeted his first voyage in the *George Washington* when "the mass of European peasantry, shopkeepers, and day laborers looked forward to his arrival in Europe as men looked in medieval times to the second coming of Christ," and the slow ebbing of popular favor on both sides of the Atlantic during the delays of the Peace Conference up to the time when "an alliance between the extreme radicals of New York and the Bourbons of the Senate" was formed to defeat the Treaty and the League.

Woodrow Wilson and His Work, by Professor William E. Dodd. Doubleday, Page & Co.

A Great Conservative

President Butler of Columbia University is one of the few men in American public life who understands the meaning of conservatism. To Mr. Butler it does not mean blind obstructionism or selfish class interest, as is the case with so many camp followers under the noble old banner of conservatism, but a definite and coherent political philosophy. His recent group of addresses on current topics, published under the title *Is America Worth Saving?* contain the creed of a scholar and statesman who knows whereof he speaks. In the essay on Alexander Hamilton, President Butler declares that Alexander Hamilton is "the one supremely great intellect yet produced in the Western world" and it is as a convinced Hamiltonian that he thus formulates the conservative principle: "the substitution of direct democracy for representative institutions is and must necessarily be a long step backward."

As might be expected, the man who popularized the phrase "the international mind," is a strong advocate of the League of Nations, tho he finds fault with the phrasing of the Covenant and the attitude of the President. His words of advice may well be heeded by every Republican:

For several generations the American Government has had a large part in the development and establishment of international law and order. On many occasions, thru resolutions of the Congress, thru executive declarations, thru diplomatic correspondence, thru special treaties, and thru participation in numerous international

conferences and conventions, the American people have exerted far-reaching influence in making international law and in developing an international public opinion. Republicans in particular must not allow their justifiable resentment at the President's methods and policies to drive them into an unstatesmanlike attitude and one wholly out of harmony with their long tradition, on the greatest question now before the court of public opinion.

Is America Worth Saving? by Nicholas Murray Butler. Scribner's Sons.

The Perpetual Nominee

Debs, whose career has been written up by his Socialist comrade, David Karsner, has outdone Mr. Bryan himself in winning Presidential nominations. Mr. Karsner tells the story of Debs's campaigns of 1900, 1904, 1908 and 1912 as the standard bearer of Socialism; relates his experiences as a labor agitator in the nineties; and publishes the text of his correspondence from prison, the anti-war speech which caused his arrest for violation of the Espionage Act, his address to the court before receiving sentence, and the decision of the Supreme Court affirming his conviction. Mr. Karsner's book is compact and informing and is particularly interesting for the glimpses it gives of the charming personality of Debs the man. His friend, the late James Whitcomb Riley, summed him up in the following tribute:

Go search the earth from end to end,
And where's a better all-round friend
Than Eugene Debs?—a man that stands
And jest holds out in his two hands
As warm a heart as ever beat
Betwixt here and the Mercy Seat!

Debs, by David Karsner. Boni & Liveright.

What Mr. Speaker Has To Say

Champ Clark, the genial Speaker of the House of Representatives, has enriched the literature of Congressional reminiscence with a lengthy account of *My Quarter Century of American Politics*. Save for some youthful memories of frontier days in Missouri and the account of the 1912 Democratic convention, which concludes the book, the narrative hardly strays outside the walls of Congress. Of the 1912 Convention he testifies:

Bryan was dishonest in his contention that he changed his vote because New York was voting for me. The principal reason he changed his vote, thereby violating his instructions and thereby proving that all his prating about "the people's rule" was hypocrisy, was that he wanted to create a deadlock and grab off the nomination for himself. He had no more idea of nominating Governor Wilson for President than he had of nominating him as Ahkoond of Swat. His well-considered plan was to kill off both Governor Wilson and myself. As I was leading, I must be killed off first. As he could not cite a single act or word of mine on which to hang a legitimate objection to my nomination, he cooked up the slander by insinuation that I would be under obligations to Ryan, Belmont and Morgan—which he knew was false. The second step he had in mind was to kill off Governor Wilson.

My Quarter Century of American Politics, by Champ Clark. 2 vols. Harper Brothers.

Hoover—And the Rest

(Continued from page 276)

more misunderstood by the general public. There was disappointment among a wide circle of liberals when Hoover announced himself as an adherent of the Republican party. The truth is that Hoover announced his candidacy in a spirit, I believe, almost of desperation. Keenly interested in the local situation in California, he felt that if he did not permit his name to be used, Californians who believe in the League of Nations and in the continued attempt of America to participate in international affairs as a moral force, would have no chance to "stand up and be counted," because of the overwhelming personal popularity of Johnson in that state. He ran in the California primaries as a friend of the League, expecting to be defeated, but believing that he owed it to men who felt as he did on that subject to allow their votes to be counted. His Republicanism was arrived at by examining the Democratic party, its leaders, and its ideas and finding within himself no sympathy for any of them. I have excellent reason to believe that Hoover's objection to the third party idea is on the practical ground that he believes a third party has no chance in America. Should the Presidential convention at Chicago decide to swallow Hiram Johnson and his antipathy to the League of Nations, and should the Democrats put in some notoriously weak stalking horse like Edwards of New Jersey, the Hoover antipathy to a third party might well melt away.

As to whether Hoover could be elected, and if when elected he would make as good a President as his friends believe, those are quite different questions. Speaking in general, I think he is an almost perfect example of Lord Bryce's great man who lacks the qualities of popularity in appealing to a general electorate. And if he were elected, it would remain a fascinating psychological problem whether he could adjust his unusual and powerful temperament to the type of problems which would confront him in the White House. The events of the past two year have proved that a President must be able to work with and thru politicians. Mr. Hoover has achieved a record as an administrator rarely excelled in all history; but he has done so working with men for the most part whom he has regarded as his intellectual equals, or to whom he could give orders. You cannot give orders to a politician; and very few of them, obviously, are Hoover's intellectual equals. The question may therefore be raised: May a man be so far ahead of the crowd in intellect and in the efficient development of his mental processes that he is unable to give full expression to his personality in the atmosphere of official Washington?

It can only be said now that to put Hoover in the Presidential chair would be an experimental innovation of a most startling sort; and I, for one, believe that such an experiment would be well worth trying.

G. Leroy Clarke

After studying the Palmer Plan of Photoplay Writing he sold his first story for \$3,000. Mr. Clarke was formerly a minister.

Dorothea Nourse

Attributes her success as a motion picture writer to the Palmer Plan. She quickly sold "Diamonds" and "Diamonds" after enrolling.

Paul Schofield

A year ago he was a bank outsider. He studied the Palmer Plan. Today he is under a 2 year contract as staff writer with Thos. H. Ince Studios.

Mrs. Caroline Sayre

Wrote the photoplay "Live Sharks" for J. Warren Kerrigan, one of scores of new writers who are developing by correspondence instruction.

5000 New Story-Ideas Wanted for Motion Pictures

(The above figure does not include material needed for religious, commercial and educational films.)

The motion picture industry is confronted with a grave dearth of story-plots. Producers will pay you well for any workable story-ideas. 95% of book material is unsuited to their needs. And as yet not enough people are writing for the screen to supply the demand. Somewhere in America this year, scores of new

photoplay writers will be developed. Many of them have never written a line for publication. Literary genius is not a prime factor to success in motion picture story writing. If you have a story-idea as good as some you have seen produced—this opportunity is wide open to you.

\$250 to \$2,000 for Workable Motion Picture Story Plots

People with merely good ideas for stories, who are willing during spare hours to learn how motion picture directors want their plots constructed, can succeed.

Producers will pay \$100 to \$500 for comedies; \$250 to \$2,000 for five-reel dramatic scripts. People who never saw a motion picture studio have succeeded.

Learn how you too can master this high- paid art in spare time

The famine in story-plots first became acute about two years ago. Public taste changed. Play-goers began to demand real stories. Plenty of manuscripts were submitted, but most were unsuitable.

For writers didn't know how to adapt their stories for the screen. Few people could come to Los Angeles to learn. A plan for home study had to be devised.

Frederick Palmer (formerly staff writer of Keystone, Fox, Triangle and Universal) finally assembled a corps of experts who built a plan of study which new writers could master through correspondence. It is called The Palmer Plan of Photoplay Writing. It is endorsed by every big producer and star. We have developed scores of new writers. Many have taken staff positions in studios. One of our members was paid \$3,000 for his first story. James Kendrick of Texas has sold 6 stories since enrolling a year ago.

Advisory Council

The educational policy of The Palmer Photoplay Corporation is directed by the biggest figures in the industry. They include Cecil B. De Mille, Director-General of the Famous Players-Lasky Corporation; Thomas H. Ince, head of Thomas H. Ince Studios; Lois Weber, America's greatest woman producer and director; Rob Wagner, motion picture writer for Saturday Evening Post.

Lasky scenario writer; Col. Jasper Ewing Brady, of Metro's scenario staff; Denison Clift, Fox scenario editor; George Beban, celebrated actor and producer; Al E. Christie, president Christie Film Co.; Hugh McClung, expert cinematographer, etc., etc.

Free Elaborate Book

If you have ideas for motion picture stories you know are better than some you see on the screen—mail this coupon today. It tells all about the Palmer Plan in greater detail. If you desire to consider the unusual

opportunity in this new field of art seriously—this book will be mailed to you free.

Zero Hour Along the Marne

(Continued from page 279)

continued casualties under the hot fire of our artillery.

Two and one-half additional battalions of the 42nd Division were put into the intermediate position during the afternoon, but, having failed to win success anywhere east of Reims, the enemy made but disjointed attempts to renew the offensive on July 16 and by the 19th began withdrawing his attack divisions from that front. The 42nd was similarly withdrawn so soon as it was evident that the attack was over and was sent to the Marne salient, where on July 25 it relieved the 26th Division in the pursuit of the enemy north of Chateau-Thierry.

Meantime General Dickman's 3rd Division, because it alone was occupying the front line of its sector, east of Chateau-Thierry, had borne a still more conspicuous part in the repulse of the great German offensive. At dawn of July 15 the masses of German infantry came pouring down from the lofty hills which dominate from the north the lowlands within the bend of the Marne west of the river Surmelin. Owing to the great breadth of the sector, over ten kilometers, the four regiments of the 3rd Division were all in line, the 4th Infantry on the left, then in order, the 7th, the 30th and the 38th. The attack fell entirely on the last three regiments. Vigorously supported by the fire of the American and French artillery stationed further back, even the outpost detachments of the 7th, 30th and 38th regiments, commanded respectively by Colonels T. M. Anderson, E. L. Butts and U. G. McAlexander, refused to retire from the river bank and with their rifles and machine guns drove back the boats and pontoons in which the Germans sought to cross.

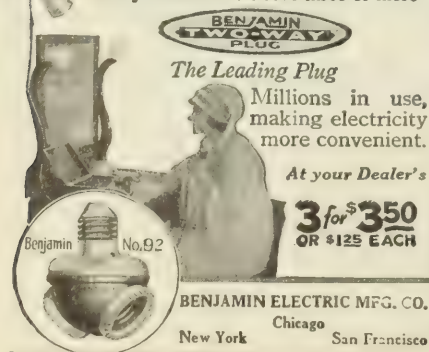

At only two points on the left and center did the enemy succeed in getting over. The small detachment which crossed near Fossoy was destroyed by soldiers of the right of the 7th Infantry and the left of the 30th Infantry. A larger body, amounting altogether to more than a regiment, which came over from Charteves, was met at Mezy and along the grade of the Metz-Paris railroad by an advanced platoon of the 30th Infantry, which, scorning to surrender or even to give ground, fought until it was practically exterminated after having inflicted far greater losses upon its assailants. The Germans who passed Mezy and pushed on south toward the highway between Chateau-Thierry and Crezancy, on the Surmelin, were met and repulsed north of the road by detachments of the 7th and 30th Infantry under Major Ditto and Major Paschal. By 8 o'clock a. m. the fight on the left and center had virtually ended in our victory.

On the right, however, the 38th Infantry had a longer, if not a harder, struggle. In the hilly, wooded country east of the Surmelin the 125th French Division fell back when the Germans crossed the river. This exposed the right flank of Colonel McAlexander's

regiment, but instead of retiring from the Marne the flank was merely swung around facing east and extended down the Surlmelin by reserve companies so as to stop the attack in that direction. Along the Marne at the foot of the Jaulgonne Bend, Major Rowe's battalion broke the attempts of the Germans to cross and, tho surrounded on three sides, Major Rowe cheerfully sent back word to headquarters that his men were holding the line and could do so indefinitely. They did hold it for five days, until the enemy retired from the hills east of them.

Across the hills last mentioned, between the Surlmelin river and Chatillon, some twenty kilometers further up the Marne, the Germans, following up the French retirement, advanced to a depth of four or five kilometers south of the Marne. Just east of the Surlmelin, in the valley of a small creek containing the village of Conde-en-Brie, the hamlets of Evry and St. Agnan and the farm of Donnejeu, the advancing enemy encountered Colonel M. D. Brown's 109th Infantry, of the 28th Division; Pennsylvanians. During the 15th, 16th and 17th these men stuck to their positions, repulsing the enemy and counter-attacking until, as the French began restoring their front further east, the enemy fell back across the Marne.

The struggle of the 3rd and 28th Divisions south of the Marne and of the 42nd in Champagne, together with the epic stand of the 2nd at Belleau Wood early in June, complete the tale of participation by American troops in great defensive battles.

THE day for the great counterstroke by Marshal Foch at length arrived. The two American divisions, the First and Second, which contributed most materially to the success of that epoch-marking event of July 18, at 4:35 o'clock on the morning of that day attacked eastward across the plateau southwest of Soissons, at the same moment with the whole line of American and French divisions of General Mangin's 10th Army and General Degoutte's 6th Army, on the 50-kilometer front from the Aisne to Chateau-Thierry. The 1st Division, now commanded by General C. P. Summerall, and the 2nd, under General J. G. Harbord, were charged with overrunning the high plateau extending from the valley of the Ru de Rctz to the valley of the Crise river, directly south of Soissons, where they would cut the main highway and the railroad running to Chateau-Thierry via Oulchy-le-Chateau. The depth of their advance would have to average about ten kilometers.

Gallantly supported by a large number of French heavy and light tanks, the divisions jumped off, the First on the edge of the plateau near Cutry, the Second from the rim of the Villers-Cotterets Forest. The tremendous attack, preceded by a barrage of the utmost intensity, took the enemy completely by surprise and overran his front and secondary defensive positions at a bound, capturing hundreds of prison-

40 minutes' use Shows the way to whiter teeth

All statements approved by high dental authorities

This test requires four minutes daily for ten days. To millions it has brought a new era in teeth cleaning.

The glistening teeth you see everywhere now should lead you to learn the way.

That cloudy film

Teeth are clouded by a film. By a viscous, ever-present film. You can feel it with your tongue. Modern research has traced most tooth troubles to it.

Film clings to teeth, enters crevices and stays. If not removed it hardens. The ordinary tooth paste does not dissolve it, so much escapes the tooth brush. Thus well-brushed teeth by millions discolor and decay.

It is the film-coat that discolors, not the teeth. Film is the basis of

tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

The new method

A dental cleaning removes the film-coat, but that is periodic. The need was for a daily film combatant, and science long has sought it. The way has now been found. Able authorities have proved its efficiency. And now leading dentists everywhere are urging its adoption.

An ideal tooth paste has been created to meet all modern requirements. The name is Pepsodent. And this new film combatant is embodied in it.

A quick convincing test

We now supply to thousands daily, a quick, convincing test. And we urge every home to make it.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

But pepsin must be activated, and the usual agent is an acid harmful to the teeth. So this method long seemed barred. Science, however, has discovered a harmless activating method,

so active pepsin can be daily used on film.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coat disappears.

Compare your teeth now with your teeth in ten days. Then decide for yourself the way to beauty and to better protection. This test is most important. Cut out the coupon so you won't forget.

ers and scores of cannon and machine guns. By 7:30 o'clock in the morning both divisions, with the Moroccans abreast of them in the center, had driven forward more than four kilometers, General Summerall's men having conquered Crevancon Farm and, in a desperate struggle, Missy-aux-Bois ravine, while General Harbord's had passed Verte Feuille and Beaupaire Farms and driven beyond the village of Vauxcastille.

From this time forward the 1st Division had a harder time, but the 2nd continued going with almost unabated speed. Owing to delays in the Villers-Cotterets Forest the men had come upon the front line at double time at the zero hour and had gone across at the same pace. Major Fehet's battalion of the 23rd Infantry, Colonel Paul B. Malone's regiment, had reached Beaupaire Farm, nearly two and one-half kilometers beyond the jump-off, fifteen minutes after starting, and the first waves of Colonel Leroy Upton's 9th Infantry and of Colonel A. Catlin's 5th Marines were abreast of them there. Sweeping on, now, across the upland, the division plunged into the deep ravine of Vauxcastille, went thru it after a brief but violent struggle with its defending infantry and machine gunners, reached the further side and drove over another strip of upland to the ravine of Vierzy, which they reached at 9:30 o'clock in the morning. The supporting detachments continued to fight most of the day, all of them without food and most of them without water.

At 6:30 o'clock in the evening the advance was resumed by Colonel Upton's and Colonel Malone's troops, the Marines remaining in support. At 8 o'clock two more kilometers had been gained across the open toward the Soissons-Chateau-Thierry road, which, lying beyond the village of Tigny, was still about two and one-half kilometers ahead. Severe casualties were experienced during the night while the troops lay in a semi-circle on the exposed plateau, surrounded on three sides by the enemy. But at dawn the 6th Marines and the 2nd Engineer Regiment advanced thru the front line and pushed on against heavy fire to Tigny, where, after starting the intrenchment of their front, the exhausted American troops were relieved by a French division almost within a stone's throw of the Chateau-Thierry road. General Harbord's division had lost nearly 50 per cent of its strength in casualties, but in its whirlwind battle of twenty-six hours it had driven forward over eight kilometers and captured more than 3000 prisoners and sixty-six pieces of artillery.

Further north, General Summerall's troops, after passing the Missy-aux-Bois ravine, had a hard struggle and suffered great losses in getting across the next section of the plateau to the Ploisy ravine. Ploisy ravine was finally conquered in a stubborn, all-night battle on July 19-20 and meantime, on the right, General George B. Duncan's 1st Brigade reached the same north-and-south line. While the

long range German guns emplaced northeast of Soissons, eight or ten kilometers away, bombarded the American positions with giant projectiles, the 2nd Brigade engaged in a furious struggle for Bery-le-Sec, the last stronghold of the Germans on the highland above the Crise valley. During the early morning of July 21 the place was finally carried in a thrilling assault led by General Buck in person and, the 1st Brigade having meantime advanced into the Crise valley, the final objective of the division stood practically attained. It was relieved by a British division on the night of July 22.

The losses of the 1st Division had been heavy, about 7000, all told. Sixty per cent of its officers were killed or wounded. Colonel C. S. Babcock's 28th Infantry made its final attack on Bery-le-Sec with only 280 effectives; the 26th Infantry came out of action under command of a captain of less than two years' experience, while both the 16th and the 18th Infantry regiments lost all their field officers. But General Summerall's troops captured over 3500 prisoners and sixty-eight field guns from seven different German divisions, cleared eleven kilometers of enemy territory in four days and broke the back of the Marne salient.

About half way between the 2nd Division, near Verte Feuille Farm, and the 26th at Belleau Wood, there were, on the morning of July 18, three of the infantry regiments of General George H. Cameron's 4th Division, amalgamated for the attack with two French divisions. The 39th Infantry, under Colonel Frank C. Bolles, served as a unit in the French 39th Division. The 58th and 59th Infantry, which, when together, composed General Frank D. Webster's 8th Infantry Brigade, served by battalions with the 164th French Division.

The 39th Infantry lay in the center of its division with its right on the north bank of the Ourcq river near Troesnes. It was charged with sweeping the northern half of the river valley and the adjacent highlands, while a French regiment did similar duty on the south side. At the very beginning, Colonel Bolles' men had to cross the deep and marshy valley of the little Saviere river, which was quickly accomplished. During the morning Major Mitchell's 2nd Battalion cleaned up the difficult woods of Cresnes, beyond the Saviere, and at 3:40 o'clock p. m. the 1st Battalion took the next village to the east, Noroy. Next morning at 4 o'clock the 3rd Battalion, on the high ground furthest north in the regimental sector, captured Chouy and, the line being straightened on the hillcrest east of that place, which was the third objective, Colonel Bolles' regiment, with the rest of the 39th Division, was relieved on the 20th.

The 58th and 59th Infantry were in the Hautevesnes sector, six or seven kilometers northeast of Belleau Wood, when they went over to the attack with General Gaucher's poilus. The advance of the 164th Division was almost as breathless as that of the 2nd United States, for at 5 a. m. the Franco-

American line had engulfed Hautevesnes and at 11 reached Courchamps, five kilometers beyond the jump-off line, and captured this strong German position. Next day the troops overcame the upland farms of Grenouillere and Remise and on the 20th approached a hilly woodland, the Bois de Bonnes, where such a stubborn battle occurred that the woods were not cleared until the 22nd. Then the front line advanced across the Chateau-Thierry-Soissons road beyond which, at a distance of fourteen kilometers from the initial line of attack, the division was relieved.

AS the 1st and 2nd American Divisions were given the task of breaking thru south of Soissons, so the 26th Division, with a French division on its right, both under corps command of General Hunter Liggett's First American Corps, was given the task of acting as pivot for the general attack and of driving the enemy back northeastward from Chateau-Thierry.

General Clarence R. Edwards' 26th Division, of New England troops, had been in line for a week along the hills south of the Gobert creek, on both sides of Belleau Wood, when it joined in the general advance of July 18. Its attack problem was difficult because its left had to first strike northward and its right eastward, after which both flanks would be obliged to coordinate their further advance northeastward. Under cover of a heavy morning fog the assault was made on the right by the 2nd Battalion of the 103rd Infantry, under Captain Hosford, charging northeast from Belleau Wood to take the narrow gauge railway line in the creek valley between Bouresches and Belleau; in the center by the 3rd Battalion of the 104th Infantry, under Major E. E. Lewis, attacking north against Belleau and Givry villages; and on the left by the 3rd Battalion of the 103rd Infantry, under Major Southard, directed north against Torcy village.

All of these positions had been taken and consolidated before 8:30 a. m.

Being obliged now, in its capacity of pivot, to await the further advance of the front extending up toward Soissons, General Edwards' men found the task of holding their new line more difficult than had been the taking of it. Under harassing machine gun fire the New Englanders not only held fast, but made another general advance on the afternoon of the 20th, when the line was pushed out over the hills east of the creek and extended from Les Brusses Farm on the left to La Gonetrie Farm on the right.

Next morning the enemy was in full retreat to the northeast. The 26th Division pursued hotly until, after crossing the Chateau-Thierry-Soissons road, stiff resistance was again encountered at Epieds and Trugny, villages lying in a broad, shallow creek valley with dense woods admirably suited for machine gun nests on the ascending hill slopes south and east of them. Here ensued a disjointed but severe struggle lasting for two days, until during the night of the 23rd-25th, the enemy

MUSIC AT CHAUTAUQUA

NEW YORK SYMPHONY ORCHESTRA

The New York Symphony Orchestra will be at Chautauqua for six weeks, beginning July 5.

The Orchestra will give a series of Classical concerts on Monday evenings, Matinee concerts on Wednesday afternoons, and popular concerts on Saturday evenings.

On Thursday and Friday of each week the Orchestra will give "twilight concerts," outdoors.

The "indoor" concerts will be given in the Amphitheater, a "hall without walls," seating 6,000 persons.

There will be a special Music Week, August 9-14.

This is the most ambitious music program Chautauqua has ever undertaken, and promises a tremendous popular success.

THE SCHOOL OF MUSIC

Piano, Ernest Hutcheson, Eliza McC. Woods, Austin Conradi.

Voice, Horatio Connell, Frederick B. Shattuck.

Organ, Henry Bethuel Vincent.

Violin, Sol. Marcossou.

Public School Music, Howard Clarke Davis, Director; T. P. Giddings, Luther G. Weigle, Elbridge W. Newton, Helen S. Leavitt.

Courses in Orchestral instruments.

THE CHAUTAUQUA CHOIR

William C. Bridgman has just been appointed to the Directorship formerly held by Alfred Hallam. The new Choral Director at Chautauqua is now choirmaster of St. James Episcopal Church of Brooklyn.

He will train and direct the Chautauqua Choir and the Junior Choir, which is made up of members of the Boys' and Girls' Clubs.

Mr. Bridgman directed the Queens Choral Society of 150 voices for three years, the Brooklyn Sunday School Choir of 1,200 voices for five years, and the Gounod Society for two years. He has been associated with Mr. Damrosch in training the Brooklyn branch of the Oratorio Society of New York.

CHAUTAUQUA PROGRAM, 1920

Formal Opening, Thursday, July 1.

Opening Summer Schools, Saturday, July 3.

Celebration of the Pilgrim Tercentenary, July 12-17.

Exhibit of Paintings and Sculpture by St. Louis Artists, July 13-30.

Annual Prize Spelling Match, Wednesday, July 14.

Symposium "Aftermath of the War in Europe," July 19-24.

C. L. S. C. Rally Day, Saturday, July 24.

Symposium "Women's Activities in the New Era," August 2-7.

Old First Night, Tuesday, August 3.

Country Fair, Saturday, August 7.

Music Week Symphony Orchestra Concerts, August 9-14.

Annual Exhibition School of Physical Education, Tuesday, August 10.

Denominational Day, Wednesday, August 11.

Closing Summer Schools, Friday, August 13.

Grange Day, Saturday, August 14.

Symposium "Americanization," August 16-21.

Open Forum School of Methods, August 16-27.

Recognition Day for Home Readers, Wednesday, August 18.

National Army Day, Saturday, August 21.

Closing Day, Sunday, August 29.

For information as to music (or other) courses, hotels, boarding houses, amusements, etc., address

once more retreated, this time to the clearing of La Croix Rouge Farm. Here, on the night of the 24th, General Edwards' tired troops were relieved by the 42nd Division, after having pursued the enemy about 18½ kilometers.

When General Menoher's men undertook to advance into the clearing of La Croix Rouge Farm on the 25th they were driven back by the fire from the farm itself and from the woods east of it. But during the following night some patrols of Colonel E. R. Bennet's 168th Infantry found a grass-grown ditch leading up to the farm buildings. Creeping thru it, two platoons surprised the garrison on the morning of the 26th. It was the key to the position and altho during the rest of that day fighting was severe along the line of the woods, the enemy retired that night about six kilometers to the north bank of the Ourcq.

The 42nd Division followed, overcoming enemy rear guards at La Croix Blanche Farm and other places and finally being stopped by strong resistance at the Ourcq river, a small stream but deep and with precipitous banks. Here the Germans evidently meant to make a stand for they held the north bank in force against the American and French battle front from beyond Fere-en-Tardenois, at the northwest, to the Bois Meuniere. On July 28 the 28th Division came into line on the right of the 42nd, and on the 29th the 3rd Division reached the hilly ground beyond Cierges, further to the right.

General Haan's troops, last mentioned, had only won thru to the Ourcq after a week of hard fighting which ensued upon its passage of the Marne on July 21 at Chateau-Thierry, Chierri, Chartèves and Jaulgonne. Liaison between adjoining units was almost impossible and the general front was driven ahead practically by the efforts of isolated detachments. Colonel Anderson's men of the 7th Infantry thus gradually cleared the Bois de Mont l'Eveque, while those of Colonel Dorey's 4th Infantry worked their way up the ridges past Les Franquets Farm. Meantime Colonel Butts and Colonel McAlexander, with the 30th and 38th Infantry, forced their way to Le Charmel, which was finally captured on July 25 and the chateau and park east of it on the 26th. Thus the division front finally reached the edge of the watershed between the Marne and the Ourcq. During the two following days the watershed was crossed, the 7th and 4th Infantry clearing the Vente Jean Guillaume on the left and the other two regiments approaching Ronchere, which they captured on the 28th. Swinging, now, slightly to the left, the division approached Cierges.

Meantime, on July 28, General Menher's and General Muir's divisions had begun a desperate battle to gain the high ground beyond the Ourcq east of Fere-en-Tardenois. The German positions here had been arranged with great skill and were very strong.

The general attack of the 42nd Division on the morning of the 28th soon carried it across the Ourcq, in spite of

terrific enemy fire, not alone from the ground, but from a host of German combat airplanes. But after the passage of the stream every inch had to be striven for. On the right Colonel Bennet's Iowans and the Alabama troops of Colonel Screws' regiment time after time took Sergy and the hill northwest of it only to be driven out again. The New Yorkers of the 165th Infantry, under Colonel Frank R. McCoy, after a long artillery fire of destruction on Meurey Farm, advanced and took it in a hot bayonet fight on the 29th, but could not exist there under the concentration of German fire from the Forest of Nesles. They held it, however, by digging themselves in in the tiny Bois Colas, close by, where they held on grimly for several days. On the left, the Ohioans of the 168th Infantry gradually surrounded Seringes by taking Hill 184, northwest of it, and before evening of the 29th stormed the village.

Persistent efforts by the 28th Division in front of Cierges had advanced its front nearly up to that village by the morning of the 29th, the day on which General Haan's 32nd Division relieved the 3rd and came into action to the right of the 28th. The following afternoon General Ed B. Wiggins' 64th Infantry Brigade of the 32nd took the Bois de Cierges at the same time that the 28th Division entered the village of that name. Widening, now, its front by putting General W. D. Conners' 63rd Infantry Brigade in place of the 28th Division, the left of the 32nd and the right of the 42nd between them took the southern part of the Bois Jomblets, on its dominating hill. On the rest of its front the 32nd found a zone of interlocked machine gun positions similar to those in front of the 42nd, the chief centers of which were Bellevue and Reddy Farms and Hill 230. Altho a strong German counter-attack, on the morning of August 1, resulted in the temporary loss of the Bois Jomblets, that afternoon Colonel C. R. Langdon's 127th Infantry surrounded and overcame Bellevue Farm and at about the same time the 125th, under Colonel W. V. Morrow, not only retook the Bois Jomblets but captured also the Bois Planchette. The next day saw the capture of Hill 230 by the 32nd Division and the close approach of General Menoher's troops to the Forest of Nesles. That afternoon the line of the Germans gave way and all of their remaining defensive positions north of the Ourcq fell to the Americans.

During their five days battle along the Ourcq the 42nd, 3rd, 28th and 32nd Divisions, on a front of approximately ten kilometers, had slowly ground their way by heroic fighting thru the enemy's forward positions to those further back, advancing everywhere between one and two kilometers. At the same time the enemy was fighting a rear guard action along the Ourcq in order to cover the withdrawal of his booty, troops and material to the north side of the Vesle.

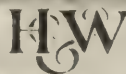

With Colonel Kelly's 117th Engineers in front line to replace the ex-

hausted infantry, the 42nd Division during the afternoon of August 2 drove northward thru the Forest of Nesle in pursuit of the enemy, while further to the right the 32nd kept parallel with it across open, rolling country thru Coulonges, Cohen and Dravegny. The 42nd was now the only division of the 1st American Corps in line while the 32nd was under the French 38th Corps, which had also the 28th American Division in support and the 3rd in reserve. The 38th Corps was relieved on August 4 by the 3rd American Corps under General Robert Lee Bullard. Little resistance was encountered on August 3, during which the Americans were pushing thru the Forest of Dole, Chery-Chartreuve, Mont St. Martin and St. Gilles toward the Vesle at St. Thibaut and Fismes. The 4th Division relieved the 42nd while advancing and was not checked until nearly 10 o'clock p. m. when, on descending into the Vesle valley, heavy artillery fire was encountered from north of the river and from St. Thibaut itself. The 32nd was similarly brought to a halt south of Fismes.

The next several days were spent in bringing the artillery up into position and in persistent efforts first to reach the bank of the Vesle and then to cross it. With General Benjamin A. Poore's 7th Infantry Brigade on the left, in front of St. Thibaut, and General Webster's 8th Infantry Brigade on the right, on the morning of the 5th, the 39th Infantry attacked St. Thibaut and won it before noon. But getting across the river was a more difficult matter and attacks by Colonel Bolles' men and those of the 58th Infantry did not succeed until late on August 6, when some troops got over on the division right. Bazoches, across the river from St. Thibaut, could not be taken and on August 9, in consequence of the violent enemy fire and counter-attacks, all the troops were withdrawn to the south bank.

In General Haan's division, further east, the 128th Infantry under Colonel Robert McCoy was repulsed from Fismes in its first attack on the night of August 3-4. The place was taken next day by Colonel C. R. Langdon's 127th Infantry, which, tho reduced to less than 400 effectives, held it until the division was relieved by General Muir's division on August 6.

Altho for a number of days longer active fighting continued on the Vesle, during which troops of the 28th Division succeeded in capturing Fismette, across the river from Fismes, only to lose it again a few days later, there was no further substantial progress until early in September, when the Germans, having been flanked by the progress of the attack of General Mangin's 10th Army north of Soissons, in which the 32nd Division, by the capture of Juvigny on August 30, bore a distinguished part, fell back to the Aisne and were followed by the 28th and the 77th American Divisions, of which the latter had relieved the 4th Division on August 12.

A Bank Knows Its Own Country

IN Japan, South Africa, Italy, England—in all important countries—are great commercial banks which can give the facts as to credit, markets, individual character and business methods that are needed by American business in foreign trade.

The National Bank of Commerce in New York maintains close relations with these great international commercial banks. Through them, it offers to its friends the combined banking knowledge of the world.

Six Stories of Far-Sighted Research

(Continued from page 280)

The value of a device which, even under these conditions, is capable of indicating with extreme accuracy the position of the lighthouse or some similar station upon shore is obvious. This is exactly what may be accomplished thru the use of the radio direction finder. Successful trials of the device have already taken place and it appears to be only a question of time before all of our important lighthouses will be provided with the necessary sending apparatus and when our ships will carry the radio compass.

We all realize the importance of textiles in everyday life. The Government, as a large buyer of cloth, required that the textiles out of which army uniforms, blankets, etc., were to be made, should meet certain specifications. The performance of this work of determining whether the samples submitted agreed with these specifications was given to the Bureau of Standards and was carried out with a marked degree of success. The plant upon which this work was done and the experts in textile research can now direct their efforts to the determination of what constitutes good and bad cloth for ordinary use; an important line of research when it is remembered that the textile industry has never been scientifically investigated.

Before the war, the United States was wholly dependent upon Europe for certain classes of goods. The war forced this country to undertake the making of many articles, the manufacture of which before had been confined to European makers.

A conspicuous example of a development of this kind was the manufacture of optical glass. Previous to 1914, the United States had been absolutely dependent on Europe for its supply of this important material, and the need for such an industry in this country was not apparent to most people. Satisfactory grades of glass could be obtained from abroad at reasonable prices, far lower, it was assumed, than would have to be paid for a product turned out by our higher paid labor, even if the processes of making the glass were known, and these had always been kept secret by the European manufacturers.

The Bureau of Standards foresaw that in the event of a great emergency, such as the war, we might be left wholly without a supply of this material. Shortly after the conflict in Europe commenced, the Bureau, therefore, undertook the systematic investigation of the manufacture of optical glass. When the United States declared war on Germany in 1917, the development of glass-making at the Bureau's plant was well under way, and within a short time the knowledge necessary for successfully making optical glass had been freely given to a number of American glass-making concerns.

**NERVE
FORCE**

Can It Be Your Nerves?

MEDICINE AND DRUGS ARE WORSE THAN USELESS. Send 25c in coin or stamps for the book, "Nerve Force"—64 pages—bound in cloth. 50c. It is the most remarkable book ever written on the vital subject of Nerve Culture. If you do not agree that the book marks a turning point in your present life to a life of greater health and Nerve Power, return it and your money will be refunded plus your outlay for postage.

PAUL VON BOECKMANN Suite 236, 110 West 40th Street, New York City

"That tired feeling," depression, irritability, sleeplessness, "nervousness"—all are due to lack of Nerve Force.

portant process in itself is the constructing of the so-called pots in which the glass is melted. These are large-sized receptacles made of a refractory material in which the ingredients out of which the glass is formed are melted, the pot itself being placed within the furnace. The old way of making these pots was a laborious hand process. Thru the Bureau's efforts a casting method was developed which produced not only a better pot, but one that is much less expensive than the old kind. Several firms in this country can now manufacture optical glass equal to that produced in Europe.

Work in connection with airplanes is still, perhaps, regarded by most people as having but little actual value for the average citizen. However, the Bureau's work on certain airplane appurtenances has been of great commercial value.

Prominent among its various investigations conducted during the war in the field of aeronautics may be mentioned the researches in connection with airplane engines. In a laboratory designed for the purpose, the engine was subjected to the actual conditions encountered during a flight at high altitudes and its performance was studied under these conditions. The Bureau also conducted a very thorough investigation of the performance of aircraft radiators. The cooling of aeronautic engines is an important and serious problem and presents difficulties not met with in ordinary work. However, many of the basic facts underlying radiator design hold for all types, whether used on automobiles, or airplanes. This investigation forcibly brought out the good and bad features of radiator design and can now be applied to the construction of radiators for automobiles; the same may be said of carburetors, and ignition appliances.

An important part of the Bureau's work in connection with gasoline engines was the determining of what would constitute a satisfactory fuel for our air service abroad. In the drawing up of fuel specifications the Bureau took a leading part, and during the past year and a half has also lent its aid in the investigation of many of the so-called "patent medicines" of the gasoline engine industry. Large numbers of would-be fuel improvers and fuel dopes, by which it is claimed that the efficiency of gasoline can be increased, have been sent to the Bureau for test. In all cases, these have proved to be of little or no benefit. The education of the public on this one point is a matter of considerable importance.

It is impossible within the compass of this article to describe even the more important of the results brought about thru the Bureau's war-time activities. But the Bureau is endeavoring to maintain closer cooperation with the public and the industries than ever before, and it is believed that in general the value of its work is understood and appreciated. Its only request is, that the people will bring to its attention the problems of standardization which they feel require solution and will back up the Bureau in its work.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem inseparable. Aside from government bonds, the return under which is small there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 37 would provide an annual income of \$628.60 absolutely beyond question of doubt. The Annuity Department METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. Chinese Gold. By Charles McMorris Purdy.

1. What effect does the poem produce on the reader?
2. Tell the story that the poem suggests.
3. What is the relation of the first three lines to the rest of the poem?
4. What is the purpose of lines four to ten inclusive?
5. Explain the figures of speech in lines 11, 12 and 13.
6. What is the effect of the last four lines?
7. What is the meaning of every one of the following words: curio, musty, repose, junk, glimmering, pinnacle?
8. What do the words just named add to the poem?
9. What rhetorical effects increase the beauty of the poem?
10. Read the poem aloud in such a way that your reading will emphasize the effects that the author wished to produce.

II. A Message from the United States Government to the American People. Six Stories of Far-Sighted Research. By S. W. Stratton.

1. Condense into a single paragraph what the writer says in support of his contention that much real good, other than political good, has resulted from the World War.
2. Write a briefly-worded placard that will call attention to the good work of the Bureau of Standards, and that will increase popular interest in that Bureau.
3. Make a grammatical analysis of the first sentence of the article, paying especial attention to the syntax of phrases and of clauses.

III. A Message from the Belgian Government to the American People. Because We Both Love Liberty. By Baron Emile de Cartier.

1. Write a paragraph of comparison in which you show similarity of spirit in the people of Belgium and the people of the United States.
2. Condense into a single sentence the "message" from the Belgian Government to the American people.

IV. A Memorial Day Promise. By Elizabeth Hamm.

1. What emotion characterizes the article?
2. Prove that the article has an effective climax.
3. Comment on the writer's use of adjectives throughout the article. What is her reason for using adjectives as she does?

V. Zero Hour Along the Marne. By Captain Joseph Mills Hanson.

1. From what point of view is the article written?
2. What other points of view would be possible for an article concerning the battles along the Marne?
3. What is the writer's purpose in the article?
4. What rhetorical devices does he employ in order to accomplish his purpose?

VI. The Sheepishness of Americans. By Edwin E. Slosson.

1. Point out examples of contrast used for the sake of emphasis.
2. Point out examples of antithetic sentences.
3. How can you apply the thought of the article to the writing of school compositions?
4. What is the meaning of the following sentence: "The strongest man in the world is he who stands most alone"?
5. Define the following words, and use every word in an original sentence: laudable, mutual, fad, gubernatorial, metronome.
6. Write, in well-formed sentences, the constructive suggestions indicated in the article.

VII. Hoover—And the Rest. By Bruce Bliven.

1. Explain, in full, the meaning of the following sentence: "It is a desperate, a sacred and an awful responsibility which rests upon the man who dares offer himself to be the leader of his country in such an hour of trial."
2. Express, in a single paragraph, the reasons the writer gives for believing that Mr. Hoover would make a satisfactory President of the United States.
3. What devices used in printing the article can you employ with advantage in your preparation of school compositions?

VIII. The Boom and the Book.

1. Prove that the subordinate titles are both appropriate and effective.
2. Read aloud the quotations given from Governor Coolidge's speeches. What spirit do they express?
3. Read aloud the quotation from one of President Butler's speeches. What does the quotation mean?

IX. The Story of the Week

1. Draw from the various articles material for at least ten original sentences giving definitely constructive ideas.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Presidential Campaign—"Hoover—and the Rest," "The Free for All at Chicago," "McAdoo."

1. "... I found only two men of the eleven who struck me as being completely ... inadequate for the office [of president]. Who are the two men to whom the author probably refers?
2. On what grounds does Mr. Bliven hold Mr. Hoover as the prime candidate for the presidency?
3. Upon what issues are all candidates practically agreed? On what issues are they divided?
4. Explain this quotation: "... I think he [Herbert Hoover] is an almost perfect example of Lord Bryce's great man who lacks the qualities of popularity in appealing to a general electorate."
5. If Mr. Williams is correct in his analysis the Republican convention next month will be very similar in its proceedings to the conventions of a generation ago. Prove that this statement is correct.
6. Upon what grounds does Mr. Hapgood support the candidacy of Mr. McAdoo?

II. Zero Hour Along the Marne.

1. What, in a general way, was the purpose of the German High Command in July, 1918.
2. Captain Hanson declares: "The initiative was lost to them and they never regained it." Study the war maps of 1918 with a view to proving that this statement is correct.
3. Were any regiments from your neighborhood engaged in the battles described in this article? What part did they take in the battles?

III. Because We Both Love Liberty.

1. Review the history of Belgium under the following headlines: (a) the period of the Middle Ages, (b) the Belgian provinces in the time of Philip II of Spain and his successors, (c) the Belgian provinces at the end of the eighteenth century.
2. "The American Revolution was a great inspiration to the Belgians." In what respects is this true?
3. What became of the Belgian Republic established in 1790? How long before Belgium was established as a separate nation again?

IV. Six Stories of Far-Sighted Research.

1. Describe the organization and the functions of the Bureau of Standards.
2. What are the six subjects of research discussed in this article? Which of the six do you regard as most important?
3. Can you think of any problem that might properly be presented to the Bureau for solution?

V. Radical Parties and Their Aims—"The Socialist Convention," "What the Socialists Want," "Halting the Deportations," "Sane Socialism."

1. Why, in spite of the fact that he is serving a jail sentence, did the Socialist party nominate Eugene Dels for the presidency?
2. What is the declared attitude of the party toward (a) the "Soviet form of government," (b) the League of Nations, (c) the general industrial problems of the day?
3. Distinguish as far as you can between the Socialist party, the Communist Labor Party and the Communist party.

VI. Riots and Repression in Ireland—"Home Rule and Hunger Strikes."

1. Describe as closely as you can the present attitude of various English and Irish parties toward the Home Rule bill now being considered in Parliament.
2. What do you think of the agitation in favor of Ireland now going on in the United States?
3. If the Home Rule bill is passed by Parliament will the Sinn Fein revolution collapse?

VII. Wilson Unseats a Rider.

1. What is the meaning of the word "rider" as used in this article?
2. Upon what grounds did the President base his veto? What constructive suggestions did he make to Congress?
3. Why does Congress not enact a law establishing a budget system as the President suggests?

VIII. Immovable Freight.

1. Describe briefly the present railroad situation in the United States? What can be done to remedy this situation?
2. Will the increase in freight rates asked for by railway executives result in better railway conditions? The increase in pay asked for by the railway unions?

Letters to the Great and the Near Great

By John Citizen

The Dark Horse,
Care Republican and Democratic
Campaign Committees.

Your Equininity:

I see by the papers that you have a strong chance of winning the race in both conventions and reducing the favorites to "also rans." Some of your kin have made good records in the past, and the fact that a man has not been nationally known before being nominated for President argues nothing against the fame which he may acquire thereafter. We have no fear that you will give the nation the nightmare. But we would advise you to keep away from those machine politicians whom journalists sometimes designate the "black horse cavalry." Similarity of name should not induce you to trust them.

However things turn out my congratulations are timely, since even if you fail to win the Presidential handicap you will certainly win the consolation prize of the Vice-Presidency, which tradition reserves for steeds of the deepest brunet.

Mysteriously yours,

JOHN CITIZEN.

Senator Philander C. Knox,
Washington, D. C.

Dear Senator:

So we have really been in a state of peace all these months since the armistice! How good of you to tell us. We might have made the blunder of resisting a German attack, supposing that the Germans had broken the armistice, as seemed probable on several occasions during the winter, spring and early summer of last year. If the Germans had refused to agree to the peace of Versailles, as they threatened, hostilities would have been renewed and Foch's army would have marched into Germany. But Pershing's army, on your theory, would have had to turn tail and march in the opposite direction so as not to become again involved in hostilities with a nation which was at peace with us. I fear that such a theory would have been received with some impatience had that contingency arisen. Yet I must admit that you are

consistent, for it is no more righteous to abandon the Allies to a possible German war of revenge today than it would have been to abandon them immediately after the armistice. You have simply carried into the past the logic of your present opposition to co-partnership with the Allies. Carry it a little farther into the past and you will occupy Senator La Follette's position that we should never have entered the war at all.

Yours with admiration,

JOHN CITIZEN.

New Plays

39 East, by Rachel Crothers. Clean, wholesome, romantic American comedy, extraordinarily well acted, for young and old. (Shubert Theater.)

The Magic Shop, a pantomime of human puppets, set to music by Puccini. All the dolls in the shop come to life in the night and dance in their wooden way. Amusing enough to compensate for the gloomy and unnatural play, "The Fair," that preceded it. (Neighborhood Playhouse.)

Footloose, a brilliant comedy which shows off Emily Stevens's technic as a "vamp" to perfection and gives Norman Trevor his usual role of the courteous, masterful British gentleman. O. P. Heggie plays a minor part of Corsican spy with distinction. (Greenwich Village Theater.)

Remarkable Remarks

W. H. TAFT—I never attend conventions.

PUSSYFOOT JOHNSON—I quit drinking years ago.

GENERAL OBREGON OF MEXICO—I am a bit of a thief.

EUGENE V. DEBS—The Republican party was once Red.

REV. DR. JOHN R. STRATON—I can swear to the identity of liquor by smelling.

LORD FISHER—Every fool knows that every war begins where the last war left off.

PROF. JACOB H. HOLLANDER—Economic laws can be made plain to any child of twelve.

PETER W. COLLINS, K. of C. Worker—Los Angeles is the nuttiest city in the country.

WARD MUIR—Like most Europeans, I am secretly of the opinion that water is indigestible.

HERBERT C. HOOVER—I will not mortgage my soul in advance in order to obtain the election.

GENERAL WOOD—An army of 100,000 men would be ample for all peace needs of the nation.

With the Victrola and Victor Records you hear the greatest artists just as they wish to be heard

Your interpretation of a piece of music may be in itself a highly artistic achievement, but not if superimposed on the interpretation of a master. It then would be neither one thing nor the other.

The Victrola is equipped with doors so that the volume of tone may be regulated to suit varying conditions. They are not intended to be used in imposing amateur "interpretations" upon those of the world's greatest artists, for that would be to lose the very thing you seek—the finest known interpretations of music.

A Victor Record of Caruso is Caruso himself—provided always that some less qualified person shall not tamper with what the artist himself has done.

Victrolas \$25 to \$1500. Victor dealers everywhere. New Victor Records on sale at all dealers on the 1st of each month.

Mr. Jacques Danielson, a pianist

That "Secret" Marriage

An article in which the author of "Happily Married," "A Circuit Rider's Wife," "Eve's Second Husband" etc., surveys the sea of matrimony and charts some shoals and currents

Miss Fannie Hurst, a writer

By Corra Harris

AN announcement was recently made of a secret marriage which took place five years ago between Mr. Jacques Danielson, a pianist, and Miss Fannie Hurst, who is one of the most brilliant short story writers in this country.

Mrs. Danielson herself made the announcement. It was natural that she, not her husband, would publish the news, altho an effort seems to have been made to outwit nature in this instance. If for any reason a woman submits to a secret marriage, you may depend upon it that sooner or later she will stick her head out of the window at noonday and tell everybody that she is married, also give the name of her husband. The man never tells. The arrangement suits his

They suspected a trap was being set to inveigle them into matrimony

nature and convenience too well. If any shadow of the secret falls, it falls on the woman, not him. There can be no doubt that very many men would prefer secret marriages, but women have long since discovered that it is much safer to be married in the open and to say their prayers about it in secret. The shrewd old world may not be a good man, but he has a virtuous eye and makes the best possible witness at a wedding.

We do not know what pressure was brought upon Mrs. Danielson to tell of her marriage. But the fact that she told is a confession of defeat. She is a nice girl, and could not face the question in the shrewd old world's eye. Now she has gone and put the shackles on Mr. Danielson, reduced his matrimonial orbit. The triumphant note in her explanations is bluff. She had to conform to the custom which she despises and admit that she is a married woman. "The sheen of the damask" is rubbed off. Her marriage is now the most public domestic relation in New York. She has been obliged to tell things about her life as a

wife that usually no woman is asked. She has been obliged to discuss matters that usually are not discussed. She has got a comet's tail of newspaper reporters about her and behind Mr. Danielson, who will notice everything he does and that she does and talk about it, and pass ten thousand opinions on their conduct, and not more than one out of a thousand favorable.

The pianist may stand it. He may even like it, but it is bad for Mrs. Pianist, because she will not like it. She will be tired to death of this nose rooting publicity presently, and may have nervous prostration, or not be able to devote her whole mind to her work, and it would not surprise anybody if she wound up by getting a divorce.

But, she would be obliged to do that now, seeing that her marriage is no longer a secret. The plan she tells about will not work now. It seems that neither she nor her husband really believed in marriage, which of course was a very bad reason for going off and getting married, because you ought to believe in the thing you do. They suspected Nature was setting a trap to inveigle them into matrimony, only to make them

unhappy afterwards and their lives stale and unprofitable. Poor old Nature! Who has been so lavish with love, only asking that you should leave two or three behind you to carry love and life on in the world. So Mrs. Danielson tells a reporter: "We decided . . . we would try out marriage for a year and at the end of that period go quietly apart, should [Continued on page 342

Sooner or later she will stick her head out of the window at noonday and tell everybody that she is married

The Independent National Convention

In Which Men and Women from All Sections of the United States
Name Their Choice for the Next President and Give Their Reasons

THE readers of The Independent have chosen Mr. Herbert Hoover of California as their candidate for President of the United States. He has obtained more than 45 per cent of the total vote cast in our symposium and over 63 per cent of the vote cast for all Republican candidates. This is the most striking feature of the poll on candidates.

The second feature which strikes the reader of the shower of letters which has poured in upon our office in response to our invitation of April 17 is the total submergence of party lines. Independent readers are independent voters. If The Independent poll points to anything it is to a heavy Republican vote for Democratic candidates and a heavy Democratic vote for Republican candidates in the November elections.

A third point worth mentioning is the wide range of preferences expressed. The two conventions will be open conventions indeed if they consider all the candidates whom our readers have put forward. This is all as it should be, for there are more good fish in the sea than the politicians have ever caught. Setting Mr. Hoover aside as the "favorite" we find a "field" of twenty-four other possibilities. Of these Major General Wood, President Wilson, Senator Johnson, Mr. McAdoo, Governor Coolidge, Attorney General Palmer, Mr. Bryan and Mr. Hughes have a substantial following. Scattering support is also accorded to Governor Cox, Senator Capper, Governor Allen, Governor Lowden, Champ Clark, Mr. Taft, Senator Harding, Senator Glass, Senator Lodge, Senator Owen, Eugene Debs, Henry Ford, John R. Mott, John D. Rockefeller, Jr., Secretary Daniels and Ambassador Davis.

The Favorite

We only wish that it were possible to print the whole of the scores of excellent letters in behalf of Mr. Hoover with which we have been favored, but we could not do so without crowding all the other candidates out of our limited space and thus creating a natural suspicion of partiality. Brief extracts from a few letters must serve as samples of the rest; the more easily that there seems to be very general agreement as to Mr. Hoover's particular merits and qualifications. Three main points are always emphasized, his knowledge of foreign affairs, his ability as a business administrator and his independence of party ties.

Here are some excellent general statements of the Hooverite:

I nominate Herbert Hoover because of his proved efficiency in huge undertakings, business and philanthropic; because he sets his own partizan standards instead of merely conforming; because the world knows and loves him.

Ames, Iowa

H. H. LINDEMAN.

Herbert Hoover is the foremost candidate for the presidency. The main issue is to search thoroly for practical means of restoring our country to normal conditions and to put them into effect. He has a thoro training in industry. He knows present world conditions. He knows the extent of present utter lack of confidence in the old-time managers of the two major parties. He has the ability to select men who will study the problems of our complex industrial life and their world-wide aspects. He enjoys the confidence of foreign statesmen as well as of the leaders

and the masses of this country. He will be nominated and elected.

C. G. SELVIG.

Crookston, Minnesota

Mr. Hoover's efficiency counts most with some:

He is a successful business man of proven tremendous ability.

His assistants swear by him to the last ditch.

He probably possesses a better knowledge of European conditions than any other American.

He is a statesman and financier of remarkable caliber, as demonstrated by his efforts in feeding Europe and controlling food in America.

He talks little, thinks much and acts quickly.

Fort Morgan, Colorado

CHARLES H. ADAMS.

While with others his foreign policy is of paramount importance:

The distance between our country and all foreign powers has been shortened from weeks to a few hours. For this reason the most important issue before us at the present moment is our international relations. Domestic issues can never be settled satisfactorily until international relations are settled to the satisfaction of all concerned.

We must have a man for president who is not deaf, dumb and blind to these facts. We must have one in whom foreign nations have the utmost confidence. We must have Hoover.

J. E. BULLARD.

Eden Park, Rhode Island

And others again like him because he is "not as these other" politicians:

I am in favor of Herbert Hoover for President. He seems to be a big man capable of a big job; a man of principle and independence not dominated by party politics; has an interest in international affairs as a necessity of the present times, and unlike some others does not leave his business to run up and down the country electioneering for himself. He is for the League of Nations, and is opposed to militarism. My second choice is ex-Judge Hughes.

A REPUBLICAN OF ABOLITION STOCK.

Partizan spectacles make their wearers mentally cross-eyed. Being neither a partizan nor a politician, Mr. Hoover sees clearly, and will act for the best interests of the nation, irrespective of sections and parties.

FRANCES H. CHAPMAN.

North Haven, Connecticut

Let us close the list with a letter from a fellow-Californian:

Herbert Hoover should be our next President, not for the cheap reason that he is a Californian, but because he is an American of exceptional capacity and can be trusted to carry out the ideals of millions of our people. We want a constructive program of world peace, the most important of national or international questions. Hoover has had much more than a traveler's acquaintance with foreign peoples, which obviously is a desired qualification, yet because of this acquaintance his Americanism has been deepened.

In our candidate we want character and administrative ability, not oratory. We are tired of juggling politicians of the Johnson brand. Give us statesmen in fact, not self-seeking demagogues. Hoover is clear-cut, absolutely dependable. He has hitherto placed public service above personal ambition. We are waiting for Hoover once more.

Chico, California

M. E. MERRIAM.

The Field

Of the candidates other than Hoover, Major General Leonard Wood seems to hold the lead with 9 per cent

of the total vote, the other candidates, notably President Wilson, Mr. McAdoo and Senator Johnson, press hard on his heels. Some of his support is based on his general adequacy:

General Leonard Wood is my first choice for the Republican presidential nomination. He is in favor of a League of Nations, with the United States a member; his achievements as a constructive statesman, his pure Americanism, his fairness, his understanding of domestic problems, and his wide acquaintance, both at home and abroad, make him the logical candidate.

ROBERT THACKER.

ROBERT THACKER.

Donnybrook, North Dakota

And some of it on his achievements in a particular case:

He showed us the stuff he was made of in his handling of the steel strike at Gary, Indiana. He did not force the issue between labor and capital, but met the situation like a diplomat and submitted it to arbitration.

Valley Falls, Kansas

HARRY DAVIES.

A most interesting suggestion is that he be made Governor over some mandatory territory to repeat the work which he did in Cuba and the Philippines:

I have great respect for Wood. He did some splendid work while in charge of affairs in Cuba, and I would like to see him over a mandatory territory embracing Russia, Turkey, Austria and Armenia.

Give him time and backing and I believe he could bring order out of that chaos and by shifting the people around and developing the agricultural and mineral resources of the territory, help to establish a democracy which would bless the world and bring back to us all the bread we have cast on European waters.

A. E. FULLER.

East Chattanooga, Tennessee

In spite of the third term tradition 7 per cent of our correspondents wish to see President Wilson remain in the White House for four years more. Many readers seem to feel that only in this way can his great achievements be adequately recognized and his policy of the League of Nations be adequately vindicated:

I want to see President Wilson nominated for a third term because he is entitled to the verdict of the American people upon his work at the The conditions are extraordinary. The the elections of 1918 upon a spurious psychology of a gold-bricked electorate.

Peace Conference. The Republicans won the slogan. The war has had time for the sober second thought. The Lodges of the United States Senate serve for thirty years and more; the people of the United States will no longer tolerate a precedent that bars public opinion and place, a ban upon presidential service beyond eight years.

DR. WM. Y. WARD.
Ivanhoe, Texas

Mr. McAdoo ties with President Wilson for first choice by the Democrats. His admirable record

as Secretary of the Treasury is remembered by his friends in these hours of financial stress:

I hope to see McAdoo nominated. He has a sympathetic understanding of the demands of the common people, and is right on the questions arising out of our relations to other nations of the world. As Secretary of the Treasury he showed a grasp of financial and business affairs equalled by no man in his generation. Initiative and genius

Boise, Idaho

CURTIS F. PIKE.

William G. McAdoo, because he is a Democrat, a safe and sane business man, and an expert on administration and finance. The next administration will be responsible for important legislation pertaining to war debt liquidation and other vital subjects that will hasten the restoration of normal conditions. Mr. McAdoo qualifies as leader, and would give us a sound business administration.

E. C. SMITH, JR.

Dallas, Texas

The Johnson men, of course, stress the excellent record of their candidate in his native state:

We are for Hiram Johnson for President and so is every good and honest citizen of California. He made California from the worst and most corrupt state, one of the best and foremost states of the Union. He placed the railroad out of politics and made wealthy corporations pay their just taxes. He gave us woman suf-

fringe, protected women, children and the laboring men with wise laws. He fostered industries, reclaimed our farms. He is not above anybody; you could see him at any time. He is one of the boys. He is not wealthy. He made enemies of course. You step on a pig's tail—he will squeal.

Sacramento, California

PAUL H. STEUDE.

Here is a good nominating speech for Mr. Palmer:

Attorney General Mitchell Palmer is the man I would like to see nominated for President for three reasons. First, he places his country before himself. During the deadlock in 1912, in the Democratic convention, he was offered the nomination for the presidency, but refused, saying that he was pledged to Woodrow Wilson and no selfish reason was going to make him abrogate his promise. Secondly, his great administrative ability was shown by his handling of the coal strike and the problem of the high cost of living. And lastly, he is of the same mind as our President in regard to the League of Nations.

Eveleth, Minnesota

MORRIS H. GREENBERG.

And here is a good campaign slogan for his supporters:

The League of Nations without reservations—and the
"Reds" without mercy.

Plattsburg, New York

The peerless orator of the Platte finds several supporters for a fourth nomina- [Continued on page 334]

When the Angler's Reel Begins to Sing

By William E. Brooks

In a pool where the water ran black, then broke in frothy foam, I got my first strike—not so lengthy as many another I have taken, but as broad as my hand from back to belly and with his fat sides gleaming and bespangled with many fiery points of color

THE swift water swirled around the old moss-grown log, making sweet music, and then ran quietly into a big pool. From that pool I had taken my twelfth trout for the morning, enough surely for any reasonable man. The sun was beginning to get warm, and the grass under the big oak that shaded the pool was very inviting. What better place could I find for that lazy hour with pipe and memory that I had promised myself these many long months?

Now the hour was here at last; and it has been all that I hoped it would be. For while the pipe sent forth its incense and the water murmured its songs, memory opened its treasure houses and told its tales of other hours, of other mornings on the water, of bits of beauty rare and fine, of men as rare and fine who had shared those hours with me. Perhaps the story of it will seem to you, Gentle Reader, a bit like that pocket you used to have in your long-gone boyhood days, full of all manner of unrelated and perhaps unnecessary things. But weren't you glad for that pocket, and don't you sometimes wish that when you dip down into your present ample broadcloth you might pull out some of those things, instead of that bunch of jangling keys, that badge of your seneschalship of many heavy cares? After all being an angler is something like being a boy, for a good angler never grows old. He has so many things to keep him young—mornings when the gray world of shadows flees away at the coming of that which Chanticleer described as "that golden thing we call the Day"; evenings when he sees as wondrous glory as ever dazzled the eyes of the Seer of Patmos; and long hours of joy between when, as Shadow-of-a-Leaf assured Robin Hood,

"With sweet blue wood-smoke curling thru the boughs,
And just a pigeon's flap to break the silence,
And ferns, of course, there's much to make man happy."

But the angler's soul finds something more than beauty for its satisfaction. He does not need to be an angler to find beauty in the world, tho no one but an

angler would ever have found my wild-wood study. His principal quest is the getting of fish. He may have other things in mind besides them, and he will get many other things, but when he goes a-fishing he goes determinedly to try his skill against their cunning. The blue lake's depths call to him, the hills around invite to quietness, but most of all is the old lust of battle (that never entirely fades from the soul of man) satisfied, as he puts his skill against the keen instinct of the finny folk beneath the waters. Such a day was the

one in which I caught my big trout, when hope was dying. I had been with Bennie Moore far up Treaster Valley, and early in the morning I had set out to tramp the old lumber road to the upper stretches of the creek. Now a lumber road is as the Jordan way is famed to be in the negro ballad, "a hard road to trabel." And rubber boots on a hot summer morning do not add to the comfort of the passing. But at length I reached the place where I wanted to enter the stream, and soon my flies were dancing over the ripples and under the alders. Cast after cast I made, but never a rise. What could be the matter with the trout? Had they fed their fill last night when the moon was shining and would they rest in maw-crammed content while I worked my long way down to Bennie's, stumbling over the stones and stooping under the low hung alders lining the stream? It seemed like a day when I had to be content with the satisfaction of beauty, for I would get no satisfaction of fish.

Then came the great moment when disappointment turned to joy. I had come to a pool where the water ran black and dark, and then broke in frothy foam as it swirled around the roots of a huge old hemlock. My flies swiftly vanished in the foam, then the line tautened as I felt what I had not felt that morning—a strike and a brave one too. He came toward me thru that racing water—it meant quick work with the reel. Then he darted back, down to the bottom, then over to where the roots hung out. It would have been all over had the line gotten tangled there, or had my dropper caught. Then he was back again, then off on another dash for the foam below. I suppose the birds continued their songs, but I heard no singing save that of my merry reel. Soon he began to tire, and I drew him gently to a bit of shingly beach and in a moment he lay among the grasses. Whether it was the thrill of the fight or the fair prize, somehow that morning stands out above other days.

Allentown, Pa.

The Gate to Riches

By Secretary of War Baker

This Message from the United States Government to the American People was written for The Independent by Secretary Baker after his recent tour of inspection to Porto Rico

TO most Americans Porto Rico is associated only with the rising price of sugar; but more should be known of this pearl of the West Indies, 3600 square miles in extent, which was ceded to us by Spain just twenty-two years ago.

The island is most ideally situated, and because of its elevation above sea level has a most delightful climate. There is missing the strong contrast of seasons as in the North, and yet one does not encounter the dulling monotony of heat usual in tropical countries. There is a heavy annual rainfall, but it is distributed evenly thruout the year, and the temperature rarely goes above 90 degrees or below 65 degrees.

San Juan, the capital of Porto Rico, is still a Spanish city, and on approaching it from the sea the towering walls of Moro Castle make one expect to find in the harbor a fleet of gold-laden Spanish galleons, in hiding from the piratical Morgan. Rounding Moro Castle, however, one is immediately disillusioned. Altho San Juan is still essentially Spanish, side by side with the old Spanish-built huts and small houses rise large American-built stores and hotels. And the city itself is beginning to acquire an American look, with its rows of buildings, traffic police, and many automobiles.

Porto Rico has too long been neglected by the general American public, and it is necessary that we educate ourselves as to its immense possibilities. The island at the present time produces great quantities of sugar, tobacco, coffee, and, in common with other tropical countries, grape fruit, oranges, pineapples, cocoanuts, and other fruits. This production is limited, however, because of the lack of interest we have shown in the

welfare of Porto Rico. It is not possible to export these products unless ships are sent to Porto Rico for the purpose. Plans for the deepening of the harbor of San Juan to take care of a greater number of ships than may now be admitted, are now being perfected, and it is hoped that the opportunities offered will make San Juan a port of call for all steamship lines between the United States and South America. Porto Rico needs ships, but with increased ocean transportation the problem of the island will be solved.

The population of Porto Rico has lately been estimated at 1,250,000, which would give a density of approximately 345 to the square mile, or a greater density of population than in any state in the Union with the exception of Massachusetts, Rhode Island, and possibly New Jersey. Because of this and of irregular and infrequent steamship service to the island, there is always a great surplus of labor and a large proportion of the population is at all times in great need.

In 1919 a United States Army officer in an official report made the statement that "probably 350,000 of the population are practically on the verge of starvation all the time." This condition cannot be relieved until regular and frequent steamship service is furnished to Porto Rico, and as soon as this is done the full productive capacity of the island can be utilized with the confident knowledge that all products for export can be handled; and at the same time more goods will be brought into Porto Rico, causing a very appreciable rise in the standard of living.

But even the conditions .[Continued on page 338

"The Porto Rican country is teeming with exuberant life"—this pineapple field typifies its agricultural productivity. "Only the laborer walks indifferently, with the shadows of ignorance in his eyes"

The Passing Show, London
ANOTHER SOLAR ECLIPSE!

If Labor Takes the Helm

A Message from the British
to the American People

By C. A. McCurdy, M. P.

Food Controller of Great Britain

The World, London
STILL HIGHER!

THE revolutionary changes which the war has made on the map of Europe are, I should think, sufficiently plain to be visible from the other end of the solar system.

Any interested observer in Mars or Venus can have no difficulty in realizing that several European Empires have disappeared, and that there is a considerable revolution in Russia, and an unhappy recurrence of troubles in Ireland. But in Great Britain nothing may seem to the distant onlooker to have been changed by the war. We are settling down with energy and success to the tasks of reconstruction, we have already almost succeeded in balancing our yearly income and expenditure. King George is still secure on his throne and Parliament is sitting as usual.

But for all that we have not escaped some breath of the wind of revolution which is sweeping over the continent of Europe, overturning thrones and parliaments, and changing the face of the political world.

The revolution is here, too, and altho it is and will be a bloodless revolution, a revolution not without respect and even affection for old political institutions and social landmarks, it is a very real revolution for all that, and at present we are none of us very clear how far it is going to lead.

The ancient party system which on the whole has governed the United Kingdom for good during some centuries is in process of transformation. A new party is claiming not only a chair, but all the seats at the Board of Government. Labor has become a political force of first class importance.

The policy and progress of the Labor party is the most absorbing topic in political circles today. I say this not without a full recognition of the importance of the Irish problem. That problem has taxed every effort of British statesmanship and British good will for the last half century. But that problem has been so thoroly explored, and the attitude of England is now so clearly defined, that there is nothing left for the English electors to inquire into.

We are ready to give Ireland any form of self-government short of separation upon which Ireland can agree, and we pray daily for her agreement.

But the development of Labor politics in this country is a new thing, so new, so full of great possibilities, that we cannot help giving it a large share of attention.

Every Englishman recognizes that in a few years a new and untried party may be the governors of this country, with power to settle the Irish question so far as Ireland permits and every other question in British

politics, just as they please. The recent by-elections disclose a marked transfer of votes from the two old political parties, the Liberals and Conservatives, to the Labor candidates, and as in this country a very small transfer of votes from one political party to the other has in times past been sufficient to make a complete change in the constitution of Parliament, no one can exclude the possibility of a great labor triumph at the next general election. In 1906 a transfer of votes amounting to only $3\frac{1}{2}$ per cent of the electorate ended the long reign of Conservatism and flooded Parliament with Liberal members.

Labor may effect a similar political landslide when the lifetime of the present Government expires.

What makes the bare possibility of such an event of grave concern is the fact that the Labor party appears to be definitely and uncompromisingly committed to a Socialist program.

The Labor party in Great Britain first made its Parliamentary *début* in 1906. By 1910 it had grown to a respectable sized party of forty odd members. It was not then a Socialist party in any sense of the word. So far as my memory serves, Macdonald, Snowden, and Jowett were the only Socialists among the parliamentary phalanx.

The remaining members were almost entirely trades unionists whose political opinions were very hard to distinguish from those of any radical member of Parliament. They were free traders, home rulers, supporters of disestablishment, and just as loyal to the institutions of private property and individualist enterprise as any of the Liberal leaders. King Edward and his successor had no more loyal and unrevolutionary subjects.

Their excuse for existence as a separate party was the real need which then existed of raising wages to keep pace with a cost of living which was steadily rising long before the war. They were in Parliament to press the claims of the workers to a higher standard of living and better conditions of employment, and they had the active and cordial assistance of the progressive wings of both of the older political parties.

During the war the small Socialist section went pacifist. The larger Trades Unionist section helped the Government to win the war.

When the war was over the moderate men found that a new temper and spirit had developed in the ranks of labor. A spirit of revolution had made its appearance among some of the younger members of the unions. Macdonald, Snowden and [Continued on page 347]

Third article in The Independent's Industrial Series on the big plants that are finding a successful answer to the problems of labor unrest

The Labor Court

By Professor John R. Commons, of the University of Wisconsin

In collaboration with A. P. Haake, O. F. Carpenter, Malcom Sharp,
Jennie McMullin Turner, Ethel B. Dietrich, Jean Davis, John A. Commons

IN a small, rectangular room on the second floor of their central factory, Hart, Schaffner & Marx, Chicago clothing manufacturers, and their employees hold court. A window opens on the commerce of Monroe street; above the walls, which do not reach the ceiling, the conversation of the halls and offices comes in. At the head of a plain table sits a big man with a Van Dyke beard and whiskered cheeks—a strong voice, a strong, understanding face, a strong body—Mr. Mullenbach, chairman of the Trade Board. The union won a strike nine years ago, and employer and union agreed to adjourn their struggle for power to this room. Mr. Mullenbach is umpire, paid equally by union and company. His position is that of a judge in a court of original jurisdiction. All day he adjusts the rival claims of company and “people”; keeping industrial warfare from becoming anything more than verbal conflict; turning out good will under a government of laws and not of men.

On the six floors above and in three other buildings in the city the republic of eight thousand people, for whom this court dispenses justice, carries on its work. On the top floor the cloth is stored. On the floor below men are at work examining it and shrinking it, as it is unrolled, and then hanging it in long, movable frames, set next to a high ceiling to dry. In a high, well-lighted, relatively quiet room, the cutters lay out their patterns in such a way as to waste no cloth, chalk around them, and cut their “lays,” either with a hand tool or an electric machine. They are the aristocrats of the industry. Before the time of the Amalgamated Clothing Workers of America they would have scorned to ally themselves with the less skilled stitchers and pressers, spongers, buttonhole makers and helpers, who, with seventy other sub-divisions of workers, make up the members of the union. In another room women are stitching at long rows of clattering

machines; on piece work, their hands flying so fast that the eye cannot follow them. For all these workers and their fellows, and for their employers, the court below is the protector of rights and the enforcer of duties in those matters which affect their welfare most vitally, matters of the daily job. Under the agreement which is the constitution of the republic, the Trade Board is the first agency to determine the conditions under which a man is entitled to hold and possess his job, and the wages and conditions of work which he may claim under the contract. He may be deprived of his job, but not without due process of law.

A case recently occurred in which a minor union official named A was brought to trial, charged with being a “trouble maker.” He held two positions in the plant. For the union he was a “shop chairman,” and he earned his living by working for Hart, Schaffner & Marx, as a tailor. His position with the union involved taking up grievances of workers in his shop with their foreman. If questions are not settled in this way, they are taken to union deputies, paid officials of the union, not necessarily in the company's employ. These men try to settle matters by conference with the representatives of the company—“company deputies.” Failing settlement by any of these methods, a cause of action comes before the Trade Board. A's position is that of the famous “shop steward” in England. He is also the man whom the open shop employers have in mind when they say they will deal only with representatives of their own employees.

In this case the company had lodged complaint against A with the Trade Board. The action petitioned for was the removal of A from his position as shop chairman. Under the agreement, a shop chairman may not be discharged by the company, nor may he lose his union position except after trial by the Trade Board. [Continued on page 340]

Next month—The Leitch Plan —and how it has worked

THE REPRESENTATIVE OF THE COMPANY

THE ARBITRATOR

THE REPRESENTATIVE OF THE UNION

These three men, from left to right, Earl Dean Howard, labor manager of Hart, Schaffner & Marx; J. E. Williams; and Sidney Hillman, president of the Amalgamated Clothing Workers, have done much to stabilize the clothing industry in Chicago

In Darkest Mexico

Wide World

THE LATE PRESIDENT

Venustiano Carranza met the too common fate of Mexican Presidents and was murdered by his own followers on Thursday, May 20, shortly after he gave up office. This photograph was taken at his last official appearance at a public function, the celebration at San Fernando Cemetery over the graves of the defenders of Puebla in the battle against the French on May 5, 1862. President Carranza governed Mexico for nearly five years, an administration characterized by hostility to foreigners, and a laissez-faire policy toward domestic disorder

© Underwood & Underwood

THE NEW LEADERS

The latest revolution in Mexico brings to the top the one-armed warrior, General Alvaro Obregon (left), who was formerly a chief support of the Carranza regime. When he and General Pablo Gonzalez (right) returned to Mexico City after the revolution they were received as head of the Mexican Government. Gonzalez is notable as one of the few Mexicans who was pro-ally during the war

Wide World

The presidential train in which Carranza and his officials fled from Mexico City was wrecked en route. Several soldiers and civilians were killed, but the presidential party escaped. The train was crowded with refugees

© Kodel & Herbert

It was in this desolate country, near Mount Orizaba, that the Carranzistas fought their last battles against the Obregon forces. When it became evident that Obregon had the upper hand Carranza and his followers fled to the mountains

At the right is the triumphal celebration in Mexico City to welcome the successful revolutionists. Former Carranza supporters crowded the streets in their eagerness to avow loyalty to Obregon, and to acclaim his coming into power. "The Mexican people," says Blasco Ibanez, "have finally come to take revolution as a matter of course, much as an invalid gets accustomed to his pain"

Wilsonism as an Issue

By Norman Hapgood

GOVER Cleveland at the climax of his career was charged with destroying his party. Now he is that party's pride. Lincoln was on the verge of defeat when he was carrying his country's heavy burdens, and was saved only by military victories in the nick of time. Washington's later years were saddened by the bitterness of the attacks upon him. If we confine ourselves to a decade, the same instability of popular judgment can be demonstrated. Think of the charges against Roosevelt: drunkenness, megalomania, paranoia, demagoguery, the ruin of his party. Bryan has been buried many times. In 1917 and 1918 nobody was quite so dead as La Follette.

Woodrow Wilson has operated on a world-stage. Had he died when he broke down, the greatness of his name in history would have been secure. Had he turned over the responsibility to Mr. Marshall, treating himself as sick and of uncertain future, he would have received the sympathy that goes to death on the battlefield, and his final return to strength would have brought with it enthusiasm and powerful influence.

But in the meantime? He had fought much of his war-policy almost alone, as he had fought his Mexican policy alone, and he had been right. How the press jeered at his notes! How we heard every day several cheap jokes about the number of notes! It took patience to hold on, but today history has already decided what mighty deeds those notes accomplished. They tied up in advance the victory with the principles which victory must bring into government, or else be false to the hopes of men. They held labor in England, France and Italy to the war, because labor believed it was fighting for a new life. They split Germany and Austria wide open, and in attack were the equivalent of armies. We understand now, and it is good for our souls to remember how we jeered in the days of the President's steadiness and trial.

If Mr. Wilson trusted himself, invalid as he was, to see further into the future than the Senate majority could see, are we sure he was not right? The country was invited by Senator Johnson, and with less outspokenness by Senator Lodge, to reject what we had fought for: to stay out of the League, in the one case; to go into it claiming special privileges, guarantees, immunities on the other. There was to be no equality, no trust, no long struggle in common for progress in the dealings of the nations. We were to return to the boast of superiority, to conflict of interest, to national pettiness. The fighter in the White House said "No." He had created the issue of the great war, and to that superlative issue all things must yield.

The Democratic party is not wedded to every detail of Woodrow Wilson's make-up. It has nothing to do with his taking Henry White to Paris to represent the Republican party, instead of Root and Taft; with the unwise wording of his appeal in the fall of 1918; with his dismissal of Lansing on a technicality, with the actual reasons unspoken.

The party's concern is not with Mr. Wilson's tact. It is with the paths that he has marked out. He answered the money trust with the Federal Reserve Act. He took the tariff out of the offices of the privileged industries. He invited big business to make good before the Federal Trade Commission. He established rural credits. Facing the most destructive war in history he told the world what it was fighting for; he led us into the fight only when the world accepted our vision; once in we made a record over which every American now glows; and when Germany was beaten the President induced Clemenceau, Foch, and the other tired victors to accept an agreement

instead of the hundred-per-cent solution in material power. The agreement was imperfect, but carried in itself the certainty of improvement, if this vast and fresh nation, generously and with determination, assumed its place, month in and month out, at the council board.

The banner of that cause must be carried into the campaign. It must be carried thru, God willing, to victory in November. It must be carried by some man who is capable of expressing such high reaches of the mind and heart. The platform and the nominee need not agree necessarily with the President about the wisdom of fighting to a finish with materialism and narrowness in the Senate, as a guarantee of our spirit before we enter the League; but they must agree with him at least in sharing his vision and his lofty will.

Fashions Change

CUSTOM forbids a Presidential candidate, whose election is at all probable, to go on the stump.—The Independent, November 10, 1892.

Peace Without Honor

SENATOR Knox's peace resolution has carried Congress, tho doubtless many of its supporters in both Houses secretly hoped that President Wilson's veto would save the nation from the dishonor of a separate peace. Congress has much to answer for, but it does not really wish that the United States should turn its back on England, France and Italy in order to shake hands with Germany. But for Senator Knox there is not even the excuse of hypocrisy. From the wording of the resolution which he has fathered in the Senate and from the tenor of his speeches it is evident that he really desires the United States to accept such advantages as may be stipulated for us in the Treaty of Versailles while repudiating any responsibility for maintaining the peace made by the Treaty. Even among those who for reasons of partizan advantage or personal spite have supported the peace resolution few feel that Senator Knox has been a careful custodian of the honor of America.

Let the Office Seek the Man

By Charles M. Sheldon

IN the old Roman days a Roman citizen who wanted to be elected to an office went and stood up on a pedestal in the Forum and displayed to the voters the scars of the wounds he had received in war. The candidate who could show the biggest scars and the largest number, especially if they were fresh, stood the best show to receive the largest number of votes.

In our time if a citizen of the United States wants to be President (and a considerable number seems willing) he may not have any outward scars to reveal, but he "organizes." He gets the endorsement of a political party, arranges a speaking tour, opens up an elaborate and highly systematized campaign helped on by his political newspapers, and goes before the public boldly and personally, asking to be elected President because he is better fitted (he says so) for the position than any other candidate. He denounces his opponents, he recites the enormous list of mistakes made by the party to which he does not belong, and promises the millennium if he is elected. In other words, he is in the political Forum, displaying his scars.

It may be that this is the only way in which a President of the United States can be elected, but we doubt it.

Perhaps the day is not so far distant when a man who is equipped by character, experience and statesmanship can be made President without displaying his scars (or the lack of them in the other fellow). The day when the people will say, "There is a man whose record is known. His character is above reproach; his ability is unquestioned; he does not need to organize and go on a tour. Let him stay at home and mend the baby's wagon and plant his garden and go out walking with his wife and save his money to buy groceries. We will elect him ourselves. He need not ask us to, we want him."

That day may be far off, but meanwhile, some of us plain, ordinary citizens with one vote apiece and no money to be spent on campaigns, would really like to vote for someone who didn't stand in the Forum, throwing back the folds of his toga from his proud chest. It is all right to have an ambition to be President, but remembering a little Latin out of a good deal we have forgotten, we are reminded that the word "ambition" meant to the Roman "going around" to solicit votes. I would like to vote for some one who didn't have to "go around," but who stayed at home and attended to his business and let me do the voting. Some of these "ambitious" candidates will need to wrap their togas around them a little closer after the exposure to the cold winds of the coming political conventions.

A Problem in Percentage

THE prohibition issue is dividing America into two camps: the 100 per cent Americans and the 2.75 per cent Americans.

The Railroads—National Highways

By Talcott Williams

THE railroad deficit for the past five years was first attributed to Government management. It continues under private management, and the remedy proposed for it is another dose of management by a Government Board, the Interstate Commerce Commission.

This is to refuse to see why there is a railroad deficit. For forty years the net income of railroads, which furnishes both dividends and interest on the capital invested, has been steadily decreasing in proportion to the total income. Take the New York Central. Its shares once earned 8 per cent. The net income has steadily fallen, decade by decade. At present, the New York Central & Hudson River Railroad is earning 4 per cent because of its lease of the Lake Shore & Michigan Southern.

This is not all. The railroads in the past twenty years have been steadily losing the most profitable part of their business. The passenger traffic which paid the larger profit was not the long distance passenger traffic, but the commutation traffic in the suburban ring around the cities. The trolley took much of this away. The short distance traffic between country towns and villages has been largely absorbed by trolley systems. Anyone who will study fares within a radius of thirty miles around our cities will find that the fares of the trolley, which carries no baggage, which has greatly reduced the amount of dead weight in proportion to passengers and which picks up its traffic every few hundred yards, are far below those which a steam railroad can afford to charge for the same trip. For short distances, electric transportation has proved far cheaper than the steam engine and more profitable.

Freight is going thru the same change. The profit of railroads is not made upon the bulky freights represented by the coarser articles like coal, iron and other similar articles; but by the higher grades and more valuable freights on which high charges can be made. The best profit of all is made not on an article like wheat and coal carried a long distance, but on valuable freight, like silk goods, passing from one center of population to another.

The railroads bring the raw materials to manufacturing districts which deal direct with leather, cotton and wool, as in New England, in eastern Pennsylvania and in other manufacturing districts. The completed product is distributed, and heavy freights are charged on it, profitable to the lines.

This particular traffic is being carried more and more by trucks. The truck goes when it is wanted. It delivers freight at the door. It is not subject to the delays of a railroad system which gives its freight cars the average mileage of twenty-five miles a day and takes a week to go from Buffalo to New York City. A family moving from Philadelphia, or even from points as far as Utica, to New York, finds that it is cheaper to have its furniture carried by truck than by freight cars. Cartage is saved, deliveries are more prompt and the furniture does not have to be crated. Department stores are getting goods direct by trucks from factories.

Probably no one who reads this article but has some case of this sort in mind. How long can the railroads stand losing the profitable portion of their passenger traffic and of their freight? What good will raising the rates do to meet this competition when thousands of trucks are already carrying freight at a profit, with the present railroad rates, and the trolleys have been able to raise their passenger rate without losing traffic.

The only effective remedy is the improvement of the railroad system, the substitution of the internal combustion engine for the extravagantly wasteful steam engine of the past, the use of electric power and the reorganization of rolling stock, of administration and personnel so that dead weight will be eliminated, foolish delays removed and the railroads made as efficient, as safe and as economical as subway systems like that in New York. Even they are disgracefully over-capitalized, and economic forces have their own inevitable way of squeezing out capital charges which did not stand for just value at the time they were incurred. Can existing railroad corporations secure the new capital needed for this reorganization?

If they cannot, the railroads are, in fact, national highways. Highways have been kept open by taxation, when the private company that opened a turnpike could not pay the cost of repairs and management. So are canals. The private capital invested in railroads must be treated justly, but with no more than justice.

Lawyers or Engineers?

AN absolute majority of Presidents and of Congressmen, not to mention other political offices, have been drawn from one profession—the law. Perhaps it is well that just for a change this election has brought forward an engineer, Herbert Hoover. We do not see any reason why not Mr. Hoover only, but such men as General Goethals and Mr. Edison should not make as good Presidents as any brilliant attorney or corporation counsel. Our first President started his career as a surveyor.

The Mexican Tragedy

IT is difficult to hope for a country in which such an event as the murder of President Carranza, which is made worse by the apparent treachery of some of his most trusted followers, is so easily possible. We trust that General Obregon and the other chiefs of the new Government will prove themselves free of any complicity in the crime so that their period of power will not be darkened by such a shadow of guilt as lay on that of Huerta. But proof of their innocence, while it will redeem their reputation as men, will not brighten the prospects of their Government. For any men who assume office in a nation corrupted by centuries of slavery, anarchy and civil war thereby assume also the risk of betrayal and assassination. The new Government must study not only to avoid the errors of states-

manship which wrecked the administrations of Diaz, Madero, Huerta and Carranza, but to do something towards the moral regeneration of the Mexican people.

1896 and 1920

At least we will hear no denunciations of the "bloated bond-holder" this year.

Why Mr. Hickson?

By Shailer Mathews

PERIODS of social overstrain bring revivals of supernaturalism. When men pass beyond the natural limits of endurance and anxiety, they turn to that which lies beyond reason. The defeated Jew had apocalyptic visions; desperate France had its Joan of Arc; Sir Oliver Lodge has Raymond; America has Mr. Hickson—an Englishman on a mission of healing in the name of religion.

Is religion then to take the place of medicine? So says Christian Science, so says the faith healer, so said Dr. Dowie, but so does not say Mr. Hickson. He lays his hands on sick folks, but tells them he is no healer. He will pray for them, but God must cure them. They must trust God, but they must also mind their doctors.

This seems sensible enough, and if the mission of Mr. Hickson is simply to bring men into a realizing sense of God's helpfulness in sickness as well as in health, it is hardly open to criticism. Such rational faith is being preached by thousands of clergymen and is being practiced by thousands of Christian believers. It must be admitted also that it is as legitimate to use revivalistic methods to inculcate faith in God's assistance to doctors as to use them to deepen faith in God's assistance to ministers. But is this all this mission means? One wonders. Faith healers, Emmanuel movements, Christian Scientists, Schlatter, and Dr. Dowie we know, but what is Mr. Hickson?

The sick come to him by hundreds as the sick have gone to healers of all ages. They want the touch of Mr. Hickson's hand upon their head as well as Mr. Hickson's advice

and prayer. Mr. Hickson is sincere and reputable. He is vouched for by bishops. He has no tricks or even mannerisms. If the multitudes want miracles he declines to work them. He seems uninterested in money. But is his mission altogether a sign of healthy religion? Does there lurk in it a revival of medieval faith in ecclesiastical miracle? Is Mr. Hickson a saint in the making? Is his mission aimed to show that supernatural power is still at the disposal of the church? Is he by any chance a sort of non-Roman Catholic rival to Lourdes and St. Ann of Beaupre?

One's personal equation will largely determine the answers to such questions. So long as Christians support hospitals and employ doctors, there is little danger that religion shall become a phase of therapeutics. So long as we believe in prayer that is more than monolog, we must believe in praying for the sick. So long as we believe that the presence of God in human souls is more than sentiment, must we believe that faith in God will make cures more probable. But why this laying on of hands? Why these churches filled with the lame, the halt, and the blind? Why Mr. Hickson?

Armenia's Big Brother

WE are glad that President Wilson will act as arbitrator on the question of the Armenian boundary.

It will be better yet if the United States can rise to its opportunity and take a mandate to sustain the new Republic against Turkish or Bolshevik attempts to invade the country and against the internal perils consequent on poverty and political inexperience. President Wilson's eloquent appeal to Congress to accept the trust which Armenia herself and the whole civilized world desires us to assume should not be passed over as a mere stage in the fight over the League of Nations. It is a special and separate call of honor which it is the duty of Congress to consider with open and unprejudiced mind.

But at all events we can, so far as the Armenians show themselves worthy of their new freedom, act as the advocate of Armenia in the councils of the nations, where fear of

Paul Thompson

© Underwood & Underwood

Enough people believe in Mr. Hickson's powers as a healer to form lines like this day after day waiting their turn to enter the church where he practises "the laying on of hands." Mr. Hickson, himself, makes no claim to miracle-working

Moslem hostility has too frequently swayed the minds of European statesmen. We who have no great Mohammedan Empire to conciliate can act with more impartiality in the questions which lie between Turk, Kurd and Armenian than could England, France or Italy, even granting that their good will is as great as ours.

The Dead Letter

By Preston Slosson

THE bulwark of American liberties is our tendency to forget oppressive legislation six months after we have enacted it. If it were not for this convenient habit the United States would be one of the least liberal of the nations. Laws are now being enacted in various states which would prohibit the teaching of sewing or the alphabet to children without a special state license, which would stamp out of existence any newspaper or periodical printed in a foreign language, which would make it impossible to criticize the Government in terms one-half as drastic as stump speakers and the party press use at every election. Some hasty souls are wringing their hands in despair at what appears to them to be the final Prussianization of the country.

But if we turn over the statute books for the year following the assassination of President McKinley we will find panic legislation quite as drastic enacted by various states to combat anarchy. Some of these laws were so loosely and broadly drawn as to apply not only to anarchists, but to any radical who ventured to criticize any public official or any established institution. Why have the legislatures enacted new laws instead of putting into effect the old ones? Simply because they have forgotten their existence.

Turn back to still earlier pages of the statute books. Old Blue Laws, still unrepealed but never enforced, forbid such "worldly amusements" on the Sabbath as pastors and deacons now indulge themselves in without a moment's hesitation. It takes an exceptionally learned lawyer to be quite certain that he is not violating any statute in playing a game of golf or tennis on a Sunday afternoon. Then there are freak laws, passed by careless legislatures to while away a dull season, regulating the length of bed sheets in hotels, the size of type in newspapers and the design of a lady's dress. If you do not believe us get some lawyer friend to show you thru the statute books of your state or the municipal ordinances of your city. Probably you will discover at least three laws and eight ordinances which you have violated at some time or other in complete innocence of heart.

Of course it is very unfortunate that our lawmakers should pass laws merely to relieve their feelings. It brings all law into contempt that so many statutes should stand unrepealed which no one would dare enforce. But it is at least better than the Prussian habit of taking oppression seriously. If you called the Kaiser names you really were thrown into prison. If you printed a Polish newspaper the authorities actually did suppress it. If you held an unauthorized public meeting the police never failed to raid it. But in this land of liberty it is only occasionally that a Socialist or even an anarchist is arrested, in spite of the fact that laws exist in many states under which the whole Republican party could be jailed for what it has said about President Wilson and the whole Democratic party for what it has said about the Senate. Our Espionage Act made trouble for a handful of harmless pacifists, but it did nothing to prevent a great chain of yellow journals from advocating the cause of Germany against the Allies during the months when we were at war. It is our bad habit as a nation to pass a law against a hundred offenders and then enforce it only against one—perhaps the wrong one!

Winning by a Close Shave

APPARENTLY few candidates for President launch their booms until they have made sure of the barber vote. Of the men who have been most frequently mentioned for President during the present campaign nearly all have made a barefaced attempt to secure the nomination. There is not in the whole crowd of aspirants enough facial foliage to equip a single French politician. Among the Republicans Hoover, Coolidge, Johnson, Harding, Lowden, Knox, Allen, Poindexter; among the Democrats McAdoo, Palmer, Edwards, Clark and Bryan all face the voters without concealment. Messrs. Taft, Butler, Wood and Gerard still conceal the upper lip with the obsolescent moustache, but only Mr. Hughes ventures upon a full forest of alfalfa.

It is interesting to see how fashion changes among our Presidents. The early days of our republic frowned upon whiskers in high places. No President before Abraham Lincoln wore beard or moustache, tho Van Buren and General Taylor permitted a tiny tuft of hair to stray in front of the ears. Even Lincoln adopted whiskers very late in his political career, and his successor, Andrew Johnson, reverted to the old fashion of the clean shave. But the generation after the Civil War had other tastes. General Grant was adequately equipt with whiskers and Hayes, Garfield and Harrison wore noble beards. Arthur was the only President to adopt pendant side-whiskers of Wall Street design, known across the water as "Piccadilly Weepers." With Cleveland began the era of the moustache and his example was followed by Roosevelt and Taft, the succession being broken only by the smooth-shaven McKinley. President Wilson defeated two moustaches in the election of 1912 and a set of whiskers in 1916. This indicated to the politicians that the era of the razor was once more upon us and is doubtless responsible for the fact that nearly all of the aspirants of 1920 are clean-shaven. The wheel has swung full circle and political fashions are again where they were in the days from Washington to Buchanan.

Debs and Knox

THE Socialist platform demands the dissolution of "the mischievous organization called the League of Nations." We hope that the Old Guard Republicans and the Reds enjoy each other's company.

Smoot Smitten

PRESIDENT Wilson did well to veto on May 14 that section of the Legislative, Executive and Judicial bill which gave Senator Smoot and his committee power "to determine what information shall be given to the people of the country by the executive departments of the Government."

Government news may need censorship and no one knows better than The Independent the money wasted in Government bulletins and publications. But to establish such a censorship as this bill contemplated would have been a usurpation of the executive branch of the Government by the legislative and a real blow to fearless journalism and American democracy.

Finding What They Look For

IS it not strange how many people who go to Russia find all their previous opinions amply confirmed? This encourages us not to go, for it is no use spending weary months in a villainous climate to arrive at the conclusions we have already reached at a comfortable distance. But if we did go we would try to leave our opinions at home and carry our eyes instead of leaving our eyes at home and carrying our opinions.

The Story of the Week

The Murder of Carranza

THE tragic annals of the Mexican Republic are stained with yet another political assassination. President Venustiano Carranza was put to death by the followers of General Rodolfo Herrera under somewhat mysterious circumstances. The new Government at Mexico City disavows the crime and promises to investigate it and to prosecute the criminals if they can be caught. General Obregon had previously issued orders to those who were in pursuit of the late President that in no case should Carranza be personally injured if overtaken. He feared that the United States would refuse recognition to the revolutionary Government if it took office after the assassination of President Carranza; remembering well how obstinately President Wilson refused to recognize General Huerta after the murder of President Madero.

According to information given by General Barragan, Carranza's Chief of Staff, Ignacio Bonillas, former Ambassador to the United States, and other followers of the late Mexican President, General Herrera had overtaken Carranza in the mountains near the state line between Tlaxcala and Puebla. General Herrera offered his safe conduct and Carranza, knowing that Herrera passed for a supporter of his Government, made no opposition. At 4 o'clock on the morning of May 21 Herrera's men surrounded the hut where Carranza was sleeping and opened fire on it. The followers of Carranza were surprised by the attack and before they could rally to resist the treacherous assault their chief was killed. General Obregon, when he received the news, accused them of cowardly desertion of the President and declared, "You should have shared his fate. . . . There are signed to your message the names of thirty-two officers and one civilian, which is more than sufficient in number to have saved Carranza's life." In reply to this charge General Barragan explained the circumstances of surprise and treachery which had made effective resistance impossible. In spite of this explanation, General Obregon caused President Carranza's escort to be arrested and held for investigation of their conduct.

The late President Venustiano Carranza was a Mexican of wealth and pure Spanish blood. His tall and stalwart frame, his patriarchal beard and his habitual dignity of manner made him a most impressive figure. Altho a civilian who occupied at the outbreak of the revolution against Huerta the post of Governor of Coahuila, he assumed the leadership of the revolutionary movement with the title of First Chief and, according to the testimony of the Spanish novelist Blasco Ibanez, showed greater military talent than many of his generals. At all events he was able to win to the Presidency even after Villa and many other supporters of the revolution had deserted him and started "campaigns" on their own account. His domestic policy had two main features: hostility to the Catholic clergy, whose rights were greatly restricted under the new revolutionary constitution, and hostility to the foreign concession holders, whose properties he thought should revert so far as possible to the Mexican nation. His foreign policy was somewhat chauvinistic. He tried to avoid an open break with the United States Government, which had done so much to place him in power, but he played upon anti-American sentiment in order to strengthen his position with the Mexican people, and his policy with respect to foreign owners of Mexican mines and oil wells naturally brought him into frequent diplomatic conflict with foreign

nations. Professing a strict neutrality during the Great War he nevertheless leaned towards Germany; not so much from any interest in the European conflict as such as from fear and dislike of the United States. His attempt to dictate who should be his successor to the Presidency brought about his downfall. Perhaps the most that can be said for the late President was that from his own narrow point of view he was a sincere patriot and thought that his arbitrary measures tended to the benefit of the Mexican nation. If he did not have the genius of either Juarez or Porfirio Diaz, he was equally free from the weakness of Madero and the mere bloodthirsty brutality of Huerta and Villa.

Wilson Urges Armenian Mandate

PRESIDENT Wilson has asked Congress to authorize the United States to assume a mandate over the Republic of Armenia. He began his message to Congress with a tactful reference to the Senate resolution welcoming the independence of Armenia and authorizing the President to send a warship to Batum to protect citizens of the United States resident in Armenia and the Caucasus region. This resolution the President declared to be "the voice of the American people expressing their genuine convictions and deep Christian sympathies and intimating the line of duty which seemed to them to lie clearly before us."

The President then pointed out that the Senate resolution of sympathy coincided with the invitation of the Allies in conference at San Remo to the United States to accept the Armenian mandate and to define the boundary between Armenia and Turkey. He believed that it was the duty of the United States to accept this opportunity of being of service:

Early in the conferences at Paris it was agreed that to those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the states which formerly governed them, and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well-being and development of such peoples form a sacred trust of civilization, and that securities for the performance of this trust should be afforded.

It is in pursuance of this principle and with a desire of affording Armenia such advice and assistance that the statesmen conferring at San Remo formally requested this Government to assume the duties of mandatariness in Armenia. I may add, for the information of the Congress, that at the same sitting it was resolved to request the President of the United States to undertake to arbitrate the difficult question of the boundary between Turkey and Armenia in the Vilayets of Erzerum, Trebizond, Van and Bitlis, and it was agreed to accept his decision thereupon, as well as any stipulation he may prescribe as to access to the sea for the independent state of Armenia.

In response to the invitation of the Council at San Remo, I urgently advise and request that the Congress grant the Executive power to accept for the United States a mandate over Armenia.

I know from unmistakable evidence given by responsible representatives of many peoples struggling toward independence and peaceful life again that the Government of the United States is looked to with extraordinary trust and confidence, and I believe that it would do nothing less than arrest the hopeful processes of civilization if we were to refuse the request to become the helpful friends and advisers of such of these people as we may be authoritatively and formally requested to guide and assist.

General Harbord, chief of the American Military Mission to Armenia, has estimated that a military force of 59,000 men at the outset, to be gradually reduced as conditions grew more stable, would suffice to protect Armenia

against invasion and police the country against banditry and internal disorder. The expenditure of \$756,000,000 for a five year period, a portion of which might be repaid from local revenues, would enable the United States to cope with the food problem, the transportation tangle and all other after-effects of the war, as well as make it possible to introduce sanitation, as we did in Cuba and Panama, and to establish a satisfactory educational system, as we are doing in the Philippines. At the end of five years the new Republic would be on a firm basis and the expenditure of the United States could be reduced to a small sum. Congress, however, appears to be badly frightened at the idea of spending several hundred millions for an object which brings no political advantage to the Congressmen themselves.

The Slump in Prices

OWING in part to the growing tendency of the banks to restrict credits and in part to the increasing reluctance of the buying public to pay the high prices everywhere demanded, there has been a sudden, sharp decline in the price of manufactured goods. Clothing of all kinds was the most affected by the downward movement. Spring suits, hats, shoes, silks and linen all took to the toboggan. In many cases cuts amounted to as much as 50 per cent of the prices recently asked, and stores all over the country attempted to clear off their overburdened shelves by general "no profit" sales or all-round reductions of 20 per cent.

Food prices have not decreased. The Department of Labor has issued statistics which show that from March 15 to April 15 the cost of the principal articles of food increased in the great cities by an average of 5 per cent, the greatest increase in a single month ever recorded in American history. The increase in one year over last April amounted to 16 per cent; the increase since 1913 to 116 per cent.

Particular interest is felt in the present price of sugar which is quite abnormally high and tending to increase. Mr. Hoover, former Food Administrator, blamed the Government for not buying up the Cuban sugar crop of 1920 when there was an opportunity. He asserted that the sugar could have been bought in at six and one-half cents a pound and the cost to the consumer restricted to twelve cents a pound.

Attorney General Palmer, on the other hand, contends that the high cost of sugar is due to a world-wide shortage and to increased consumption by the American public. He estimated that the American demand for sugar increases by 250,000 tons every year, owing to increased population and a greater demand for sweets. The Cuban crop, he said, is short this year by half a million tons below the original estimate.

Mr. Hoover summarized under eight headings what he believes to be the causes for the present high cost of living:

1. Shortage of commodities due to the underproduction of Europe.
2. Inflation; especially the expansion of credit facilities for non-essential industry.
3. Profiteering and speculation made possible by underproduction and inflation.
4. The excess profits tax.
5. Decrease in American production due to strikes and other causes.
6. Increase in extravagance.
7. Deterioration of our transportation system during the war.
8. Expensive and wasteful distribution system.

And proposed the following solutions:

A diversion of credit from non-essential to essential industries and adjustment of taxation so as to bear much more heavily on luxury and, above all, more stimulation to revive thrift and the high sense of sacrifice of the war are the important directions of remedy.

The Bonus Question

WHAT is really worrying Congress these days is not the Knox peace resolution or the Armenian mandate or even the cost of living; it is the problem of finding the money to recompense the veterans of the Great War. The Republicans of the House of Representatives have approved by a majority of 116 to 39 in caucus the bonus bill which was prepared by the Ways and Means Committee. The revised bill does not include the proposed general tax on sales, but would raise funds by a tax on stock dividends, on transactions on the grain and stock exchanges, on real estate transfers and on tobacco, and by a supertax on incomes. A cash bonus of \$1.25 is offered for each day of overseas service and \$1 for each day of service in the United States. As alternatives to the cash bonus the options of vocational training, insurance, homestead allotments and farm aid are offered to the ex-soldier.

Secretary Houston of the Treasury notified Chairman Fordney of the Ways and Means Committee that so far from being able to endure the burden imposed by bonus legislation the Treasury might be compelled to ask for new taxes to meet obligations already contracted. He said:

The very heavy burdens which will rest upon the Treasury by reason of laws already enacted, including particularly the recent railway laws, which it is estimated will entail an expenditure of approximately \$1,000,000,000, and also by reason of the delay in making provision to realize upon the Government's investments in railroads and ships, taken in connection with the existing credit situation, suggests the need of grave consideration whether, quite aside from and in addition to any taxation which it might be necessary to impose in order to pay a bonus to the soldiers, it may not be necessary to provide for meeting the necessities of the Government in larger measure from taxation.

The obstacles which the bonus bill must encounter in Congress are numerous. There is first of all the opposition of a large minority in both parties and both Houses which is hostile to the idea of any bonus at the present time. Then there is a progressive Republican group, supported by the majority of the Democrats, who oppose all the proposed taxes, except the stock dividend tax, and would finance the soldier bonus instead by a retroactive

tax on war profits. Finally, there is the fear that the Supreme Court may once again declare against the constitutionality of the stock dividend tax, even in its present revised form. But to fail in putting thru the measures which party leaders have implicitly promised to the Great War veterans would be political suicide, and to put the matter off with promises until after the elections would create a suspicion, perhaps not unjustified, of bad faith. The bonus problem seems to be one of the many modern problems which have no solution that can prove satisfactory.

Knox Resolution Vetoed

THE peace resolution, previously passed by the House of Representatives and modified in the Senate by Senator Knox, was approved in its amended form on May 21 by a majority of 228 to 139. Nineteen Democrats, of whom eleven were from New York, joined with the Republicans, and two Republicans, Kelley of Michigan and Fuller of Massachusetts, voted in opposition. The Republicans of the House who had the measure in charge did not ask for a conference with the Senate, but agreed at once to the Senate amendments and hurried the resolution thru. The House of Representatives, like the Senate, has failed to give the two-thirds vote necessary to pass the resolution over the President's expected veto, but the action of the New York representatives in deserting the President points to a sharp conflict in the Democratic Convention between the Administration forces and Tammany Hall. The chief alteration in the peace resolution made in the Senate was the broadening of its scope to include a declaration of peace with Austria as well as with Germany. President Wilson has vetoed the resolution.

Labor Is Wrathful

SAMUEL Gompers, President of the American Federation of Labor, has declared war on Congress as at present composed. He commended President Wilson for advising legislation which, if enacted by Congress, would have made it "possible to curb, at least to some extent, this unlicensed plundering in the necessities of life." He attacked the Department of Justice, however, for failing to do anything effective to remedy the high cost of living. He asserted that twenty-one corporations had made excess profits this year averaging 435 per cent, whereas many branches of labor had not enjoyed any increase of wages to meet the doubled cost of living. He condemned the outlaw railroad strike as a denial of "the training and discipline of the trade union movement," but said that only

the ignorant and the blind could be surprised at such an irregular outburst:

The outstanding fact in the whole situation is that appeals of the wage earners made in an orderly manner thru proper channels to proper authorities have been met with postponement after postponement. The appeals of the wage earners for relief from profiteering, relief from the high cost of living, relief from reduction of wages, have been made under conditions most aggravating, only to be met with deception, if not treachery.

W. J. Lauck, consulting economist of the Railroad Brotherhoods, claims that the steel corporations alone have exacted \$750,000,000 from the people of the United States during the war by a 300 per cent increase of prices. This advance in price is not to be explained by higher wage schedules, as the labor cost per ton of finished steel was only 41 per cent higher during the war than in the pre-war period. Net profits meanwhile increased by 220 per cent.

New York Gets Beer and Boxing

GOVERNOR Alfred Smith has been very busy revising the work of the New York Legislature. He has used his veto power very freely, but two very debatable and much debated measures have received his signature. The most contested of these measures permits the manufacture and sale of beer containing not more than 2.75 per cent by weight of alcohol. The saloon is not revived; as liquor cannot be sold to be drunk on the premises except in restaurants. The New York law does not immediately come into effect, since the nation is still subject to wartime prohibitory legislation. Moreover, the Supreme Court has still to pass upon the right of an individual state to adopt a definition of "intoxicating liquor" which diverges in principle from that established by Congressional legislation. In his memorandum of explanation, Governor Smith admitted that "in the opinions of experts laid before me there is a sharp division of opinion, those declaring beer containing 2.75 per cent alcohol to be intoxicating being about equal in number with those declaring it to be non-intoxicating." He thought that in such a case of doubt the opinion of the majority of the Legislature was entitled to prevail.

Another measure which met the approval of the Governor restored professional boxing in New York state. A special boxing commission of three members with a secretary and several deputies is established to see that the regulations governing boxing are not violated. Fifteen round bouts are permitted. All clubs and incorporated bodies conducting bouts must be duly licensed. The Governor claims that popular sentiment is behind the bill, and it is certain that the creation of several new high-salaried positions made it welcome to the politicians. The three commissioners to regulate boxing matches are paid at the same rate as the three judges of the Kansas Court of Industrial Relations who are charged with regulating the whole problem of the relation between capital and labor!

On the other hand, Governor Smith has vetoed all of the repressive laws designed to stamp out of existence the Socialist Party. One of these measures authorized the courts to rule off the ballot any party advocating principles "which, if carried into effect, would violate the State or Federal Constitution." Another empowered the Legislature to bar elected members whose eligibility had been questioned and adversely decided by majority vote from taking the oath of office. A third made ineligible for public office persons affiliated with a disloyal or seditious party organization. A fourth created a special secret service bureau for the investigation of criminal anarchy. A fifth required the licensing by the Board of Regents of all private schools not connected with a religious body. A sixth demanded a loyalty pledge from teachers in the public

schools. This whole elaborate code of Prussian laws was thrown out by the Governor with sharp comment on its reactionary character. He laid down the following principle in opposition to the policies of the Legislature

The voters of this state are entitled, as of right, to the privilege of choosing their own candidates and their own officials and to enunciate their own platforms, and no majority should have the right to exclude any minority from its just participation in the functions of government.

House May Talk on Ireland

SECRETARY of State Colby has assured the House of Representatives that the Administration will not interfere if the members desire to discuss resolutions of sympathy with Irish nationalism. Chairman Porter of the Foreign Affairs Committee had notified him that three resolutions relating to the Irish question had been offered and inquired as to the propriety of discussing such matters at the present time. Secretary Colby replied:

It seems hardly proper for me to attempt to guide the action of your committee by an expression of opinion of legislation which is at this stage. . . . I may say, however, in my reply to your inquiry of a day or two ago, that there are no facts in connection with our foreign relations which should deter your committee from any action which is dictated by good judgment and which it may feel conscientiously impelled to take.

By thus standing neutral, the Administration compels Congress to assume the full responsibility for any action with reference to Irish claims which may be taken or refused.

Nitti on the Tight Rope

FRANCESCO Nitti, who has for a year held the precarious position of premier without a majority party to back him, was thrown out of office May 11 by an adverse vote in the Chamber of Deputies of 193 to 112. This was due to the fact that the Catholic deputies voted with the Socialists and that most of the Liberals, who form Nitti's chief support, refused to vote. But the King could find no one who could command a larger vote than Nitti so he has again reorganized his cabinet with such representation of the various factions as may secure their support.

The effort of Signor Nitti has been in domestic policy to steer a middle course between reaction and radicalism and in foreign policy to come to a compromise with the Yugoslavs in regard to Fiume along the lines suggested by President Wilson. He came into office because the extravagant claims of the Orlando administration for more territory on the eastern side of the Adriatic met with the

united opposition of Lloyd George, Clemenceau and Wilson. But Nitti's willingness to relinquish the more extreme of these claims rallied against him the militarists and imperialists who openly favor and secretly support d'Annunzio in holding Fiume in defiance of the Italian Government and the League of Nations. The Italian army is still kept on a war footing in spite of the ruinous expense and no premier dare demobilize it, partly because the industries could not absorb so large a body of men thrown upon them for employment, partly because the possibility of a war with the Yugoslavs is not yet averted, partly because the troops are frequently needed to suppress revolutionary disorders.

This last danger is most serious, for the Socialists are coming to despair of reconstructing society thru parliamentary methods and are turning toward "direct action," that is, utilizing strikes and riots for the purpose of overthrowing the "bourgeois" Government and establishing a "dictatorship of the proletariat" as in Russia. The prevailing and universal distress caused by lack of food and fuel has given them abundant opportunity to sow the seeds of their incendiary doctrine and there have been numerous attempts to start local soviets. Premier Nitti, while promptly suppressing such outbreaks, has on the other hand tried to win over the Socialists by adopting in part some of their measures.

But by so leaning to the Left he has offended the opposite wing. In this quarter the new factor is the Partito Popolare that has been organized by the Catholics. Until recently the Vatican held to the policy adopted by Pius IX after the establishment of the King of Italy at Rome, that good Catholics could not participate in this usurping Government that had deprived the Pope of his temporal rights. But this restriction has gradually relaxed in the course of the last fifty years and in the election of last November the Catholic Populist Party entered the field and won 101 seats in the new Chamber of Deputies. The Socialists obtained 156 seats and the Liberals 161. That is, the Chamber is divided into three not very unequal parts and any Government must secure the support of two of them in order to stand. The Liberal, like all moderate, intermediate and opportunist parties, suffers from lack of the unity and definiteness of the extremists on either hand, besides the Liberals are largely followers of Giolitti rather than Nitti, for ex-Premier Giolitti, altho he has been in eclipse for the last six years on account of his opposition to the war, still retains much of his former political and personal power.

The new Catholic People's Party is entering energetically upon a campaign to gain both the labor and the farmer vote. It has declared in favor of international and industrial peace; full suffrage for women in national, municipal and provincial elections; arbitration in disputes between employers and employees; stricter legislation for the protection of public morals; equal freedom and recognition for church as for state schools; breaking up large estates and peasant proprietorship of land; proportional representation of all interests in political and administrative organizations; increased taxation of war profits and relaxation of state control over commerce.

In the new cabinet which Signor Nitti has formed there are three representatives of the Catholic People's Party. One of them, Signor Giulio di Ridono, becomes Minister of War, the first time a civilian has held that office. The other two Populists are Signor Abbiatei, Minister of Labor, and Signor Micheli, Minister of Agriculture. This puts the Catholics into strategic positions where they can carry out their industrial and agrarian programs, but involves a complete breach with the Socialists which will play into the hands of the violent wing of that party.

Spencer in Omaha World-Herald

Spilling the beans

Hungary Accepts Peace Terms

THE peace treaty with Hungary will be signed in the Grand Trianon Palace at Versailles on June 4. When the terms dictated by the Allies were presented to the Hungarians last February they protested that they could never consent to the dismemberment of their country and to the alienation of territory that had been Hungarian for a thousand years. They contended that in the territory taken away from Hungary there was a complete ring from thirty-five to forty miles wide in which the Hungarians formed an overwhelming majority of the population. They asked that the people of the disputed sections be consulted before being handed over to alien rule and agreed to submit to a plebiscite to be taken under the authority of the League of Nations. The Hungarian Foreign Minister Teleky declares that "this treaty is the worst and cruelest of all."

Even in England some sympathy was expressed for the Hungarians. In the House of Lords on March 30 Lord Bryce protested against the treaty as unjust and ruinous and Lord Newton said:

Hungary was the most complete geographical and economic unit in Europe containing a population of over 18,000,000. That population is actually going to be reduced to something like 7,000,000, and of the Hungarian territories no less than two-thirds is going to be annexed to other countries and divided among the new states.

Slovaks, who have not the slightest desire to be incorporated, are taken away from the north of Hungary and incorporated in Czechoslovakia. . . . Pressburg, containing 97 per cent of Hungarians, is handed over to this new state merely for the purpose of giving it a port on the Danube.

Under the Treaty Hungary is going to lose 57 per cent of its arable area, 65 per cent of its stocks of cattle, 56 per cent of its horse production, 70 per cent of its sheep, 85 per cent of its forests, the whole of its salt mines, and nearly the whole of its mining area, and 65 per cent of its railways, including the most important railway junctions. And on the top of all this it is also going to lose the control of the waterways upon which the prosperity of the country almost entirely depends. It therefore looks, without exaggeration, as if the country economically will

be unable to exist. But the worst feature in all this is the fact that something like 3,500,000 of Magyars, and something like 1,500,000 German-speaking Hungarians, are to be transferred, like so many animals, from one country to another.

But the Supreme Council refused to make any concessions or allow any votes to be taken among the alienated population on the ground that ethnographic conditions in central Europe are such that it would be impossible to make the political frontiers of Hungary coincide with her ethnical limits, and that the result of plebiscites in the detached territories could not be far different from the result arrived at by the Supreme Council after minute study of the peoples and their aspirations. But the Supreme Council pointed out that the League of Nations might afterward rectify the frontier line if modifications are found desirable. Ten days were given to the Hungarians to accept the treaty.

Count Apponyi, the head of the Hungarian delegation, resigned rather than sign the treaty, but the Hungarian Government saw no way except to comply, so the Hungarian Foreign Minister, Ivan Prasnovski, took his place and arrived in Paris on the last day allowed by the ultimatum. A protest will be filed stating that Hungary assented to the conditions in the hope that they may be alleviated by the League of Nations and that Hungary may the sooner be admitted to the League. This treaty, like the German and Austrian, contains the Covenant of the League of Nations. It will be signed by Ambassador Wallace for the United States.

The Polish Drive

DIRECTLY east of the Polish border extend for two or three hundred miles the marshes and forests of the Pripet river. Here open campaigning is impossible, consequently effective drives must be made either north or south of this region. The Poles directed their recent offensive to the south of the Pripet and succeeding in reaching the Dnieper river and capturing Kiev. The Russians counter-attacked north of the Pripet and seem to be making some progress. They have forced their way across the Beresina river and are aiming at Minsk and Vilna. The latter city is claimed by the Lithuanians as their capital, but has been occupied by the Poles, so possibly the Lithuanians may coöperate with the Bolsheviks in its recovery if the Soviet will cede it to Lithuania.

The first effect of the Polish invasion of Russia was to rally to the support of the Soviet some of its most pronounced opponents. General Alexis A. Brussilov, former commander-in-chief of the Russian armies, has entered the service of the Soviet and is conducting the campaign against the Poles. Brussilov had the reputation of being the most brilliant strategist on the Russian staff, for it was he who carried out the drive against the Austrians in Galicia of 1916 that resulted in the relief of the famous fortress of Przemyśl. Stanley Washburn, correspondent of the London *Times* with the Russian armies on that campaign, wrote of Brussilov:

I think it would be impossible for anyone to be a pessimist after an hour with this officer. He is a thin-faced handsome man of about fifty-five; in every respect the typical hard-fighting cavalry officer. He is just the man one would expect to find in command of an army with the record that his has made. I asked him if he was tired after his year of warfare. He laughed derisively. "Tired! I should say not. It is my profession. I shall never be tired." . . . If moral, as Napoleon says, is three times the value of physical assets we need have no fear as to the future where Brussilov is in command of an army.

BOLSHEVIKI GAIN CAUCASUS AND CASPIAN

Since the defeat of Denikin's armies in the Ukraine the Soviet forces have met with little opposition in their southward sweep. Denikin and his staff escaped to Constantinople in a British warship. The remnant of his troops under General Wrangel is cornered in the Crimea, into which the Bolsheviks are prevented from penetrating by the British warships that shell the isthmus connecting the Crimea with the mainland. The Tartar republic of Azerbaijan surrendered its capital, the oil city of Baku, without a struggle, and the neighboring republic of Georgia appears equally compliant to Bolshevik influences. Unless Armenia receives the report from America which President Wilson asks there is danger that she, too, will succumb to the Soviet. The Caspian fleet sought shelter in the Persian port of Enzeli, but the Bolsheviks followed and captured it there. These advances bring the Bolsheviks into direct contact with the disaffected elements of the Turkish and Persian population and may cause serious trouble in these regions. The Bolsheviks have displaced the British in Resht

Altho the Polish drive was not authorized by the League of Nations or approved by any of the Allies except France, the Russians of all parties regard it as an attempt of other powers to crush Russia and this has stiffened up the resistance of the Bolsheviki to outside overtures for restoring commercial relations. The Central Soviet now refuses to admit the delegation which the Interallied Supreme Council proposed to send into Russia to investigate conditions and arrange for trade. The ground of the refusal is that since certain members of the League are actively supporting Poland and the Ukraine warring on Russia it would be unsafe from military considerations to allow representatives of these nations to enter the country. The Soviet will welcome delegates of the trade unions and newspaper correspondents who will "give guarantees that they will not abuse the hospitality of the Russian people." In reply to the request of an American fur buyer for admission Maxim Litvinoff, the Soviet trade commissioner in Denmark, replied:

"In view of the hostile attitude of the United States toward Russia I regret that I am unable to grant permission to American citizens to enter Russia."

Bolsheviki Take Persian Port

HITHERTO all the fighting against the Bolsheviki has taken place within the limits of the old Russian empire. Now for the first time the Bolsheviki have surpassed these bounds and taken possession of the port of Enzeli on the southern coast of the Caspian Sea. Their object was to capture Denikin's fleet which took refuge here after the Bolsheviki took Baku. On the morning of May 19 a fleet of thirteen Soviet warships appeared off the port of Enzeli and opened fire. A deputation of Persian officials accompanied by a British officer boarded the Soviet flagship and were told that if the interned ships and troops were surrendered no hostilities would be directed toward the Persian Government or the British garrison and that the Russian volunteers of Denikin's army would not be harmed. The British troops numbered less than five hundred and since it was vain to try to hold the port they evacuated Enzeli and retired to Resht the same night. The Bolsheviki landed 10,000 troops and took possession of the vast stores of war material which had been provided by the British for Denikin's army. Denikin's fleet, said to consist of six cruisers and seven transports, thus fell into their hands. Admiral Sergiev, commander of the Caspian fleet, who appears to have been captured at Baku, is rumored to have been hanged by the Bolsheviki. The Persian Government has protested against the occupation of Enzeli as a violation of neutral rights, but since Enzeli has been used as a base for the British campaign in the Caucasus its neutrality may be questioned.

Since the Caspian is an inland sea, eighty-six feet below the ocean level, it is impossible for the British fleet from the Black Sea to enter here. Since Persia was the only other country neighboring on the Caspian, the old Russian Government kept on this sea only a few small warships. Most of these fell into the hands of General Denikin and the British when the anti-Bolshevik movement was at its height. But the Bolsheviki held on to Astrakhan thru all their vicissitudes and brought some gunboats down the Volga river to the Caspian at Astrakhan. From this port they were enabled to raid the shipping crossing the Caspian from Baku to Turkestan. Now the Bolsheviki by the capture of Baku and Enzeli have gained complete control of the Caspian Sea and will have access to cotton growing regions that may supply material for their textile mills which have been obliged to close for lack of material with which to work.

Position of Persia

ENZELI, where the Bolsheviki captured Denikin's fleet, is the seaport of the city of Resht, fourteen miles inland. No railroad connects the Caspian coast with the Persian capital and Resht is 221 miles from Teheran. There is no reason to suppose that the Bolsheviki intend to advance on Teheran and probably they could not spare the troops for such an invasion, but they will probably endeavor to stir up trouble by representing themselves as deliverers of the Persians from foreign rule. The Mohammedan department of the Soviet Foreign

Office has been for many months carrying on vigorous propaganda in the Caucasian, Afghan and Persian borderland and apparently with some effect since the buffer states of Georgia and Azerbaijan turned Bolshevik just as soon as the Soviet troops came in sight.

The Persian Nationalists may feel that this is their last chance to secure the independence of their country. In order to check the German movement toward India, Great Britain and Russia agreed upon the division of Persia into two "spheres of influence"; the northern part to be under the control of Russia and the southern under the control of Great Britain. The collapse of Russia left her sphere without a claimant and so the whole of Persia has passed under British control. The Shah consented last August to an agreement that virtually makes Persia a British protectorate. But the British troops in northern Persia are too few to afford protection. They were not even able to hold Baku against the Bolsheviki, altho this oil city was of supreme importance to them. The Afghans are still waging predatory warfare on the Indian border. There are hardly enough British troops in Mesopotamia to hold this most valuable of British conquests and the people of England, sick of war, are unwilling to support any further military adventures whatever may be at stake.

Persia has appealed to the League of Nations for protection against the Bolsheviki, since this is a clear case of the "external aggression" which the much discussed Article X was designed to cover. But the League has as yet neither forces nor funds to employ in such an emergency. Consequently Persia is likely to make peace with Soviet Russia as Esthonia has done, especially since the late elections showed a large majority for the democratic liberals in Teheran and Tabriz.

UNDER THREE FLAGS

General Brusilov, who as commander of the Czar's army in Galicia drove the Austrians out of eastern Galicia, became on the fall of the Czar Generalissimo under the Provisional Government of Prince Lvov. But he offended Kerensky by failing to meet him at the Petrograd station when his train arrived as Kerensky had ordered him to do, and was replaced by Kornilov. Now Brusilov, believing it his duty to serve his country whatever its government, has accepted the position of commander in chief of the Soviet armies and is conducting the campaign against the Poles.

Let's Go to the Moon

By Robert H. Moulton

In 1864 Jules Verne, the far-seeing French novelist, wrote a book of fiction called "From the Earth to the Moon and Around It." His heroes ascended to the orb of night in a cylindrical metal car, shot upward from the earth from a cannon charged with a great quantity of gun cotton. The resourceful Frenchman worked out and explained a most credible theory for this celestial journey, but it was the purest fiction, and no one believed it would ever be possible to project any earthly object to the moon.

But science works many miracles, and now comes along an American professor, Robert H. Goddard, of Clark College, Worcester, Mass., with an improved design of sky rocket, which by experiment he has demonstrated to the satisfaction of the scientific world, thru the Smithsonian Institution, in Washington, can actually carry thru the 220,000 miles of space separating us from the moon and land a center hit on the planet.

Professor Goddard claims his rocket, weighing 1274 pounds, will lead to great discoveries. The apparatus as designed and tested is a multiple-charge high efficiency rocket of a new design. The determining factor of the efficiency of a rocket is the velocity of ejection of gases due to the explosion of the propelling material. In the case of ordinary or ship rockets, as tested by Professor Goddard, the velocity of exit of the gases is low, about a thousand feet per second, giving the rocket an efficiency of only 2 per cent. By

The moon rocket (right) looks almost as harmless as its neighbor of the common variety

An inside view of the chamber of the rocket

increasing this velocity, thru the proportion of the propelling material to weight of projectile, and thru a greatly improved nozzle shaped passage for the escape of gases, to about 8000 feet per second, Professor Goddard has raised the efficiency of the rocket to nearly 64 per cent.

The great scientific value of Professor Goddard's experiments lies in the possibility of sending recording apparatus to moderate and extreme altitudes within the earth's atmosphere. The nature of the higher levels of the air has for a long time been a subject of much speculation, as to their chemical composition, temperature, electrical nature, density, ozone content, and so forth. As the earth's atmosphere extends 200 miles, there is a great unknown region, knowledge of which would greatly benefit the science of meteorology. Weather forecasting, to us the most familiar phase of meteorological research, would undoubtedly be improved if daily observations could be taken in the upper levels of the atmosphere.

An interesting speculation is the possibility of sending to the surface of the dark part of the moon a sufficient amount of brilliant flashlight, which being ignited on compact, would be visible in a powerful telescope. This would be the only way of proving that the rocket had left the attraction of the earth, as the apparatus would never come back once it had escaped that attraction. Professor Goddard's experiments with flash powder demon-

strated that if the powder were exploded on the surface of the moon, distant 220,000 miles, and a telescope of one foot aperture were used, we should need a mass flash of 2.67 pounds to be just visible, and 13.82 pounds, or less, to be strikingly visible. The quantity required could, of course, be much reduced by the employment of a larger telescope.

The Empire of the Southwest

The states which were formed in whole or part from old Mexican territory—Arizona, California, Colorado, Nevada, New Mexico, Oklahoma, Texas and Utah—have banded together to form the League of the Southwest. This is a purely non-political alliance and portends no development of sectionalism; only the development of the resources of a section! At the recent convention of the League in Los Angeles the utilization of the Colorado river was considered. The basin of this mighty waterway includes 244,000 square miles with an average population of less than one person to a square mile. The Colorado basin, if peopled as densely as most parts of western or central Europe, would contain the whole population of the German Empire. Of course such density of population is impossible in arid plateau country, but engineers and agricultural experts believe that some 6,000,000 acres of land now arid can be placed under cultivation by proper control of the waters of the Colorado with an annual production of a billion dollars worth of crops and other farm produce. The area of all the states in the League of the Southwest is over a million square miles and the aggregate population about ten millions. This is a greater area than the United States had before the Louisiana Purchase and a greater population than the whole nation had in the days of President Monroe.

Spiritual Illiteracy

The price of one lead pencil is being spent by America in the course of a year to give religious instruction to each of its Sunday School pupils! This fact was brought out by Professor Walter A. Athearn, head of the American Religious Education Survey Department of the Interchurch World Movement, at a conference of editors of religious papers held recently, in New York City. He and his co-workers are busily engaged in making a minute study of conditions in the city and rural Sunday Schools of the country.

Statistics compiled by the Federal Council of Churches and recently made public show that while church membership is on the increase the Sunday School enrollment of the United States has fallen off several thousands. This survey proposes to uncover weaknesses and afterward to suggest remedies for what it terms "America's greatest peril," the spiritual illiteracy of millions of its children.

The survey probably will not be com-

In this tube Professor Goddard fired his experimental rocket

Ten Rules for a Happy Vacation

1. Take only congenial company; even if you are limited by this rule to yourself.
2. Before leaving turn off all the faucets and gas jets, deposit the pet animals where they will be safe, lock the door and pay your debts. Take no worry along with you.
3. If you are going within a hundred miles of any body of fresh water in these latitudes take mosquito netting, pennyroyal and punk sticks.
4. Discard three-fourths of the clothes you intended to take but don't omit something warm for the first cold night. Wear easy shoes, easy clothes, an easy hat and an easy temper.
5. Don't take along a serious book. You know you won't read it.
6. Don't take anything that will break. Tin cups are better than china.
7. Don't be ashamed to loaf outright without any pretense of fishing, sewing, nature study or other camouflage.
8. You will forget something important from your equipment. Don't worry; the human race lasted for centuries before it was ever invented.
9. Don't try to light a fire by rubbing sticks together. "In the movies they do it," but not in real life.
10. Don't take other people's good advice too seriously; not even our own!

pleted for several months as approximately 6000 selected Sunday Schools of different denominations and various types of communities are to be carefully studied, but already some startling facts have been unearthed.

It has been found, for instance, that seven out of every ten children and young people in the land, or a total of approximately 27,000,000, receive no religious instruction in any Protestant, Catholic, or Jewish church school. All of these are under twenty-five years of age, 8,000,000 of them under ten. Furthermore, the instruction of the 16,717,000 Protestants is limited to thirty minutes weekly, sandwiched in between the morning sermon and an appetizing American dinner. When it is considered that the average attendance at Protestant schools is only about 50 per cent of the enrollment this already inadequate instruction is further reduced to twelve hours instruction per year. The children of Catholic and Jewish faith fare better, 8,000,000 of the former receiving about 200 hours of training a year and the 1,600,000 of the latter getting 250 hours.

A medium-size suburban city of New England has been chosen as a typical community in which to begin the nationwide survey. If the findings there are verified by the studies in a majority of the other municipalities to be covered, the facts and figures unearthed will be taken as portraying conditions in the country generally. It has been found already that twice as much is spent for the janitor as for religious teaching, four cents of every dollar going to the former. The average public school pupil is absent one day out of five, the Sunday School pupil, one out of three. In city public

schools there is a supervisor for every eighty-two teachers; in Sunday Schools, one for every 2716—counting stenographers as supervisors!

Only 6 per cent of the teachers are college graduates, 31 per cent high

school graduates, or non-graduates. Eight per cent did not graduate from public school, some are only 14 or 15 years of age. In the matter of service, however, it is shown that all of the Boy Scout, Girl Scout and Camp Fire Girls' leaders were recruited from the Sunday Schools.

Who Swallowed Jonah?

Was Jonah swallowed by a whale? According to the biblical story it was a fish of this nature that entertained the prophet in its interior for three days and nights, but the limited size of the whale's throat precludes the possibility of its swallowing a man. However, there was caught at Miami, Florida, recently, a fish that could have lunched on twenty Jonahs without suffering the slightest pang of indigestion, and among the many persons who have seen the fish are clergymen who have formulated the theory that it was really a fish of this species that swallowed Jonah.

Here is the way this denizen of the deep shapes up in the way of dimensional figures: The net weight of the fish, when caught, not including its last meal, was 30,000 pounds. Its liver alone touched the beams at 1700 pounds, which is about the weight of a hefty bullock. From end to end it measures 45 feet, which is equal to the combined length of eight normal men. At the thickest part the circumference is 23 feet 9 inches.

One of the most impressive features of the fish is its mouth, which is 50 inches wide and 43 inches deep. Inside of the mouth is a tongue 40 inches long, and it has a multitude of teeth much smaller than a baby's. Nobody has ever attempted to count these molars. The tail resembles the caudal appendage of an airplane and measures ten feet from tip to tip.

But big as the fish is, it died in infancy. Scientists who have measured its cartilaginous formations say they are far from developed, and that had this monster attained full growth it would have been two and a half times as large as it is now.

According to the scientists of the

Is this the fish that swallowed Jonah?

Smithsonian Institution the animal is a whale-shark, and is the first specimen of its kind that has been captured. They state further that it is an inhabitant of water of 1500 feet depth, its hide of sufficient thickness to withstand the most enormous water pressure, and its eyes, which have no lids and consequently were never closed, indicating that it dwelt at a depth where eyes are of no avail.

The Smithsonian scientists believe that it was thrown up by some subterranean volcanic disturbance which injured its diving apparatus so that it was unable to return to its natural levels and that thus disabled it strayed beyond confines fixed for the monsters of the deep.

Capt. Charles H. Thompson of Miami caught the fish while cruising for tarpon off Knight's Key, Florida. The huge bulk, which he first took to be a whale, was sighted on the surface of the water. A lifeboat was manned and he and a crew pursued the mysterious discovery, which proved to be alive and in

motion. It disappeared, but rose again to the surface. A harpoon was sunk deep into its side. The great fish, tho unable to employ its deep-sea diving powers, proved to be a speed artist on the surface. The sailors said that at times it made forty-five miles an hour. Four more harpoons were shot into it. Then about 150 bullets were fired into the fish's hide, but later these were found to have done little damage, hardly more than piercing the skin.

The fight took place in sight of some of the Florida keys, where thousands of people gathered to see it. For thirty-nine hours—two days and a night—the fierce fish pulled the lifeboat thru the waters. A yacht followed, keeping as near to the lifeboat as it could with safety. Finally the fish quit struggling, was lashed to the yacht, and the landward voyage begun.

During this journey the fish died. Science became interested in the catch and the Smithsonian Institution sent a skilled taxidermist to Miami to prepare the immense carcass for preservation.

lead shield, which lightens the total weight of the outfit by some five pounds. The new tube also rectifies its own current, eliminating the bulky rectifier, while the transformer, used in "stepping up" the low house voltage to the needs of the tube, has been reduced in size by the use of smaller windings and a case shaped to fit the coils.

The variation in lighting circuits between town and country, always an obstacle to radiography in the home, has been overcome by the control system, making it possible always to deliver the same definite voltage to the transformer.

The total weight of the outfit is about 125 pounds, of which the transformer weighs forty-three pounds. As will be seen by the illustration, the set consists of three units: a control box, a transformer at the base of the supporting frame, the adjustable frame itself and the X-ray tube.

Chips

Fireflies in captivity cease to flash.

On the Malabar coast of India there are squirrels as large as cats.

Traffic on American railways normally doubles every twelve years.

Washington, D. C., contains more negroes than any other city.

There is a divorce law in the Philippine Islands, but there are no divorce cases.

Two-thirds of the chinaware imported into the United States is made in Japan.

It costs less than a cent to carry a ton of freight a mile on the American railroads.

The American colleges at this moment are engaged in drives totaling \$215,000,000.

In the past ten years Congress has debated 146,471 bills and passed 16,000 of them.

Jackson, Wyoming, has elected a city administration consisting entirely of women.

Since the armistice it is estimated that the American public has spent \$8,500,000,000 on luxuries.

More than 5000 churches in the United States use the cinematograph in some branch of their work.

The number of suicides is greater among lawyers than men of any other profession, says the Save-a-Life League.

The x ray has been found very useful to discover internal knots, resin pockets, cracks and grub holes in timber up to 18 inches in thickness.

Two hundred volunteers to take summer courses of instruction as trained psychiatric social workers are wanted by the American Red Cross.

Sadie De Kol, Wisconsin's champion dairy cow, has just broken the world record. This prize Holstein during an official test ending March 10 made a thirty-day record of 3247 pounds of milk and 126 pounds of butter fat.

Have You an X-Ray in Your Home?

A valuable advance in the development of X-ray photography is the invention of a portable X-ray outfit which may be set up at the bedside of the patient and which will produce plates as good, it is claimed, as those procurable in the best X-ray laboratory. Thus patients whose condition might prevent their removal to a hospital or doctor's laboratory can now secure the benefits of X-ray diagnosis in their own homes and a serious handicap under which the medical profession has been laboring, has at least been partially removed.

The portable X-ray is the work of Dr. W. D. Coolidge, a scientist of Schenectady, N. Y., and known as the inventor of the Coolidge X-ray tube.

The apparatus may be packed and

carried in four hand-borne units, to any home wired for electricity where the ordinary lighting circuit furnishes the necessary current.

The physician need not necessarily be an expert in radio photography, for the process of operating the machine is simplified for him by an automatic control system enabling the use of any desired intensity of ray, and a time switch, which will accurately measure and control the length of each exposure. The matter thus becomes one of following directions, pressing the button and letting the machine do the rest.

In order to make the new set simpler than the portable army type already familiar to medical corps men, the tube has been reduced in size and made of thick lead glass, without a heavy

Kelly Caterpillars Enabled 5-Ton Truck to Haul 16-Ton Load Over Mountains

"It was extraordinary," writes Mr. C. H. Hemme of San Diego, owner of the truck, "to see the rubber of the Kelly-Springfield Caterpillar tire spread itself from underneath the weight of the load and assume its normal shape again when released. We firmly believe that only the Caterpillar tire, allowing the rubber to spread in several directions, saved the day, as no other tire would have stood the extreme overload without coming loose from the steel. For heavy-duty service there is no tire that gives me more satisfaction than the Kelly-Springfield Caterpillar tire."

We don't recommend overloading a truck. It is bad for the truck and bad for the tires. But there are times when overloading is necessary, and when that time comes it is a great satisfaction to know that your tires can haul any load the truck can bear.

Do you borrow Garden Hose or lend it?

Whichever you do, you will enjoy Mr. Butler's inimitable garden hose story, "Millingham's Cat-Fooler," which we have obtained permission to reprint for the entertainment of our friends 32 pages, bound in boards and illustrated with amusing pictures. *Sent free to promote your garden hose education.* This book contains no advertising, direct or inferential. With it we enclose a pamphlet:

"The Truth About Garden Hose"

which tells you how to know a good hose when you see it, how to get the kind of hose best suited to your needs, and how to care for it to make it wear as long as possible. A book of valuable information for every gardener, florist, garage owner, or other user of hose. Incidentally, it tells you about our three standard brands of garden hose

BULL DOG MILO GOOD LUCK

and explains why these particular brands have become within 5 years the most widely talked of hose on the market, and why one of them will exactly fit your garden hose needs. Send for these books today.

The Independent National Convention

(Continued from page 313)

tion. His platform would be one of peace and disarmament:

Aside from being a statesman, Mr. Bryan has taken a firm stand on every moral question of the past decade. He is the one prominent Democrat who "stood by his guns" after the 1916 election. He is the one man who can be trusted to carry out the will of the people concerning universal military training and the League of Nations.

MRS. ESTELLA F. KELLEY.

Chase, Kansas

Mr. Hughes is mentioned for President:

I am of the opinion that the Republican party ought to nominate Charles E. Hughes, of New York, for the Presidency. In addition to his peculiar fitness to serve his country in a time like this, as its Chief Executive, he has a prior claim on his party for the splendid fight he made four years ago, and that, too, against great odds. *He is the man for the place, and he should not be set aside, even tho he personally requests it.*

NATHAN B. YOUNG.

Tallahassee, Florida

And for Vice-President:

The Vice-President should be selected with great care, one who is the President's counselor, with highest legal ability, and can fill the chair acceptably during the absence, or disability of the President. Choose men who stand four square. *Hoover and Hughes.*

MRS. S. G. SPAULDING.

New York City

Governor Coolidge does not poll a very heavy vote, but his supporters make up in the quality of their enthusiasm for their lack of numbers. Here are two typical extracts:

He stands for law and order as popularly expressed, but really he stands for righteousness in public as well as private life, that righteousness that has its roots grounded in love to God and fellowmen.

B. F. PICKERING.

Salem, Massachusetts

Calvin Coolidge, of Massachusetts, is known as a genuine statesman, not seeking office, but unselfishly seeking the highest good of his country, irrespective of party or class. He is not the tool of politicians; is too strong, and independent to be subservient to any class, whether commercial, financial, political or industrial. He is positive without being stubborn, and has sense and moral principle enough to be the President of all parties and all classes.

DWIGHT MALLORY PRATT.

Cleveland, Ohio

Governor Cox of Ohio is fortunate in finding a supporter who can make an effective speech of nomination:

President Cox would sound mighty good to me. I think he should be elected (1) because he is a lover of law and order. During the steel strike peace and order were maintained, the right of free speech was preserved, property damage was prevented—all this was done without calling out a single soldier.

(2) He is fair to both labor and capital. Some of the labor legislation he obtained was: The Workman's Compensation Law, elimination of sweat shop labor and extra provision for dependents of men killed in mines.

(3) He is for the League of Nations without reservations. He is a Christian

gentleman, a good business man, and comes from a state that always carries weight politically.

FRANK TIMONEY.

Danville, Kentucky

The supporters of Governor Lowden, who are not perhaps quite so numerous as we expected, all emphasize his tact and ability to get along with Congress:

I believe Mr. Lowden the best man for President, for the reason that, in my opinion, he is likely to secure a following.

Not one of the several good men who are running can accomplish much with a Congress such as has handicapped most every President, for example, Mr. Taft.

The most important issue before the nation is to eliminate such men as La Follette, Borah, Poindexter and Hiram Johnson, and establish majority rule, and become builders, and not wreckers.

E. T. HATCH.

Vancouver, Washington

Senator Harding's vote is also rather small, but here is an excellent testimonial from a champion of safe and sane conservatism:

I am for Warren G. Harding, of Ohio, for President, because he is so eminently qualified and fitted for the office, and which qualifications stand out in my judgment over all others mentioned. He has never lowered the dignity of the office by making a wild scramble for pledged delegates to the convention. His nomination will solidly unite all factions of the party thruout the United States and will tend to bring back to the country a sound and stable form of government which will insure capital and labor—the business man and the investor, a firm, aggressive and just administration of affairs, and one in which everyone will have absolute confidence.

PAUL A. ZIZELMAN.

New York City

Senator Glass obtains an equally well-phrased testimonial from the Democratic side:

Senator Carter Glass, of Virginia, is nationally known as a clear-headed, honest-minded, far-seeing public servant of first-rate ability, with a courage and resource that compel results. No special interest, pecuniary or otherwise, will control him, or swerve him from doing his duty.

Besides being in accord with President Wilson's world policies, he is by experience and training preëminently equipped to handle aright the most important issue before the American people, viz., the wise, sane and just solution of the economic and financial problems of the nation growing out of the World War.

O. L. STEARNES.

Salem, Virginia

Here is an unconventional but excellent suggestion:

In this time of reconstruction it is not enough that our President should be a great intellectual leader. He must also be a great moral force to help bring the nation "back to the spiritual standard, to make Christ's principles an impelling force in the reconstruction of society."

For these reasons John R. Mott is the man I would like best to see nominated.

ROSE SHIELDON.

Ithaca, New York

And what do you think of the "Uncle Sam candidate"?

The situation is sickening. I think I shall not have heart to vote just to elect

CLOSE-TO-NATURE CANVAS HOUSE

For Every Outdoor Purpose

Designed especially for living and sleeping in the open air. As open to the air as an umbrella but instantly closed weather-tight or only partly closed. The slatted sides in steel grooves, and are operated by cords from the inside. A rich person may adjust the slatted sides to any degree of ventilation without leaving the interior.

Screened insect proof. Firmly anchored to the ground to withstand very hard winds. Easily erected or taken down without the removal of bolts or use of tools. Rolled into convenient bundles, they may remain permanently attached to frame parts except the roof and gables, which pull on over rollers as a shield.

For camping, hunting, fishing, golf links, motor camps, hotels, etc. For use on your lawn or a summer home on a suburban lot, the Close-To-Nature houses are used by the thousands annually.

Why shelter under hot roofs when the canvas house is as cool as the atmosphere? For tuberculosis, nervousness, insomnia, and ill health generally, Nature's remedy is sleeping in the open air.

Made in nine sizes. Catalogue free.

a Democrat or a Republican. I should like to have a chance to vote for something that would clear the atmosphere of politics and would stay the lifted arm of anarchy. Unless we do these two things we are going to get what we deserve.

Can't we do this by having, say, an Uncle Sam candidate, or a Son of His Country candidate? Such a President, I believe, John D. Rockefeller, Jr., would be, who, if he would serve at all would undoubtedly serve without salary; would engage for the betterment of humanity, both materially and spiritually; and probably would have not a single selfish interest to forward.

Marion, Kansas

ALICE MARTIN.

The Platform

Our readers have decided that the ratification of the Treaty of Versailles and our participation in the League of Nations is the paramount issue of the campaign. Half of the letters sent in emphasized this issue above all others. And there was remarkable agreement as to the stand which the American people should take; only four or five of our correspondents wished the nation to keep out of the League and very few even mentioned reservations. Some reservationists spoke generally about "reservations to Americanize the Treaty," a larger number desired simply such reservations as would satisfy the Senate and thus permit ratification of the Treaty. Not one specified exactly what or how many reservations seemed necessary to him.

We must therefore start our platform with a plank in favor of the Covenant of the League of Nations. Here are some good suggestions:

The issues before the American people are many and various. The most important, not only for the United States, but for all the world, is the League of Nations and the movement for world-wide peace designed to abolish the ponderous machinery for human murder now existing. The whole present plan failed in 1914—failed dismally, utterly, tragically. The world wants to effect an improvement—some plan, some organization is imperative if we prevent martial destruction. The League of Nations at present is the only available plan offered. We should use it.

DR. ARTHUR M. CRANDALL.

Madison, Minnesota

This nation gave its treasure, the life-long happiness of many of its people and the lives of some fifty thousand of its sons to preserve Christian civilization. Christian civilization cannot survive if the advanced nations of the world fall back into the old balance of power groups and constantly menace the existence of the new nations.

SARA McPIKE.

New York City

The most important issue now before the people is the Peace Treaty. I favor ratification without reservations. We cannot keep out of "European complications" because they will not keep out of us, and the treaty as it stands contains no menaces or dangers whatever to our sovereignty or interests.

A. C. RICHARDSON.

Williamsville, New York

And "a boy of sixteen" adds his testimony:

The League of Nations is one of the most forward-looking documents ever signed by nations or peoples, or Senates or Parliaments.

OSBORN ANDREAS.

New York City

Wm. H. Jackson Co.

2 W. Forty-seventh Street, New York City

Bronze and Iron Works Brooklyn

ITALIAN STONE GARDEN FURNITURE

Twelve per cent of our correspondents bring forward the industrial question as the issue of the day, including such topics as the high cost of living, regulation of big business and stimulus to production. A farmer speaks his mind:

I think the most important issue is industrial readjustment and in particular the readjustment between agriculture and other industries and, as a step in that direction, the organization of farmer and middle class sentiment that it may become articulate and that the super-radical labor element may no longer be the big noise to frighten timid politicians.

L. M. SPERRY.

Pueblo, Colorado

Another reader epigrammatically says that the Golden Rule should be applied in industrial disputes, "applying it forcibly to those who do not want to accept it."

A closely related topic is efficiency and economy in the management of the Federal Government and a wise administration of public finance:

A genuinely economical administration of the Government, reducing expenditures to the lowest possible figure, consistent with a wise conservation of the resources of the country, and the rapid payment of the national debt.

E. P. BRANCH.

Melbourne, Florida

The most important question is stabilization, that is to get back to a sound basis of public and private life, to reduce taxes, Government and private expenses and waste, to adjust the status of labor and capital. In short, to begin to use good common sense in all public and private matters.

E. A. McFARLAND.

Lincoln, Kansas

There are extremely few suggestions of purely political reform, and most of these concern the elimination of boss rule in the parties or the restoration of civil liberties rather than any change in our constitutional system. A number of the supporters of Senator Johnson and of other more or less radical candidates emphasize the need for restoring pre-war liberties:

The most important issue before the American people today is ridding the ship of state of the barnacles of war time legislation and getting back gradually on a pre-war basis. To this end I think we should first get rid of the espionage law and other obnoxious, radical measures which, tho necessary in war time, have outlived their usefulness and are depriving us of our rights as free citizens of a free country.

F. A. SHACK.

Stratford, Wisconsin

Let the teachers add a plank:

I consider the largest issue before the American people is the right education of our youth! If we are to look toward the East, see the light and be glad, we must not worship the little red school house of yesterday, but furnish money to pay the best Christian teachers the country can find.

ERNEST A. PRENTISS.

East Cleveland, Ohio

And let us give the last word to the Church:

The most important issue before the American people is not the League of Nations, nor the high cost of living, nor legislation against strikes, but repentance for selfishness and practice for the brotherhood of man. To get this we need a revival of righteousness.

The Gate to Riches

(Continued from page 315)

which now exist are immeasurably better than obtained under the Spanish régime. In an article written in 1897 by Doctor Cayetano Coll y Toste, a prominent Porto Rican and an eminent authority on conditions affecting the people of Porto Rico, it was said:

The country thruout is teeming with exuberant life; plants are clothed with luxuriant foliage, they grow lusty and strong and cover the earth everywhere, the dark green tints, evidences of the life-giving sap, brighten the landscape in every direction; and the bull, the horse, and the hog are growing vigorously along with the doves and chickens, and multiplying prodigiously.

Only the laborer, the son of our fields, one of the most unfortunate beings in the world, with a pale face, bare feet, lean body, ragged clothing, and feverish look, walks indifferently, with the shadows of ignorance in his eyes, dreaming of the cock-fights, the shuffle of the cards, or the prize of the provincial lottery. No, it is not possible that the tropical zone produces such organic anemia; this lethargy of body and soul is the offspring of moral and physical vices that drag down the spirit and lead our peasants to such a state of social degradation.

In the miserable cabin, hung on a peak like a swallow's nest, this unhappy little creature comes into the world; when it opens its eyes to the light of reason it does not hear the village bell reminding him to give his soul to the Divine One and render homage to the Creator of worlds; he hears only the hoarse cry of the cock crowing in the early morning, and then he longs for the coming of Sunday to witness the strife and cheating at the cock-fights. . . .

In the wretched tavern the food he finds is only the putrid salt meat, codfish filled with rotten red spots, and Indian rice; and the man who harvests grains of nature and takes to pasture in the fields and meadows the beautiful calves, cannot raise to his lips the bit of meat because the municipal tax places it out of his reach and almost duplicates the price of the tainted codfish; coffee becomes to him an article of luxury thru its high price, and of sugar he can only taste that filled with molasses and impurities. The body is deprived of healthful and necessary alimentary fluids; the brain is unbalanced; alcohol in the form of rum filled with aromatic substances, as a stimulant, is used to substitute the fibrine and oxygen of the blood; and that man, without bread for the spirit or meat for the muscles, lives haphazard in expiation of unknown crimes. No, it cannot be that this balmy air originates this state of prostration of our peasants, for within the same atmosphere are those who with the same organisms struggle for a living and win. This eternal groan of the Porto Rican laborer is an infirmity of our present day society, and consequently it is necessary to study it and remedy it. . . .

In the language of a commission appointed by the Secretary of War in 1899 we find

That ignorance should prevail among a people when not a single building has been erected especially intended for school purposes, and not a single structure worthy of the name exists upon the island, is not to be wondered at.

It is estimated that fully nine out of every ten persons upon the island can neither read nor write, and of the children of the usual school age not one out of every ten attends school of any kind. . . .

The schools we visited are simply pretensions to education, and in the United States would not be regarded as being worthy of the name. The miserable hovels into which these schools are crowded, the unwholesome and unhealthy conditions surrounding them, the lack of the smallest conveniences, and the entire absence of a good system of school books, is everywhere noticeable.

Up to 1919 we had built 497 school-houses, ranging in cost to over \$100,000 each, with 2984 teachers; and the expenditures for educational purposes amounted to \$2,467,703.29 for the fiscal year ending June 30, 1919. Of course the modern system of education is provided, and as many conveniences as possible are given. However, there is yet great room for improvement, as evidenced by the statistics which show that even now only slightly more than one-third of the school-age population is actually enrolled in the schools, and the Governor of Porto Rico has strongly recommended that the Government of the United States extend financial aid in order that the insular school system may be enlarged and extended.

Other conditions have changed to the same extent. Governor Yager states in his report of 1919 that "some dreadful diseases, such as yellow fever and perhaps smallpox have apparently been permanently banished from the island, and many others seem to have been brought under definite control." For ten years before the American occupation the average annual death rate from smallpox was 621; in 1917 only three cases were reported, with no deaths.

The country has been greatly benefited by its wonderful system of roads. The Spanish in all their years of occupation had constructed only 250 kilometers of state and provincial roads, which, however, have been acknowledged by modern engineers to be of marvelous construction and enduring monuments to their builders. Since we took over the island there have been constructed 935 kilometers of roads, up to 1918, and now the whole island is connected by a closely-woven system of fine, macadamized roads, kept in perfect condition.

A trip into the interior of Porto Rico by automobile, over these wonderful roads, is a revelation to one unaccustomed to tropical vegetation and to Porto Rico. One rides thru practically virgin forests in which all manner of plants and fruits grow in the greatest profusion, only to emerge to a view of hillsides, seemingly so steep that only a mountain-sheep could maintain a foothold, laid out in small farms and cultivated by the natives. Then on thru plantations of sugarcane, and fields of tobacco, with occasional glimpses of fruit-laden banana trees, and up to the heights where one can see the gorgeous intermingling of all colors in the bright valleys of Caguas and Cayey. One will unconsciously exclaim, "This is the garden spot of the world!" and yet will not be saying more than did Ponce de Leon when he called Porto Rico "the gate of riches."

The Labor Court

(Continued from page 317)

A was charged with being a "trouble maker." A squat, square-headed, white-faced, phlegmatic Slav, he sat and listened to his trial. Next to him at the table sat two tailors from his shop, picked at random, the only members of the Trade Board of eleven, as originally constituted, besides the chairman, whom either side had found it worth while to have present. They were there to answer questions and watch proceedings. The Trade Board was originally organized as a body composed of five union representatives, five company representatives and an impartial chairman, but it no longer functions as a joint council. Both sides are interested only in Mr. Mullenbach's decision and their Trade Board representatives have ceased to meet. Next to the tailors sat the two union deputies who were conducting the case for A. At the end of the table Mr. Mullenbach presided. On his left the dark, keen deputy for the company carried on the prosecution.

The first witness, a fiery Jew, foreman in the defendant's shop, testified that A had refused him "any satisfaction" in the case of a stitcher who was doing bad work; and that when the witness insisted on taking the matter up with the superintendent, A had said "I'm thru with you," hinting at trouble ahead among the foremen's workers. The foreman gave testimony also to convict A of lying in order to gain recruits for the union. In a cross examination of the witness by the union deputies, an instance of bad language used by him within hearing of women came to light, and, lawyer-like, the union deputies pounced on the item to discredit the character of the witness. In the course of proceedings the people in A's shop asked for a postponement of the hearing and during the interval they disposed of the case by deposing A and electing a substitute.

This case got no further than the Trade Board. The union deputies might, however, have had it appealed had it gone against them, to a higher tribunal. This tribunal is the Board of Arbitration, composed theoretically of the company's lawyer, the union's lawyer, and Mr. Tufts, Professor of Philosophy in the University of Chicago, but practically of Mr. Tufts. This Board has recently begun to act also as a supreme court for the other men's clothing houses in Chicago which are installing similar systems. It is a court of appeals for 35,000 workers.

The union representatives claim that the organization has increased the efficiency of Hart, Schaffner & Marx 60 per cent. The management says, too, that efficiency has improved since the recognition of the union. Just how much of the improvement is the work of the management and how much the work of the union, it is impossible to say. Take the "stoppages." A stoppage is not a strike, and yet it is a double strike. It is a strike against the company and a strike against the union.

Thirty buttonhole girls quit work. They do not walk out; they just sit still and talk. They send a delegation and demand to see Mr. Strauss, the general manager. Mr. Strauss goes to see them, but brings along a union official. He will not settle with them while on strike. Has not the firm of Hart, Schaffner & Marx always lived up to its agreement? Yes. Are you not members of the union? Yes. Is there not a Trade Board always in session and always deciding disputes? Yes. Have Hart, Schaffner & Marx ever refused to carry out a decision of the Trade Board? No. Well, then, why not go back to work? It turns out that the union official had not taken up their complaint when it was made several weeks ago. Then you are on strike against the union, are you not? Yes. The union official now tries his hand. It is his task to get them back to work. Oratory, threats of expulsion, appeals to the workers' sense of responsibility for the success of the agreement, to their loyalty to the Amalgamated Clothing Workers of America, promises to attend to the grievance at once—these follow in eloquent succession, and the workers are convinced.

Stoppages are costly to the company and costly to the fellow-workers. But they are the way the rank and file keep the officials and the company promptly up to date.

Twenty years ago the men's clothing industry was a sweatshop industry, scattered in contractors' shops over the city. There were Polish shops, Scandinavian shops, Jewish shops, Italian home workers. Today the shift has been from the sweatshop to the factory.

Along with this change in industry has gone a change in industrial government. The Amalgamated Clothing Workers' Union, beginning as a radical industrial union, unaffiliated with the American Federation of Labor, is developing, under the leadership of Sidney Hillman, into a constructive organization doing a big work in stabilizing the industry and enforcing responsibility on the rank and file. Its members, many of them exiles from the revolution of 1905 in Russia, have long since postponed indefinitely the date when labor is to take over all industry and operate it. The Plumb plan, they say, may be good enough for the railroads, but it will be long before the workers in Hart, Schaffner & Marx have sufficient education to enable them to run successfully the industry in which they are engaged. Furthermore, to them capitalism is no longer autocracy. It is constitutional government. Their jobs are secure. They can be dismissed only on hearing and trial by a judge whom they have an equal voice with their employer in choosing, and whose salary they share equally in paying. Their wages have advanced beyond the cost of living, also by decision of the impartial judge. Due process of law has equalized the struggle for power. Dictatorship of the proletariat is no longer looked for. The Trade Board and the Board of Arbitration have been substituted for the Red Guard.

Clipped Yew Hedges at Holme Lacy, Herefordshire.
From "Garden Ornament," Charles Scribner's Sons, New York.

AROUND THE WORLD in the Garden English Garden Series No. 1

THE splendid old Yew hedges at Holme Lacy are full of delightful interest and form the best possible background to borders of hardy flowers. In some of the manor house gardens of England there stand rows of stately Yews, each tree at a certain height, stretching to right and left to meet its fellow, so forming a series of great green archways in order that each archway may give a different view of some aspect of garden beauty.

We have many beautiful evergreens suitable for such plantings. Yew is the tree most generally employed for topiary work but Box is also excellent—and for walls and close hedges, Hemlock, Spruce, American Holly and the favorite Privet are admirably suited.

That "Secret" Marriage

(Continued from page 311)

the venture prove itself a liability instead of an asset."

Well, whatever they do they cannot now "go quietly apart." Whether the venture pays or fails a plenty of people will see to it that the adverb "quietly" is stricken out of the contract. If they keep up their hocus pocus marriage, good and well, but if they do not they cannot range the highways of society as a single man and a single woman. There must be the usual dust in a divorce court before they can risk another adventure.

But these two young people are not so much to blame for the trick they have played as the mind of the times in which they live. There is too much exploiting of that "breakfast table cloth, stale with soft boiled egg stains," to which Mrs. Danielson unhappily likens the married relation "after a few months." There is too much said and written and dramatized about the worst and not the best of married life. The men and women who live honestly and well together do not get themselves written up, nor their patience and goodness portrayed on the film and the stage. Therefore up and doing young people like Mrs. Danielson are afraid to risk this relation upon which the honor of society and the sanity of the world depends.

During these five years of this marriage no children have been born to Mr. and Mrs. Danielson. This is an indictment or a misfortune. But if there should be children, she will not burden herself with the care of them. She will employ a competent person to do that. No one will deny that this is the wisest course she could possibly pursue under the circumstances. But some very good children who have become men and women bulwarks of this nation have been nursed, bathed, dressed, nourished and trained by their own parents.

When pushed further into the corner by these lively reporters, she did not think she would allow Mr. Danielson to move over and live like a respectable parent in the house with his own children even if they should have these indefinitely deferred children. She probably knows he would not be much help to her in bringing them up, and the noise he might make at the piano would no doubt interfere with her own composition of short stories. A lot of people who can bear to hear a rooster crow without having Carlyle fits, could not possibly endure operatic music in the dead hours of the night when they have to do a love scene the next day with nothing but a pen and their own brains. Still if you marry a musician, you ought to be willing to take the consequences, as many women do when they marry men who snore, or use tobacco, or beat their wives. It is not wrong to live with your husband if he plays the piano. It is brave, and exactly what you ought to do, because he will be a better man if you do, altho he may not have such

a good time. And this is one of the main objects of the married relations, to make better men and better women of those who enter it, people who do not think first and most of their own pleasures and convenience, but of what is right and proper toward each other and toward society. In marriage you are not supposed to evade, but to assume your responsibilities and live up to them, even if it ruins your opera and your literary career. Your duty is to take one another for better or for worse, to live with one another and bear with one another in the customary manner, because if you do not others will follow your example and make a mess of what you claim to have made a success. "Act only on that maxim which thou canst at the same time will to become the universal law." Not even Mrs. Danielson will claim that the way she lives her married life should be the accepted universal way of living in the married relation. She is petting herself, making an exception of herself because she is a professional woman with a career to keep. Nobody's career is so important as one marriage well made.

The Valley, Georgia

Pebbles

Where there's a will there's a lot of poor relations and a law suit.—*Froth.*

There are few persons with courage enough to admit that they haven't got it.—*Life.*

A Neighborhood Nurse was bandaging a little boy's hand which had been badly cut with a pen knife. The boy surveyed his injured fingers ruefully.

"How soon do you think I'll be able to play piano?" he asked.

"In about a week," the nurse answered.

"That's funny," replied the boy. "I never could play piano before."—*Better Times.*

The Woman you were meant to be

IF your dearest wish is for health—beauty—attractiveness—it is a perfectly natural wish. It is just as natural to have these things. Any woman can have them. Read these health facts and beauty truths that bring better enjoyment of life itself.

How Any Woman May Acquire Buoyant Health

There is just one way to gain—or retain—womanly health. But it is an *easy* way. The woman who accepts it, is on the high road to health, happiness and attractiveness to others. You only need to know and apply a few natural principles. This necessary nature-knowledge is at last offered in simple, understandable form.

You may now obtain it without delving deep in the realms of science.

The Whole Secret of Personal Attractiveness

—is health. Your outward appearance depends—entirely—on conditions within. With the right information, you can make those conditions bring about *astonishing* results. Here is the way:

The new Olympian method reveals to you what *makes* a supple body, a bright eye, clear skin, healthy hair—and it becomes absurdly easy to develop them. You learn just what causes ailments you may now accept as a woman's lot—and eliminate them, naturally.

What You Can Accomplish in a Month

By this plan you can make surprising progress in bodily health and mental comfort. Constipation, for instance, is easily ended. Worrying can be cured. Surplus weight is

removed—without denying one's self the dainty desserts and other pleasurable foods. Wonders are worked toward a more shapely form, graceful contour and carriage—without *punishing* the system.

Try to realize this: by the method here offered, you will see results in a *week*. 30 days will be a positive revelation.

Just Three Things Can Cause Luxurious Hair

You'll learn many surprising things about yourself.

Only three things can cause—or prevent—healthy, plentiful hair. They are soon understood. Not to know them is a pity.

What you will learn about *nutrition* will enable you to make your weight almost what you will.

Do you know that the average woman is but 55% efficient? Why? How easily efficiency is increased?

—That a *mental* tumor may be the cause of a bad complexion or an aged expression? That a *chair* in your home might be the sole reason for unpretty back or shoulders?

Too little sleep—or too much—makes trouble; find out just how many hours you should sleep. And what baths, air, clothing can do for your color and skin.

The Olympian Society's Offer to the Women of America*

This remarkable aid to health and happiness is a course which twenty-six authorities—men and women—gave years to work out. It is comprehensive, complete knowledge—compressed to simplest form.

The course has been thoroughly tested. Actual results have exceeded all hopes. So its sponsors now offer it to American families in general—on approval, with no advance payment, no obligation to buy.

For your own sake, don't pass by or postpone the opportunity to inspect Olympian. It is beyond anything you have seen, or thought possible. If you enroll, you will be in close touch with Olympian Society for *nine months* under expert guidance and counsel—receiving benefits too numerous to even list here.

Do Not Send Any Money

We wish you to see the value of this course before paying a penny. Its first cost was huge, of course. But your individual share to pay—should you enroll—is *trifling* compared to what you get out of it. Just the coupon, plainly filled out, brings complete Olympian material for free examination.

Mysteries of Motherhood

Successful motherhood; adorable children. Thoroughly explained. What to believe—and not to believe. Preparation for motherhood. Exercises for mother and child. Important things, so little understood. Sex truths. Wonderful benefits in this department.

OLYMPIAN SOCIETY,
10 E. Jackson Blvd., Chicago.

Please ship, prepaid, complete text and material for examination, without obligation. Within 5 days of receipt, I will return everything at your expense, or signed enrollment blank, with payment of \$2.50.

AS Leslie's special foreign correspondent, the Baron Eugene de Schelking places at your disposal a most intimate knowledge of the continent, as seen from the inside. Russian by birth and education, he has made a notable record in the diplomatic service of his country—in Greece, France, Spain, Holland, and Germany. In the field of Russian journalism, as well as diplomacy, he ranks high.

He is conspicuously equipped to interpret for you European conditions as they are today—with special reference to those now existing in Germany.

His articles in Leslie's scheduled for the coming year are another exclusive Leslie's feature that you will not want to miss. Five dollars will bring Leslie's to you 52 times every week for a year. We can send the bill later. Your name and address—your card—will be enough to insure immediate subscription. Send it now.

Religious Work at Chautauqua

THE religious program at Chautauqua this season will be rich. The work of this department includes daily classes, numerous conferences and special addresses. It aims at expression of the religious interest of the community, with classes which begin on the Fourth of July and continue seven weeks; a training group for pastors' assistants; a Sunday School Institute commencing August 1 and continuing three weeks in cooperation with the educational departments of the New York State Sunday School Association; the Congregational Denomination, the Unitarian Denomination, and the Disciples Denomination, and offering regular courses and conferring certificates; special religious work with the children on week days and Sunday in cooperation with the other children's activities.

The calendar: July 5, classes open; July 5 to 23, Prof. T. R. Glover, of Cambridge University, teaches; July 5 to 23, Miss Georgia L. Chamberlin teaches; July 12 to 30, Prof. J. Clark Archer teaches; July 26 to 30, two short courses; July 5 to August 13, Dr. Jesse L. Hurlbut teaches; July 5 to August 20, training course for Church assistants; August 2 to 20, Dean Shailer Mathews teaches; August 2 to 20, Prof. Luther A. Weigle teaches; August 2 to 20, Miss Chamberlin teaches; August 2 to 20, Sunday School Institute; August 5 to 20, Foreign Missions Institute; August 22 to 27, Foreign Missions Institute and Ministers' Institute.

Some of the Weekly Chaplains will be: Week of July 4, President Lynn H. Hough, Northwestern University; week of July 11, Principal Alexander Grieve, Congregational College, Edinburgh, Scotland; week of July 18, Dr. Frederick F. Shannon, Central Church, Chicago; week of July 25, Dr. Cornelius Woelfkin, Fifth Ave. Baptist Church, New York City; week of August 1, Bishop Herbert Welch, Seoul, Korea; week of

August 8, Dr. Shailer Mathews, Chicago.

of Yale will teach daily classes in Missions, especially on The Near East and Christianity, and Mr. Glover will teach the New Testament and Church history. In August Dean Shailer Mathews will give courses on the life of Jesus and the life of Paul, and Professor Weigle will give a course in Religious Education. These are three-week courses.

The six-week courses will be given by Miss Chamberlin on The Use of the Bible, Religious Education, Bible stories and so on, and by Dr. Hurlbut on the International lessons and lectures on the Model of Palestine.

August 22 to 27 will be Ministers' and Religious Workers' week, including Foreign Missions Institute; the council of women for Foreign Missions, and a Ministers' Institute under Dr. Mathews. Daily addresses by

Bishop William F. McDowell, of Washington, D. C.

Visitors drawn to Chautauqua by the attraction of these different items in the Institution's religious work will have the advantage of all the other educational, cultural and recreational opportunities of the summer assembly. The various denominations have headquarters at Chautauqua where social gatherings, both formal and informal, are frequently held. Frequent opportunities are given to become acquainted with distinguished men of the respective denominations who appear on the Chautauqua program.

In personnel, in facilities for study, in organization, and in its atmosphere of inspiration the opportunities at Chautauqua are unsurpassed. A gate fee to the grounds gives admittance to lectures, concerts, entertainments, and athletic events which at any individual charge would total many times more than the concentrated fee. Board and rooming accommodations may be had at various prices and there are special arrangements for ministers and others to give their

full time to religious work.

If Labor Takes the Helm

(Continued from page 316)

Jowett were no longer the advanced men of 1910. They had not gone back, but others had come up and gone beyond.

In the workshops of the Clyde, the Socialists of Marx or of Macdonald has become a back number. Syndicalism, direct action, Soviet government, and the class war were now the doctrines which swayed large masses of the younger men, and made labor politics very uncomfortable for the nominal labor leaders.

The first step of the wild men was to carry a resolution of the Trades Union Congress calling all labor men out of the Government. Before the ink on the armistice agreement was dry, the Labor party had declared a new war, a civil war, a class war, war without truce upon capitalism and all its works.

While the Coalition Government has been tackling the rough jobs, binding up the wounds of war, rebuilding industry, providing for millions of returning soldiers, sapping the mountain of war debt, the Labor party has neglected its Parliamentary duties, has refused to help in the work of government, and has been playing its own party trumpet in the provinces.

As a result the Coalition Government has lost some seats at by-elections and the Labor party has profited—I might say profited.

But the Labor leaders have had to pay a price for these untimely triumphs. Forced on from behind by the wild men, they have had to adopt socialism, or, as they now call it, nationalization, of the means of industry as the first plank in the Labor program.

A great effort is now being made to take them two steps further, and to commit them to the principle of Soviet government, the policy of direct action of the means of industry as the as a purely political weapon.

So far they have resisted. As the pressure on the Labor leaders increases, two results will follow, as the day follows night. First, the Liberal and Conservative electors will be drawn more closely together to defend the constitution and the foundations of British commerce and prosperity from these rash and ill-considered experiments. Secondly, the so-called Labor party will split in pieces.

It is at present a coalition of men and women of most widely differing principles, individualists, Socialists, syndicalists, direct actionists, parliamentarians, with a vigorous tail who preach trust in the Germans, friendship with Bolsheviks, but hatred and the class war at home.

They are temporarily united in a common policy of nationalization, which, when it is understood, will be repudiated by half their followers.

The one thing they are agreed on is that they desire a Labor Government.

It is a thing they are unlikely to get.
London

Never a corn on millions of feet nowadays

Do you know that millions of people who use Blue-jay keep entirely free from corns?

If a corn appears it is ended by a touch. A Blue-jay plaster or a drop of liquid Blue-jay is applied.

The corn pain stops. Soon the whole corn loosens and comes out.

The method is scientific. It is gentle, easy, sure. Old-time harsh treatments are supplanted by it with everyone who knows it.

It is made by a world-famed laboratory, which every physician respects.

It is now applied to some 20 million corns a year. You can see that corn troubles are fast disappearing.

Then why pare corns and keep them? Why use methods which are out-of-date?

Try this new-day method. See what it does to one corn. You will never forget its quick and gentle action. Your druggist sells Blue-jay.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. When the Angler's Reel Begins to Sing. By William E. Brooks.

1. What effect does the article produce on the reader? By what means does the writer produce this particular effect?
2. Select at least five especially picturesque sentences. Read every one of these sentences aloud, reading them in such a way that you will emphasize the beauty of which they speak.
3. Summarize the reasons the writer presents for enjoying the outdoor's world.
4. In what ways does the article resemble Stevenson's "Inland Voyage"?
5. Point out literary references in the article. Why are literary references peculiarly appropriate in an article of this sort?
6. What effect is produced by the abrupt beginning of the article?
7. Make a list of at least a dozen unusually effective adjectives, or adjective expressions.
8. Write a character portrayal of the writer of the article, of "Ned," or of "Pat Garrity."
9. Write an original story that will tell of some imaginary incident in the life of any one of the three persons just named.
10. Point out five examples of the use of figurative language. Tell why the figures are appropriate.
11. Visit the nearest library, and prepare a report on one of the following books: Henry Van Dyke's "Little Rivers"; Izaak Walton's "The Compleat Angler."
12. To what literary type does the article belong? What are the characteristics of that type of writing?
13. Write an original article that will imitate the method and the style of this article.

II. The Labor Court. By Professor John R. Commons.

1. Write a brief for an argument for or against either of the following propositions: The Labor Court benefits employers; The Labor Court benefits employees.
 2. Explain why it would be possible, or not possible, to apply the methods of the Labor Court to the problem of school discipline.
 3. By what means has the beginning of the article been made effective?
 4. Explain the full significance of the last sentence.
- III. A Message from the British Nation to the American People. If Labor Takes the Helm. By the Rt. Hon. C. A. McCurdy, K. C., M. P.
1. Find an example of hyperbole. What advantage is gained by using hyperbole?
 2. Write a series of well-formed sentences, in every sentence telling about a different revolutionary change produced by the World War.
 3. Summarize, in the form of a brief, the reasons the writer gives for wishing, or for not wishing, the Labor Party "to take the helm."

IV. A Message from the United States Government to the American People. The Gate to Riches. By Secretary of War Baker.

1. Explain in full why it is appropriate to call Porto Rico "The Pearl of the West Indies."
2. Write a short outline of the article, showing the principal points around which it has been constructed.
3. What means does the writer employ to make his exposition entirely clear?
4. Draw from the article material that you believe tends to increase one's love for the United States.

V. The Independent National Convention.

1. What is a symposium? What is the advantage of a symposium?
2. Explain how the editors of a school paper could make use of a symposium concerning important school questions.
3. Write a paragraph in which you point out what conclusions may be drawn from the present symposium.
4. Select from the letters presented the sentences that you think most striking or most significant.
5. Draw from the article material for a series of statements of principles in which you believe.

VI. Let the Office Seek the Man. By Charles M. Sheldon.

1. Write an argument for or against the principle in which the writer of the article believes.
2. Explain how the method of "letting the office seek the man" could be applied to the management of school athletics and of school organizations in general.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Presidential Campaign—"The Independent National Convention," "Wilsonism as an Issue."

1. Quote those sentences in the published letters which most nearly express your own ideas upon the coming election.
 2. Why, in spite of the evidences that Hoover is a popular favorite, has he so few delegates pledged to his nomination?
 3. Summarize the chief claims of each of six candidates as expressed in the published letters.
 4. Look up the history of the administration of Cleveland, Lincoln and Washington to find evidence in support of Mr. Hapgood's first paragraph.
 5. "The platform and the nominee . . . must agree with him [the President] at least in sharing his vision and his lofty will." Upon what grounds does Mr. Hapgood base this assertion?
- II. Political Conditions in the Near East—"Wilson Urges Armenian Mandate," "Armenia's Big Brother," "The Position of Persia," "The Polish Drive," "Bolshevik Take Persian Port."

1. State the arguments in favor and against an American mandate in Armenia.
2. Review the steps by which Great Britain gained exclusive control of Persian affairs. What is President Wilson's attitude on Persian affairs?
3. Is the Polish drive against the Bolshevik justified? Is the Bolshevik drive in the region of the Caspian Sea justified?

III. Nitti on the Tight Rope.

1. Describe the political conditions which make it possible for Nitti to be a "premier without a majority party to back him."
2. "The Italian army is still kept on a war footing? Why?"
3. "Until recently the Vatican held to the policy adopted by Pius IX." etc. Give the history of the adoption of this policy.
4. "The Chamber is divided into three not very unequal parts." What is the program of each of the three parties?

IV. Mexico's Latest Revolution—"The Murder of Carranza," "The Mexican Tragedy."

1. Describe the social, economic and political conditions in Mexico which make frequent revolutions possible.
 2. How many changes in government has Mexico undergone in the last ten years?
 3. Why was the government of Carranza overthrown? Why was Carranza himself murdered?
 4. What will be the probable attitude of the United States toward the new government?
- V. The Gate to Riches.

1. "The gold-laden Spanish galleons, in hiding from the piratical Morgan." Explain this expression of Mr. Baker.
2. Compare the conditions in Porto Rico under Spanish dominion with those which now exist.
3. What possibilities exist in the island which justify the title of this article?

VI. The Labor Factor in Present Society—"The Labor Court," "If Labor Takes the Helm."

1. Describe the industrial system which is in operation in the factory of Hart Schaffner & Marx.
2. What are some of the problems which come before the "Labor Court" for settlement?
3. According to the author, where does the danger of a breakdown in the present system of industrial organization in the Hart Schaffner & Marx plant lie?
4. "Labor has become a political force of first class importance." What conditions in England justify this statement?
5. What were the original aims of the Labor party in Great Britain? What are their present declared aims?

VII. The Railroads—National Highways.

1. What, according to Dr. Williams, are the chief causes for the decline in railroad revenues?
2. What are some of the reforms in railroad administration advocated by the author?
3. What ultimate solution of the problem does the article suggest?

VIII. The Slump in Prices.

1. What are the chief causes of the slump in prices discussed in this article?
2. "Food prices have not decreased." Why not?
3. Discuss Mr. Hoover's explanation of high prices and the remedies which he suggests.

Remarkable Remarks

JOHN BURROUGHS—How do squirrels use their toe nails in climbing trees.

EUGENE V. DEBS—I will conduct my Presidential campaign at home in seclusion.

LORD ROTHERMERE—Europe is sinking deeper every month into a financial morass.

NATIONAL DEMOCRATIC CHAIRMAN HOMER CUMMINS—And Congress still talks.

VICE-PRESIDENT MARSHALL—There is enough for the church to do without trying to reform Congress.

MISS MARGARET WILSON—I believe the American woman rather enjoys that seven day breakfast arrangement.

AUGUSTA RUCKER, M.D.—In examining 414 successful business women recently, not one measured up to normal.

SIR J. FORTESCUE FLANNERY—The peace of the world can be maintained only as long as the British navy is paramount.

FRANK B. GILBRETH—Chairs share with lighting the most important place in the problem of eliminating unnecessary fatigue.

HENRY COLLINS—If you prefer high collars to your coat that reach to the ears, you will do well to choose a hat that slopes upward.

W. G. MCADOO—I doubt most seriously that I possess the qualifications required to meet the exacting requirements of the present situation.

HERBERT N. CASSON—Have you not noticed that while a professional man tends to become narrower, a business man tends to become broader?

THEODORE DREISER—I, musing around among religions, philosophies, fiction, and facts, can find nothing wherewith to solve my vaulting egoism.

STEPHEN LEACOCK—It does not do to say that in England all the decent people are opposed to prohibition. So they were in the United States.

REV. J. H. OLMSTEAD—It is conceded now that the greatest optimist in the world is the man who persists in keeping his cork screw on his key ring.

SENATOR CAPPER—Wall Street melon patches continue to be warmed by the sun of privilege, fertilized by the perspiration of labor, and watered by the tears of poverty.

GEORGE LANSBURY—I want to say as emphatically as I am able that within the limits of their means, which are very small, the Bolsheviks are more humane, more civilized in warfare and in their treatment

of prisoners, than any other government I know.

PREMIER LLOYD GEORGE—The Soviets hold the same opinion of the League of Nations as the United States does.

There was a young man so benighted,
Who never knew when he was slighted.
He went to a party,
And ate just as hearty
As if he'd been really invited.

—*New York Globe.*

The Man of Law—But, my dear madam, there is no insurance money for you to draw. Your late husband never insured his life; he only had a policy against fire.

The Wonderful Widow—Precisely. That is the very reason I had him cremated.—*London Passing Show.*

The lunatic asylums, already bursting with patients who succumbed to the strain of calculating the income tax, may now expect a vast new pressure from the people who have had to make, read and travel by the new spring, conflicting state-law, double-time, railroad time-tables.—*Life.*

"Well," said Farmer Contossel, "I'm glad the railroads have gone back to private ownership."

"What difference does it make to you?"

"I can speak my mind to the station agent without feelin' that mebbe I'll be criticized for showin' lack of respect to a Government official."—*Washington Star.*

A foreman in an Oldham mill noticed one of the machines idle, and asked the next man "Where Bill was."

He didn't know, and after several inquiries Bill was seen returning.

"Where'st bin, Bill?" asked the foreman.

"Bin to get 'air cut," said Bill.

"What, 'air cut in firm's time?"

"Yes; it grows in firm's time, don't it?"
—*London Evening News.*

CHANDLER SIX

Famous For Its Marvelous Motor

Why The Chandler Holds Its Leadership

THE Chandler car has attained and held its place of leadership among all sixes, by steadfast pursuance of worthy policies.

There is but one Chandler car, one Chandler chassis. To that chassis, for seven years, have been devoted the ambitions and the engineering ability and the sincere purposes of its builders.

Featuring this sturdy chassis is the famous Chandler motor, brought to a plane approximating perfection through these years of refinement and development.

Nearly eighty thousand Chandler owners know the excellence of this motor. They know its power, and the flexibility of its power. They know its endurance. They know its economy. They know it affords all the speed that any responsible driver would ever wish or dare to use. They know that on mountain roads it leads the way up.

On this one chassis are six handsome and comfortable types of body, built by America's best body-builders and splendidly finished and cushioned.

You Will Be Delighted With a Chandler

Where the Money Goes

A Message from the United States Government to the American People

By Medill McCormick

United States Senator from Illinois, Chairman of the Senate
Committee for Consideration of a National Budget System

THE United States no longer is the only civilized nation on the face of the earth without a business form of government. Within the last few weeks, by almost unanimous action of the House and the Senate, there has been placed in the statutes a law giving to the United States, in place of its old slipshod, haphazard business system, the most up-to-date plan of business administration of any government in the world.

The reform of the financial methods of the Government, agitated with increasing energy for twenty years, was brought to consummation by the consciousness of the people to the economic burdens resulting from the world war. The French and the British national debts today are, as a result of the war, ten times what they were in the early summer of 1914. The United States, which had been relatively debtless before the war, today owes \$26,000,000,000—or very nearly twenty-five times as much as before we entered the conflict in 1917.

There has been a corresponding increase in taxation. Not only are the taxes levied by the national government five times what they were five years ago, but the cost of the state governments, which played little part in the actual financial support of the war, is five times what it was twenty years ago. The people are not only burdened by the swollen debt and the aggregate taxation, but they are suffering no less from the inflation of the currency due to the increase in debt and the continuing deficit between revenue and expenditure.

In order that the country might be the better able to meet the problem presented by this economic situation, Congress has sought to provide by law for a budget system similar to that which existed under Alexander Hamilton and his immediate successors, and analogous to the systems which obtain in other democratic countries.

It has done so. It has created a system which is

Harding in Brooklyn Daily Eagle

Housecleaning is a big job when you've put it off too long

better than its exponents ever dreamed of accomplishing two years ago and better even than many of its advocates hoped for last fall when it became apparent that Congress was considering the question seriously with a view to enacting legislation.

In a general sense, a budget is an estimate of revenue and expenditure for the forthcoming year, presented by the executive for the consideration of Congress. But it is more than that. It is an estimate in detail as well as in summary of the proposed expenditures and must be prepared in such form as in itself to institute comparisons between past years, the current year, and the year in prospect for which the estimates are submitted.

It was the judgment of both the House and the Senate that the President should be made respon-

sible for the annual budgets of his administration. For a time there was a difference of opinion between them as to the method of preparing the budget. The House in its bill, sought to set up in the executive office an independent bureau, for the preparation of the budget. The Senate, on the other hand, held to the judgment that the Secretary of the Treasury should be vested with the powers once exercised by Alexander Hamilton; that he should resume the functions of a true minister of finance, and be the President's chief and responsible deputy in supervising the preparation of the estimates.

The conferees, after a most thoro and deliberate discussion of the whole problem, agreed in principle with the view of the Senate. So from this time on, the Secretary of the Treasury not only will supervise the raising of revenues to meet the expenditures, but he will have, as Hamilton had and as Glass demanded, the power to supervise expenditures and to revise them if necessary, as well.

For the first time since the early days of our Government, the executive branch [Continued on page 369

Washington—The City of Disillusionment

Where Everyone Is Hunting a Soft Job and Promotion Comes by the Aid of the Undertaker

By Chester T. Crowell

WASHINGTON is the most depressing city I have ever seen, I believe it is the most depressing on the North American continent. It has no more in common with the remainder of the United States than some foreign watering resort. There may have been times in the dead and gone years when its tinsel dazzled the eyes of the plain citizen from the brushwood. In fact, I am assured that there have been days when Washington really was the place for a newspaperman or a public man to polish his experience with a certain brilliance to be acquired nowhere else. Today it is a political graveyard and it is not the goal of the best newspapermen. Neither has it much to offer to the scores of professions and trades which it employs in the multifarious Government activities.

I saw Washington for the first time last November and I was comparing it—quite naturally—with Houston, Dallas, San Antonio, Fort Worth, El Paso and other Texas cities, those being the only cities in this country I had seen until 1919. Since then I have failed to see only the Pacific Coast. The Texas cities I have named have better hotels than Washington. I went to Washington expecting to be a poor country boy, standing aside to watch how the city folks behave in order not to make a public show of myself. After a week I felt a

keen desire to call a convention and explain to those people how far behind Dallas they are. Their street car service is poor, their hotels are historic, extremely so as one can readily observe by reading the right hand side of the menu card. The street paving is in a bad condition of repair which may be blamed on the war, but there is nothing notable about it at best. Beautiful trees and large numbers of monuments grow along the Washington streets. The public buildings are marvelous. Otherwise the place is a net loss.

About 80 per cent of the population is engaged in a bitter losing battle with the high cost of living. They appeal pitifully to Congress for help. Most of them are not going to get help. I am in favor of their not getting help. They ought to get out. An enormous number of them are doing things which really need not be done. It isn't their fault. They are innocent victims of a lot of foolish activity which profits no one and is therefore poorly paid. But they have been doing these things—whatever they happen to be—and they are not well paid and they think they ought to have living wages. I think so too. I think they ought to resign and go and get living wages. There is plenty of work in this country. It is an outrage that so many thousands of persons should still be hanging onto their jobs in Washington when they are urgently needed elsewhere to assist in useful

U. S. Army Air Service

During the war Washington was swamped with stenographers, clerks and experts, many of whom had offices in the munitions buildings or the Navy Department Annex shown above. And now that the war is over some of the routine workers still hang on. Sincere, honorable, hard working men and women, they are not well paid and they think they ought to get better wages.

Mr. Crowell thinks they ought to resign and go into work of their own

production. I do not mean that they ought to go to the farm. But there is a shortage of stenographers nearly everywhere in the United States, while Washington has hundreds of them doing work that is worse than useless. They are good stenographers, good clerks; there is a tremendous amount of potential efficiency among the employees of those Government offices. They are sincere, honorable, hard-working men and women. But they think the Government ought to make some sort of an arrangement by which they could find their reward for years of faithful labor. No such arrangement is ever going to be made under a Government like ours. It is approximately impossible.

Recently I read the comments of the Secretary of Agriculture on the subject of the loss of experts sustained by his department on account of its inability to pay higher salaries. Some of his best trained men have gone to private companies and individuals. That occurs to me as an excellent outcome. Since the Government is not an institution operated for profit its wage scales cannot be shifted up and down to meet changing conditions. There must come periods when private industry will take Government employees. I am in favor of it doing so. Surely there is not such a dearth of brains in this country that the United States Government is going to have to go out of business because of the loss of even half its experts. Private industry trains men. The Government can assist in training men, can search diligently for men to replace those who go.

But there is a peculiar point of view in Washington which does not exist anywhere else in the country. In Washington when the Government employs you it is the correct thing for your backbone to turn to a cotton string and your will power to jelly. You are never going to leave Washington. You are never going to do anything but draw your pay checks on the appointed days. The Government owes you a living. Even Congressmen fall under the spell of it. Instead of going home at the end of their terms some of them try to get Government jobs. The atmosphere is the most poisonous I know in all this country. The people seem to have the same point of view as flunkies at some European court before the war. One never hears anyone speak of going into business for himself. One never hears a group of young men discussing

American Photo Service

The Washington monument as seen thru the colonnade of the Treasury Building is one of the show sights of the Capital

what I have always considered the great American game—getting off the payroll and into something for yourself.

I had often heard of men and women "using influence" and getting "soft Government jobs." Well, they use influence, that is true. The amount of shoe licking and the wear and tear on the knees incident to getting a Government job is something a self-respecting negro boy with his own shoe shine box would consider seriously. But after they have landed the "soft" Government jobs they are not receiving a large amount of money. Neither are the jobs soft, most of the Government employees have hard work. Persons employed by the Government are receiving one hundred to three hundred dollars a month with a heavy accent on the one-hundred-and-twenty-five class. Persons drawing three hundred dollars a month are plutocrats and aristocrats—subjects of unkind gossip. Persons who draw five thousand a year and upwards are simply crooks. No use disputing that—in Washington.

It would seem that no part of the country could be mistaken about the fact that a national capital exists to serve the people of the nation. But that point of view is not accepted anywhere in Washington. Such a statement as that causes an ironic smile. The assertion goes into the bales of propaganda sent out, but no one in Washington believes it. I supposed they believed it, before I went to Washington.

I knew they made many mistakes in Washington. All governments do. But I supposed everyone agreed that the capital city exists simply because the organized nation must have a headquarters. But it is not so. The nation exists in order to pay tribute to the beautiful, the wonderful, the cultured, the intellectual Washington. No other city in America is more fanatically loved by its residents than Washington. New York jokes about itself. Boston considers itself, philosophically, and finds a speck now and then. Philadelphia raves about her faults and curses her politicians. But Washington admits she is the queen of the universe and complacently takes it for granted that all the world bows before her while her own American subjects are delighted to pour out their wealth to do her honor. Just why Washingtonians think such silly things in the face of the brutal facts which they meet day by day I do not know.

In Wash- [Continued on page 375]

Even a super-skilled bricklayer laying four bricks in the old way goes thru all these motions in doing so

How to Increase Production

By Major Frank B. and Dr. Lillian M. Gilbreth

The same bricklayer laying the same number of bricks in the new way economizes in motions and conserves his energy

*Starting as a consulting engineer in the realm of things, Major Gilbreth's interest has gradually shifted to people and the problems with which they are confronted in adjusting themselves to industry. He believes that fear, fatigue, apathy play a tremendous part in the inefficiency of workers and must be eliminated before increased production can be secured. Other psychologists place their faith in the curing power of music or of the drama; Dr. Gilbreth, in occupational therapy. He is the inventor of the micro-motion and chronocyclegraph processes for determining methods for fitting crippled soldiers for industrial life. A member of various industrial societies, lecturer, author, he is perhaps best known by reason of books written in collaboration with Dr. Lillian M. Gilbreth, his wife, on *Time Study*, *Fatigue Study* and *Applied Motion Study*. Mrs. Gilbreth is also the author of a book on the *Psychology of Management**

THE great problem of today is increased production. This alone can pay up the war debts and make up the war losses. But to secure it, we must conserve and develop the workers. We must not only convince them of the need for more production, but must place and promote them to those positions where they can make the most production, must teach them *how* to make it, and must provide the incentive that makes the work satisfying.

During the war, a new type of specialist came into widespread public attention—the psychiatrist—the man trained in recognizing and curing mental diseases. He acted as an adjuster, and did this so successfully that those interested in industry, and especially in management, realized that he would be a valuable asset in the industries. The leader among these psychiatrists was the late Dr. E. E. Southard, Director of the Psychopathic Hospital in Boston, who threw himself into the work both in this country and abroad. Thanks to his broadmindedness and practicalness, the importance of psychiatry—a new thing to the average man—as a means of bringing the abnormal back to the normal, was made clear.

Even before the start of the great war, we had been

conferring with Dr. Southard as to the possible work that the psychiatrist could do in industry. At first he felt that this work would lie in the field of handling complaints only, but after we had outlined the Three Position Plan of Promotion, and its relation to minimum labor turnover and increased stability in industry, he agreed with us that the psychiatrist could well advise in the field of promotion.

In the summer of 1919, he gave a course of lectures for a group in training as employment managers. At that time we brought to his attention various types well known in industry, and not constantly in our Three Position Plan of Promotion, who are not properly utilized and fitted for their best opportunities. These twelve by no means cover all such types, but they are types constantly met by every manager that he does not understand and cannot handle properly, yet that we can all see have not been helped to fulfil the best of their possibilities.

In the death of Dr. Southard industry as well as psychiatry has suffered a great loss. But his fellows in his profession are ready and willing to carry on his work.

It remains for industry, and especially for man-

This cyclegraph record of work at a drill press indicates the different motions made when the work is new, after it has become habit and when it has been reduced to its fewest possible elements. At the left, the newcomer records indecision, fumbling and awkwardness. After he has been on the job a while (center), the curves tend to become smooth and almost identical. While if the operations are studied, the method improved and the apparatus standardized (right), the same work is found to involve only these two motions and great speed is made possible on the part of the worker

agement, to recognize its value, and to welcome this new group in the industrial field.

We shall describe in a few words the twelve types of misfits mentioned, in order to make plain the problem and the need.

First, the apparently unambitious employee, who refuses the opportunity to advance, tho apparently capable of advancement. Is this employee really unambitious, or is he simply modest and afraid to assume responsibility? Again, is he really capable of advancement or only apparently so? Dr. Southard told us of many cases in his experience that showed that, where responsibility was *forced* upon those who unwillingly assumed it, the individual upon whom it was imposed often could not rise to that which the new work demanded of him. On the other hand, we have not, in our experience, many cases in the industries that show that, when a person has been gradually given more responsibility, and has been properly trained to assume it in accordance with our standard practice of the Three Position Plan of Promotion, the results are satisfactory. Often what has seemed to be lack of ambition turns out to be timidity, over-conscientiousness, or a feeling of unpreparedness for the new duties.

Who is to decide whether the employee is right in declining advancement, or whether the manager is right in urging certain placement? Only an expert in diagnosing and understanding states of mind and analyzing causes and results of experience can make an adequate decision.

Second, the inquisitive employee, with an exaggerated curiosity incapable of sustained attention, who is apparently bored by standardized methods, and refuses to try them. Such curiosity shows itself in many ways, the distraction of attention if anyone pauses thru the room, or at the slightest new happening or even new noise, or if the desk of the foreman or other person in charge is in a location behind the worker while at work.

The dislike of standardization and everything pertaining to it may show itself in a decided tendency never to do things twice alike. We have met cases where this applied even to so simple and elementary a matter as the form of checking mark used in checking off items on a list. The attitude of the worker toward the principle and practice of standardization is one of the most interesting and valuable tests of fitness and of need of special training. Sometimes this aversion to or hatred of standardization is conscious. Sometimes it is a misguided conception of the relation between standardization and monotony. Very often it is unconscious, and the worker seems to find it impossible to do anything twice alike. We have had cases where inability to do work twice the same way was the first indication we noticed of a mental defect that was later recognized as insanity.

Perhaps no one thing will do so much to interfere with one's progress, yet in most cases can be cured so easily, as an aversion to or lack of habits of standard-

ization of methods in small as well as large things. Demonstration of the benefits of standardization and its relation to the One Best Way to Do Work and teaching of efficient methods will show whether there is anything seriously wrong with the worker or not.

Third, the worker who is constantly making valueless suggestions and inventions, or inventions downward in the path of cumulative improvement. This type is apt to tire even of his own inventions as soon as they are made, to such an extent that he is loath even to "try them out" himself, as he often has a new invention or at least a change, ready to suggest before his previous suggestion is even tried. His interest lies not at all in the result or improvement embodied in the suggestion or improvement, but simply in a desire to make changes from accepted standards, and in many cases he cares little or nothing for any changes with *which his name as suggester is not identified*. This type is very common. It is by no means confined to those occupying humbler positions. It often includes a type high up, and particularly those

thought of as "System Pests." One will realize how numerous are those of this type when one is engaged in installing management and finds how many people will suggest changes and new methods before they understand the method being installed, which is the "design from practice."

Fourth, the ambitious employee

with a strong desire for a specific job, for which he apparently is not suited. This type is very common, and our own experience has been that if a desire is *strong enough*, the worker will, in a surprising number of cases, overcome the apparent unsuitability, and will usually make good at the work he specially desires. It may be that he is therein gratifying a "suppressed desire." This is for the psychiatrist to find out. Countless examples of this type can be found among the crippled, and the number who have made good in spite of their apparent unsuitability has taught the manager and the psychiatrist that they must use the utmost care in making their decisions, as they may themselves be the ones who prevent the apparently unsuitable from fitting for his *best opportunity*. A safe rule to remember is that the man who has sufficient desire for a specific job, and who is willing to utilize his spare time in studying and fitting himself to fill it, will almost always make good at whatever he sets his heart on.

Fifth, the young in years, who have apparently stopped learning. To stop learning is the great tragedy of life. If the psychiatrist does nothing but discover why this type stopped learning and enable them to start again, he will have done a wonderful piece of work for the individual involved and for industry as a whole. We hear of blind alley jobs. These are usually misunderstood. A *blind alley job is not so frequently one that has no apparent line of promotion as one that makes it easy to stop learning*. How shall this mental inertia be overcome? That is for the psychiatrist to say.

Sixth, the restless, nomadic [Continued on page 376

Motions characteristic of an expert, showing decision, speed, grace and smooth curves are here being registered by Dr. Myrtelle Canavan, expert pathologist, in a motion study conducted under the direction of the late Dr. E. E. Southard, of the Psychopathic Hospital in Boston. Notice the photographer, and the table top and wall laid off in squares

Thinking in the Open

Some Personal Impressions of Chautauqua

By Edwin E. Slosson

THE system of intensive training in camp, which proved so useful in getting our impromptu army into shape for the Great War, was worked out nearly fifty years ago at Chautauqua, New York. Bishop Vincent—who completed his life's labors a few weeks ago—was confronted with the same problem as our preparedness people, but he had no precedent to help him. He had an army of Sunday School teachers to train—volunteers, eager for service, willing to do anything but not knowing how, ignorant of the art of teaching, not too well-informed on what they wanted to teach, altogether lacking in *esprit de corps*, unpracticed in team work. Dr. Vincent, realizing these defects, devised a plan to teach the teachers by giving them a short course under the best Biblical scholars and Sunday School workers of the day. He proposed it to his friend, Lewis Miller, a manufacturer of Akron—where the tires come from—to hold the institute in his city, but Mr. Miller told him to take it to the woods. This was a startling suggestion, seeing that there were in Akron as elsewhere plenty of churches and schoolrooms already built and equipt for such purposes, and plenty of hotels and homes for lodging the students. The camp meeting for religious revivals had formerly been a popular American institution, but its aims were emotional rather than educational. But altho the outdoor idea shocked conservative minds at first and some refused to have anything to do with such foolish business, it was adopted and in the summer of 1874 the tents were set up on the shore of Chautauqua Lake. Every year since increasing throngs have gathered there for study and recreation and the queer name of the place—which can be misspelled in more ways than most any other—has been applied and misapplied to various forms of education and entertainment throughout the land.

Now that we see how Chautauqua succeeds we can explain why it succeeds. There are, it seems to me, four factors in its success: first, the getting away; second, the getting together; third, the formal study, and fourth, the informality of the place. As to the first it does one good merely to get away from home even tho like Touchstone in the forest of Arden he gets into a worse place. All travel is educational wherever the journey may lead. Second, the mere association of people of similar interests from various places is of mutual advantage even if they do nothing but sit around under the trees and talk. When several thousand folks who want the same thing live together for a week something is going to come out of it. Chautauqua has always been a forcing frame for seedling thoughts. On the instructional side the chief contribution made by Chautauqua is the introduction into reputable educational practice of that unjustly condemned but surreptitiously employed method of mental culture known

A corner of the Chautauqua Parthenon

as "cramming." Under its new name of "intensive training" it is now recognized as based upon sound psychological principles and producing the best results. Years ago Professor Harper discovered to his surprise that his students at Chautauqua who studied nothing but Hebrew got more of the language in six weeks than his students at Yale did in a year when they took it along with three or four other studies—and avocations. He gave them a stiff dose of Hebrew in the forenoon and another in the afternoon before they got over the first. The doctors do that now. They inject typhoid serum into you a second time while your arm is still sore. When Harper became president of Chicago University, he tried to make the rule that no student should be allowed to take more than two studies at a time, and that he should recite twice a day in one of them.

The faculty would not stand for such a violent departure from custom, but the effort did result in a wholesome cutting down of the multiplicity of courses and concentration on a few. It was demonstrated at Chautauqua that the camp meeting method of training was applicable not only to religious training, but to secular subjects as well. I find in the catalog of the Chautauqua Schools this summer no less than two hundred courses given, including such as automobile operation and typewriting, French fiction and artistic dancing that I'm sure were not included in the Chautauqua course of 1874.

But when I go to Chautauqua this summer I shall take none of these two hundred hard work courses, for I could get them in New York City, but I shall take full advantage of what you can get free at Chautauqua and cannot get elsewhere at any price. I shall not lay out any plan of prescribed work, but shall wander about the grounds, as I delight to browse about a library, picking up whatever seems attractive at the moment. That is the nice thing about Chautauqua, you can do as you please, unless you carry around with you one of those old fashioned New England consciences that will not allow you to neglect any opportunity for edification. This is a peculiar inconvenience at Chautauqua, where there is something worth while going on every hour of the day and generally several simultaneously. It is more distracting than a three-ring circus.

But if you have a tractable and desultory conscience such as will let you enjoy yourself, at least on vacation, you can have a fine time at Chautauqua watching the thoughts flying around among the trees. Occasionally one will light on your head if you keep still. The atmosphere is full of what Shelley calls "unpremeditated art," the best kind, I think. You stroll about and drop in or hang around any building where something attractive seems to be going on. It may turn out a song; it may turn out a sermon. [Continued on page 377]

The Most American Thing in America

This big "hall without walls" at Chautauqua indicates the informal and at the same time educational atmosphere of the Institution. Chautauqua people all have one thing in common; belief in Bishop Vincent's motto, "Education ends only with life." Out of the Chautauqua Idea have grown university extensions, correspondence schools, and the host of itinerant or planted "chautauquas" that have, unchallenged, appropriated the name of the institution. Vigorous vitality gave birth to the Chautauqua Idea; vigorous vitality is still, after half a century, Chautauqua's dominant characteristic. And in Chautauqua is reflected all that is best in America

The president of Chautauqua Institution, Arthur E. Bestor, leading a Recognition Day procession. Behind him is the founder of Chautauqua, the late Bishop John H. Vincent, who in 1874 organized his assembly at Fair Point on Chautauqua Lake for the mental nutrition as well as the spiritual revivification of church workers. Then, the Chautauqua Idea employed education as an instrument for the expansion and direction of religious leadership. Now, it makes religion a part of the broad popular education which is its purpose. The Chautauqua Institution enlists thousands upon thousands of persons, year by year, in its Home Reading Course—the C. L. S. C. Four books are selected each year, and the reading goes in cycles—next year it will be chiefly on Modern Europe. With the books go a Topical Outline, The Independent magazine for current events, and the Round Table, a monthly bulletin

The outdoor beauty of Chautauqua Lake establishes an ideal atmosphere for the Chautauqua Summer Schools, a second important phase of the Institution's work. Here are schools of languages and literature, science and domestic science, arts and handicrafts, physical education, music and business. More than 200 courses are given; more than 5000 students attend. School-teachers of progressive tendency find here a dynamo of new energy. Then there is a third branch—the Assembly. Thru July and August the best speakers of the world fill a program of wonderful richness and variety; the best musicians render the best music. There is also the Open Forum, and open air measuring of mental powers in the Hall of Philosophy. Nor is it recreation for the mind and soul alone. There is boating and swimming and fishing, play for the kiddies, golf for father, tennis for the girls, and whatever she likes for mother

The New York Symphony, which is now making the first European tour ever undertaken by an American symphony orchestra, is to be a notable feature of the Chautauqua Assembly this summer. Beginning July 5 the famous orchestra, conducted by Walter Damrosch, will be at Chautauqua for six weeks, giving a series of classical concerts on Monday evenings, matinee concerts on Wednesday afternoons and popular concerts on Saturday evenings. On Thursdays and Fridays it will give twilight concerts out-of-doors. There will be a special Music Week, August 9-14

Presidents, Primaries and People

By Talcott Williams

THE one invariable, inevitable remedy for the shortcomings of democracy is more democracy.

The presidential primaries have failed in the past three months at three points: (1) Not enough votes polled out of the total party strength to be effective. (2) The party line has not been respected, and Democrats, with men of all parties, voted as in California, for a Republican candidate for whom they did not intend to vote. (3) The cost of reaching 15,000,000 voters in the Republican party has, taking all the candidates, led to the expenditure of \$3,000,000. This is inexcusable since it gives the rich man a power popular institutions can never permit without ruin. General Wood's friends, who spent \$1,200,000 for him, injured him. So has Lowden's \$500,000 hurt him.

These are serious faults, but they are remediable faults. Elections and primaries are an evolution. A century or more ago only half the voters in New York state came to the polls at all. Education, agitation, evolution, now bring eight out of ten. Even now in France and Italy only half the votes are cast. Where a state vote is all one way, not over half vote. In the South, where there are white primaries, the election often calls out less votes than the primary.

The present state-wide uniform primary is only thirty years old. In many states it is only five, ten, or fifteen years old. In some states, like Connecticut, it does not exist. A few years will create a primary habit, just as the election habit was created for the English-speaking race by fining shires and boroughs who sent no members to the House of Commons, before America was known.

Party regulation for the presidential primary already exists in New York state, but on a poor plan, far removed from the actual conflict. If registration at which a party preference was recorded came after the second Tuesday in May and not last November, and the primaries the last Tuesday in May, every voter would turn out. So for the Fall elections, the party registration should come with the election registration and the state-wide primary, the last Tuesday in September, instead of the first.

This would bring party registration when voters were interested in parties, and nominations when men were interested in nominations. Interest brings the psychological moment for decision. The shorter the period the more vivid the attention. The present plan in this and other states damps personal interest, delays political action, and prevents public opinion from doing its full and perfect work—and this is the reason why the politicians have arranged the present system.

In Oregon, which has on the whole the best primary law, provision is made by which the state gives every candidate a certain number of words in which he can describe himself and give his platform at primary and election. This goes to every voter in the state.

In a presidential election all these matters should be regulated by Federal law. Party registration once in four years should come within sixty days of the convention. The election of delegates should come within thirty days. Both on the same day for all states. This would be ill for the politicians; it would be good for the people.

Every Republican and every Democrat voter went to the presidential primary in New York state last April feeling that he was degraded and deprived of his rights as a citizen because in nearly all the other states in the United States his fellow citizens were expressing their personal opinion and he had none.

Politicians are of two classes, those who live in politics and those who live by politics. The first are often high

minded, the second are nearly always high paid. About twelve hundred men in each of the two parties manage the politics of six millions of people in New York city. They constitute a close corporation into which it is about as difficult to get as to get a seat in the stock exchange, and the men who know how to use the power they have in contracts, make it almost as lucrative. The overwhelming majority are honest and make nothing. These twenty-four hundred men are pretty close together and between them they decide once in four years who six million people with 700,000 voters who vote, shall name in order to nominate presidential candidates for them in the National Convention. This system is not as corrupt as the one existing in the days of the "caucus," but it is as undemocratic.

Uniform presidential primaries on the same day for all the states a month before the conventions, with party registration two months before the conventions and the National Post Office used to put a concise record supplied by each candidate, into every voter's hand—this would bring the primary and the choice of the candidates close to the people, prevent this criminal outlay by limiting expenditure and prevent the hand-picked "uninstructed" delegates who meet at Chicago.

Chorus of Politicians

I had rather be Right than Vice-President!

Democratic Timber

By Norman Hapgood

MR. Balfour at a small lunch asked Theodore Roosevelt what he thought of Mr. Bryan. "Mr. Bryan," the Colonel said, "has a brain of three guinea-pig power." He paused. "And when I say three"—his fist descended—"I exaggerate!"

Mr. Bryan is perpetually virtuous. He might perhaps have been President long ago had his genuine political idealism not been parochial, and had he been able to solve problems as well as to raise issues. He seems likely to oppose some of the strongest planks that his party ought to build on, and some of its most fully equipped men. When there is danger of reaction, as at Baltimore in 1912, at St. Louis in 1908, Mr. Bryan is a hero. But there is no chance at San Francisco for Palmer, Underwood, or Clark; the real possibilities are all more progressive than Mr. Bryan knows how to be. When he opposes McAdoo on the ground of close relation to the Wilson record he gives the measure of his own inadequacy.

Let us look at some prominent figures in the inverse ratio of their probability. Mr. Baker has undoubtedly lost ground. A year ago he was watched hopefully by some distinguished leaders, as it was expected that the tendency to over-criticize him would run its course, leaving his qualifications free to be considered: his progressiveness, his oratory, his residence in Ohio, his holding of a high office in a victorious war. If the rebound has not begun it is due to two causes: the active liberals, formerly his staunchest friends, do not think he has done enough for the restoration of liberty, and his department is not generally held to have been conducted with the degree of executive mastery shown by those who held the highest places in war work, by Hoover, Crowder, McAdoo, and Wilson.

Carter Glass has done large things recently, and done them well. He is too thoroly a Southerner to be a probability.

Mr. Davis is one of the most distinguished lawyers in

America, brilliant and cultivated, but what he has done has been essentially the work of a lawyer, whether actually in the law, in the legislature, or abroad. It has not been an executive test.

Governor Cox lacks the finish of these men, but he has been three times elected to the chief office of a big doubtful state, he has promoted modern legislation, he has administered with honesty, courage, and judgment, his recent expressions on national and world policy have been good-tempered and firm. I presume he is not a "wet" in the sense of wishing to take any responsibility away from the Supreme Court of the United States.

There remains McAdoo. It is indeed remarkable that as many as five men of such quality are under consideration. McAdoo, however, meets as severe a test as all of them combined. The attacks on him have carried silliness to the limit. The gist of his supposed disqualifications is that he was part of the administration, that he is related by marriage to the President, that Tammany is against him, and that a reporter for a Hearst newspaper said that some unnamed person told him that somebody was raising money for a campaign fund. The folly of these attacks speaks loudly for the former secretary and director-general. I know something about the growth of the McAdoo sentiment: nothing is clearer than that this growth is the steadily increasing realization that he is the outstanding Democratic possibility, by reason of tested ability, courage, adroitness, and experience. The recent history of private operation on the railroads has undoubtedly helped McAdoo. Our financial fears and problems have recalled the extraordinary degree to which his management of the treasury was successful.

As a possible candidate in a trying position he has conducted himself with a discretion that has annoyed his opponents. When others have shown alarm over the President's unpopularity, McAdoo has boasted of Wilson's mighty accomplishments. He is no more afraid of difficulties than was Julius Caesar. The questions that have been put to him he has answered. Even on a matter that sends most politicians to the cellar McAdoo says: "We can embargo commodities but we cannot embargo ideas. Russia has the absolute right to live under any form of government she chooses." On the industrial question he says: "Efficiency rests on coöperation and contentment. It cannot be produced by compulsion. . . . In the future it must be the test of statesmanship that it shall bring about social justice and make unnecessary violent paroxysms within the industrial fabric."

Size is McAdoo's characteristic: size of understanding; size in the scale on which he acts; the vivid certainty of genius in seeing his goal; practical judgment and courage in selecting his route.

Dives and Lazarus

THE financial stringency in this country is at least doing one good thing in showing to everyone the fallacy underlying such phrases as "favorable exchange," "favorable balance of trade" and the like. The notion that one country can prosper the more because of the economic prostration of a rival has been scouted by students of economic science for a century, but it still lingers in the popular mind and in the mind of politicians, which is often subpopular. But we are all learning now that the bankruptcy of a nation is a menace to all its creditors; that the financial collapse of a commercial rival is also the financial collapse of a customer, and that the best thing which could happen to the United States, from the most purely selfish point of view, would be to have the franc, the pound, the lira and the mark quoted at par and to have European industry revived in full vigor. The increased prosperity of any nation should be a cause for rejoicing to all its neighbors, for some of the wealth is certain to overflow the ar-

tificial boundaries of the map. Economically, at least, we are all members one of another.

Wanted—A Better Congress

SUPPOSE that, as in England and most other European nations, our cabinet was selected from members of the legislative branch of the Government. How many of these ten positions could be competently filled? How many Senators and Representatives are of cabinet quality?

Fair Play for the Interchurch World Movement

By Shailer Mathews

IF discriminating sanity were ever needed it is in the present discussion of the Interchurch World Movement. The movement has given the world a succession of amazements, but none relatively greater than that wrought by the disclosure of its financial management and condition. By June 1 the total expenses will be approximately \$9,000,000, with the total income from gifts amounting to less than \$3,000,000. The balance must be paid by the denominations that coöperated, or raised by subscription. And the movement was supposed to be run on business principles by business men!

Our first impulse is to shout for legislation against blue-sky financeering in the name of the Kingdom of God. But second thought brings pause to hasty words.

The fact that the movement has not been as successful as was hoped does not justify the belief that it was a mistake. The contrary is true. The movement has been of incalculable value and has been worth all its cost. It has strengthened denominational treasuries while gaining little for itself. The Northern Baptists, for instance, could not be expected to raise \$100,000,000 in 1924 for general denominational work, if it were not for the publicity given by the Interchurch World Movement.

The very denominations who declined to go into the movement shared in its benefits. There has never been a time when religion and the work of the Church have been more in evidence, where the attention of men has been more turned to vicarious causes, or where the Church has so understood the problems of its day. The Interchurch World Movement has helped produce this condition by the enormous amount of information it has put at the disposal of friend and foe. If there has been waste and over-free expenditure, there has also been atmosphere.

Some religious denominations are likely to pull out from the Interchurch World Movement. Possibly this may be the only method to reestablish confidence in coöperative religious work. At all events, there should be rigorous retrenchment and complete reorganization. Protestant coöperation has suffered a serious setback, but it is not impossible.

The next great Protestant coöperation must so organize itself that waste will be stopped and amateur leaders will learn not to be indifferent to the uninspirational details of book-keeping. The Kingdom of God will certainly never come by financial plunging. Nor can efficiency on a large scale be extemporized. Methods may be justifiable and risks may be taken in a closely organized denomination like the Methodist, which are impracticable and undesirable in a joint movement of different denominations.

It is no time for mutual recrimination. The churches have done a wonderfully big thing. Every argument for coöperation which led denominations to enter the Interchurch World Movement a year ago is as strong today as it was then. The movement has failed in management, not in ideals; in control of expenditure, not in plans; in underestimating denominationalism, not in its discovery that de-

nominations can cooperate. As it is, it is better to have attempted the cooperation which the Interchurch World Movement proposed than to have refused to cooperate with Christian brethren. If the Interchurch World Movement is in debt today to the banks, the Christian Church is in debt to the Interchurch World Movement. It is no time for men who a year since had visions of a cooperative Protestantism to deny their faith.

Ambition Is My Middle Name

WHY is the first name so objectionable to great men? This question may be referred to a committee consisting of Gaius J. Caesar, George B. Shaw, Alexander M. Palmer, Hiram U. S. Grant, James Beauchamp Clark and Thomas W. Wilson.

There Is No Royal Road

By Franklin H. Giddings

THE article "Why It Can't Be Done" which was published in The Independent of April 17, has called forth a richly variegated lot of letters, ornate in style and expansive in thought. They all upbraid us for our little faith, or, worse, our unbelief; and each one maps the royal road to abundance which we have so blindly missed.

Most of them are from cranks, of course, but cranks are sincere, and by that sign are different from politicians. What is more, every letter-writing crank speaks for thousands of convinced believers who vote, agitate and sometimes strike, without bothering to write much or to make speeches. Crank letters, therefore, are not to be despised. They reveal important forces at work in democracies; forces of misunderstanding and waste which, of themselves, would knock out the millennium even if there were no other prohibitionist influences on the job.

Look at a few examples.

One writer tells us that we can bring production back to normal only by restricting credit and contracting our monetary circulation. Another one, by the same mail, advises us that misery can be made an end of by cutting the "currency" loose from the cause of all poverty, namely, the "gold basis," and letting everybody make all the money he wants on other security, preferably land. To our disappointment this man neglects to explain why the inflation of the paper money of the world from \$7,000,000,000 in 1914 to \$56,000,000,000 in 1920 has not filled up a bigger hole in the bottomless pit of indigence. An anti-profitteer sees how to raise all the revenue needed for abolishing poverty by "swatting" the "brigand corporations" with excess profits taxes; but a single tax friend who neither slumbers nor sleeps while there remains opportunity within free speech limits to present his argument warns us that "unscientific" taxes on production are driving us head on to destruction. A syndicalist has brought together all the economic statistics that are left after "capitalistic lies" have been weeded out, and triumphantly points to their "irrefutable" demonstration that under "the revolution" the proletariat will create "necessaries, comforts, education and recreation" for everybody then left alive by four hours' work a day, but unhappily a disciple of Lenine butts in and proclaims that nobody will work those four hours unless "the dictatorship" of the "working millions" "militarizes" industry and "shoots up" the slackers!

So there you are. These are only samples. But even so, they serve to sharpen the essential point made in the article that called them forth. Suppose it were admitted that mankind could create wealth enough to put everybody on easy street "if only we could agree" how to go about it. Plainly we don't agree, and who and where is the person able to argue, or persuade, or fool us into agreement.

On one thing we do agree. Poverty can't be abolished by individual effort only. Working at cross purposes with our neighbors won't take us far. Only thru unity of plan and effective cooperation can the mighty task be achieved, if at all, and unity of plan appears to be about the last thing we are ready for. This was the chief contention of the editorial, and every letter writer has either missed or ignored it.

Won't one of our correspondents tell us just how he proposes to get all the rest of us to accept not our own but his particular way of making a new heaven and a new earth.

Thrift Note

RESOLUTIONS of sympathy may be sent to the Armenians as substitutes for food and weapons. If you have no new resolutions a second-hand one, previously used in behalf of Ireland, will serve.

Not So Black as They Are Painted

MANY Francophobe "Liberals" could scarcely conceal their chagrin when the French troops actually evacuated Frankfort after promising to do so. They had assured everyone that France was quite as militaristic as Prussia and sought only an excuse to extend her boundaries for all time. The French have their faults, but they are not incapable of understanding the "point of honor."

The Coming Food Shortage

By L. Wayne Army

THERE seems to be no doubt as to the probability of a food shortage in the immediate future. Men close to the production end of the food business have been sounding warnings for several months past, but in most cases these warnings have fallen upon the ears of an incredulous public which feels that the present high prices for foodstuffs are sufficient guarantee against any repetition of the food situation as it was during the war. It has been difficult for the man on the street to divorce from his mind the idea that the farmer has been making large profits from the present exorbitant food prices. He has had, therefore, but little sympathy with the farmer in the latter's recent complaints against the injustice of present economic conditions.

Unfortunately, however, there are some very good reasons for discontent among farmers and it is very probable that the point of actual food shortage will be reached sooner than is generally realized. The immediate trouble is a labor problem, for the farmer faces a situation in which he is expected to produce more food with less help. He is naturally becoming seriously discouraged over the prospects of accomplishing it. Labor, in turn, is scarce because the farmer is unable to meet industrial competition; it is impossible for him to pay the wages that are being paid in the cities.

As an illustration, it has been found that the labor income of a group of farmers in a good agricultural community was \$420 last year. Ten years ago it was \$337. The advance has not been great enough to parallel the general rise in price level of other commodities and, as a result, the number of farmers in that community decreased from 266 to 156 in the ten year period. It has been predicted that 1000 farmers will go out of business in New England this year.

This situation is gradually becoming known. Senator Arthur Capper, in a recent speech before the Senate said: "Unless substantial rewards are given for farm work a food shortage is inevitable—and it will not be long in coming." In the same vein, a leading farm paper has published an editorial in its last issue which begins: "There can be

Hunting the profiteer

no question about the shortage of food that is due for next winter. The situation is worse in some respects than during the war." Reflecting the general discouragement among farmers, the following letter written by a farmer that has been successful after a lifetime of hard work on the farm, is significant:

My last boy of five boys has just left me to go to work in the village at about \$25 per week. Can't blame the boys much, but this is more than I can pay on the farm and get by. Those cursed village chaps are not satisfied with \$4 to \$6 a day, but want \$1 an hour and short days are driving us farmers all back to the wall, and now they want to stick on daylight saving as they call it. I hope those fellows will see the time when they stand in the bread line and have to pay 40 cents per loaf for their bread and \$6 per bushel for their potatoes, and it is fast coming to that. I have not decided whether I will sell out the farm or just stay and raise enough for myself and family.

The facts in the case are these: the farmer is perfectly willing to work long hours and for prolonged periods in order to produce food. He has not as yet been turned aside by the general demand for shorter working hours, and it is doubtful if he ever will. He is trained for hard work, but unfortunately he cannot produce the food that must feed the country without adequate help. Farm labor has come under the influence of city conditions and is following the lure of exorbitant wages; wages that are utterly beyond the reach of even the most prosperous farmers at this time when the margin of profit in food production is so near the ragged edge of zero. The result, of course, is alarming and accounts for the present migration from the farm to the

city not only by the men who were formerly content with the conditions of the farmhand, but also by farm owners who are giving up a life that appeals to them and for which they are by training best fitted to pursue, for one that has little more than high wages to commend it.

One farm paper that caters to rural advertising of the "help wanted" classification printed in its last issue sixty-three appeals for farm help, but only sixteen for positions wanted. The latter group consisted mostly of inquiries for such positions as estate superintendents, managers, and "bosses" of various kinds. Not one, however, seemed anxious for a job as a plain, hardworking farmhand. Those who advertised for help offered, on an average, \$50 per month and board, which represents probably the wage limit under present conditions. It is equivalent to about \$23 per week, a wage that almost any competent clerk can command for eight or less hours a day, in comfortable working environment and with an absolute freedom from the business risks of the farmer. The whole situation results in a labor competition that is working disastrously for the farmer and one that must inevitably develop serious economic conditions which will be costly to adjust.

The adjustment, based upon the experience in the past, must come from a food scarcity sufficiently serious to cause prices for food to advance to a point where the farmer can make sufficient profit to enable him to pay wages that will compete fairly with the industries. He will then get the labor and produce the food. Until that time comes, however, the unsatisfactory conditions of today must continue.

Wilson Vetoes Peace of Dishonor

I return herewith, without my signature, House Joint Resolution 327, intended to repeal the Joint Resolution of April 6, 1917, declaring a state of war to exist between the United States and Germany, and the Joint Resolution of December 7, 1917, declaring a state of war to exist between the United States and the Austro-Hungarian Government, and to declare a state of peace. I have not felt at liberty to sign this resolution because I cannot bring myself to become party to an action which would place ineffaceable stain upon the gallantry and honor of the United States.

The resolution seeks to establish peace with the German Empire without exacting from the German Government any action by way of setting right the infinite wrongs which it did to the peoples whom it attacked and whom we professed it our purpose to assist when we entered the war. Have we sacrificed the lives of more than 100,000 Americans and ruined the lives of thousands of others and brought upon thousands of American families an unhappiness that can never end for purposes which we do not now care to state or take further steps to attain?

The attainment of these purposes is provided for in the Treaty of Versailles by terms deemed adequate by the leading statesmen and experts of all the great peoples who were associated in the war against Germany. Do we now not care to join in the effort to secure them?

We entered the war most reluctantly. Our people were profoundly disinclined to take part in a European war, and at last did so, only because they became convinced that it could not in truth be regarded as only a European war, but must be regarded as a war in which civilization itself was involved and human rights of every kind as against a belligerent Government. Moreover, when we entered the war we set forth very definitely the purposes for which we entered, partly because we did not wish to be considered as merely taking part in a European contest. This Joint Resolution which I return does not seek to accomplish any of these objects, but in effect makes a complete surrender of the rights of the United States so far as the German Government is concerned.

A treaty of peace was signed at Versailles on the twenty-eighth of June last which did seek to accomplish the objects

which we had declared to be in our minds, because all the great governments and peoples which united against Germany had adopted our declarations of purpose as their own and had in solemn form embodied them in communications to the German Government preliminary to the armistice of November 11, 1918. But the treaty as signed at Versailles has been rejected by the Senate of the United States, tho it has been ratified by Germany. By that rejection and by its methods we had in effect declared that we wish to draw apart and pursue objects and interests of our own, unhampered by any connections of interest or of purpose with other governments and peoples.

Notwithstanding the fact that upon our entrance into the war we professed to be seeking to assist in the maintenance of common interests, nothing is said in this resolution about the freedom of navigation upon the seas, or the reduction of armaments, or the vindication of the rights of Belgium, or the rectification of wrongs done to France, or the release of the Christian populations of the Ottoman Empire from the intolerable subjugation which they have had for so many generations to endure, or the establishment of an independent Polish State, or the continued maintenance of any kind of understanding among the great powers of the world which would be calculated to prevent in the future such outrages as Germany attempted and in part consummated.

We have now, in effect, declared that we do not care to take any further risks or to assume any further responsibilities with regard to the freedom of nations or the sacredness of international obligations or the safety of independent peoples. Such a peace with Germany—a peace in which none of the essential interests which we had at heart when we entered the war is safeguarded—is, or ought to be, inconceivable, as inconsistent with the dignity of the United States, with the rights and liberties of her citizens, and with the very fundamental conditions of civilization.

I hope that in these statements I have sufficiently set forth the reasons why I have felt it incumbent upon me to withhold my signature.

WOODROW WILSON.

The White House, May 27, 1920.

The Story of the Week

Knox Resolution Fails

PRESIDENT Wilson's veto message, stigmatizing as dishonorable the Knox resolution for a separate peace, has sealed its fate. The House of Representatives sustained the veto on May 28; 220 Representatives voted to override the President's veto and 152 voted in the negative. The vote was very close to party lines and to former test votes on the Knox resolution. Two Republicans, Representatives Kelley of Michigan and Fuller of Massachusetts, supported the President, and seventeen Democrats, a majority of them being from Tammany constituencies, joined with the Republicans. The debate was a keen one and the Democratic leaders repeatedly challenged the Republicans to repeal the war-time legislation if all they sought was a restoration of normal process of law within the United States. Representative Porter of the Foreign Affairs Committee charged the President with designing "to retain and continue to use these drastic war laws as a means of compelling the Senate of the United States to surrender its prerogatives."

The failure of the House to override the veto of the Knox resolution means that the United States will remain in a nominal state of war until the Treaty of Versailles is resubmitted to the Senate and the conditions of ratification are agreed on between the President and the Senate. This may not occur until after the November elections if the Treaty issue goes into the campaign.

Busy Congress

THE last days of a Congressional session are always congested with urgent business, and this is particularly the case when a Presidential campaign is in prospect and Congressmen begin to wonder how much of a record of achievement they can show to the voters and praise in the party conventions. In addition to the consideration of foreign affairs, of the soldier bonus bill and of the revenue measures which might make a bonus possible, Congress has also had before it the regular program of appropriations. The House and Senate reached agreement on the Naval Appropriation Bill, carrying about \$436,000,000 and noteworthy for an appropriation of \$20,000,000 for naval aviation, mainly for the purpose of protecting the Pacific coast. The Senate desired still heavier appropriations, but agreed to a compromise in conference. The Army Reorganization Bill was also readjusted. The Senate proposal for federalization of the National Guard was abandoned and the National Guard left in practically its pre-war status. The size of the regular army was limited to 297,000 officers and men.

A Congressional Commission representing both Houses has recommended an increase in the salaries of the men in the postal service. The initial increase in the postal budget under the new salary scale would amount to \$33,000,000 the first year and rise to \$43,000,000 in the third year after the increases go into effect. Postal clerks and letter carriers would receive increases of \$150 to \$250 annually and supervisory officers, earning less than \$5,000 a year, an annual increase averaging \$400. The eight hour day and reasonable periods for vacation and sick leave with pay are also recommended. Bills will be introduced embodying these recommendations. There has long been complaint that with doubled prices for everything the old rates of pay in the postal service could no longer attract competent men and that in

consequence there had been a marked falling off in the efficiency of mail deliveries in all parts of the United States. Until after the armistice this deterioration of service was ascribed to war conditions, but with the restoration of peace complaints have become even more numerous and it is no longer questionable that there has been an administrative breakdown.

Perhaps the most constructive achievement of the present Congress, the McCormick-Good bill providing for a modified form of the Federal budget system, is described by Senator McCormick himself in the present issue of *The Independent*.

Bonus Bill Passes House

THE House of Representatives has gone on record by an overwhelming majority, tho perhaps with some mental reservations due to the uncertainty of action by the Senate, in favor of a bonus to veterans of the Great War. The debate and the roll call showed that neither party is entitled to the credit or discredit arising from a consistent record for or against the measure. Party lines vanished for once in an intensely partizan session; 174 Republicans, 112 Democrats and three independents supported the measure, and forty Republicans united with fifty-two Democrats to oppose it. Altho the measure was principally of Republican authorship, Representative Mann, former party leader in the House, and Representative Cannon, former Speaker, were among the forty members of the party who opposed it.

In order to get speedy action on the bonus measure, its advocate secured a special rule suspending the rules of the House for six legislative days. This motion was hotly contested as a "gag law" to shut off debate and make amendments impossible. The rule suspending the rules, curtailing debate and preventing amendments was finally carried by 220 votes to 165 after an unsuccessful attempt to have it declared out of order. Debate on the bill itself was limited to forty minutes, but owing to the fact that the bill was being jammed thru under a suspension of the rules a two-thirds vote was necessary to pass it. The brief period of debate allowed contributed little to the discussion of the question and was chiefly notable for the excitement and disorder which prevailed. The final roll call gave a majority of 289 to 92 in favor of the bonus, which was far above the necessary two-thirds. The bill was therefore sent at once to the Senate where it will probably encounter much more difficulty and delay than it did in the House.

The Wilson Platform

MUCH light is thrown on the policy of the Administration in the coming San Francisco Convention by President Wilson's emphatic endorsement of the platform adopted by the State Convention of Virginia. President Wilson informed Senator Glass of Virginia "that the sentiments expressed in this notable document are in full accord with my own views, especially the statements which set forth the attitude of the party on the League of Nations and the pressing problems of peace, finance and reconstruction."

The Virginia platform, which the President desires to have taken as a model and precedent for the national platform of the Democratic party is a lengthy, dignified and well-expressed defense of the achievements of the Adminis-

tration in peace and war. The League of Nations is commended as "the surest, if not the only, practicable means of maintaining the permanent peace of the world and terminating the insufferable burden of great military and naval establishments." Prompt ratification of the Treaty "without reservations which would impair its essential integrity," is urged, which indicates that President Wilson, who commended the platform without qualification, is still willing to agree to purely "interpretative" reservations. The Democratic tariff, currency and banking laws and war taxation are commended as having made possible the sound financing of the war. The Democratic record on labor legislation is commended and strikes and lockouts deplored. The Republican Congress is accused of extravagant expenditure and failure to readjust taxation to a peace-time basis. "An indiscriminate bonus" is opposed, the generosity to disabled veterans is urged. Merchant vessels constructed by the Government should be sold "as soon as practicable to citizens of the United States." President Wilson is commended for his support of woman suffrage; which is the more remarkable since Virginia has failed to ratify the equal suffrage amendment. As Virginia is largely agricultural great stress is laid on the development of the farm loan system, the Smith-Lever Agricultural Extension Act, the expansion of the rural mail service and the parcels post, whereas the Republicans "have failed utterly to propose one single measure to make rural life more tolerable" since they gained control of Congress. From start to finish it is a "point with pride" platform, 100 per cent satisfied with the accomplishments of the Democratic administration since 1913.

The High Cost of Politics

THE Senate, on motion of Senator Borah, has ordered a sweeping investigation of all pre-convention campaign budgets. The aspirants for the Presidency and their campaign managers are pursued by an inquisitive committee which demands to know, in the language of the Senate resolution, "the campaign expenditures of the various Presidential candidates in both parties, the names of the persons, firms or corporations subscribing, the amount contributed, the method of expenditure of said sums and all facts in relation thereto, not only as to the subscriptions of money and expenditures thereof, but as to the use of any other means or influence, including the promise or use of patronage and the providing of funds for setting up contesting delegations, and all other facts in relation thereto that would not only be of public interest, but would aid the Congress in any necessary remedial legislation relative to this growing evil." Point is given to the reference to "contesting delegations" by the fact that of the 984 votes in the Republican Convention, 137 are contested by rival delegations. Nearly all of these contests are between factions in the states of the "Solid South," where the Republican party exists merely as an outline sketch of an organization. Most of the southern delegations are unpledged and of uncertain allegiance, but General Wood and Governor Lowden are interested in some of the contests.

Governor Lowden's campaign, it was learned, had cost about \$415,000, of which the greater part was contributed by the Governor himself. Major General Wood's managers, on the other hand, had received heavy contributions. According to the testimony of Mr. Sprague, treasurer of the Wood campaign, over \$1,180,000 had been raised to secure his nomination. Most of this sum was spent in publicity work, as General Wood, unlike the other candidates, had carried the campaign into nearly every state in the Union instead of concentrating on a single state or section. Colonel Proctor personally advanced over \$500,000 to the Wood campaign.

While the Wood and Lowden campaign funds were the

largest, vast expenditures were admitted by the representatives of other aspirants. Even Senator Johnson, the "poor man's candidate," was supported by a \$200,000 fund, according to Mr. McCabe, treasurer of the Johnson campaign. The National Hoover Republican Club raised \$62,000 and there were self-supporting local clubs also in various states. No single contribution of over \$1,000 was made to the Hoover movement. Governor Edwards of New Jersey had a campaign fund of \$12,900; Senator Owen of Oklahoma, \$9,410; Senator Sutherland of West Virginia, \$4,280; Governor Cox of Ohio, \$22,000; Senator Poindexter of Washington, over \$60,000; Attorney General Palmer, \$59,610; Senator Harding of Ohio, \$113,100; Governor Coolidge of Massachusetts, \$68,375; President Butler of Columbia, \$40,550; Senator Hitchcock of Nebraska, \$3,300. Difficulty was found in discovering any campaign fund for Mr. McAdoo, as he is not connected with any organization and has refused to make an active campaign. Mr. Baruch denied the rumor that he had financed the publicity movement for Mr. McAdoo. More money has been spent already by various Republican aspirants to secure the nomination at Chicago than has usually been required to secure an election and finance an entire national campaign. The Democrats, with their comparatively moderate budgets, see great political capital in the Senate investigation, tho the Republicans hint that the Democrats spent less on the primary campaign only because their nomination is not so much sought after as the Republican.

Keystone View

Aerial photography is giving us a new and a more comprehensive view of the instance, gives an unusual impression of the beauty of its landscape and first time on

Ohio Amendments Upheld

THE Supreme Court of the United States has decided that the provision of the Ohio state constitution which extends the referendum to the ratification of Federal constitutional amendments is invalid. In its decision the court declared:

The framers of the Constitution might have adopted a different method. Ratification might have been left to the vote of the people, or to some authority of Government other than that selected. The language of the article is plain and admits of no doubt in its interpretation. It is not the function of courts or legislative bodies, national or state, to alter the method which the Constitution has fixed. . . . Ratification by a state of a constitutional amendment is not an act of legislation within the proper sense of the word. It is but the expression of the assent of the state to the proposed amendment.

This decision involves the fate of the eighteenth amendment, establishing Federal prohibition, and of the projected nineteenth amendment for Federal woman suffrage. Altho the eighteenth amendment was formally declared to have been adopted, the liquor interests hoped to prove its unconstitutionality in the courts. As one method to this end they made use of the Ohio law and asked to have the courts nullify the ratification of the amendment by the Ohio legislature on the ground that as no popular referendum had confirmed the action of the legislature ratification was incomplete. The Supreme Court of Ohio had confirmed this view and the "wets" were hopeful that the Supreme Court of the United States would agree. But the present

decision apparently removes the last hope of destroying the eighteenth amendment in the courts.

The Ohio law was also relied on by the anti-suffragists. The Ohio legislature has ratified the equal suffrage amendment, but no popular referendum has confirmed this action. Had the decision of the court sustained the Ohio law the number of states which have ratified the amendment would be reduced from thirty-five to thirty-four, or, in other words, it would be necessary to capture two more states instead of one to establish equal suffrage. As it is, there are suffrage contests on foot in Louisiana, North Carolina, Vermont and Connecticut and if favorable action can be secured in any one of these states before November the nineteenth amendment will become a fact. The Republican National Committee has passed a resolution demanding immediate action by Governors and Legislatures in Republican states. The party state convention in Vermont has taken similar action. The Governor of Connecticut has definitely refused to call a special session of the state legislature on the question. The Delaware Senate has been won to the cause of equal suffrage, but the House was more obstinate. In North Carolina and Louisiana the politicians who are in touch with President Wilson and the national administration are favorable, but the sentiment of "states rights" keeps the legislatures resistant to pressure from Washington.

Presbyterians Leave Interchurch

THE General Assembly of the Presbyterian Church at Philadelphia has voted to withdraw from further active participation in the Interchurch World Movement. The resolution offered by Mr. John Willis Baer and adopted by the Assembly provides:

That the General Assembly of the Presbyterian Church decline to incur any further financial obligations for the Interchurch World Movement, as now organized and controlled; that it terminates its relationship with the said movement and withdraws any representative it may have therein.

The resolution further provides that the Church pay promptly any "amount already underwritten in behalf of the Interchurch World Movement" and that an additional sum of \$100,000 be granted for the year 1920-1921, but only on condition that the Movement "has been organized so as to insure an efficient and economical administration of its affairs and the adoption of a budget for the year 1920-1921 not in excess of \$1,000,000."

The General Assembly went on record in favor of the League of Nations. The failure of the Senate to ratify the Treaty was condemned and immediate acceptance of the Covenant without reservations or with "reservations to which no righteous man could find objections" was urged. American financial aid to Armenia was recommended.

Senate Blocks Armenia Mandate

THE Senate Foreign Relations Committee has taken a definite stand against an American mandate for Armenia. Only four members of the committee, Senators Williams of Mississippi, Hitchcock of Nebraska, Smith of Arizona and Pittman of Nevada, opposed the resolution, which was offered by Senator Brandegee:

Resolved by the Senate (the House of Representatives concurring) that the Congress hereby respectfully declines to grant to the Executive the power to accept a mandate over Armenia as requested in the message of the President dated May 24, 1920.

Senators Lodge, McCumber, Borah, Brandegee, Knox, Harding, Fall, Johnson, New and Moses, Republicans, and Senator Shields, Democrat, voted for the Brandegee resolution of rejection and Senator Lodge so reported to the Senate. The apparent opposition between the President and the Republican majority of Congress on the question

familiar places. This photograph of Arlington National Cemetery, for the amphitheater and chapel in the foreground were used for the Day, 1920

of an American mandate in Armenia may add another issue to the campaign of 1920.

On June 1, the Senate voted its approval of the report of the Foreign Relations Committee, rejecting the Armenian mandate. On the final test vote the Republicans voted as a unit against accepting a mandate and were joined by thirteen Democrats, Senators Beckham, Chamberlain, Dial, Gerry, Harris, Myers, Nugent, Pomerene, Reed, Shields, Smith of Georgia, Thomas, and Walsh of Massachusetts. Twenty-three Democrats only remained loyal to President Wilson.

The Bourgeois Bolshevik

THE Soviet Government has shown itself shrewd in selecting Gregory Krassin as its first commercial envoy to the outside world. For he is not a politician, but an engineer, not a revolutionist but a business man, not a believer in Bolshevism but an open advocate of capitalistic methods of industrial management. He was born of a bourgeois family in the province of Tobolsk, Siberia. He studied first at the Modern School of Tiumen and then took his engineering course at the St. Petersburg Technological Institute. While a student at the capital he was converted to Socialism and became a friend of Lenin, who was studying law at the University. Krassin took the side of the Duma in its conflict with the Czar and was arrested by the Government at Viborg in 1907, but was subsequently released and amnestied.

When he entered the service of the famous electrical firm of Siemens-Schuckert at Berlin he became a German subject. Later he was sent back to St. Petersburg to take charge of the Russian branch of that firm. During the war he rendered notable service to the Czar's Government in the management of a munition factory and in the consolidation of large financial corporations.

He was opposed to the Bolshevik revolution of November, 1917, and refused Lenin's offer of a Government post because he put no faith in communism and foresaw that the hasty nationalization of railroads and industries would prove ruinous. It turned out as he feared or worse, but when he saw that Russia was being attacked on all sides by the Allied Powers and that universal famine and pestilence would result from the ill-timed experiments of fanatical theorists and incompetent committees he consented to enter the service of the Soviet in the hope of bringing some sort of order out of the chaos. He accepted the position of Commissioner of Transport on condition that he be allowed to restore discipline on the railroads and repair

shops. He gradually eliminated the political Bolsheviks from the management and replaced them with technicians regardless of party. He forced the local committees of employees into subordination to central expert control. He permitted no interference with the running of trains. When the employees of the Nikolai station at Petrograd requisitioned a provision train he had it recovered and four of the men shot. As President of the Committee for Supplying the Needs of the Army he has speeded up the manufacture of ammunition and shoes and kept the Soviet troops sufficiently supplied to hold their own against the armies, which were furnished with all they needed from the surplus stocks of the Allies. It is said to be thru his influence that Lenin and Trotzky have abandoned their plan of equal pay and the control of industries by local committees of the workingmen and have substituted instead pay by piecework and high salaries to competent managers.

In spite of Krassin's frank criticism of their most cherished dogmas the Bolsheviks have not been able to dispense with his services. They realized that however little he might like their system he was doing his best to make it work and that it would not be possible to find so efficient an industrial engineer to take his place. He is reported to have said to one of his friends: "Who still believes in Socialism in Russia? In any case, not I nor Lenin." In a recent report to the Popular Economic Council he said: "I must say that life has shown itself stronger than communistic doctrines and until we recognize as absolutely impossible the establishment of economic life under our régime as it exists at present we can do nothing."

Krassin is now about fifty and his black hair and full beard are turning gray. He is active and alert, enthusiastic and indefatigable at work, quick to grasp details and prompt in decision.

London Receives Soviet Envoy

GREGORY Krassin, commercial commissioner of the Russian Soviet Republic, is now in London with a staff of experts to arrange for the restoration of trade relations. He was invited to a cabinet conference at 10 Downing Street, where he had a long talk with Lloyd George, the Prime Minister; Bonar Law, leader of the House of Commons; Earl Curzon, Secretary for Foreign Affairs; Sir Robert Horne, Minister of Labor, and Cecil B. Harmsworth, Under Secretary for Foreign Affairs. Later Krassin and his colleagues will confer with the premiers of France and Italy, since he has come over at the invitation of the Supreme Council, not of any one government in particular.

Ostensibly his mission is restricted to commerce and does not involve recognition of the Soviet Government, but since all of the trade of Russia, external and internal, is controlled by the Soviet and since all the financial and commercial questions considered have a political aspect, it will be impossible to keep the conferences to the specified field. Premier Nitti of Italy is openly in favor of full official recognition of the Soviet Government and Premier Lloyd George has for more than a year been working toward that end tho prevented from taking any active steps because of the opposition of the Tories, on whom he relies for support. The Labor party and Asquith wing of the Liberals urge recognition. The Labor leaders have served notice on the British Government that if they come into power they will not be bound by any secret agreements to support the Poles or any other people in a war against Russia. The London dockers have refused to load ships with munitions bound for Poland, thus siding with the Soviet Government.

After the conference of Krassin with Lloyd George it was announced that the Soviet trade commission would

Kirby in New York World

Go away!

open headquarters in London for carrying on commerce between Russia and Great Britain. The office will be under the supervision of the Overseas Trade Department of the British Government. Parliament has voted an extended appropriation to the Overseas Department in order to guarantee British engaging in Russian trade from loss due to insecure credits, uncertain exchange and other impediments to commerce. These securities may be extended to other members of the League of Nations, but since the United States remains outside the League and still refuses to permit trade with Russia, American merchants will not share in these privileges. A delegation of British trade unionists, coöperatives and labor leaders is now, by authorization of the British Government, in Moscow to investigate conditions in Russia and to see how commerce can be carried on under the new régime.

Russian Trade Opportunities

KRASSIN claims that Russia is now prepared to export timber, tar, turpentine, flax and hemp to the value of \$250,000,000. Since the Soviet has captured Baku it will be able to supply petroleum. The conquest of the Ukraine and the Caucasus puts the Soviet in possession of the chief grain and coal fields of Russia. The Soviet also has now control of Turkestan, which can produce more cotton than is needed for home consumption. But the chief advantage of Russia in this bargaining is the possession of nine-tenths of the platinum deposits of the world. Since platinum is indispensable for many scientific and industrial processes and much in demand for jewelry and photography, the world at large has suffered for the lack of it since the Russian supply has been shut off. The store of platinum that has accumulated may now be used to pay for the machinery and manufactures that Russia needs. It is further intimated that the Soviet Government is willing to grant a monopoly of the Ural platinum mines to some outside corporation for a billion dollars. The anxiety of Italy to make peace with Soviet Russia is in order to open up Odessa, from which used to come a large part of the Italian cereals. The British governmental Board of Trade reports that the world's food supply next fall will be only 65 per cent of the normal. Since England is chiefly dependent upon outside sources for her food supply, such a scarcity would mean higher prices, causing unrest in labor circles probably worse than would result from raising the barrier against Bolshevik propaganda. Before the war England imported annually from Russia wheat to the value of \$10,000,000, barley \$9,000,000, butter \$17,000,000 and eggs \$23,000,000, and the lack of these has been severely felt.

On the other hand, it is questioned whether Russia could now supply any great amount of food or other products even if the embargo is raised. The Ukraine, which is the richest part of Russia, has been overrun by various armies and ravaged by marauders for the last three years. The Russian peasants refuse to raise more than they need themselves and decline to sell to the Soviet since its money is worthless and it cannot supply them with the goods they need. The chief cause of the destitution in the Russian cities is doubtless the breakdown of the transportation system. Sixty per cent of the locomotives are now continuously out of repair. But even if new rolling stock and agricultural machinery were immediately supplied it would not suffice to relieve the food shortage before next year.

But if Russia is short of goods to exchange she is abundantly able to pay cash for whatever she wants. The Soviet is better supplied with gold, and, what is more than equivalent, platinum and precious stones, than any other government, for it has virtually abolished money for internal circulation and has confiscated the treasures of the imperial family and the Orthodox Church. The Soviet is said to have \$500,000,000 in gold now on hand.

Marcus in New York Times

Germany's opportunity

But the French protest vehemently against Krassin's proposal to pay in gold for what he is trying to buy in England. Their objections are three: that the gold is stolen by the Bolsheviks; that if locomotives are supplied they will be used for the transportation of troops to crush out Poland and Ukraine; and that the gold should be first employed to pay Russia's debts to her Allies. French loans and investments in Russia amount to over five billion dollars and the French Government is opposed to restoring any kind of commercial or diplomatic relations with Russia until guarantees are given that all the debts of the old régime are to be paid in full. The Soviet Government has several times intimated its willingness to assume the imperial indebtedness in exchange for official recognition, but perhaps it would not be quite so ready to do so now in view of its recent military successes. Washington dispatches, however, state that our Government is convinced that Bolshevik rule is on the verge of collapse and will be shortly overthrown on account of the ruin which it has brought upon the Russian people.

The Two Turkish Governments

NOW that the Turkish peace treaty is ready the difficulty is to find any responsible Government to sign it. The Sultan still reigns in Constantinople, but his writ does not carry east of the Bosphorus nor west of the Chatalja line. Even in his capital he is openly flouted and secretly thwarted. For Anatolia, the homeland of the Turks, is under the sway of the rebel Nationalist Mustapha Kemal Pasha, who regards himself as the true protector of Islam. An extraordinary court martial at Constantinople summons to be tried for treason Mustapha Kemal and his colleagues in the Nationalist Government, Ali Fuad Pasha, former commander of the Twentieth Turkish Army Corps, and Rustem Bey, former Turkish Ambassador to the United States, and when they do not appear in court solemnly condemns them to death. But the condemned men reply that the Sultan is a prisoner in Constantinople and his Government the tool of the British, whose troops now hold the city. He may still be the Sultan of Turkey, but he cannot be Caliph of Islam unless he is free.

The two Governments, that of Constantinople and that of Angora, have only one thing in common, their opposition to the proposed peace terms. Mustapha Kemal says:

The aim of the Nationalists here is to keep the Turkish lands for the Turks, maintaining the integrity of Turkey as it stood when the armistice was signed. The Nationalists act by resisting execution of the terms of the treaty where they conflict with our ideas. This is a people's movement. Without their support it will die. We are depending, too, upon the aid of all Islam. The

Turks are the last of the Moslem races to remain free, and Islam will strive to keep them free. We have ample assurances from the Moslems of other lands that they will do their share to hamper the enemy. Most of them live in countries conquered by the British, and now it is the British who want to crush us. We have come to the last of their crusade against Islam, and today Islam is aroused to the danger.

Why was the principle of self-determination applied to the Armenians and Greeks in Turkey and not to the Turks. Where is the fair play of civilized Europe, which condemns the Turk? The peace terms were conceived by imperialists, without regard to the principles of justice.

In Constantinople a mass meeting of five thousand Turks was held in a park adjoining the mosque of St. Sofia and, marvelous to relate, an unveiled woman addressed the crowd. This was Fatima Hanem, who said:

We shall never consent to be separated from Thrace and Smyrna, with their historical monuments. The cross shall never be raised over our mosques. We believe in the Wilsonian principles and are confident that adequate application of them will be made eventually.

These threats are being backed with some show of force. In Adrianople the Turkish commandant, Jafar Tayar, is said to have an army of 40,000 Turks and Bulgars ready to resist the Greeks when they shall attempt to take possession of Thrace, which was assigned to them by the peace treaty. On the Asia Minor side the Greeks may have a worse time for the Nationalists are gathering about Smyrna in sufficient force to drive out the Greeks unless they get support from the Allies.

The French are withdrawing from Cilicia, leaving the Armenians of that district defenseless before the Turks. But on the other hand a French column has fought its way up from the Syrian coast to Aintab, which has been besieged by the Turks for two months.

D'Annunzio Seizes Durazzo

CAPTAIN Gabriele d'Annunzio, who has held Fiume for eight months, seems now determined to extend his power down the Adriatic coast. He has sent an expedition southward by sea and taken possession of Durazzo, the chief seaport of Albania. Albania is one of the unsolved problems of the peace. The Greeks claim the southern part of it. The Serbs claim the northern part of it. The Italians claim all of it. The Albanians claim independence. The secret treaty of London provided for the partition of Albania among the Powers. Italy was to get Avlona (Valona), the port nearest the Italian peninsula so as to give Italy command of both sides of the entrance to the Adriatic Sea. Italy also was to have a protectorate over the rest of Albania not otherwise appropriated.

But President Wilson held that the United States was

not bound by secret treaties which had not been communicated to the American Government when America was asked to come into the war and which were incompatible with the peace terms publicly accepted by the Allies. Accordingly he questioned the right of the Allies to divide and dispose of the Albanians without their knowledge and consent. In the midst of the war and apparently without the approval of France and England, Italy declared Albania an Italian protectorate. Recently it has been rumored that the Italian troops were being withdrawn from all parts of Albania except Avlona.

Fiume was by agreement of Italy, France, England and Russia in the treaty of London assigned to the Croats (Yugoslavs) as their seaport. In the city proper Italians predominate, but the surrounding country is strongly Slavic. The working class of Fiume is largely Slavic, but they mostly live in the suburb of Susshak, which is separated from Fiume by a small stream and connected with it by a bridge. Fiume is held by d'Annunzio's forces, but Susshak is occupied by regular Italian troops. A barrier on the bridge divides the opposing forces, but they frequently fraternize.

Recently it has appeared that numerous Fiumans and Dalmatians were in Italy stirring up trouble. In some cases the Government troops fired upon the mobs raised by the agents of d'Annunzio and at Rome the chief of police arrested seventy of them, but was ordered to release them by personal intervention of the King in their behalf. In Fiume the news of the arrests caused great indignation and a crowd of 10,000 gathered in front of d'Annunzio's palace. The poet appeared on the balcony and made an impassioned speech. He concluded by hurling his hat and his handkerchief into the crowd, which, with these as their insignia, marched to the Susshak bridge and tore down the barrier.

On the night of May 26 d'Annunzio led his men in attacks upon the neighboring villages, which are occupied by Yugoslavs. His object is apparently to start a war with the Yugoslavs in the hope that the Italians will support him in spite of the Italian Government. Foreign Minister Trumbitch of Yugoslavia and head of its Peace delegation, has lodged a complaint with the Powers against these unprovoked attacks by d'Annunzio's forces and also against their continued occupation of Fiume, which has for eight months deprived Hungary and Yugoslavia of an outlet to the sea and caused great misery to these peoples. In case the Allies do not suppress d'Annunzio's depredations the Yugoslavs will feel justified in taking measures of self-defense.

Wide World

Camping on the old tent ground is the city of Newark's answer to the high cost of renting. The Government has furnished 200 tents, the city has appropriated \$25,000, and evicted tenants have already begun to establish themselves comfortably in the tents for the summer. The camp has electricity, water, and so forth. Meals are to be served to the whole camp from a community kitchen

Where the Money Goes

(Continued from page 351)

is charged with the responsibility of economizing wherever economy is consistent with good service, and the principal financial officer of the administration will find it incumbent upon him firmly to control the demands of the departments for moneys to be expended.

In my estimation, the budget law just agreed upon, while probably nowhere near perfect in all its details, will stand out as one of the truly constructive pieces of legislation adopted by Congress in the present decade. Under its terms the President in conference with his cabinet, must hold a preliminary conference upon the sums needed to carry on the routine business of the Government, and to carry out the administration's economic, political and social program.

The budget, of course, must be a political instrument. It can be nothing else, for presidents are elected on political platforms and must fulfil pledges made by political parties intrusted with responsibility by the voters.

After the President and his advisers have agreed upon a program, it will be up to the Secretary of the Treasury and the Budget Bureau to work it out, and allocate to each department and each bureau of the Government its proper share of the appropriations to be sought from Congress. When the Secretary of the Treasury, as director of the budget, completes this work, the President must either approve it, or change it, and then on the first day of each regular session of Congress he must send the budget to Congress with his approval.

There is no way, under the law, by which any President in the future can dodge responsibility for the financial demands of any department or establishment of the Government, outside of the Supreme Court and the legislative branch.

Congress, in turn, will have to consider the budget in whole, as well as in part. It must reform its committee system to this end. And in case of a difference of opinion between Congress and the President, the people will have the opportunity, every two years, of deciding the issue.

The present Congress, working under extreme difficulty, has made a notable record in reducing appropriations sought by the executive departments. In all probability, when the record is summed up, the people will find that a saving of a billion dollars has been made. But Congress has done all of the economizing.

In the future, the process of saving will begin in the departments themselves, and while Congress will still be charged with the responsibility of cutting appropriations down, the President and his advisers will be charged with equal responsibility, for which they will be clearly accountable to the people. This they have not been in the past.

Washington, D. C.

Fares, please!!

The word "fare" has slipped and skidded from its older, warmer, truer meaning.

In stage-coach days, the driver was "host" and the travelers his "fares." Now "fare" has come to mean money.

In fact, for the last 20 years it has become the car rider's equivalent for a nickel.

From a clean seat in a modern electric street car, in its warmth, speed and cleanliness, we may dream back to dustier, colder days, when stout \$2.50 shoes nestled on a straw-strewn flooring. Then any ride was uncertain in time. Cars came each hour instead of every five minutes, and puffing steam dummies unerringly shot cinders between father's neck and his inflammable collar.

But this is all gone—all except the tradition that "fare" is unfair when it strays from its old crony, the five-cent piece.

There was a time when a good cigar or a railway track spike could be had two for 10 cents.

Once copper wire and beef steak cost 12 cents a pound; a dollar bought a good hat, a real shirt, a hotel room or a day's work in track labor.

Nothing is left of all this — except the habit of thinking of "fare" as money, instead of in its old meaning—one who is cared for by a host for pay.

Let us remember that a penniless host must needs be a poor one.

Let us think about the relation of electric railways and ourselves as mutual—each with definite obligations.

When adjustments are made, let's make them on the basis of a reasonable return for the service rendered—the old true basis of host and fare.

Here Are Books—and Books

Our Turbulent Neighbor

Recent events in Mexico have called forth a considerable number of studies of the present régime in Mexico from which the reader may draw an answer to the question as to whether the United States should or should not intervene in the affairs of the distracted republic. In most of these works the author plainly tells the reader what conclusions he should

mic and social conditions now prevailing. The articles of the much-discussed new constitution which bear on economic issues are given in the text. The author has sympathetic confidence in the ultimate emergence of the Mexican people from their present difficulties.

"Mexico is the richest undeveloped accessible country in the world," is the text of P. Harvey Middleton's *Industrial Mexico, 1919 Facts and Fig-*

The modern world will accept no dogmas upon any authority; but it will accept any dogmas upon no authority. Say that a thing is so, according to the Pope or the Bible, and it will be dismissed as a superstition without examination. But preface your remark merely with "they say" or "don't you know that?" and the keen rationalism of the modern mind will accept every word you say.

The modern man wants to eat his wedding cake and have it, too.

The innovators have as much sham optimism about divorce as any romanticist can have had about marriage. Such a reformer is quite sure that when once the prince and princess are divorced by the fairy godmother they will live happily ever after.

The Superstition of Divorce, by Gilbert K. Chesterton. John Lane Co.

"Life in the Old Dog Yet"

Romain Rolland says that he wrote *Colas Breugnon* in a reaction from *Jean-Christophe*, a sort of mental vacation. He wrote it before the war, he wrote it very evidently for the pure joy of the thing, in fact he says that he had no idea of "transforming or explaining the world either politically or metaphysically"; but if he had set out to give the world just the mental stimulus it needs he could not have done it better, probably not half so well. For *Colas Breugnon* has that joy in life which we have almost forgotten. He savors life, he holds it up to the light and lets the sun shine thru it, he drinks it slowly, tasting every bit of its sweetness down to the last drop, and if he finds some of it bitter, he laughs. He takes life easily, and that is almost a lost art!

Colas lived in Burgundy back in the time of Marie de Medici when society was perhaps a little less complex than it is now, but when they had pestilence, battle and sudden death even as today, when any modern would have had nearly as many excuses for tearing his hair as he does when he contemplates the present political situation in the United States. But don't read the book for moral uplift, read it because you will thoroly enjoy it. It has picturesque scenes, amusing incidents, dramatic moments, warm, sound philosophizing. The style is delightful—running, sparkling, bubbling over, breaking suddenly into little rimes, just for the fun of it. The English translation keeps the spirit very well tho it must be admitted that some of the sparkle is lost in transit.

Colas Breugnon, by Romain Rolland. Henry Holt & Co.

The Right to Know

Walter Lippmann's *Liberty and the News* is a plea for the establishment of impartial news agencies, capable of giving one hundred per cent information, uncolored by opinion and propaganda. "There can be," he shrewdly points out, "no liberty for a community which lacks the information by which to detect lies." Mr. Lippmann believes, as every reader of *The New*

Press Illustrating

The point of divorce reform, says Gilbert Chesterton, the English satirist, in his book "The Superstition of Divorce," is that the rascal should not only be regarded as romantic, but regarded as respectable. He is not to sow his wild oats and settle down; he is merely to settle down to sowing his wild oats. They are to be regarded as tame and inoffensive oats; almost, if one may say so, as Quaker oats

reach. *Mexico Under Carranza*, by Thomas E. Gibbon, insists that the Mexican people, demoralized by ages of misrule, are incapable of democratic self-government and that the Mexican Government is waging relentless war against the property rights of foreign residents. In the appendix there is a chronological list of outrages on American citizens.

Intervention in Mexico, by Samuel Guy Inman, is, on the contrary, avowedly pro-Mexican in spirit. Mr. Inman chronicles economic and social progress, wise laws and administrative measures, educational advance, the growth of a real public spirit and increasing friendliness to the United States; Mr. Gibbon has heard of nothing but oppressions and outrages. It is not for the stay-at-home American to say which is the true picture, but it is due to Mr. Inman's work to say that it seems very sympathetically in touch with the Latin American people and their viewpoint so that he can discuss as from the inside national institutions and characteristics which a less friendly critic could relate only from the outside.

Mexico, Today and Tomorrow, by E. D. Trowbridge, is a work of somewhat broader scope and less bent on propaganda. It gives a brief summary of Mexican history but is mainly devoted to a presentation of the econo-

ures. He expands it in chapters on railways, oil, mines, agriculture, timber, trade opportunities, sugar and coffee plantations, credit, banking, the national debt, the constitution of 1917, and government institutions. His information, gathered on the ground, is interesting. The volume is a reference book for the business man who is looking for new fields; it is distinctly not for the casual reader.

Mexico Under Carranza, by Thomas Gibbon. Doubleday, Page & Co. *Intervention in Mexico*, by Samuel G. Inman. Association Press, New York. *Mexico, Today and Tomorrow*, by E. D. Trowbridge. Macmillan Co. *Industrial Mexico*, by P. Harvey Middleton. Dodd, Mead & Co.

The Case for Marriage

Punch's advice to those about to get married was "Don't!" Equally concise is Gilbert Chesterton's advice to those about to get divorced. In *The Superstition of Divorce* he argues that if divorce is permitted even for unhappy marriages it will strike a fatal blow at the institution of marriage, which is based on the permanent sacredness of the vow. Such is the thesis, but most readers will be more interested in the embroidery of wit and wisdom with which it is embellished. A few quotations, necessarily too few, will give some idea of the tone of the book:

While free love seems to me a heresy, divorce does really seem to me a superstition.

Republic knows, in the greatest possible liberty of opinion, but he regards this as the lesser half of full liberty of the press. "When freedom of opinion is revealed as freedom of error, illusion and misrepresentation, it is virtually impossible to stir up much interest in its behalf. But people, wide circles of people, are aroused when their curiosity is balked. The desire to know, the dislike of being deceived and made game of, is a really powerful motive, and it is that motive that can best be enlisted in the cause of freedom."

Liberty and the News, by Walter Lippmann. Harcourt, Brace and Howe.

A Poet Who Thinks

It is restful to find emerging from the welter of impressions and records of personal emotion which constitute most of our modern verse a poet who is occupied primarily with ideas and with arresting methods of presenting them. He is not impersonal, but he is interested in his emotions not because they are his but because they are human. Verner von Heidenstam, who was awarded the Nobel Prize in 1916, has just been presented to Americans in a volume of translations by the editor of *Contemporary Verse*. Charles Wharton Stork by his introduction, by his selection of poems, and by the manner and spirit of his translations gives a definite picture of an unusually interesting personality. To quote von Heidenstam is the best way to explain him, but the best poems are too long to quote entire and too closely knit to be divided. "Starting on the Journey," however, is fairly typical.

Already I'm upon the bridge that leads
From Earth unto a land beyond my ken.
And far to me is now what once was near.
Beneath, as formerly, the race of men
Praise, blame, and forge their darts for
warlike deeds;

But now I see that true and noble creeds
Even on my foemen's shields are blazoned
clear.

No more does life bewilder with its riot.
I am as lonely as a man may be;
Still is the air, austere and winter-quiet:
Self is forgot and I go forward free.
I loose my shoes and cast aside my stave.
Softly I go, for I would not defile
With dust a world so pure, all white as
snow.

Beneath, men soon may carry to a grave
A wretched shape of human clay, the while
Mumbling a name—'twas mine once long
ago.

Most of it is not musical poetry but the vividness and originality of simile and phrasing do much by way of atonement. Sweden honors him primarily as a patriotic poet, an angle from which he will also appeal to Americans, tho he is really more fascinating in his less noble moods.

Sweden's Laureate: Selected Poems of Verner von Heidenstam, translated by Charles Wharton Stork. Yale University Press.

McCutcheon's Dress Linens for Summer Garments

THE LINEN industry is still in a very critical condition because of the great difficulty of procuring yarns and dyes.

Notwithstanding this we have, through close co-operation with our manufacturers, procured practically a pre-war assortment of these most practical fabrics.

NON-KRUSH-LINEN—conceded to be the best Dress Linen made. Soft, lustrous finish—will not crush or crease—shown in a range of thirty-five colors, White, Cream, Navy, 36 inches wide, \$1.95 yard.

FRENCH-FINISH DRESS LINEN—a fine lightweight fabric—crisp, dry finish. White and all the leading shades, 46 inches wide, \$1.95 yard.

RAMIE LINEN—a heavy, sturdy weave—particularly well adapted for Suits, Skirts, and Children's Wear. White and colors, 45 inches wide, \$1.95 yard.

WHITE LINENS—sheer, medium and heavy weights. Complete line carried in stock at all times, 36 to 45 inches wide, \$1.50 to 7.50 yard.

Samples of the above fabrics mailed on request.

James McCutcheon & Co.

Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

If you are interested, write for free booklet called "How We Stopped the Leaks That Kept Us Poor."

THE INDEPENDENT, 311 Sixth Avenue, New York

The laborer is worthy of his hire

All service is worthy of its hire and good service cannot be continuously obtained unless adequately rewarded.

From the beginning of telephone history the American public has received the best telephone service of any country in the world. In proportion to the service rendered the people have paid less for this telephone service than any other country in the world.

The reason why the American people have received the highest type of telephone service at the least proportionate cost is because the Bell System has been operated on a scientifically economic basis.

Every device which inventive skill, engineering ability, labor and time saving talent has been able to create; every efficiency known to buying, operation, executive control and financial conduct has been employed.

Public service companies feel the high cost of living as well as individuals. Pay them enough to make possible their giving good service. There is no permanent saving in poorly paid service.

In this land of opportunity none of us is willing to jeopardize his success or happiness by stinting the payment necessary to secure the most helpful and efficient service.

THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York
FIFTY-FOURTH YEAR

A School in the Heart of the Open Country. Lower School for Boys 9 to 12.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

one of the editors of The Independent was assigned to the task of putting into plain language the startling theories of the new Newton. This journalistic effort to explain to the non-mathematical reader what few professional mathematicians claim fully to understand met with such favor that the numbers of The Independent containing the articles were soon out of print and there was a demand for their publication in book form. This has been done and the neat volume of 120 pages contains not only the original material but extensive additions by the same author as well as an article in which Einstein explains his own theory. A bibliography of over a hundred references to Einstein's writings and to popular and technical articles and books on the subject is appended. There are numerous illustrations, even one giving directions for drawing a diagram of a four-dimensional figure. The author is so afraid that somebody will buy the book on the assumption that it is mathematical that he has prefaced it with the following:

PREFATORIAL DIALOG

Scene: A street car in uniform movement of translation in any direction.

Time: The present.

The Reader (looking over the top of a morning paper): Here's something queer—a whole page taken with a new discovery in physics—"Eclipse Observations Confirm Einstein's Theory of Relativity." Anything about it in your paper?

The Author: Yes. Here's a cartoon on it by McCutcheon.

The Reader: Must be something to it then. McCutcheon always knows what's news. (Reads on with audible fragments.) "Most sensational discovery in the history of science"—"Greatest achievement of the human intellect"—"Upsets Galileo, Newton and Euclid"—"Revolution in philosophy and theology." It looks as tho I ought to know something about this, doesn't it?

The Author: I think you will have to some time. And you might as well do it now and get it over with.

The Reader (running down the column and hitting the high spots): "Parallel lines meet"—"a man moving with the speed of light never grows old"—"gravitation due to a warp in space"—"length of a measuring stick depends upon direction of its motion"—"mass is latent energy"—"time as a fourth dimension"—why, the man is crazy, isn't he?

The Author: Well, definitions of insanity are so uncertain that it is not safe to say who is crazy. But it seems there's method in his madness—otherwise how could he have hit upon the exact extent of the sun's attraction on light?

The Reader (picks up his paper and reads aloud with concentrated attention): "Postulate I. Every law of nature which holds good with respect to a coördinate system K must also hold good for any other system K', provided that K and K' are in uniform movement of translation." Say, do you know anything about this business.

The Author: Well, yes, a little. I have followed the controversy—at a safe distance—for a number of years.

The Reader: Can you tell me in plain language what it is all about?

The Author: Yes. Just that. I can tell you what it is *about*, tho I can't tell you what it *is*. Einstein says that there are only twelve men in the world capable of understanding his latest paper.

The Reader: Are you one of the twelve?
The Author: No, nor the thirteenth.
 But without plunging into the mathematics of it, we might talk over some of the interesting aspects of the theory of relativity and in the end I could put you on the track of the twelve so you could read up on the subject if you liked.

The Reader: All right. That's fair. This is a slow car anyhow. Go ahead.

Easy Lessons in Einstein, by Edwin E. Sloan. Harcourt, Brace & Howe.

The Man Who Fed the World

Everyone concedes that Herbert Clark Hoover deserves a good biography. Thanks to Vernon Kellogg, his associate on the Commission for Relief in Belgium, he now has one. *Herbert Hoover, the Man and His Work*, is a biography as adequate as it is readable and contains exactly what the reader wishes to know. In it you can find out who the Hoovers were, how young Herbert finally managed to vanquish the bug-bear of "English composition" at Stanford University, how he learned typewriting between a Friday and the next Tuesday, his adventures as an engineer in the waterless interior of Australia and during the Boxer uprising in China, how the Belgian Relief Commission came to be organized, how Hoover wrung concession after concession from an unfriendly German Government on behalf of the Belgian civilians, how he handled the Food Administration in the United States, and how his efforts after the war saved from famine and Bolshevism the great belt of famished nations from the Baltic to the Adriatic. It is a magnificent picture of the most truly American figure of our time.

Herbert Hoover, the Man and His Work, by Vernon Kellogg. Appleton.

Bedouins

James Huneker's writing is full of sound and fury but it signifies a good deal. His criticism is backed by a real knowledge of most of the arts in most of the centuries and he tosses off quotations and allusions so rapidly that an attempt to place every one in any given essay is like trying to qualify in one of Dr. Crane's What-Do-You-Know tests. *Bedouins*, to judge by Mr. Huneker's last volume, are almost anything, but especially Mary Garden. They include thoughts on the "Artistic Temperament" and "Painted Music" and "Caruso on Wheels" and Chopin and Debussy and other interesting people. It is high-speed, colorful, fascinating writing which leaves you with vivid if somewhat tumultuous impressions.

Bedouins, by James Huneker. Charles Scribner's Sons.

Digestible Mince Pie

Mince Pie is an excellent name for Christopher Morley's miscellaneous collection of essays, poems, skits and character sketches; none of the ingredients have any relation to each other, some of them are much better than others, but the conglomeration is delicious. Mr. Morley mixes his metaphors a little by urging you to read the book in bed, as a soporific, which

Watch It Clean Up That Big Pile, Too!

ADDITION averages only a small part of the daily figure-work in business today. You can easily determine this proportion in your own business. Keeping tabs on your own figure-work would probably show you that—

$\frac{2}{3}$ of your work involves either multiplication, division or subtraction.

$\frac{1}{3}$ of the burden is addition.

An ordinary adding machine will of course do the addition. But it is bound to be inefficient on $\frac{2}{3}$ of your figure-work, because it is not adapted to *direct* subtraction, multiplication or division.

Get a machine that will do the entire $\frac{3}{3}$ of your figure-work—a *calculating* machine—and that means the Monroe. It will handle multiplication, division and subtraction as well as *addition*, and—in the direct, simple manner that you learned in school. No complements necessary. No reciprocals necessary.

No trained operators. No re-checking to insure accuracy. The Monroe is always right the first time.

Start the Monroe hustling on your invoices. Let it hurry out your payrolls. See how quickly and accurately it handles *all* your figure-work—even complicated problems of square and cube root.

We shall be glad to send a representative to show you the exact application of the Monroe to the figure-problems in *your* office. No obligation. Simply mail the coupon.

MONROE

Getting Ahead

is the story of Peter Perkins and how he accumulated \$10,000 in ten years by investing \$25 a month in high-grade listed stocks and bonds, on a novel plan. "Getting Ahead" is as interesting as anything you ever read. Thousands have read it and are now "getting ahead" financially on the same plan. You will be fascinated with it. But better still, it will show you a new way to invest your savings monthly—how to get interest, plus a PROFIT, on your money—without sacrificing safety. We send it free. WRITE FOR IT TODAY.

is surely not the mission of mince pie, but any way it is worth reading, at least most of it is. The good parts are so very good that one resents the inclusion of an occasional forced and commonplace bit. Mr. Morley has not only a sense of humor but an original sense of humor. He is really whimsical, a characteristic much rarer in human nature than publishers' announcement would lead you to believe.

Mince Pie, by Christopher Morley. George H. Doran Co.

Dingy Pictures from Life

From poetry, sometimes sentimental, Margaret Widdemer has turned to writing unescapably realistic fiction. Her latest book, *The Boardwalk*, is a collection of stories about the winter life of an Atlantic coast resort.

The feverish, tawdrily gay summer, when you couldn't do a thing with the children, alternated with the empty idle winter, when there wasn't a thing for the children to do. If our people had any money they sent us to boarding-school. If they hadn't, or didn't worry, we spent fourteen hours a day and all available change on the boardwalk in summer, and made precocious love to each other there in winter after school.

It is with that precocious love making that most of the stories begin. It is a sordid, tawdry, unwholesome atmosphere, the sort of atmosphere that one would shun if the ideas back of the stories and their psychology, for they are primarily stories of character, were not really interesting. In some of them the people are stronger than their background and manage to break away from it entirely, and those stories are as good, often better, than the others. Which raises the question of the place of the sordid in art. Is the skill with which it is done a sufficient excuse for painting dead fish and tinsel?

The Boardwalk, by Margaret Widdemer. Harcourt, Brace & Howe.

The Newer Composers

Most of the guide books to the realm of music fail us just when we need them most, that is when we want to know something about the younger set who are claiming our attention. Here Paul Rosenfeld comes to our aid in a volume of criticism which may be called a postscript to any encyclopedia for he devotes most of his attention to the composers with whom we have had the opportunity to become acquainted only in recent years. The chief interest of the book therefore lies not in the essays on Wagner, Liszt and Berlioz, appreciative as they are, but in what he tells us of Ornstein, who comes from the ghetto; of Rimsky-Korsakoff, who as a lieutenant in the Russian navy came to our rescue in the Civil War; of Sibelius, who voices Finland; of Debussy, whose music is as ethereal as Maeterlinck's prose; of Stravinsky, who has "minted music anew"; of Mousorgsky, who represents the old religious Russia; of Scriabine, who has enlarged the scope of the piano; of Schoenberg, "the great troubling presence of modern music."

Musical Portraits. Interpretations of twenty modern composers. By Paul Rosenfeld. Harcourt, Brace & Howe.

Washington—The City of Disillusionment

(Continued from page 353)

ington I always have to go to church because some relatives reside there and recently I whiled away the time by looking at the feet of the people in the row ahead when they kneeled to pray. I solemnly assert that every shoe of man, woman and child that I saw in church in Washington was mended. Those people are bitterly, pitifully poor. Only stern necessity prevents them from being overdressed. They have always dressed first and eaten afterward. They boast of it. They are nice people. They are struggling hard to keep up that appearance of gentility to which they are accustomed. They are proud people—foolishly proud. I am sorry for them. In fact, I am so sorry for them I would like to take an axe handle and lay open the scalps of about two thousand, as there seems to be no gentler way of impressing them with the utter futility of their lives.

Still out of two thousand casualties it might be possible to save fifty or sixty persons and lead them into places where something useful is done—places where the boss would be all smiles some day and give a bonus or put an extra gold piece in the Christmas envelope. Places where initiative counts, where one can advance without the aid of the undertaker. Those poor benighted heathen in Washington don't know what it means to be associated with a company that had a good year. Every year is a bad year in Washington and the plaintive howl of the taxpayer pleading for economy brings from them an answering howl for living wages. The old game of making jobs is still played in spite of the fact that men and women are needed everywhere. And the silly dream that there are good jobs in Washington persists. It probably always will. How can the dream be shattered when the persons with the mended shoes hang on year after year, accumulating nothing but years? They could take lessons in one phase of Americanism from the East Side immigrants in New York. They lack the spirit of do and dare that seems to me to be an essential element of Americanism. It is only a part of Americanism, to be sure, and it is not the most vital part. But to me it is a part of Americanism to feel that all this country is yours and that nothing but you can keep you poor. To me it is Americanism to dislike doing a thing that you cannot put your heart into because it is tremendously worth while doing.

Washington seems to me to be saying: "Lord, give us jobs; any old jobs. Let us live here in this city all of our days. Lord, inspire Congress to order a census of the phonographs or establish a bureau for the prevention of red bugs and chiggers. Thus may we hang on and howl thru the happy years."

Washington, D. C.

An invention which has revolutionized July

Think how many new delights Prof. Anderson gave summer when he invented Puffed Grains.

The milk dish now has Puffed Wheat floating in it—thin, flimsy, toasted bubbles of whole wheat.

Breakfast brings the choice of three Puffed Grains, each with its own fascinations.

Puffed Rice now adds to berries what crust adds to a shortcake. Or a nut-like garnish to ice cream. And between meals hungry children get some Puffed Grain crisped and buttered.

Every day in summer, millions of people now enjoy these supreme food delights.

But don't treat them like mere tidbits

These flaky, flavory bubble grains seem like food confections. But two are whole-grain foods, remember. And all are scientific.

They are made by steam explosion. Every food cell is thus blasted so digestion is easy and complete.

They are the best-cooked cereals in existence—the only cereals so ideally fitted to digest.

They are all-hour foods. They make whole-grain foods tempting. Let children find them handy, morning, noon and night.

Puffed Wheat

Puffed Rice

Corn Puffs

Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 70 cents, annual subscription \$3.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

How to Increase Production

(Continued from page 355)

type who wants to "go somewhere," though given high wages and as good a chance for advancement as he could expect. Here we have the typical "floater," capable and desirable from the employer's standpoint, but dissatisfied with any fixed occupation and always sure that his real opportunity lies in some other place. Possible advances in pay or promotion seem to have little or no effect upon this type. It seems as natural for this type to float as for birds to go south every winter.

The type is not new. History has long recorded the wanderings of the journeyman, the gypsy, the tramp, the tourist, the explorer and the pioneer. The younger one is, and the less responsibility one has, the stronger this fundamental "go somewhere" instinct is. We all have it in some degree. But in the case of many of this type it is so strong and its call is so imperative that it interferes with progress, since the desire for travel has no definite industrial, vocational or promotion aim in view, and is not gratified for the sake of acquiring valuable experience.

Seventh, the "fixed idea" group, with immovable opinions concerning capital, labor, employer, foreman, other workers, etc. These differ from those who have stopped learning in that they have very definite ideas on many subjects that prevent or postpone the revision of ideas and the acquiring of additional knowledge. This type is often fond of arguing, but no matter upon what subject they speak, are sure to arrive at one of their fixed ideas. They hold themselves impervious to new ideas. Unfortunately, these fixed ideas are often extremely radical, and the worker may become dangerous to himself, to his family, to the industry and to the entire community.

Eighth, the type who refuse to take advantage of Safety First, and who think that it is smart to disobey or defy or evade rules for the practice of safety. These are not limited to the young, altho recklessness is usually thought to be a characteristic of youth. In the days when Safety First was new, and recklessness was fashionable, it was more or less excusable. The man who did "safety-first" stunts to amuse himself and his fellow workers was looked upon as a "regular feller," as "good company" and as a man "not scared of anything." Today, when Safety First is an established part of job and shop routine, and when recklessness is no longer fashionable or desirable, there is no excuse for it. However, the type still remains, and is at present a menace.

Ninth, the self-centered type, who refuse to recognize the social side or to coöperate with either fellow workers or with the employer. This is a type which brings much more suffering to itself than to others, and is one of the types to which the attention of the psychiatrist can be immediately directed with profit. It seems obvious that there is something decidedly

wrong here, which is causing much unhappiness, and which the success of the psychiatrist in treating similar types out of industry, leads one to believe can be easily helped.

Tenth, the timid or over-fearful type, who dread even remote and improbable accidents, from being struck by lightning to falling down stairs. Industry itself is doing much to help this type by provisions for and evidences of safety, provisions for health and hygiene, by a definite plan for promotion and satisfying advancement, and by otherwise eliminating causes of possible fears. In the extreme of this type, however, there is found constant fear of things that are never likely to happen, and it is this type of fear with which the psychiatrist must cope.

Eleventh, the indecisive type, who waver and hesitate over the simplest decision. In industry we cope with this type by so standardizing the work that the required decisions of their work cycles can be reduced in number, separated and individually explained, and their proper handling taught. It is, however, a slow and difficult problem to advance the indecisive type far without carefully planned methods of adjustment.

Twelfth, the over-decisive type, who are carried away quickly by a partial knowledge of an idea, but who have little power to evaluate evidence as distinguished from testimony, and no regard for the value of actual measurement in guiding decisions. These have some relationship to the self-centered, but are in many ways very different. The "fixed idea" people may have come to their ideas slowly. These over-decisive people rush into things without proper deliberation. They are the type that makes the ideal mailing list for promotion of fraudulent advertising, and are the most intolerable in religion, politics, and matters pertaining to fraternal orders and secret societies.

As has been said, these twelve types are by no means the only such types to be found in industry. Neither must it be thought that these types are always in the extreme forms that we have outlined here. Nor, again, must it be thought that such types are receiving no attention at present, for in fact managers are doing their best in many cases to understand and advance them, and many cases now are under the care of psychiatrists, but not thru industry itself. What we are pleading for is the discovery and treatment of such types in the early stages, thru the initiative of industry.

It must be apparent, as the late Carleton Parker so clearly realized and said, that the underlying cause of industrial inefficiency lies in instincts that have been suppressed or diverted. Most of those who propose remedies for industrial unrest have this in mind, tho they cannot or do not always make this clear. Any successful remedy must have it in mind.

It must also be apparent that this is not a new method of inspection to be forced on the worker. On the contrary, it is an opportunity to be available to every member of the organization and the management.

The psychologist will find waiting for him in progressive industry many new measuring methods and devices.

In the Motion Study laboratories he will find records of behavior; of progress in learning; of decision and indecision; of skill and awkwardness; of habit and automaticity; of transference of skill and experience from one kind of work to another; and of other variables that will be permanently useful to him in making accurate records, in estimating characteristics and in establishing norms in all fields.

For example, we have thousands of timed records showing skill of different types of executives, professional men, workers, champions, experts, inexperienced, supernormal, normal, subnormal, morons, epileptics, etc., at different kinds of work. Many of these show pitiful conditions of hesitation and indecision, even to the point of fumbling. We have also hundreds of records showing that the hesitation has been helped or cured by showing the worker his record, and teaching him the one best way to perform the activity involved.

The psychiatrists are, more and more, becoming interested in the possibilities of work in the industries. They are training groups of women to serve as Psychiatric Social Aids. This training, planned primarily to meet a war need, is well adapted to meet the everyday need of the industries, and will be further adapted as the needs are more fully realized.

It is for those in industry and especially those in management who stand for maintenance of what is best, for progress, and for definite plans of assistance to workers, to secure and hold their best opportunity, to prepare the industrial world for these new scientific workers, to invite them into the field, and to extend to them the heartiest coöperation. In this way, alone, can the psychiatrist enter industry with most profit to all concerned, and with the highest degree of conservation of the human element.

Montclair, N. J.

Thinking in the Open

(Continued from page 356)

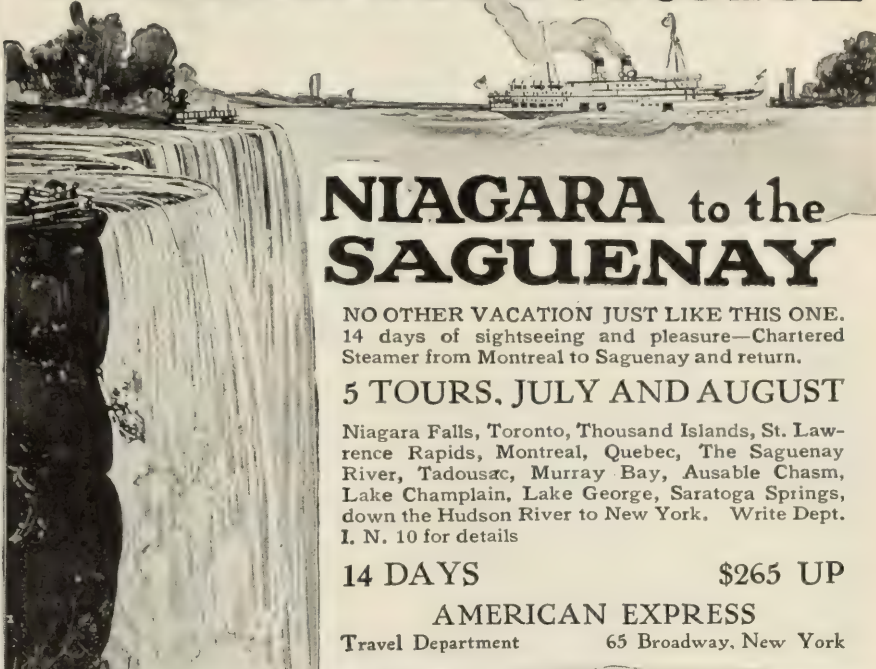

Either is likely worth listening to. If not, you do not have to listen longer.

The Chautauqua buildings are so constructed as to cater to casualness. The amphitheater spreads out to the walks on all sides. There are no walls and every aisle leads to the open. It is therefore easy to slip into a seat—or slip out of it. The distribution of a Chautauqua audience on ordinary occasions when the vast amphitheater is only partly filled is curious and characteristic. In the pit, right in front of the platform, is the compact body of those who know what the lecture is and are determined to hear every word of it. Then there is a widening semi-

circle of empty or scantily filled seats and finally around the upper edges of the bowl the crowd again thickens. This outer ring is composed of those who have just dropt in from curiosity. They are unwilling to commit themselves to an hour's hearing, but will give the speaker fifteen minutes in which to interest them. If he does he may see them gradually slipping down into the center. If he fails he will find his audience dissolving away on the edges like a lump of sugar in a cup of coffee. It is dangerous for a dull speaker to use a lantern, for when the lights are turned on again he may find himself talking to himself.

The Chautauqua platform is the best "tryout stage" in the country. Chautauquans will give any man a hearing—one hearing. If he gets another it is because he deserves it. That is why all the isms in their infancy make their first appearance before a Chautauqua audience. The future student of the genesis of American political, social and religious movements will find the files of the daily *Chautauqua Herald* his best source book for such disturbances of the intellectual atmosphere generally originate in the cyclone centers of the mid-continent and sweep eastward thru the Chautauqua circuits.

The amphitheater is misnamed for it is really not amphi at all, but is modeled after the single Greek theater, which is the best form ever invented for speaking and hearing. This was the universal form during the thinking period, but when the Romans went in for spectacular athletics they doubled the theater and made a circus out of it. The same transition from the mental to the muscular has taken place in America within a generation and our universities are naturally building amphitheaters instead of theaters.

Chautauqua is not unaffected by the spirit of the age and every year its calendar gives increased space to sports. But it differs from other educational institutions in that it still holds the head higher than the legs. Its architecture therefore tends more to the Greek than the Roman. The heart of Chautauqua is what is officially styled the Hall of Philosophy, but commonly called "the Hall in the Grove." This is a primitive wooden Greek temple, a square colonnade resting on a platform and supporting a roof. I saw a supercilious school ma'am, probably a classical teacher, tap one of the pillars with her hard knuckles and then turn up her sharp nose at an angle of forty-five degrees as she said in a voice matching her knuckles and nose: "Wood! And they call it a Greek temple. How I hate imitations!"

"My dear Madame," I retorted—or as I would have retorted only I never can think of retorts in time—"how you must hate the Parthenon!" For the Parthenon was a palpable imitation of an earlier wooden building. Its stone pillars were cut round, and tapered toward the top to represent logs of wood. The marble triglyphs above were

cut to look like the ends of what were once wooden beams, with six little square knobs (*guttae*) conscientiously carved beneath to stand for the heads of the wooden pegs which a thousand years before used to hold the rafters in place. I see that Chautauqua is putting in more brick and stone buildings every year and I am afraid that it will eventually become petrified. A living thing must be embodied in ephemeral material. But doubtless those who saw the canvas tents on the Chautauqua shore give way to comfortable bungalows looked to the future with the same foreboding as I do now.

The olive grove of Academe where Plato taught—no, talked—was the mother of all academies. That is, this most informal way of learning, the academic, became in the course of centuries a synonym for whatever is most conventional. The word "forum," that sounds so academic now, meant originally "out of doors." It was the open market place, what we call "the curb." And in the days when the Forum Romanum was the focus of the world's thinking it was not free from the taint of commercialism most abhorrent to our Latin professors. As Professor Robinson says, no two people in the world are so different as an ancient Greek and a modern classicist.

But Chautauqua keeps a lot of the old Greek spirit. The Chautauquans are as eager as were the Athenians to "hear tell" of some new thing. They will flock to the Hall in the Grove at any hour in the day to hear the latest novelty in poetry, philosophy or religion. They sit around on the floor, on the railing, on the steps, on the sod in groups reminding one of that picture by Alma Tadema, "Reciting Homer," that is hung in all the college studies. On the outskirts of the crowd are semi-detached auditors who feed the squirrels with one hand while they listen with the other.*

One reason why Chautauqua is restful is that you do not have to plan for the future, and do not have to do what you do not want to do when the time comes because you have planned to. You can wait till ten minutes before the hour to decide whether you will take in the lecture or the lake, whether you will go to church or go to sleep or both, whether you will watch somebody play tennis or hear somebody play the piano. It spoils the pleasure of any entertainment to fix a date for it far in advance without knowing what your mood will be, as you have to do when you engage seats. How can I tell that at 8:30 two weeks from tonight I shall want to listen to Tchaikowsky's Sixth Symphony? I may be so happy then that I cannot endure this most miserable of music. Or I may be so unhappy that hearing it will add another to the list of crimes which have given it the name of "the Suicide Symphony." You want what you want when you want it and you generally can get it at Chautauqua—unless you oughtn't to.

*Yes, that's all right. If you are on the outskirts of the crowd you have to hold one hand to your ear in order to catch the speaker's words—unless it is Vachel Lindsay, who can be heard anywhere on the grounds.

New England

CUSTOMS FIFTY YEARS AGO

Who among us would say to-day, "I never use a Dentifrice, I never have to?"

Yet Fifty years ago, odd as it may seem, not one person in 1,000 used a Dentifrice—or even a tooth brush.

So to-day, after more than 30 years of persistent publicity of Allen's Foot-Ease, the Antiseptic Powder for the Feet, not many well-turned-out people care to confess, "You know I never have to use a Powder for the Feet!"

More than One Million five hundred thousand pounds of Powder for the Feet were used by our Army and Navy during the war.

The reason is this: Confining the feet in Leather or Canvas Shoes is bound to create friction, more or less. Allen's Foot-Ease removes the friction from the shoes. You know what friction does to your motor-car axle. Why not remove it from your foot-wear by Shaking into your Shoes to-day, Allen's Foot-Ease, the cleanly, wholesome, healing Antiseptic powder? Get the habit, as millions now have it, who inhabit our, as yet, imperfect world.

EUROPE IS OPEN

H. C. WICK, Secretary.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. Here Are Books—and Books.

1. You have been asked to select for your school library one of the four books on Mexico. Write a letter, address to the principal of your school, naming the book you select, and giving your reasons for believing that book will interest students more than any one of the others would do.
2. Explain the following terms: appendix; a chronological list; a brief summary; a bibliography; unescapably realistic fiction.
3. Explain the meaning of the following sentence: "The modern world will accept no dogmas upon any authority; but it will accept any dogmas upon no authority." What rhetorical principle does the sentence illustrate? What is the rhetorical name for a sentence of this kind? What is the advantage of using such a sentence?
4. Draw from any of the books read in your school course in English material that will illustrate the following: a picturesque scene; an amusing incident; a dramatic moment; sound philosophizing.
5. Explain the meaning of the verse given under the title, "A Poet Who Thinks." What two attitudes toward life does the poem emphasize?
6. Tell in full, with illustrations chosen from books read in English, what is meant by the expression, "Vividness and originality of simile and phrasing."
7. Write "a prefatorial dialog" to be used as an introduction to any book studied in your school course.

II. A Message from the United States Government. Where the Money Goes. By Medill McCormick.

1. Write a short outline of the article.
2. Show how the writer makes use of the principle of definition as a means of increasing the clearness of the article.

III. Thinking in the Open. By Edwin E. Slosson.

1. What spirit characterizes the article?
2. Write a circular, or letter of announcement, to be used in calling attention to the work at Chautauqua.
3. Write an argumentative composition for or against the proposition, "No student should be allowed to take more than two studies at a time."
4. Write a serious, or a humorous, composition in which you narrate the events that took place at a school that adopted the Chautauqua method in full.
5. Explain the following allusion: "Like Touchstone in the Forest of Arden he gets into a worse place."
6. Prove that the following statement is true or is not true: "All travel is educational, wherever the journey may lead."
7. Write for your school paper an editorial article in which you present reasons for believing in, or for not believing in, "The introduction into reputable educational practice of that unjustly condemned but surreptitiously employed method of mental culture known as 'cramping'."

IV. How to Increase Production. By Major Frank B. and Dr. Lillian M. Gilbreth.

1. Explain the plan on which the article has been written. What are the advantages, and what are the disadvantages, of referring so noticeably to the "twelve types of misfits?"
2. Give a short talk in which you explain the value of the work of a psychiatrist.
3. Explain the advantages of applying the principle of standardization to class work in composition.
4. Write an original short story in which you make use of characters that will illustrate one or more of the "twelve types of misfits" named in the article.
5. Imagine that you are an efficiency expert who has given especial attention to the study of English. Point out what you think "The One Best Way" to prepare a lesson in literature, and "The One Best Way" to prepare written work.

V. Washington—The City of Disillusionment. By Chester T. Crowell.

1. The writer says, "Washington is the most depressing city I have ever seen." Draw from the article material for a description of a city that the writer would call "The most exhilarating city I have ever seen."
2. What type of character does the article indicate that the writer most admires?
3. Write a paragraph of contrast on "The Advantages and the Disadvantages of a Government Position."

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Presidential Campaign—"Democratic Timber," "The Wilson Platform," "The High Cost of Politics."

1. According to Mr. Hapgood, what influence will Mr. Bryan probably have on the coming Democratic convention?
2. Who is Mr. Hapgood's first choice for the nomination? Do you agree with him?
3. Name five things which the Democrats will probably emphasize in their platform. How will the Republicans meet the same issues?
4. What do you think of the disclosures made before the Senate committee? Will these disclosures affect the presidential campaign?

II. Where the Money Goes.

1. What are the essential elements of a budget system? Does the government of your community provide such a system?
2. Describe briefly the system of raising and spending money as it has worked in the United States up to the present time.
3. "A budget system similar to that which existed under Alexander Hamilton." What are the facts which justify this phrase?
4. How will the new system described by Senator McCormick work in practice?

III. Washington—The City of Disillusionment.

1. "Today if [Washington] is a political graveyard," etc. What does Mr. Crowell mean by this statement?
2. Assuming that his description of physical conditions in Washington is true, how do you account for such conditions?
3. What impression of the United States civil service do you get from this article?
4. Can you suggest any method for remedying the conditions described?

IV. Ohio Amendments Upheld.

1. What are the exact provisions of the constitution in reference to amendment? What method of ratification was provided in the case of the eighteenth and nineteenth amendments?
2. What question concerning the Prohibition amendment still remains to be settled?
3. What is the present status of the suffrage amendment?

V. Recognizing Russia—"London Receives Soviet Envoys," "Russian Trade Opportunities."

1. What is the purpose of Krassin's visit to London? If the British Government approves of trade relations with the Soviet Government what will be the political effect?
2. What trade advantages has Russia to offer to the various countries of Europe? What limitations will there be on this trade for the present?
3. Why are the French opposed to opening trade with Soviet Russia?

VI. How to Increase Production.

1. What is meant by Scientific Management as applied to industry? What contributions have Major and Mrs. Gilbreth made to the subject?
2. Make a list of the twelve types of industrial misfits mentioned in this article. Do you recognize yourself as belonging to any one of these types? What remedies are suggested to you?
3. Define the work of a psychiatrist. How does his work fit into industry?

VII. The Coming Food Shortage.

1. What are the facts upon which the author bases his prediction of a food shortage next winter?
2. Is there any reason why farm labor should be less well paid comparatively than city labor?
3. "The adjustment . . . must come from a food scarcity," etc. Discuss this statement with the laws of supply and demand in mind.

VIII. The Interchurch Situation—"Presbyterians Leave Interchurch," "Fair Play for the Interchurch World Movement."

1. How can you explain the statement, "The movement has been of incalculable value and has been worth all it cost," when there is said to be a deficit of \$6,000,000?
2. What other religious denominations besides the Presbyterians "are likely to pull out from the Interchurch World Movement"? Would you imagine the Northern Baptists to be among them?
3. How, in the author's estimation, has the movement failed and how succeeded?
4. "... the Christian Church is in debt to the Interchurch World Movement." Please explain.

Just a Word

This double number of The Independent, combining the issues of June 19 and June 26, is made necessary by the present shortage of white paper. This emergency is one which most of the magazines published in this country are being forced to meet; in some cases it has resulted in a temporary suspension of publication. It is our expectation, however, that by one combination of two issues in one we shall be able to get past the immediate difficulty and continue unbroken the regular weekly publication of The Independent. In this double number we have included the news of two weeks. We have also achieved a remarkable record of timeliness in publishing the full account of the Republican convention, the platform adopted and the picture of the candidate.

Pebbles

Sunday School Teacher—Johnny, can you tell me who built the ark?

Johnny—Naw.

Sunday School Teacher—Correct.—*Punch Bowl.*

"Yes, said the Boston girl, "I am going to marry him to reform him."

"Huh! What is there left to reform?"

"Well, he occasionally splits his infinitives."—*Philadelphia Bulletin.*

Reporter (interviewing centenarian)—To what do you attribute your great age, then, Madame?

Madame—I can't say at present, sir. Y'see, I'm still bargainin' with several patent-medicine companies.—*Sydney Bulletin.*

"I hope that the young man you met on the golf links never kisses you by surprise," said the mother, who was wintering at the fashionable resort, to her daughter.

"Nay, nay, mother. He only thinks he does," returned the minx.—*Pennsylvania Punch Bowl.*

The shirts I sent to thee, dear heart,

Are of no further use to me;

The collars are all torn apart;

My Laund-ery! My Laund-ery!

In vain my underwear I seek;

My socks in shreds appear to be;

And still I send you more each week:

Oh Laund-ery, you'll ruin me!

—*Yale Record.*

Talking about the Prince of Wales, who is being used as the suffering bird to try to save the English monarchy system. He was at a rest-camp in France one raw morning, and coming on a group of soldiers playing two-up, blew into the game. He was losing steadily, when a big Queenslander pushed into the school, and after watching the play for a while said in a tone of concern: "Say, Prince, what'll they say to yer if yer go 'ome broke?"—*Sydney Bulletin.*

Remarkable Remarks

MISS J. B. CRANFILL—Hell hath no fury like a woman's corns.

SENATOR HIRAM JOHNSON—The climate of California is not debatable.

REV. JOHN ROACH STRATON—Dancing Christians are dancing corpses.

W. J. BRYAN—It is not wine and beer that the wets want—it is alcohol.

DOUGLAS FAIRBANKS—Charlie Chaplin is always sleeping in my best bedroom.

FRANK H. GILBRETH—All surfaces of all factory workrooms should be painted white.

NEW YORK TRIBUNE REPORTER—At 4 p. m. Mrs. Douglas Fairbanks washed her curls.

BRUCE BARTON—A politician with his ear to the ground can't keep his eye on the ball.

DR. GRAHAM LUSK—No family of five should buy meat until they have bought three quarts of milk.

GOVERNOR CALVIN COOLIDGE—We need more of the Office Desk and less of the Show Window in politics.

PUBLISHER THOMAS B. MOSHER—Is there any reason why a man with a milk route should not read Shelley?

SENATOR PENROSE—The League of Nations occupies an obscure place in the political cemetery of dead issues.

REV. DR. I. M. HALDEMAN—This Inter-church Movement deceives men, telling them that they are the sons of God.

BERTRAND RUSSELL—I am one of those who, as a result of the war, have passed over from Liberalism to Socialism.

NEAL R. O'HARA—The French 75's are now silent on the battlefields but the perfect 36's are busy on the boulevards.

M. L. BLUMENTHAL—Probably the most thankless and least remunerative job is that of being brother to a great man.

VICE-PRESIDENT MARSHALL—I will take my chances on the forgiveness of a living God rather than the capers of a ouija board.

DE LA HUERTA—Mexico invites and enjoys the visits of foreigners, but we do not wish to make our country a place of dissipation.

BLASCO IBANEZ—General Obregon, with his short thick neck, broad shoulders and small eyes, which on occasion emit fierce glints, reminds you of a wild boar.

JOHN R. MOTT—We need more men and women who have sunk a shaft down deep into the great thought of God, have uncovered hidden streams, and have set gushing great vital fountains.

Graced! She, who in the business of this brisk day is a persevering and now really tremendous power—"the second in command"—is quick to stamp with her unrestrained approval those things which best help to lighten the burden of her work. A new order! Because the Mimeograph is particularly a woman's implement—neatly doing in hours the work of days—its importance in the world of commerce has kept pace with the remarkable growth of woman's influence in business. Today the Mimeograph is duplicating, at the remarkable speed of five thousand well-printed copies an hour, all kinds of form letters, bulletins, blanks, designs, maps, diagrams, etc., in unnumbered thousands of institutions throughout the world. And thereby it is cutting costs and tedious labor down to minimum. Booklet "E-6" will tell you how this is done. Send for it now. A. B. Dick Company, Chicago—and New York.

The Independent

June 19 and 26, 1920

The S. O. P. Pussyfoots Into Action

By Harold Howland

ON Tuesday of last week the Republican party went into session in Chicago and on Saturday night it came out the Same Old Party. Twenty years had fallen from its shoulders. It was happily, comfortably, complacently back in the year Nineteen Hundred. For it there had been no Twentieth century, no Roosevelt, no progressive movement, no great war. It was the Same Old Party. I wonder what will happen if it wakes up in November—or sometime—to discover that this is not the Same Old World.

On the surface it was a harmonious convention. Every decision made on the floor was smilingly acquiesced in by everybody. No one threw any monkey wrenches or other hardware into the works. Behind the scenes it is true there was heated altercation on a single point, the Covenant and the League. Johnson and Borah, snickersnees in hand, were all ready to run up the jolly Roger and put to sea with their hands against every man if they could not have their way. The reservationists, strict and mild, of the Senate had no intention of letting them have it. For three days "they fought and they bit, they scratched and they fit," when suddenly some master of illusion produced a plank that had the magic property of looking to each of them just like the one he wanted. So all the animals, even the wildest of the wild and the mildest of the tame, lay down together. The twin lions of California and Idaho began to eat straw with their brethren of the East—and all was harmony and brotherly love.

They say that young Will Hays, the flowery-tongued, glad-handing national committee chairman, had that mesmeric plank in his pocket all the time and that it was written by Elihu Root weeks or months ago. I wonder if Mr. Root over there in Europe is proud of the job. As a keynote it rings with all the clear, bell-like tone of an unbaked earthen pot struck with a lump of putty. But it produced harmony, which is what the party wanted, and it has prevented that most dreadful of party catastrophes, a bolt. It has the further advantage from the public point of view, if it is not blasphemous to introduce that point of view in considering a party platform, that it leaves every Republican Senator, present and prospective, free to act on the Treaty and the Covenant when next they come up for action precisely as he pleases.

The rest of the platform was as dull as a Chicago sky. Wherever possible it substituted words for ideas. It did its best to reassure the conservatives without annoying the progressives, to mollify the progressives without alarming the reactionaries. It contained such magnificent challenges to thought and action as these: "The farmer is the backbone of the nation," "Without obedience to law and maintenance of order our American institutions must perish," "We favor a liberal and generous foreign policy founded upon definite moral and political principles," "We hold in imperishable remembrance the valor and the patriotism of the soldiers and sailors of America who fought in the Great War for human liberty," "The supreme duty of the nation is the conservation of human resources thru an enlightened measure of social and industrial justice. We pledge the Republican party to the solution of these problems thru national and state legislation in accordance with the best progressive thought of the country," "Republicans are not ungrateful."

We have held our presses in order to publish in this issue of The Independent the complete story of the Republican Convention, wired from Chicago by the former Associate Editor of The Independent. Mr. Howland will also attend the Democratic Convention in San Francisco as the representative of The Independent, and we hope to make another notable record of timeliness in presenting his article and the news of the convention there.

The platform straddles everything that had two sides. Its favorite word was "But." The subjects about which there could be no controversy were smothered in untentiousness.

The platform was adopted unanimously except for the usual protest from the Wis-

consin La Follette delegates, who presented a radical platform as a substitute amid catcalls, hisses, groans, and hoots.

Then came the proceedings which fell naturally into three parts—oratory, deadlock, landslide. The outcome was a victory for the professionals over the amateurs. It was demonstrated once more that a little, compact group of old political hands who know their own minds and the weaknesses of their fellowmen can have their own way against anything but a revolution. It was something like two months ago that a visitor to Washington used to come back and tell me that Harding was the candidate of the "Senatorial crowd" and warn me to watch him when the time came. But meanwhile so much had crowded into the foreground of the picture that his big figure in the background had become indistinguishable. Neither I nor anyone else was watching Harding as the oratory surged and beat about our heads and the deadlock strained and groaned before our eyes. Except the little "Senatorial" group who were

running things. They had him in mind all the time, I suspect, and only awaited the appropriate moment to trot him out. Not that they could have made the convention nominate Harding if it had not wanted to. The convention was unbossed. It was as free as any convention of politicians can ever be. But it was ultimately controlled with great success by past masters in the political game.

The oratory of the nominating speeches was as sultry as the weather. Speech after speech dragged its flaccid length along, each one galvanizing into the time-worn activity the supporters of its subject and leaving the rest of the audience bored and impatient.

Midway of the parching expanse of words something like a little cooling wind came to woo the senses of the crowd. The Speaker of the House of Representatives, Congressman Gillet, nominated Calvin Coolidge of Massachusetts with splendid brevity and absence of bombast. Then a slim figure in refreshing white with a smart sailor hat on her head came forward and made the best speech of the day. She was Mrs. Alexandria Carlisle Pfeiffer, until recently a popular actress. Her simplicity and directness of manner, her effective delivery and cameo-like enunciation and the freshness and vigor of her thought put to the blush all the experienced spellbinders who ramped and roared before and after her. Other women made good speeches, but none so good as hers.

Mrs. Corinne Roosevelt Robinson, T. R.'s sister, supported General Wood's candidacy with vigor and effectiveness. In fact this first advent of women into a national convention as spokesmen for candidates was a triumph for themselves and a lesson to the men. Next time they would do well to make all the speeches. There would be more matter in them and less oratory.

The speeches rumbled on till eleven candidates were in the field. Then came the first ballot. It revealed Wood first, Lowden second, and Johnson third, with the highest more than two hundred votes from the goal. Four ballots were taken that day and none of the three made appreciable gains. Then the delegates went out from the Coliseum to think it over and the managers of the different candidates started to rustle for votes.

It was anybody's race and probably nobody's so far as the leaders were concerned. They had shot their bolts. The convention would not have any one of them. The question was, who would the convention have. The next day was Saturday. In a political convention there is nothing like imminence of Sunday to break a deadlock. Delegates want to go home.

Life in a convention city is expensive and most delegates cannot spare more than a week from their home affairs. So Sunday is the best ally of those who would bring off a *coup d'etat*. It was the Senate's hour. In a hotel room long past midnight, the story goes, the final plan was made. Harding it was to be. However that may be, that was the way things went when the morning came and the convention met. For three ballots Wood and Lowden held their own on level terms. But each ballot saw Harding creeping steadily up. Sixty-one votes he had the night before. Now the tale was seventy-eight, eighty-nine, one hundred and five, one hundred and thirty-three and one-half. The eighth ballot found Wood and Lowden slipping. Johnson had already

lost nearly half his votes. There came a demand for a recess. It was hotly contested. An excited group argued and shouted on the platform. Even the Brahmin-blooded Lodge lost his imperturbability and waxed gesticulatory. A newspaper man invited to the platform was seized by a clerk and almost hurled back into the press box. Myron Herrick, leader of the Ohio delegation, excitedly protested against the recess. He was apparently afraid that it might halt the steady progress of the Harding slide. But the Senators on the platform calmed his fears.

The question was put and the chairman declared it carried. The recess was ordered. At five o'clock the balloting began again and the end came swiftly. The ninth ballot saw the Lowden delegates flocking to Harding with one-fifth of the Wood men. Harding's vote was 347½. The tenth ballot ratified the choice and Harding with 692 1-5 votes became the nominee.

And who is Harding? Former Lieutenant-Governor of Ohio, present Senator from Ohio, tall, handsome, dignified, "stalwart," who asserts that his Republicanism is the Republicanism of McKinley. He is a regular of the regulars. He hates any divagations from the true faith, such as T. R. and his followers indulged in in 1912, as the devout Catholic hates apostasy. With his nomination the wheel has come full circle. We are back in 1900 again.

A tepid demonstration occupied the next half hour. Then the delegates named Coolidge as candidate for the vice-presidency and went out to scurry for trains and home. So ends the Roosevelt era of the Republican party. The party has slipped back into its former state of self-satisfaction and turned again to its worship of prosperity and conservatism and "regularity." It has put a "regular" candidate on a "regular" platform. It will wage a "regular" campaign and trust to win a "regular" victory. It was probably inevitable. In any human organization or community great leaders do not follow one another without a break. Human progress is like the sea. There are troughs between the waves and only every seventh wave is a giant.

The Republican party is naturally the party of the contented, the prosperous, the static. When its leaders are mediocre its weight is all thrown on the side of the existing order. It then looks inward not forward. It sees itself as the guardian of what is, not the eager quester for the things that are to be. But it has the merits as well as the defects of its quality. It is efficient. It gets things done.

It only needs strong leadership by men of vision to make it a mighty force for good in the nation and thru the nation in the world.

That leadership it lacks today. A great opportunity confronted the party at Chicago, but it made the great denial. It chose to pussyfoot.

There is just one ray of light in the murkiness. For the second time in many decades the Republican party has nominated for the vice-presidency a man worthy to be president. *Absit omen*. But perhaps the germ of the new leadership is to be found in the young man who said "there is no right to strike against the public safety by anyone, anywhere, at any time," and awoke to find himself famous.

Women and children first—if they step lively

A well built hair pin curve on Pike's Peak Highway, the highest motor road in the world, which represents an unusual achievement in road building, for it has eighteen miles of broad, smooth boulevard rising at an average grade of 6 per cent with a maximum of only 10 per cent. The road leads to the summit of Pike's Peak, almost three miles above sea level

When Uncle Sam Goes On the Road

A Message from the United States Government to the American People

By Thomas H. MacDonald

Chief of the Bureau of Public Roads

ON July 11, 1916, President Wilson approved the measure generally known as the Federal Aid Road Act, under which the Federal Government is now coöperating with the states in the construction of highways.

Nearly a century before, the Congress had put an end to federal activity in road building when it failed to continue the appropriations necessary for the completion of the Cumberland Pike, the great national road which was to connect eastern tidewater with the frontier along the Ohio. This early activity in road work by the Federal Government was abandoned because of the development of the railroads which quickly replaced the stage coach for the long overland journey, and relegated the highways to the position of feeders which they have ever since occupied.

There followed nearly three-quarters of a century during which the public roads went from bad to worse under the care of local overseers and poll tax labor. A few of the main roads controlled by toll companies were kept in passable condition with the revenue collected from travelers at the pikes or barriers; but in the main the country roads of this period were best avoided by all who could.

New Jersey was the first state to redeem itself from this condition by the establishment of a state highway department in 1891. The results, in this state, of the substitution of scientific road construction for the mismanagement of the local road builders were so quickly demonstrated, that Massachusetts, Connecticut, New York and other eastern states followed with the establishment of highway departments in rapid succession. State control with consequent application of engineering principles to highway construction proved to be the solution of the road problem in these states. Under that plan were built up the splendid road systems which they now possess.

But, notwithstanding the success of the state-aid plan, there remained in 1915 seventeen states which had failed to adopt it, in a workable form, and which were still opposing to the forces of road destruction the weak arm of local control.

To encourage the establishment of adequate and efficient highway departments in all the states was one of the principal objects of the Federal Aid Road Act. It specifically provides that each state, in order to share in the distribution of federal aid funds, must have a state highway department, adequate, in the opinion of the Secretary of Agriculture, to take charge of the scientific design and construction of roads; and that these departments must have direct supervision over the construction on which federal funds are to be expended. To make sure that these departments will have sufficient money to carry on their work, the act further provides that the allotment of federal funds shall be met in each state by the appropriation of at least an equal amount of state money.

The effect of these provisions of the act was felt immediately. In the first year after its approval by the President more constructive state highway legislation was placed upon the statute books than had ever before been enacted in the history of the country in a similar period, and a condition was brought about which otherwise would not have been reached in five or ten years.

The conditions laid down operated most powerfully to bring about the establishment and strengthening of state highway departments, the placing of road construction under skilled supervision, the standardization of road construction methods, the creation of large funds for construction and maintenance, and the establishment, in many states for the first time, of definite provision insuring the maintenance of highways from the date of their completion.

The Secretary of Agriculture is named to administer the provisions of the act, and he, in turn, has delegated the details of administration to the Bureau of Public Roads.

The appropriation made by the Act of 1916 was \$75,000,000, which was made available in five annual installments, beginning with \$5,000,000 for the first year, and increasing annually by \$5,000,000, the last installment of \$25,000,000 becoming available on July 1, 1920. The Amazing Progress of Aviation

A Message from the Italian Government to the American People

By Colonel Alessandro Guidoni

The author of this article is himself a pioneer in aviation; in 1911 at Spezia, Italy, he tried the first Italian seaplane ever used; in 1913 he was the first airman to drop a 700-pound torpedo from a torpedo plane. During the Italian-Turkish war Colonel Guidoni was wounded in an aeroplane landing at Tripoli. He was with the seaplane squadron "San Marco" at Venice during the Great War. Among his foreign decorations are the D. S. M., the Legion d'Honneur, and the B. E. Cross. Colonel Guidoni is the first attaché for aeronautics from Italy to the United States

OCTOBER 20, 1911, has been perpetuated as the date when an Italian aeroplane took the air from the shores of Tripoli to execute on the Turkish lines the first aerial reconnaissance ever recorded in the annals of history. Airplanes of this type were then equipped with 50 horsepower motors, and could not fly higher than 1800 feet above ground. The useful load was barely sufficient for one person, so that the pilots were compelled to fly alone. Tripoli, however, had not been occupied a month, when two hangars for the two 350,000 cubic feet P1 and P2 dirigibles were erected; these dirigibles afterwards made more than eighty flights in the interior of Tripoli.

Italian aviation began thus its glorious course, supplementing the scarce and unsatisfactory means of that time with the devotion and prowess of its personnel. As in the automobile field our firms had secured an enviable position among European constructors, so for the production of aircraft there sprang up numerous organizations which by their endeavor and sheer

ability made possible not only the emancipation of our aviation from foreign production, but even the supplying of a great number of planes and motors abroad.

At the beginning of the great war Italy, altho possessing a nucleus of aircraft and motors, was not in a position to successfully face the risks of war above the ground. The remaining nations of the Entente were not, however, in much better shape. The speed of Italian aircrafts was at that time a trifle more than eighty miles per hour; the motors were only 100 horsepower and the load of bombs could not exceed sixty-five pounds. At this stage Italian enterprise began to create with great enthusiasm, bettering that which existed and producing that which was needed. On the other hand Italian aviators did not for a moment hesitate to

throw themselves into aerial encounters, tho they well knew that they were facing with imperfect planes a trained foe, hardened and rendered expert by a year of pitiless war. It is no mystery that many of them gallantly paid with their lives for their temerity.

With a supreme effort

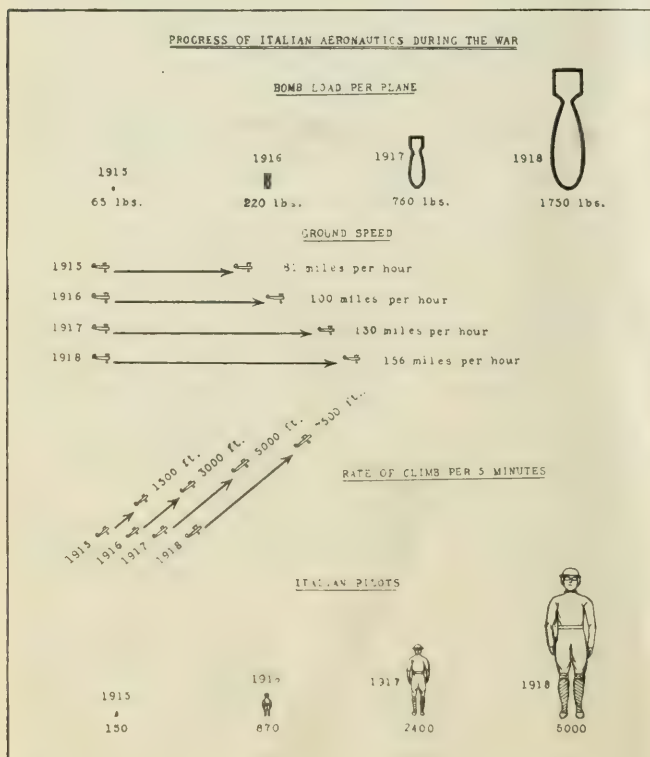

Italian aviation obtained, in 1916, the absolute mastery of the sky; the number, speed and power of its aircraft and the daring, skill and valor of Italian aviators proved insurmountable obstacles for the Austrians, who were forced to give way to their conquerors.

The very enemy paid a tribute to our aviation, when, in June, 1918, the Austrian official bulletin gave an account of the unsuccessful offensive on the Piave:

Squadrons of Italian chasing and bombing planes opened a deadly machine gun fire on our front line detachments and reserves, but above all they damaged the bridges, thus contributing to the Italian command a priceless activity. During the last days of the battle, owing to our air losses and the deficiency in reserves, the Italian aviators were able to reconnoiter almost undisturbed, continually harassing our troops, especially the infantry.

It is only necessary to look at the drawings on these pages to appreciate the tremendous growth of Italian aeronautics. Aircraft in 1915 numbered 400 planes; in 1918 it had jumped to 6500. The number of motors originally 600, reached 15,000. The weight of aircraft, 1700 pounds, became 15,000 pounds, and the power of the motors became 700 horsepower when it was previously 100 horsepower.

In October, 1918, when the Italian army and navy with an irresistible and impetuous attack rushed the enemy positions, demoralizing their senseless and ferocious resistance and completely routing the enemy and taking 500,000 prisoners, hundreds and hundreds of

Italian eagles took part in the victorious fighting, discharging 150,000 pounds of bombs on the enemy in flight. Simultaneously, on the sea, from Venice to Brindisi, our speedy pursuit seaplanes were protecting our coast cities, while more powerful planes brought the offensive to the coasts of the enemy.

In the Tyrrhenian Sea navy airplanes, sea-planes and dirigibles kept a diligent, efficacious look for the insidious submarine monsters, tirelessly protecting our steamers transporting food for our men and coal for the machinery of our country.

Italian eagles, likewise, were the first to bring fraternal greetings to the Italian cities wrested from the long, barbarous rule of the enemy, even before our soldiers could enter them.

Forty Italian aces have to their credit from forty to five enemy machines; some two hundred others brought down from four to one. Five hundred and sixty pilots, observers and machine gunners paid with their generous life their debt to their country.

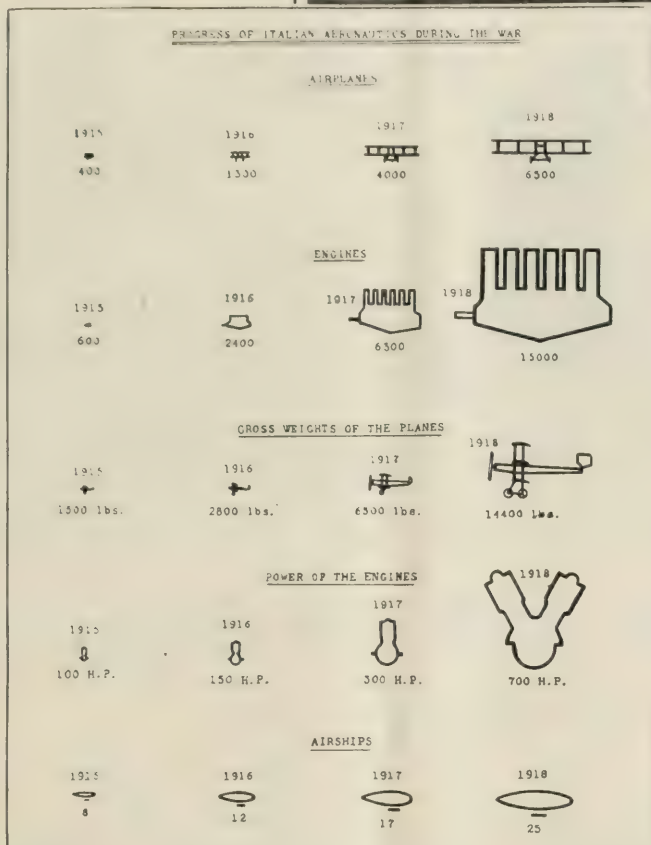

Hostilities had hardly ceased when Italian aviation quickly deflected its activities to the field of civic and commercial aeronautics. Since 1917 airships from the northern part of Italy have had to be dispatched under their own power to all parts of the peninsula. This rendered imperative the establishment of a veritable net of aerial routes, binding the entire country, and consisting of airplanes and emergency grounds at about fifteen or twenty miles from one another. This arrangement guarantees an almost sure flight, inasmuch as, should trouble develop an aircraft can always glide to an emergency field. Such a network of air routes, which again puts Italy in the lead, was not possessed by any other country.

At the termination of the war Italy, owing to her very favored position in international aeronavigation, soon turned her attention to perfecting the existing air routes. The peninsula is as a great natural bridge thrown between Central Europe and Africa and Central Europe and Asia. Any English, French or German airplanes which are going or will go to Egypt will have to fly thru Italy to reach their destination.

Our aviation was quick to realize that this air traffic was to be given all possible incentive and coöperation. Not only are foreign crafts at complete liberty to cross Italy, but they are sure to find there the best possible air routes, both in the interior and on the coast, numerous landing fields and all that is needed for the

The Italian dirigible "M" has a huge two story nacelle capable of carrying thirty or more passengers

upkeep and supplying of their planes. Aerial navigation in Italy is nowadays as possible as maritime navigation. This branch of civic aeronautics is admirably headed by Colonel Marengo.

After the signing of the armistice the Italian aeronautics evolved into a new organization, which can be said to occupy an intermediary position between the French and English services. This new Central Body of Production and Experimentation (Italian State Aeronautics) is charged to provide aircrafts and motors to the army, navy and mail services and to organize commercial air traffic. This organization is presided over by Lieut. Col. Carlo Berliri Zoppi, an energetic young man who enthusiastically is giving his labors to the de-

velopment and future of our civic aeronautics.

It cannot be said that the advent of peace has diminished the Italian aerial activities. An entire squadron of Italian planes is nearing the goal in the Rome-Tokio 10,000 mile raid, after journeying over inhospitable regions and facing every imaginable peril and difficulty.

Some time ago the T34, a great 1,000,000 cubic foot dirigible, made her first trials in a most satisfactory manner. This dirigible represents an altogether new type, and, without possessing the inconveniences inherent in the rigid-type German airships, has all the advantages and leading features of the Zeppelins. It has a useful load of nineteen tons and can navigate 8000 miles without having to stop en route for supplies.

Furthermore the great engineer, Caproni, has nearly finished his mammoth twenty-five ton seaplane, leading all others by far. This monster of the air can safely undertake the transportation of 100 passengers at once, and, propelled by its eight engines, can attain a speed of ninety-five miles an hour.

It is then with justifiable pride that the Italian aviation recalls today its glorious war exploits and the not less noble achievements which are blazing the trail to a peaceful victory in this growing field of aerial locomotion.

Master Workshops of America

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprises That Have Given the United States the Name of the Foremost Industrial Nation of the World

The Wanamaker stores in Philadelphia and New York are each the biggest of their kind in their respective cities. The first day's sales that John Wanamaker made in his store amounted to \$24.67; the present record is \$1,000,000 in a single day

The Store with the Right Idea

By Edward Earle Purinton

ASK the first person you meet to define a modern "store," as for instance, "department store." He will probably call it a place where goods are bought and sold, branding it a commercial proposition.

The brother guesses wrong. He is twenty years behind the times. The great merchant of today puts the matter of sales last, not first. And the great store of today is, just as much, a school, a library, a laboratory, a household, a bank, a restaurant, a publishing office, a playground, a reception room, a battlefield, a workshop, a council meeting, a brain factory, a social center, a community of idealists, and a score of other institutions *not* concerned in the mere selling of merchandise.

The old-fashioned store, a grim place of barter, was doomed on the day John Wanamaker was born. You can't buy a thing on a basis of money exchange, in a Wanamaker store. You get values of heart, mind and spirit, that no millionaire can buy with his gold, and that the stated price never includes. A hearty solicitude, a genial service, a delightful candor, a deft skill, a quiet manner, a trained intelligence, a clear knowledge, a clean atmosphere, a quick motion, a smiling face;—these things cannot be bought, yet they should accompany every sale as a part of the thing sold.

President Charles W. Eliot once made this remark: "Business will eventually be properly classed as among the learned professions." He didn't put it strong enough. The kind of business founded by John Wanamaker should be classed not among, but above, most of the learned professions;—it takes more knowledge and

higher wisdom to run it than a professional man ever needs to make a success.

The founder of the Wanamaker stores is a teacher, a preacher, a philosopher, a writer, a banker, a scientist, a statesman, a reformer, a worker, a pioneer, a manufacturer, a publicist, a patriot, a philanthropist. How many lawyers, doctors or teachers have to be a dozen professional men, all in one? How many could be?

While John Wanamaker is too practical, and too modest, to call himself a professional man, he does say that "in this age of the science of business, the merchant must be a close student of protection, free trade, factory systems, banking, currency, coöperation, contract, import and tariff laws, consular and shipping laws, textile machinery and education, architecture, social service, fire and marine insurance, origin and production of raw materials, new processes of manufacture, new openings of countries like Japan, China, Russia, Korea." Furthermore he declares that "the field of influence and beneficence of merchants, manufacturers or foundry master creates parishes larger than those of the lawyers, doctors and the vast majority of clergymen."

It is a new idea that a business head should create and conduct a parish. Why not? Isn't a great man's *life* the best sermon he can offer? And doesn't he have to preach this sermon all day, six days in the week? And with ten or twenty thousand employees not only hearing his words but watching his every move, he holds a ministerial position that would test the character of a saint.

As a former teacher, descended from a line of teach-

ers and preachers, I frankly confess that Wanamaker the man, able to instruct and inspire a countless host of employees, customers and friends, appeals to me far more than does Wanamaker the merchant, able to build and operate the world's largest retail store. He himself, opening the first mammoth store building at Philadelphia, by a ringing challenge to the best in his vast audience of fellow-workers, proclaimed that "a man may be immensely greater than the greatest granite structure that can be built."

Such a man is John Wanamaker. Let us go back to the foundations of his life, and spend a few minutes analyzing the first deep, human sources of his later commercial supremacy. Viewing with admiration a powerful business machine, a thinking person always asks, "What made the *man* that made the machine?"

The first business experience of John Wanamaker was turning bricks and doing odd jobs around the yard, his father being a brickmaker, with seven children to support. John was the oldest; he had to stop school at thirteen and commence to earn money, so he found a job as errand boy in a publishing house at \$1.25 a week. Later, as a clerk in a large Philadelphia clothing store, he put so much personality into his work, even tho a boy, that the customers would ask on entering the store, "Where is John?" and they had to have him wait on them. The proprietor, the famous Colonel Bennett, often told his friends, "John is the most ambitious boy I ever saw. He declares he is going to be a great merchant, and he is always organizing something."

Every boy has it in him to do and be something great. The first job of parents, teachers and ministers ought to be to find that great something in each boy, and help him to live it out. A college graduate should know precisely what he can do best, and where and how he can do it quickest. Otherwise he knows less than John Wanamaker taught himself; for by the time he was

Wanamaker employees get education and recreation along with employment. This drill is part of the Commercial Institute's work at the Philadelphia store

twenty-one, after outgrowing the various positions he had mastered by toil and study, John opened his first store, with \$1,900 he had saved, with a young friend as a partner.

The floor space of the first Philadelphia store was 16 by 80 feet, and the first day's sales were \$24.67. The present Philadelphia store occupies a six million dollar steel-ribbed, granite-walled, fireproof building containing forty-five acres of floor space, reaching 247 feet in the air and thirty-four feet below the street, and covering the largest business block in the city; while the New York store, consisting of two mammoth buildings, comprizes the largest retail business plant in the business center of the world. The twin stores now have a record of more than \$1,000,000 for a single day's sales; the total volume of distribution of quality merchandise has equaled more than a billion dollars; the total number of employees has been about 150,000, the store in each city having the biggest payroll of that city; and the name and fame of Wanamaker have gone to the ends of the earth. Young John's fixed purpose led to sizable results.

Only glimpses of the man are possible in so brief a sketch. But the traits of character that underlie the whole business may perhaps be indicated thus, and a knowledge of principles ought to precede a knowledge of tools and methods.

He concentrates. He puts every job right thru—and thru right. Also, the harder it is, the closer he sticks. When he was a lad studying arithmetic, problems would arise that could not be solved in school hours. The other boys left their problems in the middle, to run off and play. John kept the teacher in, working till they had the solution. And of course he led the class. Many a poor scholar has been "kept in" by the teacher, but did you ever hear before of a good scholar who kept the teacher in!

He smiles at obstacles. He sees thru them, and climbs over them or batters them down. Tuberculosis threatened him as a young man—he had studied and worked too hard in boyhood. He opened his first store with such a handicap, and turned the handicap into a help! How? By learning how to live so as to conquer and prevent disease. Fifty years later, when he was seventy-one years old, he began work one morning at 7 o'clock, went over all sections of the New York store in the two great buildings, examined thousands of samples of merchandise, kept on the job till 1:30 the next morning—and was fresher at the close than the young fellows whom his energy had tired out. People who think they have some incurable disease may learn from Mr. Wanamaker that what they have is likely to be incurable ignorance or incurable idleness. [Continued on page 412]

John Wanamaker went to work when he was thirteen years old and at the age of eighty-two he is still actively at it

One Day's Work at St. Mihiel

The First Complete Story of Our Combat Operations

By Captain Joseph Mills Hanson

IN the taking of the St. Mihiel salient there was a quality of grandeur which will ever commend it to thoughtful Americans as one of the most stirring episodes of our history. Perhaps no other event, either of war or of peace, in all our national existence, has demonstrated, at once so swiftly and with such awe-inspiring power, the concentrated might of America. In the previous May and June a few of our divisions had taken a valiant share in halting the drives of the Germans toward Paris; in July a larger number had figured as decisive factors in hurling him back from the Marne to the Vesle. But on those occasions our forces were scattered under French higher command, unable as yet to present a united American front to the enemy. In late September, October and early November a vastly greater American army than fought at St. Mihiel was to engage in the battle which would end only with the capitulation of Germany. But in this case the struggle was to be so protracted that its very length and intensity would deprive it of that aspect of abrupt finality which marked, like the stroke of a mighty sword, the suppression of the St. Mihiel salient. The latter was an achievement which thrilled alike the people of America and of all the Allied nations, which sent a shudder thru the fabric of the Central Powers and which confirmed in the American army a confidence in its own strength not to be shaken by any future events.

At the time when the Aisne-Marne counter-offensive came to an end and the battle front temporarily stabilized along the Vesle, that is to say about August 9, 1918, it had become evident that the situation on the Western front had altered in two most important particulars. First, by the operations just concluded the enemy had been thrown definitely upon the defensive and, second, owing to the rapid arrival of American troops the weight of numbers was at last in favor of the Allies. In these circumstances the immediate concern of Marshal Foch was to assure to his armies the retention of the initiative which they had gained by allowing the enemy no chance to recover from his recent reverses. Such an object could only be achieved by continuing the offensive without interruption and a most potent weapon for its continuance would be a purely American army, fresh, strong, subject to constant reinforcement and expansion, and able to strike powerful blows in a sector exclusively its own.

By August 9 the magnificent efforts of the United States had placed in France no less than 1,300,000 troops and during the month of August 705,000 tons of supplies for the use of these troops were delivered at the ports of France under American control. We had twenty-eight combat divisions in line, in rest or in

Seicheprey

*A handful came to Seicheprey
When winter woods were bare;
When ice was in the trenches
And snow was in the air.
The foe looked down on Seicheprey
And laughed to see them there.*

*The months crept by at Seicheprey,
The growing handful stayed,
With growling guns at midnight,
At dawn, the lightning raid
And learned, in Seicheprey trenches,
How war's red game is played.*

*September came to Seicheprey;
A slow-wrought host arose
And rolled across the trenches
And whelmed its sneering foes,
And left to shattered Seicheprey
Unending, sweet repose.*

training areas, of which seven were in the region of the recent Aisne-Marne operations and we had four Army Corps staffs, those of the First, Third, Fourth and Fifth Corps, available for use with an American army. Under these conditions a plan was arranged between Marshal Foch, General Pershing and General Petain, Commander-in-Chief of the French armies, whereby an American army to consist of two corps of three divisions each should be constituted in the region of Chateau-Thierry. To this end the headquarters of the First American Army was created and established on August 22 at La Ferte-sous-Jouarre, on the Marne between Meaux and Chateau-Thierry.

But such an arrangement was not altogether satisfactory, particularly to General Pershing, who was most anxious to have his first army operating as soon

as possible in the general region of Toul, which, since his first arrival in France, had been looked upon as the theater in which an American army would eventually take the offensive. With this scene of operations in view the American seaports at Brest, St. Nazaire, La Pallice, Bordeaux and Marseilles had been selected and improved because the trunk railway lines running thence toward Toul interfered to the minimum degree with the overtaxed lines supplying the British and French fronts. Along these American supply lines immense depots, shops, regulating stations and railheads had been built up, all designed for the feeding of combat forces in the region of Toul. While the American army continued near Chateau-Thierry, this great supply system would remain relatively useless.

During the month of August the offensive role of the Allies was maintained in a limited way by the British attacks in the Amiens salient, in which troops of our Thirty-third Division had a part, and by the advance of General Mangin's Tenth French Army between the Oise and the Aisne, in which our Thirty-second Division participated. These operations, however, were merely calculated to recover some of the territory which had been lost during the spring and to hold the German strategic reserves immobilized so that they could not be concentrated for another offensive of their own.

But the steady improvement in the Allied situation and the accumulating evidence of the enemy's comparative weakness now enabled Marshal Foch to form plans for launching a series of hammer blows along the whole front which would perhaps be capable of breaking down the entire organized system of German defenses before winter or, at the least, of seriously shaking it. For the prosecution of such a far-reaching effort, General Pershing was able to convince the Allied high command that his army could be most usefully

Photographs by the U. S. Signal Corps

No Man's Land on the heights of the Meuse in front of Les Eparges and Mouilly. It was this ground that was crossed by the United States 26th Division and the French 15th Colonial in the famous morning attack of September 12, 1918. The photograph was taken from an American front line trench

To these French refugees the victory of St. Mihiel brought the immediate blessing of giving them their homes again. As soon as the American occupation was established the refugees came up from cellars and back from temporary shelters to reestablish themselves in whatever of their homes had been left standing

employed in the region in which it had originally been intended to operate, devoting its energies to the conquest of the German front on both sides of Verdun, from the Moselle River on the east to the Argonne Forest on the west, and striking northward toward the Briey iron fields and the trunk railroad line between Metz, Sedan and Mezieres. Early in September, therefore, the headquarters of the First American Army were transferred from La Ferte-sous-Jouarre to Neufchateau, about twenty-five kilometers south of Toul, and the concentration of American combat troops was begun in front of the St. Mihiel salient.

This salient, whose suppression was a necessary preliminary to any general attack on the main German front between the Moselle and the Argonne, was a familiar object to several of the American divisions which had been longest in France, for in the trenches surrounding it and especially in those on its southern face, in the low, marshy plain of the Woevre, about Flirey, Seicheprey and Xivray, they had undergone their training in trench warfare during the winter of 1917-18. The French called it "the hernia of the Western front," and to them it had been an object of grave concern ever since September, 1914, when it had been created by two German army corps under General Von Strantz, which had advanced, almost unopposed, from the plain of the Woevre, west of Metz, overrun the Heights of the Meuse between St. Mihiel and Les Eparges and, crossing the Meuse at St. Mihiel, had attempted to encircle Verdun from the south. At the time the bulk of the French reserves were involved in the efforts to envelop the right flank of the German armies between Soissons and the English Channel, which followed the victory of the First Battle of the Marne. But Von Strantz's attempt on Verdun was finally frustrated by the comparatively feeble armies of Generals Sarraill and Dubail, which were holding the line from Verdun to Toul and Nancy. The French, how-

ever, were unable to drive the enemy back from the Meuse heights or to recover the St. Mihiel bridge-head, by holding which the Germans cut the important railroad between Verdun and Toul and deprived the Verdun fortress of any rail communication save by the one line extending eastward thru Ste. Menehould. Early in 1915 the French made violent efforts to pinch out the salient by attacking its flanks at Les Eparges, on the Heights of the Meuse, and at the Bois le Pretre, on the Moselle south of Metz. Beyond making some local gains of ground their efforts resulted in failure, very costly in blood, and during the succeeding years the Germans had fortified the salient very strongly, holding it as an advanced work protecting Metz and the Briey iron fields and as a constant menace not only to the rear of Verdun but to the flank of any offensive which the French might contemplate either in the Meuse-Argonne region, on the west, or beyond the Moselle River, on the east. Since this was precisely the sector which the Americans took over early in September, 1918, it is obvious how necessary was the reduction of the salient before they could move against the Meuse-Argonne front.

To describe in a little more detail this important bastion of German defense, which had a total front of about sixty-five kilometers and enclosed two hundred square miles of territory, it may be said that from its eastern end, on the Moselle just north of Pont-a-Mousson, westward to Apremont, a distance of about thirty kilometers, the German line, tho elaborately intrenched and deeply wired, ran for the most part over the open, gently rolling country comprising the southern part of the Woevre Plain. The trench lines on the western half of this front, both German and Allied, in the low flats around Seicheprey and Xivray-Marvoisin, were completely dominated by Mont Sec, a high, abrupt hill resembling one of the buttes of the western United States, which

[Continued on page 422]

This is the fourth of ten articles in which Captain Hanson tells the complete story of what the American troops did on the battle line in France — a series written from a thoro study of the official records and with the background of actual experience overseas. "Up the Line from Cantigny" was published in The Independent of March 27, "Those Desperate Days at Chateau-Thierry" in the April 24 number, and "Zero Hour Along the Marne" in the issue of May 29. The others will follow in the fourth issue of every month

The Danger of Playing Safe

By Talcott Williams

THE Republican National Convention at Chicago has dodged its responsibilities on the duty and demand of the hour, the League of Nations. The convention had fewer able men than in past Republican national councils and more average men. In rejecting Lowden and Wood the convention ended the future free use of money in the canvass for a nomination, a great reform.

The average American today is not enthusiastic over a League of Nations. He is not on fire to set the world in order and keep the peace of humanity. He sees no "duty" in Mexico. He wants neither "empire" nor "glory." He is not crazy over "social reform." He is sick of agitation. He believes this is a good country as it is. He wants to enjoy it. One quarter of the men who will vote next November have been in uniform. They never want to be in uniform again or see any number of their fellow citizens in it if they can help it. The half of them who went to France are disillusioned by their experience there.

They want peace and quiet. They believe there is enough constitution and law now to go around. If they are on a jury, they almost invariably find verdicts of guilty against any men who tell them this country needs to be made over. They are thru experimenting. Three Constitutional amendments have given them heavy income taxes, the direct election of Senators and stringent prohibition. The fourth amendment for woman suffrage hangs fire. It will pass, but no one urges new amendments this year.

This is all wrong. It was the spirit of the overwhelming majority of Americans from 1840 to 1860. All parties dodged—even the Republicans. War came. So we compromise and you will reap conflict. God so made the world. If this one, great, solvent, powerful people refuses to accept the responsibility laid in its path of saving the civilization of the world, it will in due season pour out blood and treasure like water to save its own civilization and by then it may be too late.

THE Republican Convention in candidate and platform reflects exactly this prevalent desire to get back to the peace, prosperity, and quiet of the bloodless years before the Great War. Warren Gamaliel Harding of Ohio is a good man. He has kept the law from his youth up. He looks prosperous. He feels prosperous. He is prosperous. He has had a typical American career. Every day of it has been to his credit, and improved his credit at the bank. He is intelligent and clear-headed. He has the capacity for easy, lucid expression acquired by the good newspaper man. He has the knowledge of foreign lands and foreign affairs which comes to the American editor, wide and general, but not profound, exact, or inspiring. He has been staunchly in favor of every reform which had a majority. Nobody ever called him a "Johnny Uplift," but he has improved the city and state in which he lives. He is a useful citizen. He reads, but he never studies. He was never in "Who's Who" until he held office. Any man would be glad to have him for an executor of his will. But a President has to deal with a living nation and vital causes. His campaign biographer will have as hard a job as Nathaniel Hawthorne when he wrote the campaign biography of Franklin Pierce, but Franklin Pierce was elected over Scott, a far abler man. Senator Harding has a wide national acquaintance, an indispensable requisite (if elected) for a post whose holder must fill hundreds of offices. He never lost a friend, but what is a most serious lack, he never made an enemy. No newspaper man should live in a wicked world and not make some enemies.

As President, he will select a good cabinet, and he will

walk in the old paths. In the Senate, he was opposed to the League and the Treaty of Peace with Germany. He will be doubtful on it as President. He has decision, but no vision. He will enforce the laws. If a great exigency comes, he will show the usual resource of the American. He will not hesitate in the issue as to whether labor unions shall be more powerful than the law of the land and the rights of all. He will originate no new policy save in the administrative details the platform provides, and he will open no solution for the social, international and racial issues which shadow the day. He is—let no one forget who sees his manifest deficiencies—much the kind of steady, hard-working, confidence-creating, not over brilliant men to whom the English-speaking folk, in each of its homes, has often turned for guidance in government.

CALVIN Coolidge for Vice-President is the best man in many decades selected for the post, except Theodore Roosevelt. Coolidge for President and Harding for Vice-President would have filled the Republican party with enthusiasm. Such a ticket would have elected itself. The ticket nominated will have to be elected by the men who selected it—machine leaders and average men playing for safety.

They had a narrow choice. Lowden and Wood had made themselves impossible by their expenditure. Hiram Johnson could not carry New York, an essential state. Hoover, the one man who would sweep the country, had estranged the party workers. A bold leader would have nominated him, secure that the workers would accept the party candidate, but this is always a perilous risk. Knox had an impossible corporation record. Hughes was wanted in the East and odious in the West. The western vote promised Butler did not materialize. Intellectually, he was admitted to be the best equipped, but this is a bad year for university presidents. Sproul, Coolidge and Harding were left. Sproul meant a break with Penrose and the great interests the Pennsylvania Senator represents. Coolidge was too little known and the Massachusetts delegates admitted he was sometimes narrow. He was unknown to the network of state leaders. This elimination left Harding "available," but weak. A newspaper file is a dangerous record. He lost his own state running for Governor. If this was not believed to be a Republican year, he would not have been selected. He will be found to be much easier to nominate than to elect; just as Coolidge and Hoover are easier to elect than to nominate.

He cannot carry a majority of the Electoral College unless the Democratic Convention helps him. His great ally is the Democratic party which has no conspicuous candidate both known to the country and also commanding its confidence. It is responsible for the situation of our national finances and for the business and price conditions growing out of them, a heavy weight to carry. Democratic taxation, particularly on incomes, has been cruelly unjust to the North and partial to the South. All that the Republican platform says as to waste, extravagance and delay in retrenchment is generally accepted. Eight years of Democracy have wearied the land; but no party can win on the faults of the other party alone. Hymns of hate never win victories.

"Senator Harding," neatly says Senator Hitchcock of Nebraska, "is a very appropriate choice for the Republican platform. He fits it very well." On the one arching issue of the hour, the League of Nations, the Republican party has left all roads open to the President and Con-

The Republican Ticket

The Republican candidate for President of the United States, Senator Warren Gamaliel Harding, has only one fault, according to his father: "He is too accommodating." Geniality, easy-going friendliness, the ability to get on with people are among his chief characteristics. Senator Harding comes from an old American family, of Scotch descent on his father's side and of Dutch stock on his mother's. He was born in the village of Corsica, Ohio, on November 2, 1865. He spent his boyhood on his father's farm and until he was fourteen he got his "book-larnin'" at a little red schoolhouse. Then he went to the Ohio Central College at Iberia, and was graduated in 1882. Most of his college expenses were paid with the money he earned himself, cutting corn, digging roads, painting barns, teaching school, working on the village paper. When the family moved to Marion, Ohio, in 1884, his father bought half interest for young Harding in the *Marion Daily Star*, which he still owns and edits. It was not until 1900 that Senator Harding's interest in politics led him to run for office. He was elected to the State Senate, and later made Lieutenant-Governor of Ohio. In 1914, Ohio sent him to the United States Senate by a majority of more than 100,000. Senator Harding is a trustee of the Trinity Baptist Church in Marion. His favorite recreation is golf

© International

Like Senator Harding the Republican candidate for Vice-President, Governor Coolidge of Massachusetts (right), spent his boyhood on a farm and earned his first money driving home the cows. Calvin A. Coolidge is as typically New England as his name, quiet in manner, dress and speech, reticent, unassuming, but forceful and decisive when occasion arises. In his handling of the police strike in Boston, Governor Coolidge stood uncompromisingly for the protection of the public with the statement, "There is no right to strike against the public safety by anyone, anywhere, at any time"

Governor Coolidge was born in Plymouth, Vermont, on the 4th of July, 1872. He grew up on a farm, he went to the country school, and in 1891, having waited until he could get together enough money, he entered Amherst College. His classmates there remember "Cal" as a quiet boy who took honors always in his studies and was popular in his class. After college he practiced law in Northampton, Massachusetts. He was elected City Solicitor in 1899 and from then on he has continued steadily to win political honors without ever being in the least a politician. As the Northampton blacksmith explained it: "I guess it's because when he says he'll do a thing he does it"

gress to be elected. Under the ingenious utterance drawn by Senator Root, the present League could be entered by the United States or it could refuse to assume any responsibility whatever. The same is true of Mexico. Any action or none is left open to the next administration. On the mandate for Armenia, the convention rejects a clear national duty.

The platform is doubtful on all disputed issues. Even the prohibition plank is weak. No one can tell what is to be done on the army or the navy, our inflated currency, the check to national credit by depreciated national bonds, the principle upon which revenue is to be raised, the treatment of exorbitant profits, of high prices or of combinations which are controlling the supply of the necessities of life at home as well as our trade and exchange abroad. All these are left vague. Cumbersome propositions are made in the platform for legislation and administration; but such are futile in a party program. Principles of national action are not presented at a time when the emergency of the hour is great and the possibility of widespread disaster imminent.

The great world of social questions is left untouched, altho a Professor of Sociology, Professor Samuel McCune Lindsay, guided the preparation for an effective platform. No one knows better than he that social needs cry aloud for remedial legislation. They can be met now, without danger. Neglected, deadly peril lies in the path. When the flowing tide of general prosperity and high wages ebbs, the storm will break as never before and it is not to be prevented by criminal prosecutions and drastic sentences. It is much that the platform by implication condemns the ejection of Socialists from the New York Legislature. It is more that it faces with courage the supremacy of public welfare over the demands of "labor." These are well. More is needed, but the Democratic party cannot furnish it because it supports and draws its votes from the denial of rights and of justice to the negro. The Republican party demands the Federal punishment of lynching. It follows its past in this.

If the Democratic party is true to President Wilson's record and work on the League of Nations, Senator Harding will be forced as candidate to supply the evasions of the platform and the longer the refusal of the Republican party to discharge the duty of the Republic to a suffering world, the more thoro will be the education of American voters and the more certain the triumph of justice to humanity, thru a League that ends war, a League denied today, but certain to come in the dawning morrow of hope, succor, and salvation for all lands.

Two Wars

THE Civil War and the War with Germany were the greatest of our wars. It is interesting to note that party lines, party names and party war-cries are still determined by the events of 1860-1865, whereas the events of 1914-1919 have failed to create new party alignments. Bryan and La Follette did not leave their respective parties to form a new party based on pacifism; nor General Wood and Senator Chamberlain to form a party based on universal military service; nor Senator Reed and Senator Borah to form a party based on national isolation. Dead issues are stronger than living ones in determining the allegiance of the voter. The dead Abraham Lincoln and Jefferson Davis are more potent than the living Wilson, Lodge or Johnson.

A Vision of the Future

JULY, 1940—Silas J. B Jones has received the Republican nomination. He had \$30,000,000 to \$27,000,000 for his most dangerous opponent, William O. Smythe. No dark horse candidate was able to raise more than half of this latter sum. Delegates sold at less than a hundred thousand

apiece, when taken individually, but the practice of the leading managers was to buy them in blocks by direct arrangement with the state bosses. The Dominican party has passed a resolution limiting campaign expenditures to \$50,000 a delegate. The candidate with an absolute majority of the cash (counterfeit money not being accepted) will be declared elected; it proving impossible for any aspirant to obtain the two-thirds of all currency required under the old ruling. Vice-presidential nominations are quoted at thirty cents.

We Are Still a Democracy

A poor man may hope to become President—if his friends will spend a million dollars to elect him.

The Republican Party and the League

By Hamilton Holt

THE preamble of the Republican platform ends with the statement that "the people are entitled to know in definite terms" how the party proposes to solve the "grave problems" confronting them.

The gravest problem confronting the Republican party is the League of Nations. Indeed it is the gravest problem confronting the American people. With hundreds of thousands of voters it will doubtless be the decisive factor in determining which party they will cast their ballot for at the November elections.

In what "definite terms" then does the Republican platform explain the League of Nations and how does the Republican party propose to solve the question.

The plank is a marvel of adroitness. It stoutly defends the senatorial factions which poison-gassed the treaty, and yet a careful scrutiny of the exact words employed reveals the astonishing fact that not a single statement appears in the entire document that would prevent a Republican President and Senate from ratifying the Covenant *in toto* or entering the League of Nations without reservations. In other words, the Republican nominee is encouraged to attack whatever stand the Democrats take in defending the Covenant, and then, if elected, he will be free to bring the United States into the League of Nations whenever the political exigencies of the hour make such a course advisable. The plank, therefore, is a pure straddle and, while seeming to meet the issue, it really defers defining it till after the election, putting into the hands of the candidate, in the meantime, a blank check on which he is free to draw Republican support for any kind of League he wants or for no league at all.

What, then, exactly does the platform say on this paramount issue? Let me take it up point by point, for it was written by Elihu Root, and anything that master mind has produced is worth discussing in detail:

The Republican party stands for agreement among the nations to preserve the peace of the world.

So far, so good. Everybody stands for international cooperation whether it be denominated agreement, or association, alliance, league, covenant or what not.

We believe that such an international association must be based upon international justice.

The preamble of the Covenant says the same. The purpose of the League, to use the exact phrase, is the "maintenance of justice."

And must provide methods which shall maintain the rule of the public right by development of law and the decision of impartial courts.

Public right is likewise fully maintained in the Covenant. What else are the Assembly and the Council for? They can "deal with any matter affecting the peace of the

world"? And as for an "impartial court," Article XIV especially provides for one. It is curious to note in this connection that Elihu Root himself is now in Europe engaged in the laudable effort of establishing this very court. Indeed, had it not been for the existing League of Nations, whose creation Mr. Root did so little to help and so much to hinder, America's foremost international jurist would not now be enjoying the happiness of helping to bring into reality his life's dream.

And which shall secure instant and general international conference whenever peace shall be threatened, by political action so that the nations pledged to do and insist on what is just and fair, may exercise their influence and power for the prevention of war.

Nothing here either that the League does not also do. The Covenant says the Council shall meet "as occasion may require," and wherever war threatens "the League shall take any action deemed wise and effectual to safeguard the peace of the world." Indeed, there is no choice but for "instant and general international conference" when war clouds threaten, for the Secretary "in case of emergency shall forthwith summon a meeting of the Council."

Note also the use of the drastic words "pledge" and "power." If these mean anything they mean that the Republicans are prepared to do exactly as Mr. Wilson's Covenant proposes we should do, that is, "pledge" ourselves to use our "power" to prevent war. We should rejoice that the Republicans, too, believe in a League with teeth in it.

We believe that can be done without compromise of national independence.

Mere camouflage to make the voter think the present League limits the independence of its members. Of course, every one who has even casually read the Covenant knows that the dominant purpose of the League is to safeguard the independence of its members. What else do the guarantees in Article X and XVI mean?

Without depriving the people of the United States in advance of the right to determine for themselves what is just and fair when the occasion arises and without involving them as participants and not as peace makers in a multitude of quarrels the merits of which they are unable to judge.

When "the occasion arises" the Assembly or Council, under the Covenant, discuss it to determine what is to be done, but we cannot be "involved" as participants whether by making war on recalcitrant members or by exerting economic pressure unless and until in every case Congress approves. Indeed, were the United States made a "participant" in action under the League, as this sentence of the plank implies, the Constitution of the United States would be clearly violated, since Congress has the sole power to declare war and make appropriations, etc. As no Senator has as yet pointed out a single instance in which the Covenant has violated the Constitution—and nobody will deny they would have done so if they could—we may fairly assume that we cannot become "involved" without our consent, the implications of the Republican platform to the contrary notwithstanding.

As to the merits of controversies "of which the people know nothing," I respectfully ask if there is any better way to inform them than by the publication of the facts at issue after an impartial inquiry by an official international body endowed with full powers of getting at the truth such as no private individual or group could hope to emulate.

The Covenant signed by the President at Paris failed signally to accomplish this purpose and contained stipulations not only intolerable for an independent people but certain to produce injustice, hostility and controversy among nations which it is proposed to prevent.

No specifications here—pure political hocus pocus.

The Covenant repudiated to a degree wholly unnecessary and unjustifiable the time honored policy in favor of peace declared by Washington, and Jefferson and Monroe and pursued by all American administrators for more than a century.

More partizan bunk. On the contrary, the work of Wilson in federating the nations bears an astonishingly close analogy to the work of Washington in federating the thirteen American states into our present union. Said the father of his country when the Constitution was up for adoption: "Should the states reject the excellent Constitution, the probability is that an opportunity will never again offer to create another in peace. The next will be drawn in blood."

Jefferson's warning against "entangling alliances" was uttered in the days before steam and electricity had annihilated time and space and when Richmond and Boston were farther from New York than are Rome and Tokyo today. The United States was then indeed isolated. Now we became involved in a world war despite all we could do to keep out. Will any one deny that in the next war we shall go in at the beginning, League or no League?

As for Monroe and his Doctrine, it is demonstrable that the Covenant has impaired the Monroe Doctrine in no smallest particular. On the contrary it has actually glorified it. Apparently the Chicago plank carpenters never heard of Article XXI of the Covenant by which for the first time in history the Monroe Doctrine is definitely accepted by all the nations as a principle of international law.

And it ignored the universal sentiments of America for generations past in favor of international law and arbitration and it rested the hope of the future on mere expediency and negotiation.

MOONSHINE! The Covenant provides in Articles III, IV, XIV and XV for the development of international law. Moreover as the nations entering the League agree among other things to arbitrate their differences, abolish secret treaties, limit armaments, champion minorities and backward peoples, improve labor conditions, extend commerce and promote science, it would seem as tho the League were not founded wholly on "expediency" or "negotiation."

The unfortunate insistence of the President upon having his own way without any change and without any regard to the opinion of the majority of the Senate, which shares with him in the treaty-making power, and the President's demand that the treaty should be ratified without modification, created a situation in which the Senate were required to vote upon their consciences and their oaths according to their judgment upon the treaty as it was presented, or submit to the commands of a dictator in a matter where the authority under the Constitution was theirs and not his.

Here we come to the kernel of the coconut. It is not the League so much as the "dictator" President, the Republicans hate. To be sure, in his speech of the 8th of last January the President said, "There can be no reasonable objections to the interpretations accompanying the act of ratification. But when the Treaty is acted upon I must know whether it means that we have ratified or rejected it." But I suppose a little thing like accuracy must not be insisted upon too rigidly in a political platform.

I repeat here what I have said before—namely that the President should have compromised with the Senate when a majority voted against him the second time. A minority cannot perpetually hold up a majority in a democracy. The President must therefore take his share of the blame for the present *impasse*. But the Senate is the chief offender in the disgraceful quarrel and every candid man knows it. And what have Woodrow Wilson's psychological peculiarities got to do with the case anyway? The only question before the Senate was whether the twenty-six articles of the Covenant were good or bad for the American people. Woodrow Wilson will die some day. But the Republic will live. The personal traits of one of the authors of the Treaty have nothing to do with the merits of the issue.

The Senators performed their duty faithfully. We approve their conduct and honor their courage and fidelity.

Maybe so, and yet did not something happen the other day to these implacable foes of the Treaty, Senators

Reed and Shields? Did not the good people of Missouri and Tennessee express themselves rather forcibly on the matter? Perhaps there is a warning here to Brandegee of Connecticut, Gore of Oklahoma, Moses of New Hampshire, Sherman of Illinois, Wadsworth of New York, and Penrose of Pennsylvania, and the other "bitter enders" who will come up for reelection this autumn.

And we pledge the coming Republican administration to such agreement with the other nations of the world as shall meet the full duty of America to civilization and humanity in accordance with American ideal and without surrendering the right of the American people to exercise its power in favor of justice and peace.

Then why in heaven's name didn't the party endorse the League of Nations? There is no other alternative before the world except the League, which is now a going concern and which has in its membership every nation on earth except Russia, Mexico, Bulgaria, Austria, Turkey, Germany and the United States. No Senator nor group of Senators, no association of experts, no political party has suggested a better League. And the reason they have not is the simple reason that they cannot. Any committee of competent men if given the task of framing a League of Nations for the maintenance of peace and order and public right will come within 95 per cent of the plan worked out by Woodrow Wilson and his associates at Paris between February 3 and February 14, 1919. Only within the League of Nations will the people of the United States have opportunity "to meet the full duty of America for civilization." And as for the danger of our "surrendering the right to exercise" our "power" in favor of justice and peace, it so happens that Article XVI states it is the "fundamental right of each member of the League" to take up with the other members any matter affecting international relations "which threatens to disturb either the peace or the good understanding between nations upon which peace depends." Thus the League, as the Republican party, would amply guarantee the United States in its right to "exert" its power for "peace and justice."

This then is the paramount plank upon which Warren G. Harding will fight his forthcoming campaign. Should Republican friends of the League support him or bolt the ticket? This question cannot be properly answered until the Democratic Convention has given us its platform and candidates. But what a renunciation of leadership by the "party of moral ideas" when face to face with the gravest issue that has confronted the country since the adoption of the Constitution!

So Far Away, Y'Know

ONE argument against joining the League of Nations is distance. All very well for Europe, they say, but we live in Another Hemisphere and the Atlantic cannot be sopped up by any blotting paper of a Covenant. But Japan, China, Siam, Australia, Canada, Brazil—are these any nearer to Geneva either in miles or hours than we? With nearly the whole of Asia, Africa, Latin America, British America and the islands of the Pacific in the League of Nations we might cease speaking of that "European" League.

The Death Warrant of John Barleycorn

THE decision of the Supreme Court sustaining the eighteenth amendment, upholding the Volstead Enforcement Act, and invalidating any nullification of this law by state action, is the most important event in the history of prohibition. This verdict is even more important than the enactment of the amendment and the laws with which it deals, because in the United States no law is more than provisional until the Supreme Court has finally decided what it shall be construed to mean and by a definite verdict has set aside all doubts of constitutionality. Con-

gress has spoken, the state legislatures have spoken, the courts have spoken, and by this triple verdict the nation is committed to the principle of a perennially sober United States.

The experiment of complete prohibition is a truly American achievement. All European nations have restricted the sale of liquor in various ways, especially since the beginning of the Great War, but they still permit the sale of the milder alcoholic poisons and usually some of the stronger kinds as well. The Moslem countries refrain from drink only because of a religious scruple which has no application to Christendom. The definite banning of the sale of alcohol as a beverage on grounds of social welfare is one of the most noteworthy of the contributions of the United States to world civilization, and its effects will soon be felt across the Atlantic. The Independent is proud to remember the consistent part it has played in the great struggle now crowned with signal victory.

American Staying Power

WE may have been slow to enter the Great War, but no European critic can deny that once in it we have determined to remain at war to the bitter end. The bitter end in our case is not the defeat of Germany but the election of the next President.

Statistics

LINCOLN'S Gettysburg Speech contains 266 words.

The Ten Commandments contain 297 words.

The Crucifixion as described by Matthew contains 1200 words.

The Declaration of Independence contains 1321 words.

The Republican Platform contains 6396 words.

That Mandate for Mexico

By Preston Slosson

SENATOR Shields has countered the request for an Armenia mandate by suggesting a mandate over Mexico. He admits, in somewhat ungracious fashion, that "the Armenians are always soliciting aid in this country and want some other country to fight their battles and feed them," and he cannot well contend that the Mexicans show a like eagerness for our intervention. But the wishes of a foreign people seem to him irrelevant; the only question is in what country shall we fight with the greatest prospect of realizing material assets to offset the costs of intervention.

Even when the question is argued on this level it is doubtful if the Senator's proposal is a good one. General Harbord believes that an expenditure of \$756,000,000 over a period of five years would suffice to put Armenia in a condition of self-support and that a military force of 59,000 men would sufficiently protect the country against any attack or uprising, and as to both men and money this is reckoned an outside estimate. These are heavy responsibilities and it is hardly surprising if the Senate is inclined to shirk them. But would a mandate for Mexico be cheaper? In November, 1916, when our entire National Guard was chasing a single bandit or defending the frontier from his raids, The Independent estimated that a complete occupation of the country would cost not less than \$1,000,000 a day. It could not be done so cheaply now, as the cost of making war has since risen like everything else. But even at this rate a five years' mandate in Mexico would cost more than twice as much as General Harbord's estimate for a five years' mandate in Armenia. The reason is obvious. In Armenia we would be welcomed by, at least, all the Christian portion of the population. But no one has invited us into Mexico.

Wide World

The hottest place in the United States—ask any delegate!—was the crowded Coliseum at Chicago during the convention. The speakers' bridge had a few stray breezes and a water cooler, but the floor and galleries got no relief

The first Republican nominating convention was held in Chicago in May, 1860, and the occasion then, judging by this cut from *Harper's Weekly* of that date, was one of more social grace than the convention of today

The first woman ever to address a Republican National Convention was Mrs. Margaret Hill McCarter, of Kansas, vice-chairman of the Women's Executive Committee of the Republican Committee

Main Timbers of the Chicago Platform

The Democratic Failure The outstanding features of the Democratic Administration have been complete unpreparedness for war and complete unpreparedness for peace.

While the country has been left to shift for itself the Government has continued on a wartime basis. The Administration has not demobilized the army of place-holders. It continued a method of financing which was indefensible during the period of reconstruction.

It has used legislation passed to meet the emergency of war to continue its arbitrary and inquisitorial control over the life of the people in time of peace, and to carry confusion into industrial life. Under the despot's plea of necessity or superior wisdom, executive usurpation of legislative and judicial functions still undermines our institutions.

The League of Nations The Republican party stands for agreement among the nations to preserve the peace of the world. We believe that such an international association must be based upon international justice and must provide methods which shall maintain the rule of public right by the development of law and the decision of impartial courts and which shall secure instant and general international conference whenever peace shall be threatened by political action, so that the nations pledged to do and insist upon what is just and fair may exercise their influence and power for the prevention of war. We believe that all this can be done without the compromise of national independence, without depriving the people of the United States in advance of the right to determine for themselves what is just and fair, when the occasion arises and without involving them as participants and not as peacemakers, in a multitude of quarrels, the merits of which they are unable to judge.

The covenant, signed by the President at Paris, failed signally to accomplish this great purpose, and contains stipulations not only intolerable for an independent people, but certain to produce the injustice, hostility and controversy among nations which it proposed to prevent.

That covenant repudiated, to a degree wholly unnecessary and unjustifiable, the time-honored policies in favor of peace declared by Washington and Jefferson and Monroe, and pursued by all American administrations for more than a century, and it ignored the universal sentiment of America for generations past in favor of international law and arbitration and it rested the hope of the future upon mere expediency and negotiation.

The unfortunate insistence of the President upon having his own way without change and without any regard for the opinions of a majority of the Senate, which shares with him in the treaty-making power, and the President's demand that the treaty should be ratified without any modifications created a situation in which Senators were required to vote upon their consciences and their oaths according to their judgment against the treaty as it was presented or submit to the command of a dictator in a matter where the authority and the responsibility under the Constitution were theirs and not his.

The Senate performed their duty faithfully. We approve their conduct and honor their courage and fidelity and we pledge the coming Republican Administration to such agreement with the other nations of the world as shall meet the full duty of America to civilization and humanity, in accordance with American ideals and without surrendering the right of the American people to exercise its judgment and its power in favor of justice and peace.

Mexican Policy We should not recognize any Mexican government unless it be a responsible government, willing and able to give sufficient guarantee that the lives of American citizens are respected and protected, that

wrongs will be promptly corrected and just compensation will be made for injury sustained. The Republican party pledges itself to a consistent, firm and effective policy toward Mexico that shall enforce respect for the American flag and that shall protect the rights of American citizens lawfully in Mexico to security of life and enjoyment of property in accordance with establishment of international law and our treaty rights.

No Armenian Mandate We condemn President Wilson for asking Congress to empower him to accept a mandate for Armenia. We commend the Republican Senate for refusing the President's request to empower him to accept the mandate for Armenia. The acceptance of such mandate would throw the United States into the very maelstrom of European quarrels.

We deeply sympathize with the people of Armenia and stand ready to help them in all proper ways, but the Republican party will oppose now and hereafter the acceptance of a mandate for any country in Europe or Asia.

Industrial Arbitration We recognize the justice of collective bargaining as a means of promoting good will, establishing closer and more harmonious relations between employers and employees and realizing the true ends of industrial justice.

The strike or lockout as a means of settling industrial disputes inflicts such loss and suffering on the community as to justify Government initiative to reduce its frequency and limit its consequences. We deny the right to strike against the Government, but the rights and interests of all Government employees must be safeguarded by impartial laws and tribunals.

In public utilities we favor the establishment of an impartial tribunal to make an investigation of the facts and to render decision to the end that there may be no organized interruption of service necessary to the lives and health and welfare of the people. The decisions of the tribunal to be morally, but not legally, binding, and an informed public sentiment to be relied on to secure their acceptance. The tribunals, however, should refuse to accept jurisdiction, except for the purpose of investigation, as long as the public service be interrupted. For public utilities we favor the type of tribunal provided for in the transportation act of 1920.

In private industries we do not advocate the principle of compulsory arbitration, but we favor impartial commissions and better facilities for voluntary mediation, conciliation and arbitration supplemented by the full publicity which will enlist the influence of an aroused public opinion. The Government should take the initiative in inviting the establishment of tribunals or committees for the purpose of voluntary arbitration, and of investigation of disputed issues.

The Farmers' Plank The crux of the present agricultural condition lies in prices, labor and credit.

The Republican party believes that this condition can be improved by practical and adequate farm representation in the appointment of Governmental officials and commissions; the right to form coöperation associations for marketing their products, and protection against discrimination; the scientific study of agricultural prices and farm productions costs at home and abroad, with a view to reducing the frequency of abnormal fluctuations; the uncensored publication of such reports; the authorization of associations for the extension of personal credit; a national inquiry on the coördination of rail, water and motor transportation with adequate facilities for receiving, handling and marketing food; the encouragement of our export trade; an end to unnecessary price fixing and ill-considered efforts arbitrarily to reduce prices of farm products which in-

variably result to the disadvantage both of producer and consumer; and the encouragement of the production and importation of fertilizing material and of its extensive use.

The Federal farm loan act should be so administered as to facilitate the acquisition of farm land by those desiring to become owners and proprietors and thus minimize the evils of farm tenantry, and to furnish such long-time credits as farmers may need to finance adequately their larger and long time production operations.

The Budget We congratulate the Republican Congress on the enactment of a law providing for the establishment of an executive budget as a necessary instrument for a sound and businesslike administration of the national finances; and we condemn the veto of the President which defeated this great financial reform.

Federal Finance We advocate the issuance of a simplified form of income return, authorizing the Treasury Department to make changes in regulations effective only from the date of their approval, empowering the Commissioner of Internal Revenue, with the consent of the taxpayer, to make final and conclusive settlements of tax claims and assessments barring fraud, and the creation of a tax board consisting of at least three representatives of the taxpaying public and the heads of the principal divisions of the Bureau of Internal Revenue to act as a standing committee on the simplification of forms, procedure and law, and to make recommendations to the Congress.

The fact is that the war, to a great extent, was financed by a policy of inflation thru certificate borrowing from the banks, and bonds issued at artificial rates sustained by the low discount rates established by the Federal Reserve Board. The continuance of this policy since the armistice lays the Administration open to severe criticism. Almost up to the present time, the practices of the Federal Reserve Board as to credit control have been frankly dominated by the convenience of the Treasury.

The results have been a greatly increased war cost, a serious loss to the millions of people who in good faith bought Liberty Bonds and Victory Notes at par, and extensive post-war speculation, followed today by a restricted credit for legitimate industrial expansion. As a matter of public policy we urge all banks to give credit preference to essential industries.

Transportation We are opposed to Government ownership and operation or employee operation of the railroads. In view of the condition prevailing in the country the expenditures of the last two years and the conclusions which may be fairly drawn from an observation of the transportation service both for the present and future can be furnished more certainly, economically and efficiently thru private ownership and operation under proper regulation and control.

We indorse the transportation act of 1920 enacted by the Republican Congress as a most conservative legislative achievement.

We declare it to be our policy to encourage and develop water transportation service and facilities in connection with the commerce of the United States.

We favor liberal appropriations in coöperation with the states for the construction of highways, which will bring about a reduction in transportation costs, better marketing of farm products, improvement in rural postal delivery, as well as meet the needs of military defense.

Trade and Tariff The Federal Trade Commission under a Democratic Administration has not accomplished the purpose for which it was created. This commission, properly organized, and its duties efficiently administered, should afford protection to the [Continued on page 429]

The Story of the Week

The Elephant at Home

EVEN before the Republican National Convention assembled at Chicago on Tuesday, June 8, the first skirmish was fought, over the seating of delegates. The 137 pending contests were settled with little friction and apparent impartiality, tho most of the decisions appeared to be favorable to the candidacy of Governor Lowden. To make impossible factional fights in the future between "lily white" and "black" Republicans of the South the National Committee adopted a general ruling that negroes must not be arbitrarily excluded from state or district party conventions.

Senator Lodge of Massachusetts was selected as temporary chairman and later as permanent chairman of the convention. For the permanent chairmanship Senator McCormick of Illinois and ex-Senator Beveridge of Indiana also received some support. The keynote speech by Senator Lodge was almost exclusively an attack on the Wilson administration. "Mr. Wilson and his dynasty," said the chairman, "must be driven from all control, from all influence upon the Government of the United States . . . not because they are Democrats but because Mr. Wilson stands for a theory of administration and government which is not American."

For three days the convention was held in session, listening to party oratory or seeking relief in song, while the platform was being hammered out in committee and subcommittee. The real conflict came over the plank on the League of Nations. Ex-Senator Crane of Massachusetts led the fight for an endorsement of the League with reservations, while Senator Borah of Idaho threatened a bolt unless the League were definitely denounced. Finally a compromise, said to have been arranged by Elihu Root in advance of the convention, was agreed on with slight modifications and the platform was presented to the convention and adopted without further difficulty. The more important parts of the platform are given elsewhere in this issue of The Independent. On Friday nominating speeches were made and the convention made ready for the balloting.

Harding and Coolidge

TO the surprise of nearly everyone outside the inner circles of professional politics the Republican Convention nominated Senator Warren G. Harding of Ohio as the party's choice for President of the United States. The four ballots taken on Friday gave a plurality to Major-General Leonard Wood. Most of the other candidates held their strength well and Governor Lowden of Illinois made rapid progress. President Butler of Columbia University, finding himself unable to hold the New York delegation, withdrew, and his supporters scattered, a majority voting for Lowden on the fifth ballot. The fifth,

sixth, seventh and eighth ballots, on Saturday, June 12, did not avail to break the deadlock and the convention adjourned with Governor Lowden well in the lead but with a significant tendency evident among the anti-Wood and anti-Lowden delegates to concentrate on Senator Harding.

When the convention reassembled for the evening session all was over but the shouting. Governor Lowden's support crumbled on the ninth ballot and he withdrew from the race. On the tenth, Senator Harding absorbed most of the Lowden vote and also votes that up to the very last had gone to "favorite sons" such as Governor Sproul of Pennsylvania and Senator Poindexter of Washington. About half of the Wood and Johnson delegates withstood the landslide. The supporters of Senator La Follette of Wisconsin not only remained faithful on the tenth ballot, but resisted the motion to make the nomination of Senator Harding unanimous. Men who had been frequently mentioned as "dark horses" either failed to obtain any votes, as for example, Mr. Hughes and Governor Allen, or received an insignificant measure of support, as was the case with Mr. Hoover and Senator Knox.

Senator Harding is the seventh Republican nominee born in the doubtful state of Ohio. He was born on an Ohio farm in 1865 and made his own way in life as farm-hand, printer, journalist and politician. In 1914 he was elected to the Senate. He was a member of the Foreign Relations Committee and worked in harmony with Senator Lodge and the "strong reservationists." On domestic issues he is generally classed as an extreme conservative; yet he appears to have been more acceptable to the Johnson and Borah group of radicals than either General Wood or Governor Lowden.

Immediately after the head of the ticket had been selected the convention turned to the choice of a candidate for Vice-President. Governor Coolidge of Massachusetts was nominated on the first ballot. Senator Lenroot of Wisconsin and Governor Allen of Kansas also obtained a considerable measure of support for second place on the ticket. The nomination of Governor Coolidge was a very popular one, as his vigorous handling of the Boston police strike had given him a national reputation and caused him to be seriously considered for the Presidency.

Congress Adjourns

ON June 5 Congress adjourned to next December. It will not meet in the meantime unless called into special session by President Wilson, a contingency which seems unlikely. In addition to all the regular appropriation bills,

Congress passed the Army Reorganization Act, fixing the strength of the national forces in time of peace; the bill authorizing the sale of the Government-built merchant marine; the Transportation Act, returning the railways to private control and defining the powers of the Government

THE CLOWN ACT

in their regulation; the bill increasing the pay of employees of the postal service, and many other acts. Republican leaders also claim great credit for economy in having cut down the departmental estimates in the appropriation bills by hundreds of millions of dollars.

The most important, or at least the most debated, parts of the Congressional program, however, failed of enactment. The attempt to make a separate peace by means of the Knox resolution was killed by President Wilson's veto and Congress was unable to secure a two-thirds vote of either house to repass it into law. Having failed to make peace in this manner, Congress hurried thru a measure at the last moment repealing all legislation limited to the "duration of the war" except the Lever Act, the Trading with the Enemy Act, and the District of Columbia "anti-profiteering" law. These were retained to give the Government continued power to fight profiteering. Both Republicans and Democrats joined to carry the repeal measure, only three representatives voting in the negative. But Congress acted too late. The omnibus repeal measure only reached the President at the very end of the session and he permitted it to die without his signature. Bills for the development of water power and for print paper conservation also suffered a pocket veto.

Perhaps the saddest fate was reserved for the budget bill, described by Senator McCormick in *The Independent* of June 12. Both President Wilson and the Republican majority in Congress were favorable to the principle of this constructive measure, but it was killed at the last moment by a disagreement over a small detail. The President vetoed it on the ground that it deprived him of his constitutional right to remove from office the Controller General and his assistant. "I am convinced," he wrote, "that the Congress is without constitutional powers to limit the appointing power and its incident power of removal. . . . The section referred to not only forbids the Executive to remove these officers, but undertakes to empower the Congress, by a concurrent resolution, to remove an officer appointed by the President with the advice and consent of the Senate." The House failed to pass the measure over the President's veto and then passed it in a modified form to meet the President's objections. It died in the Senate because there was no time remaining for a debate on the question, and Senators Reed of Missouri and Harris of Georgia objected to its passage without debate.

The bonus to veterans of the Great War was also the vic-

tim of inexorable time. In spite of the haste with which the House of Representatives had passed the bonus measure, it was already too late in the session to permit consideration in the Senate, and it did not even come to a vote in the upper house before the time for adjournment. A large number of laws dealing with the high cost of living failed to get on the floor of Congress. Perhaps there never was a session of Congress which left so ambitious a program of unfinished business at its adjournment.

Wilson Raps Congress

THE chiefs of the Railroad Brotherhoods protested to President Wilson against the sudden adjournment of Congress with so much still to be done. "We call attention," they wrote, "to the fact that, despite the revelations as to the profiteering scandal, Congress has done nothing to check the evil or to punish the evildoers; that the cost of living continues to advance without a single remedial measure having been passed, and that there has not been even serious consideration of constructive legislation dealing with the serious problem of industrial unrest."

This letter played into President Wilson's hands beautifully, for it gave him fair excuse to express his disappointment at the failure of Congress to work in harmony with the Administration. He replied:

Not only has the present Congress failed to deal directly with the cost of living, but it has failed even to give serious consideration to the urgent appeal, oft repeated by me and by the Secretaries of the Treasury, to revise the tax laws, which in their present form are indirectly responsible in part for the high cost of living.

The protracted delay in dealing with the problem of the railroads, the problem of the Government owned merchant marine and other similar urgent matters has resulted in unnecessary burdens upon the public treasury, and ultimately in legislation so unsatisfactory that I could accept it, if at all, only because I despaired of anything better.

The present Congress has not only prevented the conclusion of peace in Europe, but has failed to present any constructive plan for dealing with the deplorable conditions there, the continuance of which can only reflect upon us.

In the light of the record of the present Congress, I have no reason whatever to hope that its continuance in session would result in constructive measures for the relief of the economic conditions to which you call attention. It must be evident to all that the dominating motive which has actuated this Congress is political expediency rather than lofty purpose to serve the public welfare.

Prohibition Upheld

THE Supreme Court of the United States, in an omnibus decision on several pending cases, has upheld the validity of the eighteenth amendment to the Constitution and the constitutionality of the Volstead law. On these two fundamental points the court was unanimous, but Justice McKenna in a separate opinion held that the states had equal jurisdiction with Congress in enacting enforcement legislation under the provisions of the prohibition amendment. He contended that the phrase "concurrent power" excludes the idea of a "dependent power," and that "if the supremacy of Congress had been intended it would have been directly declared." Chief Justice White and Justices McReynolds and Clarke also expounded their views in separate opinions, but sustained in general the decisions of the majority of the court as rendered by Justice Van Devanter.

The decision of the Supreme Court involves the following rulings on disputed points:

1. The eighteenth amendment was regularly enacted notwithstanding the fact that it carried Congress by a two-thirds vote of a quorum of both Houses instead of two-thirds of the total membership of each.
2. Referendum provisions of state constitutions, as in Ohio, cannot be applied to invalidate the ratification of amendments to the Federal Constitution by action of the state legislatures.
3. The adoption of the eighteenth amendment is not beyond

the powers of the Federal Government under Article V of the Constitution.

4. The eighteenth amendment is operative thruout the whole national territory irrespective of any action by any state, court or individual.

5. Congress may legislate for the enforcement of prohibition and Congressional legislation is valid even within the jurisdiction of a state.

6. Congress may prohibit the sale of liquor manufactured prior to the adoption of prohibition.

7. "While recognizing that there are limits beyond which Congress cannot go in treating beverages as within its power of enforcement, we think those limits are not transcended by the provision of the Volstead Act wherein liquors containing as much as one-half of one per cent of alcohol by volume and fit for use for beverage purposes are treated as within that power."

This disposes of practically every contention raised by the anti-prohibitionists and invalidates local "beer and wine" laws, such as those of New York and New Jersey, to the extent to which they conflict with Federal legislation. Only two legal remedies now lie open to the liquor men: they must either secure the repeal of the eighteenth amendment or enact a new law in Congress which is less strict than the present Volstead law. The Supreme Court decision will have a profound effect on the Democratic Convention, in which the anti-prohibition delegates have sought to rally around Governor Edwards of New Jersey and his attempt to nullify the Volstead Act by hostile "concurrent" state legislation. It should make easier the attempt of Mr. Bryan to insert a "dry" plank in the Democratic platform.

Little Old New York

GREATER New York has a population of 5,621,151 souls, allowing one soul to each inhabitant. This figure, just announced by the Census Bureau on the basis of the 1920 enumeration, is 17.9 per cent over the population of the city according to the census of 1910. Great as this increase is, it has disappointed some patriotic Gothamites who measure greatness in the terms of bigness and expected at least six millions. The population of Manhattan Island shows an actual decrease of about two per cent in ten years. Brooklyn is rapidly overtaking old New York and has now 2,022,262 inhabitants to Manhattan's 2,284,103; another decade with the same tendency of population would make Brooklyn the largest of the boroughs and the heart of the greater city. The borough of the Bronx shows the greatest proportionate increase, amounting to nearly 70 per cent in ten years. Mr. Browne, president of the United Real Estate Owners' Association, has attacked the Manhattan figures as an incomplete enumeration, declaring that the housing shortage is proof that the population must have increased. At any rate there is no question of the tendency of the city's population to spread out

over the outlying boroughs and suburbs, while Manhattan becomes more and more a business district.

It is impossible to say whether or not New York is now the world's largest city. There are three Londons. One is the old city of London, which is now a business district with as small a resident population as the southern tip of Manhattan Island. The administrative county of London, which may fairly be compared with New York as a political unit, has over 4,500,000 inhabitants. But "Greater London" with all its suburbs has a population of more than seven millions. For a fair comparison with New York it would be necessary to take the whole metropolitan area on the lower Hudson, including the New Jersey suburbs. There is certainly no city except London which can be compared with New York, and if New York were to secede from the United States it might even rank fairly high among independent nations. The United States in 1800 had less than the present population of the city on the Hudson, and the whole Kingdom of Sweden has no greater population today. Of the twenty Latin American republics only Argentina, Brazil and Mexico are more populous. Mayor Hylan's New York, to make another comparison, contains as many people as the England of Queen Elizabeth.

Mexican Prospects

ADOLFO de la Huerta is provisional President of the Republic of Mexico. General Obregon remains an active candidate for the presidency when the elections are held, probably in September. The Mexican Congress in the meantime established a transitional régime and chose Adolfo de la Huerta, former Governor of the state of Sonora and a leader in the revolutionary movement which overthrew Carranza, as its head. He obtained 224 votes from the Congress to 82 for General Gonzales, his chief competitor. General Gonzales has announced his retirement from politics. General Calles has been appointed the new Minister of War. He has announced his determination to carry on an active campaign for the extermination of Villa and his followers, who have, apparently, failed to come to terms with the new provisional Government.

Rodolfo Herrera, accused of the assassination of Carranza, has surrendered to the Government and will be brought to trial. His defense is that Carranza committed suicide after being captured. All the persons who accompanied the President at the time of his death will be detained for the investigation.

The sub-committee of the Senate Committee on Foreign Affairs, which has been investigating Mexican conditions under the chairmanship of Senator

Brown in Chicago Daily News

The national game of food production

Kladderdatsch, Berlin

"Frederick the Great" is the caption of this German cartoon of President Ebert, whose power was rather seriously threatened by the recent elections in Germany

Fall, of New Mexico, recommends that recognition of the present Mexican Government be conditioned on a new treaty by which the provisions of the Mexican constitution discriminating against foreign residents and properties be held not to apply to American citizens. In return for this concession, the United States should grant to Mexico a loan "with moderate rates of interest" and help reorganize the finances and defenses of the country. The committee estimated that during the revolutionary period of the last ten years 784 Americans had been killed in Mexico or on the border and American property losses experienced to the extent of \$500,000,000.

German Elections Go to Extremes

THE result of the elections to the German parliament (Reichstag) on Sunday, June 6, was unfavorable to the maintenance of the present Coalition Government. Both Left and Right gained at the expense of the intermediate parties now in control. The new German constitution provides an elaborate scheme for proportional representation by which surplus votes not needed for the election of a candidate in any district may be placed on the "empire lists" and transferred to any designated candidate of the party who may need them. This plan secures a closer correspondence between the popular vote and the composition of the national assembly than has been hitherto attained in any country, but it prevents the exact outcome of the balloting from being known until all the returns are in. There will hardly be time for the new Government to be established and adopt its policies before it will be called to confer with the Allies at Spa, June 21, on the revision of the treaty and the determination of the German indemnity.

The present Government of the German republic under President Ebert is composed chiefly of Majority Socialists, that is, the wing of the Social Democrats who at the outbreak of the war put patriotism above party and voted to support the Government. The other and more radical wing of the party, comprizing internationalists and pacifists, became Independent, and they have gained in the recent elec-

tions at the expense of the moderate or Majority Socialists. In the last Reichstag the Coalition Government commanded 330 votes out of 423. Its support was chiefly from the Majority Socialists, with 153 representatives, the German Democratic party with 74, and the Christian People's party (the old Center or Roman Catholic party) with 89. All three of these have lost heavily in the present election. Many of the Socialist supporters of the Government were disappointed because it did not attempt to put socialism into effect, as in the nationalization of mines, or because it put down the strikes in the Ruhr region with such severity. They have accordingly gone over to the Independents. The Communists or Bolsheviki figured for the first time in this election, but only captured two seats.

On the other hand, many of the conservative supporters of the Government were disappointed in its failure to secure any amelioration of the peace terms and have gone over to the German National party (the old Conservative party, monarchistic or militaristic), or to the German People's party (the old National Liberals, representing business interests). In short, the election registers the unrest and disaffection of the German people and their disposition to resort to either revolution or reaction in the belief that they could not be worse off than they are.

According to the latest reports the strength of the leading parties in the new Reichstag will be approximately as follows: Majority Socialists, 110; Independent Socialists, 80; Centrists, 67; German Nationalists, 65; German People's Party, 61; Democrats, 45.

The Japanese in Siberia

THE Japanese hold on eastern Siberia is being continually strengthened by the dispatch of troops to the continent and the extension of control over the railroads and waterways. A naval force has been landed at the mouth of the Amur River and occupied the port of Nikolaevsk. Last March a band of local Bolsheviki seized the city of Nikolaevsk and put their prisoners into the Amur thru holes in the ice. They demanded the surrender of the arms of the Japanese garrison of 130 men, and when this was refused they set fire to the barracks and the consulate. All of the Japanese troops perished in the flames as well as the Japanese consul, his wife and two children. The Japanese warships were unable to enter the Amur till now on account of the ice.

The Japanese are having a hard time controlling the maritime provinces, for the greater part of the population are in sympathy with the Soviet and those who are not are opposed to foreign intervention. The Japanese are said to have lost 2000 men in the capture of Nikolsk, the junction north of Vladivostok. American railroad officials who were in Nikolsk at the time charge the Japanese with committing atrocities after taking the town. They say that the Japanese disemboweled wounded Russians in the hospital, killed six nurses, abducted girls and shot children.

The International Railway Board, composed of Allied and American engineers who have had charge of the Siberian railroads, was so indignant at the recent interference by the Japanese military that all of the members, with the exception of the Japanese, sent the following telegram of protest to their respective governments:

The Railroad Board having examined reports of the action of Japanese troops in the railway districts are of the opinion, first, that General Semenov systematically set aside the terms of the allied railway agreement. Second, that the Japanese military acquiesced and themselves usurped the functions of the allied railway organization, and aided in the confusion of traffic and actually delayed the progress of the Czechs, and, third, that the Japanese military by placing troops at principal points on the Chinese Eastern Railway, which the allied agreement assigned to the Chinese to guard, and allowing such detachments to interfere with matters affecting railway traffic, provoked conflicts

Photograph from Adachi

This Japanese flag was planted at Vladivostok when the Bolsheviks were defeated and driven out by the Japanese troops early in April

resulting in needless loss of life to Chinese, Russians and Czechs, and also jeopardized the movements of trains.

General Oi, commander of the Japanese forces at Vladivostok, sets forth the policy of Japan in a proclamation as follows:

The recent drastic measures were adopted solely in self-defense, for such unruly conduct as that which was displayed at Vladivostok by a partisan group of Russian forces endangers the position of the Japanese army. Nor can Japan tolerate the existence, in the regions contiguous to or bordering on her empire, of any political organization which defies humanity and aims to disturb the world peace, for it will have a direct and dangerous effect upon Korea and Manchuria.

Now that the repatriation of the Czechoslovak army is nearing its completion, the Japanese command has no hesitation in declaring that our forces are ready to evacuate Far Eastern Russia as soon as conditions therein become peaceful, the menace to Korea and Manchuria is eliminated, and the protection of the lives and property of Japanese nationals residing in East Siberia is safeguarded.

This means obviously that the Bolsheviks shall not be allowed to extend their powers to the Pacific, and General Oi desires the formation of a buffer state east of Lake Baikal which would serve as a barrier to prevent the advance of the Bolsheviks eastward.

The Question of Turkish Peace

WHEN the Turkish delegation at Paris were handed the peace treaty on May 11 it was stipulated that they should reply within a month. But they have asked and secured an extension of time to two months and it is not at all certain that they will be ready to sign then or that their signing will secure peace. Damad Ferid Pasha, the Grand Vizier or Premier, says:

Turkey cannot live five years if the treaty is enforced as it stands. Constantinople will die, for no great city can live without a hinterland. We had expected to have Turkey's arms and legs amputated, perhaps, but did not expect to have Turkey's head separated from the body and laid off alone to die. Van, Bitlis and Mosul, which the treaty enables your President to give to Armenia, contain only 5 per cent of Christians. I trust President Wilson will keep that in mind when deciding the boundaries. The Russians have persuaded many ignorant Turkish peasants that Bolshevism is not inconsistent with Mohammedanism and we need fair treatment to avert the menace threatening the entire world.

Even if the Grand Vizier should come to accept the peace terms substantially as written it would carry little weight with his countrymen, most of whom sympathize with Mustapha Kemal Pasha, who has set up an independent Nationalist government at Angora in the heart of Anatolia. The Grand Vizier declares that the Nationalists are not true Turks:

Mustapha Kemal Pasha is a Salonica Jew. All Fuad Bey is a German and Ahmed Rustem Bey, whose real name is Bilinski, is a Pole.

But whatever may be the nationality of the Nationalists they are continually gathering strength by the accession of military officers and civil officials from the European side of the Straits. The Grand Vizier is not safe in his own office, for a conspiracy for his assassination has been disclosed in which prominent officers of the army and navy were involved. Shipments of munitions dispatched to the Ottoman army on the Asiatic side have mysteriously found their way into the Nationalist camp. It is even rumored that representatives of the Constantinople Government are in secret negotiation at Brusa with the Nationalist rebels.

Meantime the Nationalists are gaining ground in all directions. They have driven the French out of the hinterland of Cilicia down to the Mediterranean coast and many of the French troops were captured north of Adana. The famous French 75's were outranged by the Nationalist artillery. The French commander has consented to an armistice with the Nationalists, a chance to concentrate his forces against the British and Turks who are trying to hold the Asiatic side of the Straits. Constantinople is again disturbed by the sound of cannon for the British fleet has been called upon to protect the garrison at Ismid against the Nationalists. As may be seen from the map, Ismid is an important station on the railroad running from Skutari, opposite Constantinople, thru Asiatic Turkey. This railroad has fallen altogether into the hands of the Nationalists to within five miles from Ismid and they have also gained possession of the southern coast of the Sea of Marmora as far as and including Panderma.

Essad Pasha, Albanian Premier and leader of the Nationalist movement among the Albanians, was assassinated on June 13 by a political enemy. Essad Pasha fought for Turkey during the Balkan wars, but favored the cause of the Allies in the Great War.

THE PARTITION OF TURKEY

According to the peace treaty now in the hands of the Turks all of European Turkey (Thrace) except a small district about Constantinople goes to Greece, which also gets the Aegean Isles and the administration of the Smyrna enclave. The islands of the Dodecanese go to Italy, which also claims a sphere of influence about Adalia. Both shores of the straits of Dardanelles and Bosphorus and the Sea of Marmora are to be under the control of an international commission to prevent their being fortified and to insure free passage to the shipping of all nations. But an independent government of Nationalists has been set up at Angora that will not submit to any such treaty. The Nationalist forces have taken Panderma on the Sea of Marmora and are besieging Ismid, which is held by the British

False Prophets

In which an ex-newsboy, machinist, organizer, writer and labor leader gives voice to some wise saws

By Charles Stelzle

Those who opposed prohibition told us that if it ever became a law, the following calamities would befall us:

One million workmen would lose their jobs and be thrown onto an already overloaded labor market;

The workers all over the country would break out in open revolt and rebellion;

Taxes would be so increased that workmen would forfeit their homes;

Farmers would lose hundreds of millions of dollars annually, because nobody would buy the grain and the fruits which the liquor men purchased;

Manufacturers of machinery, bar fixtures, glassware, barrels, automobiles, harness and all other materials used in the production and distribution of liquor would go bankrupt;

Railroads which transported these articles as well as the raw materials used in making liquor would suffer from a great reduction in business;

Saloon and brewery property would stand idle, resulting in practical confiscation;

First class hotels would close their doors because their chief profit came across the bar;

There would be an unprecedented increase in the use of opium and other narcotics;

Much sickness and many deaths would result because those accustomed to using liquor could not get along without it.

None of these things has happened.

Count Your Nine Lives

They will have to revise the old saying that a man past sixty is no longer fitted for active outdoor work, for Benjamin Lilly, who is now sixty-five, is as active, tireless, and deadly with a rifle as any of the other three hundred and odd men—some young enough to be his grandsons—who are employed by the Biological Survey to rid the western ranges of predatory animals, while his knowledge of the country thru which he hunts and the ways of wild animals is probably far superior to that of any of his fellow hunters.

It has been estimated that predatory animals cause a yearly loss of \$20,000,000 worth of livestock each year to the stockmen of the Rocky Mountain section. The wolf is credited with killing \$1,000 worth of stock a year, the bear and mountain lion \$500 each, and the coyote and bobcat \$50 each. On this basis Ben, as he is popularly known, has saved the western stockmen enormous sums, for his "bag" during the last five years includes more than a hundred bears, three hundred wolves, two hundred and fifty mountain lions, and innumerable bobcats and coyotes.

Ben first came into prominence when he was chosen by Colonel Roosevelt as chief guide on a bear hunt in the canebrakes of Louisiana. Five years ago he was employed by the Bureau of Biological Survey as one of its hunters, and ever since he has spent practically the whole of his time in the mountains and valleys, coming in occasionally to change his dogs or to make an official report. On his hunting trips he is usually alone except for the com-

panionship of his dogs. These dogs number about twenty and were trained by Ben himself, and they all have records for bravery and craftiness in hunting dangerous animals which make them worthy to receive distinguished service medals. Only half of the dogs are taken out at one time, the other half being left at some convenient ranch to rest. Ben himself seems never

This is the two hundred and fiftieth mountain lion Mr. Lilly has bagged during the last five years

to rest except at night, when he is forced by darkness to discontinue the chase, and on Sundays, it being his fixed rule never to hunt on the Sabbath no matter how hot the trail may be. This has permitted many animals that were all but within his clutches to make their get-away. However, Ben usually gets any animal that he goes after, having been known to follow some malefactor thru three states before finally giving him the *coup de grace*.

If the Cook Can Get Away With It

To the housewife of the present day with a fairly substantial allowance it is a constant puzzle how the poorer classes can make such a good physical showing when the cost of food is so high. One very good explanation for this has just appeared in *Science*. At Jefferson Medical College experiments were conducted to determine whether there was any difference in the ultimate value to the system of palatable and unpalatable food. It is a well known fact that the flow of digestive juices is influenced to a very considerable extent by the savoriness of the food and the conditions under which it is served.

For seven days individuals were fed upon palatable food served in an attractive way in agreeable surroundings. The total amount of food utilized was 86.7 per cent. This was determined by calculating the amount of food ingested and subtracting the waste products. Then for two days the same individuals ate food most obnoxious to the taste, which was served to them more or less in the manner that pigs are fed. Meats, jellies, cornstarch puddings, etc., were stirred together pig style, while foul smelling chemicals were sprinkled about the table. The results showed that 85.7 per cent. of the food was utilized, a difference in the two contrasting methods of only one per cent.

The investigators of this problem believe that this experiment "simply shows how insulting we can be to the normal stomach and get away with it, but does not necessarily prove this to be the wisest policy."

H. C. L. in Other Times

This is not the first era when the high cost of living has bothered folks. According to Mr. H. H. Manchester in *American Industries* there have been three previous periods since the Middle Ages in which the price of commodities and the wages of labor left their old levels to seek a higher sphere of activity. Of course this does not take account of the minor fluctuations, the mere wave swell and subsidence of costs, such as the general fall of prices from the American Civil War to 1896 and the general subsequent rise to 1914; but only the great changes which doubled or more than doubled values.

In the Middle Ages both prices and wages were very low; much lower than in Roman times. This was due partly to

the lack of coined money and the general payment of rent and wages in kind instead of in money; in part to the general poverty and backwardness of society.

The first great upward leap in prices followed upon the outbreak of "the Black Death," the plague which created a shortage of labor in the fourteenth century by killing off nearly every other laborer. To take France as an example, cattle which sold for \$11.60 a head in 1344 were priced at \$17.40 in 1351; eggs increased from six cents a dozen in 1343 to eleven cents in 1353; butter rose from five cents to twelve cents a pound from 1335 to 1351, and wool cloth from eighty cents a yard in 1347 to \$3 in 1351. Wages had to be increased to keep up with the new prices. A common laborer got about fifteen cents a day in 1347, but in 1350 he was paid the princely wage of thirty-one cents. Similar wage increases occurred in England, where the attempt of the ruling classes to restore the old scale of pay by force of law led to serious disorders which almost assumed the dimensions of civil war.

A second period of rising values took place in the sixteenth century. This was due at first to the increase of foreign trade after the opening of the route to India and the Far East around Africa. The rise in prices was further stimulated later in the century by the Spanish discoveries of gold and silver mines in America, for if you make money plentiful you thereby increase the cost of all commodities whose value is measured in money. In England for the 140 years from 1401 to 1540 prices were fairly steady. Wheat averaged eighteen cents a bushel; oxen, \$4.94 a head; raw iron, \$1.29 a hundred weight; table linen, \$1.63 a dozen yards. By the beginning of the seventeenth century wheat sold at \$1.38 a bushel; oxen at \$24.94 a head; raw iron at \$7.94 a hundred-weight; table linen at \$8.80 a dozen

yards. Of course wages went up too. The laborer who got fourteen cents a day from 1531 to 1550 was paid twenty-one cents a day during the next decade.

After 1600 prices remained fairly level until the Napoleonic wars. Wheat in England rose from \$1.50 a bushel in 1792 to an average of \$2.50 a bushel for the war period of 1795 to 1814. Even the distant United States felt the effect. Wheat sold at a dollar a bushel in 1791 on this side of the Atlantic and at \$1.75 a bushel in 1816. An American carpenter's pay increased from 54 cents a day in 1790 to \$1.50 in 1807, sinking to a dollar by 1816. After the immediate effect of Napoleon's romantic raid on civilization had worn off both wages and prices sank till the middle of the century, but they never went back quite to their old eighteenth century levels.

The present doubling of prices in the United States and the tripling of prices in Europe repeats in every particular the upward movements that followed the Black Death in the fourteenth century; the overseas trade expansion and the religious wars of the sixteenth century, and the Napoleonic wars in the early nineteenth century. In each case there was a sharp upward rise of prices followed at a slight distance by a rise in wages, then prices sank a little but not to their old levels, and wages sank also but more slowly and not so far. Mr. Manchester even lays down as a general rule, most clearly illustrated in the third price movement, that of the early nineteenth century, that when values become stable after a sharp temporary fluctuation, prices will be about one-third more than before the rise began and wages about two-thirds more. If that holds good in the present case, about 1925 the American workingman will be earning 166 per cent of his 1913 wages and paying 133 per cent of his 1913 prices.

Our Merchant Marine

By William B. Bailey

Professor of Practical Philanthropy at Yale University

In the early days of this country we were decidedly a maritime nation, and our wooden sailing vessels were to be found on every sea. As late as 1830, 90 per cent of the imports and exports of this country were carried in American bottoms. The Civil War, however, and the change from wooden to steel vessels so reduced our share of the world's tonnage that by 1870 only about one-third of our exports and imports were carried in American vessels, and in 1914 this had become still farther reduced to less than 10 per cent. In fact, out of about 25,000,000 tons cleared from the United States to foreign ports, only about 750,000 tons were carried by American ships in 1914.

Then came the great war when new English and American shipyards were erected and existing ones enlarged to speed the construction of a merchant

marine in order to make good the losses caused by the German submarines.

Notwithstanding the sinkings by submarines, the world's tonnage had increased during these five years by nearly two million tons. But most remarkable was the growth of the American merchant marine. In 1914 only about one-tenth of the world's tonnage flew the American flag, while in 1919 over one-fourth was credited to us. During this same period the American tonnage registered for foreign trade had increased nearly nine-fold. The overseas clearance from the United States in the calendar year 1919 was 26,500,000 tons, while during the fiscal year 1914 it had been 24,900,000 tons. But the most wonderful part of this is the fact that while in 1914 only about 750,000 tons had sailed away in American ships, in 1919 over 8,600,000 tons had been carried in vessels flying our

Between 1914 and 1919 the gross tonnage of American vessels more than doubled, being 13,091,773 tons instead of 5,368,194

flag. Of all the changes which have resulted from the great world war, perhaps none is more striking than the tremendous growth in the American merchant marine.

How to Enjoy Prohibition

1. Take a case full of empty bottles, fill them with water and tint the water with varicolored fruit juices.
2. Paste on to each bottle a label bearing the name of some expensive liqueur.
3. Take a drink with every precaution of secrecy whenever you are feeling wicked.

Community Trusts

The art or science of giving away money wisely is probably as difficult to acquire as the money itself to be given away. Reports now available from trust companies acting as trustees for "Community Trusts" or "Foundations" which already have been established in various cities afford ample proof of the practical as well as ethical soundness of the principle of centralization and responsible administration of funds for charitable and educational purposes, social welfare and kindred work. When a man bequeathes money in his will to be expended after his death it is obvious that conditions may so change with the lapse of time that were he alive he would not countenance the expenditure of his money according to his will. The problem then is to get a permanent control of the fund that will as a rule represent the changing needs of each generation.

The Permanent Charity Fund of Boston is perhaps the most significant and interesting attempt yet made in this direction. In 1915 on the initiative of President Rogerson of the Boston Safe Deposit and Trust Company, a committee of seven were appointed as follows: One by the Attorney General of Massachusetts, one by the Senior Presiding Judge of the United States District Court, one by the Senior Judge of the Probate Court of Suffolk County, one by the Chief Justice of the Municipal Court of Boston and three by the Boston Safe Deposit and Trust Company. The Board is not self-perpetuating, but when a vacancy occurs it must be filled as by the original in-

cumbent. Thus it is hoped always to have the board in touch with the currents of the time, and not merely a body growing ever more conservative, as is often the case with self-perpetuating boards.

According to the latest reports the Permanent Charity Fund of Boston has already disbursed \$85,000. That the disbursements were very catholically made is evidenced from the following table:

Education	\$12,250
Hospitals	18,000
Convalescence	1,000
Nursing	6,800
Hygiene	5,000
Social Service	14,100
Relief	600
Charities	10,500
Children	6,000
Settlement Houses	7,000
Old Age	1,000

It may be added that the Permanent Charity Fund has put aside \$15,000 from income to be used for relief of those returning from the war permanently disabled or otherwise in need of charitable assistance.

Since the establishment of the first Community Trust in Cleveland under the title of "Cleveland Foundation" as conceived by President F. H. Goff of the Cleveland Trust Company, similar trusts have been organized in Milwaukee, St. Louis, Los Angeles, Spokane, Chicago, Indianapolis, Attleboro, Minneapolis, Houston, Detroit, Seattle, Louisville and of course Boston. Evidently this is a movement that should spread to all our centers of population.

Essence of Grapes

Experts of the Department of Agriculture have found a way of making a highly concentrated grape syrup, useful both in cooking and in making "soft" drinks. The grape juice is first frozen solid, and then, after being broken into pieces the size of a walnut, is put into a centrifugal machine, such as is used in sugar-making to separate the molasses from the sugar.

The rapid whirling of the pieces of frozen grape juice in this machine separates the sugar or syrupy part of the grape juice from the crystallized water and drives it into the receiving chamber. With the water it loses three-quarters of its bulk; that is, a gallon of grape-juice makes a quart of concentrated grape syrup. Moreover, much of the acid of the grape juice, which is in the form of cream of tartar, is left behind in crystals in the ice. The concentrated syrup is sterilized by heating, so that it will keep indefinitely. Aside from its special flavor, the new grape syrup, on account of its reduced bulk, has the commercial advantage of being cheaper to store, handle, and ship. The process should be of especial value in poor seasons, when the grapes fail to attain their normal sweetness; for, since it automatically removes much of the acid, it should enable manufacturers to make a very desirable sweet grape juice even from highly acid grapes.

A New Motor Fuel

The scarcity and high cost of gasoline and the restrictions on its use for private purposes in many European countries have led to experiments with several substitutes. In England use has been made of coal gas, but the containers for it are awkward in appearance and given to leaking. In Norway acetylene gas has been tried with some success. According to reports from Christiania a Norwegian captain has adapted it to motor-boat propulsion. His invention is said to be a decided improvement over similar devices. Water drops thru a tube on the carbide, and the gas that forms is led to the carburetor, where it is purified and driven to the motor. The cost averages 21 cents a horsepower hour, which is not cheap; but over there price no longer enters into the matter. The demand for the new device is already considerable, for the company that manufactures it has several thousand orders. For the time being the new system can be adapted only to benzine motors, but the inventor is working on an improvement that will make it possible to use it in connection with petroleum motors, too.

The Accident Clock

For what hours of the day should the factory worker carry the highest insurance? This question is answered by an analysis of 1873 industrial accidents reported in the state of Illinois during one year. Before 7 o'clock in the morning accidents were few because most workers were safely asleep. Hour by hour the number increased until a maximum was reached between 11 o'clock and noon when the fatigue of a full morning's work began to tell. Fourteen per cent of all the accidents took place in the last morning hour. For the lunch hour the percentage was, of course, low, but it is worth noting that it remained low during the early afternoon when the workers had returned to the job. Between 4 and 5 o'clock came another period of maximum risk, equalling that of the last hour in the morning. After 5 o'clock many had finished the day's work and so, of course, the percentage of accidents fell again. The accompanying diagram shows graphically the percentage of accidents for each hour of the working day.

This variability of accidents shows clearly that risk is directly dependent on fatigue. Just before luncheon and just before going home are the times of greatest danger to the worker; whereas the brief noon rest is almost as effective as the night's sleep in restoring the alertness and efficiency which are the laborer's surest protection against accident. The argument points not only to the advisability of the eight hour day, but to an eight hour day broken by recesses and periods of intermission.

Squiblets

The earth weighs 6,000,000,000,000,000,000,000 tons.

Births exceed deaths by one-third in the United States.

There are now 180 city-managers in the United States.

The United States spends \$1,000,000,000 a year for candy.

On the body of a single fly 6,600,000 disease germs have been found.

Insects destroy \$800,000,000 worth of food crops in the United States each year.

The population of New South Wales, Australia, has just reached the 2,000,000 mark.

In one year 15,342 pairs of twins and 147 sets of triplets were born in the United States.

Fourteen hundred girls in the University of Vienna are still wearing their 1914 clothing.

There were enough Smiths in the American Army during the war to make up fifteen complete regiments.

The Boy Scouts of America have 375,000 boys and 90,000 adult leaders at the end of their first decade of work.

During 1919, 35,000 persons in New York State moved from country to city and only 11,000 from city to country.

Ireland is the only European country which decreased in population during the half century before the Great War.

The largest wireless telegraph station in the world is being erected at Rocky Point, Long Island. It will cost \$10,000,000.

Samuel Rzeschewski, aged eight, Polish chess champion, beat twenty experts in a simultaneous match on twenty boards in Paris.

Two hundred and forty-four remedies for ivy poisoning have been tabulated by Mr. McAtee, of the United States Biological Survey.

The general H. C. of L. has doubled the price of wives in Central Africa since the war. Market rates are eight cows instead of the former four.

A Senior in Kentucky University has invented an electrically illuminated walking cane. Now it only remains for someone to invent an umbrella equipped with a burglar alarm.

General Motors Trucks

GENUINE quality stands first among the requirements in GMC construction. Nothing is allowed to interfere.

Sacrifice of quality, either for the sake of larger production or to make a lower price possible, is never considered.

Increased production is attained by greater facilities, and price is always an after consideration. It is based on quality.

Quality is the best guarantee of satisfaction to the user and success for the maker.

GENERAL MOTORS TRUCK COMPANY

One of the Units of the General Motors Corporation

PONTIAC, MICH.

Independent Opinions

Much has appeared in print about the Seamen's Act from the shipowners' side, but how it seems from the seamen's side is shown in the following letter from James H. Williams, whose real-life sea stories the older readers of *The Independent* will remember:

The executive approval by President Woodrow Wilson on March 4, 1915, of the legislation since popularly known as the Seamen's Act was the high signal for a tremendous national and international furore among shipowners and their intimately allied interests thruout the maritime sections of the United States and Europe.

In their opening tactics the shipowners attempted to obstruct and defeat the purposes of the act by ridiculing its provisions and refusing to comply with them. But such tactics proved largely abortive and generally expensive.

Next a joint conference of American and foreign shipowners was held in London to formulate and agree upon an organized and more effective form of combined attack against the cardinal principles and practical provisions of the odious American law.

Directly after this international conference had adjourned, the British Government, thru its Ambassador at Washington, asked to have certain provisions of the Seamen's Act suspended in so far as their application to British ships was concerned as a *war measure*.

A specific case covering the status of a seaman serving in a British ship while in American waters, under the Seamen's Act, was certified up to the Supreme Court of the United States, the British Ambassador officially intervening as *Amicus curie* for the Crown.

This test case: "Strathearn" Steamship Company, Limited, Petitioner, vs. John Dillon," involving the right of a seaman on a foreign ship to claim one half his wages earned while lying in an American port under Section 4 of the American Seamen's Charter of Freedom, has resulted in a unanimous verdict by the Supreme Court expressed in a final decision handed down March 29, 1920, completely upholding the constitutionality of the Seamen's Act in its application to foreign ships.

But to make the seamen's victory still more convincing and complete, another case, also involving a British ship, the steamship "Westmeath," wherein the point at issue was similar to that decided by the "Strathearn" decree was disposed of at the same time, the judgment in the first case controlling the latter also.

The contention of the British Ambassador is thereby overruled, and all foreign ships trading to American ports must hereafter comply with the terms and conditions imposed by our commercial laws or trade elsewhere.

Under a just and reasonable application of this one clause of the Seamen's Act, as construed by the Supreme Court, the maintenance of a successful American merchant marine is assured, not thru the elimination of foreign competition, but by compelling fair competition between nations.

The logical and practical effect of this section of the act has been, and will be, to elevate foreign wage standards toward American levels, thereby eliminating the principal advantage hitherto erected in favor of foreign competitors in the unequal struggle for American trade.

The Seamen's Act should not in any sense be considered or construed as either labor or class legislation. It is an act of

purely protective and defensive American law. It merely reaffirms and extends to seamen the inalienable rights of personal liberty and industrial freedom guaranteed by the constitution to all men under the American flag.

It emancipates American seamen from the blighting disgrace of human bondage which was overlooked by the liberators when the serfs of Europe and the slaves of the United States and Brazil were freed; and encourages foreign born seamen serving in American ships to become naturalized and share our freedom. The Seamen's Act enables native Americans to enter the sea service without prejudice to their self respect or loss of caste.

It likewise protects foreign seamen seeking asylum from monarchical tyranny under the American flag by abrogating the odious treaties which until recently compelled liberty loving Americans to become unwilling slave hunters for their despotic majesties of Europe and Asia.

In five years of practical operation the Seamen's Act has increased the proportion of American oversea commerce carried in native bottoms from less than ten to more than sixty per cent, and still gaining. In the same period the proportion of alien seamen serving in American ships, both coastwise and foreign trades, has decreased from more than ninety to less than forty per cent and still declining. The Seamen's Act insures to the ambitious American boy with an inclination to sea service a long sought opportunity to enter the merchant marine without disgrace and remain there a free man; to embrace an honored avocation and earn a respectable competence, to create and maintain a home and family of his own and rise up to the pinnacle of his chosen profession an honored and respected citizen of the United States.

JAMES H. WILLIAMS

You say in *The Independent* of April 3 that the present German Government is officially styled the "*Reichs-Republik*" or "Imperial Republic." It may not have occurred to you that the German expression "*Reich*" does not necessarily mean "imperial." France is called in the German language "*Frankreich*," or the territory of the Franks." Your way of translating "*Reichs-Republik*" is a contradiction in itself. The German meaning of "*Reich*" is our word *realm, authority, dominion, power*. If the German wants to convey the meaning of a monarchical country he adds the word *König*, as in "*Königreich Preussen Bayern*," etc. In this sense he has the word "*Tierreich, Pflanzenreich, Mineralreich*," which are translated "Animal kingdom, Vegetable kingdom, Mineral kingdom." The etymological meaning of the German *Reich* is clearly defined in that masterly work of Prof. F. Kluge, translated by Dr. John Francis Davis in his "*Etymological Dictionary*." Your translation above is, to say the least, misleading, and conveys a wrong idea, and is certainly philologically incorrect.

DR. C. F. ROH

Norway, Iowa

Our critic is right, but we are not wrong. The German word *Reich* does not necessarily imply an emperor—but neither does the English word *imperial*. We had previously explained in *The Independent* that the retention of the title *Reich* for the new republic did not indicate, as some editors charged, that the German people clung to their old monarchical system, but that *Reich* is

The Couple That Spent Every Cent

ABOUT six months ago I got the scare of my life. Edith was worried, too. But in the end it was one of the best things that ever happened to us.

I guess I had a pretty close call. The doctor said afterwards that he never expected me to pull through.

But it wasn't my own sickness that gave me my fright—at least I wasn't alarmed about myself. It was the sick condition of the family finances, and thinking of Edith and the boy that put me in a panic. There I was, flat on my back in bed; a big doctor's bill running up; a trained nurse to pay every week; and no reserve to fall back on—not a dollar laid by for emergency.

Luckily the firm was good enough to continue my salary without a break, or I don't know what we would have done.

The things that went through my mind during that slow process of getting well made me feel like a criminal. Suppose the worst had happened? No provision for Edith and the boy except a little insurance—the total amount not enough to last more than a year at the rate we had been living.

It hurt like a stab. It seems incredible that two people in their right minds could drift along the way we had been doing, constantly living up to the last cent, constantly on the edge of a slippery precipice. Yet according to statistics, something like 50 per cent of all the men in America over sixty years of age are dependent on relatives or charity for support—including men who had earned princely incomes when in their prime. Think of it! And all because they had failed to look ahead—had never learned how to save. It hit me right between the eyes. For I was nearly thirty-two years old—certainly old enough to know better; yet I wasn't a dollar nearer independence than when I was twenty.

One day, while still in bed, I ran across something in one of the magazines that opened my eyes to our whole trouble.

It said that most people make hard work of saving simply because they don't go at it in the right way. Their money doesn't last long because they have no check on it—no definite system for adjusting their outgo to their income. It said the only practical way is the budget system—split your salary up into proportionate parts; allow so much each week for this, so much for that, and then stick to it.

Then the article told of an almost automatic way for doing this—a new system for managing personal affairs; it was called the Ferrin Money Making Account System.

WHERE did it all go? Forbes earned a good salary. Neither he nor Mrs. Forbes could be accused of extravagance. But somehow they could never keep more than a few dollars ahead of expenses. Then something happened that gave them a scare—and out of it they found an easy way to get on EASY STREET.

It struck me that this was just what Edith and I needed if we ever expected to get our feet on solid ground. When I showed my discovery to Edith, she agreed with me, and immediately sent for the complete system.

That little step has proved to be our salvation. It has helped us put nearly \$500 in the bank in less than six months—out of the same salary that was formerly never enough. At the same time it helped us to pay a big doctor's bill without ever missing the money.

The Ferrin Money Making Account System has shown us how to cut out all that old haphazard, hit-or-miss kind of spending, how to save money that we formerly frittered away—how to stop the little leaks that were keeping us poor.

The Magic Budget Plan

The Ferrin Money Making Account System is simplifying money matters for thousands upon thousands of people all over the country—putting square up bills and debts—putting money in the bank for people who never before saved a cent. It will help you in the same way. This system, which is simplicity itself, comprises:

The Ferrin Money Making Account Book
The Ferrin Kitchen Calendar (for the household)
The Ferrin Pocket Account Book
The Ferrin Investment and Insurance Register
The Ferrin Household Inventory and Fire Insurance Record

Compact information is given on Making a Budget, Keeping Expense Accounts, Making Safe Investments, Making an Inventory of Household Goods.

The Pocket Account Book (price when sold separately, 50 cents) contains printed slips so that you have only to jot down the amounts of your daily expenditures. The Kitchen Calendar (price 50 cents) keeps track of household expenses. At the end of each week or month these amounts are transferred to the Money Making Account Book, which contains 112 pages, size 8½ x 10½ inches, and is bound in half blue Silk Cloth Back—Cadet Blue Cover Paper Sides—Turned Edges, semi-flexible, stamped in gold on Front Cover. This book has been prepared by an expert to fit any salary from the smallest to the largest. Incorporated in it is a recapitulation for every month of the year, which shows at a glance the Budget and the amounts paid out during the month for the various classified items of expense. It is the only book to our knowledge which has a Budget Column for every month. Special columns are provided for items on which an income tax does not have to be paid, so that these amounts may be deducted at the end of the year.

One Money Saving Feature

A war tax is now levied on almost every kind of article you buy. Few people know that the amounts so paid on daily purchases may properly be deducted from their income tax report.

The following items, for example, are deductible. Interest on personal indebtedness; taxes on land, buildings and household property; war taxes on club dues, theatre tickets, transportation, telephone messages, telegrams, tobacco, etc.; contributions to churches, charitable, scientific or educational institutions which are not conducted for profit. By keeping track of these war taxes on the pages for daily expenditures, and transferring the weekly or monthly totals to the Money Making Account Book, you will effect a saving on your income tax that will surprise you and that will pay the small price of the System many times over.

The Ferrin Investment and Insurance Register is designed to keep an accurate record of your investments, insurance policies, etc. Contains 32 pages size 5 x 8 inches; price separately, 50 cents. The Ferrin Inventory and Fire Insurance Record will enable you to make and keep a complete inventory of every room in the house; also provides for record of your fire insurance policy. It is an absolute necessity in case of fire. It may save you many thousand times the cost, which is 50 cents when sold separately.

"The things that went through my mind during that slow process of getting well, made me feel like a criminal."

Two Minutes a Day

The Ferrin Money Making Account System takes only two minutes a day. Any grammar school boy or girl can keep the accounts. This method is not a hard task.

Now you need not worry about the money you spend for clothes, food, rent, or the theatre. You will spend it freely because you know how much you can afford to spend. The Ferrin Money Making Account System is a most practical gift to any newly married couple. Many people use them for Christmas gifts.

Send No Money

See how magically the Ferrin Money Making Account System works, no matter how much or how little your income. We know what you will think of it when you see it. So we are willing to send you the complete System without your sending us any money in advance. Just mail the coupon, and back will come the System by return mail. If you feel that you can afford not to have it, simply send it back, and you will owe nothing.

But when you have seen what big returns the Ferrin System will pay you, you will surely want to keep this wonderful aid to money-making, especially as we are now making a special short-time offer of only \$3.50 for the complete System.

You will appreciate what a remarkable offer this is when you consider that other expense account books are sold for \$3 and cover a period of only two years. The Ferrin Money Making Book covers four years, and therefore has twice the value, \$6. And in addition you get the Ferrin Kitchen Calendar, the Ferrin Pocket Account Book, the Ferrin Investment and Insurance Register, the Ferrin Household Inventory and Fire Insurance Record, each worth 50 cents, or \$2. You have the opportunity, therefore, of securing \$8 value for only \$3.50.

But we can make this special combination offer only for a limited time. You are therefore urged to mail the coupon now—to do so costs nothing and does not obligate you in any way, and it may be a revelation to you of how much more you can get out of your income.

READ!

Letter from Head of Financial Department of Largest Corporation of its kind in the United States.

"I consider your account book a remarkable contribution to the people of this country at this time."

"In our company we have 5,000 employees and it was a revelation to me, in giving them advice in regard to the making out of their income tax returns, to find how few had any intelligent idea of their income and their living expenses."

"The simplicity of your plan, which, by comparison with previous methods of account keeping, would seem to be well-nigh automatic, appeals to me strongly."

"They say you can't teach an old dog new tricks, but I will say to you that I am going to use the Ferrin Book for my own family expenses, and consider it will make money for me right from the start."

(Signed) D. S. Burton.

Letter from A. B. Dick, Jr., of the A. B. Dick Company of Chicago, Manufacturers of the Edison-Dick Mimeograph Machine.

"I can cordially say that all the record books which you have issued are practically invaluable to the man who wishes to handle his personal and household accounts in the proper manner. I have seen several systems to take care of these matters, but yours covers the ground in a more thorough manner than any of them."

"To further show my appreciation I would like to have three copies of your Investment and Insurance Register, and also one copy of the 'Money Making Account Book' if these are off the press and available. It would be particularly gratifying to have them in sufficient time for the opening of the new year. If you will forward your bill I will be very glad to remit."

(Signed) A. B. Dick, Jr.

Esterbrook Pens

Made in America—
Used 'round the world

Australia

Esterbrook Jackson Stub No. 442

If you like a stub pen you will get the most satisfaction from the use of this just right stub. Flexible, yet firm, easy and sure, glides freely over the paper with least muscular effort.

For those who write a great deal, accountants, recording clerks, lawyers, this pen offers a relief from strain, writer's cramp, etc. There are other Esterbrook Pens for all writing purposes. Every Esterbrook Pen maintains the high standard of excellence established by over 60 years of uniform good work.

Send or telephone to your nearest dealer, asking for samples. 15c a dozen, assorted, or of your favorite pen.

"Say it with Flowers"

Tea-Time is Flower time. No table so elaborate but that Flowers will add to its beauty. No meal so simple but that Flowers will lend piquant zest.

You can "Say it with Flowers" on every occasion and in every place through the Florists' Telegraph Delivery Association

used in its generalized sense of *domain*. "Commonwealth" would be a good version. There need be no ambiguity here for we all use such words in the same way in English. Even our correspondent cannot avoid the usage he criticizes us for. He says *Reich* should be translated "realm" or "dominion." But "realm" implies a king and "dominion" implies a lord (*dominus*). We note that the Germans still call France *Frankreich*, that is "the kingdom of the Franks," altho France has not been a kingdom for eighty-two years. Who is "king" of the "animal kingdom," the lion? The term "British Empire" has of late come to be used even in official documents, yet there is not and never has been a "British Emperor" as there was a "German Emperor," nor an "Emperor of Great Britain" as there was an "Emperor of Austria," nor an "Emperor of the British" as there was an "Emperor of the French." There is an "Emperor of India," yet India is not at all the same thing as the "British Empire." An illustration of this comes right to hand. The new British ambassador to Washington, Sir Auckland Geddes, said in his speech that it is "difficult for the British Empire to understand the American Empire." So, too, the opponents of expansion talk about "American imperialism" whenever we purchase a new island, yet even they do not really suspect the President of assuming the title of "Imperator." A knowledge of philology is often more misleading than enlightening as to the present meaning of words.

A Correction Column

Following the prevailing fashion of "Mother's Day," "Thrift Week," "Go-to-Church Sunday," etc., we are amending all the errors of our ways in this one "Correction Column."

The most important item is the addition of the following material to the Message from the United States Government, by Walker D. Hines, which was published in The Independent of March 27. The Director General of Railroads writes:

I am exceedingly sorry that there was omitted from an article which I wrote by request for The Independent regarding Federal control of railroads, a paragraph showing that the increased cost per ton of finished product of the United States Steel Corporation in 1918 was 61 per cent as compared with 1914 whereas the increased cost per unit of service on the railroads in 1919 was not more than 60 per cent as compared with 1914. The omission of this paragraph rendered meaningless or confusing several paragraphs that followed. Inasmuch as the article written by me was incomplete without this comparison to which succeeding paragraphs referred, I would appreciate it very much if you would now publish this letter.

The comparison thus made with the greatest private enterprise in the country was used as a means of suggesting that heavy increases in costs were not peculiar to the railroads under Federal control but were general and might be as great or greater in private enterprises. I stated in the article that "it would be surprising if complete analysis did not indicate a more favorable showing as to operating costs by

this large private enterprise under unbroken continuity of management and policy extending over a period of nearly twenty years and its ability to plan with confidence for the future than by the Railroad Administration."

In the part of the article which was eliminated it was stated that the figures of the Steel Corporation for 1918 were taken because they were the latest available and that thus the comparison made was unfavorable to the Railroad Administration, if, as it was believed, the unit costs of the Steel Corporation were higher in 1919 than they were in 1918.

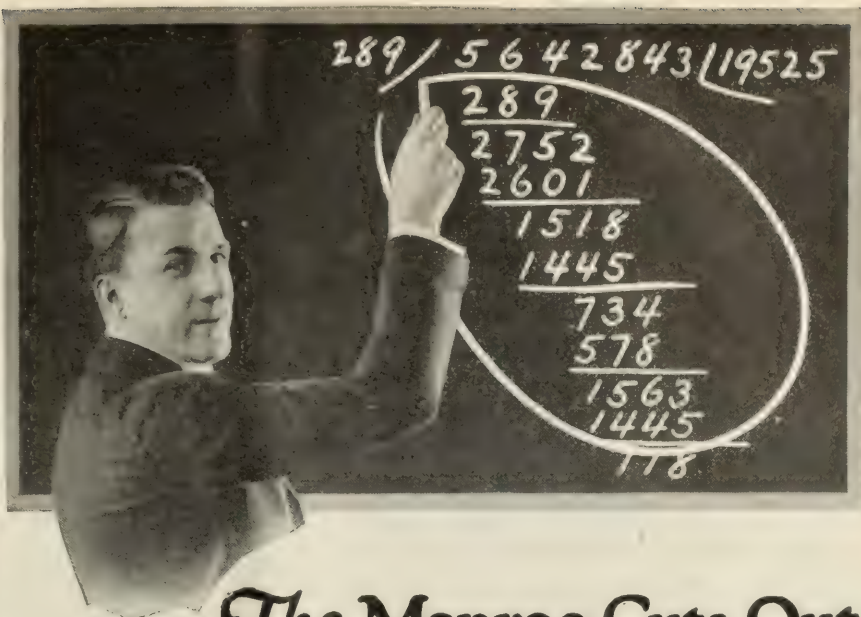

Since preparing the article for The Independent the annual report of the Steel Corporation for the year 1919 has been made public and the figures contained furnish, as expected, a basis for a more favorable comparison. The 1919 report shows that the operating costs of the company per unit of finished product increased 81.5 per cent in 1919 over 1914, while as mentioned above, the increased cost per unit of service on the railroads in 1919 was not more than 60 per cent as compared with 1914. It will be appreciated of course in making this comparison on the basis of increased cost per unit both as to the Steel Corporation and as to the railroads a full account is taken both of the increased output of the Steel Corporation and the increased service rendered by the railroads. Ignoring this increased output and increased service, the total operating costs of the Steel Corporation were 144.7 per cent more in 1919 than they were in 1914 whereas the operating costs of the Class I railroads were 102 per cent more in 1919 than in 1914. It is also borne in mind that the Steel Corporation doubtless had increased costs on account of the steel strike in 1919. The railroads, however, suffered heavily from the nation-wide coal strike, and were also adversely affected by other strikes, including several unauthorized strikes of railroad employees, especially of large numbers of shopmen in August.

My belief that the cost of railroad operation under Federal control during the extremely difficult year of 1919 compared favorably with costs encountered in large enterprises under private control led me to state in the article "as the result of my continuous contact with this subject and repeated discussions concerning it with railroad operating people thruout the country, my deliberate judgment is that Federal control has not cost one cent more than private control would have cost in the same difficult period but on the contrary has cost considerably less."

WALKER D. HINES.

Among the Remarkable Remarks in The Independent of March 6, 1920, we attributed to Dr. Kelman, pastor of the Fifth Avenue Presbyterian church of New York, the remark that "Christianity is to Bolshevism what insect powder is to vermin." Dr. Kelman asks us to deny that he made the statement; and since we didn't save the clipping we don't know which New York newspaper deserves the blame.

When Mr. Boeckel wrote the story of the United States Supreme Court, "Live Wires Under Heavy Insulation," which appeared in The Independent for April 3, he referred to Mr. Justice Harlan as having formerly lectured at Georgetown University. An "old grad" of '94 has written to correct the statement from his own memory. Justice Harlan lectured on Constitutional Law then at Columbian University, now George Washington University.

The Monroe Cuts Out All This in Your Office

LOOK inside this chalk line. That tells the story. All this costly, time-consuming work is cut out when you use the Monroe. The Monroe does it for you. A few simple turns of the crank and your answer, 19525¹¹⁸₂₈₉ appears with almost unbelievable speed.

The Calculating Machine That Has Made Figuring as Easy as Turning a Crank

Simply set your numbers on the Monroe keyboard and turn the crank—forward to multiply or add; backward to divide or subtract. No complements or reciprocals necessary; no trained operators necessary.

And you *know* as you go that your answer is correct. Before your very eyes—on the Monroe keyboard and in the Monroe dials—is visible, positive *proof* that your answer is right—right the first time.

John Wanamaker Says of the Monroe:

"Since installing the Monroe machines in this office, on invoices alone we have saved at least 33 1/3% of the time formerly required to do the same kind of work, and we take pleasure in being able to tell you how successfully the Monroe Machines have worked out with us."—JOHN WANAMAKER, New York.

Mail coupon for "Book of Facts" which explains fully how easily the Monroe figures invoices, chain discounts, payrolls, percentages, estimates, interest, etc.

The Store with the Right Idea

(Continued from page 389)

He works overtime. And he doesn't strike for more pay—he strikes out for more work. Is there on the globe today another merchant eighty-two years old who can be found every day toiling at his business from 8 o'clock till 6 or 7, with a grasp of mind and hand like that of a man of forty? I don't know of any. How could a decent employee loaf under a man like this? You never hear of labor troubles in the Wanamaker Stores. When Mr. Wanamaker was Postmaster General of the United States he used to be always at work by 7:30 o'clock—two hours and a half before the other cabinet officers took up their duties for the day. So rare a sight was never known before—the other name for Washington is said to be Worklesstown.

He attempts, and achieves, what others call impossible. He founded the "new kind of store" at Philadelphia in a deserted freight depot; and for his New York store he bought the old property of A. T. Stewart at Broadway and Ninth street when the shopping center was moving so far uptown that other merchants hastened to leave the district Wanamaker was entering! Business men loudly predicted failure, but the character of this business and this man drew a multitude of patrons in record-breaking time. One year after he came to New York he had bought a whole block next to the A. T. Stewart site, had built a \$4,000,000 edifice to accommodate the new customers, and was opening the new building with prominent men from all over the country aiding the ceremonies, the principal address being made by the Secretary of the United States Treasury. Wanamaker is a mental radical, but a moral conservative; this type of man breaks traditions, rules, precedents, and from the broken bits he paves for himself a new road.

He thinks ahead of the crowd. By thinking ahead, he gets ahead. The innovations he conceived and made for the science of storekeeping have been many and diverse; including the one-price system for all goods to all customers; the privilege of return of goods; the freedom of the store without solicitation to buy; the guarantee of truthfulness in all advertisements; the friendly and full cooperation with manufacturers; the education of employees for business and life; the combination of art and utility, of health and comfort, thruout the appointments and arrangements of the store. He was the pioneer of correct business policies and principles, that we now take for granted because other merchants followed his lead. As Postmaster General he instituted many reforms, and modern efficiency methods before the word "efficiency" had become popular. He established rural delivery, enlarged free delivery, promoted American shipping interests, founded sea post offices, organized better mailing facilities for towns and cities, destroyed the lottery, abolished Sunday

work by postal employees in the buildings under his charge and reduced it everywhere. The postal telegraph, postal saving system and parcels post were among the great utilities he recommended long before their adoption. He is probably the only merchant with national quality and renown as a fearless, broad, keen statesman of the first rank.

He makes kindness the paramount issue of life. He believes that a man's head should guide his business, but his heart should guide his head. Nobody ever sees John Wanamaker clouded and misled by anger, hate, resentment, fear, dejection or other destructive emotions. And he prefers injury to himself rather than injustice to anybody else. A girl accused of shoplifting was once brought to his private office—and the goods were found on her. She was defiant, would not give her name, or confess her guilt. A clergyman happened to be in the office. A moment's thought, and John Wanamaker knew the way out of the trouble. He and the minister knelt in prayer. The girl broke down, cried and confessed, told how she was a stranger in the city and a sudden temptation had moved her to steal the sort of things that a girl loves. Instead of sending her to prison, John Wanamaker sent her to the home of a Christian woman, and he offered her a place in his store, where she could earn the pretty things she craved. That girl is now a superior settlement worker, attending also to many of Mr. Wanamaker's private charities. Could a minister have done a finer bit of practical evangelism? A theological seminary might distinguish and honor itself by conferring the title of Doctor of Divinity on this merchant who is quite as much a minister.

What bearing has a personal introduction of such length on the "new kind of store" we are about to enter? Simply this. John Wanamaker is a new kind of man. That is how and why he came to evolve a new kind of store. To arrive at the purport of the institution, we must be guided by a glimpse at the heart of the man.

THE beginning was peculiar. On a Christmas eve, some sixty years ago, a plain country boy took a few dollars he had saved from his earnings and went into a Philadelphia jewelry store to buy a present for his mother. He chose a gift, but before the jeweler could wrap it up the boy saw something prettier, and exclaimed with a boy's delight over a new discovery, "I think I'll change my mind and take that instead!" The jeweler snapped, "It's too late now. You've bought this and you must keep it." Doubtless the crabbed jeweler wanted to get rid of the first article, which had been a poor seller. The boy took it, but resolved then and there to have a store himself, some day, where the rich or poor, old or young, wise or otherwise, should be

treated always fairly and courteously. Cherishing this ideal, he had to fight the whole business world.

The majority of dealers then were mild tricksters, many were habitual liars and robbers. They used false labels. They marked goods too high and later, slicing down the price a bit, called them wonderful bargains. They had different prices for different customers. They worked off stale goods on green or young buyers. They kept a "barker" out in front, regulating his salary by his capacity for telling the loudest, most convincing lie about the merits of the store. They paid the largest wages to clerks who could sell the largest quantities of damaged or out-of-date merchandise, and even then paid mostly by orders for dry goods, groceries and other commodities having no fixed value. They printed eulogies about themselves that would make Munchausen blush with shame and Gulliver gasp with envy. They had, in short, the honor of pirates, the virtue of criminals, the sense of lunatics, the science of idiots. They were professional money grabbers, and the mental and moral stabbers that money grabbers always are. So the buyer and the seller had come to be foes.

The boy John Wanamaker, after the episode of the jeweler, made a vow. He would establish a business different from any that existed, based on a reliable system; every word, spoken or printed, guaranteed accurate; with a motive higher than mere cash profit; and a purpose to raise the standards of merchandise, value and service, so that business dealing might be more agreeable and safe, and rising generations might engage in commerce free from practices that had lowered mercantile character. He decided the cornerstones of his building should be *intelligence, industry, integrity* and an ideal.

Pondering, toiling, dreaming, planning, he dwelt on his peak of purpose till he had a prophet's vision. He saw in his mind's eye seven great lamps to illumine the way of progress and serve as beacon lights for others. He called the seven great lamps Truth, Justice, Courtesy, Faith, Initiative, Education, Coöperation. He resolved that every transaction, every employee, every bit of goods, every cent of profit, should stand in the light of clean character disclosed by these seven lamps. The visions men had in Bible times are with us yet. But the man of today, if he is a real man with a real vision, works it out—he does not talk about it as the ancients did.

The Philadelphia headquarters, realization of the Wanamaker vision, might have been truthfully named "the store of a thousand surprises."

The store is 281 feet high and covers an area of about forty-five acres; yet the official who acted as our guide said "We made just one mistake—we didn't build large enough!" And the people who saw the building going up predicted failure because the store was ten times too large! It never pays to heed the mortals with a pinhead vision. Merit points to magnitude as surely as

ONCE upon a time it was an unpleasant job to use a paste, but Cico has changed all of that. There is no water well to bother with. The paste comes from the jar ready-mixed, ready for instant use and stays ready. The adjustable brush guard makes soiling of the hands and fingers an impossibility. Clean, convenient and economical.

Shave With Comfort

This new way saves time and bother How Shavaid Helps the Lather

Men who for years have used the old ways of softening the beard, find Shavaid a positive revelation. They have abandoned hot towels and rubbing-in methods. They prefer this easy, quick, comfortable procedure.

Harsh shaving methods are unnecessary. Shavaid, the new scientific preparation which so many men are using today, has proved this. It is working a revolution in shaving methods.

A Shavaid shave is simplicity itself. It saves time—no hot towels, no rubbing. Just apply to the dry beard. Then apply your favorite lather. Then shave. That is all there is to it.

You will feel the cooling, soothing effect of Shavaid at once. It keeps the lather moist and creamy. The blade "takes hold" of perfectly softened hair. There is no "pull."

And afterwards, no need for lotions, creams or hot towels. After a close shave, your face will feel cool and comfortable—no smarting, no "drawn" sensation.

the needle of the mariner points to the magnetic pole. Just the incidental features constitute large business undertakings: the restaurants feed 10,000 customers a day, the post office does a traffic of \$1,000,000 a year, the hospital furnishes treatments, examinations or prescriptions to the number of about 40,000 a year. The volume of daily custom is shown by the fact that Wanamaker wagons have made in one day as many as 84,000 deliveries.

The architect describes the building as "a collection of efficiency units," all independent in purpose, yet interdependent in function and appearance. For example, any one of the twelve stories could be removed without disturbing the other stories. The sixty-eight elevators, of the direct plunger type, are infallibly safe and effective because the plunger piston travels thru a hole drilled in the solid rock to a depth equaling the height of the elevators' ascent; the plunger cannot fail, resting on a cushion of water displaced in its descent, and when the car goes up a water pressure of 150 pounds to the square inch does the pushing. Fire escapes are smokeproof as well as fireproof, and the fire doors are made to close automatically should fire occur. Safety is promoted, and ventilation improved, by the separation of light, heat and power plant from the store building, a neighboring structure being used for this purpose. Cold drinking water must be available at all times on all floors, to the extent of about 1000 gallons an hour; so the water is pumped continuously from the refrigerating plant to the top of the store, where a tank is on direct line with every fountain. The air, first washed, then warmed or cooled, is completely changed every ten minutes, and every six minutes thruout the basement stories, three of them below the street level; so perfect is the ventilation that in summer the basement is five degrees cooler than the main floor temperature. From the comfortable and commodious basement to the vast roof laid out in running tracks and tennis courts for employees, the building is a rare combination of science, art, novelty and utility. The Wanamaker stamp of individuality is all over it.

The aisles are broad, spacious, inviting, free of the crowding and shoving that are so characteristic of many large stores, and so hateful to a sensitive woman shopper. The counters are placed with a view to ready access and immediate service. The walls are lined with masterpieces of art, and they ring with beautiful harmonies played by a master hand for the devotees of this temple of commerce. The very air is of ease, calm and quiet—not the mad, noisy rush of the typical store crowd. You almost forget you are in a market place, you feel somehow that here are blent the chaste beauty of an art gallery, the noble sentiment of a cathedral, the gracious welcome of the home of a friend tried and true. The heart comes first, the head next, the purse last; which is the right order in every business house.

More than 600 fine paintings, bought from the world-renowned salons of Paris, lend the Wanamaker atmosphere of culture to the Wanamaker aisles of trade. The marble columns and superb decorations of the Grand Court of Honor in the center of the store lift the mind of the visitor, who may have come only to shop, yet pauses to adore and be refreshed in spirit. A characteristic union of refinement and resourcefulness occurs in the famous piano showrooms; these are veritable chambers of art, with furnishings and ornaments after the highest Greek, Moorish, Egyptian or Louis XIV patterns, for guests to enjoy while they listen to the music; an original mechanical device moves out the pianos in record-breaking time, changing the demonstration rooms into concert or lecture halls, and so doubling their usefulness.

PERHAPS the most remarkable store scene ever witnessed opens the day here. At 9 o'clock a bugle call is sounded from the organ loft in the Grand Court, by uniformed members of the boys' and girls' band. Customers gathered outside throng in; but few start shopping; they stand by the walls, pillars and counters, waiting, expectant. From the largest organ in the world suddenly peals forth a rich volume of heavenly music, bearing a sense of sublime grandeur as of an old cathedral. The organ voluntary lasts thirty minutes. The arrangement of the store enables 25,000 people to hear the music easily and comfortably. Hosts of eager listeners wait for the music only, they do not buy a thing, and they are as welcome as the shoppers. Could there be a finer prelude to the day's work, merely to put customers and clerks in tune with themselves and each other?

Now let us view the quality of some of the merchandise. When the National Pure Food Law, covering toilet articles, went into effect, not a single Wanamaker label had to be changed; nor is there need of inspection of weights and measures—the store attends to that as a religious duty. Gold is marked by the karat. Silver is sterling, .925 fine, the English standard. Linen is pure flax fiber—no cotton mixtures are sold. Leather in shoes, gloves, books or baggage is accurately described by name. Mahogany is genuine mahogany—not mahogany veneer. Paris millinery and lingerie come from Paris, London hats and sport togs for men come from London, a foreign label never appears on domestic goods. The aim is to let each bit of merchandise tell its own truthful story, clean of misrepresentation by the seller and of misunderstanding by the purchaser.

The house of Wanamaker was the first in America to make regular use of whole-page newspaper announcements, and the first to erect and maintain scientific, artistic, ethical standards of publicity. All advertisements are based on personal inspection of the merchandise, and interview with the buyer. The aim is to furnish real news to the general public. A reason is always given for a special price or ex-

This man can cut from four to five acres of grass per day

This man takes care of the lawn and grounds on the estate of Thomas A. Edison, West Orange, N. J. Where he formerly required three or four helpers he now does the work alone and *does it easily*. For keeping the lawn in fine shape—rolled smooth and grass nicely cut—was the hard part of the job. It kept two or three men busy most of the time. But the Ideal Power Lawn Mower solved the problem just as it has for hundreds of others who have large lawns to care for.

Advantages of the Ideal

The Ideal is a power mower and roller in one and the sod is rolled every time the grass is cut. This keeps it smooth, firm and free from bumps. The Ideal is scientifically designed to keep lawns in fine condition. The weight is just right for steady year around work. The Mower has a thirty-inch cut and one man can easily mow four or five acres of grass per day at an operating expense of about fifty cents for fuel and oil.

Cuts Close to Walks, Trees and Shrubbery

Machine turns easily and will cut close up to walks, trees, flower beds and shrubbery. When running over walks, driveways, pavements, etc., the operator simply lifts the cutting mower from the ground by means of a conveniently placed lever. This feature is also important in the early spring when it is desired to use the machine for rolling only. Simply lift up the cutting mower, add more weight if required, and you have the most convenient power roller imaginable. The success of the Ideal is due to its sturdy and powerful, yet simple, construction. No clutches or complicated parts to wear and get out of order. The Motor is built in our own shop and designed especially for the work.

Owners of large estates, public parks, golf clubs, country clubs, cemeteries, etc., are all using the Ideal Tractor Lawn Mower with great success.

Special Cutting Mower for Putting Greens

For work on golf courses we furnish, at slight additional cost, a special set of cutting blades for use on the putting greens. In less than five minutes the regular 30" blade can be substituted for cutting the fairway. When desired, we also furnish, as an extra, a riding trailer which fastens to the frame and permits the operator to ride and at the same time have the same easy control as when walking.

You can secure the Ideal through your dealer direct or from our factory. Write today for catalogue and further details.

Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

For many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein,

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$7.00. Besides our teaching service, we offer a manuscript review service.

tra quality. Clear language, bold type and attractive display are the rule. Before publication, every advertisement in proof form is verified as to accuracy and sincerity of statement, judged as to pictures, types and expressions, viewed as to public service features, tested as to economy of space and money, regarded as to genial spirit and optimistic outlook. The first advertising slogan is: "Print nothing you cannot prove." The second is: "Look at everything from the customer's viewpoint." The third is: "Make friends for the store—never try to effect immediate sales at the risk of permanent friendships."

Character is the hall mark not only of goods and advertisements, but also of the people in control. Thus, the sponsor of the golf department is the noted Scot who introduced the game into America; one of the store's employment experts is a former placement official of one of the United States Government offices during the war (who applied physical and mental tests to the soldiers by order of the Surgeon-General); and the director of the welfare institution was for half a lifetime the medical supervisor of the most efficient large-railroad system, and as such the originator of notable hygienic features to benefit the public as well as employees.

The Wanamaker system of teaching and training employees is so comprehensive and unusual that a book would be needed to describe it. Every Wanamaker boy is a member of the house military organization; when the national call came to serve in the Great War, 1500 Wanamaker youths, trained and equipped already by the store, took their places in the front ranks of the fully prepared. Every morning, before opening time, the boys and girls are drilled, as a powerful army of industry, and shown how to handle their minds and bodies, heeding and obeying orders in a concert of willing action. I was a lieutenant in a corps of cadets, but I never saw a finer military spirit than that of these regiments!

John Wanamaker insists that because a lad or maiden has to go to work is no reason for not going to school. One of the biggest, perhaps the most serious, of our educational problems is to know what to do with the majority of our boys and girls who drop out of school before even ready for college. The solution is here—Wanamaker has no space, in his head or his store, to hold an unsolved problem. He founded his Commercial Institute as a business academy or preparatory school, and his American University of Trade and Applied Commerce as a higher institution of learning—the highest branch of learning being life itself. The subjects taught in the Commercial Institute cover in addition to regular public school themes, commercial geography, commercial history, commercial correspondence, banking and finance, ethics, French, physical and military training, elocution, singing. The courses of the American University of Trade and Applied Commerce are designed to lift

higher the adult employees in the knowledge and skill of their store occupations, in general education and culture and in the ethics of life. The right way to learn is to earn at the same time—Wanamaker the teacher is perhaps greater than Wanamaker the merchant.

Employees are further aided by a multiplicity of store organizations—military band, drum and bugle corps, cadet battalion, violin class, junior chorus, dramatic club, orchestra, women's league, alumni association, beneficial association, literary assemblies, touring parties, summer encampments. The organization of highest value is the John Wanamaker Foundation, recently established to do the following things needed in every business concern, but not yet carried out in the stores of America: publishing a monthly store magazine, preserving accurate data of each employec, giving immediate assistance to the ill or injured, providing for dependents at death, caring for old age or permanent disability by pensions, and stimulating and rewarding thrift in order to supply comforts in old age and cash for special needs, as marriage, home buying, vacation travel, business opportunity. The Director of the Foundation quoted to us the words he most often hears from Mr. Wanamaker: "Isn't there something more we can do for our workers?"

Possibly the most unique distinction earned by Mr. Wanamaker is the wealth of personal tribute to the store and the man given by other famous men of their own accord.

General Grant, buying here the uniform that he wore on his memorable tour of the world, and viewing the splendid management, observed, "It takes as much generalship to organize a business like this as to organize an army."

President Taft, speaking at the dedication ceremonies of the Philadelphia store and institution, called this house of business "a new instrumentality for the betterment of the condition of men."

Dr. Josiah H. Penniman, Vice-Provost of the University of Pennsylvania, declared it "the finest example in large business, of which I have any knowledge, of the operation of the Ten Commandments and the Golden Rule."

Even finer than the tribute of statesmen, teachers, business men or customers was a heartfelt act of an old employee. This man, finishing a lifetime of Wanamaker service, was about to sign the paper guaranteeing him a pension from the Wanamaker Foundation for the rest of his days. The Director of the Foundation, handing him the pen, remarked, "This is the pen with which Mr. Wanamaker signed the charter of the Foundation." The eyes of the old man lit up, then filled with tears of joy and gratitude, as he murmured, "God bless him!" and reverently, spontaneously, kissed the pen. We should have a new business world in a single generation if all employers could inspire devotion like that.

Show Men

The way to whiter teeth

All statements approved by high dental authorities

Women should test this new method of teeth cleaning. They usually decide the family tooth paste. Tooth protection depends largely on them.

There are new facts to consider. And every woman, for her sake and her family's sake, should prove them.

That film-coat

Most tooth troubles are now traced to film. To that viscous film which you feel with your tongue. Millions of teeth are dimmed and ruined by it.

Film clings to teeth, enters crevices and stays. The ordinary tooth paste does not dissolve it, so the tooth brush leaves much of it.

It is the film-coat that discolors, not the teeth. Film is the basis of tartar. It holds food substance which fer-

ments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So, despite the tooth brush, all these troubles have been constantly increasing.

Now we combat it

Dental science has for years sought a way to fight that film. Not on the surface only, but between the teeth.

That way has now been found. Able authorities have amply proved it. The method is now embodied in a dentifrice called Pepsodent. To millions it has brought a new era in teeth cleaning, and leading dentists everywhere are urging its daily use.

Ask for a ten-day tube

Everyone is welcome to a test of Pepsodent. Watch the results, read the reasons for them, then judge it for yourself.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

A new discovery makes this method possible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. But science has found a harmless activating method,

and active pepsin can be used to fight this film.

Pepsodent combines two other modern requisites. And these three great factors do what nothing else has done.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how the teeth whiten as the film-coat disappears.

You will know then what is best for you and yours. Cut out the coupon now. This is too important to forget.

When Uncle Sam Goes On the Road

(Continued from page 385)

act approved February 28, 1919, the appropriations were increased by the amount of \$200,000,000, of which \$50,000,000 was made available before July 1, 1919, \$75,000,000 between that date and the corresponding date in 1920, and \$75,000,000 became available on July 1, 1920. The amount which becomes available on July 1 of this year is therefore \$100,000,000, a larger amount than has previously been made available in any one year. To measure the generosity of this appropriation of federal money, it is only necessary to remember that the total expenditure, under state control, in all the states during 1918 was only \$117,000,000.

The record of accomplishment in the way of roads constructed with these vast funds runs into large figures. Up to May 1, the Secretary of Agriculture had approved projects, submitted by the states, the aggregate length of which was 27,796 miles, long enough to span from New York to San Francisco nine times. It is estimated that the total cost of this approved mileage will be \$326,750,928, of which \$139,840,901 will be paid from the federal treasury. On the same date there were under actual construction or completed 13,540 miles, the total cost of which will be nearly \$200,000,000, of which approximately \$60,000,000 had been expended for completed work amounting in length to 4300 miles of road.

But little of this actual construction was done before the signing of the armistice. Since that time expenditures for completed work have been made at the rate of nearly \$40,000,000 per year, a record approximately equaling the rate of construction of the Panama Canal. This rate has been attained in the face of the worst economic conditions which have been experienced in a century, and in spite of railroad strikes, inadequate transportation facilities, and shortage of construction materials and labor.

In the prosecution of this great work the Federal Government and the states have acted in the closest coöperation. There is no competition for labor and materials such as there would be were the federal roads constructed independently by the Federal Government. The roads are designed and built by the state highway departments subject to the approval of the Secretary of Agriculture and his designated representatives. The cost of this supervisory control is less than one and one-half per cent of the cost of the road work supervised.

Tho the Government may participate in the cost of construction to the extent of 50 per cent, the states, so far, have volunteered to pay more than one-half the cost. In fact, the average state has offered to pay 57 per cent, leaving only 43 per cent of the cost to be borne by the Government. But there is a decided advantage to the states even in this division of the

expense, because an examination of the character of the traffic which uses our average highway will show that 90 per cent of it is local in character, and not more than 10 per cent is of that interstate nature, which generally characterizes works under federal control.

But the Federal Government has also an interest in the betterment of the avenues along which the local traffic may flow. A large part of it is the traffic from the farms to the shipping points, and nearby cities and towns, and any improvement which will expedite this traffic will go far to ease the existing critical situation in respect to the supply of agricultural products. This we must regard as most important in these days of high prices of the necessities of life, and reduced production of the fruits of the soil. Whatever works will help in the betterment of the conditions of rural life, the promotion of the educational and social opportunities of our rural communities, and the development of the inherent attractions of country life, will tend to increase our agricultural population, and consequently our production of the vitally necessary raw materials.

The Federal Government, of course, has a direct interest in the development of interstate roads to accommodate that 10 per cent of highway traffic which flows across state lines. Previously this traffic has consisted largely of automobiles driven by tourists in the pursuit of pleasure, and the provision of roads to accommodate it has properly been subordinated to the provision of the local roads which actually promote the substantial well-being of the country at large, but lately, with the development of the motor truck, the interstate traffic has taken on a somewhat commercial aspect, and the importance of providing for it has increased. The lessons of the war have also taught us that in special cases it is important to provide special roads against military contingencies.

The Secretary of Agriculture is well aware of these changed requirements and has taken steps to assure that they will be provided for. He is in consultation with the War Department, the several state highway departments and similar agencies representative of the various national, state and local needs; and upon the advice of these agencies a systematic program of highway development is being outlined. It is a system which begins at the very roots of our national scheme of transportation, provides first for the construction of the roads which serve the farms and the commercial needs of the cities, but includes also the necessary provision for the connection of the local roads, and the ultimate development of a network of economically located roads which will tie together the states as well as the towns, and which will tend to serve the transcontinental tourist as well as the farmer.

(Continued from page 398)

public and legitimate business in this. There should be no persecution of honest business, but to the extent that circumstances warrant we pledge ourselves to strengthen the law against unfair practices.

We pledge the party to an immediate resumption of trade relations with every nation with which we are at peace.

The uncertain and unsettled conditions of international balances and the abnormal economic and trade situation of the world, and the impossibility of forecasting accurately even the near future, preclude the formulation of a definite program to meet conditions a year hence. But the Republican party reaffirmed its belief in the protective principle, and pledged itself to a revision of the tariff as soon as conditions shall make it necessary for the preservation of the home market for American labor, agriculture and industry.

Merchant Marine

The national defense and our foreign commerce require a merchant marine of the best type of modern ships flying the American flag, manned by American seamen, owned by private capital and operated by private energy.

We indorse the sound legislation recently enacted by the Republican Congress that will insure the promotion and maintenance of the American merchant marine.

We favor the application of the workmen's compensation act to the merchant marine.

We recommend that all ships engaged in coastwise trade and all vessels of the American merchant marine shall pass thru the Panama Canal without premium of tolls.

The Immigrant Alien

The immigration policy of the United States should be such as to insure that the number of foreigners in the country at any one time shall not exceed that which can be assimilated with reasonable rapidity, and to favor immigrants whose standards are similar to ours.

The selective tests that are at present applied could be improved by requesting a higher physical standard, a more complete exclusion of mental defectives and of criminals and a more effective inspection applied as near the source of immigration as possible as well as at the port of entry.

There is urgent need of improvement in our naturalization law. No alien should become a citizen until he had become genuinely American and tests for determining the alien's fitness for American citizenship should be provided by law.

We advocate, in addition, the independent naturalization of married women. An American woman should not lose her citizenship by marriage to an alien resident in the United States.

We urge Congress to consider the most effective means to end lynching in this country, which continues to be a terrible blot on our American citizenship.

The Wounded Veteran

Republicans are not ungrateful. Thruout their history they have shown their gratitude toward the nation's defenders. Liberal legislation for the care of the disabled and infirm and their dependents has ever marked Republican policy toward the soldier and sailor of all the wars in which our country has participated. The present Congress has appropriated generously for the disabled of the World War.

Civil Service Reform

We renew our repeated declaration that the civil service law shall be thoroughly and honestly enforced and extended wherever practicable. The recent action of Congress in enacting a comprehensive civil service retirement law and in working out a comprehensive employment and wage policy that will guarantee equal and just treatment to the army of Government work-

ers, and in centralizing the administration of the new and progressive employment policy in the hands of the Civil Service Commission is worthy of all praise.

A Word for Mr. Burleson

We condemn the present Administration for its destruction of the efficiency of the postal service and the telegraph and telephone service when controlled by the Government and for its failure to properly compensate employees whose expert knowledge is essential to the proper conduct of the affairs of the postal service. We commend the Republican Congress for the enactment of legislation increasing the pay of postal employees, who up to that time were the poorest paid in the Government service.

Woman Suffrage

We welcome women into full participation in the affairs of Government and the activities of the Republican party. We earnestly hope that Republican legislatures in states which have not yet acted upon the suffrage amendment will ratify the amendment, to the end that all of the women of the nation of voting age may participate in the election of 1920, which is so important to the welfare of our country.

The Children

Where Federal money is devoted to education, such education must be so directed as to awaken in the youth the spirit of America and a sense of patriotic duty to the United States.

A thoro system of physical education for all children up to the age of nineteen, including adequate health supervision and instruction, would remedy conditions revealed by the draft, and would add to the economic and industrial strength of the nation. National leadership and stimulation will be necessary to induce the states to adopt a wise system of physical training.

The Republican party stands for a Federal child labor law, and for its rigid enforcement. If the present law be found unconstitutional or ineffective, we shall seek other means to enable Congress to prevent the evils of child labor.

And the Working Woman

Women have special problems of employment which make necessary special study. We commend Congress for the permanent establishment of the women's bureau in the United States Department of Labor to serve as a source of information to the states and to Congress.

The principle of equal pay for equal service should be applied thruout all branches of the Federal Government in which women are employed.

Federal aid for vocational training should take into consideration the special aptitudes and needs of women workers.

We demand Federal legislation to limit the hours of employment of women engaged in intensive industry, the product of which enters into interstate commerce.

A Number of Things

By Edwin E. Slosson

Lord Fisher, admiral of the British fleet, gives this good advice:

Fear less—hope more; eat less—chew more; whine less—breathe more; talk less—say more; hate less—love more, and all good things are yours.

It will be a long time before the prejudices of the war are eradicated from the youthful minds on which they have been impressed. Here is an amusing instance from a letter written three years ago by an English woman

to her husband who was then at the front.

The kiddies had been having a long chat about the war when Hibbert said, "Artie, why did God make the Germans?" "I don't know, dear"—(pause while H. thinks hard)—then: "I fink they were meant to be us, but when God was making them he saw they were howwid, so he said 'No, vese will be Germans.'"

Since Dr. Einstein has declared that time is the fourth dimension London *Punch* is worried about the effect of the discovery on literature. It may be necessary to revise Shakespeare so as to read:

The fourth dimension's out of joint. Oh spite,
That I was ever born to set it right.
And again, "I know a bank where the wild fourth dimension grows." Watt's famous hymn will read "The fourth dimension, like an ever-rolling stream," while Lord Northcliffe may be driven to change the name of his newspaper to *The Fourth Dimensions*.

The Prince of Wales, who is now touring Australia, does not seem to be received there with as much awe and admiration as he did here—if we may judge from the following verses in the *Sydney Bulletin*:

Bena, deena, dinah down
On yer knees before the Crown.
Beny, meeny, miney, mo,
Nibble at the Prince's toe.
When you rise again you'll be
Ready for the cakes and tea.

Fee fi, fo, fum,
Here the devilled obsters come.
Hickory, dickery duck with greens,
For suitable persons of ample means.
Higgledy-piggidy it round the trough,
Polishing truffles and turkey off.

See-saw, Margery Daw
Be ca-a-areful now with the Prince's paw.
(Who're y' showing, y' greedy brute!)
Ain't he nice in 'is Hinglish suit?
Oh, Breadth and Girth, come out to play,
The Prince is here on a holiday!

No republican would dare to be so disrespectful as a royalist.

The "information tests" now so popular sometimes elicit strange information. Here are some aberrant answers obtained in the questionnaire of the Friends School of Philadelphia: Define "doughboy."

A name for American soldiers because the Secretary of War is named Baker. Who founded the Methodists?

Methuselah.

Define "unicorn."

A kind of bunion.

Define "dromedary."

A place where students board.

What is a "silo"?

A kind of musical instrument.

Who is John Drinkwater?

The man who is making England dry.

What is a "palliative"?

Something to put out fires.

What is a "perambulator"?

Something to make coffee in.

What is the "Buford"?

The "Buford" is the ship used to deport alienists who are undesirable.

What is a "pedagogue"?

Something with ten sides.

A teacher who will not listen to reason.

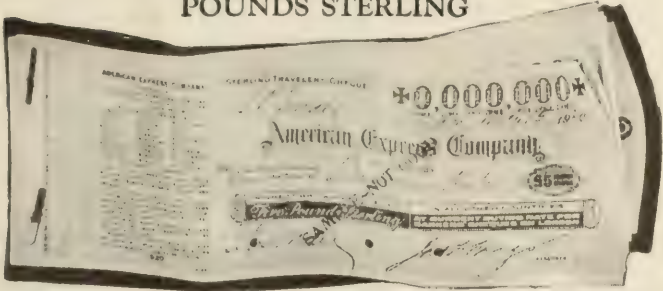

One who is worshipped as a god.

An idiot.

One Day's Work at St. Mihiel

(Continued from page 391)

stands well out beyond the main massif of the Meuse Heights. From Apremont the German line climbed over the densely forested massif to a point on its western rim overlooking the Meuse River. Thence it turned abruptly north, crossing the river to include the sharp bend of Chauvencourt, a suburb of St. Mihiel, and then ran on north along the edge of the heights past Spada to Seuzey and thence diagonally across them by Mouilly to Les Eparges, on their eastern rim overlooking the Woivre.

In the four years during which they had, at leisure, elaborated their defenses in this quarter, the Germans had constructed but had not entirely completed a smaller salient which they called "the Schroeter Zone," lying seven or eight kilometers inside of the main salient. This retirement position included their chief depots and railheads at Thiaucourt and Vigneulles and also the eastern escarpments of the Meuse Heights, which they could ill afford to lose because these heights would furnish to the Allies splendid observatories from which to look toward Metz and over the main Hindenburg line, called in this section "the Michel Position," which extended northwestward across the Woivre Plain from the Moselle near Vandierces to the heights northeast of Verdun, near Ornes.

General Pershing logically decided, in undertaking the reduction of a triangle so powerfully fortified, to make the main attack on its weaker side, between the Moselle and Apremont, leaving the point of the salient and the difficult heights on its western face to be taken in reverse by this attack. Such an arrangement would be the simpler, moreover, since the railheads of his supply system were directly south of the Moselle-Apremont front. The plan finally adopted presented four main features. They were:

(1) A main attack from the south in the general direction of Vigneulles, in the center of the salient. (2) A subsidiary attack from Les Eparges directed southeast upon Hattonchatel, on the heights just above Vigneulles. (3) A follow-up attack extending around the point of the salient past St. Mihiel to a point just south of Les Eparges. (4) Eventual exploitation of the American army front to the wire of the Hindenburg line. This was an ambitious program by comparison with the costly attacks on limited fronts which had been carried out by the French in 1915. But it was based on precisely the same tactical principle; the reduction of a salient by pinching in its flanks. Only since 1915 the hard experiences of war had gradually taught both combatants to widen the front of their attacks and to drive thru with unlimited, or at least with very distant, objectives, preparing beforehand to support the advance with all the accompanying artillery and other auxiliary arms that could possibly be provided to enable the infan-

try to increase and to hold its gains. Exactly so the American army now prepared for its attack, which was scheduled to jump off on September 12. From the first of the month until that date the roads in rear of the American front were congested each night with the columns of troops and artillery and truck trains moving up to the vicinity of their final positions. During this time about 500,000 troops were moved together with thousands of tons of ammunition, rations and other supplies which were deposited in forward dumps ready for the advance. On August 30, General Pershing had taken over command of the First American Army sector, extending from Port-sur-Seille, east of the Moselle, to a point southeast of Verdun.

For one reason or another only fourteen of the American divisions in France were readily available for use in these operations, while three of the American corps staffs could be used. In addition, General Pershing had under his command one French corps and several French divisions which were already in line.

When all was ready, General Hunter Liggett's First Corps stood on the right, from Port-sur-Seille to Limey; then General Joseph T. Dickman's Fourth Corps, from Limey to, approximately, Xivray; then General Blondlat's French Second Colonial Corps, from Xivray to Mouilly, and, finally, General George H. Cameron's Fifth Corps, from Mouilly to Chatillon-sous-Cotes, northwest of Les Eparges. General Liggett's corps, on a front of twenty-two kilometers, contained four divisions in line and one in reserve. The 82nd Division, General Burnham, lay across the Meuse; then came the 90th, General Allen; the 5th, General McMahon, and the 2nd, General Lejeune. In reserve it had General McCrea's 78th Division. This corps, with the exception of General Burnham's division, which was merely to make a follow-up attack on the right, was ordered to advance northward across the deep ravine of the Rupt de Mad, which protected the whole southern face of the German second position, or Schroeter Zone, capture Thiaucourt and reach the front of the Hindenburg line.

General Dickman's corps, on a front of eleven kilometers, had three divisions in line and one in reserve: the 89th, General Winn; the 42nd, General Menoher; the 1st, General Summerall, and, in reserve, the 3rd, General Buck. This corps was also to advance across the Rupt de Mad, but on its more shallow upper course, and after cleaning up the large woodlands of Gargantua, Belle Oziere, Nonsard and Thiaucourt was to push on to the Hindenburg line at Lake Lachaussee, overrunning on the way the main highway out of the salient from Apremont by Vigneulles and St. Benoit cross-roads to Chambley and Metz. General Summerall's division, on the left, was especially charged with reaching Vigneulles.

neulles at the earliest possible moment, there to cut off the retreat of the enemy's troops from St. Mihiel and the point of the salient about Apremont.

General Blondlat's corps covered a front of more than forty kilometers, with only three divisions in line and none in reserve, but, as it was to make merely a follow-up attack, its strength was sufficient for the purpose. Its 39th Division, General Pougin, extending from the right of General Dickman's corps to the hills west of Apremont, was to take Mont Sec after it had been flanked by General Summerall's division and was then to pursue the enemy up the road toward Vigneulles. The 26th Division, General Belenet, around the point of the salient and past St. Mihiel, was similarly to press in as the enemy retreated across the forested Heights of the Meuse. On the left of General Blondlat's corps, his Second Dismounted Cavalry Division, commanded by General Hennocque, an officer whose father served in the Union army throughout the American Civil War, was to render like assistance to General Cameron's 5th Corps, which had in charge the subsidiary attack from Les Eparges.

The 5th Corps, on a front of about fifteen kilometers, had two complete divisions in line with General Hines' 4th Division partly in line and partly in reserve. The attack on the corps front was to be made on the right by the 26th Division, General Edwards, and in the center by the French 15th Colonial Division, General Guerin, while the portion of General Hines' division in line on the left was to make a follow-up attack like that of General Burnham's division on the other flank of the army. The 26th American and 15th Colonial Divisions were to drive across the Heights of the Meuse to their eastern rims, overlooking the Woivre. These gained and the enemy's defenses thus broken thru, General Edwards was to send a column thru the forest to Hattonchatel, seize that commanding hill crest and form a junction with General Summerall's 1st Division across the gorge of the salient. Thus it was hoped to envelop the German troops retreating from St. Mihiel and Apremont before they could pass Vigneulles and Hattonchatel.

Besides the eleven American and four French divisions thus concentrated for the direct attack there were two divisions in Army Reserve, the 35th and the 91st, and two others, the 80th and the 33rd, near enough to be used in case of emergency. Hence there was no lack of infantry for the work in hand. But a handicap of the American army resulting from measures taken during the crisis of Allied affairs in the spring and early summer, now made itself manifest. Owing to the urgent desire of the French and British military authorities at that time that American infantry and machine gun units be sent to Europe to the exclusion of all else in the effort to counterbalance Allied losses, the artillery and auxiliary troops as well as their equipment had been held back to such an extent that

in September many of our divisions were still without their organization artillery, while corps and army artillery was almost entirely lacking. The number of American aeroplanes and tanks was also very limited for an operation of such magnitude and there was a great shortage of horses. These deficiencies, however, were made good by generous contributions of artillery, aviation and tanks from the French. General Pershing was thus enabled to control eventually 610 American and 742 French, British and Italian aeroplanes and 144 American and 273 French tanks. When the hour came for the opening of the attack nearly 3,000 guns were ready to join in the bombardment and barrage, of which 1,600 were American and 1,370 were French. The total number of troops amounted to about 600,000, of which 75,000 were French.

It is an interesting fact that owing to the capture, some time after the event, of a copy of the official report of Lieutenant General Fuchs, the German commander of Army Detachment "C," which was occupying the salient, and of the situation reports kept at his headquarters during the progress of the attack, we have a much better knowledge of the measures taken by the enemy command during this battle than during any other in which American troops were pitted against the Germans. From these documents it appears that on the morning of the attack General Fuchs had six divisions in line in the salient and one in direct reserve, while three others belonging to the Army Group of which his detachment formed a part, were within reach. His order of battle, from left to right, was: the 255th Division, astride the Moselle, then the 77th Reserve, covering Thiaucourt; the 10th, covering Mont Sec and Vigneulles; the 5th Landwehr, extending from Apremont thru St. Mihiel; the 192nd, occupying the western face of the salient to about Dompierre, and the 35th Austro-Hungarian reaching thence to a point about in front of Les Eparges. Near this place the Austro-Hungarian division had liaison with the 8th Landwehr Division, which does not appear to have been part of General Von Fuchs' command but of that of General Von Francois, next in line. The 8th Landwehr was, however, heavily involved in the fighting on this flank. Von Fuchs' reserve division was the 31st and the three others within his reach were the 123rd, the 107th and the 87th.

None of the German units were up to normal strength and it seems probable that General Von Fuchs did not control more than 75,000 men. But their positions were strong by nature, their defenses very elaborate and they had many hundreds of cannon in position. Fairness to an enemy demands that it should be said that at this time the German high command was already hard pressed for men, owing chiefly to the great activity of the British armies between the Scarpe and the Oise. Nevertheless it seems clear that it was the fault of General Von Gallwitz, com-

THE INDEPENDENT, 311 SIXTH AVENUE, NEW YORK CITY

manding the Army Group of which Army Detachment "C" was a part, that the latter was neither so strongly reinforced that, within its powerful defenses, it could reasonably be expected to hold the salient against any attack nor promptly and decisively withdrawn, together with the vast quantities of artillery and material of war which it was guarding, so as to have averted the excessive losses which ensued. In General Von Ludendorff's memoirs, the German Quartermaster General admits that there was a mistake but ascribes it to over confidence on the part of the local command, which believed that the troops actually in the salient could hold it against the American attack, which had been anticipated for some days. Nevertheless, he adds that General Headquarters did order its evacuation on September 8th but the work had not progressed very far when, on September 12th, the American blow fell.

As the hour for the great attack drew near, the spirit of eagerness in the American ranks, massed in their carefully concealed positions in the trenches and among the woodlands behind the front, rose to fever heat. The young soldiers of America, of whatever branch of the service, seemed panting to be over the top and away across No Man's Land to prove that they were more than a match for the soldiers of the Kaiser in the mazes of a fortress of four years' standing as they had already proved themselves more than a match for those soldiers in the open warfare of the Marne salient. United, at last, in one great, homogeneous army, they were keyed to a high pitch of patriotic resolve to win victory for their own country, to avenge the insults heaped upon her by the common enemy, and they were stirred by compassion for the thousands of French inhabitants held under obnoxious foreign rule within the confines of the salient and those other thousands who, having fled from their homes before the invaders, had wandered as refugees over France for four long years.

The exact hour for the attack was not given out by General Pershing until September 11th. He then designated 5 o'clock the following morning as zero hour for the advance of the 1st and 4th Corps, on the south face of the salient, and 8 o'clock for the advance of the 5th Corps, on the northwest flank, while the 2nd Colonial Corps, in the center, was to begin its raids in force at 6 o'clock. The artillery bombardment began all along the line at 1 o'clock A. M. and its tremendous thunder shook the earth for the next four hours, the smaller caliber shells tearing to pieces the German trenches, shelters and battery positions, paralyzing all efforts to continue the evacuation and pinning the defending troops to their lines, while the great projectiles of the army artillery reached the railroad yards at Chambley, Mars-la-Tour and even Metz. Precisely at zero hour, as the lighter guns united their shells in the curtain of the rolling barrage, the assault waves advanced. It was a tremendous moment as this

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$233.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Higher Interest Rates

Owing to a general advance in interest rates, we shall for a short time at least, be able to get Seven Per Cent for our customers on First Mortgage Loans. We suggest that you take advantage of this and arrange to take some of these loans at the higher rate. Good loans are offering. Write for Loan List No. 710

Perkins & Co., Lawrence, Kansas

army, more than three times as large as any American army ever marshalled before, swept forth to perform its mission. From a high hill in the midst of the Woivre Plain south of the American front, General Pershing, accompanied by Secretary of War Newton D. Baker, watched the progress of his troops. Their actual ranks were at first concealed from view in a morning mist hanging over the low grounds, but soon the many colored stars of signal rockets began to burst above the waves of the fog, conveying to the artillery the welcome news that the infantry had reached its first objectives and that the range of the guns must be lengthened. The minutes passed. Near and far the roar of the guns continued, the flashes from their muzzles cutting the dawning light of morning. The sun rose, the mists began to dissolve in floating fragments of vapor. Above the fog the sinister crest of Mont Sec broke thru the obscurity and, beyond it, the dark forest walls crowning the Heights of the Meuse. Aeroplanes, shimmering patches of color like giant dragon flies against the blue, droned overhead, dropping across the sky toward the distant battle line. Down alleyways rifted in the mists appeared endless, threadlike columns of troops and motor trucks, artillery, ambulances and rolling kitchens, creeping forward along the shell-torn country roads and thru the ruined villages in the wake of the fighting front. The keen point of America's steel-blue lance whose long shaft ran back across the waves of the sea and received added momentum from every hand of the millions that were loyally working between the Atlantic and the Pacific, was driving forward, at last, into the vitals of the foe who, for so many months from his hilltop fastnesses, had laughed insolently at the young American divisions which were learning their first lessons of warfare in the muddy, exposed trenches at his feet, around Limey, Flirey, Seicheprey and Xivray.

SO swiftly, in fact, did the impetuous men of Liggett's and Dickman's corps push forward that the enemy divisions would scarcely have had time to react even had the bombardment left them with sufficient spirit to do so. Few of the German batteries opened fire when that bombardment was over and the defending infantry and machine gunners did little better. The American pioneer parties, armed with wire cutters and bangalore torpedoes for making passageways thru the belts of German entanglements, found the latter so rusty and out of repair or else so torn by the American shell fire that their preparations were almost unnecessary. The advance infantry waves, working according to plan, outflanking woodlands, farms, machine-gun nests and strong points as these were reached and leaving them to be mopped up by the supports, swept on with hardly a pause, gathering in prisoners, machine guns and artillery as they went. The 77th German Division, holding the Rupt de Mad and Thiaucourt in front of General Liggett's

corps, was composed largely of Alsace-Lorrainers who had little stomach for the battle at best and who were now more than willing to yield. Before noon, General Lejeune's 2nd Division, headlong as always, was down the steep ravine of the Rupt de Mad and into Thiaucourt, capturing there railroad switches full of cars and locomotives and warehouses and yards heaped with millions of dollars worth of construction and military material. On its right, General McMahon's men had cleared Vieville-en-Haye and General Allen's were pushing northward thru the heavy timber of the Foret des Vencheres.

General Dickman's 4th Corps troops, with the left flank of his 1st Division sweeping up past Mont Sec, met, at first, somewhat more determined resistance from the Prussians of the 10th Division. The men of the 1st American Division had a sharp struggle with them in the woods of the Quart de Reserve, but the enemy, being outflanked and outnumbered, soon gave way and General Summerall's troops were in Nonsard by noon, with General Menoher's "Rainbows" at Pannes, to their right, and the 89th Division men under General Winn approaching Bouillonville. All of them were beyond the Rupt de Mad and the Schroeter Zone was pierced.

Meanwhile, far over on the left flank, in the vicinity of Les Eparges, General Edwards' New Englanders and General Guerin's Colonials, after a bombardment lasting three hours longer than the one on the south face of the salient, at 8 o'clock went to the assault of the extremely strong German positions on the precipitous hills and across the deeply eroded ravines in their immediate front. The fighting here was very fierce, the right regiments of the 35th Austro-Hungarian Division and the left ones of the 8th Landwehr opposing the New Englanders as they pushed thru the shell-shattered woods toward the village of St. Remy, while the right of the Landwehr troops fought hard to hold back the Colonials from the three hills of Les Eparges, Combres and Amaranthe. But by noon, vigorously supported by General Henocque's dismounted cavalrymen on their right, General Edwards' men had reached the edge of St. Remy, while those of General Guerin were in possession of Les Eparges hill, where they repulsed a violent counter-attack by a portion of the 8th Landwehr Division. Meantime, around the point of the salient, General Blondlat's divisions were pressing the Germans at Spada, Chauvencourt and Apremont, holding them so closely engaged as to prevent their retreat thru the corridor at Vigneulles, which was hourly growing narrower as General Summerall's division approached it from the south.

By noon, in short, the plight of Army Detachment "C" was a desperate one. Up to that hour General Fuchs appears to have hoped to stem the olive-drab torrent which was overflowing the salient. Early in the morning he ordered the bulk of his available reserves, consisting of the 31st and the 123rd Divisions, to march on Thiaucourt, but

long before they could reach there the 2nd and 5th American Divisions had passed far to the north and northeast of the town. The German reserves, upon their arrival within striking distance, counter-attacked toward Thiaucourt and Vieville-en-Haye, but General Lejeune's and General McMahon's men repulsed them easily and continued the advance. From all sides reports of disaster from his broken and retreating divisions continued to pour in to the German commander at his headquarters near St. Benoit cross-roads—a point, it may be mentioned, which was thoroly bombed and machine-gunned by a squadron of about forty Allied battle planes early in the afternoon. At noon Fuchs gave the order for a general retirement to the Schroeter Zone, but he was soon obliged to cancel it on learning that the Americans had already swept over that zone at Nonsard and were rapidly widening the gap. At 2 o'clock p. m. he instructed all his divisions to retreat on their prepared positions in the Hindenburg Line and thereafter concentrated his energies upon desperate efforts to form, from all the odds and ends of troops that could be gathered in, a temporary line of resistance extending from Heudicourt thru the woods south of Vigneulles and St. Benoit to protect the all-important road past Vigneulles by which his divisions were retreating from the point of the salient.

The slender German line of resistance, standing gallantly at bay, was approached by the 1st and 42nd American Divisions about mid-afternoon. General Summerall's troops, reinforced by a brigade of the 3rd Division, pushed up thru the Bois de Nonsard in force and at 4 p. m. some American tanks and a squadron of the 2nd United States Cavalry reached and crossed the German line of retreat between Heudicourt and Vigneulles. But they were too few to hold their ground and after some sharp fighting they were forced back into the woods by General Fuchs' scratch line of battle. Their possession of the road for a few hours longer doubtless enabled a good many of the retreating Germans to escape from the trap laid for them but by far the larger number were taken, nevertheless, for by 10 o'clock that night the 28th Infantry, on the left flank of the 1st Division, had established itself across the road and at 3:15 o'clock on the morning of the 13th this regiment was on the edge of Vigneulles.

In their detached positions on the heights, General Cameron's divisions, meanwhile, had been completing their victory and converting the retreat of the 35th Austro-Hungarian Division into a disastrous rout. General Edwards' troops were thru the last enemy trench lines and up to the villages of St. Remy and Dommartin by mid-afternoon and the Colonials, swinging northeastward and forcing the 8th Landwehr before them, had attained the edge of the heights overlooking the Woivre. The whole front on this flank, including General Hennocque's Cavalry Division, was still pushing eastward thru the woods when, at 7:30 p. m.,

MILTON S. BARGER, General Treasurer.

General Edwards received a Corps order to launch a column with all speed on Hattonchatel to form the pre-arranged junction with the 1st Division and close the salient.

Within half an hour after receiving the order the 102nd Infantry, under Colonel Bearss, together with all the machine gun units of the 52nd Infantry Brigade, had started thru the darkness of the dense forest on the only road leading toward its objective, the Grande Tranchee de Calonne, a woodland track so deep in mud that the batteries of the 101st Regiment of Field Artillery, detailed to follow the infantry, could not get forward. But Colonel Bearss' force, leaving detachments at each crossroad they passed to intercept any parties of the enemy which might seek to escape thru the woods, covered the nine kilometers of its isolated and dangerous pathway and reached Hattonchatel before 2 o'clock on the morning of the 13th. During this march alone the 102nd Infantry captured 280 prisoners. The whole of the 26th Division took 2,400 prisoners and 50 guns in the course of the battle, while General Henocque's dismounted cavalymen, scouring the woods further south, gathered in about 2500 prisoners.

Scouting cautiously thru the smoking ruins of Hattonchatel, which had been ruthlessly burned by the retreating enemy, the patrols of the 102nd Infantry, coming from the northwest, and those of the 28th Infantry, coming from the south, descried one another about 7:15 o'clock on the morning of September 13th. The meeting of the handful of tired, dirty doughboys in the pale light of morning, there on that mighty hill crest looking out across the misted plain of the Woivre and the frontier of German Lorraine to the far spires of Metz, marked, with a dramatic finality in keeping with all other features of that most dramatic battle, the end of the St. Mihiel salient. The Germans remaining anywhere south of Hattonchatel at that hour were all doomed to become prisoners of war, while the American and French corps, facing to the northeast, had only to overcome any points of resistance remaining between them and the wire belts in front of the Hindenburg Line and to consolidate their own front.

In the course of completing this consolidation during the ensuing four days, General Pershing's army made further advances of three or four kilometers, sometimes at the cost of sharp, but always local, engagements. Thus on September 14th a part of the 2nd Division repulsed a vigorous counter-attack of the enemy in the steep hills bordering the Rupt de Mad at Jaulny, northeast of Thiaucourt, and on the 15th, the 26th Division put down a similar attack at St. Hilaire, in the Woivre plain. For four days the 90th and 82nd Divisions fought their way slowly northward thru the Bois le Pretre and the wooded hills on the west side of the Moselle, clearing the great rock quarries of Norroy, which had been regarded as impregnable, and occupying the villages of Norroy and Vilcey and, eventually, Vandieres. In the center,

the 42nd Division reached Lake Lachaussee, and on the left the whole front was carried forward from three to six kilometers beyond the foot of the bluffs into the Woivre.

By September 18th the American Army command tacitly admitted the termination of active operations in the St. Mihiel sector by ceasing to mention it in the daily Official Communiqué. On that date, in fact, several of the divisions which had participated in the attack had already been withdrawn, together with most of the corps and army artillery and troops, and were going into positions between the Meuse and the Argonne for the still mightier and more momentous attack which was to occur there on September 26th, and for which preparations were far advanced. The places of the withdrawing American divisions were filled by the three French divisions of General Blondlat's 2nd Colonial Corps, to which the 26th American Division was also assigned, holding the left of the new front from Lake Lachaussee to Mesnil-sous-les-Cotes, and by General Dickman's 4th American Corps on the right, with the 90th, 78th and 42nd Divisions in line from east of the Moselle to Lake Lachaussee.

As we have seen, it was virtually within the space of twenty-six hours, between the mornings of September 12th and 13th, that the 1st American Army, at a total cost of less than 7,000 casualties, by far the greater part of them only slightly wounded, had cleared the immense salient of St. Mihiel, delivering dozens of villages and thousands of French inhabitants from the hands of the invader, freeing the Verdun-Toul-Nancy railroad, taking nearly 16,000 prisoners, 443 pieces of artillery, 752 machine guns and huge quantities of stores, and practically wiping out at least five enemy divisions. On the morning of September 13th, General Pershing and General Petain, side by side and accompanied by Secretary of War Baker, rode up the streets of St. Mihiel. The poor, half-ruined houses beside the main thoroughfare, thenceforth renamed the "Rue du General Pershing," were bright with flags and the red, white and blue bunting of the sister Republics, while the inhabitants crowded about their liberators with cheers and sobs of joy.

Far different was the situation on the other side of the Hindenburg line, where the German commanders, no longer able to conceal from the deluded people of their nation the limitless power of American arms, so long scorned and derided, were hastily reinforcing what remained of their defeated troops in front of the vitally important fortress of Metz, and speculating with doubt and alarm upon the possibility of this new and virile army extending its conquests in the direction of Briey or even of Metz itself. Such, indeed, would have been a very logical possibility had not the comprehensive strategy of Marshal Foch destined the energies of General Pershing's hosts to the prosecution of a vastly more important campaign in another quarter.
